making the personal charge which incites them to write. Public good? Public good? Public gabble! Doubtless he thought he heard the words he imputed to the preacher. Of course he should, as he very easily could, have verified them. But let us plead that a man may be careless, even with the reputation of others, without any great culpability. Of course this is very wrong, but it is not inexpiable, and no one will judge such a fault very harshly—if he did, he would be preaching all day and every day. He has made his charge publicly, however, although anonymously. But he has been wrong. No such words were used. The very opposite of such words were used. There is abundance of testimony. No doubt on the subject remains in the mind of a single person who heard the preacher or has examined the evidence. Thus there is one, and only one, obvious course open to a gentleman. He has remained anonymous, so that it is very easy. It hurts no pride, true or false, for the name of the writer of letters like this is neither a mattter of interest nor curiosity. He should acknowledge his error, publicly and fully, retract his statement, recall the the disparaging inferences made on the supposition of the truth of that statement, and express his regret at his error. This is what a brave man and a gentleman would do, and this is what is due from him publicly. Privately, however, he should analyse his motives well, and ask himself why he wrote this letter, why he brought so serious a charge without verifying the grounds on which he brought it, whether his conduct has been decent, decorous and justifiable. Whether or no he discharges the latter duty, we know not. But he has not discharged the former. He has persevered with the true spirit of the anonymous writer. He makes a charge which could not but grievously wound the man against whom it points, because it wounds the cause that man was pleading; he makes it lightly, and he makes it anonymously, and he now knows as well as we all do that it is a false charge. He does not retract it, or the inferences he made from it. The society which is in any sense represented by such men, or harbours them in any numbers, is assuredly unfit for anonymous writing.

Turning from this letter, we come to another which bore the signature "Soft Spectator." The object of this was to level an insult, in the shape of an offensive doubt upon his veracity, at the author of a note in the *Japan Weekly Mail* of the 28th August, who gave some *data* in regard to an ascent of Fusiyama, chiefly with a desire of showing how easily it might be accomplished, and of inducing others to make what, to him, was a very delightful excursion. The diction of the letter was worthy of the gutter, but education was not compulsory ten years ago, and we have no wish to reproach a man with his misfortunes. A couple of Latin words at the end of the letter conveyed an insult to the most gifted race in the world, though one who evidently knows nothing of his own language must be held guiltless of all but an attempt at imposture for impertinencies couched in any other. He further presumed to criticize some pretty and ingenious lines which appeared in our last Weekly issue, and betrayed about as much taste in his remarks as schoolarship in his letter. However—he is brought to book for his doubt by the offer of a wager, which, at all events, whatever else it showed, showed no fear on the part of him who threw down the glove. Of course "Soft Spectator" sneaked away. One of his defenders supports him on the ground that he had a full right to his opinion (Observer). This is not a question of opinion. It is a question of whether a man has any right anonymously to cast a doubt upon another man's word. In a room he would not have dared to do it. What right has he to do so under a mask? There have been other letters as bad as these, but there is little need to refer to them.

Anonymous writing is a good thing in certain conditions of society; but is a demoralizing thing where the sentiment of the Press is low, where that Press is in bad hands, where society is careless about the duties of the Press, indifferent whether it discharges its responsibilities properly, and whether it represents those for whom it is called on to speak. We appeal to the facts of the past fortnight, and ask—in no uncertainty about the answer,—whether it is for the good of this place, or the reputation of this community, that the Press should be and remain what it is, and whether the anonymous writing which it encourages,—on which, we might almost say, it lives,—is an advantage or disadvantage to society.

Signora Palmieri's second Concert took place on Monday evening last, and afforded the residents of Yokohama another musical treat which, if in some respects not quite equal to that of her first appearance, was, in others, superior to it. The evening was opened as before by Signorina Persiani, who sang the celebrated *Polacca* from *Il Puritani*, not quite so well, we think, as she gave *Una voce* at the first concert, but rather from a little nervousness caused by the want of steady support in her accompanyist, than from any shortcoming originating in herself. Her intonation was somewhat uncertain at times, owing to this cause, though she delivered many of the difficult passages the song contains with entire and delightful accuracy. Signora Palmieri followed with a recitative and *Aria* from Semiramide which she declaimed with truly splendid gesture and power. Her acting was a fine study—every movement was regal and stately; nothing was overdone; nothing left undone. But the air is not in any sense a fine one. It inspires no enthusiasm in the singer, and leaves the audience cold. It is thoroughly poor music,—and Rossini is at times very poor, if tested by the highest standards—the motive is meagre and the *fioriture* passages are without ingenuity. Yet it may be redeemed by fine acting, and by this it certainly was redeemed.

In the pretty lullaby which followed, Gounod's *Chantez toujours*, Signorina Persiani sang with much grace and tenderness, and received a round of hearty applause, which she responded to by repeating the last verse of the song. Gounod has the great merit of never falling into common place. If he has a mannerism which rarely deserts him, so have all but the musicians of the first rank, and we doubt if it ever overburdens his music as does that of Spohr. In this pretty song the voice and violin *obligato* approach and recede from each other like butterflies at play. They chase and intersect each other's paths with a graceful ease, all their motions are as natural and unconscious as the act of drawing breath, and the general impression left by the song is one of pleasure and satisfaction. The air which Signora Palimieri sang after this, *O Stella Confidente*, by Robaudi, also with violin *obligato* accompaniment, is tender and graceful; but it does not contain enough thought for its length. One or two ideas in it are repeated more often than their merit justifies, and the *obligato* accompaniment is deficient in ingenuity. It was extremely well sung, but the favourable impression it produced was due rather to the singer than to the composer. A trio by Campana followed this—gracefully written, as all his concerted music is. But it did not go as smoothly as it might.

The second part of the concert was opened with the duo from Norma," *Mira, O Norma*," which concluded the first performance, nor do we think it went quite as well as on that occasion, when it carried the house by storm. These two ladies sing so admirably, that we are jealous for them of the smallest imperfection in their work, and if we point out the occasions on which we discover it, it is because no standard or ideal of perfection can be too high for the true and conscientious artist.

Signor Palmieri then sang a barcarole, *Dormi Pure*, and we venture to think that this was the special gem of the evening —music as well as singing. This is the music which the Italian writes and sings as no one else on the face of the earth can. We do not mean to say that it belongs to his highest school; but it belongs to him alone and he may defy all competition in it. Signor Palmieri sang it like a true artist, as any one who knows anything of music can see that he is. His intonation is absolutely perfect; his voice, which is still a fine one, has been cultivated by the very best class of study; every note is as clear and perfectly defined as that of an organ pipe; there is no trace of affectation or mannerism, no departure by a hair's breadth from the

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

best model on which singing can be formed. And it is particularly pleasant to find an opportunity of saying this, because in the last concert few among the audience saw, or had a fair opportunity of seeing, the true artistic power and feeling which Signor Palmieri possesses. It was evident euongh, indeed, to the amateurs of music, who are either driven to despair, or, what is far better, to hard study, by such beautiful singing; but we greatly doubt whether it was [generally felt and acknowledged.

This was followed by the celebrated *Ombra leggiera* from Meyerbeer's *Dinorah*, the difficulties of which Signorina Persiani approached with a courage which evoked all the sympathy of her audience, and if here and there she dropped a rose-leaf of the bouquet which the cluster of notes forms, she still displayed it with all her winning grace and fascination. The concert was brought to a close by Signora Palmieri, who sang a *bolero* from Verdi's *Vespri Siciliani*. So far as we know, this opera has never been performed in England, though it is full of striking music. Its incidents deal with the period of the detested French occupation of Sicily, and are full of dramatic and very tragic interest. The *bolero* taxes the powers of the greatest singers, and contains one passage which none but the boldest and most skilled ever dare attempt. This consists of a rapid run from E in alt to tenor A on the line, and is like the swoop of an eagle from the very clouds to the earth. It involves a daring *tour de force* on the part of the singer, and is a perilous descent which none but a great artist could presume to make. Signora Palmieri executed it with prodigious skill, and astonished even her warmest and most critical admirers by her combined facility and power. These are the passages which test singers, and tell of years of study, and days and nights of practice and performance. These are the feats which the artist alone can perform—the trials of strength which none but the strongest can stand—the dangers which none but the most dauntless can face, and the conquest of which brings the laurel which the artist alone can win, or is worthy to wear.

It would not perhaps be quite fair to our contributors to treat the comments of the local press upon their contributions with the same indifference as we have long shewn towards the attacks made upon ourselves. Thus we think it right to point out the manifest and very gross unfairness displayed by the *Japan Herald* in selecting, from the valuable paper contributed to our last weekly issue under the signature R. H. B., only such passages in it as reflect unfavourably upon the Japanese Government, and which, taken apart from their context, give an altogether false impression of the purport of a paper which contains many most important hints of a very practical nature to the Government. This is the true duty of an honest critic, and our coutributor has discharged it. But it is a gross and shameful injustice to select such passages only as those which were reprinted in the *Herald* of Monday evening as representative of the scope, bearing and intention of R. H. B's article.

We have been requested to draw attention to the defective drainage arrangements in the neighbourhood of the Convent on the Brewery Road, on the Bluff. There would appear to be no proper means of removing refuse matter which remains stagnating on the road to the serious annoyance of residents.

The *North-China Daily News* gives the following account of the stranding of the P. & O. s. s. *Sunda* on Turnabout Island:—

The mail steamer *Sunda*, Captain Edmunds, left Hongkong about 10 a.m. on Sunday, the 12th September, with two first class and five or six second-class passengers; 300 bales or packages of Manchester goods, and about 3,500 piculs of sugar. All went well until Tuesday morning, the 14th, when signs of very threatening weather appeared, and the Captain deemed it prudent to avoid the expected typhoon, by turning back, with a view to shelter in Aaitan Straits. About noon, to the dismay of all, the vessel struck on a rock, and stopped. Shortly after, a cry went aft that the vessel was going down by the head. The boats were promptly ordered to be got ready, and they were rapidly filled with passengers and crew. It was then discovered that the water-tight compartments held, and that the sinking of the vessel was, at least for a while, delayed. Then it was determined to go a-head and beach her, and most of the people returned to the steamer. Signals of distress were hoisted both on the steamer and on the light-house at Turnabout—and fortunately the mail steamer *Geelong* hove in sight and came to the rescue; taking on board those who had remained in the boats and following the *Sunda* to render all requiste assistance. The position of the steamer after being beached, appeared to be secure, and it was intended that the crew and officers should remain on her, but as the tide fell, down went the stern, and the people had to quit her. The first officer, however, remained on board, but the water rushing up to the wheel-house, the position became desperate and he took to the rigging, and ultimately jumping overboard was taken on board the *Geelong*. At night the native pirates swarmed over the unlucky *Sunda* and stripped her of all they could. On Wednesday, arrangements were made with two mandarin junks and a gunboat to protect the vessel, the chief officer taking up his quarters on board a mandarin junk. On this day also, the steamer *Douglas* was sighted, and by her Captain Edmunds went to Foochow. The mails, passengers, and crew were saved by the *Geelong*, except four Chinese and three Malays who are missing. The steamer is on a sandy beach, and at high tide her upper deck is covered, but at low water the scuttles are about 6 inches above water. There appeared to be no leak abaft the main bunker.

The most extraordinary part of the whole proceeding is, how, with the Captain leaving for Foochow from Turnabout Island on the 15th, no telegram had been received in Shanghai *viâ* Amoy up to Saturday night.

Subjoined is the report of the P. & O. steamer *Geelong*, Captain C. Fraser, which left Hongkong on the 12th instant at 4.05 p m.:—As far as the Lammocks Islands experienced very clear weather and moderate breezes. At 11-30 a.m. on the 14th, observed a steamer ahead off Turnabout Island, supposed to be the steamer *Sunda*. There was then a strong increasing breeze. At 0.10. p. m. the steamer *Sunda* still ahead, with a signal flying which was not understood, the distance being too great. A few minutes afterwards, a signal was made at the flagstaff on Turnabout Island, "H. C." (steamer requires immediate assistance). At 0.30 p.m., saw seven of the *Sunda's* boats on both bows. Picked up one life-boat and one jolly-boat, with a portion of the passengers and crew. Stood in towards Trite Island to follow the *Sunda*. At 4.00 p.m. anchored in six fathoms in Haitan Straits, the *Sunda* having then been beached on Station Island. At this time it was blowing hard, with every appearance of bad weather setting in. At 4.15 p.m., Mr. Grant, chief officer, boarded the *Sunda* to ascertain the nature of the assistance required, and learned that she had struck a rock off Turnabout Island. Captain Edmunds, of the *Sunda*, returned with Mr. Grant to the *Geelong*, which vessel, after receiving two more boats' crews on board, was taken further in shore and anchored in 4¼ fathoms; it then blew hard from the N.N.E.; barometer 29. 98. At daylight on the 15th, the chief officer of the *Sunda*, and the second officer of the *Geelong* went on board the former ship, and found that the vessel had been partially looted by the natives. At 8.10 a.m., a mandarin junk came near to the *Geelong*, and sent a boat alongside. Captain Edmunds then succeeded in arranging with the mandarins for the protection of life and property. Mr. Scott, the first officer, and one quartermaster and a native remaining by the ship. Weather still continued bad, and the *Sunda* rolled about very much, rendering it very difficult to work either on board or in the boats. At 11.20, the steamer *Douglas* hove in sight, and anchored near the *Geelong*, having picked up the mail boat with three of the *Sunda's* officers on board. The officers were unable to weather the entrance to Haitan Straits, and had to go round Chim Island. They were at last to beach the boat, when, as Captain Fraser states, they

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

were fired at from a junk. Eventually, they succeeded in boarding an Amoy junk, where they were kindly received, fed and clothed, and put on board the steamer *Douglas* off Nangan Head. The *Douglas* returned at once to render all assistance possible. The boats of the *Sunda* and *Geelong* were engaged during the 15th and 16th in endeavouring to salve whatever could be got at. The mails, contained in seventeen bags, were recovered, but all were completely wet. The plate and some sails and baggage were the only property saved besides, the vessel having settled down and being totally submerged at high water. The weather during all this time was very bad, with thick drizzling rain. At 8.30. a.m., the crew left the ship, Mr. Robert Scott, 1st officer, only remaining on board. At 11.20, Captain Edmunds went on board the steamer *Douglas* to make necessary arrangements, the weather still continuing threatening. The *Douglas* then left for Foochow with Captain Edmunds on board. At 4.00 p.m. a native boat came alongside from the shore; and a letter was sent to Mr. Scott. It was now blowing a strong gale from the N. by E., with sudden gusts and drizzling rain. At 11.10 p.m. weighed and proceeded, after receiving a communication from Mr. Scott that he was well protected on board a war junk. Weather moderating. Arrived at Shanghai on the 18th at 7.00 p.m. Seven natives of the crew of the *Sunda* were drowned.

(From the Japan Mail Daily Advertiser.)

On Saturday last a report was brought to us of a case Campbell *v.* Da Roza, said to have been heard before the Portuguese Consul-General, and as it was in a handwriting known to us as that of one who is in the habit of a attending the Courts as a reporter, and its correctness was vouched for by the person who brought it, who further stated that the facts embodied in it had that morning been made the subject of an affidavit made before the British Consul, we inserted it in our Weekly issue of last Saturday and our issue of yesterday morning. But it transpired also yesterday at the Portuguese Consul-General's Court that the report was substantially untrue, and the Plaintiff in the case was called upon to apologize for it, which after agreeing to, he refused to do. The public has been misled, we regret to say through our own instrumentality—of course under no suspicion whatever as to the truth of the report,—by a person who has shamefully abused the confidence of the Press, and whose appearance before the public under these circumstances is extremely to his discredit.

A person signing himself "Soft Spectator," (who writes, by the way the worst English we ever saw in print) ventures, if we understand him rightly, to throw a doubt upon a statement recently made in the *Japan Weekly Mail* that the descent of Fusiyama, including the walk to Shubashiri, was made in two hours and a quarter. We will make him an offer by which he and his impertinent doubt shall stand or fall. We will engage that, barring death or departure from Japan, or any such incapacitating circumstance as serious illness, the gentleman alluded to in the above statement shall make the descent next year within the time stated, say two hours and a quarter, for a wager of a thousand dollars, the stakes to be placed in the hands of the Oriental Bank.

But we insist upon the condition being added that if the descent, including the above walk, is made *within two hours*, he shall forfeit two thousand dollars more, which must also be deposited, while we will engage to pay a hundred dollars, out of the thousand won, if the descent is *not* made within the two hours. These terms are perfectly fair, and he is a poltroon if he does not come forward and accept them, for he has gratuitously presumed to express a doubt anonymously which he would not have dared to express in his own name—the true anonymous writer's trick. There would be one or two slight conditions to be added to the articles of the wager, such as provision for a sprained ancle or being misled by the guide. In the former case the bet must be considered as off, because it would be impossible to undertake the descent again during the same season; in the latter, a second trial would have to be made.

The Revd. Mr. Douglas purposes holding the following services at Tôkei: On Monday, the 27th instant, at 4.30 p.m. at the temple of Yôsenji near the Yamato Yashiki; and on Tuesday, the 28th instant at 4.30 p.m., at the British Legation.

The "Soft Spectator" has prudently retired. The position he occupies is that of a man who has deliberately and anonymously thrown a doubt on the word of another, and, when brought to the test, has sneaked away.

The *Hochi Shimbun* writes: The Commercial School to which we have frequently referred will be opened on the 1st October under an American teacher.

A telegram was received on Saturday night, and was published with our usual weekly edition, announcing the loss of the P. & O. Co's S. S. *Sunda* which struck on a rock off Turnabout Island on the 14th instant.

It is gratifying to learn that with the exception of seven natives all the passengers and crew have been saved. The mails also were removed and will be sent over from Shanghai by the first opportunity. The *Sunda*, a fine steamship of 1,682 tons, was sister vessel to the *Malacca*, and arrived not long since from Europe, whither she was sent for the purpose of being fitted with new compound engines.

The following additional telegram has been received on this subject:—

Geelong leaves with *Sunda's* mails. *Sunda* on sandy beach under water at high tide.

Owing to the heavy rains which fall recently at Sugashima, a small island off the coast of the province of Shima, some very heavy landslips have occurred. Many dwellings were destroyed, but fortunately no loss of life occurred.

The large store belonging to Shimada, the banker, whose bankruptcy occurred some time since, will close within a few days.—*Nichi Nichi Shimbun.*

In consequence of the illness of one of the plaintiff's witnesses the hearing of the case Ito Hachibei *v.* Walsh, Hall & Co., stands adjourned to Monday next.

His Majesty the Mikado honoured Mr. Peshine Smith with an audience on the afternoon of the 16th instant, at which H.M. presented him with a handsome sword and added his compliments upon the valuable services rendered by Mr. Smith in the *Maria Luz* embroglio. It is understood that Mr. Smith's services have been retained for a further period.

It is stated on good authority that all the members of the Sei-in with the exception of Sanjo, Iwakura, Shimadsu and the *Sangi* (Kido, Itagaki and others) have received their *congé*.

A native newspaper states that about one hundred and fifty officials of the Daijokuan received their *congé* on Thursday last.

A monument in honour of those who fell during the revolution at Hakodate was erected in that town on the 15th instant.

In accordance with a recent order of the Government many of the old and spirit-stirring dramas illustrating the feudal ages of this country will shortly be withdrawn from the stage. It has been determined to prohibit dramas in which the ancestors of existing families form part of the *dramatis personæ*, and this virtually has the effect of excluding some of the most famous and favourite pieces from the theatre.

The *Nichi Nichi Shimbun* says that an English employé of the Railway Department, while shooting in the Gifu *Ken* on the 10th instant, unfortunately wounded a native labourer. The wound is in the leg and is not fatal.

The *Nisshin Shinjisshi* says that the prevalence of *Kolera* in the towns of Hiogo and Osaka causes much apprehension among the inhabitants, as no successful mode of treatment has yet been discovered.

Mr. Edward Loureiro, Consul-General for Portugal, took his departure this morning for Europe in the M. M. steamship *Tanais* with the view of seeking professional relief from an afflicting malady which he has for some months past suffered under.

A telegram from Hongkong, which has been kindly communicated to us by the Agent of the Messageries Maritimes Company, announces that the *Menzaleh* left that port for Yokohama at 8 o'clock on Tuesday morning.

Should the export of bricks from Japan to San Francisco be continued, there seems a fair prospect of another branch of industry returning a reasonable profit if the Government does not adopt the policy of raising the price of clay, and thus kill the goose that lays the golden eggs. In October last an experimental shipment of 20,000 bricks was made hence to California; the favourable out-turn of that venture induced another, per *Vasco de Gama* of 100,000, and now we learn from an official report that

Japan-made bricks are little larger than Californian bricks, being 8½ inches long, 4½ inches wide, and 2½ inches in thickness. They are smooth and even, and but very little liable to break. Although there is a duty of 20 per cent on this class of goods, they can be sold a trifle lower than those made in San Francisco in consequence of the cheapness of labour.

Not long since the native newspapers told us that the consumption of flesh-meat showed indications of falling off. Referring to this subject the *Hochi Shimbun* gives us the following figures. The number of head of neat cattle killed in Kobe is 800 per month, in Yakohama 600, in Yedo 500 and in Osaka and Nagoya 300 each. In the year 1873 the number of horned cattle in this country was estimated by the Government not to exceed 75,000, and as the cows are usually selected for slaughter the exhaustion of the stock cannot be far distant.

The *Choya Shimbun* relates a report that Kinrinsho, a famous Corean, with 4,000 followers consisting of farmers and fighting men has made his way to Urajiwostof (?) in Russian Territory. To this it adds the rumour that a Japanese resident in Corea named Tedzuka is endeavouring to induce Kinrinsho to accompany him to this country. Of the motives of the latter's exodus from Corea no explanation is attempted.

The Cricket Match, "Settlement against H.M.S. *Charybdis*," resulted in the victory of the former. Only one innings was played.

SERICULTURE IN JAPAN.

UNDER the title of "Notes taken in an excursion through the Silk Districts of Japan, we publish to-day a most interesting report, written by Messrs. J. M. and R. JAQUEMOT and addressed to Her Britannic Majesty's Minister in Japan. Since the publication in 1874 of Mons. E. de BAVIER'S valuable work on the subject which forms the heading of the following remarks, this is beyond doubt the most valuable contribution to the literature of the subject; and, while we regret that the short time at our disposal since its arrival in our hands prevents our doing full justice to it, we will briefly draw the attention of our readers to its most salient points.

In the first place, then, it was recently reported, on what seemed fairly trustworthy authority, that there were serious grounds for thinking that *pébrine* had attacked the Silk-worm of Japan, as will appear from the correspondence and certain comments on the subject published in our present issue. No evidence, however, has yet been adduced to substantiate this report, while it is certain that, had the disease actually appeared in the country, the Messrs. JAQUEMOT would have witnessed or heard of its ravages in the course of their extended tour. The fact that they make no mention of it must be held to be conclusive in regard to any solid grounds for entertaining this opinion, at least for the present.

So much has been said and written about the enormous extent of Government interference in the private affairs of the Japanese people, that we are pleased to remark the absence of any evidence in the Report before us that this is carried to any excess calling for remark, or is exercised adversely to the interests of foreign trade. Almost everywhere, indeed, a branch of the *Kaisha* (the general silk-guild) was found, and whenever the travellers applied to its director for information, they found him civil and obliging, and, generally speaking, communicative. In one conversation, a director declared, in terms far from complimentary to his countrymen, that Government interference is good for the people of these islands—a remark which, up to a certain point, is undoubtedly true, though we would press it as little as possible, in the firm belief that wherever freedom can be given with safety, it is given with advantage. The master of the *Kaisha* is not a salaried official, but a merchant like the other members of the guild, and, as the silk-inspector of his district, he has often an ungrateful task to perform. But he does it for the welfare of the reelers and much to his own inconvenience (see 31st July). In one instance (see 1st August) he forbids certain silk being sent to Yokohama on account of its very inferior quality—surely a very injudicious measure, though one with which foreigners will hardly find much fault. And here let us warn our readers, in passing, that, except in one case (see 8th August, Kankorio filature) the affixes Mr. and Dr., which frequently occur in the "Notes," apply to Japanese, no foreigner, unless in Government employment, being allowed to reside in the country.

Nothing can be more striking than the cumulative evidence collected by the Messrs. JAQUEMOT in reference to the quality of Japanese seed, cocoons and silk. To their laborious and persevering enquiries the answer was almost invariably to the following effect:—"Ten years ago, good seed being abundant and cheap, we produced better silk than now because we had better cocoons. Our industry has been ruined by the sale of our best seed to foreigners." Such evidence, corroborated by facts which came under their own observation, was well calculated to produce very painful impressions, and the conclusions suggested by an attentive perusal of Messrs. JAQUEMOT'S Report is that Japan silks must be expected to be worse this year than they have ever been formerly.

We are entirely with Messrs. JAQUEMOT on their general conclusion that the export of seed has been the cause of the undoubted deterioration of Japan silk. But we cannot acknowledge that the deterioration has been progressive. Six years ago, the Japanese Government, warned of the growing evil, administered a partial remedy to it by limiting the export of seed, and, since then, a certain proportion of all the 'annual' cards, calculated according to the average wants of the country, was regularly set apart for its home consumption. Nor should it be forgtten that the success or failure of a crop does not solely depend upon the nature of the seed. Here, as in Europe, weather and vegetation possess their respective share of influence on the event. Accordingly, during the last six or eight years, Japan silks have been sometimes good and sometimes bad; but the causes of their present depreciation in the foreign markets are too numerous and too complex to be dwelt upon in the present article. Last year, the total production of 'annual' seed was 2,470,000 cards, and they fell to so low a price that the native dealers destroyed some three or four hundred thousand by fire, in order to raise the value of the remainder. The total export was 1,300,000 cards, costing on an average $0.40 per card. About 800,000 'annual' cards were left in the country, the requirements of which Messrs. JAQUEMOT estimate at 700,000. From this it would appear that the supply of seed for this year's crop must have been abundant, cheap, and not worse in quality than that which was exported. One of Messrs. JAQUEMOT'S informants (see 31st July) admitted the fact, and we can only wonder that the admission was not more general. That in so many places they saw almost nothing but *bivoltini* cocoons becomes less puzzling when we remember that they started on their tour after the crop of annual cocoons was over. Had they visited the same districts in June, we venture to say that their impressions would have been different.

When such connoisseurs as these gentlemen unquestionally are, tell us that most of the silk they saw in course of reeling was bad, we accept their statement as a fact. We only beg permission to dissent from their general inferences from that fact. The Japanese dry their cocoons, and sometimes keep them until late in the season, reeling the inferior ones first in July and August. The defects which are concealed in a skein nicely made up, are glaring when the silk lies unfolded on the reel, and these are among the circumstances which the observer has to take account of.

Before proceeding further, we shall draw attention to the following table.

ARRIVALS IN YOKOHAMA FROM 1ST JULY 1874, TO 30TH JUNE 1875.

Joshiu	4,390	
Bushiu	1,750	
Shinshiu	2,370	
Koshiu	700	
Hida	210	Hanks.
Echigo	125	9,545.
Oshiu	2,100	Oshiu.
Echizen	170	and
Sodai	114	Other sorts.
Sundries	75	2,355.
Total	11,900	Shipping bales.

Among the above enumerated provinces, only two, Shinshiu and Koshiu, have been thoroughly examined by

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

the Messrs. JAQUEMOT. Of three others, viz. Bushiu, Echigo and Oshiu, they visited only a very small portion; the rest were not visited at all. It is much to be regretted that their tour was not extended to the province of Joshiu, which produces the Mybash, Tomioka, Shimonita and other celebrated silks, and contributes nearly one-half of the total supply of Hanks. They saw so little of Oshiu that their Report may be said to bear upon the Hank silks almost exclusively. In fact, their conclusions only apply to Echigo, Shinshiu, Koshiu, and a little slip of Bushiu, the collective production of which contributes from 35 to 40 per cent towards our total supply of Hanks, or 30 per cent to our total supply of all descriptions of silk.

Refering to the trade in Silk-worms' eggs, Messrs. JAQUEMOT seem to make some confusion between the producer and the dealer. That the latter, looking after his own interest exclusively, should remorselessly sell to foreigners the best seed he can get from the former, is a matter of course. That the producer would use all his best cocoons for making seed, sell all his good seed and thus cut the plank from under his own feet, involves an amount of stupidity which should go far to justify the judgment passed upon him by his own countryman, as related above, but transcends our belief. We think better of the Japanese peasant. With cunning enough to detect the bias of his interlocutor, he is too phlegmatic and submissive to contradict him. The uniformity which characterizes the evidence produced in the "Notes" may perhaps, to some extent, be traced to that peculiar disposition of the informants. Messrs. JAQUEMOT'S Report cannot fail to produce a strong impression on their readers at home. Whether we have gone too far in endeavouring to reduce its first effect to the exact and legitimate proportions it ought ultimately to assume, will be decided a few months hence by the verdict of the European consumers.

In conclusion, we must add one word in praise of the humane and courteous tone adopted towards the Japanese on the part of the two travellers of which this report gives ample evidence. And the politeness was abundantly returned. Everywhere they met with civility, attention and hospitality, not only from the people but the officials. Men vacate or clear their rooms for them; the host accompanies them to the outskirts of the village to bid them farewell; the women chat pleasantly while they reel off the golden balls which cover the country, like DANAE'S shower, for two months, and all is civility and urbanity on both sides. If all foreigners could be relied on to go into the country in the same spirit, we might have it unrestrictedly opened next month.

DISEASE IN SILK-WORMS.

(*From the "Japan Mail Daily Advertiser."*)

The following translation of an article from the *Nichi Nichi Shimbun* demands a few words from us.

The paragraph which appeared in our *Weekly* issue of the 28th ultimo, to which reference is made, was written with the greatest care, and with studious moderation in view of the serious nature of the subject with which it dealt. The writer in the *Nichi Nichi Shimbun* denies the existence of *pébrine* in this country in a most unqualified manner. We would ask him if he has made, or is capable of making, any investigations into the subject. All that we said was, that "there are serious grounds for believing that it has attacked the Silk-worm of Japan." These grounds were the existence of *corpuscules* in the worm, which has been the invariable forerunning symptom of *prébrine*, or, at all events, wherever the *pébrine* has broken out, the *corpuscules* were the first apparent symptom of the existence of the lurking disease. If he denies this, his statement is of little value, unless he proves that he, or some one capable of doing so, has made investigations and found no trace of *corpuscules*, although even this would only prove that there are districts where no trace has been found of unfavourable symptoms. He speaks of our having said that there were "clear and decisive proofs of the existence of *pébrine*." We must be pardoned for saying that we made no such assertion.

We have, however, no position to support in this question, except to prove that we wrote with the most studious care and moderation on it. The report came to us on most excellent authority, and covered far more ground than that to which we intentionally reduced it, in view of the gravity of the case. We shall rejoice to think that the alarm is unfounded. But we refuse to attach any value whatever to the denial of the writer in the *Nichi Nichi*, because it is based on no grounds of scientific experience or investigation. The Government should not be afraid of hearing the alarm-bell sounded. It may save the house from being burnt down.

"Nichi Nichi Shimbun" of September 12, 1875.

The "*Mail*" of the 28th of the 8th month (August) says:—

"We lament to say that there are *serious grounds "for believing that the pébrine, the disease in the silk-"worm which has destroyed the silk-crops of France and "Italy, has attacked the silk-worm of this country in "more than one district."

Which are the districts (attacked)? What are the †clear proofs spoken of? And on the result of whose inspection is this statement based? It is impossible to ascertain the origin of the pébrine disease except by means of microscopical investigation, and the number of persons whether foreigners or Japanese in this country who are acquainted with the science of microscopical examination is so small that they may be counted on the figers. And even if inspections have taken place which have resulted in the establishment of clear proof of the existence of pébrine, how many of these inspections have been made, and during how many years have they been conducted? In our opinion the originators of this report are imperfectly acquainted with the present and past condition of sericulture in this country and have been very much alarmed through having happened to discover some slight foundation for their suspicions. If it be asked why we think so, we reply, Because from early times there has existed a disease called the *Sabiko*.‡ The principal features of this disease are that rust-like marks form themselves on the end of the tail of the silkworm, the whole body of the worm assumes a dead colour and in the end the worm dies. On microscopical investigation being conducted into this disease it has been found to resemble in its features the symptoms of the disease called pébrine" (the other names of which as such "coruperusen" (?), corpuscule," &c., &c., we suppress) which is mentioned in books written by European sericulturists, as they are called.

This disease is not a strange one which has only just sprung up, nor is it one which is spreading like an epidemic as the newspapers have noisily stated. The abundant production of silkworms of this year is known to most people. Besides, proof of the falseness of this report of an epidemic is furnished by the fact that it was only promulgated three months after the formation of the cocoons.

The healthiness which characterizes the silkworm produced in Japan and which is a bequest to us from Heaven, is a matter for wonder. Though disease has occasionally appeared it has always been successfully resisted. And thus although from years back many and various kinds of

* Mis-rendered in the translation by the word "Kakushô"—"clear or decisive proofs."

† Should be "serious grounds."

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

diseases have broken out, we have never yet heard of an instance in which serious injury has been caused in this way to the whole country. Nevertheless it is impossible to predict beforehand what future changes may take place; and therefore as it is impossible to adhere strictly to old practices in regard to silkworms. The Government have given the subject their attention, and with a view to making the system of prevention more and more strict, already in the 6th year of Meiji 1873 they commenced to carry into effect their desire to obtain decisive proof as to the nature of these diseases by collecting specimens, not only of silk-worms attacked by *Sabiko, Hosoko, Oki-Chijimi* these being diseases similar to *pébrine*, but also specimens of worms affected by *Gira, Uji, Tareko, Ojari,, Fushidaha, Chijimi* and other diseases, and by dissecting these or by subjecting them to microscopical examination. Subsequently fresh investigations continued to be carried on with gradually increasing results, and the system of prevention was made more perfect, so that now there is no room for the slightest doubt or apprehension. However, in order to bring back the good reputation of our silkworms' eggs and of our silk all that is required is to put a stop to the production of inferior qualities. Let care be taken and let industry be practised!

(Signed) SASAKI CHOJUN,
7th Class Attaché of Board for the Promotion of Industries.

NOTES TAKEN IN AN EXCURSION THROUGH THE SILK DISTRICTS OF JAPAN.

Yokohama, September, 4th, 1875.

SIR.—Agreeably with your request, we have the honour to submit to you the report of our excursion in the silk districts of Oshiu, Echigo, Shinshiu, Kôshiu and Bushiu, with our observations thereon.

Saturday 3rd July.

We leave Tokei in jinrikisha with the intention of travelling as fast as possible, until we reach the silk districts, which we do not expect to see before Utsunomia. We do not arrive there before the evening of the 4th, owing to the badness of the road and the heavy rains which had been prevailing for the last fortnight.

Monday 5th July.

We begin to see cocoons in the villages between Utsunomia and Shiragawa on the Oshiu Kaido; they are small and of poor quality with a large proportion of doubles. The villagers tell us that the silk they reel is not brought on to Yokohama, but is used by the native manufacturers. The proportion of annuals to bivoltinis is about 3 to 1. At Akutsu we see fairly good annuals, which are intended for seed. There is not much *Uji* here, owing to the sandy nature of the soil. The proportion of annual cocoons to bivoltinis is also about 3 to 1. We arrive at Kitsurigawa at 5 o'clock.

Tuesday 6th July.

Soon after leaving Kitsurigawa we find the road extremely heavy again, owing partly to the late rains, partly also to recent repairs, effected by accumulating on the road a quantity of black mould and clay, which are to be afterwards covered over with stones and gravel. Meanwhile owing to the soft nature of the ballast the road is all but impracticable at present, and we are obliged to hire horses at the next village to enable us to get on. At Sakuyama, seeing good cocoons in two or three houses, we stop to make inquiries. We find that a great portion of the cocoons in this locality come from seed distributed among certain cultivators by Mr.————, who, when the education is finished, buys the cocoons back at the current market rate. One man we saw reared one half a card of seed, others from one to two or three cards. The cocoons were annuals, and generally good, some very good, well formed and close grained. The market price of the day is from 20 to 25 cents for one *masu* of cocoons, which weighs about half a catty. One card of seed produces about from 30 to 33 catties of cocoons. The proportion of doubles is about 30 per cent, which in our opinion is considerable. There is no *Uji* in this locality, or very little, the soil being sandy. Having the good chance of meeting in the village with the head clerk of Mr.————, whom we have the pleasure of knowing personally, we enter into a very interesting conversation with him. He says Mr.———— makes his seed at Ishii for his own requirements, and puts it out every year in Oshiu to be reared by a certain number of educators, from whom he buys the cocoons, as we said above. He never buys any other cocoons but those which come from his own seed, which ensures a continuous supply of the same quality of cocoons. He has made all the seed he will require next year, about 1,300 cards. He is of opinion that there is not enough good seed left in Japan, the export trade in silkworm's eggs having taken away a large quantity of the best. We stop at Otawara, the weather being bad, and in the afternoon go into several houses to look at various lots of cocoons. Some of them have been reared for the account of Mr.————, and very good cocoons indeed they are. Other parcels are very poor and weak, a mixture of annuals and bivoltinis. In one house we are told that the proportion of annual cocoons to bivoltinis in this locality is only 1 to 3; the second crop of the latter began just three days ago. In another house again, we see an extensive education, in which we remark very fine white cocoons, firm and well formed. The growers are a wealthy firm of *Saké* brewers, the three partners in which Messrs.————, receive us with extreme civility. They reel silk in the house and the girls have begun to work. They reel annuals with seven cocoons, bivoltinis 14 to 16; the silk is pretty good, but has hardly any twist and is not quite clean. One *masu* of their best annual cocoons will yield 10 *momme* of silk; or as they express it in other words, it takes 15 to 16 *masu* of their best annual cocoons to make one catty of silk; but it takes 25 to 27 *masu* of bivoltinis to produce the same quantity. The crop this year has been good; the mulberry leaf is very cheap about 50 cents the picul. They also make seed for sale at Yokohama, upon which we showed them the article from the *Japan Mail* of the 6th of June last, a translation of which appeared in one of the native papers of the 16th and 17th days of the same month. Mr.———— has no sooner began to read it, than he says it has already been published in the official notifications of the Japanese Government, but in an abridged form; he reads it then in its entirety, and says, that paper sets him thinking deeply and seriously indeed. The paragraph alluding to the exodus of children from the country seems to strike him particularly. At length he says that instead of selling his seed, he will make cocoons with his cards next year, and for the future will sell silk only, there being obviously now an insufficiency of good seed in Japan.

Wednesday 7th July.

Owing to the heavy state of the roads we are compelled to ride on packhorses.

On passing through several villages, we look at cocoons; mostly bivoltinis, poor, with plenty of doubles, whilst we see but a very small proportion of good or even decent annuals. From Kuriburi to Ashino, the country undulates and gradually rises, but it is mostly laid in coarse grass, brushwood and timber, and little under cultivation. After Ashino we begin to see the Aidzu mountains in the distance, the country continues to be little cultivated, but mostly covered with grass and brushwood, except in the neighbourhood of the villages, which are however pretty far apart. Owing to an accident which happens to one of us, we stop at Shirasaka.

Thursday 8th July.

The weather is again bad; the road wretchedly heavy, so much so that in some places our *jinrikishas* sink down to the axles in the mud. Look in at several houses by the roadside to see cocoons; all white, very poor and weak. The people say they have no annuals, all bivoltinis, which they reel for their own consumption, and not for sale. Stop at Shirakawa to rest ourselves.

From Friday 9th to Monday 12th July.

During five days the rain continues to pour down in torrents, with scarcely any intermission. Meantime we hear from day to day all sorts of reports; swollen rivers, bridges carried away, communications by roads, horses, boats, and telegraph interrupted. Two or three times only can we take a short walk out of doors. On one

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

occasion we see a small lot of cocoons, very indifferent annuals. It is strange that in a large place like Shirakawa, there should be not more cocoons to be seen, but we are assured that there is not one single silk merchant here, and all the houses look more or less miserable.

It is impossible for us to proceed as we had intended, that is to Nihonmatsu and Fukushima, as all the bridges on that road are carried away, and communication cannot be reestablished for some days to come. In consequence we prepare to go to Inawashiro, and shall leave to-morrow the 13th inst., if we can get horses to carry our luggage.

Tuesday 13th July.

Having made our arrangements to go to Inawashiro, we start at 8 o'clock. Just outside the town we begin to see the havoc committed by the inundation. The river has overflowed its banks, and washed away considerable extents of land, as well as one half of a long and solid bridge, which will have to be entirely rebuilt. We have to be ferried over to the other side of the river, where we find a packhorse for our baggage. In passing through the suburbs, we see two women reeling off double cocoons. Never saw such beautiful doppionis before. The country we go through is very fine and picturesque, but thinly inhabited, and mostly laid in grass. At Merikanokawa the cocoons are almost exclusively bivoltinis and very poor; the few we see of annuals being nearly as bad as bivoltinis. The roads are horribly heavy in consequence of the late rains. The country continues hilly, grassy and all but uncultivated. We perceive in the distance the top of the Gondokura, a very high peak in Aidzu. In the afternoon we go through the Temaneghi Pass, the road being if possible worse than ever; from thence to the village of Hagioji, and about 6 or 7 o'clock to Maginouchi, where we find a swollen river, but neither bridge nor boat to get over, and are obliged to wait a long while until some men come, who carry us across on their shoulders.

Wednesday 14th July.

We leave Maginouchi early, and pass through several villages where we see but very poor cocoons, all bivoltinis. Stop at Yubano to change our packhorse. The master of the Kaisha, an old man, shows us his cocoons; they are the same as in all the other villages of this neighbourhood, extremely poor bivoltinis with at least 30 per cent of doubles. He informs us that they had not always reared bivoltinis in this part of the country; about ten years ago they had none but annuals; but now and for some years past they could no longer afford to buy annual seeds, the cards being so scarce and the prices having risen so high that they are therefore obliged to rear bivoltinis. They do not make any seed for themselves, but get it from Fukushima or Dewa. Nor do they reel their cocoons, but sell them at about 12 to 14 *masu* for one *rio*, or 7 to 8½ cents the *masu*. On resuming our journey, we have to hire men to carry our luggage, as horses cannot, just at present, go across the rivers. The road passes over several mountains, and within a distance of barely two *ris* we had to be carried across three rivers, having found everywhere traces of the violence of the late rains, in the shape of bridges carried away, landslips etc. At Sachido we see plenty of cocoons; all bivoltinis, with only a very small proportion of annuals; but the latter are hardly any better than the former. In another part of the village, however, we see further large quantities of cocoons, a fair proportion of which are annuals, some pretty indifferent, and some good. After Sachido we pass through several villages, where we see quantities of cocoons, nearly all bivoltinis and very poor. At the village of Miyo we see the greatest quantity of cocoons we have yet noticed. They appear to be mostly annuals, some of them very good. It is to be noticed that a considerable proportion of these annuals are yellow. Silk of that color is not esteemed, either by the Japanese consumers or by the foreign buyers, so well as the white or green sorts, it being generally asserted that yellow silk does not take the dye very well. The foreign buyers of silkworm's eggs have constantly declined to buy seeds of yellow cocoons; therefore the Japanese had no such temptation to overproduce them as they did the other two sorts, and consequently good annual yellow cocoons are to be found here in large quantities, whereas green and white ones are much scarcer. The silk crop is not yet over at Miyo, numbers of the worms requiring two or three days more to form their cocoons. We leave Miyo to come to Fukura distant about ¾ of a *ri* from the lake of Inawashiro, which we shall see to-morrow. The growers in the last few villages we have visited are not seemingly in the habit of making seed for sale, as they were killing their cocoons in the sun, even before taking them off the bush. They may certainly make a little seed for their own use; so much the better as the breed of Inawashiro district has long been known to produce a firm, clean, wiry, much esteemed thread. The silk is generally reeled full, but is none the worse for that.

Thursday 15th July.

We hire a boat to take us from Fukura on the lake of Inawashiro to Sasayama at the further end of it, from thence we take the road to Wakamatsu, looking in occasionally at houses by the roadside to ask about the silk crop and see cocoons; some we find are pretty good annuals, others only very inferior bivoltinis. Time does not allow us to pay a visit to the town of Inawashiro, on the other side of the lake opposite to Fukura; but from various accounts which we hear, we have every reason to believe that the crop round about Inawashiro is very much the same as in the portion of the district we have gone through. Arrive at Wakamatsu at nightfall.

Friday 16th July.

We leave Wakamatsu early in the morning with the intention of betaking ourselves to the province of Shinshiu by the shortest road. We shall have to take the pass called the Hachijiuritoge, a short cut as far as distance is concerned, but little frequented and arduous. At Bagi we see bivoltini cocoons, not bad at all of their kind, and girls who reel very well indeed; considering the quality of the cocoons, they turn out excellent work, a clean, wiry thread of 12/18 cocoons. Some of the silk shown to us is beautifully clean, with but few trifling defects. After Bagi we traverse a succession of pretty hills and picturesque valleys, with fine mountains in the distance, and arrive at about nightfall at Yanagitsu.

Saturday 17th and Sunday 18th July.

We are detained here these two days, by torrents of rain; the river which flows in this valley, called the Ariganokawa, has risen about 8 to 9 feet within the two days, but the rain having stopped, is slowly subsiding.

Monday 19th July.

We resume our route at 8. The road follows the course of the river, passing through well cultivated fields in an undulating and hilly country with an amphitheatre of mountains on every side. We pass several villages where the mulberry tree is extensively cultivated; but owing to the altitude of this district the silk crop is still generally backward. At a village called Takiya, where we stop, we find a quantity of cocoons already smothered, one fourth of which are annuals, the rest bivoltinis. The landlord tells us that some six or eight years ago, there were none but annual cocoons reared here, but now, they can no longer afford to pay the high prices asked for seed, and are obliged to resort to the cheap kinds. In another place we find pretty good annual cocoons, but they are yellow. We make in this valley the same remark that we made in the district near lake Inawashiro, namely, that the breed of these yellow cocoons does not seem to have degenerated like that of the white or green breeds, and no doubt for the same reason as we have related. After Takiya, we pass very high mountains, and after a long and painful walk in a very fierce sun, we come to the village of Miyanoshita, where we see pretty good yellow cocoons. From this the valley gets considerably narrower; the path or road ascends continually, following the course of the river, which flows between high mountains covered on both sides with splendid timber; and now and then we see very pretty waterfalls; a truly picturesque country indeed. At seven o'clock we arrive at Numazawa. We had intended to go one *ri* further, but as it is getting late, we are obliged to stop here to-night. There being no inn in the village we beg leave of the village *yakunin* to sleep at his house, which he kindly grants us.

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

Tuesday, 20th July.

We start at a very early hour; weather fine and cool. The path continues to ascend, till we come to level ground which skirts the base of the mountains, through a very interesting country. On the opposite side of the plateau are distant mountains with deep ravines and gorges; then comes an abrupt and steep descent leading us right down to the river side, and we arrive at Nichitani, where we see annual cocoons, both white and green, very poor indeed. After this we leave the right side of the Ariganokawa, which we had followed hitherto for 10 *ris*, and cross over in a boat; the river is much swollen, and very rapid. We land at the village of Honna, where we see white cocoons—very poor. We enter into conversation with the master of the Kaisha. He says that for some few years past they have had no good seeds, not being able to pay the high prices which are now asked for them. He himself now rears half bivoltinis, half annuals; but the latter are no better than the bivoltinis. Some years ago the cocoons were much better than now. Yellow cocoons are the best they have now, and have always been good. We are hardly out of the village when we take boat, and cross again to the left side of the river. The road lies in a more level and flatter line of ground, mostly through cultivated land and paddy fields, but still with an amphitheatre of mountains all around us covered with timber from bottom to top; altogether a very picturesque country. We pass several villages; cocoons everywhere, mostly yellow ones, which are nearly all pretty good, the white and green ones being at the same time very poor. In the afternoon, the heat being tremendous, with hardly any breeze, we feel very tired when we come to the village of Tazawa. We are yet distant three or four *ris* from the place where we had calculated to pass the night, and it will be impossible to reach it before nightfall. We therefore make up our minds to stop to-night at Tazawa, and to-morrow we shall make a short day's work of it, so as to rest ourselves well before we undertake the passage of the Hachijiuritoge the day after to-morrow. There is no inn at Tazawa. We apply to the village *yakunin*, who consents very kindly to entertain us, although he has scarcely any room to spare, his house being full of cocoons and silk-worms. Part of the cocoons are already formed and laid in the sun to be smothered, but there are also quantities of them not yet taken off the bush. Those cocoons are on the whole only second rate ones. The *yakunin* buys his seed at Daté, and rears three cards. Has not such good seed now as he had some years ago. Ten years ago he could buy much cheaper seed, which gave him much better cocoons. He pays now six times as much for his seed as he did ten years ago, and does not get such good cocoons as he did then. The yield is not so good now as before. We give him the article to read about the exportation of seed, when he says that he is exactly of the same opinion, and that things would come to pass as it was therein said, unless something decisive was done in that respect. In the village they do not reel their cocoons, but sell them at Daté (Shendai) where they buy their seed. The buyers of cocoons prefer annuals because bivoltinis are not fit for fine silk, and consequently they do not rear bivoltinis in the village. The market for cocoons is not opened yet; but the price is likely to be about 8 *masu* for one *riyo*. They complain of having now too great a quantity of doubles, which was not the case at least to the same extent some years ago, showing that worms are now weaker than previously.

Wednesday 21st July.

The *yakunin* has been exceedingly kind and civil to us. We are, says he, the first foreigners who have come into this valley. He had often heard of foreigners, but had never seen any before, and is very glad he has become acquainted with us. This officer is an old man, probably 70 years of age. Just outside of the village we cross once more to the left side of the Ariganokawa; the path then follows the course of the river. At a village, one *ri* from Tazawa, we see annual cocoons, but very indifferent. One *ri* further we come to Shiwozawa where we see again plenty of cocoons; all annuals but only second rate or indifferent ones. The crop in all this valley is rather late; some of the educations are only just through; the rest not finished yet. There are but few bivoltinis in comparison with annuals.

The master of the Kaisha at Shiwozawa, to whom we put a few questions, says they have no longer such good cocoons as they had once upon a time; they get their seed from Daté; they know not why, but their cocoons get worse, softer and weaker every year; there are great quantities of weak inferior cocoons, (Kuzu); scarcely any bivoltinis are reared here, nearly all annuals, but withal very indifferent at present. They reel their cocoons full size, and sell their silk at Daté. They have not yet begun to reel this year and cannot therefore show us any new silk. At a distance of two hours walk from Shiwozawa, we come to the village of Kaminaosu. The master of the Kaisha has his house full of cocoons, and we draw him into a chat about them. He says that for three or four years past he has noticed that the quality of the seed he buys at Fukushima is getting worse every year; he has heard that there is a great deal of seed made for shipment at Yokohama, and he imagines that it is owing to this fact that they do not any longer get such good seed as they had previously. A walk of one hour and a half more brings us to Erikanaosu. There being no inn, we apply to the village *yakunin* for entertainment; but his house is so full of cocoons that he has no room to put us in and requests one of his neighbours to receive us, which the latter does very obligingly. This house is likewise full of cocoons and worms which are not yet at the bush; none but annuals are reared in this and the near lying villages, but *all* the cocoons we have seen are only middling. There may be a few pretty good ones; but by far the greater portion are weak, a good many doubles and a good deal of refuse *(Kudzu)*. We notice that to-day we have crossed the Ariganokawa six times from side to side, twice in boats, twice over wretched bridges, and twice on the shoulders of our baggage bearers.

Thursday 22nd July.

We are up before two in the morning and start at three, with six men to carry our baggage. We go up and down four or five chains of mountains, one or two of them so high that we find large fields of snow still unmelted. The road or path is in places most abominable, nothing else, in fact, but the beds of the streams; in other places a soft, black mud, in which we sink one foot deep, especially after showers of rain. It takes us thirteen hours of actual walking, not including stoppages, to accomplish the distance between Erikanaosu and Hioshigahira; and during all that time we see but two straw huts, in one of which we rest for an hour or two. Those huts are situated on the boundary of the Wakamatsu and the Niigata *Kens*, one on each side. There is no inn at Hioshigahira, where we arrive at 7 o'clock, we therefore resort, as usual, to the house of the village *yakunin* who receives us very politely and obligingly.

Friday 23rd July.

After Hioshigahira we find a very mountainous country, with abominable roads. The mulberry tree is very little cultivated; we see very few cocoons, all annuals and very bad. At 6 o'clock in the evening we arrive at Futsukamachi.

Saturday 24 July.

The valley is getting wider and the hills gradually lower. At one place there is a fine view, embracing at once the whole of the valley encompassed with hills, and in the distance the splendid, snow capped peak of the Hakai Ginsan closes the horizon amidst the clouds. About midday we come to a small town called Nitsuki. We find the mulberry trees abundant enough here about; but this year the weather has been unfavorable, and the crop of cocoons has partially failed. The master of the Kaisha, who is also a merchant of this place, tells us that the silkworm's eggs reared here come from Sinshiu. For the last seven or eight years the seed has been much worse than it was formerly; cocoons are not generally reeled off, but they make *mawatta* or floss silk of them, for which purpose they use all qualities of cocoons indiscriminately, with the exception of doubles. Bivoltinis are not reared, only annuals, but they yield very

Digitized by Google
UNIVERSITY OF CALIFORNIA

poor silk, and that is the reason for which they mostly make *mawatta*.

At five o'clock we arrive at Nagaoka, where we are at first refused admittance in three inns, on the mere account of our being foreigners. As soon however as we have found one, in which they consent to receive us, we are called upon by an officer of the Niigata Ken, who comes civilly to inquire whether we are provided with passports, and finding that such is the case, enters into conversation with us, and withdraws with polite compliments.

Sunday 25th July.

We start early; the road lies at first in a flat country; about two or three *ris* hence it ascends gradually, going through a chain of hills; from the top of the highest of them we get a fine view of the sea and the western coast of Japan and Hashigakizaki in the distance. There are in this neighbourhood numbers of petroleum wells, which are worked actively, if we may judge from the quantity of tubs we have seen in our way from Nagaoka. In the afternoon we are clear of the hills, and pass through an immense plain stretching before us, with high mountains far away on our left, and on our right, downs of sand with scarcely any vegetation. About six olclock we arrive at Kashiwazaki, and are again refused admittance in two or three inns, like yesterday at Nagaoka; fortunately the master of the Kaisha insists on our behalf and succeeds in getting proper lodging for us.

Monday 26th July.

We follow the road along the seashore for about one *ri* from Kashiwazaki. There we engage a boat which will land us with our baggage at a place within two *ris* of Takata, where we intend to stop to-night. The weather being very fine and the sea perfectly smooth, we arrive, in about seven hours' navigation, at Imaimachi; from thence proceed on to Takata, where we are very cordially and politely received at the Kaisha.

Tuesday 27th July.

We leave our polite host at six; the weather is very fine and the sun very hot. The road follows a valley bounded on the right by very high mountains, and on the left by moderately high hills. Although we are still at no great distance from the sea, we begin to see cocoons, some of which are tolerably good, some very indifferent. The country rises gently and gradually, and, as we ascend higher, the valley becomes wider, whilst coarse grass and brushwood replace the cultivated fields. At Sekiyama we stop only a few moments, having seven *ris* more to make to reach Murui, where we intended to pass the night. On our way we see scarcely any mulberry trees or cocoons, the latter very poor. The valley continues to ascend, but the road which had been hitherto tolerably good, gets very bad indeed. The heat is overpowering, and several of our *kago* bearers knock off, and have to be replaced by fresh men engaged in villages. At six o'clock we come to Nojiri, where there is a very pretty lake, well known to one of us, who attempted to swim across it five years ago. Night comes on, we light our lanterns, and at little more than ten o'clock we arrive at length at Murui.

Wednesday, 28th July.

At Murui there is but very little silk reeled. The landlord of the inn says the prices now paid for labour are not sufficiently remunerative for women. Probably he means that the silk which is now made is so inferior that the dealers offer but very low prices for it, and consequently it does not pay. The cocoons we see are weak; the silk reeled here is sold at Nakano. Taking a cross path from this we come in about three hour's walk at Asano in the valley of the Shinano, having seen very few mulberry trees or cocoons on the way, with the exception of a few yellow cocoons, half good, half inferior. From Asano, instead of proceeding to Nakano, we cross the river in boats, and take a path to the right, which will lead us to Suzaka. A peasant offers to show us shorter cuts, which we accept with pleasure. This man shows us into several houses, where we can see both cocoons and silk. At a village called Bandayo, a woman shows us her silk, which we find really very good and very clean. She has excellent cocoons; always makes seed for her own use, and never sold any. That explains why she has both good seed and good cocoons, whereas other people who have to buy their seed or their cocoons are discontented with the result. Some of the men of the village tell us that not long ago they had only annual cocoons, but seed having since become so dear, they have been obliged to resort to bivoltinis, of which they have now quantities, in lieu of annuals. In another house a man has got six girls reeling for him; the cocoons are good, but the girls are careless, and their silk is not clean. Another house again; a large quantity of good cocoons, but careless reeling. In those two latter instances the men make also seed for their own use only, and looking at the quality of the cocoons, ought to get as good silk as the woman mentioned a little higher, but that the girls who reel them off do not pay sufficient attention to their work, to the great detriment of their employers, who, themselves, should not be so lax in their superintendence. As we proceed on our way we see more girls at work. The cocoons are good enough, but the girls are careless and the silk is more or less foul. About sunset the view of the valley of the Shinano is truly very fine. We arrive at Suzaka at 7 o'clock. A silk merchant of this town, for whom we have a letter, is good enough to call on us at our inn and we have a long and interesting conversation with him.

"Ten years ago there was there far better silk than now; but the foreign buyers of Yokohama taking anything that was offered them, good or bad, at almost any price, the girls came to pay little attention to the reeling, and the silk became consequently very bad."

"Besides that, the quality of the seed has considerably degenerated within the last ten years. Ten years ago there were no bivoltinis here, but the prices of annual seeds having risen so much, the cultivators could not afford to buy any more, and bought bivoltinis instead, so that now they have fully 40 % of the latter."

"The bivoltini cocoons wind off far more easily than annuals; hence the girls are induced to make a mixture of the two sorts, in order to get thoough their work quicker, and the result is very bad silk. The current market price of good cocoons is now 8 to 8½ *masu* for one *riyo*. The Japanese Government having heard that Shinshiu Silk was very bad last year, has appointed, this year, inspectors, who go round all the houses where silk is reeled, to see that proper attention is paid to reeling, and to admonish the careless workers."

Thursday 29th July.

Whilst we were talking last night with Mr. ——, one of the native merchants of Yokohama came in, arriving from Nakano, and knowing him very well, we were glad to see him.

He is one of the most sensible of the Yokohama dealers, and occupies, or did occupy a not unimportant place in the Shosha. This morning we had with him a conversation on the subject of silk worm's eggs. He said he fully concurs in all that was written last June in the "*Japan Mail*" on that subject. It is a fact, said he, that the Japanese have sold all the best seeds they had, and now they have nothing left for themselves but bad or indifferent annuals and bivoltinis, which cannot make good silk. If prompt attention is not paid to the subject, the Japanese Silk trade will be lost.

It is certain, continued he, that the French and Italians have now got all the good seed that was to be had in Japan; they get now plenty of good cocoons, whilst we Japanese have hardly any left; silk becomes poorer every year.

In the course of the morning Mr. —— sends one of his employés to accompany us to a small filature of ten pans, belonging to two merchants; we find the cocoons very good indeed, all coming from one educator, who makes seed enough for his requirements, but never made any for sale. This rearer does not reel his cocoons, but sells them.

The machinery of the filature is simple, but efficient, and is moved by an hydraulic undershot wheel. The system of "croisure" well known in Italy, is on the single thread, by means of two rollers. All the girls here are not equally clever; some are yet learners; but there is one in particular who surprises and charms us by the excellence of her work, and we cannot help paying her a well deserved compliment.

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

The present market price of cocoons, such as those used in this filature is 7½ to 8 *masu* for one *rio*, and one *masu* of cocoons will produce 9 *momme* of silk, so that they can lay their silk down at Yokohama under $300 per picul all charges included.

We have a good many samples of other silk shown us by various silk merchants; they are all more or less foul, and we cannot help giving freely a not very favorable opinion of them. We have also shown to us a sample of the Nakano Filature. The silk is of a bright color, well reeled and very clean, but the nature is soft, and does not appear to us to be as good as that of Suzaka.

We also see a sample of full-sized silk, made for the native manufacturers of the place, with annual cocoons stained or inferior. We should like to have silk of that sort at Yokohama, and would give a fair price for it, upon which the merchant who has reeled it, says he will have some reeled off and send it to Yokohama to try the market.

We ask the Filature owners whether they are in the habit of sorting their cocoons, to which they reply that they always do so carefully. Some of the merchants who are with us assert that it is to the careful sorting of cocoons that the good color of the Nakano Filature silk is due.

In the afternoon we are invited into several houses to look at cocoons and silk. The only good cocoons hitherto, are those we saw this morning at the filature, reared by the man who only makes seed for his requirements, and for his own use; the others were all more or less second rate or indifferent. As for silk, we see very little good, the bulk being mostly foul.

It is worthy of notice that the color of the Suzaka silk is dull; that may partly come from the color of the cocoons themselves, which is generally dull; partly also from the water which is not so good here as at Nakano, and still less so than at Uyeda or Yoda.

Friday 30th July.

We find the country all round Suzaka completely covered with mulberry trees, planted in lines and ridges. We pass through several villages, and notice everywhere the progress of the second crop of bivoltinis, of which there seems to be a very large quantity. In some houses silk reeling is going on, but not much; besides, the girls are careless and turn out bad work.

We notice that with a large proportion of the annual cocoons, seed has been made for sale at Yokohama; it is the bivoltinis that are mostly, if not almost entirely, used to make silk with, hence the inferior qualtity that is so much complained of.

At Watauchi, the whole of the annual cocoons are thus used to make seed with. At Kawada, a little further on, the same.

We arrive at Matsushiro about noon. Early in the afternoon, an old man invites us kindly to come to his house and look at his silk and cocoons, of the latter of which he has a large quantity. The cocoons we find to be very good; he makes seed for his own use; makes also a little for sale, but very little only, and has always kept his best seed for himself.

Within the last ten years, the quality of the seed in general at Matsushiro has enormously declined, entailing a considerable loss to the rearers of silkworms.

Some of his silk is pretty good, and pretty well reeled, but not quite clean. The market price of best cocoons is now 8 *masu* for one *riyo*, they produce about 9 *momme* of silk to the *masu*, which will lay the silk down at Yokohama at a little under $275 the picul; present market price of silk 51 to 52 *momme* for one *riyo*, equal to $335 to $340 per Picul, laid down at Yokohama.

He sorts his cocoons as carefully as is done in any in any filature.

Before we left Suzaka Mr.———had given us a letter to Mr. K.——who has a filature of 50 pans, here; having sent the letter on by our servant, we go to the filature about one mile and a half out of town.

The machinery is very simple but efficient, and tolerably well got up. The system is "A la Chambon" with double twist, hardly so good, in our opinion, as that of yesterday's filature at Suzaka. The water in the pans is heated by steam supplied by a boiler, which, however, appears to us to be unsafe and dangerous.

The owners of the filature buy only the best quality of cocoons; present price 7½ to 8 *masu* for one *riyo*, which yields 9 *momme* of silk per *masu*: within the last few years, the best cocoons have become extremely scarce; it is therefore with the greatest difficulty, and by looking out everywhere, that they have been able to collect the cocoons they want for their filature. Some ten years ago, on the contrary, best and good cocoons were plentiful.

We are shown what they consider curiously good cocoons: one parcel from Saku, very good; another parcel from Matsu-shiro still better, and really very fine; but of the two parcels put together there is not enough to make one half a picul of silk. Those two parcels of cocoons came from men who only make seed for themselves, and never sell any, but only sell the cocoons produced from that seed.

On the other hand we see at the same time an extremely small parcel of extra beautiful cocoons from a man who had bought the seed of a dealer in silk-worm's eggs.

This exception, by virtue of its exceeding rarity, confirms the rule.

We see plenty of other cocoons, but all second rate; we also see many samples of silk, not filature silk, mostly very indifferent and foul.

In almost every house of the town, are to be seen bivoltini worms of the second crop passing through their stages. (Mr. K.—— is one of the silk inspectors appointed by the Government for this district.)

Dr. ——— another of the Government inspectors calls on us late in the evening, wishing to show us samples of of silk &c.; but it being too late to-day, promises to call again early tomorrow.

Saturday, 31st July.

Dr. ——— having called on us this morning, we enter into conversation.

He says that within the last ten years there has been a considerable deterioration in the quality of the seeds, and consequently of cocoons. Last year the dealers in seed lost so much money by their speculations at Yokohama, that in order to save further losses, they sold some of their best seeds to the native cultivators at low prices, and the consequence is that this year's cocoons are little less bad than they were in the previous two or three years.

He then shows us some of his silk, portion of which is really No. 1; other samples are not quite so perfect, but have small knibs in them, to which we draw his attention, telling him what he ought to do to avoid that defect.

He has no regular filature, but a small number of girls reeling silk in his house, whom he can watch over better than if he had a larger establishment. That silk is the best we have yet seen in Shinshiu, and is equal to that reeled at Suzaka, by the clever girl we have spoken of.

Having enquired, in reference to the remarkable extent of Government interference in the private affairs of the people which we witnessed, whether it would not be better to let the latter alone to take care of their own interests, he replies that the Japanese country people are a set of boors without any initiative, and with very little intelligence, who have so long been used to be guided and led by their officers, that, when left to themselves, they know not what else to do but cheat; and therefore it is for their own good that the government is obliged to keep them, as it were, in leading strings.

He, as a silk-inspector for this district, has a very ungrateful task to perform; but he does it for the welfare of the reelers, much to his own inconvenience. He finds it sometimes very hard indeed to find fault with, and admonish the girls, but in duty bound he has to do it. Most of the girls are reckless, caring little for any observations as to the faults they commit.

But if they had to reel silk for dresses of their own, they would be careful enough to reel properly and turn out good silk.

K. calls and brings a sample of splendid cocoons, of which unfortunately there are but one hundred *masu*, which shows how scarce best cocoons are. (These one hundred *masu*, at the rate of ten *momme* of silk for one *masu* of cocoons, will only yield a little over six catties of silk or lbs. 8 avoirdupois). His mother had reared the worms from seed made by herself, and for her own use exclu-

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

sively. We leave Matsushiro in the afternoon for Yashiro.

At the village of Iwanomura, where we see large quantities of cocoons and bivoltini worms going through their stages, we ask an old man whether there were always so many bivoltinis here as now. Some ten years ago, says he, we had very few bivoltinis, and a great many annuals. Now it is just the reverse, and even the present annuals are scarcely any better then bivoltinis.

At another village a little further on we notice that considerable quantities of annual cocoons have been used to make seed with, leaving only the bivoltinis to make poor silk of. On the roadside we see bivoltini cocoons drying in the sun; they have a very nice appearance, but are weak, and unfit for fine silk.

We arrive at Yashiro about 5.

Sunday the 1st of August.

We start at 5 o'clock, and in passing by Mr. U's house, call on him and find him expecting us. He is well known to most of the foreign merchants of Yokohama, where he is in the habit of coming every year.

He makes seed for sale at Hachoji, but never sold any at Yokohama; he says that this year's cocoons are not good, in fact, he shows us what he calls the best cocoons of the season, but they are only of a second rate quality.

"For the last ten years or so, the cocoons have gra-
"dually, considerably deteriorated, certainly owing to the
"sale of the best seeds for shipment abroad. The seeds
"having been so dear for some years past, dealers found
"their advantage in selling their annuals and replacing
"them with bivoltinis. The latter form, now, the
"greater portion of the silk crop in the neighbourhood,
"whereas ten years ago there were scarcely any."

"As the foreign buyers of seeds knew very well what
"they were about, they offered high prices for the best
"annual seeds, and refused to take any bivoltinis; thus
"the Japanese dealers had no other alternative but to let
"them have their best seeds, and that alone suffices to
"explain how it is that they are so scarce now."

"Thus for the sake of an immediate profit realised by a few dealers, the best breeds are now, as it were, lost to the country and replaced by an inferior article, which can by no means yield the same silk as they had before this. Shipments of silkworm's eggs began about 12 years ago."

The market price for cocoons here is 7½ to 8 *masu*, for best.

We pass through a great many villages on our way to Uyeda. There are bivoltini worms everywhere.

The valley of the Shinano is getting narrower; the road which lies now quite at the foot of the hills on the left, winds along the slopes which are cleared from brushwood, and planted with mulberry trees from bottom to top in long straight lines.

We look in every now and then at the houses by the roadside, and are sorry to see that with scarcely any exception, the girls are careless in their reeling, turn out bad silk, and leave plenty of knibs; but they saucily say that they do not care, and that the silk will sell equally as well.

At Sakaki, a small town about half way between Yashiro and Uyeda we notice again bivoltinis everywhere, we see some cocoons just finished; they are so weak that they can hardly bear to be touched.

We see silk in several houses, and very foul; the only exception being that of a girl at work, by herself, who reels pretty well. We meet by chance a merchant whom we knew formerly at Yokohama, and of whom we had bought a good deal of silk. He says silk is no longer so good as it was ten years ago. There were then scarcely any bivoltinis, but plenty of annuals; it is now completely the reverse. He says that the Government silk inspectors have lately gone round the town, and refused to permit a quantity of silk to be sent to Yokohama as being too inferior.

Proceeding on further, we come to one point where the valley is extremely contracted, leaving upon the mind the impression that a convulsion of nature clove the mountain in twain, and thus gave passage to the river. Almost immediately after that the valley gets much wider again, and presenting the appearance of an amphitheatre of hills rising one on top of the other.

We pass through a wonderful number of villages and small towns, and look into the houses wherever we see girls reeling silk.

We are sorry to say that we see none but indifferent or bad silk. At length, at nearly one o'clock, we arrive at Uyeda.

A merchant who must have known one of us at Yokohama, calls us by our name, into his shop. He deals mostly in silkworm's eggs. We tell him frankly how foolish it is of the Japanese dealers to sell, as they have done for ten years past, and more, their best annual seeds for shipment, keeping only bad or indifferent bivoltinis to to make silk with. Upon which the merchant admits no less frankly that it is really deplorable what a quantity of bivoltinis there are now in comparison with former times.

We call upon Mr. ——— who deals in silk, and also in silkworm's eggs for shipment at Yokohama; the latter are the produce of seed which he buys here; has some seed of his own, which he reserves for himself exclusively, and of which he never sold any. Shows us cocoons, the produce of that reserved seed, and likewise cocoons from seed he buys here in the open market. The difference between the two is very striking. Has no doubt, that if he had been in the habit of selling any of the seed which he keeps for himself, the quality of it would soon have degenerated.

He shows us various samples of new silk, which he buys in the market, one parcel of which has just been sold at Yokohama at $420, which is a high price for the present, we find it far from clean, and no better than that of last year in spite of his assertion to the contrary.

He also shows us samples of rather full sized silk, of excellent nature, annuals, he says 5 to 6 cocoons, but we doubt that; we find it however extremely foul. On our asking him, were there many bivoltinis here some years ago he replies that there were very few then, but now there are large quantities of them.

On our asking him how he explains that there are so many bivoltinis now, we can see plainly by his replies to this and various other questions, that he is indisposed to give us the information we require. At last upon being pressed he admitted that "if there were to be again better seeds than those which are to be had now, and more of them, the quality of silk would improve again; but it would be a matter of some years, say three or four at least;" thus implying that there is not enough good seed left in the country.

Upon his showing us a sample of what he says are the best cocoons in Uyeda, we tell him frankly that we cannot call them first rate. They are not so good as those produced from his own reserved seed, nor as those we saw at Matsushiro.

He says that merchants from Bushiu, Joshiu and other districts, have lately come to Uyeda to purchase cocoons, the present market price of which is 6½ to 7 *masu* for one *riyo* (we are much inclined to doubt the accuracy of this last statement, there being a great difference between the price just named to us, and those ruling in the other districts we have gone through).

As we are about taking our leave of Mr. ———, he makes a last remark to the effect, that as the prices given at Yokohama for seed are getting lower every year, the native dealers will soon find no more inducement to bring their silkworm's eggs thither, when the native rearers will have again better cocoons and better silk, in which hope we fully concur with him.

In the evening we are called upon at our inn by———, who had long been the head clerk or managing man of one of the large dealers of Yokohama. He says that when the export of silkworm's eggs first began, the peasants here, seeing that there was much money to be made by selling seed to the foreign merchants, said to themselves; "Let us first of all think of making seed
"for sale to the foreigners, such as they require, and
"what is left we will make silk of. And so for many
"years in succession they have been selling their best
"qualities of seed to the exporters of Yokohama, and
"have only kept for themselves those which the foreigners
"would not have."

"It cannot be denied that within the last ten
"years, or there about, since the exportation of
"seed began, silk has gradually become worse and

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

"worse. Formerly there were few bivoltinis in the "country; latterly the amount has been largely increasing "every year more and more, and, this year especially, "the quantity is lamentably large."

We then show him a sample of the Matsushiro cocoons, reared by K's mother, when he says that he has just bought 100 bales of cocoons here, and that in the whole 100 bales there is not (to speak honestly) one single cocoon equal to those we show him; they are the best cocoons he ever saw.

With regard to the market price of cocoons, he says we have been misinformed, when told that it was 6½ @ 7 *masu*. The correct price of the day is 7½ @ 8 *masu* for good cocoons, and 8½ @ 9 for second rate ones.

Monday 2nd August.

We purpose, this morning, to call upon a silkman for whom we have two letters of introduction.

We find him in a remarkably fine house, and, having introduced ourselves, are received civilly, but somewhat coldly at first.

We explain to him our desire to get as accurate information as we can about the silk and cocoons of the district, and tell him where we have gone to, up to this moment, in search of this.

He shows us *splendid* cocoons, as good as any we saw; they are produced from seed he makes for himself, and none of which he ever sold to anybody. Says that if he had ever made seed of that kind for sale, assuredly he would not have now the same good quality, but that it would have degenerated.

He is fully aware of the deterioration of Japan silk which has shown itself for some years past. In his opinion the degeneracy is due, in the first instance, to the excess of annual seeds sold for export. Another cause of it is that girls, when reeling off cocoons, mix annuals with bivoltinis, which fraudulent practice gives a very bad product. It requires good cocoons to make good silk, and you cannot make good silk with bad cocoons. (That truism almost causes us to smile.) The quality of Japan silk, he is sorry to say, is getting worse and worse; but with his own seed he is quite sure to make good silk. He has not yet begun to reel any of his best cocoons, and regrets therefore he cannot show us any silk made with them.

He shows us however, various samples of silk, the produce of cocoons he buys in the village, and the district round it, as also silk reeled by other people; all of them of a very good nature, but still more or less deficient in cleanness.

As our visit lengthens our friend loses gradually the coldness of manner which had at first characterised him; he introduces us to his old father, a fine, grey-haired gentleman, and to his children; obliges us to partake of refreshments on the score of the imprudence we should commit, were we to travel so fas as Uyeda on an empty stomach.

In a word, he shows us every possible civility; and when we take our leave of this fine family, he accompanies us to the limits of his township, saying that it would not be polite of him to part with us otherwise. We tell him in return how grateful we are to him for his kindness, and that we shall be most happy to see him at Yokohama as soon as he can come.

The situation of his house is very picturesque. There is from it a fine view of the valley through which the Yodagawa runs, before it throws itself into the Shinano, and also of the range of mountains to which belongs the Asama Yama, the lowermost slopes of which we can see below the clouds which conceal the summits from our eyes.

In the evening Mr.——takes us to look at the small filature which was erected two or three years ago by the Ono Bank, under the name of Idzutsuya.

The girls have finished working for the day, but the superintendent shows us some of the silk, which although made with inferior cocoons, is really beautifully clean and well reeled, in a word equal to anything we have seen in the course of our excursion.

Tuesday, 3rd August.

Although ready to start at a very early hour, we are kept waiting until five o'clock, by the man whose horse is to carry our baggage.

The road at first is the same as we took yesterday to go to Yenoma; but instead of crossing the Yodagawa as we did yesterday, we proceed on its right side.

The valley which we follow is not wide, but very thickly inhabited; at every ten minutes walk, rich and populous villages are seen, the people of which are everywhere busy with their second crop of bivoltinis.

We look into many houses where girls are hard at work reeling off; but look where we will the silk is foul, and the girls are careless.

At Kamimaruko, a small town we go through, a man calls us by our name, and invites us to his house, to look at his silk, which we find so inferior and foul that we go away in disgust.

About half a *ri* further we come to a little town called Koshigoye, where we see one girl at least who reels pretty well and turns out clean silk. The people at the Kaisha where we change our packhorse, say that this year's silk is a shade better than it was last year; but good cocoons are very scarce, and some years ago they were much better than now.

At noon we stop at Nagakubo for food and rest, and leave again at four for Wada.

We see plenty of cocoons in the houses of the villages, and plenty of bivoltinis still feeding. We see likewise many girls reeling, and look at their silk; it is invariably the same thing, more or less foul. We ask why this year's silk is so bad, when they nearly all reply that this year's cocoons are not good.

One girl says that she does not know why, but do what she will, and take whatever pains she can, she cannot reel her silk clean.

As we proceed on, through village after village, looking into several houses in each, the tale is the same. Everywhere foul silk and bad cocoons.

In one village a woman tells us that some years ago there were both good cocoons and good silk, but what is the cause of the change she cannot imagine.

Another girl, on our telling her that she turns out foul silk, says: Those are only second rate cocoons. "We suppose then that when you get first rate ones you will make clean silk?" "Oh!" says she, "prime cocoons are so scarce now adays, that we shall not be able to have any of the good silk."

At 6 o'clock we arrive at Wada, where we are to pass the night. There is a good deal of reeling going on here; but look where we will, the silk is everywhere foul, so much so, that this year's produce seems to us to be worse than last year's. And yet we are told that all the cocoons are annuals! What will it be when they come to reel off the bivoltinis, if they intend to reel them fine?

All the seed used in this valley comes from Uyeda. The valley is known by the name of Yoda, and it was reputed at one time, say ten years ago and more, to produce some of the best silk in Japan.

Wednesday, 4th August.

There is this morning a heavy mist hanging over the village and mountains, accompanied with a fine drizzling rain which induces us to wait until the weather clears up a little.

Meantime we go round the village, and into several houses; everywhere we find foul silk and indifferent cocoons. The people tell us they could make good silk, if they could but get good cocoons, but they know not where to get good ones. Their seed comes from Uyeda they do not make any themselves; sometimes when they have good cocoons they make seed for sale.

The mist and rain having cleared up a little, we leave at noon, intending, to-day, to go as far as Shimono Suwa; but barely half an hour after our starting, the mist comes down again, thicker than ever, with a drizzling and soaking rain.

As we go up, the valley gets gradually narrower, the villages disappear, and there are no more cultivated or paddy fields.

Bye-and-by there is no more room between the mountains, but for the river, which rushes through the rocks at the bottom of the valley, the road following all its windings, a few yards only above the river bed.

Let us say that the road is remarkably good for a

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

mountain pass; it is much the best of the kind we have seen hitherto.

When within half a *ri* of the summit of the pass, we are caught in a very heavy shower, like those which we met with on the Hachijiuri Toge, and are only too glad to find shelter in one of the last three or four tea-houses on this side of the mountain. Although it is yet early in the day, we decide upon stopping here till to-morrow morning, taking our chance of the weather clearing up in the night, whereby we might be enabled to enjoy the fine view for which this pass is reputed.

Thursday 5th August.

The rain is over, but the mist which had completely cleared away during a portion of the night, envelopes again the mountains and hides the valleys, so that we cannot enjoy the fine prospect we had hoped to contemplate.

We leave the little roadside inn, where we have been so kindly entertained, at eight. The summit of the pass is reached in twenty minutes; from thence the incline is at first much more rapid than on the side we have just finished climbing; the road making a thousand circuits round the sides of the mountains. The scenery is much of the same character as in the Yoda valley, and in two or three places we notice fine basaltic rocks. We arrive at Shimono Suwa about noon. We see numbers of girls reeling off; all bivoltini cocoons; all very bad, foul silk, all too fine for bivoltinis, which they reel four to four-five cocoons. One girl reels annuals, but they are as indifferent as bivoltinis, and she reels them three-four cocoons! Every where we are told that good cocoons are extremely scarce.

The landlord of the inn, and his wife, being perfectly well acquainted with silk, which is indeed the chief produce and industry of the place, we draw them into conversation. "There were here, some years "ago, far more annuals than bivoltinis; now it is quite "the reverse. They get the greater portion of their seed "from Uyeda, mostly white. Cocoons this year are "neither better nor worse than last year; really prime "ones are extremely scarce."

"With their best they make seed for sale; the indifferent annuals and bivoltinis they reel off. They sell part of their cocoons at Matsumoto; they only buy bivoltinis there."

"Do not know how it is that Silk is now so foul. Filature Silk is more free from knibs; but why girls who reel single handed in their own houses, turn out foul silk, they do not know. There is only one small filature or two at Shimono Suwa, but not working now."

Before leaving the town, we call upon a merchant for whom we have a letter of introduction.

The nature of his replies to our questions proves how unwilling he is to give true and correct information.

"All his cocoons are first rate!" and when requested to show us some, he says, "they are all given out to be "reeled. There has been a marked improvement in the "quality of cocoons and silk within the last few years;" etc, etc.

We take our leave of this merchant, and a few doors off, our eyes are attracted to a house where several girls are reeling off cocoons.

The woman who employs these girls, shows at least every disposition to reply truthfully to our inquiries. On our asking her how she finds cocoons now, compared with what they were, say ten years back:—

"At that time, says she, we had excellent cocoons; now "they are all weak and poor. She buys all her cocoons "in the village or neighbourhood. Does not rear any "worms; there were no bivoltinis here ten years ago, they "have been gradually introduced; now a days there are "plenty, far more of them than of annuals."

The road to Kami no Suwa follows at a short distance the shore of the lake of Suwa, of which we get a good view. In passing through several villages we look in at the houses by the way to see girls reeling; silk all very foul and cocoons indifferent.

We arrive early at Kami no Suwa, and have at first some difficulty to find an inn.

A police officer who calls to ask for our passport, struck with the unreasonable and unbecoming conduct of the landlady, obligingly sends one of his subordinates, who soon brings us to a place where we are at least politely received.

Friday, 6th August.

Kamino Suwa is a pretty large town, formerly the residence of a Daimio. There is apparently little silk reeled in the town; there is one filature lately erected by the Ono Bank under the name of Idzutsuya, but it is not working now.

It is in the villages round about the town which are very numerous, that the process of reeling, as well as the education of the second crop of bivoltinis, are in full activity.

As usual we look into numbers of houses on our way. Most girls reel off bivoltinis 4 @ 5 cocoons, as foul as possible.

Some of them who reel also 4 @ 5 cocoons call their cocoons annuals; but upon inspection they turn out to be but a mixture of annuals and bivoltinis. Silk very foul and very bad. When told that their work is full of knibs, they reply. "It does not signify, the buyers will not look at it so closely as you do."

We have not seen yet to day a single instance of passable or decent silk. It appears to be this year decidedly worse even than last year's.

In a house we see a lot of bivoltini cocoons just finished; the peasant had had before that a lot of annual cocoons, which being good, he made seed of, for sale, keeping the bivoltinis to reel off.

We arrive at Kanazawa at 11 o'clock. The day being fine, we have a good view of the whole range of mountains, including the Wada Toge; and as we could see nothing below us when we were surrounded by the mist, at the top of the pass, there is some consolation, at least, in being able to contemplate it from here, quite free of clouds, and resplendent with sunshine.

After this village the cultivation of the mulberry tree ceases almost entirely; the valley rising gradually, until we come to Tsutaka, where we stop for the night.

Saturday 7th August.

We continue to follow the same valley, which however is far narrower than yesterday. At Kihoraishi 1½ *ri* from Tsutaki, there are mulberry trees again; village people rear none but bivoltinis, which are now in their fourth or fifth stage, and yet remarkably small.

They get their seed from Uyeda. Ten years ago they had annuals only, but annual seed having become too dear for them, they have been obliged to resort to bivoltinis.

Some two or three *ri* further on, at a place called Hinoharu, we see a house built in the European style. It is an establishment created by the filature of Kofu, who have made round it extensive plantations of mulberry trees. There the Kofu filature rear silkworms.

In the spring they reared eight cards of annuals, at present there are two or three cards of bivoltini worms, which, although they have passed their fourth stage and are about going up to the bush, are wonderfully small, and of a curiously dark color.

There are in this establishment a man and his wife to superintend the education of the worms; they are very intelligent, and seem to understand their business well. Say that the annuals they reared in the spring, were a mixture of good and bad; the seed came partly from this neighbourhood and partly from Oshiu.

Ten years ago there were cheap seeds, and really good cocoons; but now, seed is dear, and cocoons worthless.

We have since heard at Kofu that the place where those plantations are, is not well adapted for the cultivation of the mulberry tree; there is apparently something in the nature of the soil which causes the leaf to impart to the worms the dark color we have noticed.

We arrive at Nirasaki in the middle of the afternoon; we see but little silk there, which is very foul and inferior.

We regret time did not allow us to visit two or three houses, where one of us saw, two years ago, small filatures of recent creation. The owners of them were then reeling Shinshiu cocoons which seemed good enough, and as the silk turned out was far from being faultless, it was a matter of doubt whether the imperfections came from the want of attention of the girls, or from the nature of the cocoons; and we should have been glad to see

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

whether there was this year an improvement or the contrary. It never was a question how far the quality of the cocoons interferes with the cleanness of the silk; but from what we saw and heard in many places, especially in the Yoda valley, we are strongly disposed to think that the foulness, which is more noticeable than ever this year, is one of the characteristic signs which mark the degeneracy of the breeds of Japanese silkworms. From Nirasaki we take jinrikishas, and reach Kofu in 2½ hours.

We send word on to the chief merchants of the place, whom we know personally, requesting them to call on us at the inn, which they are good enough to do on receiving our message.

After the usual civilities, we ask one of them, how cocoons are this year. "Tolerably good, perhaps a shade "better than last year. Silk this year will be pretty much "the same as last year. There is a considerable difference "between cocoons now and what they were say ten years "ago; they were then cheaper than now, better formed, "and had more silk in them."

"If we are to look at the true cause of the deteriora-"tion of the cocoons, one cannot but confess that the export "trade of Seeds, is the primary and most important one. "When the peasant has good cocoons he makes seed of "them, for sale."

"When rice is dear in Japan, the peasant sells his best "quality, and, getting a higher price for it, he contents "himself with the second to live on. It is the same with "silkworm's eggs. By degrees the best seeds have been "sold out of the country, leaving only second rate or in-"ferior ones; and, although people have made progress in "reeling, and in the education of their worms, it cannot be "expected that with the cocoons they have now, they can "produce as good silk as they did when they had a much "superior quality."

We may observe that our informant deals in silkworm's eggs for export as well as in silk.

After this informant had retired, another merchant (whom we know pretty intimately) says that this year's cocoons are not what the former represented them to be; on the contrary they are not good, they are very weak. All the silk reeled this season in Koshiu, is reeled too fine, is full of knibs, and still fouler than last year. (This fully agrees with what we have seen throughout our journey in Shinshiu and elsewhere.)

There can be no doubt in his opinion that the trade in seed is the main cause of the evil.

Sunday 8th August.

Mr.———having called again this morning on us, we ask him what proportion of bivoltinis there are here, compared with what there was ten years ago. He says that Kofu, being in an elevated situation, is too cold for bivoltinis to be reared profitably and therefore there are scarcely any here. But round about Suwa, and in the villages through which we came, the climate being milder, they can and do rear bivoltinis.

Ten years ago there was not one bivoltini at Suwa; but for the last five or six years, more and more of them have been reared, so that now you can scarcely see anything there but bivoltinis.

Another friend calls on us this morning. We have a letter for him; he was once a silk merchant; he is now a banker and money-lender. Says that this year's cocoons are not good. In Suwa and the neighbourhood of it and all the country going west, such as Inagori, Matsumoto, Hida, Kaga, &c., there are none other than bivoltini cocoons, and as they all reel fine, it follows that their silk will be very bad.

He says further; "At Kofu there are no cocoons *really No.* 1; all No. 2 and 3. Mr.———wanted to buy good cocoons for his filature of Kakorio, but was obliged to renounce it, and went to Uyeda instead." We show him the sample of Matsushiro cocoons which K———, gave us, upon which he says:

"There are no such cocoons here; most probably they came from a man who made seed only for himself and never sold any of it; had he sold seed for export, he certainly would not have now such cocoons as these." We are surprised, and pleased at the same time to find how exactly the man has hit the nail on the head.

We go afterwards to visit sundry small filatures, in the town, on the old Japanese system, but where a greater or less number of girls work together; 70 in one house, 50 or 60 in another.

We are forced to confess that in all these filatures, the silk turned out is very foul, and the cocoons indifferent; there is hardly a lot of good cocoons to be seen.

Then we go to visit the Kofu filature, got up in the European style, with Keller's system of twist on the single thread. There are 200 pans, the girls all dressed alike in a sort of uniform. The officers, (it is a sort of government affair,) receive us politely and show us through the filature.

They also show us both silk and cocoons, some of of the latter very good, from Tanaka, in the neighbourhood of Kofu.

They only make 40 to 50 catties of silk per day; silk generally very good, but not quite free from knibs and flue.

All the merchants we have met with here were extremely polite and kind to us.

Monday 9th August.

It rained heavily all last night; this morning the rain continues to pour down in such a way as to prevent our intended depature for Hachoji; consequently we stay here, in expectation of the weather clearing up.

We leave Kofu in the afternoon. The mulberry trees are far more abundant on this, than on the opposite side of Kofu. We see in many villages numbers of girls reeling off, but are sorry to say that everywhere the silk is foul; sometimes to an excess. At the little town of Utada, we notice a pretty large establishment with a quantity of cocoons laid out to dry, and stop to make inquiries. The cocoons are annuals, 2nd to 3rd rate, the market price of which is 9 *masu* for one *riyo*; they will yield about 9 *momme* of Silk to the *masu*. They reel them 4 to 4/5 for Yokohama; the silk is very foul and soft, and a great deal too fine.

They also show us a sample of Shimadas, of the kind which was formerly known under the name of Selles in London, that is reeled to 20 cocoons; it is not by any means so clean as some we saw at Kofu.

The market price of cocoons used for this class of silk, is 10 to 12 *masu* for one *riyo*, and they will yield much about the same quantity of silk as the hanks, say about 9 *momme* to the *masu*, which would lay the silk down at Yokohama @ $190 per picul all charges included.

We heard at Kofu, yesterday, that a parcel of Shimadas had just been sold at Yokohama at $360 or say $350, and that below the latter price the holders are not disposed to sell.

There are very few bivoltinis in this little town. There were none at all some years ago; it is only lately that they have been introduced.

They make a little seed for sale at Yokohama, and for that purpose use their best cocoons.

There is also a description of silk which is reeled expressly for the native manufacturers of Yamura; samples of it are shown to us; it is generally very full sized, some reeled at 30 cocoons.

Further on than Utada we continue to look in at many houses by the road side; a great portion of the silk we see is for Yamura, all of the kind above described.

That which is reeled for Yokohama is all fine and foul.

At Katsunomia, the inn which has been recommended to us, is full; but the landlord rather than he should turn us away, gives up his own room to us, where we are very comfortable.

Tuesday, 10th August.

It rained all night in torrents; it is still raining heavily when we get up, and we hear that a large bridge has been carried away on the road from this to Saruhashi. It continues to rain all day, we stay at the inn, in the sheer impossibility of going out of doors.

The landlord having cocoons which his daughter reels for him, shows them to us. They are decent second rate ones. This year's crop has been good. Reels all this year's cocoons into full sized silk for Yamura, say 20/30 cocoons.

The market price for cocoons such as he shows us was, till within the last few days, 10 *masu* for one *riyo*, but there are no more sellers at that price.

Ten years ago cocoons were far better than now.

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

Reels also Shimadas, the present market price of which is 60 *momme* for one *riyo* (equal to $275 per picul laid down at Yokohama.)

He shows us, besides samples of that silk for Yamura, full sized 20 (a) 25 cocoons, clean, wiry, nervous, which we never see at Yokohama; only the length of the reel is too short for European consumption. At the same price as that of the Shimadas, this silk would sell readily at Yokohama for shipment.

Wednesday 11th August.

We leave at 10.30 for the Sasuno-Togoi. The road has been ill some places considerably injured by the rain.

The cultivation of the mulberry tree assumes here a great development. The slopes of the mountains on both sides of the stream, which flows in the bottom of the valley, are entirely covered with mulberry bushes, and more ground seems in the way of being reclaimed for increased cultivation.

In all the villages we pass, women and girls are actively at work reeling silk for Yamura. At 2.30 we reach the summit of the pass.

From thence there is a pretty good view of the valleys on both sides, but nothing worthy of particular notice. In about one hour more we arrive at Kuronda.

We enter into various houses of the village, the whole of the silk reeled is again for Yamura.

We are surprised at the beauty of the silk we see everywhere. It seems as though the girls were vying with each other as to which shall turn out the best.

The cocoons are only second rate, seed from Uyeda; and yet the silk reeled off these cocoons is beautifully clean and even. Here we must pay a due meed of praise to the carefulness of the reelers. We have watched them attentively and been delighted with the attention they bestow on their work. The way in which they give the twist to the silk is alone a very interesting curiosity. We never see, or have never seen any such silk at Yokohama; very likely it is all done to order for the Yamura manufacturers.

But, were any of the merchants of these parts to send some to Yokohama, it would be sure to meet with buyers at once and at remunerative prices.

Here we see, not only the process of reeling the raw silk of the cocoons, but also of throwing it into tram and organzine, with native machinery, and even of preparing it for the dyepot, all on account of the Yamura manufacturers.

We reach Kamihanasaki, a little after seven o'clock, and not being able to proceed further, as a large bridge, just outside the town has been carried away, we stop here for the night.

Thursday 12th August.

We start early. The path we have to take in order to avoid the bridge which has been carried away, leads us in a circuitous way up and down a succession of hills covered with mulberry trees.

In a small village where we stop to give breathing time to the men who carry our baggage, we see the same sort of silk, full sized and clean, which is reeled for Yamura. That which is shown to us is reeled at ten cocoons; market price fifty-four to fifty-five *momme* for one *riyo* (equal to a little less than $320 per picul laid down at Yokohama) a beautiful silk. By and by we come to Sanuhashi.

This is market day; the little town is full of bustle and animation.

In all the villages we have passed, the same activity as we saw yesterday prevailed, women reeling in almost every house by the roadside.

We have looked into scores of houses, and always seen the same beautiful quality and kind of silk; only it is not everywhere of the same size; it varies from 8 (a) 10 up to 20 cocoons, but we have invariably found a remarkably clean, round, nervous thread, as good, in a word, as one wishes or may expect to see.

At Torizawa the master of the Kaisha kindly invites us to stop at his house, instead of going to the village inn, which we accept with pleasure. We see here specimens of that beautiful silk reeled for Yamura.

We notice also six or seven cards of seed which are hanging up to dry. It is seed that the master of the Kaisha has made this year for his own use. He never sells any of it.

We then ask leave to see his cocoons; we find them excellent, far better than any we have seen in the valley, which are all produced from Uyeda seed.

We leave again at 2 o'clock. The Koshiu Kaido, here and further on, is very interesting indeed; and in several places we enjoy very picturesque prospects.

After Torizawa the mulberry tree is still plentiful everywhere, and the women we see in the villages are reeling away with might and main. However we are told that the silk they make is no longer for Yamura, but for the use of the villagers themselves, who weave various descriptions of silk goods, to a considerable extent. Strange it may be; but we have noticed that since Torizawa, the silk reeled is no longer so clean as that which we had noticed before. The size and good nature are still the same; but there is less care and attention given to the cleanness and regularity of the thread, than in the former part of the valley.

In one house we see again silk reeled for Yokohama; we can qualify it in two words: filthy stuff!

At the village of Sekinoshiku, we find that the bridge on the river has been carried away. Owing to the swollen and rapid state of the stream, we have much trouble, and waste a great deal of time in crossing, in consequence of which we are obliged to stop for the night at Uwenohara, instead of Yoshino, as we had intended.

We go to the Honjin, or what was once the Honjin. The master of the inn is gone out, and his servant says that in his absence she cannot take upon herself to admit us.

Two or three people go in search of the master who returns, seemingly in a haste, to tell us that, having a Japanese officer in his inn he cannot receive us!

He offers to show us to another inn, but we soon find one without any assistance on his part.

Friday, 13th August.

We have to-day to accomplish a long day's march over the Kobu Toge to Hachojii.

We leave at an early hour in a thick fog which at times threatens to resolve itself into a drizzling rain; but it clears up after we have passed Yoshino. About 9 o'clock we come to a village which was entirely burnt down in December last.

The landlord of the inn at which we stop, says cocoons are no longer so good as they were some years ago.

From this we begin to ascend the Kobu Toge; at a little before 12 we reach the summit of the pass, which it has taken us two hours to climb, whilst we reach the foot of the mountain on the other side in barely one hour.

When in the level country we see cocoons again in abundance.

Part are reeled full sized and made up in Shimadas for the native consumers, of which kind we see some very good samples; another portion is reeled finer for Yokohama, but we find it invariably foul and inferior.

We arrive at Hachojii at 5 o'clock, the town is all hung with flags, flowers and lanterns; it is "Tenno Matsuri" day, and people are all carousing and enjoying themselves.

Saturday, 14th August.

We are anxious to return home as quickly as we can. We hire jinrikishas, and in six hours we reach Tokio; from there in fifty minutes we are at Yokohama after an absence of forty-three days.

We are afraid that you will find that this report of ours extends rather too far, and that our interrogatories present throughout too much of the same character.

We beg, however, to observe, that in bearing in view the object of our investigations we had to repeat in almost every village or town nearly the same series of questions, so as to be able to come to a conclusion on the "*tout ensemble*" of the facts which were represented to us.

We need not assure you that we had, from the first, divested our minds from any impression previously conceived, or from foregone conclusions.

We applied ourselves earnestly to discover the truth; and should our remarks appear to you somewhat gloomy,

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

or tending rather to the unfavourable side, we can only repeat that they are the true expression of the opinions of the various parties with whom we came into contact during our journey.

We shall only add that from our experience of the Silk Trade of Japan, as also from our observation, for several years past, of the declining quality of the produce of this country, we were not unprepared to hear reports of a regretable nature; but we are sorry to say that the state of things we have noticed has even exceeded the anticipations we might have previously formed.

We are, for instance, more convinced than ever; that it is to the excessive trade in Silkworm's eggs for export, that the degeneracy of the silk of this country is to be mainly ascribed.

The testimony of so many credible witnesses, as well as the daily examination of worms, cocoons and silk, in the districts we have gone through, leave no doubt whatever as to the present extreme scarcity of first rate seeds, and consequently of first class cocoons.

We have carefully noted the few instances we have met with, of parties who make seed for their own exclusive use.

It is truly deplorable to think what an infinitesimal proportion those privately reserved seeds now bear to those which are produced for sale. It is still more deplorable to consider, that, were those who have hitherto made seed for their private use alone, to part with any of it, their produce would be sure to deteriorate gradually, and, ere long, come to the same level as that of the seed dealers.

It must be acknowledged that when the French and Italian "grainers" first came to Japan in 1864 to buy Silkworm's eggs wherewith to replace their decimated breeds, the eagerness with which they bought the native cards, and the high prices they were disposed to pay for them, were to the native dealers perfectly irresistible.

The latter went on selling their best at prices ever increasing during four or five years, without reflecting that some day or other they would discover that they had, in fact, impoverished their country and brought it to the verge of ruin.

The total amount of silkworm's eggs, from all parts of Japan, exported during the ten years 1865-1874 rises in round numbers to 18,000,000 of cards, irrespective of the quantity of seeds for the use of this country, and which we estimate at about 700,000 cards annually; so that the production of seeds for export has been carried to between two and three times beyond, but not including, the quantity required by this country. Before the trade in silkworm's eggs for shipment began, there were only two provinces in Japan, namely Shinshiu and Oshiu, in which reproductions of seed were made for the use of the country at large. That was due to the fact, known from time immemorial, of these two provinces being far less exposed than other districts of the Empire to the attacks of the destructive insect the Uji, probably in consequence of the nature of the soil, or some other circumstances which have not come to our knowledge.

But when the country people saw what large profits they would derive from the sale of silkworm's eggs, even those who had never been in the habit of making any before, took the opportunity, and poured in seeds to Yokohama.

The loss from the Uji, which is inconsiderable in Shinshiu and Oshiu, is heavy elsewhere, especially so in some districts. From data upon which we think we can rely, we estimate the total loss from that source * for the whole of the Empire, at 40 per cent, which is by no means exaggerated.

If we add to the 18,000,000 of cards, 40 per cent or say 7,000,000, that makes up a total of 25,000,000.

It requires, on an average, a little more than one *masu* of cocoons to produce one card of seed, if we take into consideration the loss by Uji etc.; but, for argument's sake, we will assume that one *masu* of cocoons will produce exactly one card of seed. It follows therefore that it took 25,000,000 of *masu* of cocoons to produce the 18,000,000 of cards.

Those 25,000,000 *masu* at the low rate of 8 *momme* of silk for one *masu* of cocoons, would have produced 1,250,000 catties of silk in ten years, or say, catties 125,000 yearly, equal to over 1,500 shipping bales.

If we are met with the objection that the native growers could not have made use of the 18,000,000 cards of seed, if they had kept them for themselves, we reply that the quantity of cocoons necessary to make them was actually produced, with which silk might have been made instead of seed; it is only because the latter paid the growers far better than silk that they preferred making seed.

The 1,250,000 catties of silk which might have been produced in the ten years 1865-1874, even in calculating them on the basis of the high prices which prevailed from 1866 to 1871, say at an average of $600 per picul for the whole period, would have brought to the silkreelers about $7,500,000, whereas 18,000,000 of cards fetched at the port of shipment, at least $36,000,000, during the same time, taking them at the average figure of $2 per card, which is by no means too high an estimate.

In order to form a pretty correct idea of the net profit accruing to the dealers out of those $36,000,000 — it suffices to say that on the basis of *six masu* of cocoons for one *rin*, which we adopt purposely, although it is high, one card of seed would only cost 16 cents.

If we add to the cost 9 cents per card for charges, such as land carriage, packing, duty to the Government, commission to the Yokohama merchant, &c., &c., it all comes to 25 cents per card. The total cost of 18,000,000 cards being therefore $4,500,000, would have left to the producers a profit of $31,500,000.

No wonder that the native cultivators found it far more to their advantage to produce seed than silk, the actual profit on the cards shipped amounting to more than four times the market value of the whole of the silk that would have been turned out, had silk been made in lieu of cards.

However, as the cost price of the seed to the producer, as stated above, might seem to have been under-estimated, we are willing to assume, for argument's sake, the figure of 50 cents instead of 25 cents a card.

The cost of 18,000,000 cards would have then been $9,000,000, leaving still a profit of $27,000,000, to the dealers.

You will notice that we often refer to a period of ten years ago or more, as a point of comparison between the nature, quality &c. of the seeds and cocoons at that time, and what they are now.

We need only draw your attention to the fact that the export of silkworm's eggs from Japan commenced on a large scale in 1865, and has continued uninterruptedly till last year.

We were therefore anxious to ascertain whether the country people, both educators and reelers, had been sensible of a growing difference. It will no doubt appear to you, as it did to ourselves, that the gradual deterioration has been noticed almost everywhere in the various provinces we have gone through.

We may perhaps be charged with having been too severe in our general appreciation of the cocoons and silk that we saw. We can only say that we did look at them certainly with a critical eye, but we have conscientiously represented them as we found them, and we had no interest at all in describing them as worse than they really are.

At any rate, the astonishing unanimity of the country people in their statements of the growing deterioration both of seeds and of cocoons and silk during the last ten or twelve years, is to us a sufficient guarantee, that if we have erred at all, we have not exaggerated the position.

On terminating this report we come to the following conclusions.

A.—From the careful investigations we have pursued, throughout a journey of 235 *ris*, through five provinces, we are quite confirmed in our previous opinion of the degeneracy of the various breeds of seeds and cocoons.

B.—The deterioration in the quality and yield of cocoons seems to us to be progressive.

C.—Speaking in a general sense, and leaving apart the praiseworthy efforts of some spirited firms of merchants, private individuals or public companies, to improve the quality of their produce, we consider the quality of Japan

* The loss by Uji is much greater in making seed than when cocoons are reeled off.

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

silk of this season, taken as a whole, to be hardly equal to that of last year.

D.—The deterioration of silk is more apparent in some districts than in others.

That of Suwa in Shinshiu, for instance, is one which has left on our minds a most painful impression.

It is the more to be regretted, as the silk which comes from that part of the country is, or used to be, of a pure white color, which some years ago was particularly well adapted for the purpose of the Nottingham lace manufacturers. The breeds of annual cocoons which were reared exclusively, even less than ten years ago, in Suwa and its neighbourhood, have lately been replaced in a large measure with bivoltini breeds, which offer to the consumer nothing like the cleanness, evenness, tenacity and firmness of thread which are found in the annuals.

The Yokohama merchants have repeatedly tried to persuade the reelers to limit themselves to annual breeds, whenever they had to turn out a thread which is required to be at the same time clean, even, and nervous as well as fine, such as is wanted at Nottingham.

But all those representations have been made in vain; we have satisfied ourselves that this season 80 per cent at least of the silk from the district of Suwa will be reeled off bivoltini cocoons; and as it is all, or nearly all, reeled no fuller than 4/5 cocoons, and a great deal much finer still, it will be too weak, and therefore unfit for the purposes to which it used to be applied some years ago.

E.—The proportion of the best cocoons is reduced to a minimum. It is only amongst those who make seed only for their own requirements that we have found first class cocoons.

We have likewise found that cocoons produced from seeds made for the purpose of trade, are no better than second rate.

We see an evidence of it in a fact stated in letters from Italy and France, recently received here, namely, that the seeds exported last autumn, and hatched this season, have generally yielded indifferent cocoons.

F.—Owing to the export which has taken place, within the last ten years, of the best annual seeds, it has been found necessary to replace them with bivoltinis, the education of which has extended with an incredible rapidity all over the country. The latter are much inferior to the others in many respects.

As a matter of course, the best descriptions of silk have continued to be reeled from annual cocoons; but bivoltinis have been extensively used for what are called good medium and medium, and current qualities of hanks, either alone or mixed with annuals.

It follows that whilst the best qualities still retain, although in a less degree than formerly, a portion of their intrinsic merit, the medium and current grades have deteriorated to a far greater extent, owing to the radical change which has taken place in the very nature of them, by the progressive introduction of bivoltinis.

The best qualities of silk almost entirely now find their way direct to the continent of Europe; the medium and current descriptions are generally sent to London, and, either used by the English manufacturers, or re-exported to the continent of Europe as occasions may occur.

Unfortunately they have degenerated during the last three or four years to such a point, that they attract little attention on the part of the continental buyers, and their prices have fallen to unprecedently low figures, so that the British importers may be said to have lost far more than those of the other consuming countries of Europe by the degeneracy of Japan silk.

We are convinced that if the Japanese bivoltini cocoons were to be reeled full sized, that is to say not less than 8-10 to 12-16 cocoons, or even coarser, provided due attention were paid to the evenness and cleanness of the thread, silk might be turned out with them, superior in many respects to that of China (China produces only bivoltini cocoons); such as many descriptions of Oshios, Nagahamas, &c., &c., and which would sell as currently as the old Tussahs before they began to be adulterated in the way that drove them out of consumption in Europe.

But the native reelers of Joshiu and Shinshiu between others, have been too long used to reel fine silk for the Yokohama market, and they know (or feel the difference of price that would be made at once between fine and full sized silk.

They have continued to reel fine silk with bivoltinis, in spite of the change in the nature of cocoons, and have produced in consequence a foul, soft, nerveless, fluffy thread which can only be wound with difficulty, and is spurned by the throwsters of Europe.

Repeated complaints have been made to the native dealers, by the foreign buyers, but to very little effect.

As far as our personal experience in the interior goes, the girls pay very little heed to what is said to them, and imagine that we overlook the very faults of which we complain so loudly.

The only way to give the native dealers a useful lesson, would be to refuse to buy any silk which did not reach the desired standard.

We shall not close these lines without tendering to you and the Japanese Government our best thanks for the passport which enabled us to accomplish with every facility the purpose we had in view; we should be happy were you to consider the investigations we have pursued as throwing light on the present critical situation of the most important branch of industry in Japan.

We have the honour to be,

Sir,

Your very obedient humble servants,

J. M. JAQUEMOT.

RONALD C. JAQUEMOT.

To Sir HARRY S. PARKES,

H. B. M.'s Envoy Extraordinary and Minister Plenipotentiary in Japan,

&c., &c., &c.

SPIRIT OF THE JAPANESE PRESS.

THE PENSIONS OF THE SHIDZOKU.

(Nichi Nichi Shimbun.)

Among my thirty-five millions of brethren, there are more than four hundred thousand belonging, like myself, to the *Shidzoku* class, and to them I desire to speak, asking their advice, and that of all who bear in their hearts the same anxiety which I myself feel.

The reason why we *Shidzoku* are pensioners of the Government is that in the old days of the feudal system it was our duty to fight, and we discharged this well, nor were we ashamed of being *Shidzoku*. But, since the revolution, which overturned everything, we have become a class of useless dependents, and neither have duties to discharge towards the Government nor to the people. Thus there is no reason why we should rank above the common people, and why we should be receiving pensions. This feeling has been deeply impressed on my heart, and I am never free from it for a moment. When I look to the present circumstances of the *Shidzoku*, I find that nearly one half of them have surrendered their pensions to the Government, and have either become farmers, merchants or tradesmen, and in this manner many of them make their money and live independently, for which I ought to be and am grateful. Still I am not fully satisfied with it, because if we search deep down in the hearts of many of those who surrendered* their pensions, we find that they did not do this to save themselves from a shameful position, but with a view of carrying out some schemes of their own with the means derived from this surrender, while others acted from a desire to follow the fashions of the times. When I speak thus, it may sound as though I meant that it was wrong for the *Shidzoku* to throw up their pensions. But this is not the case. My fear is that, in very many cases, the money received from the Government in commutation of these pensions has not been put to the best purposes. Of course it is proper for the *Shidzoku* to surrender their pensions, for, in performing this act, they render themselves independent of the Government.

But why is it that these pensions are given to the *Shidzoku*? I think that the Government treats us with extreme tenderness, and feels sorry for us, thinking that

* The equivalent of the word 'surrender' is used here as it was above. But the writer refers to money received in commutation of the pensions.

Digitized by Google UNIVERSITY OF CALIFORNIA

should these pensions be suddenly cut off, it would revolutionize the whole life of the class. Doubtless the Government feels this; but an old proverb says "If you love your child, make him travel abroad," the moral of which is that you must not carry your love too far. The love of the Government for the *Shidzoku* is of the warmest character, but it has in it for that very reason something of a disadvantage to them, and this is my reason for saying that their pensions must be abolished. Doubtless this view will hardly be palateable to the *Shidzoku* or coincide with the feelings of the majority of them. But I will here state what have been the effects of the recent changes in my own province, Aidzu, and will try to convince the pensioners that my ideas are not far from reason.

Our *Han* was put under a ban for resisting the imperial forces at the time of the Revolution, but this ban was afterwards taken off by the gracious act of the Government and was endowed with 30,000 *Koku* of rice, its former assessment being 230,000 *Koku* out of which the pensions were paid. Let us say that the *Shidzoku* of the province amounted to 25,000, and that it was not diminished after the reduction of the provincial revenue from 230,000 *Koku* to 30,000. It appeared as if the *Shidzoku* must starve. But nothing of the sort occurred, nor have there been any who have harboured any seditious feelings. When the *Han* were converted into *Ken*, the pension of the Daimio was again reduced to 3,000 *koku*, and all the *Shidzoku* were to receive four *go* of rice per day per head. Again, in 1873 it was enacted that a certain sum should be given to the *Shidzoku* in commutation of their pensions, and this extinguished the charge. But no one has starved by these successive reductions, while many have since become very prosperous. Although there was some suffering at the beginning of these changes, this very distress laid the foundation of our prosperity at the present day, and taught men expewience of which they knew nothing until they had to earn their living. Reflecting upon all this, it seems as though the *Shidzoku* should not be distressed even if their pensions were to cease entirely. But if the Government continues to pay them, these men will never entertain the *idea* of earning their own living. Think well over all this matter, ye *Shidzoku!* Why should the farmers and merchants give their hard-earned money to the Government? It is in order that they may be protected. But is it not how your office to protect them, and you receiving money which you have no right to receive? Is not this a subject of shame to you? Even if the farmers and merchants pity you, and do not begrudge the money they contribute to your support, is it not your duty to decline it? There are some who say it is the duty of the Government to give you these pensions and therefore they cannot be stopped. But should matters continue as they are at present, when are the *Shidzoku* to become independent? O, ye *Shidzoku!* search your own hearts, ye will find the true answer there.

IKEGAMI.

RELIGION.

(Hochi Shimbun.)

Religion has so important a bearing upon morals that it is indispensable to the constitution of society. If the morals of all men were naturally pure, religion would be unnecessary. As Kanko said, "If the hearts of men were clean, God would protect them, even though they did not pray to him." Those who set their minds upon the acquisition of knowledge and wisdom, know that if they are virtuous they will be happy, and that if they do evil they will be unhappy; if they are industrious they will become prosperous; if indolent, they will fall into poverty. If these reasons pervaded every deed, the minds and lives of men would become pure and religion would be unnecessary to reform them. But when men who have neither knowledge nor wisdom know not the respective effects of virtue and vice, we must consider what can be done to awaken their minds and influence their conduct. This can only be done by religion, and it behoves us to consider why it can be done by religion alone.

Now, in the various religions there is both true piety and superstition, and it is very difficult to decide which religion is true. For instance, the Buddhist say that Christianity is a corrupt doctrine, and that believers in that religion are superstitious; and the Christians again say the same thing of Mahommedanism and the Mahommedans. No conclusion can be arrived at until God himself comes into the world and determines the question. What is true and what not true cannot be determined by man.*

But suppose we see a man kneeling before a stone and worshipping it, we say he must be foolish or mad to be praying to that which has neither mind nor sense. So, although the Buddhists have strange images of different gods made out of wood and stone, the materials of which they are so made is in no way altered. And in our Japanese houses we may see pieces of paper pasted up with the names of the gods printed on them. But they are nothing but scraps of paper and have neither power to reward nor punish men. It is therefore idle nonsense to believe in such things.

The ground-work of the belief of men all over the world is much the same. Although they may differ in certain points, all men believe in some Supreme Power, and, in times of danger, look towards heaven and implore God's protection, even though they pray before wood and stone.

But there certainly must be in the world some one or more objects which are worthy of worship, and, if so, it is the duty of men to worship it or them, and to seek out the most honorable amongst them. Paper, wood, stone and bronze are not things that men can put faith in, and therefore they must seek out some mighty and virtuous Being to govern them, and as that Being can neither be seen nor touched, we cannot tell how many of them there are. We may indeed conclude that there is only one such Being, for we all live in one world, and there is no reason for believing that Europe and America were created by one God, and Japan by a Japanese *Kami*; and although many beings may have assisted in the work, there must have been one Head, so that, even in this case, we may infer the unity of the Creator.

This one Creator must have made the world and all that it contains, and therefore must *have a right* power to govern us. He dispenses happiness to the good and misery to the bad, wealth to the industrious and poverty to the indolent. As to the next world, all is uncertain; but should there be such a state of existence, and the souls of men be indestructible, those of the virtuous will be rewarded and those of the wicked punished hereafter. Let men therefore believe in the Good and the True, and not in the False.

OFFICIAL SUMMARY OF NEWS FOR AUGUST.

(From the Government Gazette.)

5th—Rules and tables of weight and measures were published, and orders were given to the *Shi*, *Fu*, and *Ken* that offices where these can be obtained shall be erected in convenient places.

8th—The *Chihoh-kuan kwaigi jimu kyoku* (a department for transacting the business of the Local Officials' Assembly.) has been organized under the *Sho-in*.

The rank of officials of the *Shushi kiyoku* (a department charged with the care and compilation of the annals of the Empire) was fixed as follows:—

Soets (General superintendent)	equal to	4th rank.
First class of *Chosen* (collector)	„	5th rank.
Second „	„	6th rank.
Third „	„	7th rank.
First „ of *Kiyoshu* (assistant)	„	8th rank.
Second „	„	9th rank.
Third „	„	10th rank.
First „ of *Shoki* (secretary)	„	11th rank.
Second „	„	12th rank.
Third „	„	13th rank.
First „ of *Zenshi sei* (transcriber)	„	14th rank.
Second „	„	15th rank.

9th—Additions were made to the original rules, issued in October 1872, for the payment of the expenses of officials travelling on government business, and these additional rules come into force from the 15th of this

* The relative nature of human knowledge is here distinctly apprehended and fairly stated by the writer.—[ED. J. W. M.]

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

month. Regarding officials travelling in foreign countries, the rules shall apply from the day after they have been received.

12th—A department called the *Gisokukwa* has been organised under the *Sho-in*.

The Superior Court in Fukushima has been removed to Miyagi, but its jurisdiction remains as before.

14th—As it has been reported that, in some localities, human beings are sometimes given in mortgage as security for the payment of debts, this is declared to be strictly prohibited; with this exception, that the debtor may pay his debts by labour and service during a term which may be specified.

24th—Provisional rules have been established for retirement from the Navy, and are embodied in a book drawn up to that end.

28th—It has been ordered that whereas, until now, one per cent of the value of land in towns and cities was paid as the land tax, three per cent will now be levied in accordance with the ordinance passed in the seventh month of the sixth year of Meiji, and the Act will be enforced universally throughout the country.

30th—In view of the alteration of the Land-tax, inequalities may arise which would cause inconvenience in the *Ken*, *Kôri* and *Fu*, originating in differences in the value of land and fluctuations of its produce. It has therefore been notified to all the *Fu* and *Ken* that the general reform of the Land-tax should take place in the 9th year of Meiji (1876) if possible.

31st.—The Government-house of the Sakata *Ken* has been removed to Tsuruga-oka, Tagawa *Kôri*, in the province of Aizen, and the name has been changed to Tsuruga-oka *Ken*.

GHOSTS.

Then the forms of the departed
Enter at the open door.
LONGFELLOW. "*Footsteps of Angels.*"

It is the festival of *Bon*, the eve on which of all the long twelve months the spirits of the dear departed are permitted to return to earth, to hover near those who loved them, and to visit the cherished scenes of which their presence formed part before their journey to the other world began. Who amongst all the simple dwellers in this northern village has not upon his altar-shelf or in his heart some valued record of a friend or relative deceased, whose memory time has robbed of every blemish till the precious jewel shews no flaw nor crack; till the gem which scarce, perhaps, was rightly esteemed in the rough, has become a priceless brilliant, never to be parted with—a perennial joy, but most of all a joy upon this August eve?

'Twill soon be night, a moonless sultry night, when the winds are still and no sound can travel far. How are the ghostly visitors to find their way amongst the rugged hills which frown around the little hamlet? Their time is short, and should they miss the path they cannot come again for many weary months. The lonely widow and the sorrowing maiden, the weeping mother and the wifeless husband will live the coming year no whit the better if they fail to commune with their dead to-night. Then fire the underwood; pile blazing straw on burning leaves; hang lanterns at every door and window; keep open house all night. Let not the lamps, however, shew too bright a light, for the spirits love to enter unobserved. A pale cerulean tint, a gentle convolvulus color suits their fancy best. A weary way they have to travel, have those silent shades, nor may they linger on the road for food or drink; and so it is the custom in this secluded village to entertain these visitants with rice and vegetables and such-like simple fare. The rice pot, as is but becoming, must be scoured and polished brightly, and the rice cooked upon a special furnace. For so these people make shift to kill their fatted calf, where, alas! there is no fatted calf to kill, and one meal differeth not from another, year in, year out. These furnaces must be made of red and tenacious clay, which, when properly manipulated, becomes a firm cement-like mass. By all this little trickery the feast is made to differ from an ordinary meal and to do duty for a banquet. Before each door and beside a fire of hemp refuse is placed one of these little furnaces. It should be finished and in working order ere the sun has dipped behind the western hills, and its roseate glow has faded from the deepening twilight.

And now the bat is on the wing and the dew has commenced to fall; a few short moments more and night will have drawn her sable curtain over hill and hamlet. Most of the fires are glowing and the rice is nearly cooked. Haste ye, such as have not yet built up your furnaces, lest night should find you unprepared and the hungry spirits come to find no welcome. Ah me! the day is gone, and one poor helpless watcher's work is vain. How sad she looks—nay, what despair is in her face! Beside her sits her mother, old and blind and childish, smiling a happy foolish smile, and talking to herself. She cannot help to lighten her despair. Her hands are soiled with mud. Before her is a shapeless heap of earth, and by her side a burnished cauldron; but the rice within is scarcely colder than her heart, for she knows the spirit of her lover is about her and she hath not wherewithal to offer him. Ah! foolish virgin, your lamp is out; and whilst you fain would purchase oil and trim it, behold the bridegroom is come and—gone!

* * * * * * *

And now the street is deserted and the villagers have retreated to their houses—all save two women. The flicker from the expiring embers of a fire lights up their faces. One is old and wrinkled and has fallen asleep upon the shoulder of the fair young girl beside her, whose attitude and expression denote that for the present she has indeed fallen into the "depth of a divine despair."

Correspondence.

THE ENGINEERING COLLEGE.

TO THE EDITOR OF THE "JAPAN WEEKLY MAIL."

Imperial College of Engineering,
Tokio, 23rd September, 1875.

SIR.—In your paper of last week I observe an article on Public Works, signed "R. H. B." Into the question of the management of Public Works, I will not enter at present, but I hope you will allow me a short space to notice a few of R. H. B.'s remarks on Engineering Education in general, and on this College in particular.

As far as I can gather from the article, the only fault which is found with the programme of this College is, that too much time is taken up with theoretical studies to the neglect of the practical part of the students' education. If this were the unanimous opinion of men who are thoroughly well qualified to judge of such a question, I would not have the slightest hesitation in modifying the course to suit their views, but I have received letters from men who stand high in the profession, and without exception they agree with the arrangement which I have made. If any alteration is suggested, it is to make some of the theoretical subjects more complete, but not one of my correspondents proposes that any of these subjects should be curtailed.

For instance: Mr. Lewis Gordon, who is as distinguished in practice as in theory, says, "I have read the whole of the programme—it is wonderfully complete and I see nothing too ambitious in the Technical courses." Mr. John Anderson, late Superintendent of Woolwich Arsenal,—a man who rose from the ranks of working men, and therefore likely to know the relative value of theory and practice—suggested that the technical course in mechanics be extended.

I might give you similar opinions from other men quite as qualified to give advice, but I think the following extract from the *Engineer* embodies all that the others have said upon the subject.

"As an example of what a Government engineering college should be, we cannot do better than cite the institution at Tokio in Japan. The Japanese Government are in just the same position as that of India. They want engineers, and they have established a college to supply them.

"The calendars of this college for 1873 and 1874 lie before us, and they contain a great deal that is eminently suggestive. The Imperial College of Engineering was

Digitized by Google Original from Imperial College of Engineering

established at Tokio in 1873. under the orders of the Minister of Public Works, with a view to the education of engineers for service in the Department of Public Works."

"All the students are Japanese and all the professors are British. The Principal is Mr. Henry Dyer, C. E., M. A. University of Glasgow, while the Professors of Natural Philosophy, Mathematics, Chemistry, Drawing and English Literature are all men of high attainments."

"At the end of the calendar for 1874, examples of the examination papers are given, and although they are easy enough, it reflects no small credit on students who acquired their information through the medium of a foreign language—English—that they appear on the whole with much credit to themselves and their instructors."

"The principal reason we refer to this College here, is, to show the admirable manner in which it is proposed to combine theoretical with practical instruction."

"The course of training will extend over six years. During the first four years, six months of each year will be spent at college, and six months in the practice of that particular branch which the student may select. The last two years of the course will be spent wholly in practical work. By this alternation of theory and practice the students will be able during each working half-year to make practical application of the principles acquired in the previous half-year The system of instruction will be partly what is usually called professorial, and partly tutorial, consisting in the delivery of lectures, and in direction and assistance being given to the students in their work."

"Can anything be better than this, or more likely to produce the class of men that is wanted? We regret that we have not space to describe more minutely an institution which has much to recommend it. We regret still more that English youths have no such facilities for learning their profession as those afforded by the Japanese Government."

In drawing out the course for this College, the first thing to decide was the greatest length of time that could be spared for the students' education.

Taking into consideration the pressing wants of the country and the well known anxiety of the Japanese for some practical results, I felt that if we extended the course beyond six years, it might lead to dissatisfaction. For the first two or three sessions the standard of examination will be comparatively low, but I have not the slightest doubt that at the end of the sixth year, we shall be able to turn out men who will prove useful to the country.

The length of the course fixed, the next thing was to determine the relative time to be spent at theory and practice. The above extract from the "Engineer" shows how I arranged it, and yet "R. H. B." says that he cannot resist the conclusion that too much importance is given in the Engineering College in Yedo to theory.

If I had proposed to take up all the time in theoretical studies, I might have been accused of giving too much prominence to theory, but with the present arrangement I refuse to admit the justness of "R. H. B.'s" criticism, the fact being that I know of no College in existence where so many facilities are given for practical work.

Perhaps it may surprise "R. H. B." when I say that I had previously quoted to my colleagues some of the extracts from the report of the Institution of Civil Engineers given by him towards the end of his article, in order to justify my proposal not to attempt too high a theoretical standard for a few years, as I was impressed with the necessity of turning out practical men in the shortest possible time. It is evident from "R. H. B.'s" article that he is quite ignorant of the facilities we have for practical work in connection with this College. Does he know that we have well equipped laboratories where what may be called experimental engineering may be successfully carried out? Does he know that we are forming a museum, where we are collecting models of machines and engineering works, specimens of materials and manufactured products, all of which the students will have opportunities of examining? Does he know that in connection with the College we have one of the largest (in a short time it will be the largest) mechanical engineering establishments in Japan, where those students who wish to become mechanical engineers will have every opportunity of learning the details of their profession? Even the Civil Engineers will spend a great part of their time here, as "R. H. B." need hardly be informed that now-a-days a man who is a good mechanical engineer has nearly learnt the practice of his profession as a civil engineer.

In the other departments special facilities will be given for learning the practice of their profession, so that at the end of their sixth year, there is every prospect of the students being able to exercise their judgment, instead of being bound hand and foot to a book of formulæ and a copy.

To those who pass a satisfactory examination at the end of the sixth year, I proposed to give the degree of "Master of Engineering." The examination will take place in the principles and practice of the work on which the students have been engaged. Strictly speaking it is a mistake to speak of an examination in the practice of engineering; it should rather be called an examination in certain things pertaining to that practice.

No college can undertake to examine in the practice of any art; the proficiency of the students must be certified by the engineer under whom they serve, and who has observed their aptitude for such work. The Calendar says, "The position of the student in the service will be determined by the final examination at the end of each course, as well as by his general aptitude for business."

"R. H. B." jumps to the conclusion that all the students will be immediately placed in charge of the execution of works on their own resposibility. Nothing could be further from what is intended.

In some cases where the students have spent a good deal of time on some special kind of work, they may be appointed to take charge of such work, but as a rule they will be under the supervision of some foreign engineer until they have obtained sufficient experience to undertake the work on their own responsibility; but, as I said, the general aptitude or inaptitude of the students for business will be taken into account, and if found necessary they may be appointed to very subordinate positions.

"R. H. B." says the possession of a degree "implies a capability to design and conduct the execution of engineering work." I would ask him to look over the Report of the Institution of Civil Engineers, and see if the diploma given by any college in Europe pretends to do anything of the sort. As a rule the diploma is given when the student leaves college, before he has spent any time in practice, and it simply certifies that the holder is in possession of such knowledge as will enable him, when he attempts practical work, to carry it out in an intelligent manner.

I admit there is something anomalous in the name "Master of Engineering," but the same anomaly exists in other professions—for instance, "Master of Surgery" is given to a medical student when leaving college, but it is never considered to mean that its holder is thorough master of all the principles and practice of surgery, it merely signifies that he is in possession of such knowledge as will enable him by practice to master all the details of his profession.

"R. H. B." has quoted Professor Fleeming Jenkin to show that the course for Civil Engineers is too extended. If he turns to page 8 of the same report he will find the programme of Professor Jenkin's class, and will see that the list of subjects is practically the same as what I have proposed, with this difference, that his is more advanced. To show you, however, that Jenkin's course is not above Japanese students, I know of two who attended his class in Edinburgh, and they were able to take places considerably higher than the average students. I should advise "R. H. B." to study this report of the Institution of Civil Engineers, and he will see that what I have proposed is the merest elements of what is attempted on the Continent. When he finds us setting such examination papers as are printed at page 123 of the above mentioned report, I will give him permission to say that we give too much attention to theory.

In speaking of the Cooper's Hill College "R. H. B." says, "he is inclined to the opinion that such institutions, by lessening the time which young men have to devote

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

to the practical part of the profession, and by destroying their taste for it, will more or less tend to lower the high reputation in which English engineers stand in all parts of the world." It seems almost a waste of time to argue with one who holds such opinions, opposed as they are to those of every right thinking man. If they had been uttered two hundred years ago, they might have been forgiven, but in the present day when every small village has its Mechanics' Institute, and every large town its Technical College, they can only proceed from one who has some special reasons for holding them.

"R. H. B." quotes George Stephenson, Brindley, Telford and Smeaton as examples of what can be done without theoretical knowledge. Every one admits that these men by their mechanical genius were able to accomplish wonders, but none lamented more than themselves their ignorance of mechanical laws, and they never missed an opportunity of improving themselves in the theory of their work.

Does "R. H. B." not know how much George Stephenson regretted his deficient education—how, when a boy, he saved his three pence a week so that he might learn penmanship and arithmetic—and that his determination to procure a first class education for his son—the want of which he himself felt—was what spurred his ambition, and no doubt contributed to his success?

Brindley, when designing any new work, was in the habit of retiring to bed, and there arranging his plans, a system which "R. H. B." might advise to be tried with the Japanese. If Brindley had even known the elements of arithmetic and mechanics, he would have been able to have done double the work with less trouble.

Telford and Seamton seized every opportunity of improving their defective education, and none would have been more willing than they to admit the practical utility of a thorough grounding in the principles of their work.

It seems almost unnecessary to enlarge further on this part of the subject, but I will shortly mention another engineer, celebrated for building light-houses, Robert Stevenson of Edinburgh, of whom "R. H. B." may have heard. If so, is he aware that this Robert Stevenson, when building the Cumbrae Light-house, spent every spare moment he had in going to Glasgow to obtain instruction in mathematics and mechanics at the Andersonian University? Does he know that when engaged on a light-house on the Pentland Skerries in Orkney, he came to Edinburgh University in the winter and studied mathematics, natural and moral philosophy, chemistry, natural history, logic and agriculture? I have no doubt R. H. B. thinks this time was sadly mis-spent, or at least would have been spent to greater advantage in practical work; but Stevenson thought otherwise, and I am very much inclined to agree with him.

I would have "R. H. B." remember that other branches of engineering are taken up in this College besides civil. Would he also apply his arguments to the training of mechanical engineers? If so, then I have small hope of future progress in that department. Would Watt have made any of his discoveries if he had not previously studied the laws of heat and principles of mechanics? I very much doubt it. Even the small improvement that has taken place in the steam-engine since his time has been the result of theoretical investigation, backed up of course by practical experience.

To-day I found a striking example of the value of a knowledge of theoretical mechanics to a mechanical engineer or mill-wright. I was taken by a Japanese official to see what was considered a wonderful machine, which was intended to revolutionize the world and supply any amount of power out of a small pond of water. The apparatus consisted of a water-wheel, which worked on one side a set of pumps, and on the other a set of the ordinary Japanese stampers for cleaning rice. The action of the machine was intended to be as follows:—the water-wheel was turned by hand sufficient to effect a few strokes of the pumps,—these discharged the water into a vessel at a considerable height, and this again fell upon the water-wheel in the ordinary way,—which in turn supplied power to drive the stampers. The water passed from the wheel into the pond to be used over again, thus intending to realise the Perpetual Motion, the dream of school-boys and philosophers of all ages. The practice of this man was excellent, but his theory was deficient: he was considered a mechanical genius by his neighbours, but now I think he is a wiser, as well as a sadder man. How much trouble and expense would he have been saved, if he had known the elements of the principle of the Conservation of Energy. Does "R. H. B." think that this man's education would have been complete if he had been able to read a book of formulæ? If so, I would recommend him to study the Patent Office list, where he will find examples of frequent occurrence in which this principle of the Conservation of Energy and others equally important, are continually violated. Professor Rankine remarks:—"Such men too often spend their money, waste their lives, and, it may be, lose their reason in the vain pursuit of visionary inventions of which a moderate amount of theoretical knowledge would be sufficient to demonstrate the fallacy; and, for want of such knowledge, many a man, who might have been a useful and happy member of society, becomes a being, than whom it would be hard to find anything more miserable."

If "R. H. B." looks a little further on in Fleeming Jenkin's lecture which he has already quoted, he will find the following:—

"The younger men in factories have to design machinery frequently of one type, but nevertheless varying so much from year to year, that a sound knowledge of mathematics, mechanics, and physics, is of the greatest importance to them; consequently, as draughtsmen or designers, we find foreigners employed all over the country. And, *à priori*, I would rather engage a foreigner to carry out my ideas in designing a new machine than a young Englishman of equal standing, especially as most of the foreigners complete their education by working in a shop for a short period."

It is impossible to follow his logic when he tries to prove that what is required for mechanical is not so essential to civil engineers—in fact, he is inconsistent when he says further on "I wish my engineering pupils to owe quite as much to Professors Kelland, Playfair, and Tait as to me."

I cannot agree with "R. H. B." when he says that in Japan nothing new in the way of engineering is likely to be required. If by 'new,' he means new in principle, he is probably correct, but I think that Japan offers innumerable opportunities for new arrangements and designs, both in civil and mechanical engineering.

If these designs are made by a mere copyist, we are likely to see even more wonderful productions than the specimen I have mentioned above, where each part may be correct when taken by itself, but the general arrangement contrary to some of the most ordinary laws of mechanics and physics.

"R. H. B." remarks that "in the ordinary practice of the profession few questions of theory arise which have not already been worked out by such men as Fairbairn Rankine and others, and have been reduced to formulæ by them—the application of which is simple in the extreme." He is rather unfortunate in the names he selects, as Fairbairn was not a theoretical man, he was entirely practical. The little theory found in his books was not given by himself, but by a mathematical friend, whose assistance he always acknowledges.

Fairbairn's favourite theme at meetings of Mechanics' Institutes was his own defective education, and the necessity for the study of theoretical subjects to obtain success in practice. Rankine again, though his works are master-pieces of the kind, has not reduced his formulæ to such simplicity that the "veriest tyro in mathematics" can understand them, as "R. H. B." would have us believe. I should not like to trust the work designed by such a tyro.

I have far exceeded the limits which I intended for this letter, and will conclude by inviting "R. H. B." to Yedo, that I may shew him what we have done and what we propose to do, that thus he may be in a position to treat his subject with a greater amount of justice.

With this I send two copies of our Calendar for the current year, one of which you may present to "R. H. B."

I am, Yours very truly,

HENRY DYER.

SPECIAL SERVICES IN CHRIST CHURCH.

To the Editor of the "Japan Weekly Mail."

Sir.—A great number of the English-speaking residents in Yokohama have been unusually excited by the recent advent of an English clergyman, by his preaching in the English Episcopal Church last Sunday, and by the part he has subsequently taken in holding Special Services in the same building. Some of them have been at the trouble to give vent to their feelings in letters to the daily press; and they have in this form discussed with more or less animation his object in coming, his manner, appearance, and doctrinal delivery—nay, surprise has even been expressed that public notice had previously been given by his friends of the services he was induced to conduct.

It must be admitted that the publicity sought for these services was thoroughly successful, and that no arrival of a stranger in Yokohama has ever been attended with more marked notoriety.

Had the preliminary hand-bills and the advertisements been intended to herald the advent of a troop of equestrians or a corps of ballet-dancers, no one would probably have taken the slightest exception to the proceeding, but that recourse should have been had to so commonplace a means of announcement, on behalf of a preacher of the Gospel, was more than the critics in question could be expected to stand.

Strange as it may appear, it has not been, as a rule, the Church-going people who have raised this special objection, but outsiders, who, like "Sceptic" and "Flaneur," denounce the whole proceeding as an outrage on decency. They are heart-broken at the cruelty of an English vicar's deserting his own flock and wasting their or his substance in foreign travel. They wonder why he should have entered upon such an undertaking. They even proceed in their righteous indignation to doubt his identity!

That a clergyman should travel, that he should undertake mission work, that he should presume on such a pretence to visit Japan, are suppositions too dreadful to contemplate. No such thing had ever happened here before, and, if they could help it, should ever happen again. Of the existence of much local excitement, there is no reason to doubt, still less that hostility and indignation greatly prevail in the minds of many persons. The only question is, what is the cause? What is the reason for such a display? Mr. Douglas might have travelled to the end of his natural life—he might have passed through Yokohama round the world once every year, or as often as he might have found it convenient, for all these people cared either for him or his parishoners: but that he should have announced himself as an Evangelist, and have given one week of his time to preach the Gospel in this place to those who needed it, is the sole foundation for all this commotion.

Preach the Gospel! What Gospel? Anything new, anything unusual? No! only the old story—the same that has been proclaimed for the past 1,800 years, the same that is now preached every Sunday in nearly every open port in Japan. It is evident, therefore, that mere preaching of the gospel is not the cause of the unusual irritation. Many places for public worship are regularly open for gospel services, and they call for no commotion or excitement; they are decorously conducted without any fuss; those persons go to them who so incline; those who don't, stay away. Unfortunately public worship by Protestant Christians has for long had a tendency to subside into a decorous formality, men are thoroughly satisfied with themselves and the great enemy of souls looks on with approval. But let a trumpet sound and men's consciences are roused. A special Evangelist has come from headquarters to ask what is doing in the Lord's kingdom in this advanced out-post, the inhabitants of which are absorbed in the affairs of this life, surrounded by heathen, and only too familiar with heathen customs, ignorance and vices.

Ignorance and vice, we are sorry to say, are only too common in every part of the world, notwithstanding all the preachers, the philosophers and the reformers of morals, and it needs all the restraints of religion, law and good government to keep the open display of them within the slightest bounds. As time goes on, every means are being had recourse to for lessening such evils, and no efforts have been found so efficacious toward this end as appeals to men's conscience. You may use the restraints of law or you may enforce the benefits of education, but unless these are accompanied by the higher appeals to man's better self, you make little way towards substantial improvement. It is this appeal, so effective and yet so repugnant to human nature, that has now reached us anew, and, as it were, fresh from England. Men are reminded in forcible terms of the lessons of their youth. They are called upon seriously to consider their ways, and they are urged to compare their present condition with that of former years, and to extend their compassion towards those around them, who never have had the advantages bestowed on themselves—advantages which ought to render them only more thankful and more considerate.

Sir, it is by no means a bad sign, but a very good one, that this hostility has been displayed. Men may talk loud and make a display of anger they do not always feel, but doubtless there are individuals who do feel and do fear. They hate to be reminded of their condition, they fear to be disturbed in their self-satisfaction.

Mr. Douglas is now here giving gratuitously his time and his labour in the good cause. He has made a powerful impression in this place, and will shortly leave behind him many thankful and sympathizing hearts, and whenever he resumes the sphere of his regular duties in happy England, he will be justified in saying to his and our fellow countrymen that he found in the Eastern seas many who received him gladly, many to whom his coming was as a message from heaven, and many who, though alarmed at this advent of an Evangelist among them, may yet hereafter have cause to rejoice at the words he was permitted to speak during his short sojourn.

I remain, Sir, a humble
Christian.

THE DESCENT OF FUJIYAMA.

To the Editor of the Japan Weekly Mail.

Dear Sir,—A correspondent of the *Japan Herald* having, by a rude and offensive insinuation, thrown doubt upon a statement in the *Japan Weekly Mail* of the 7th August last relative to the accomplishment of the descent of Fujiyama, from the summit to Subashiri, in two and a quarter hours, inclusive of some short time lost in mistaking the path, I have much pleasure in offering your readers my opinion of such an undertaking.

Previous to the publication of the letter alluded to, I had entered into a moderate wager to proceed on foot, accompanied by one or two *guides*, but without other assistance, from the gateway of Subashiri to the summit of Fujiyama and back to the gateway of Subashiri. The trip to be made in July or August next, business and health permitting, and accidents barred. Time not to exceed ten (10) hours from start to finish.

In offering this wager I estimated time as follows:—

Subashiri to summit...	7 hours.	= 10 hours.
Refreshment	½ „	
Descent to Subashiri	2½ „	

but in this estimate I considered the last allowance of time gave me a margin of 15 to 20 minutes.

In the proposed trip I shall be happy to be accompanied by any number of gentlemen to act as umpires, by whose decision, without any referee acting on my behalf, I shall be willing to abide.

My experience of the country in the vicinity of Yokohama has shown me that distances are generally much exaggerated, and the time required to walk from any one known place to another greatly over-estimated.

I am, Dear Sir,
Yours faithfully,
W. H. TALBOT.

I concur in the above,
A MAJOR.

Yokohama, September 24, 1875.

Shipping Intelligence.

ARRIVALS.

Sept. 17, *Paraguay*, British steamer, Williams, 1,179, from London, General, to E. Fischer & Co.

Sept. 19, *Takasago Maru*, Japanese steamer, Eckstrand, 1,200, from Shanghai and ports, Sept. 11, Mails and General to M. B. Co.

Sept. 19, *Wm Van Name*, American barque, Watts, 466, from New York, March 17, Kerosene, to Carl Rohde.

Sept. 15, *Oregonian*, American steamer, Harris, 1914, from Shanghai and Ports, General, to P. M. S. S. Co.

Sept. 23, *New Republic*, British barque, Adams, 580, from New York, April 26, General, to Order.

Sept. 23, *Great Republic*, American steamer, Cobb, 3,881, from Hongkong, Sept. 15, Mails and General, to P. M. S. S. Co:

Sept. 25, *Geelong*, British steamer, C. Fraser, 1,139, from Shanghai, Sept. 21, Mails, to P. & O. Co.

Sept. 25, *Kanagawa-maru*, Japanese steamer, Young, 749, from Shanghai and ports, Sept. 18, Mails and General, to M. B. S. S. Co.

DEPARTURES.

Sept. 21, *Naples*, British steamer, Flindt, 1,447, for Hiogo, General, despatched by Jardine, Matheson & Co.

Sept. 22, *Tanais*, French steamer, Reynier, 1,010, for Hongkong, Mails and General, to M. M. Co,

Sept. 25, *Hants County*, British barque, Cochrane, 647, San Francisco, Tea and sundries, despatched by Walsh, Hall & Co,

Sept. 25, *Takasago Maru*, Japanese steamer, Eckstrand, 1,019, for Shanghai and ports, Mails and General, despatched by M.B. Co.

PASSENGERS.

Per *Takasago Maru* from Shanghai and ports.—For Yokohama: Revd. F. Galpin, Mr. H. F. Abell, and 1 European, 1 Chinese in the steerage. From Nagasaki.—Bishop Petitjean and servant, Messrs. W. L. Roch Junr., J. Scott, J. Mahed, Go and servant, Araki and servant, Taketomi and servant, Nose, and 46½ Japanese 1 Chinese in the steerage. From Simonoseki.—Mr. and Mrs. Kasheda and child, Minami, and 40 Japanese in the steerage. From Hiogo. Mrs. Fitzgerald, Messrs. J. P. Van Hemert, Cope, Herhausen, Bonger, Reynvaan, Fitzgerald, D. M. Gray, H. A. Fagan and servant, E. C. Kirby, Honble. Miss Otchi and attendant, Messrs. Fuwakoshi, and three others, Okamura and servant, Sakarai and servant, Shimadzu and servant, Minakata, Kido and servant, Amakasa, a Japanese lady, and 129 Japanese, 1 European, and 1 Chinese in the steerage.

Per *Tanais*, for Hongkong.—Edward Whitall, Lawrence, E. Loureiro, Consul General of Portugal, J. C. Gray, L. Dubief, Kan.

Per *Oregonian*, from Shanghai,—For Yokohama—Messrs. J. Bradfield, J. O Brien. G. H. Ferguson. Aug. Heard, Hiley, Heineman, Yashimo, Masugawa, H. Gorman, Miss Elliot, Mrs Oneiya and Miss Gordon. For America—Jas. M. Young.

Per *Great Republic* from Hongkong.—C. W. Crocker, for San Francisco.

Per P. & O. steamer *Geelong*, ex *Su da* from Shanghai.—Messrs. A. Andrico, C. Reckes, T. Bingham, H. Collins, and Marshall.

Per *Kanagawa maru*, from Shanghai and ports.—Messrs. W. Leslie, J. Stickler, W. Dodd R. N., Burge, R. Lewis, Gibson, Bird Wertheimber, Winstanley and 10 Japanese in Cabin, and 85 Japanese, 3 Chinese in the steerage.

Per *Takasago Maru*, for Shanghai and ports.—Messrs. Wiht, Watanabe, Shand, Nogawa, Mawaka, Kimura, Kawasaki, Minakata, Handa, Potter, E. H. House, Cobb, F. W. Fry, Hyashi, Mochiyoshi, Ewago, Whitfield, Hrauch, Motono, Yasuda, Mrs Marshall, and Mr. and Mrs. Carvalho and child, 4 Chinese and 437 Japanese in the steerage.

CARGOES.

Per *Niigata Maru* for Shanghai and ports.—

Treasure	$1,400
,, ...	*yen* 5,003

Per *Tanais*, for Hongkong—

Silk—France, ...	404 bales.
England	262 ,,
	667 bales.

Per *Oregonian*, from Shanghai.

Treasure	$150,000

Per *Takasago Maru*, for Shanghai.

Treasure	$2,500
	Yen 5,000

REPORTS.

The *Wm. Van Name* reports: heavy weather off the Cape during which split several sails, had the deck swept, water casks stove in and boats damaged.

The *Great Republic*, reports: Left Hongkong September 15th, at 3 p.m. On September 16th, at 6.45 a.m. off Tongmi Point passed O. & O. Co's Steamer *Belgic* for Hongkong. September 19th, 11 a.m. passed English Mail Steamer bound for Hongkong. Arrived at Yokohama, September 23rd at 2.45 p.m. Strong N.E. winds prevailed the entire passage.

EXCHANGE AND BULLION.

Exchange.—Sterling rates have continued weak throughout the past fortnight, with a fair demand for Bank Bills principally at short usuance; there have also been moderate sales of Private Paper.

Gold Yen, are fast advancing to par, some purchases having been made at a ¼ per cent discount.

Rates close as follows:—

STERLING—Bank 6 months' sight.....	4s. 1d.
,, Bank Bills on demand.....	4s. 0d.
,, Private 6 months' sight.....	4s. 1⅛d. to ⅜
ON PARIS—Bank 6 months' sight.....	5.19
,, Private 6 ms. sight.....	5.25
On SHANGHAI—Bank sight.....	72½
,, Private 10 days' sight	72¾
ON HONGKONG—Bank sight.....	Par.
,, Private 10 days' sight.....	¼ per cent disct.
ON San Francisco—Bank Bills on demand.....	98
,, 30d. sight Private	101
On New York—Bank Bills on demand	97½
,, 30 days sight Private	101
Gold Yen.....	401.25
Kinsats	406

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

COMMERCIAL INTELLIGENCE.

IMPORTS.

Cotton.—During the closing fortnight business has been shown indications of an improving tendency, and the prices of most articles of import have undergone a further advance.

Cotton Yarns. The demand runs chiefly on numbers 28/32 which may be quoted considerably higher; 16/24 and 38/42 are less enquired for but are very firmly held.

Grey Shirtings of all weights are fairly saleable at advancing rates. *T. Cloth* is more enquired for, the 7 lb. weights being chiefly in demand. *Velvets* are for the moment in less favour, but prices are nominally without change. The stocks of *Taffachelass* increase but the rates demanded are nevertheless firm.

Grey Shirtings:—				White Shirtings:—			
7 lbs.	38½ yds. 30 in. per pce.	$2.00	to $2.10	60 to 64 reed 40 yds. 35 in. nom. per pce.	2.20	to	2.40
8 lbs.	38½ yds. 44 in. „ nom.	2.50	to 2.70	Turkey Reds 24 yds. 30 in. 2¼—3 lb. per lb.	0.75	to	1.02½
8 lbs. 4 to 8 lbs.	38½ „ 30 in. „ „	2.30	to 2.65	Black Velvets	8.75	to	10.00
9 lbs.	38½ „ 44 in. „	2.60	to 3.05	English Drills 15 lb. 40 yds, 30 in.	3.30	to	3.40
				Taffachelass. 13 yds, 43 in.	2.55	to	2.70

Cotton Yarn.—

No. 16 to 24	per picul	$30.00	to 35.50	No. 38 to 42	per picul	$41.50	to 46.00
No. 28 to 32	per picul	$37.00	to 41.50	Reverse Twist 16-24	„	$36	

Woollens.—The closing fortnight has been marked by excessive tranquillity. The previous demand, small as it was and tempting as the prices consented to by importers appeared, has again collapsed, and with the exception of a few small sales of *Mousselines de laines*, business has remained altogether suspended and prices must be considered as entirely nominal.

Plain Orleans	40—42 yds. 32 in.	6.25	to 7.80	Figured Mousseline de Laine	30 yds. 30 in.	0.25	to 0.28
Figured Orleans	29—30 yds. 31 in.	4.75	to 5.50	Multicolored „	30 yds. 30 in.	0.32	to 0.36
Italian Cloth	—30 yds. 32 in.	0.25	to 0.34	Cloth, all wool plain or fancy	48 in. to 52 in.	8.00	to 1.20
Camlet Cords	29—30 yds. 32 in.	6.25	to 7.25	Presidents	54 in. to 56 in.	0.70	to 0.80
Camlets Asstd.	56—58 yds. 31 in.	18.50	to 19.00	Pilots	54 in. to 56 in.	0.45	to 0.52½
Lastings Japan	22—30 yds. 32 in.	13.00	to 14.50	Union	54 in. to 56 in.	0.50	to 0.70
Plain Mousseline de Laine	—30 yds. 30 in.	0.18½	to 0.20½	Blankets, scarlet & green 7 to 8 lbs.	per lb.	0.40	to 0.42½

Iron.—The market is without a favourable change. The transactions of the past fortnight have been unimportant.

Iron flat and round	per picul	$3.50	to $4.00	Iron hoop	per picul	$4.10	to 4.50
„ nail rod assorted	„	3.50	to 4.00	„ pig	„	1.50	to 2.00
„ small size	„	3.80	to 4.20				

Sugar.—The market continues very quiet for all descriptions and sales are on a small scale.

Sugar:—Formosa in bag	per picul	4.30	to 4.40	China No. 5 Kong-fun	per picul	4.70	to 5.30

EXPORTS.

Silk.—Since the 10th instant, settlements are 750 bales of Hanks and 250 of Oshiu. Prices for all descriptions of Hanks have advanced $10 to $15 and remain firm at previous quotations for Oshius. The market is well supplied, and the stock has the increased to 900 bales.

The shipments of the fortnight are 992 bales, making the total export since 1st July 3,095 bales against 2,489 last year for the same period.

Silk Worms' Eggs.—Last year total arrivals at this date were 800,000 cards; we have none as yet to report for the present season.

Common to Inferior							

Tea.—A rather fitful demand exists for this staple as holders after a day's large sales at once advance the price of their stocks and thus deter buyers. They seem to be entirely blind to the fact that this market is in such speedy communication with the American Tea centres, and that an exceptional purchase ordered by wire of 600 to 800 piculs, ought not to establish a marked rise in face of the large stocks in the country yet to come in. They are overlooking another very important point viz, that in their anxiety to get the New Crop down to a good market, they have paid less attention this season to the curing than was customary heretofore. The Teas to hand already shew this fault in a large proportion, and by this date next month it will be difficult to find many parcels under "finest" Teas which will not be more or less heated or sour.

Our settlements since 18th instant have been 4,600 piculs, and arrivals 3,700 piculs. Stocks are about 8,000 piculs.

Price close rather nominal, holders looking for rates entirely out of the question considering New York advices; and buyers awaiting the arrival of the American mail now due.

Common		$20.00	to 23.00	Fine		$36.00	to 38.00
Good Common		24.00	to 27.00	Finest		$39.00	to 42.00

THE GREATEST

WONDER OF MODERN TIMES!

HOLLOWAY'S PILLS.

PERSONS suffering from weak or debilitated constitutions will discover that by the use of this wonderful medicine there is "Health for all." The blood is the fountain of life, and its purity can be maintained by the use of these Pills.

SIR SAMUEL BAKER,

in his work entitled "The Nile Tributaries in Abyssinia," says, "I "ordered the dragoman Mahomet to inform the Fakey that I was a "Doctor, and that I had the best medicines at the service of the "sick, with advice gratis. In a short time I had many applicants, "to whom I served out a quantity of Holloway's Pills. These are "most useful to an explorer, as possessing unmistakable purgative "properties they create an undeniable effect upon the patient, which "satisfies him of their value."

SIMPLE, SAFE AND CERTAIN!

HOLLOWAY'S OINTMENT

Is a certain remedy for bad legs, bad breasts, and ulcerations of all kinds. It acts miraculously in healing ulcerations, curing skin diseases, and in arresting and subduing all inflammations.

MR. J. T. COOPER,

in his account of his extraordinary travels in China, published in 1871, says—"I had with me a quantity of Holloway's Ointment. I "gave some to the people, and nothing could exceed their gratitude; "and, in consequence, milk, fowls, butter, and horse-feed poured "in upon us, until at last a tea-spoonful of Ointment was worth a "fowl and any quantity of peas, and the demand became so great "that I was obliged to lock up the small remaining stock"

Sold by all Chemists and Medicine Vendors throughout the World.

Japan Weekly Mail.

A POLITICAL, COMMERCIAL, AND LITERARY JOURNAL.

VOL. VI.—No. 40.] YOKOHAMA, SATURDAY, OCTOBER, 2, 1875. [PRICE $24 PER ANNUM.

TO SUBSCRIBERS.

SUBSCRIBERS at a distance whose period of subscription may have elapsed, are informed that their papers will be addressea and charged to them *until countermanded.* This rule has been found necessary in order to avoid the inconvenience of an abrupt stoppage of the paper which might result from an omission to renew.

It is requested that notice of the intention to discontinue d subscription be so given as to reach Yokohama *before* the date of its effluxion.

NOTICE.

ON and after the 1st of July, Notices of Births, Marriages and Deaths will be charged $1 each insertion.

Such Notices cannot be inserted in this journal unless endorsed with the name and address of the person by whom they are sent.

Yokohama, 25th June, 1874.

Notes of the Week.

Little is positively known regarding the occurrence in Corea the account of which, published on Thursday evening, has caused so much stir both in Yedo and here. But it is doubtless true that a Japanese gun-boat was fired upon by the Coreans, and that her people then landed, took a fort, and burnt the village near to which the attack was made. If, in giving our own short account of it on Friday morning, we mentioned the possibility of war, or the probable attitude of the nation in the event of its breaking out, we did so assuredly with no feeling either that it would be wise or was necessary under all the circumstances. If it be true that summary punishment was inflicted upon the attacking party, the question fairly arises whether this does not satisfy the actual requirements of the case. The general feeling among foreigners is that it does so, and that however gratifying it might be to the luxury of revenge to call the Corean Government to account for these acts of its subjects, it would at this moment be far wiser to postpone any such remonstrances and the demands which might accompany them until affairs in this country were more settled. The Japanese have so lately proved that they can fight their own battles, that no exhibition of the spirit of the nation is now required. The country urgently demands peace and the opportunity to push forward its necessary internal reforms. Far from being overburdened with money, it is undoubtedly poor, and though fairly provided with war material laid in for the last emergency, a war which might be long and would certainly be expensive, would be a great calamity at this moment. Whether a Government, which, in spite of a great deal of good work, is not very popular, and will not be so until it takes the burdens off the land, can enforce, what is probably its own desire, abstention from war, remains to be seen. The Satsuma men have to be reckoned with, and it is likely that their strong voice would be for war. Not so surely, however, as some imagine. We have had most trustworthy intelligence within not very many months that the clan, which is said to be very loyal, very practical and rather stolid, if not stupid, does not see what good could arise, or what advantage be gained, from a war with Corea. It is, however, one thing to say this in cold blood, and quite another to say it after a little passage of arms which has left both sides somewhat the warmer for the occurrence.

The question, however, certainly arises, Is the modern doctrine that nations are not justified in closing their territory to the friendly advances of other nations, right or wrong? If wrong, there is not a word to be said. But, if right, have not the Coreans set it at defiance long enough? And could not the great powers interested in letting the light in upon Asia and getting the eastern hemisphere somewhat into order, give such general countenance to the Japanese as to make the present outrage upon a friendly power the occasion of supporting it or joining with it in a demand that the country should no longer continue closed; that the sense of the world is against any such exclusive doctrine or line of action; and that persistence in it, defying as it does the conditions under which alone mankind has advanced upon the paths of progress and civilisation, can no longer be tolerated? It is idle to suppose that Corea will, can, or should remain for ever in her present condition, and it would be preposterous for the great European powers to stand by and see Japan and Corea fighting about what is little more than an accident, while one of the greatest and most liberal doctrines of the modern life of the world is at stake. There is always some small proximate cause which, when time is ripe, launches the coming event into the ocean of universal history, and the event chronicled on Thursday would seem to be the fitting proximate cause in this case. Let us see whether sound law, sound policy and sound philosophy do not encourage us at this moment to do the Japanese a good turn, and introduce, even though with some slight reluctance on her part, a new relative into the family of nations.

Under the heading Sericulture in Japan, we reviewed last week Messrs. Jaquemot's report on their recent excursion in the silk districts. In our present issue we publish and recommend to the attention of our readers a letter in which these gentlemen criticize our review. Their report made no mention of the *pébrine.* Their present statement in reference to that disease is the more welcome as, being stronger than purely negative evidence, it goes farther to corroborate our conclusions. The *Kiito Aratame Kuaisha* is the great corporation which was established a few years ago by the Government to control the whole silk trade of the country. Naturally enough we believed, as no doubt our readers did, that the word *Kuaisha,* which so frequently occurs in Messrs. Jaquemot's report, applied to that corporation. It appears, however, that we were mistaken; they never came into contact with it; the duty of inspecting silk, which was one of its essential attributes, has been transferred by a recent decree to a new body of men. As the word *Kiito Aratame Kuaisha* means "Company or association, for improving, reforming, inspecting silk," we may perhaps be excused for having applied it to that new body of silk-inspectors; but the acknowledgment of our error does not in the least impair the force of our previous remarks on the question of Government interference. Whether the deterioration of Japan silks has been progressive, gradual, or not, is a question of fact which we leave to the decision of those who are in a position to analyse the manifold causes of the neglect into which Japan silks have fallen. We had no doubt that Messrs. Jaquemot's report would tend to create a strong prejudice at home against the silk of the new season. Whether we have gone too far in warning our readers against their first impression is, as we said at first, an open question. As

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

mail after mail is taking home the strongest possible evidence on the subject, we will leave the shipments to speak for themselves.

We should be sorry to dismiss this important topic without giving a strong expression to our agreement with Messrs. Jaquemot on two points:

1st The baneful influence of the Export of Silk-worm's eggs on the quality of Silk.

2nd The deplorable waste of coccoons which is the result of imperfect *machinery* and careless reeling.

We publish elsewhere a translation of an essay on Revolutions by a Mr. Kusama Tokiyoshi, but cannot be content to do so without saying a few words upon it. The general tendency of his doctrine is of the most pernicious nature, and would be countenanced by no writer of any eminence in political philosophy. Revolutions are in themselves bad things, and are only tolerable as medicine administered to dispel or counteract other evils. If improvement is impossible without a resort to violent means, violent means must be resorted to. But as in the body of man, good food and wise regimen will ensure health, so in the body politic good government will ensure contentment, order, and, certain other conditions being fulfilled, progress. Revolutions are the deplorable results of bad government, not the expedients of a wise people who have their choice between revolutions and good government. Medicine does not nourish, neither do revolutions; rather indeed, do both impoverish. It is true that they expel other evils, but these evils ought never to have been allowed to gain so much strength as to necessitate their expulsion by force. A wise statesman and a wise people will only regard them as tolerable when they promise to be the lesser of two inevitable evils. When the writer of the essay talks about "their genial influence," his words bear a perfectly poisonous atmosphere with them. You might as well talk about the genial influence of prussic acid, because prussic acid is occasionally used as a medicine. It is a deadly, not a genial, influence, through a resort to it on extraordinary occasions may be warrantable or even desirable. The great thing is not to permit any confusion to rest in the mind with regard to the nature of revolution. It is in itself a bad, not a good, thing; whatever may be its ultimate effects, its influence is not genial, but noxious, destructive and poisonous. It may fail in its operation and bring about even greater evils than those it was administered to remove; and, far from being an expedient to which a wise man would readily resort, it is the very last he will have recourse to, and then only in the case of the most violent disorders and after the most careful deliberation whether the disease cannot be expelled by other means, even though these should operate far more slowly. What every wise man should urge is timely reform, honest administration, prudent changes, firmness in resisting clamour, concession to wise suggestion and to growing intelligence. A people unfit to govern themselves rarely gains by revolutions, and none should resort to them who cannot, to some extent at least, control them.

The following circular has been issued by the Kobusho.

NOTIFICATION.

It is hereby ordered that without express written permission given in each case by the Minister of the Cobusho—

1st.—No officer of the Cobusho shall publish or communicate or show to any person or persons unconnected with the office or department to which he belongs any official document.

2nd.—No officer of the Cobusho shall write to any newspaper, or publish or cause to be published in any newspaper or elsewhere any thing upon the subject of or in connexion with the business or administration of his office or department.

3rd.—Every breach of either of the two forgoing orders, or of any part thereof shall be viewed as a breach of official trust, and further shall be dealt with as an act of insubordination of the most serious character.

By order of The Minister of Public Works.

27th September 1875.

Now it is said that this most unwise notification has been put forward in consequence of the publication in this journal, the week before last, of a very excellent paper signed R. H. B. upon the general question of Public Works, in answer to which a letter appeared in our issue of last week. If this report be true, the Kobusho has unquestionably acted upon the worst possible advice and deserves a serious rebuke for such a line of action. If official secrets had been divulged, if character had been aspersed, if disorderly or mutinous writing had appeared, it would be quite right to step in and prevent it. But such writing as we published is part of the very life and soul of public affairs, and we are in doubt whether to be more surprised or indignant at the manner in which it has been treated. Public discussion, we repeat it, if properly conducted, is of altogether incalculable benefit, and the Japanese can hardly be grateful enough to those who carry it on. What was there in these communications to disturb the equanimity of any public office or officer? If there was any conflict of opinion, it was open, decorous and intelligent, intended and calculated to do good, wholly untinged by personal *animus*, and dealing with open questions of the highest importance here as elsewhere. Are a number of free men, accustomed to look upon open discussion as the very soul of modern life, to have their mouths shut on the great topics which engage nine tenths of their thoughts and energies? We are indeed astounded at the issue of this notification, than which we have for a long time seen nothing so bad launched by the Government. It is as thoroughly illiberal in spirit as it is indicative of a profound misapprehension of the very genius and spirit of modern life, something of which we hoped that the Japanese were catching. What good can we possibly hope to do in placing before them some of the best thought produced by foreigners in this country, if it is to be treated in this manner? What chance is there for the gradual but steady improvement of things here if such thought is banished alike from the eyes of foreigners and natives? If this journal encouraged a number of disaffected men to air their real or imaginary grievances anonymously, while eating the bread of the Japanese Government, there might be some cause for remonstrance and ground for action. But there has not been a trace of this. Questions of principle or practice have alone been debated, and no free-born men have ever yet been silenced by any Government pretending to be civilized, in discussing such questions. It is impossible to speak with too great severity upon this most indiscreet Notification, and if it has been issued at the suggestion of any foreign employé of the Government, it simply proves that whatever other qualifications he may possess for his post, he is deficient in this much, that he is out of harmony, utterly and entirely, with that spirit of freedom and openness which has braced, enlightened and purified the life of the nineteenth century.

It certainly seems very hard for the Japanese to get justice done them. They are either abused in terms which could only be fairly applied to a tribe of vain savages, or praised and flattered in a manner which would turn the heads of a much wiser people. The critics who indulge in the latter form of comment used to appear some years ago more frequently than they have done of late. But every now and then we come across one of them, as a specimen of some vanishing race of men or animals may be found by the naturalist. The following extract from a letter in the *Academy* shows that the genus is not yet wholly extinct.

The study of the art and genius of Japan, what is called here *le Japonisme*, makes marked progress in France. I am very proud of it because if I did not give the first impulse to the study, I at least originated the word for it. The *Japonisme* was written for the first time in a young journal of literature and poetry, founded and supported by the well-known group of *Parnassians*. I had friends in it, and although not a poet by profession, my articles entitled "Le *Japonisme*" were accepted, and—I may write this without conceit, since the *Renaissance* reckoned, besides its contributors, about one hundred and twenty subscribers—they obtained so much success that the term was immediately accepted. My object was to attract public attention to Japan, and thus promote useful essays in science, criticism, and art. All is singular and delicious in this country and this race: the poetry, the brevity of which contains treasures of delicacy concealed under heaps of allusions; the history, which is chivalrous and romantic, made up of slaughter and of love; the painting, which is brilliant; the sculpture, which is full of fine observation and delicacy; the art of working metals and that of manufacturing china, which have been carried to the highest point of perfection; drawing and printing in colours managed by processes of which we are ignorant in Europe, and which are the surest means of artistic propaganda among popular classes. All this is well worth considering. The influence of the Japanese albums on artists such as Mr. Whistler, and such as those among us who form the group of the *Intransigeants* is manifest, but its action upon our artists who apply their talent to manufacture has been equally apparent. For some years past our carpets, our hangings, our wall-papers, our furniture, our table services have been designed and executed in a lighter and more harmonious scale of

Digitized by Google UNIVERSITY OF CALIFORNIA

colour. I think it very important for Western nations to make bright homes for themselves. It is a practical remedy against gloomy notions. The idea of evil was in the history of the first human families associated with that of darkness. Prometheus dealt the gods a fatal blow by giving mortals at once a hearth and torch. For my part, I never would allow my little girls or their nurses to be dressed in black.

Passing over the pardonable pride with which so feeble a writer refers to his parental claim to the word *Japonisme* ("Que vous semble de ce mot *tapinois?* N' est il pas bien choisi?") a stroke of delicacy and subtilty allied—if not not very closely—to genius, we come to the acute piece of criticism beginning, "All is singular and delicious in this country and this race &c." That "treasures of delicacy" may be concealed under "heaps of allusions" in Japanese poetry is, of course, possible enough, though no one has yet discovered them. A writer in these columns well qualified from his knowledge of the language to be considered a fair judge, lately said "I have never yet come across one fine thought in all the Japanese poetry I have examined." If, among this people, "all is delicious," how are we to account for the statements made in a letter published in our columns this very day, and treating with just severity theatrical representations so obscene and disgusting that even allusion to them is impossible? We know well enough that reforms in this direction cannot be made in a day. But meanwhile do not let us have this horrid cant about "delicacy." In the history we shall grant that there is much of romance and of chivalrous feeling, though the latter has never yet taught the Japanese that cutting a man down from behind is a supremely infamous thing. If "slaughter" is a noble ingredient in history, that of this country has great claims on our admiration, though we should have thought that everything depended upon the motive of the combatants. If mere bloodshed is noble, commend us to the Sioux, Pawnees, Choctaws and Fijians. So far as love is concerned, everything depends on its quality, and the institutions of the country utterly forbid the idea that here it is, generally speaking, a noble passion. In painting, the Japanese are still bound by the conventional art of China, which sets nature at defiance. We have never yet seen a Japanese picture in which the human figure was drawn with even an approach to accuracy. A new school has sprung up of late in which more expression has certainly been thrown into the face, and which promises to destroy the ridiculous old ideal of countenance. But any one who will examine the anatomy of these pictures, especially of the shoulders and arms, will see in a moment that the artist never paints from living models. We lately cannot called the attention of a native painter to this point, and he acknowledged that he had never done so. "The sculpture, full of fine observation and delicacy!" Why, there is no sculpture, or any trace of it in the sense in which we understand the word. There are images of Buddha and the gods of the national mythology, but the ideas underlying all these came from India, and for the most part they are marvels of the grotesque or the hideous. Some of the castings of Buddha are very fine; the Daibutz near Kamakura is certainly one of the finest things in the world. But it is in the last degree absurd to talk about a school of sculpture existing in Japan. In the arts of pottery and the working of metals the Japanese certainly have done and still do, beautiful things; but we altogether deny that "they have arrived at the highest point of perfection." When we see anything in this country like the Ghiberti gates, or the works of Quentin Matsys or Cellini, we may then use these very unqualified expressions of the writer in the *Academy*, but not until then. Such writing destroys the meaning and value of words, and makes criticism a mere string of inapplicable superlatives. If the *Parnassians*, of whom we hear something in this letter, write and think like this, we shall fear that the spirit which Molière exorcised in the *Précieuses Ridicules* is not yet dead in Paris.

Signora Palmieri gave her third Concert on Monday evening last, and drew a full, though not an overwhelming house, as on the two previous occasions.

Signorina Persiani opened the evening with a *Romanza* from L'Africana, "*Addio, terra natiya*"—a very difficult and ungrateful song. The progressions are so capricious and startling that the ear is almost distressed, instead of being pleased or soothed, by them. The modulations are, of course, those of a great scholar, who shows a wonderful knowledge of his art. But does not Mozart show just as much knowledge? And who will say that his music produces this kind of effect? Signorina Persiani, who has run away with the heart of the public and is very secure of it, did all she could for the music, but did the music do all it could for her? We think not. Signora Palmieri followed with a fine *scena* from the *Ballo in maschera*, the opera in which the death of Gustavus Vasa is celebrated. The scene chosen is that in which the heroine seeks the enchanted herb promised her by the witch whom she has consulted. She is surprised during the search by her husband's mortal enemy, who also loves her passionately, and the music pourtrays with great dramatic power the emotions and excitement of the scene, which gave Signora Palmieri an admirable opportunity for the display of her powers both as a singer and an actress.

Signorina Persiani then sang Benedict's variations on the *Carnaval de Venise*, but we have heard her to greater advantage in prettier music. A duet from Linda di Chamouni followed this, and the first part closed with the *bolero* of which we wrote last week, sung by Signora Palmieri even better, if possible, than at the second concert. In response to an enthusiastic demand, she repeated the second part of it.

The trio by Gordigiani which opened the second part was very effective. It is pretty music and was very well sung. Then came "*O luce di quest' anima*" from Linda di Chamouni by Signorina Persiani, *Non e ver* by Signor Palmieri, and the celebrated terzet from Don Giovanni as a finish.

Signora Palmieri gives a concert at Yedo this evening, and we may have the opportunity of hearing the party once again before they leave for America.

The largest casting ever made in Yokohama was successfully completed on Wednesday afternoon last at the Iron Works of Mess. Whitfield and Dowson. It consisted of a four-blade screw weighing about two tons, and the work was performed with ease and entire success.

(From the Japan Mail Daily Advertiser.)

The movement of the *shidzoku* towards Kioto receives confirmation by reports from various quarters. It is alleged that those residing in Shidzuoka are gradually, and in small parties of twos and threes, gathering together in the Western capital.

The *Akebono Shimbun* says it is rumoured in the capital that the Satsuma *shidzoku* have held several meetings in Yedo, as a result of which they have addressed memorials to the Government.

As the movements of the Southern *samurai* towards Kioto form the subject of much comment, it may be well to state that the *rumoured* object of their meetings is to secure the resumption of the old national dress, the liberty to wear two swords, and the revival of the former distinction between their class and that of the *Chônin* or mercantile class.

Mr. Douglas's opponents seem as unfortunate in their logic as in other matters. A writer in one of the evening papers of yesterday, signing himself "Orthodox," says, "It is a well "known fact that inactive persons do not write their sermons; "and as Mr. Sholto Douglas does not write his, he can only be "classed as inactive." Thrown into the form of a syllogism, the argument would stand thus:—

Inactive persons do not write their sermons:
Mr. Sholto Douglas does not write his sermons:
Therefore; Mr. Sholto Douglas is an inactive person.

Let us test this. Here is a syllogism similarly constructed:—

Dyspeptic fowls have pains in their inside:
"Orthodox" has a pain in his inside:
Therefore, "Orthodox" is a dyspeptic fowl.

It is, of course, unnecessary to point out where the obvious fallacy of his syllogism lies, but the quality of his mind may easily be inferred from it. What he obviously wanted to say

Digitized by Google Original from University of California

would take the following form if thrown into a logical formula :—

Preachers who do not write their sermons are inactive men :

Mr. Douglas does not write his sermons :

Therefore, Mr. Douglas is an inactive man.

Here the logic would be good, though it would land "Orthodox" in a conclusion which happens to be as far from the truth as that produced by the formula constructed on his own model. The digestion of "Orthodox" may, for all we know, be as perfect as the activity of Mr. Douglas is certainly remarkable.

As regards the assertion on which "Orthodox" bases his charge of inactivity, the greatest sermons preached by Wesley and Whitfield were preached *extempore*, though doubtless not without some preparation; many, if not most, of Robert Hall's and Irving's were; those of the late Bishop of Winchester—certainly the greatest English pulpit orator of our time—were latterly always so, and the activity of all these men, in one direction or another, was prodigious. It is supposed by most English people that because a man preaches without the black sermon-cover of strict orthodoxy he is preaching extempore. Over the whole Continent of Europe no man ever reads his sermon from his book. He writes it, gets it by heart, and then delivers it, with an animation impossible to a man who has to fix his eyes on the paper from which he is reading. What says one of the ablest and wisest men of the early part of this century—himself a clergyman—on this subject?

"To this cause of the unpopularity of sermons may be added the extremely ungraceful manner in which they are delivered. The English, generally remarkable for doing very good things in a very bad manner, seem to have reserved the maturity and plenitude of their awkwardness for the pulpit. A clergyman clings to his velvet cushion with either hand, keeps his eye riveted upon his book, speaks of the ecstasies of joy and fear with a voice and a face which indicate neither, and pinions his body and soul into the same attitude of limb and thought, for fear of being called theatrical and affected. The most intrepid veteran of us all dares no more than wipe his face with his cambric sudarium; if, by mischance, his hand slip from its orthodox gripe of the velvet, he draws it back as from liquid brimstone, or the caustic iron of the law, and atones for this indecorum by fresh inflexibility and more rigorous sameness. Is it wonder, then, that every semi-delirious sectary who pours forth his animated nonsense with the genuine look and voice of passion should gesticulate away the congregation of the most profound and learned divine of the Established Church, and n two Sundays preach him bare to the very sexton? Why are we natural everywhere but in the pulpit? No man expresses warm and animated feelings anywhere else, with his mouth alone, but with his whole body; he articulates with every limb, and talks from head to foot with a thousand voices. Why this holoplexia on sacred occasions alone? Why call in the aid of paralysis to piety? Is it a rule of oratory to balance the style against the subject, and to handle the most sublime truths in the dullest language and the driest manner? Is sin to be taken from man, as Eve was from Adam, by casting them into a deep slumber? Or from what possible perversion of common sense are we all to look like field preachers in Zembla, holy lumps of ice, numbed into quiescence, and stagnation, and mumbling?"

So that, altogether it seems to us that the assertions made about Mr. Douglas, the inferences drawn from them, the charges, the misrepresentions, the evaded retractations, the taste and the logic have, each and all, been one about as bad as the other.

The *Hochi Shimbun* has reason to discredit the report that Kiôto is disturbed, though there can be no doubt that people from different provinces are gathering there at the moment. Shimadzu Danjo still resides there and the arrival of General Saigo is shortly expected.

We are informed by the agent of the ... many that the Steam Ship *Malacca* left Hongkong for this port at 10 a.m. on the morning of the 26th instant.

The *Hochi Shimbun* says that although a large number of the officials of the *Sei In* were dismissed on the 22nd instant, seventy-five of these were reinstated in their appointments on the two following days.

The Banking House of Ohno possessed seventeen mines in the Akita *Ken* which have now been handed over by the Board of Public Works to the care of the Mining Department. The *Hochi Shimbun* says that a branch department is to be formed in the Akita *Ken* and that numerous appointments to it will be made.

The *Hochi Shimbun* devotes some space to the praise of an American lady, to whose benevolence and energy the establishment in Yokohama of a school for native girls is mainly owing. The writer deplores the possibility that the good work which this charitable lady has undertaken, and so far carried out, should be prematurely arrested by ill-health.

The native newspapers say that further reductions in the staff of several of the Government departments are imminent.

Matsuda, *Daijo* of the Home Office, and the other officials who accompanied him as Special Envoys to Corea have returned thence.

It is reported, says the *Hochi Shimbun*, that a brother of the reigning King of Loochoo may shortly be expected in Yedo.

A large number of invalids resorted to the sulphur baths of Kusatzu this season, but the high temperature of the water (which was from 130 to 150 degrees) prevented many from bathing.

The schoolmaster is apparently not abroad in the Mitama *ken*. The *Nisshin Shinjisshi* relates that on opening the ballot boxes after a recent election for local representatives there, they were found filled with an exceedingly miscellaneous assortment of papers covered with round and square figures, which the utmost ingenuity failed to identify with any of the candidates.

The *Eiri Shimbun* points out that the trade of jinrikisha-drawing is used by the thieves of Yedo to cover and assist their depredations. One of a confederate pair enters a house while his companion waits outside with a jinrikisha. Having taken all he can lay his hands on, the thief mounts his jinrikisha with the plunder. Robberies of this sort are said to be seldom discovered.

Thirty-one officials were appointed by the *Sei-In* on the 27th instant.

There is good reason to believe that the reports current yesterday in Tokio of a Japanese gunboat having been fired into by Coreans, is true, and, if so, it is hard to see how war can be avoided. It is difficult to imagine any more serious or deplorable misfortune at this moment, on account of the strain war will place upon the finances. But, on the other hand, we shall certainly see a disposition among all classes to assist the Government to the utmost, and, in doing this, to make great personal sacrifices.

The *Nichi Nichi Shimbun*, states that a telegram was sent from Nagasaki on the 28th ultimo, giving particulars of an outrage on a Japanese man-of-war cruising in Corean waters. This vessel—the *Woonyo Kan*, we understand—was engaged in surveying the coast when she was fired upon by a battery on shore. The *Woonyo Kan* replied by her fire and subsequently landed a party of men and captured the fort, burning some of the neighbouring villages. After apprising Moriyama, the Special Envoy of what had taken place the vessel returned to Nagasaki. The intelligence has caused excitement in the capital.

The Government has issued a notification forbidding the communication to the press by foreigners in their employment of any matters affecting or commenting upon their several departments. The notification is dated 27th instant.

A violent rain and wind storm set in yesterday evening and continued until an early hour this morning. We have not however learnt that any casualty to shipping, or on land, has resulted.

A farewell performance is announced by Signora Palmieri for the 7th inst., being for the benefit of Signorina Persiani.

A telegram received yesterday evening from London announces the intended resumption of business by the Bank of California this day. We understand that the Oriental Bank Corporation will pay all outstanding drafts.

STUART ELDRIDGE, M.D.,
Surgeon in charge.

For the first time in the history of our Cathedral we are glad to put on record a Choral Wedding, such an event having been solemnised therein on Wednesday, the 15th instant. The occasion was the marriage of Mr. Chaloner Alabaster, H.B.M. Consul at Hankow, with Miss Laura Abbie, only daughter of our well-known fellow-resident, Dr. D. J. Macgowan. The service which was fixed for 11 o'clock, was preceded by two voluntaries executed by Mr. G. B. Fentum, organist of the Cathedral, viz. :—*Andantes* by Smart and Westbrook. On the arrival of the Bridal Party at the West Door, Bishop Russell and Dean Butcher took up their positions within the Communion Rails, and the choir sang Keble's Hymn, for the office of Holy Matrimony "The voice that breathed o'er Eden," (212 H. A. and M.) to Dr. Gaunlett's Tune "St. Alphage." The Service was then impressively read by the Bishop of the Diocese, Psalm 67 being sung to a single chant by Dr. Crotch, and the Lord's Prayer and Versicles to Tallis's Responses. The closing exhortation was read by the Dean, and Rev. H. W. Baker's beautiful Hymn "How welcome was the call" (213 H.A. and M.) sung to Dr. Gauntlett's tune "St. George." Mendelsohn's Grand Wedding March brought this interesting service to a close, and we cannot but believe that many present must have noticed a wonderful difference between a wedding thus solemnised, and the dull old-fashioned service that was once in use in the Church of England, but which we trust has now almost become a thing of the past. The entire scene was charming, and it is a long time since Shanghai has witnessed anything like it. That is no reason however why such a one should not be enacted over again, in many cases yet to come.—*Celestial Empire.*

We hear that the Chinese iron-clad lately built at the Kiangnan Arsenal was launched yesterday afternoon, September 15th.—*N.-C. Daily News.*

A correspondent at Newchwang informs us that the Austrian Minister arrived at that port per *Millet* and returned to Chefoo by the same vessel. The Japanese 'mission' are also on the point of leaving. Our readers may remember that the object of these Japanese was to make some enquiries about Corea, and our informant hints at the possibility of their attempting some fine day to land troops near Takushan, whence it would not be very difficult to get to Corea through the neutral country. They might even avail themselves of some assistance (mercenary, of course) from the neighbouring banditti, whose stronghold is not far off. The weather is cool and pleasant, the thermometer about 60 degrees Fahrt.—*Celestial Empire.*

BUDGETS AND LOANS.

THE Turkish Budget has just been published in London, and of course it has excited the usual amount of comment. Of course, too, it is a repetition of the old story,—an increase of expenditure, a decrease of revenue, and a deficit of four millions sterling. "Nothing is concealed," says the *Times*, "nothing glossed over, nothing made to appear better than it is. The Imperial Commission which has drawn it up professes to have no other desire than to tell the truth." And thus the Budget goes up to the SULTAN and comes before the public.

> When the pie was opened, the birds began to sing;
> Now was n't that a dainty dish to set before the king!

The income is barely £19,000,000, while the expenditure is reckoned at £23,000,000, and it is morally certain that the former will fall below the estimate, while the latter will as assuredly exceed it. Besides this, too, there is the SULTAN'S Civil List, the amount of which no one pretends to guess. During the last twenty years, if we mistake not—the *Times* says ten, and is infinitely more likely to be right—loans have been contracted, at constantly increasing rates, "with a nominal capital exceeding 150 millions sterling, while it would probably be a liberal estimate to suppose that one half that sum had ever been received by Turkey." The administration of the Empire has been more and more reckless, the taxation is raised in a cumbrous and expensive manner; the administrative service is as corrupt as it well can be; money is wasted on warlike preparations which would all fail if brought to the test, and much of which, indeed, exists only on paper by way of accounting for expenditure. "It would be mere self-deceit," continues the *Times* "to go through the figures of the Budget and pretend to have any confidence in them. We have so often been favoured with forecasts of Turkish prospects, which have been always falsified. Ten years ago, or rather more, we lent the Turkish Government two of our ablest civil servants, who did their best to get to the bottom of the Ottoman financial system, and ended their labours by drawing up complete working plans of financial management which would have raised the credit of Turkey to a high rank on all the Bourses of Europe *had they been in any measure observed.* But, of course, they were not observed, and the result is as we have just stated it."

Now we can have but one object in drawing attention to this picture, and that is, to hold it up as a serious warning to this country of the miserable plight into which nations fall who do not mind their pounds, shillings and pence. Japan has certainly great financial difficulties to contend with, and she is battling with them lustily. But a great many shrewd people think that she is not getting over them very rapidly, and we are disposed to agree with them. She has been punctual in all her foreign engagements, both in the payment of interest and the re-payment of principal, but she has a large internal debt, and more of her gold has been running away than we quite like to see. The whole of the agricultural interest is discontented on account of the excessive burdens thrown on the land, and there are not wanting signs that a great effort will be made either by the land-owners to throw them off, or by the Government to take them off. The country can hardly go on, certainly cannot prosper, as it is now going on. Nor are the causes for this far to seek. After the fall of the Tokugawa family, the Central Government came into the vast revenues formerly enjoyed by the daimios and shared among their principal and subor-

Original from UNIVERSITY OF CALIFORNIA

dinate retainers. These seemed at first sight an enormous and almost inexhaustible fund on which to draw, even though weighted with the heavy charge of supporting an immense pension and allowance list, in favour of those who had formerly held the lands which provided these revenues. An army and navy had to be formed; public works undertaken; a vast educational system established; a postal service organised; special missions were sent and permanent embassies and consulates were established abroad; vast expenses were incurred for machinery of all useful and useless kinds; a mining department was formed which must have hitherto been a constant drain on the treasury, whatever else it may ultimately prove; foreigners at high salaries were engaged for many different, and doubtless often useful, though often for most useless, purposes; and in every direction money has been spent, sometimes with larger, sometimes with smaller, results, but always with a freedom wholly unknown to the severe and economical governments of the western nations. In all this effort these has been much to praise and much to command the respect which undoubtedly it has extorted from the world. But the Japanese must not be allowed to imagine that they will gain half as much credit from lavish expenditure as from a wise and severe economy; from showy expeditions as from the evidence of untiring industry; from a large revenue collected with difficulty as from a smaller one paid willingly out of an easy superfluity. They have made their *debut* in the borrowing market and have thoroughly well maintained their position there. Japanese stock stands firmly and may continue to do so, if the accounts which go home from here are moderately satisfactory, and there are substantial grounds for believing that the Budgets represent fairly and honestly the actual financial condition of country. Attention has lately been prominently called in England to the loans made to foreign countries, and a Committee of the House of Commons has taken the whole question into the fullest consideration. Its Report has been published, and an excellent article upon it will be found elsewhere, to which we desire to draw the attention of the Japanese Government, as well as to the remarks of the *Times* on the Turkish Budget which suggested our present comments. We are instituting no comparisons, and it is evident that there are now no grounds for doing so. But not the less is it well to see how rapidly financial mismanagement, official corruption, and maladministration have brought Turkey into a shameful position in the eyes of Europe, into political embarrassments which threaten the integrity of her territory, and reduced her to the position of a patient round whom the doctors are gathering in doubt whether life can be maintained or not It is also well to note the dangers incurred by borrowers, and the heavy blame they meet with if the representations they make with regard to the solvency of their principals are not strictly borne out by facts. In the case of the Honduras and San Domingo loans, a vast proportion of the borrowed money went into the pockets of financial agents, not to the State for which it was borrowed; while these agents again have incurred the crushing censure of a Parliamentary Committee for introducing loans to the public "regardless of the financial resources of the borrowing State; for violating undertakings "that the proceeds were to be spent on works calculated to develop the industrial resources of the different countries; and for "inducing the public to lend money upon a totally insufficient security by resorting to means which, in their nature and object, were flagrantly deceptive."

Our object in writing these words is to express a sincere hope that the Japanese Government will occupy on all these questions the ground which is alone worthy of an honest Government. If the financial year has been a bad one, let us know it by a Budget which conceals nothing and misrepresents nothing. The world has yet to be convinced that there is a single oriental nation capable of telling the truth, the whole truth, and nothing but the truth, and a *primâ facie* doubt hangs about every manifests issued by these nations. If Japan has to confess that her debts have increased—we do not say that it is so, for we know nothing more on the subject than the rest of the world—and that her revenue has not balanced her expenditure, let her confess it by all means. We all have some idea of her difficulties, and the western world knows well enough that the transformation of a nation cannot be effected without many mistakes and much expense. Allowance will be made for these, and time will repair both. But if once a well-founded doubt arises that reliance cannot be placed on her Budgets and her promises, her credit will suffer, suspicion will cling to any representations she may make, and if, one of these days, she should require further help, it will either be refused, or given only at a cost so heavy that she would be better without it. At present she stands well; it will be her own fault if she ceases to do so; and it is in the hope that the examples we have given of a widely different fate and the steps which lead to it, will prove useful warnings to her Government, that we have written these words.

SPIRIT OF THE JAPANESE PRESS.

COREA.

(From the "Nichi Nichi Shimbun," October 2, 1875.)

We first heard the news of the Corean attack which was published in our issue of the day before yesterday at 9 o'clock on the morning of the day previous. We had not then been able to learn whether it was true or not, but we gave it insertion, and made some observations upon it.

From the evening of the 29th till noon on the 30th, the news spread rapidly, and its truth became gradually apparent. The most curious thing about it is that it caused a sudden rise in the price of rice with the Tokio rice-dealers, on the morning of the 29th. On the 28th it was from 6-10 to 6-19 *yen* per *koku*, but on the 29th it rose at once to 6.25 to 6.30 a *koku*, so that we are obliged to conclude that the Corean news must have reached the ears of the rulers of the market rates on the morning of the 29th.

Now we have pricked up our ears and listened to the noisy talk of the streets yesterday and the day before, and have heard a number of contradictory reports. It is said that on the 29th and 30th there was an important deliberation of the Council of State, that one of the members put himself forward and offered to undertake the management of the Corean business, while another maintained that an expedition must be sent to Corea. But in matters of this kind people are so apt to put opinions in other's mouths according to their own ideas and to invent language for them, that we are unable to believe any of these reports.

According to the information which we have received it is quite true that a telegram was received from Nagasaki on the 28th, but as the Government could not decide with only telegraphic information before them, they have sent a telegram to Nagasaki ordering the Captain of the *Unyokan*, to proceed to Tokio at once, and give a detailed account of the affair. We are tolerably certain that this is correct, but we think the reports commonly current are premature, and have had their origin in the imagination of people who try to realize the feelings of those statesmen who would take part in the deliberations on Corean matters.

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

We have already pointed out in our issue of the 30th ult. that if we put aside mere superficial advantages and consider solid gain, we ought not suddenly at the present time to undertake any foreign expedition. Our observations were brief, but sufficient for this purpose.

We shall suppose, however, that we are told that it is necessary for the credit of Japan not to overlook this outrage on the part of the Coreans, and that we retire from the discussion with our opponent of the question of whether the advantages are in favour of going to war or not. But even if we yield this point, we can still show clearly that the time has not yet come to decide the question, that the intercourse between Corea and Japan has not come to an end, and that the whole country of Corea is not yet openly hostile to Japan.

In laying these considerations before our readers we have no wish by ingenious arguments to lessen the wrongful behavior of the Coreans, and confute the advocates of an expedition against that country. It is a thorough experience derived from sure precedents which has suggested them to us. It is at present quite impossible to know whether the outrage committed by the Coreans in firing upon the "*Unyōkan*" was committed by order of the Corean Government or whether it was not after all an outburst on the part of the Corean anti-foreign party? Looking back upon our own history, it seems that this affair has a great resemblance to the firing (on European ships) at Shimonoseki in Chōshiu, which the gentlemen who are discussing the present question will no doubt remember. Since the treaties were made in the period Ansei intercourse has not been broken off for a single day between Japan and Europe and America. Had not the Shimonoseki affair its origin not in a public order of the Government to drive out the barbarian, but in an outburst of the anti-foreign house of Choshiu alone? The allied fleets of England, France, America and Holland knew well that this was so, and they found it necessary, after having completed their negotiations with the Tokugawa Government, to attack Shimonoseki alone, and thus preserve their prestige. They never looked upon Japan as hostile, nor were they ever at war with the whole country of Japan. May not this Corean fort be acting in the same way as happened in our case at Shimonoseki? We don't profess to be very intimately acquainted with the condition of Corea, but judging from the adherence of the Coreans to the old Eastern custom of keeping their country closed to foreigners, their feelings must resemble those of ourselves more than ten years ago. Public-spirited men are no doubt divided into two parties one advocating war, the other peace, and some are for opening the country, others for driving away the foreigner. From what we have learnt, there are disputes about the succession to the throne, the nobles are forming parties, and the influence of the government has become gradually weaker so that it is unable to make its decrees respected and obeyed throughout the country. Where is the difference between this state of things and that which existed in the last days of the Tokugawa règime? At present the Corean Government has not refused to communicate with our envoys, they have not expelled our subjects from their country, nor pulled down the Japanese establishment at Fusan. How can we regard this single attack on the "*Unyōkan*" as a declaration of war against Japan? We think that the precedent of the four Powers, England, France, America and Holland in not considering that Japan had broken off relations with them on account of this firing (on their ships) at Shimonoseki is decisive against such a course.

As we believe that the real state of things in Corea is as we have just described, it ought to establish our opinion that this is not yet the time to resolve on war, that our relations with Corea are not yet broken off, and that Japan and Corea are not yet enemies. The advocates of war with Corea and those who would maintain the power of Japan should therefore contain for a while the flame which burns in their hearts and heads and await the speedy arrival of the Captain of the "*Unyōkan*" and the fuller intelligence which he will bring. We hope that it may be possible by carrying on the negotiations with courtesy combined with vigor, and by patiently doing our utmost in the way of friendly conference, to obtain, without recourse to war, a result which will preserve the honour of Japan.

We feel that there is yet one word more which we ought not to omit in writing this article. At present those writers for the press who talk of our national honour may be admitted to have given careful attention and thought to the question of principle, but if in balancing matters they lean too much to the side of the principle of the matter, and, pay too little heed to the advantages and disadvantages, they differ but slightly from the regular advocates of war with Corea.

The Corean Question.

("*Nichi Nichi Shimbum*" *of Sept.*, 30, 1875.)

* * * * * * * * *

The opinion entertained by us is one easy to be understood by all men, and can be explained by ordinary language. It is this, "we ought not to engage in war," and even though all patriotic gentlemen thrust us aside and stigmatise us as weak and cowardly persons, still we care nought for this. We are of opinion that those who, two or three years ago, urged the question of a Corean expedition will, upon hearing this present news,—provided that it be correct,—at once exclaim, without any distinction of social status,—"Oh! the gorgeous sun-"blazoned standard of the Empire of Great Japan has been "openly insulted by the inhabitants of Corea! Unless "we take her to task for this offence, we shall we insensi-"ble to shame! what should be the action of our Divine "country?"—With these words they would seek to bring about forthwith the question of war. We grant that Corea has certainly thrown a slight upon the prosperity of our land and has insulted our national standard,—but again, what benefit should we derive even though we were to attack and smite her, and, victorious in a hundred fights, to encroach upon the territory of her eight provinces? And yet, how can we now reckon beforehand upon being victorious in those hundred fights?

Although, upon strict principle, it may not be a very heroic sentiment, we yet have the saying: "A solid gain is preferable to a mere empty prestige," and this cannot but be considered as a precept deserving of due regard for the true pacification of the land. If, then, these advocates be desirous of starting the argument that we must engage in hostilities with Corea, we would beg of them firstly to consider, waiving the question of insult to our country, whether, after we have thoroughly conquered Corea, the Japanese are able by force to make her a part of their territory. And again, even supposing that the above were possible, what sort of profit we should acquire from holding possession of her. We fear that even the advocates of war, upon the matter coming to this, would be unable to give forth any truly reliable plan of action. Thus, then, we say "we ought not to engage in war with Corea."

But we will draw aside and leave a clear field to the advocates of a Corean expedition, and then if in a short time, we perceive that they do possess some truly reliable plan, we would enquire of them, "are our foes the inhabitants of Corea alone; have they no other forces to assist them?" According to our own idea, the Chinese have, ever since our treaty drawn up last year at Peking, cherished great dissatisfaction towards our land, and desire, upon an opportunity offering, to wipe out their shame. China must not, by any means, be despised. Upon consideration of her state of late it would appear as though she were making earnest preparation for war and devoting herself to military matters. These preparations for war do not seem to be merely for the purpose of subduing Tartar rebels; and if we believe in the likelihood that the affair of the Margary murder, which gave rise to complications with England, has now eventually been settled by the negotiations at Tientsin, and the demands of the English Minister are to be conceded, for what purpose are those military preparations to be used? We do not as yet know this. Should the Japanese once set on foot hostilities in Corea, they would of course be desirous to cause China to observe neutrality.

But then, would China at once consider Corea as an independent country, and issue a proclamation of neutrality? or would she not make a point of Corea being a dependency (of her own) and so refuse to be neutral? This,

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

too, we do not as yet know. According to what we have heard, a certain Chinese official has said "In view "of public law, China should be neutral, but in view of "friendliness she cannot but succour Corea." Now, this present affair may be considered in one and the same light with the advance of 400,000 Ming troops, in olden time, to the aid of Corea. And even should China not give any direct support to Corea, but afford her occasional supplies of provisions or military weapons &c., by what means could our country prevent this? This, too, we do not as yet know. Again, if, in the Cabinet Councils held at Peking, it should be decided to refuse the above-mentioned neutrality, and openly to give aid to Corea, what locality would be selected as the seat of war by our valiant advocates of a Corean expedition? Would they first engage China, and afterwards Corea, or would they commence war with both at the same time? Even though they be valiant, they are nevertheless unable to comprehend clearly the number of the united forces and the extent of the united military power of these two countries. This, too, we do not as yet know.

We will once more draw aside and give a clear field to the advocates of a Corean expedition; and then, even though their warlike operations be crowned with success, and they conquer the united armies of both Corea and China, we have yet another query to put to them. It is this,—"The financial position of Japan has been proved "to be but poor;—how about the absence of the war "expenses that must be furnished for the sake of "the empty prestige to which you give the name of "'washing out the insult to our national standard'? The "heavy amount of war expenses needed for an expedition "against a foreign land must have been already fully "and clearly noted by you in the Formosan affair "of last year, and as you must likewise have fully "and clearly observed the impoverished state of our "finances, we believe that you would not here await "our arguments thereon. Upon mature consideration, "is there, in such case, reason or not in our open "declaration that we should not engage in war with "Corea? How much the less then (should we fight) "when, by taking a fort, destroying a stockade, and burning the houses of the natives, we have already, through "the "*Unyô kan*," more than washed out the insult "that had defiled the standard of our land!"

"On Revolutions" by Kusama Tokiyoshi.

(From the "Choya Shimbun," September 29th, 1875.)

The word "revolution" is regarded by politicians a, the forerunner of catastrophe, as the stepping stone to revolt, and is therefore a word which causes apprehensions but this view is a superficial one and arises from ignorance of the true meaning of the word. Revolutions are excellent and there is no progress in civilization which is not made by their influence. But thoughtless people do not understand their real nature. Startled by the superficial part of revolutions which inspires dislike, they shrink from these. Is this not the same as looking at persons who have long beards or peculiarly large eyes and instantly coming to the conclusion that they are violent and wicked? In our opinion revolutions are the instruments of civilization, the road of progression of knowledge. However, in consequence of this (unpleasing) exterior people dislike them, regarding them as hateful and bad. From the very earliest times revolutions have not been able, unassisted, of themselves to develope the bright qualities they possess, but during the long period of hundreds of years which have so elapsed, their true nature has remained unimpaired, and consequently as soon as the country and the people were fairly on the road to civilization, the nature was instilled as an impulse into the minds of the people, and the question of Revolutions was first broached in the country. There are still, however, in the country obstinate fellows who expend their energy in denouncing the evils of those Revolutions which are of such importance to a nation, and the number of these is not inconsiderable. These views are prevalent in certain localities in Asia which are either altogether uncivilized, or only half civilized and are productive of mischief than which there can be none greater.

Looking at the condition of all the countries in the world we find that they owe their advance in civilization to the genial influence of revolutions, and that their retrogression in prosperity on the other hand is due to the effect of old customs. Let us advance one step further and assert that as the advance in the one case is due to the development of revolutionists, so the retrogression in the other case is the effect of the prevalence of the supporters of old customs. By a reference to the histories of the various countries of Asia and Europe this will be seen as clearly as an object is made visible by the aid of a light held before it. It is clear, it is distinct, and needs no demonstration on our part.

If we consider the degree of civilization to which our country has attained, we see that she is above bigoted China, and obstinate Corea. How is it that Japan is in a position to look down upon China and Corea and to consider herself as the head of the Eastern World? We regard this as the result of the Revolution of the 1st year of Meiji. If this Revolution had not occurred we should not be able at the present time to decide between Japan, China, and Corea, on which side lay the superiority. Again, if we go still one step further and compare ourselves with the countries of Europe and America, it is as if we compared Formosa or Yezo with ourselves. In how many years will Japan attain an equal level of civilization with Europe and America? If we exert ourselves in the contemplation of this the prospect becomes clear. The Creator in endowing mankind *acted on universal and just principles, and it is not probable that he adopted the plan of treating one nation with greater liberality than another. Therefore the degree of civilization which can be reached by foreign countries is also attainable by Japan. But can our country reach that degree of civilization without having a revolution? After careful and deep deliberation we do not believe this possible. Therefore Japan must have a second revolution, (the revolution of the 1st year of Meiji, we regard at the first). Our countryman Fukuzawa in his view of the question compares the revolution of the 1st year of Meiji to the English Magna Charta. His views are very sound and meet with our entire concurrence. The civilization of England was born in the revolution of the Magna Charta, but its perfection at the present time (though it may be that it is not quite perfect) is due to the revolution of 1640. To express it shortly; the Magna Charta gave birth to England's civilization, and the revolution of 1640 completed it. That England has the respect of the world, and can glare round on all countries on the surface of the globe with impunity, she owes, it must be admitted, to these two revolutions.

It is our secret opinion that our revolution of the 1st year of Meiji did in effect give birth to the civilization of our country, but the perfection and completion of this civilization by means of a second revolution, when will this come to pass? We fully believe that in the civilization which is to be the effect of this second revolution there will be no defect, that it will be perfect. However, the party who advocate the retention of old customs will be sure to say to this. "You are a madman. You are a "traitor! Do you wish to create fresh disturbances in the "country by means of another revolt like the pernicious "insurrection of 1640 in England! This is treason which "certainly cannot be pardoned." To these we would answer. "The two countries of England and Japan "are different. As regards England in the year 1600, "and Japan in the 8th year of Meji, both dates and circumstances differ. Why even a child of tender years "would be laughed at for its folly if it were to take this "fact in the past history of England as a precedent and "say that a similar revolution could take place at the "present time (in our country). Our reason for bringing "forward the second revolution in England lies in the importance of the inner nature of this revolution, and not "in its pernicious exterior. Are there any of us people "such madmen as to rejoice at a state of things where the "monarch of a country mounted the scaffold and that "country was subjected to the horrors of war?"

But will this second revolution in our country take place during our lifetime? Will our descendants be able to see it? The date of its occurrence cannot be fixed

* Made all alike.

beforehand. However, we think that there *will* be a great revolution, and that thus a great advance will be made in our civilization which will reach the same degree as that existing in Europe and America. We have given this brief expression of our views on revolutions in the hope that it may serve as a record a hundred years hence.

The Satsuma Clan.

(Choya Shimbun.)

In the year 1868 or '69 a meeting was convened in Tokio which was attended by some prominent men of each of the various *han*, to consult about the affairs of the nation. I have heard that some of them argued to this effect: Satsuma ought to be attacked, for should the province remain as it is, it will oppose perpetual obstructions to the progress of the Imperial Government. Whether it was jealousy on the part of the *hans* which suggested this view, or the idea that Satsuma was so strong that it might overturn the central government, and thereby bring the whole nation to distress, a fate which might be averted by the course suggested, I do not know. But at all events such views could only have been held by quick-tempered and short-sighted people. Satsuma, at the time of revolution, struggled hard for the Restoration, so that it is no wonder that the Government treated the clan with special favour; moreover, the Satsuma men made no boast of their noble deeds, and never used their great power to embarrass the Imperial Government. The conversion of the *han* into *ken* was effected by four clans, who led the movement and persuaded the others to follow them, and, of these four, Satsuma was the most powerful and prominent. Indeed the struggles made by that clan were noble! Knowing this, I at first thought that when the *ken* were established, Kagoshima (Satsuma) would become the leader of all in abolishing antiquated customs, in promoting the welfare and progress of the nation and in establishing the most civilised form of government, and had no idea that I should be disappointed in all these sanguine expectations. But since that time I hear rumours in the streets to the following effect: The people of the Kagoshima *ken* are very obstinate, and do not like men from other *ken* to administer any share of their local Government, and in this respect show no improvement upon their former state of mind. The regulations of the Educational Department remain unobserved there; certain officials sent there by the central Government were compelled to fly after being beaten by the *samurai*, and there are many other unpleasent rumours in circulation about the *ken*, though it would occupy too much space to recount them here.

At first I did not credit these rumours, but the repetition of them four or five times threw me into perplexity. I say again that Satsuma laboured hard for the Restoration, for the promotion of intercourse with foreigners, and for the conversion of the *han* into *ken*. Men of that *ken* occupy the the highest posts under the Government and seem as if bent upon the promotion of civilization. But the actual condition of the *ken* is the very opposite of this, and I see no good reason why this should be so.

Some people say that the ordering of all the laws for the whole country by the Daijokwan is injurious, and powers should be given to each *ken* to govern itself; that this would constitute a federal system, and that our Government intends to establish it; and then although Satsuma may differ from the other provinces in the form of its administration, this will oppose no bar to general union. Now although I have heard these things, my doubts are in no way dissipated by them. It is true that since the fall of the feudal system many of the old laws have been abolished and a Satsuma man may be the governor of Kaga, and a Tsuruga man the governor of Choshiu, and that changes of this kind were not made without good and sufficient object. The reason for this was that the time had arrived in Japan when change was inevitable, and the nation was forced to look some distance ahead. If a man was appointed to govern his native *ken*, something might arise at head quarters to prevent his following the dictates of his old traditions, and then the *ken* could not have been governed properly. Just look at the circumstances connected with the Sakata *ken*. In respect of its officials it was similarly situated to the Kagoshima *ken*, and finally it came to this, that Mori Toyemon brought a suit against the higher officers of the *ken*, and this difference between the officials and the people arose from the former belonging to the *ken* which they govern. But since Satsuma has been converted into a *ken*, there has been no governor or officer of rank who was not of that *ken*, and from the governor downwards there is not above one man in a hundred who comes from any other province. Looking to these circumstances it would appear that the assertion that Satsuma differs but little now from what it was in the old feudal times, is not false, and it seems to me strange that the Government makes an exception of this clan, and takes no notice of its course of proceeding. Of course it is idle to suppose that a federal system like that of America would work in this country. Such important matters as taxes, war and education ought to be determined by the central Government, and the laws relating to them promulgated throughout the entire country. Now, I do not know whether it be true or not, but I understand that the Kagoshima *ken* will neither obey the Educational regulations nor agree to the modification of the Land-tax. All this causes me great lamentation, and should these things be true, though Satsuma may be said to be under the Japanese Government, yet no one can truly aver that it is so. I cannot believe that the Satsuma men are so disloyal. The rumours of the streets must be untrue and should be rejected from beginning to end. That our Government should make one *ken* an exception to the legislation which controls all the rest, cannot surely be true, and this reflection somewhat lessens my anxieties. But thoughts which have once taken up their place in the mind are not easily dispelled, and my own will not be calm until I have full explanations of all these things.

Economy.

(Nichi Nichi Shimbun.)

Every one knows that no country can be prosperous unless its people are industrious. But there are great hindrances to industry in Japan. There are in this capital a great many men desirous of becoming officials, and by means of entreaties to intermediaries and other means, many of them eventually become so. Those who have been dismissed from office have a still greater desire to regain it, and this craving eats away all their independence; those who might act uprightly become more and more scarce, and many a young scholar forgets all the good resolutions he has formed. The Government, also, by paying for so much unnecessary work, loses its balance, and this militates greatly against the welfare of the people. The money made by the hardworking classes all seems to go to the capital towards building European houses, bridges and salaries and pensions, and all this tends more and more to the promotion of luxury. All this is deplorable, as the poor get no satisfaction from their labour and they can hardly be pleased to see the fruits of their toil disposed of in such a manner. This is hard on them, and is a matter which calls up sorrow in the heart of a spectator.

It is in human nature to try to avoid paying more for an article than it is judged to be worth, or to resort twice to a place where you have been forced to pay more than was sufficient for what you required. Again, harm has been done by saying that the people are ignorant and without energy.*

Such is the state of the capital of the country, and some even say that all the able men in it are in office, and that there is plenty of machinery by which the civilization of the country may be promoted, though with these it is unnecessary to argue here. But if so many betray this excessive eagerness for office and for the external marks of civilization in the country, and not for its inner amelioration and the advance of its internal economy, what will Japan become in the future? I have never yet heard of a country standing independently the finances of which were disordered, and whose

* This seems an allusion to a speech made in the assembly of Local Officials, in which the people were somewhat roughly criticized. The words of the speaker evidently rankled, for this is by no means the first allusion made to them by the press. [Ed. J. W. M.]

Digitized by Google UNIVERSITY OF CALIFORNIA

people were not industrious. It is not a task of great difficulty to rectify these matters. Some rules should be made in regard to the number of officials, a stop should be put to useless constructions, the taxes should be lessened, and the industry of the people should not be consumed in nonsensical undertakings. It is, indeed, said that a reduction of the taxation will only help the indolent, but it will assuredly help the industrious.

Although what we have written above may seem directed against the Government, we have written for its own good, and for that of the people, who are very precious to us,

Education.

(*Nichi Nichi Shimbun.*)

It used to be said that education was good for the nobles and gentry, but not for farmers and merchants, and in the Tokugawa times it was a proverb that if such men gave any attention to education they were certain to fail in their business. Even now, indeed, there are many people who are loth to send their children to school, though this may arise from the parents themselves being unlettered and their deslike to seeing their children more literate than themselves. But when we look a little deeper, we find that these parents are not altogether without reason sometimes, because what was called education a few years ago was no use to these classes after it was acquired. For example, a child of eight years of age was taught how to govern and tranquillize a nation, the moral doctrines of Confucius, the writings of ancient Chinese sages and Chinese poetry. Thus they were taught nothing but the square Chinese characters, and while they could recite Chinese poetry in a loud voice, they were unable to write an ordinary letter. They thus learnt that trade was beneath them, and that it was too much trouble to handle a hoe or a plough to cultivate the soil. They used to boast that they could compose poetry, but that they were above the ordinary duties of life. Thus they became haughty in their feelings and luxurious in their manners, and continued to look down upon the common people as inferior beings. It is easy to understand how such education as this inevitably brought failure with it, and if this were the only education obtainable parents might well be excused from sending their children to school. But people should bear in mind that all this has been changed, and an education is now given which renders the young useful for the ordinary duties of life, for the production of wealth in the country, and for the advancement of the Empire. Therefore, ye parents, send your children to school!

We hear that the news about the tea-market in London is just a trifle better, and that quotations for Congous are a full halfpenny higher. From New York however the news is very bad, to judge by the tenor of a private telegram which has been kindly submitted to us by a correspondent. It is dated the 15th instant, and reports numerous failures, no improvement, and prospects as most discouraging. The loss of the *Deerhound* with 800,000 boxes, of tea may possibly have had something to do with the temporary improvement in London, but it is to be hoped that the better feeling may prove lasting.—*Celestial Empire.*

The Chinese have it, that Governor Li does not feel equal to the responsibility of granting the demands of the British Government as made by its representative, but that he said a Commission would be sent to England to settle the matter there. Doubtless he would like to gain time.

The Commissioner appointed to visit England with a letter to H.M. the Queen, is His Excellency Kwo, recent Judge of the province of Fokien. His deputy is a Mr. Hsii, who is in charge of the Interpreting Office of Li Hung-chang, at Tien-tsin. He is said to be very well disposed towards foreigners. —*N.-C. Daily News.*

Correspondence.

SERICULTURE IN JAPAN.

To the Editor of the "Japan Weekly Mail."

Yokohama, 29th September, 1875.

Sir,—The editorial article in the numbers of the *Japan Mail* and the *Weekly Mail* of the 25th instant, calls for some remarks from us.

When H. B. Majesty's Minister did us the honour to ask us to give him a report of our observations in the silk districts of this country, we were too much flattered by his request not to accede to it at once. By our giving up that report to Sir H. S. Parkes, the ownership of it became vested in him, and, in duty bound, our mouths were closed on the subject treated therein. It is true that when he asked us whether we should have any objection to that report being published, we hesitated at first; but the reflection that, if we demurred, it might be supposed that we had not the courage of our opinions, got the better of our hesitation, and thus it is that the narrative of our excursion has found its way into your paper. We are perfectly aware that whatever falls into the domain of publicity, becomes, *ipso facto*, a fair subject of criticism. We are therefore ready and willing to listen to any remarks that may be made by the press, with the proviso, however, that we shall be suffered to accept in silence any opposition, well grounded or not, charitable or otherwise, that is sure to arise, and to refuse any further discussion on the subject. We are not members of the fourth estate, but merely mercantile business men. We shall treasure up, and try to make our profit of, anything that may be said to us, the justness and propriety of which we shall inwardly acknowledge; but shall pass all the rest without any comment, comforting ourselves with the thought that we accepted as a duty the invitation of H. B. Majesty's Minister, and fulfilled it to the best of our ability. Had the work been confided to more able persons than we, they might very probably have done fuller justice to the subject, but, they would not have undertaken it with more alacrity, nor taken more pains to accomplish it. It is only because you, Sir, while entrusted with the task of launching this bark of ours on the ocean of publicity, have at the same time loaded it with observations of which we had no previous knowledge, that we beg leave to trouble you with these lines. But we shall not trespass any further on your time, or the space of your valuable paper.

The first item of your editorial leader which strikes us is the paragraph in which you say: It is certain that "if the *pébrine* had actually appeared in this country, "they would have witnessed, or heard of its ravages in our "extended tour. The fact that they make no mention of "it must be held to be conclusive in regard to any solid "grounds for entertaining this opinion, at lest for the "present.

The only thing certain, say we, is that we fail to see how you can possibly construe the silence of our report on the *pébrine*, to prove or disprove the existence of it here. We never heard a word about it from, or alluded to it with, any of the Japanese people with whom we came into contact during our tour; neither do we believe that they are cognisant of it, whilst we, personally, never directed our observations to the existence of the *pébrine*, which we did not suspect, nor witnessed anywhere what you call its ravages, or any apparent symptoms of them. If the disease really exist, even barely in a premonitory stage, it can only be demonstrated by persons conversant with the subject, the result of whose scientific researches and investigations, we beg leave to suggest, should be openly and frankly made known, in the interest of all parties concerned. We fully agree with your own remark that the Government should not be afraid of hearing the alarm-bell sounded.

Your next paragraph concerning the *Kaisha*, (we should have more properly spelled it *Kuwaisha*) is entirely grounded upon a confusion of three things which are completely different. We never alluded in one single instance to what is called here and in the interior the "*Kiito no Aratame Kuwaisha*," but to the "*Zai-no Kuwaisha*," or, as it is called short, the *Kuwaisha*.

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

The former is the denomination of the Silk Guilds. The latter is an association which exists all over the country, in the smallest and poorest villages, as well as in the towns, the object of which is, to convey and transport passengers as well as goods, by *kagos*, *jinrikishas*, carts, boats on rivers, horses and other cattle, or by coolies, at rates fixed by a tariff, which varies according to localities, but is generally very moderate. The managers of this Conveyance Association, occupying a position of trust, are invariably men of a certain standing, and of comparative affluence. Not infrequently, they are merchants as well as masters of the *Kuwaisha*, very often they are *yakunins* of their villages. The nature of the business they have to transact makes them well acquainted with the products and capabilities of the districts they reside in, so that the informations we had from them we found as valuable as they were extensive. The masters of the "*Zai no Kuwaisha*" have nothing in common with the members of the "*Kiito no Aratame Kuwaisha*," and the two things are completely different; it is to the former that we applied very often, whilst we never came into contact with the members of the "*Kiito no Aratame Kuwaisha*," as such. Again, the district Silk Inspectors appointed this year by the Government (see Wednesday 28th July) are a new creation, apart also from the "*Kiito no Aratame Kuwaisha*," as well as the "*Zai no Kuwaisha*." Only in some instances the district Inspectors are, at the same time, members of the Silk Guilds. We regret that from want of sufficient information you have made a confusion of the three things; but it no less follows, that having built upon an unsound foundation, your argument falls to the ground and is no longer appropriate or conclusive.

We are at a loss to make out what you mean when you say: "We cannot acknowledge that the deterioration (of Japan Silk) has been progressive." Are we to understand that you are not prepared to acknowledge that the quality of Japan Silk has gradually deteriorated, or as we put it (perhaps incorrectly according to your idea) that the deterioration of Japan Silk has gradually progressed, within the last six or seven years at least? In that case allow us to draw your attention to a letter printed in the half yearly report of July 1870 of the Yokohama "Chamber of Commerce," addressed by its then Chairman, the late Mr. W. Marshall, to the Prince of Uwajima, Minister of Finance and Home Department, and likewise to another letter addressed in reply by Mr. F. O. Adams to Mr. Marshall. You will see therein the official expression of the first loud complaints that were coming from Europe; these complaints all the foreign houses of Yokohama know to have been increasing in bitterness year after year, to such an extent that a good many manufacturers who were formerly in the habit of using large quantities of Japan hank silk have now ceased completely to buy any more, on account of its deteriorated quality.

We are fully aware that atmospheric variations may have a considerable influence on the quality and abundance of a crop, irrespective of the nature of the seeds. But it is not to a prevalence of bad seasons, that the degeneracy of Japan Silk must be ascribed; this country has generally in the last few years been favoured with fine weather for its crop; this year in particular it was all that could be desired; the crop has been everywhere very abundant, with the exception of a portion of the province of Techigo which we have mentioned in our report; but the quality of the cocoons has not resulted any better for that. It may not turn out much worse this year than last, but all competent judges will agree with us that this year's silk, is, undoubtedly, very much below the standard of three or four years ago. We have received from Lyons a letter dated 6th August last, which confirms what we had already stated, namely, that the Japanese cards, the produce of last year's cocoons, shipped from here in the autumn, and hatched this spring in Italy and France, gave an abundant enough crop of cocoons, but that the quality and yield of them were bad; this proving that the quality of Japanese seeds sold last year for shipment was not even so good as that of the previous years. A similar account is given us by more than one *graineur*.

Your remark that we saw almost nothing but bivoltinis because the crop of annual cocoons was over, is not a happy thought. In Oshiu we saw at the same time large quantities of annual worms, as well as cocoons. The crop in Shinshiu and Kôshiu being earlier than in Oshiu, if we did not see the annual worms, we saw at least the cocoons, which had been gathered one month or six weeks before, hundreds of bales of them, in Suzaka, Matzushiro, Uyeda, Yashiro, Yenoma, Kôfu &c. &c.; and that, we need not tell you, was still better for us, as it gave us the opportunity of seeing the Silk reeled off them. Do not forget either that we saw the bivoltini cocoons of the first crop which had been got in before the annuals, so that, in fact, in going at the time that we did, we saw a good deal more than we should have done had we visited the same districts in June.

We know well that the Japanese after drying their cocoons, reel the stained and inferior ones first. It is the universal practice, and, in that respect, neither more nor less is done in this country than in the rest of the world; the operation must not be delayed, or else the value of the cocoons might fall still lower by being kept too long. It is therefore dispatched with promptitude, after which the sound ones are taken in hand, as soon as convenient.

When we came to the province of Shinshiu, the stained cocoons, either annuals or bivoltinis, had been reeled off a month or so before, so that it was the sound, and not the inferior ones, that were being reeled. We have frankly stated whenever we found the Silk bad, nor have we failed to state when it was good. What general inferences we draw (as you say) from that fact, we are at a loss to imagine, and must leave you to explain.

We can still less make out the sense of this paragraph: "The defects which are concealed in a skein nicely made "up, are glaring when the Silk lies unfolded on the reel, "and these are amongst the circumstances which the "observer has to take account of."

Do you mean to hint to us that we have been wrong, when inspecting Silk, to look at it as it lay unfolded on the reel, and that we should have taken into consideration that it would look better if it were "nicely made up" and the defects concealed in consequence? Putting however, the best construction we can upon it, we suppose that you think we have been too severe in our inspection; and that as we looked at the Silk at it lay, wet and unfolded on the reel, we saw more defects than will be apparent when the skein is "nicely made up." But would that improved appearance remove the faults we noticed?

We now come to the question of the extent of Silk producing districts that we have examined. Undoubtedly we saw far less than it would have been possible or desirable to do; but we beg you to bear in mind, that this excursion was not undertaken solely and purposely to make inquiries about Silk. The primary motive was the state of health of one of us, which required a change of air, and exercise. We had to take into consideration the length of time at our disposal, how far we might go, and to what places we had better give our attention. We made up our minds to go first to Oshio, and from thence to return through Shinshiu and Koshiu. The first two provinces being those where the greater portion of the seed is made for the rest of the Empire, we considered most worthy of being thoroughly inspected. As for Joshiu which certainly produces the largest quantity of Hank Silk, we knew that it draws its seed partly from Oshiu, and partly from Shinshiu, not to speak of the seeds of Shimamura, the bulk of which, however, is or has been hitherto been sold for export. We therefore attached less importance to the latter province than to the other two, for the object we had in view; well convinced that if we found the seeds and cocoons in Oshio and Shinshiu satisfactory at the fountain sources, they would be sure to be equally so in Joshiu. Koshiu partially makes seed for itself, and partially also draws it from Shinshiu; after we had passed through the latter province, our nearest way home lay through Koshiu and Bushiu, and we arranged our trip accordingly. We could not see at much of Oshio as we had intended; we were detained five days by bad weather in one place, and prevented by the inundations from proceeding as far as Nihonmatsu, and Fukushima; in consequence we shaped our course to the south west-

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

ern portion of the province a total distance of 36 *ri*, including the fine valley of Hachijiu ri Toge, and so we had all facilities of seeing that which is not the least interesting or the best known part of Oshio. Yechigo we need hardly mention as a silk growing province. Koshiu had a good share of our attention; more so than Bushiu; but we had hardly any time to spare for the latter and were anxious to be back at home.

One more remark on the paragraph: "referring to the trade in, &c.," and we shall bring to an end this already too long letter. We cannot help thinking that you hardly treat us fairly when you cast such a broadside of doubt on the evidence we have collected. The common saw "*What everybody says must be true*," is not an unwise one; and yet you speak as though all our informants by a common accord, had seen through our "bias," or "our peculiar disposition," and tickled our hobby accordingly. The mass of evidence in question was collected in a variety of places, the last at a distance of 200 *ri* from the first. The information come from all sorts of people, unknown to, or unconnected with, one another; men and women in their huts by the roadside, peasants, officers, and men of position in villages, merchants in towns; a great part of them was voluntarily given us, not only in a free and open manner, but even without any solicitation or leading questions on our part. The unanimity of these testimonies wonderfully agrees with our own observations. Practical men, when treating a practical question, can very soon see whether the turn of a conversation in which they are engaged, is serious and truthful or not. We have noted in our report two or three instances in which our informants were indisposed to impart to us correct and truthful information, and we took their evidence for what it was worth. If you admit that during an extended tour, we have allowed ourselves to be "cunningly" befooled throughout, you infer at the same time that we have not only been precipitate and indiscreet in accepting the statements of our informants, but made besides a very bad use of our eyes in the daily and hourly examinations we made, connaisseurs though you flatteringly call us.

We beg you to pardon us, but we think that you have attempted to prove, or rather disprove, too much.

We are,
Dear Sir,
Very truly yours,
J. M. JAQUEMOT.
RONALD C. JAQUEMOT.

It had nearly escaped us to state that, had we been able to visit the districts of Nihonmatsu, and Fukushima, as we had intended, we should have arrived there in time to see the annual worms just about climbing to the bush, and perhaps the first parcels of new made cocoons, but too soon to see them reeled.

The climatic conditions of that part of the country being very similar to those of the other part of Oshiu which we visited, we should not have been able to report about the appearance or quality of Silk, the new produce of annuals. We might possibly have seen new bivoltini Silk; but we have said that we saw some elsewhere, which happened to be very good. We have reasons for believing that Oshiu will turn out this season better Silk than many another province.

PUBLIC WORKS.

To the Editor of the "Japan Weekly Mail."

Yokohama, 26th September, 1875.

Sir,—I find it is necessary to say just a few words in reference to Mr. Dyer's remarks in your last issue. He has addressed himself to statements which I never made, and to arguments the purport of which he has entirely misapprehended.

It might have been expected that a reply, shewing a want of appreciation of the point of an argument, which fails to answer it on its merits, but rushes wildly to an extreme which nothing I have said can warrant, and in which a number of irrelevant illustrations are made use of, would have emanated from a mind accustomed to deal with romances, and which has not been disciplined to the close and solid reasoning which accompanies mathematical training; but, from Mr. Dyer, something might reasonably have been looked for which would have displayed a more logical train of thought.

Nothing is further from my intention than to depreciate the value of theoretical knowledge. For the intelligent treatment of any subject it is all essential. For the purposes of invention, for the design of any structure of which examples do not exist, for the proper application of examples, and also for the ordinary and every day practice of the profession of civil engineering, a knowledge of mathematics and general physics, in a greater or less degree, is necessary, and, as I have already stated, the more an engineer knows of these, the more useful he will probably be.

But I also said, and this I am fully prepared to maintain, that, in order to train a man who will be capable of efficiently designing or carrying into execution, any ordinary engineering work, theory may safely be made subservient to practical experience, in cases where it is difficult or impossible to attain a knowledge in both of these. I also showed how difficult it has been found to combine these two branches of knowledge in one person in England.

It is possible for a man with a good sound general education, and with a series of years of intelligent observation in the discharge of duties connected with the actual construction of work, to be an extremely useful practical engineer, but it is perfectly impossible for any man coming direct from any college, to either design or satisfactorily conduct works.

It is surely too bad in Mr. Dyer to ground his reply to such an argument as this, upon an assumption that I object to an education in scientific subjects for engineers altogether, and to go out of his way to make use of catchpennys, which, he must be aware, can have little influence; such as enquiring whether I was aware of George Stephenson saving three pence a week to learn penmanship, of Smeaton's lamenting his ignorance of mechanical laws, of Brindley's retiring to bed to think over his plans. I probably knew all this before the subject of engineering ever entered Mr. Dyer's head, and I mentioned these men's names, not with the object of advocating illiterateness, nor as instances of what engineers of the present day should be, but as examples of what it is possible for practical knowledge to accomplish without theory, while at the same time I gave instances of what theory had endeavoured to accomplish in India without practical experience.

The issue to which I would desire to direct Mr. Dyer's attention is whether, in training a man for the practical duties of the engineering profession, it is not advisable to limit his theoretical studies to those only which the highest authorities affirm to be absolutely essential to the ordinary practice of the profession, and in this way to give a more enlarged opportunity to him for the acquirement of practical knowledge.

I ventured upon a remark in my former paper that such institutions as Cooper's Hill College in London, by lessening the time young men have to devote to the practical part of the profession, and by destroying their taste for it, will more or less tend to lower the present high standard of the engineering profession. To this Mr. Dyer replies that "it seems almost a waste of time to argue with one who holds such opinions opposed as they are to those of every right thinking man"—"they can only proceed from one who has some special reasons for holding them." I cannot help thinking that it is a pity Mr. Dyer should have permitted himself to write in this way, because such expressions justify a personal retort which, were I to use it, would probably give irresistible force to my arguments. But I refrain, because nothing is further from my intention than to show any hostility to Mr. Dyer or his labours.

A justification of my remark is not far to seek. In a recent leading article in the "Times," the conduct, in India, of the young gentlemen who had been sent out there from Cooper's Hill College is very sharply commented on. These gentlemen are said to have formed the impression, that, having gone through and successfully accomplished their course of study in London, their mission in life has been accomplished. They have attain-

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

ed a position which their former hard studies have gained for them, and they feel no necessity for further exertion. They do not work, as an Engeneer requires to work; such labour is probably considered derogatory and beneath the attention of men possessed of an extensive knowledge which they feel that they have but little occasion to apply. They have made themselves conspicuous by bullying the natives, by insubordination and by other behaviour which, at all events, shews some defects in their training.

Hoping that Mr. Dyer will form, in future, a juster appreciation of my arguments,

I am, Sir,
Your obedient Servant,
R. H. B.

Dr. BROWN'S "MASTERY SYSTEM."

To the Editor of the "Japan Weekly Mail."

Tokio, September 27th, 1875.

Sir,—I think that the reviews hitherto published of this book have all been far too lenient in their judgment. Though in no case praised very highly, the book has been so far recommended to students as a work that would help them along in their studies, and in the review that appeared in your paper, it was said, that though full of typographical errors, of real mistakes there were only few. I only possess a very limited knowledge of the Japanese language; but, nevertheless, upon a hasty perusal of the first few pages of the book, I found, that not only do the Japanese sentences in the *kana*, as well as in their transliterated form, contain so many errors, that *not a single* Japanese word written in *kana* or Roman letters can be relied upon as being correct; but, besides, the Japanese sentences are often so badly construed that they are unintelligible to Japanese, so that it would only be little desirable for anybody to learn them by heart and use them again. And finally, the English and Japanese phrases, supposed to be translations of each other, are often of different, or even quite reverse meanings.

In the first part of the book the future form is written セ ウ transliterated *sho*. Later on (*ex gra.* page 32) the same two *kana* characters are used, but rendered as *shō*. In the latter part of the book it becomes シ ョ *shō*, as on page 210; but only to be relieved again by シ ウ *shō*, (pag. 210 and211).

On *page* 8 the word ホ ウ イ ウ is written *hoyu hŏyu*, and *hōyū* one under the other; and after that *hōyū* is constantly used, being sometimes rendered in *kana* as ホ ウ イ ウ and ホ オ ユ ウ, *hoyu*, sometimes as ホ ウ ユ ウ.

Page 12.—"Uncle" is given in *kana* as オ ヂ, transliterated *Ōji*, while in the two following sentences it is written *Oji* オ ヂ. The "Aunt" passes through similar metamorphoses on Page14.

These mistakes, and others too numerous to be mentioned separately, cannot possibly all be the printer's alone. The various renderings of the future termination *shō* above mentioned, clearly show, that the author has himself periodically changed his manner of writing; and the following mistakes are undoubtedly also the author's.

ハ シ ラ ン カ イ instead of ハ シ ラ ン ク ワ イ
ガ イ ム シ ヤ ウ instead of グ ワ イ ム シ ヤ ウ
リ ヤ ウ ガ イ instead of リ ヤ ウ ガ ヘ
(from カ ヘ ル to change.)

Of a more serious nature are the discrepancies between the meaning of the Japanese and English sentences; serious, because a student, after having "committed them perfectly to his memory," will, when trying to apply in practice what he has learnt, unconsciously repeat these blunders, and consequently say something quite different from what he intended to say. I give a *few* instances of such faults, but only what I have found by a hasty perusal of the first and last leaves of the book; the greater part of the book, from about page 50 to 150, I have not looked into at all. This part is still an open field for other explorers, and will, I am sure, give a rich harvest.

Page 6.—*Ashita sō nasarimasuka* is translated thus: "I will do so to-morrow," while its meaning is: "Will you do so to-morrow?"

Page 14, Sentence 10.—*Ashita Tōkiyō ye yukitō gozaimasuka*? is translated by Dr. Brown thus: "Because I wish to go to Tōkiyō to-morrow," while it can only mean: "Do you wish to go to Tōkiyō to-morrow?"

On page 14, is found the sentence: *Kiyō machi ye oide nasaraneba narimasenka*, and *page* 24, *Hashi wo toru ni hashizei woharatte wa narimasenka.*

These sentences are of constructions just as different one to the other, as *plus* is to *minus*. The first literally means: "If you do not go to town to-day, won't it do?" that is: "Is there any necessity for going;" while the second means: "If I pay toll at the bridge, won't it do?" that is: "Is there any necessity for *not* paying." Nevertheless Dr. Brown translates them both exactly in the same way, viz: "Is it not necessary to go to town." "Must I not pay toll at the bridge?" and *both translations happen to be wrong*. The only right translation of the two sentences in question is:

"Is it necessary for you to go to town to-day," and "Is it prohibited to pay toll at the bridge?"

The sentences, as given in English by Dr. Brown, would be in Japanese:

"*Kiyō machi ye oide nasaru ni wa oyobimasen' ka*" (or *oide nasarimasedzu tomo yoroshiu gozaimaska* and: "*Kanebashi de wa hashizei wo harau hadzu de arimasen' ka.*)

Dr. Brown's mistake is partly, that he does not see that the "not" in either of his English sentences is the one used, not as a negative, but to indicate that the enquirer expects an affirmative answer. When one asks: "Are you a Japanese?" he expresses no previously formed opinion of his own, and is prepared as well for a "yes" as for a "no." But when I say "Are you not a Japanese,?" I mean to express that If I am not mistaken, you are a Japanese.

But also where the "not" is a clear and distinct negation Dr. Brown uses it wrongly, thus giving just the opposite meaning to the sentence he translates. Thus *page* 16, Sentence 4.—"*Naze kore wo go hōyu ni ageneba narimasenka*" he translates: "Why must I not give this to your friend,?" while the meaning is just the reverse: "Why must I (necessarily) give this to your friend?" and quite an analogous instance is found *page* 20.—"*Naze kiyōdai ga are ni harawaneba narimasenka*?" which Dr. Brown translates: "Why must not my brother pay him,?" while it can only mean: "Why must my brother necessarily pay him?"

Page 16.—"How much must I pay?" is not in Japanese *Ikura harawaneba naranu;* it must be *naranu ka.*

Page 34,—Sentence 4.—"*Go ji goro*" is translated as "before five o'clock" instead of "about five o'clock."

Page 56,—Sentence 11.—"*Konnichi go hōyu ga inaka ye oide nara go issho ni mairimasho.*" "If your friend goes into the country to-day, will you go with him?" So says Dr. Brown; but the translation is: "If your friend goes into the country, I will go with him." The English sentence given by Dr. Brown would be in Japanese: "*Go issho ni oide nasaimasu ka.*"

Page 151.—Sentence 8.—"*Hokano hitora mo ano hito hodo haya oki de sore yori nawo hayai no mo arimashō*" is translated "Others are as early risers as he is, even more so, perhaps," while it means: "Other people rise as early as he, and some even earlier, I think." Dr. Brown seems to consider the subject to be the same in the two sentences of which the Japanese phrase is composed. But *hokano hitora* ("other people") is the first subject, and "*nawo hayai no*" ("some earlier ones") is the second.

Page 210.—"*Kono kata*" is translated as "you," though it is exclusively used for the third person.

But this may suffice as a proof of my assertion that the book is utterly unreliable and not to be recommended to students. How shall a beginner possibly get through such a confusion, at the same time following the instructions given by Dr. B. "carefully to abstain from seeing or hearing any new words other than those included in the lesson," and abstain from using any grammar? How is a poor student, if a foreigner, able to

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

find out, without the aid of a grammar, if the future of the verb *masu* ends in ?

or	セ ウ	sho
or	セ ウ	shō
or	シ ョ	shō
or	シ ョ	sho
or	シ ウ	shō

and how can he, without looking in a dictionary find, if "a friend" in Japanese is : *hoyu.*

or	hōou	ホ ウ イ ウ
or	hōyū	ホ ウ イ ウ
or	hōyū	ホ オ ユ ウ
or	hōyū	ホ ウ ユ ウ

or any of the numerous combinations arithmetic allows of, and which certainly all will be found in the "System," and of what avail would be the efforts of a Japanese beginner, if, by the way of reasoning only, he tried to come to a conclusion about the formation of certain mysterious sentences. Even if "making daily six efforts of five minutes each" as is minutely prescribed, I fear he would not get any further than pondering over some inexplicable mystery in the translation.

The printing office might easily have remedied all this, and silenced every criticism, by administering, according to the homœopathic principle *similia similibus*, only one more small error, which, strange to say, would have had the effect that all the other errors would suddenly cease to be such. If by substituting "y" for "a" on the Title Page, the book had been called "the Mystery System," then the title would have become the very right one, and nobody could have said with justice that the book did not prove to be what it pretended.

Yours obediently,

WILLIAM BRAMSEN.

THEATRICAL REPRESENTATIONS

To the Editor of the "Japan Weekly Mail."

Hiroshima, September 23rd, 1875.

Sir,—Amongst the many reforms the Government of this country has commenced, I am surprised that no attempt has yet been made to prevent managers of places of public amusement setting things before the people that tend to poison their minds. That some regulations are necessary, every one who has visited a provincial theatre must admit.

I have lived in Japan for more than five years, and have mixed with all classes of society, in the interior, to a great extent; I have also witnessed the performances in several country theatres; so that I have become somewhat inured to seeing and hearing things which offend all ideas of decency. But I have never been so thoroughly shocked and disgusted as I was a few evenings back. At the solicitations of some Japanese acquaintances, I went to the principal theatre in this city to see the performance. The first play was an historical one, and passed off without exciting much applause, although the audience seemed deeply interested in it. The second piece commenced with a Tea-house scene:—the acting and language in this were inexpressibly disgraceful and disgusting: things were represented upon the stage, which people with an ordinary amount of decency in their nature would not even speak about. At every disgusting exhibition and obscene speech, the audience expressed their approbation by roars of laughter.

It would be out of place here to give a description of the acting or the theatre; I will merely state that I should think there were from four to five hundred people present, consisting of men, women and children; amongst whom I noticed many *samurai*, some with their wives. I particularly observed three chairs, placed in a situation commanding a full view of the stage, at the same time convenient for going in and out. During the first part of the performance there was only one policeman, and he seemed to be there to see that no disturbance took place; but when the Tea-house scene was commenced I perceived three of these preservers of the peace seated in the chairs. Whether their presence was necessary to prevent any ill disposed persons interrupting the edifying performance I have mentioned, I cannot say.

It may not be amiss to state that Hiroshima is a garrison town, and, excepting Yedo, Kiyoto and Osaka, it is one of the largest towns in Japan. It has a school of English, in which three English instructors are engaged, and many native schools, both for boys and girls.

If you can find room in your widely circulated columns for this communication, the native newspapers may also take the matter up, and urge upon the Government the necessity of placing some restraint upon public actors.

I will not make any comments on the harm likely to be done to young minds by seeing and hearing such things as I did at the theatre three nights ago; but will leave that to you, Sir, if you deem it expedient.

Believing that the importance of the subject warrants me in taking up so much of your valuable space.

I remain, Sir,

Your obedient servant,

T. W. H.

[We would earnestly call the attention of the Minister of the Interior to the above letter. What is the consistency of making regulations for the preservation of decency in the streets, and permitting the minds of the people of this country—men, women and children—to be poisoned in this wholesale manner? Is it enough to white-wash the outer walls, so that the world may applaud, while this reeking filth is left untouched and undisturbed inside? This is a question which touches alike the welfare and the reputation of the country, and it is the duty of the Government to deal with it in a spirit worthy of the new light by which it professes to be guided.—Ed. *J. W. M.*]

Law & Police

U. S. CONSULAR COURT.

Before Gen Van Buren, U. S. Consul-General,

And

F. R. Wetmore and C. Drake, assessors.

Monday, 27th September, 1875.

Ito Hachibei *vs.* Walsh, Hall & Co.

In this case, plaintiff claims a sum of $108,715.42, balance of account and interest connected with certain trading transactions he had had with defendants.

Defendants deny that they are indebted in the above amount, and claim that he (plaintiff) is indebted to them in the sums of $16,222.55, and $16,483.61, being balance of accounts between them and the plaintiff.

Mr. F. V. Dickins appeared as counsel for the plaintiff, Mr. G. P. Ness for defendants.

The further hearing of this case was this morning resumed. The Court re-assembled at 11 a.m.

Hashimoto Benzo was still too ill to appear, and in his absence it was agreed that the evidence of Mr Talbot be taken.

W. H. Talbot, sworn, and examined by Mr Dickins: I am a public accountant. I have had a good many years' experience as a public accountant. I recognise the accounts shown me. I prepared them. I made them up from translations from Japanese books and papers. They were furnished me partly by Saito Kaske and partly by counsel. I did not verify any of the translations. I checked the figures. As far as the figures are concerned the accounts are correct. I got the items in the cash account from the translations. I could not compare them with the originals. There were some clerical errors that were pointed out to the accountant, and he explained them. They were principally errors in calculations. The totals are right. I think they have been corrected in the accounts I prepared. The information I required was furnished without any difficulty whatever. The accounts were in rather a confused state. The accounts relate to exchange, rice transactions, advances made and interest. The accounts show the transactions detailed. [Accounts appended to answer shown to witness, and recognised.] I have examined these accounts; they represented two exchange transactions, some advances &c., with interest. The exchange transactions shown are only about one-fifth of those shown in the other accounts. There is nothing about rice transactions in them, except an advance

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

of $5,000 on account of rice. The balance is correct so far as the account is concerned, but the account [exhibit "H"] is curiously made up. I have made up an account showing its peculiarities. [Put in and marked "S."] The items of 200,070 rios and $239,270 do not refer entirely to the exchange transactions. [Items of account and dates gone into.] The defendants in their accounts have not debited themselves with any loss on the exchange transactions. [Figures gone into] In defendants' account current interest is debited to plaintiff on the balances. It is compound interest. There is no interest charged on the advances for the exchange transactions. Interest is charged on advances for other purposes. Commission is charged on an item of $160,000. Defendants made advances to plaintiff against niboos without charging commission or interest. The accounts do not show plaintiff and defendants as engaged in partnership. I have never known before of money being advanced without interest or commission, without there was some special consideration. Some accounts handed to witness.] Exhibit "P" was not dated, but it was made up after the 30th June, 1872. [Items gone into.] In the accounts appended to the answer I do not find any explanation of the differences in the two accounts. Exhibit "F" is comprised in the accounts appended to the answer.

Court adjourned till 2 p.m.

Court re-assembled at 2 p.m.

Before proceeding with the evidence of Mr Talbot Mr Dickins called a native doctor to prove the state of health of Benzo.

Ujino Kosai: I am a physician. I know Benzo. I have attended him. He is suffering from *tsuke-kakke*. It is dropsical *kakke*. Benzo is very seriously ill with it, but is expected to recover. He is under treatment at "Kanagawa dai." It is impossible for him to attend under a week. The motion of a jinrikisha would be very detrimental to his health. It would increase his complaint to come and sit in Court and give evidence.

Cross-examined by Mr Ness: I saw Benzo last night.

W. H. Talbot, cross-examined by Mr Ness: I do not know if the translations of accounts given to me to make up the accounts by were correct. They were simply given to me. It is possible that two accounts having the results the same, but the items different, might still be consistent, if the items of the one were in an abbreviated form of those of the other. [Exhibits "P" and "E" shown to witness, who was examined on various items.] If account "P" should be assimilated to "E," showing that one was an abbreviated form of the other, both would be correct.

Re-examined by Mr Dickins: [A number of items gone into, as to balances shown by the different accounts.] One of the two exhibits ("E and F") does not look like an abbreviated form of the other.

Court adjourned until 10 o'clock to-morrow morning.

Tuesday, 28th Sept., 1875.

On re-assembling at 10 a.m.

Mr Dickins called Dr Wheeler, to testify as to the state of Benzo's health.

E. Wheeler, M.D., sworn, deposed that he was a medical man. He had visited Benzo this morning at Kanagawa, and found him suffering from *kakke*. He thought the motion of bringing him to Court would be detrimental to his health. He thought Benzo would be able to attend Court next week. Benzo could attend Court now, but he (witness) would not answer for the consequences.

Mr Dickins protested against the expense plaintiff had been put to in having Benzo examined by an European doctor. The evidence of native doctor yesterday ought to have been sufficient. He would pray the Court that defendants be ordered to pay the expense incurred.

His Honour disallowed the motion. It was customary in the foreign Courts in Yokohama to have the report of an European or American doctor in the case of parties connected with a suit being unable to attend through illness.

Kitamori Heizaburo, cautioned: I am the chief manager of the Yokohama *Shoshi*. *Kashikin shomon* is a document delivered by the borrower as security for money. I know of documents of this kind given by the old *hans* to people who lent money to them. They would be securities, but their value would depend on who issued them. The *han* would be responsible for the payment of the sums marked on the face of these documents. Some of them are sometimes taken up by the Government; others are paid directly by the *han*. It depends on the agreement that was made. Those that are taken up by the Government are converted into *kosai* (Government bonds). I am acquainted with documents called *shin-kosai*. The Government is responsible for the payment of the latter *(shin-kosai)*. There are daily rates fixed for the sale of these bonds; but I think a $100 bond could be bought for $67. If a person has them for sale there is no fixed price; he would have to get what he could for them.

Mr Ness did not cross-examine this witness.

Mr Dickins, before proceeding farther with the evidence, made a motion that defendants be ordered to give bail, for a moderate sum, for having pledged to the Hongkong and Shanghai Bank the securities that plaintiff had deposited with them. Plaintiff had not authorised defendants to make use of the securities in any way, and they had pledged them to the bank for their own purposes, thereby placing the said securities out of the power of the court. He would therefore ask that defendants be ordered to give bail for say one half the value of the securities, which were worth $100,035.

Mr Ness argued at length against any bail at all being required or given, and asked that the motion be dismissed. Plaintiff's counsel was acting irregularly. He had called witnesses and commenced his case, and this was not the time for such a motion to be made.

His Honour ruled that the motion must be made in strict conformity with the rules. An affidavit must be sworn to, accompanied by a bond.

Mr Dickins intimated his intention of doing so. He then called—

Saito Kaske, cautioned: I am the accountant of Hashimoto Benzo. In the latter part of the 4th year of Meiji I was the same. I have heard about the exchange transactions at that time. Uchida Rikichi kept the books. I assisted him. I know there was an agreement between Ito, Benzo, and defendants. The terms were that defendants were to have a two-thirds share in the business, and Ito and Benzo a one-third share it. In the rice business the agreement was the same between the parties. I know of the deposit of securities with the defendants, by plaintiff, to the amount of 100,035 yen. They were deposited as security for the correct conduct of plaintiff in the exchange transactions. [Accounts handed to witness.] These accounts were prepared by Mr Talbot. I assisted him. The entries in this account [A 7 shown to witness] are correct. These are cash accounts relating to exchange transactions only. There are two receipt and payment books, numbered 1 and 2. I took the items from them. [Two books handed to witness.] These are the two books. [Exhibits "C" and "F."] There is a memo. besides these books. [Exhibit "K" produced.] I do not know who made the foreign entries in the books "C" and "F." There are some entries in book "C" without any foreign writing. The profit and loss accounts in the exchange transactions were made up from my present accounts. I became aware of the transactions from Murabaiashi and Zenjiro, and entered them in my books. The profit and loss account was made up from *shikiri* (Shosha account sales). There were transactions entered into to the amount of $501,000, in which Nakamura Sobae was concerned. Sobae had a half share of the business; the other half was divided into three shares, of which defendants had two, and Ito Hachibei one share. The Sobae accounts are incomplete, because Sobae would not furnish the necessary documents to make the mcomplete. I went two or three times with Uchida Rikichi. [Exhibit "D 1" shown to witness.] I know the false entries in this book. I wrote them. Benzo, in the first place, asked me to write them. I told him that without Ito's permission I could not write them. Ito came and sanctioned the act, and I wrote them in the presence of Rikichi. I wrote the red ink memoranda that are close to those entries. I wrote them to distinguish the entries from others. They are numbers. As the entries are only temporary ones, I put numbers against them. The numbers were put on so that, when the entries were transferred to another book, they might be distinguished. Other marks were put on by me to prevent these entries from being carried to the proper account. These marks were not appended to any other entries. I know about a loan of $50,000 made by defendants to plaintiff about the 10th month, 1875. I do not know anything personally about it, only what I heard. I made no entries about it; Rikichi did. There are some entries in a book about it. It is entered in Rikichi's books. Ito made certain temporary advances in the exchange transactions. About 57,000 *rios* were advanced, and then 27,000 *rios* were withdrawn for the rice business, leaving 30,000 *rios*.

Court adjourned, and re-assembled at 2 p.m.

Mr Dickins continued his examination of Saito Kaske: I recognise the document shown to me. [Exhibit "R."] I wrote

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

it. Zenjiro took it to defendants, and as he was desirous to have it returned, I went to defendants by request of Mr Ito to ask for its return. I went with Rikichi and Hachiro. I first saw Futami about it, then I spoke to Shoske, and then to Iske. They did not give it back to me. They said it could not be found. They gave no other reason. [Defendants' exhibit "Z" shown to witness] During the 7th month month last year I went with Hachiro to Iske's house, Iske said at that time, "As the $40,000 transaction is finished, we will say no more about that: make this known to Ito." I wrote the document produced. I took it to Ito's house in in Tokio. We told Ito what we had been requested to tell him. Ito said, "The $40,000 is all right but this item, for an old balance, in the document is incorrect." Next day we returned and told Iske. We told Iske what Ito had said, and requested him to return the note or receipt. Iske said he must see the firm first, and requested that the paper be left. I left it. The matter still remains as it was. [Book D I shown to witness and the false entries pointed out.] I have never seen any other account bringing out the same balances as are entered in the false entries. I know the document now shown me. I saw no accounts from defendants previous to this. I think this is in Futami's handwriting. [Account sent from defendants to plaintiff handed in, and marked "T."] I have been personally to defendants' office about the settlement of accounts in the 7th or 8th month last year. Ito and Rikichi went with me. I have often been. I saw Mr John Walsh, Iske, Futami, also Mr Engert. I was told that it would be necessary to make up the accounts with Mr. Irwin, and I was asked to come on the 15th of 11th month last year. We went about the day appointed. We ascertained that Irwin had not been consulted, and all that we did was to compare the cash-books "C and F." We found them both alike. I made a round mark on "C" to show that the books agreed. I do not remember if exhibit "K" was examined at the same time. Iske, Futami, and others, acknowledged that there was no difference. The three now shown to me were not in this book when it was compared with the other. It was agreed that these entries should be made, as they were correct. They were made in the presence of all the parties. [Defendants' exhibit 2 shown to witness.] The two characters pointed out on it in Japanese are *Haishaku*. I know the word *Kushaku*. *Kushaku* is written differently from *Haishaku*.

cross-examined by Mr. Ness: I am Benzo's *banto*. Last year, in the 7th month, I was requested by Benzo to assist Ito in the matter of these accounts. Ito pays my expenses. Benzo lent me to Ito. I was not in Ito's employment, but in Benzo's. I know of the arrangement about exchange transactions between plaintiff and defendants, from Benzo and Ito. I know they were engaged in exchange transactions, from personal observation. I was ordered by Benzo to make calculations in the exchange business, after I had been told that partnership arrangements had been entered into. I never went to defendants' office. I wrote the names of the account books on the covers of them. I saw Benzo start out to place the securities in Iske's hands. I have seen the securities. I saw them at the time Benzo took them to defendants. I saw them in Benzo's presence. This was about the 5th month, 4th years Meiji. Benzo started off with the securities from his own house. They were for money lent by Ito to the different *han*, and in Ito's hands they would be worth $100,035. At the time Benzo took these securities there were no new Imperial Government bonds amongst them. The exchange transactions between the parties began, I think, on the 5th or 6th day of the 7th month. I knew about the state of the rice and exchange accounts. I struck no balance about this time [when the false entries were made.] Money was due to Ito; I think about $70,000 or $80,000. This was not the exchange and rice business, including deposits made by Ito with defendants. My accounts were not made up. I was instructed by Ito not to make up the accounts, because Ito had been asked to let it stand. From $70,000 to $80,000 was due to Ito from defendants from the state of the books. I was orderd by Benzo to receive my orders from Ito in regard to the books. The book now shown to me is Ito's. It was marked when I received it. At the time the false entries were made I thought they were incorrect, as the amounts varied. When I was first asked to make the entries I did not know if they were right or wrong. I knew the proposed entries to be wrong when I was first asked to make them.

Court adjourned till 10 o'clock to-morrow morning.

September 29, 1875.

Court re-assembled at 10 a.m.

Mr Ness continued his cross-examination of Saito Kaske: My personal accounts were not made up when I was asked to make the false entries. "C" was in my possession at the time I was asked to make those entries. When I looked at the book I saw that those entries were incorrect. Book "C" was made up to 2nd day 10th month 4th Meiji. The entry dated 29th Oct., 1871, was the last entry made in that book for 36,413 *rios*. I think the book "F" was in my hands at this time, and the book "C" in defendants.' I am sure I had "F" at this time and that defendants had "C." I think I parted possession with this book on the 22nd day of the 10th month. I do not remember making the entries in the memo. "K" was written in the 4th Meiji "K" was not written at one time, neither was the copy. The copy is in my own account-book, and does not bear the handwritting of Mr Irwin.

Mr Ness called for the production of the book containing the copy.

Mr Dickins objected to this.

His Honor said he could not order its production.

Witness continued: The copy is in my general account-book. This book contains my personal accounts, to which I referred in my examination-in-chief.

Mr Ness again called for the production of this book. Mr Dickins had examined the witness in regard to how certain accounts had been made up, and witness had said from his private accounts, and it was only fair that he should have them.

Mr Dickins again objected.

Witness: The book contains only memos of the partnership accounts.

His Honour ordered that the book must be produced. [It was put in, and marked "Defendants' exhibit 4."]

Witness continued: Mr. Talbot made up the accounts from the so-called cash books "C" and "F," and not from my personal accounts. The accounts referring to the Sobae transaction were made up from my accounts. The entries in this book of mine were made at the time of the transactions. This book of mine contains all the exchange transactions that are entered in books "C" and "F." The other part of the book contains Uchida Zenjiro's "time" contracts. I was not told by Benzo the reason why I was asked to make the false entries. Benzo said nothing at all at the time; he gave me no reasons whatever. I did not mention to Ito or Benzo that I knew them to be false. An employé or servant should certainly obey the order of his superior. I think Zenjiro and Benzo were present when the false entries were made. I wrote them, and Rikichi put on the seals. I can't remember if anything was said about the entries being incorrect. Rikichi said something about corrected accounts. Rikichi told me that Mr. Irwin would hand in, in a day or two, corrected accounts. The understanding was that corrected accounts should be handed in. I do not know if Benzo brought an account from defendants from which the false entries were made. I have never seen corrected accounts bringing out those balances (the false entries). I find, on examining my book, I was mistaken in saying it contained a copy of "K." It should have been in it, but there must be another slip containing a copy. [Slip produced] The copy was made last year. I have no other copy. [Defendants' exhibit 2 shown to witness] An entry in it bears the word "*haishaku*" (loan). The old indebtedness of the firm referred to is this. [Exhibit 2, which is in a letter.] I should suppose it refers to a loan. I do not recognise the handwriting of the letter shown me. I did not write exhibit 3 in defendants' office. I left it at the request of Iske, because Ito said an item in it was incorrect, and Iske desired to show it to the firm. In the 4th year of Meiji I knew of the indebtedness of defendants to plaintiff, as I was in Benzo's employment. Ito did not command me to make up the accounts before last year. I was never dismissed from Benzo's employment. I never asked Ito to get me re-instated, as I was never dismissed.

Re-examined by Mr. Dickins: [Exhibit "C" shown to witness] On the cover of this book is written, "American firm No. 1 and Ito Hachibei: Payments and receipts of cash exchange transactions: Meiji, 4th year, 7th month: *Kichi nichi*" (lucky day)."

His Honour: Lucky day for the lawyers!

Witness continued: The cover of book "F" bears the same inscription. [Exhibit "D" shown to witness.] "Ito Hachibei partnership with American firm No 1," is written on the cover, also the words "Daily Cash Book." The covers were inscribed before the entries were made in the books. I do not remember if some of the securities were changed for *shinkosai*. I think so. [Exhibit "H" shewn to witness.] "Ito" is on one side of the cover; on the other are the words "Cash Book." Inside is written, "Copies of daily entries of partnership with American No 1."

Digitized by Google UNIVERSITY OF CALIFORNIA

Rikichi made most of the entries. I wrote the entry on first page. Entries in "H" marked "H 2" are the same as those in "C 1." The entries "C 1" were made on the 15th of 11th month last year. One of the entries, "H 2," was made 6th day, 9th month, 4th year of Meiji; another was made on the 16th day, 9th month.

Court adjourned, and re-assembled at 2 p.m.

On re-assembling.

Mr Dickins continued his re-examination of Saito Kaske.

Witness: My profit and loss account were made from the account sales of the *Shosha*, and the account sales of Zenjiro and Chojiro. Morabaiashi and Zenjiro furnished me with the information of the *jigi* (cash) transactions, which I entered in my book. I think in the latter part of the 5th year I engaged in exchange transactions and lost, and not wishing to let my master (Benzo) know, I went to Yedo for a time, and afterwards I asked Iske to explain the matter to Benzo. I was not dismissed.

Iwaikuhei, cautioned: I am an exchange and rice broker. About the 4th year Meiji, I had some transactions with Zenjiro. I remember the $40,000 transaction. I think it was about the 19th or 20th of the 9th month, 4th year Meiji, I made transactions to extend to the 30th of the month at the market rate. The amount involved was $40,000. When the contract had to be completed I had not the money at hand, and I asked Zengiro for two or three days' grace, which were allowed. On the 3rd of the next month I was prepared to complete the transaction, but as the market rate had risen considerably, Zengiro refused to carry ont the contract.

Mr Ness did not cross-examine this witness.

Ito Hachiro, cautioned: I am the son of the plaintiff. I remember going to Iske's house on the 7th month last year. I went with Saito Kaske. We went for the purpose of obtaining the return of the $40,000 note. We asked Iske, in the absence of the real document to give us one in its place. Iske said the $40,000 transaction was finished; he further said defendants would furnish plaintiff with accounts in a very few days. Iske then showed us a paper containing a statement of the securities deposited and the $40,000 transaction. There were two other items in it about dollar transactions. Iske wrote this paper. Iske said, "If this is all right we will prepare a statement and get Ito's views on it." We then asked for this paper, that we might take it to Yedo and show it to Ito; but it was a little difficult of comprehension, and Kaske, who was present, was requested to make a copy, which he did, and, we took it to Yedo. Iske at the time was in a good state of health. [Defendants' exhibit "3" shown to witness.] This is the copy. We left the original in Iske's possession.

Mr. Dickins called for the production of the original.

Mr. Ness said he had no such document.

Witness: We showed the copy to Ito, and told him what Iske had said. Ito looked at the paper, and made objection to two items, which made him in debt to defendants. He ordered us to take the paper back to Iske, and demand the return of the $40,000 note. We took it back, and told Iske what Ito had said. We again demanded the return of the $40,000 note, but were told that it could not be found. Iske asked us to leave the copy, that he might speak to the firm about the two objections of Ito. We left it. I went to the office of defendants in the 9th month last year. Rikichi went with me. We saw Choski only. We repeated our request for some paper in lieu of the $40,000 note, if it could not be found. We were asked to see Iske about it. We went to his house, and made the same request to him as we had done to Choski. We told Iske that it would make great trouble if one paper or the other was not forthcoming. Iske replied, "The $40,000 transaction is finished. I expect to live a few more years, and will take care that no harm comes to you through its absence. In the 8th month defendants sent plaintiff an account—a complete voucher—in which you will find the $40,000 note entered; it is all right; our company (defendants) is not a company to deny a payment when it has been made."

Cross-examined by Mr Ness: The paper was a note for money that had been returned, and we wanted it back naturally. That was the only reason. During 1871, 1872, 1873 and 1874 I had nothing to do with the accounts between the plaintiff and defendants. The paper shown me in is in my father's handwriting. [Defendants' "Exhibit 2."] I do not recognise the document you show me. ["Exhibit P."] It was written in Iske's house, upstairs [Defendants "Exhibit 3."] Iske was recovering from illness at the time he wrote it.

Mr. Dickins re-called

Ito Hachibe, cautioned: Defendants' "Exhibit I" is in my handwriting. I recognise it. The two characters marked A and B shown me mean *haishaku*. In the 2nd month 3rd year of Meiji, before these transactions were commenced, I deposited 40,000 *rios* with defendants. It was deposited with the defendants for the purpose of being loaned to the *Daimio* Mito. That money has never been retained by Mito, defendants applied in the 9th month 4th year Meiji, to the Okurasho at Yedo, to have it returned. The money was received from the Okurasho during the 11th month 4th year Meiji by the defendants. The sum received by defendants from the Okurasho was 53,535 *yen* and odd cents. This money was not used in the transactions. At this time there was a balance in my favour on a shipment of silk to New York in the hands of defendants. It was about $1,300. There was also a sum belonging to me in defendants' hand on a charter of a vessel called the *Tokio*: I think it was 600 *rios*. I heard in the 12th month from Irwin what amount of my money there was in the sum defendants had received from the Okurasho. Defendants said my share was 50,365 *yen*. That amount, together with the charter and silk money mentioned, would make the sum of 52,000 *yen* in round figures in the hands of defendants belonging to me. The moneys just mentioned were never included in the transactions mentioned in this case. They were quite separate. Early in the 7th month 4th year Meiji, Irwin projected this partnership arrangement, and I deposited $20,000 as my share of the capital. During the exchange and rice transactions I paid over to defendants at different times a little over $31,000 to make up deficiencies in the transactions. By these figures it will be seen that I have turned into the transactions some 51,000 odd *rios*. Then there is the old money—52,000 *yen*—and the 51,000 in these transactions, besides the losses, which will not probably exceed $40,000. I don't understand how it can be possible that defendants show in their accounts that money is still due to them. I am out of pocket more than $100,000, and still they claim that I own them money. I considered defendants' at that time to be a most secure firm, and that my money in their hands was as safe as in my own box. It was at the request of Irwin that I let the accounts stand. I left my deposits in defendants' hands. Mr. Irwin said I could borrow any money I wanted at any time. Since then I have borrowed from and deposited money with defendants. One amount I borrowed was $15,000. There is no such thing as any old indebtedness on my part to defendants. They hold all these moneys of mine. In the 12th month of the 6th year of Meiji I borrowed $10,000, and on the 28th 1st month 7th year Meiji, I borrowed $5,000,—making $15,000. Defendants' "exhibit 3" was written by me to Benzo and Iske. Iske received it, and Benzo knows nothing about it. I asked for another loan of $10,000 in it, but the loan was refused. The word *Haishaku* in it refers to the $15,000 previously borrowed.

Cross-examined by Mr. Ness: The old debt spoken of in the letter I wrote to defendants refers to the $15,000 previously borrowed. Mr. Irwin managed all the exchange transactions.

Court adjonrned till Monday morning next, at 10 o'clock.

THE REPORT ON FOREIGN LOANS.

(Pall Mall Gazette.)

The Report of the Committee of the House of Commons on Foreign Loans has justified the institution of the inquiry. The main objection originally taken to Sir Henry James's motion was that it tended to divert the minds of investors from the primary necessity of being on their guard against the glowing accounts of their resources given by foreign Governments in difficulties. So long as there are lenders to whom the difference between high and low interest is the difference between comfort and penury, Governments like those of Honduras and Paraguay will occasionally find victims; and it would be no real service to a credulous public to give any colour to the notion that the security which they cannot realize for themselves they may look to the British Government to realize for them. But, so it turns out, the authorities, at all events the home authorities, of these bankrupt States play but a small part in the transactions with which they are associated. The history of the Honduras or the Paraguay Loan deals with the operations, not of a South American Republic, but of financiers in this country. It is clearly expedient that the public should be fully informed as to the relations in which these persons stand to loans which, though professedly contracted by foreign States, apparently yielded next to no benefit to the States which contracted them. Upon this point no reader of the Committee's report will be left in any doubt. The ample and well-constructed narrative may also be useful to another class of persons. The holder of bonds issued by these States may perhaps be led to the con-

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

clusion, that, though no part of the money which actually reached the nominal borrower can be got back, that which stopped half-way may not be quite so irrecoverable. And lastly, the report may furnish food for some profitable speculations as to the scope of the criminal law, whether in the form of opinions of counsel or of proposals to Parliament.

Of the four series of loans which the Committee inquired into, the most attention has justly been paid to those of Honduras. The story of the 1867 Loan may be briefly given. In 1861 a clerk in a commercial firm in Liverpool, Don Carlos Gutierres, as one of the witnesses phrased it, "turned" Honduras Minister. He could not meet the small expenses of his embassy without assistance, and his Government was, if possible, more completely destitute of resources than himself. However, in 1867 he agreed with Messrs. Bischoffsheim and Goldschmidt for the issue of a loan to the nominal value of £1,000,000. Though a quotation on the Stock Exchange was secured, only £48,340, owing to various circumstances, was held by the public six months after the date of issue, the remainder of the stock having remained in, or come back into, the possession of Messrs. Herran and Don Carlos Gutierres, as representatives of the Honduras Government. There seemed, therefore, little prospect either of obtaining the funds to commence the railway of which so much was said in the prospectus, or of realizing those handsome commissions to the payment of which so great a part of the loan was afterwards applied. Even an investment which promised 12½ per cent. on the price of issue had not so far tempted lenders either in London of Paris. But what Messrs Bischoffsheim and Goldschmidt were unable or unwilling to do M. Charles Lefevre was willing, and, as it proved, able to do. He undertook, on advantageous term, to place the whole of the bonds to which the public had shown themselves so indifferent. By a series of judicious operations on the Stock Exchange the loan was forced up to 94, and then the very people who had declined to come in at 80 and at a much lower figure rushed in to buy. The popular enthusiasm was increased by the recommendations of brokers who had bought from M Lefevre greatly below the market price, and who were naturally anxious to give their clients the benefit of so valuable an investment at the current quotation. M. Lefevre got rid of his whole purchase within fifteen months at a heavy profit, and every one benefited except the genuine buyer. Nearly the same tactics were pursued with the loan for £2,500,000 issued in 1870, only, as the amount was much larger, the profits were larger in proportion. The accounts show that, apart from any gains by gambling in the stock, M. Lefevre pocketed nearly £1,000,000 for himself or his associates. The trustees for the bondholders were among the few reapers in this abundant harvest. Two of them "received £1,500 each for fourteen months' service" This generosity to the representatives of the bondholders is perhaps explained by the fact that they were usually clerks either of Messrs. Bischoffsheim and Goldschmidt or of Mr. Sharp, Messrs. Bischoffsheim and Goldschmidt's solicitor, and that they "seem to have implicitly obeyed the directions of Don Carlos Gutierres, and in pursuance of such directions to have dealt with the funds and bonds of the loan without regard to the terms of the trust deeds."

The San Domingo Loan is chiefly remarkable for the frankness with which the agent, Mr. Hartmont, admits that he put the bulk of the proceeds into his own business. He has not, however, thought it necessary to assume with the principal the obligation of paying the interest. In the second Costa Rica Loan, for £2,400,000, the Committee of the Stock Exchange, owing to the influence of the Syndicate, absolutely granted Messrs. Knowles and Foster, Baron Erlanger's agents, a settlement and quotation, though they were notified by the contractors of the previous loan for £560,000, issued in 1871, that the Republic was already in default.

The Paraguay Loan ran much the same course as its allies, Mr. Samuel Laing and Mr. Albert Grant playing the part which in the Honduras Loan was assigned to M. Lefevre. Between the issue of the loan to the public on the 21st of November, 1871, and the special settling day on the 8th of December, they, together with Messrs. Waring Brothers, bought on the Stock Exchange more than half the nominal amount of the loan. After the day of allotment they proceeded to sell their stock, and by April, 1872, they had disposed of the whole amount. During these five months the stock was always at a premium, but as soon as the whole loan had passed out of the hands of Messrs. Waring Brothers, Mr. Albert Grant, and Mr. Samuel Laing it began to fall In October, 1872, it was quoted at 20 discount; in July, 1873, at 45 discount; and in July, 1874, the £ 00 bond could be bought for £12.

The really important fact which the report of the Select Committee claims to have brought to light is the association of persons holding a certain position in the City with loans that had the double vice of not telling the truth to the lenders and not paying over the proceeds to the borrowers. The prospectus of the first Honduras Loan made no mention of the intention of the Government to apply part of the proceeds to the payment of old debts. The second loan partly floated by the help of consignments of mahogany on account of the Honduras Government which had really been bought by their agents to induce "the public to believe that the hypothecated forests were providing means for paying the interest." The prospectus of the Paraguay Loan of 1871 was silent upon the indebtedness of the Government in the matter of heavy war indemnities. The prospects of the Paraguay Loan of 1872 described the public lands as worth, "at a low valuation," £35,000,000, whereas a year before "the General Under-Secretary, by order of his Excellency the President," had estimated them at £19,380,000. It will be observed, too, that the same names appear in connection with successive loans contracted by the same State. Messrs. Bischoffsheim and Goldschmidt, Messrs. Waring Brothers, Mr. Albert Grant, and Mr. Samuel Laing were of too trustful dispositions to be undeceived by a single failure. They all went on hoping against hope, and when they had proved by experiment that a first loan was less profitable to the public than to themselves, they were still ready to give the public a chance of doing better the next time. It was not to be expected that the recommendations of the Committee should propose any single remedy of great efficacy for the cure of the disorders revealed in their report. It is something, however, that the public should be informed, on the authority of a Parliamentary Committee of more than usual weight, that persons of the postion of Messrs. Bischoffsheim and Goldschmidt, Messrs. Waring Brothers,' Mr. Albert Grant, and Mr. Samuel Laing have introduced loans to the public "regardless of the financial resources of the borrowing State;" have violated undertakings "that the proceeds were to be spent on works calculated to develop the industrial resources of the different countries;" have, with a view of inducing the public to lend money upon a totally insufficient security, resorted to means "which in their nature and object were flagrantly deceptive;" and, by trading on the credulity of certain classes of the community, "have obtained their money, and then betrayed their interests." To appreciate what manner of man it is that they have put their faith in is the first lesson that the public have to master, and they certainly cannot complain that this truth is not made sufficiently clear in the report of the Select Committee on Foreign Loans.

"Berkeley, Sept. 1869.—Gentlemen, I feel it a duty I owe to you to express my gratitude for the great benefit I have derived by taking 'Norton's Camomile Pills.' I applied to your agent, Mr. Bell, Berkeley for the abovenamed Pills, for wind in the stomach, from which I, suffered excruciating pain for a length of time, having tried nearly every remedy prescribed, but without deriving any benefit at all. After taking two bottles of your valuable pills I was quite restored to my usual state of health. Please give this publicity for the benefit of those who may thus be afflicted.—I am, Sir, yours truly, HENRY ALLPASS.—To the Proprietors of NORTON'S CAMOMILE PILLS."

COMMERCIAL INTELLIGENCE.

IMPORTS.

Cotton Yarns and Fabrics.—The market has during the closing week been characterised by less activity in business. This is no doubt partly attributable to the unfavourable condition of the weather as prices continue to exhibit considerable firmness.

Grey Shirtings:—				
7 lbs.	38½ yds.	39 in.	per pce....	$2.00 to $2.10
8 lbs.	38½ yds.	44 in.	„ nom.	2.50 to 2.70
8 lbs. 4 to 8 lbs.	38½ „	39 in.	„ „	2.30 to 2.65
9 lbs.	38½ „	44 in.	„ ...	2.60 to 3 05

White Shirtings:—				
60 to 64 reed	40 yds.	35 in. nom.	per pce....	2.20 to 2.40
Turkey Reds	24 yds.	30 in.	2¼—3 lb. per lb...	0.75 to 1.02½
Black Velvets			Nominal ...	8.75 to 10.00
English Drills	15 lb.	40 yds,	30 in....	3.30 to 3.40
Taffachelaes		12 yds,	43 in....	2.55 to 2.70

Cotton Yarn.—

No 16 to 24	per picul...	$30.00 to 35.50	
No. 28 to 32	per picul...	$37.00 to 42.00	
No. 38 to 42...	per picul...	$41.50 to 46.00	
Reverse Twist ... 16-24 ... „ ...		$36 Nominal.	

Woollens.—The market continues without change. Notwithstanding the low rates quoted business in most fabrics is of the slenderest character, with the exception, however, of plain *Mousselines de laine* which are readily saleable.

Plain Orleans	40—42 yds.	32 in....	6 25 to	7.80
Figured Orleans	29—30 yds.	31 in....	4.75 to	5.25
Chimagoro	30 yds.	30 in....	5.25 to	5.75
Italian Cloth	—30 yds.	32 in....	0 25 to	0.33
Camlet Cords	29—30 yds.	32 in....	6.25 to	7 25
Camlets Asstd.	56—58 yds.	31 in ...	18 50 to	19.00
Lastings, Japan	22—30 yds.	32 in....	13.00 to	14.50
Plain Mousseline de Laine	—30 yds.	30 in,...	0.18½ to	0.20½

Figured Mousseline de Laine	30 yds.	30 in...	0 25 to	0.28
Multicolored „	30 yds.	30 in...	0.38 to	0.40
Cloth, all wool plain or fancy..	48 in. to	52 in...	0.80 to	1.20
Presidents	54 in. to	56 in...	0.70 to	0.80
Pilots	54 in. to	56 in...	0.45 to	0.52½
Union	54 in. to	56 in...	0.50 to	0.70
Blankets, scarlet & green 7 to 8 lbs....	per lb...		0.40 to	0.42½

Sugar.—The market continues very dull, with small sales at subjoined quotations. The stocks are reported to be large.

Sugar:—Formosa in bag	per picul....	4.20 to	4.30	
in Basket	„ ...	4.10 to	4.20	
China No. 1 Ping fah	„ ...	8.00 to	8.10	
„ No. 2 Ching-pak	„ ...	7.20 to	7.70	
„ No. 3 Ke-pak	„ ...	6.20 to	6 60	
„ No. 4 Kook-fah...	„ ...	5.50 to	5 90	

China No. 5 Kong-fun	per picul ...	4.70 to	5.30	
„ No. 6 E-pak	„ ...	4.40 to	4.50	
Swatow...	„ ...	3.30 to	3.50	
Daitong...	„ ...	3 20 to	3.30	
Japan Rice	„ ...	3.25 to	3.30	
Kerosine Oil...	per case ...	2.60 to	2.65	

EXPORTS.

Silk.—In consequence of the large transactions effected since the departure of the French mail, prices for Hanks advanced fully $10 to $15. During the past week a quieter tone has prevailed and they may at present be quoted at $370 for Inferior to 500 for Extra. In one instance $600, in another $660 to 670 are reported to have been paid for native filature Silk.

Since the 20th ulto., arrivals are 970 bales, and deliveries about 800 piculs.

Tea.—Business has been rather quieter during the closing week, holders being somewhat firmer and endeavouring to establish a higher scale of prices. Settlements amount to 2,800 piculs, shewing an advance of nearly $1 per picul in quotations.

Total settlements for Yokohama for the current season to 30th September amount to 99,700 piculs leaving a stock to hand of 8,000 to 10,000 piculs.

To-day prices close as under, holders being rather firm in their demands.

Common	$20.00 to	23 00	
Good Common	24.00 to	27 00	
Medium	28 00 to	31.00	
Good Medium	32.00 to	34.00	

Fine	$35.00 to	38.00	
Finest	$39 00 to	42.00	
Choice	$43.00 to	48.00	

The *Ambassador* and *Cremona* are loading for New York; rate of freight £2 to £2.5. per 40 cubic feet.

EXCHANGE AND BULLION.

Exchange.—There has been again a very fair business doing in Private-paper, with but little demand for Bank Bills. Rates in consequence close rather firmer.

Gold Yen are steady as last quoted with very little doing.

Rates close as follows:—

Sterling—Bank 6 months' sight	4s. 1d.
„ Bank Bills on demand..... ...	4s. 0d.
„ Private 6 months' sight.....	4s. 1⅛d. to ¼
On Paris—Bank 6 months' sight.....	5.19
„ Private 6 ms. sight.....	5.26
On Shanghai—Bank sight.....	72⅛ to ¼
„ Private 10 days' sight	72¼

On Hongkong—Bank sight.....	⅛ o/o prem. s par.
„ Private 10 days' sight.....	¼ per cent disct.
On San Francisco—Bank Bills on demand.....	98
„ 30d. sight Private	101
On New York—Bank Bills on demand	97½
„ 30 days sight Private	101
Gold Yen.....	401
Kinsats	405

ROWLAND'S ODONTO 2/9

WHITENS, PRESERVES, AND BEAUTIFIES THE TEETH, PREVENTING THEIR DECAY.
ASK ANY CHEMIST OR PERFUMER
FOR ROWLAND'S ODONTO.
AND TAKE NO OTHER.

ROWLANDS' MACASSAR OIL

Is the best and safest Restorer and Beautifier of the Human Hair It prevents hair from falling off or turning grey, strengthens weak hair, cleanses it from scurf and dandriff, making it beautifully soft, pliable and glossy. Great caution is necessary to ask for ROWLANDS' MACASSAR OIL, and avoid all others, this being the only genuine. Price 3s. 5d., 7s., 10s. 6d., equal to 4 small, and 21s. per bottle. CAUTION—Each bottle has a glass stopper instead of the cork as formerly. All with the cork are spurious imitations. ROWLANDS' ODONTO, or Pearl Dentifrice, preserves and beautifies the Teeth, strengthens the Gums, and gives a pleasing fragrance to the Breath. It eradicates Tartar from the Teeth, removes spots of incipeint decay, and polishes and preserves the enamel, to which it imparts a PEARL-LIKE WHITENESS. Price 2s. 6d. per box. ROWLANDS' KALYDOR realises a Healthy Purity of Complexion and a Softness and Delicacy of Skin. Soothing, cooling and purifying, it eradicates all Cutaneous Eruptions and Discolourations. Price 4s 6d. per bottle. ROWLANDS' ESSENCE OF TYRE never fails to produce immediately perfect change in Red or Grey Hair, Whiskers, Eyebrows, &c., to a beautiful glossy and permanent Brown or Back, which colour remains so durable that neither washing or perspiration can remove it Price 4s., 7s. 6d. and 10s. 6d. per bottle. Sold by all Chemists, Perfumers, and Bazaars throughout China and Japan. "Ask for ROWLANDS' ARTICLES," At ROWLAND & SONS, Hatton Garden, London.

PROTECTED BY ROYAL LETTERS PATENT,

Dated Ootober 11th, 1869.

Under Distinguished Patronage

DR. BRIGHT'S PHOSPHODYNE.

(OZONIC OXYGEN)

A CHEMICAL PREPARATION OF PHOSPHORUS, WITH THE VEGETABLE ALKALOIDS QUINIA, CYPRIPEDEN, XANTHOXYLIN, &c.

This Phosphatic combination is pronounced by the most eminent members of the Medical Profession to be unequalled for its power in replenishing the vitality of the body, by its supplying all the essential constituents of the blood and nerve substance, and for developing all the powers and functions of the system to the highest degree.

It is agreeable to the palate, and innocent in its action, while retaining all its extraordinary properties; and as a specific, surpassing all the known therapeutic agents of the present day for the speedy and permanent cure of—

Nervous Prostration	Lassitude
Liver Complaints	Shortness of Breath
Palpitation of the Heart	Trembling of the hands and limbs
Dizziness	Impaired Nutrition
Noises in the Head and Ears	Mental and Physical Depression
Loss of Energy and Appetite	Consumption (in its first stages only)
Hypochondria	Timidity
Female Complaints	Eruptions of the Skin
General Debility	Impaired Sight and Memory
Indigestion	Nervous Fancies
Flatulence	Impoverished Blood
Incapacity for Study or Business	Nervous Debility in all its Stages
Sick Headache	Premature Decline

and all morbid conditions of the system arising from whatever cause. The action of the Phosphodyne is twofold—on the one hand increasing the principle which constitutes nervous energy, and on the other the most powerful blood and flesh generating agent known; therefore, a marvellous medicine for renovating impaired and broken-down constitutions. It quickly improves the functions of assimilation to such a degree, that where for years an emaciated, anxious, cadaverous, and semi-vital condition has existed, the flesh will rapidly increase in quantity and firmness, and the whole system return to a state of robust health. The Phosphodyne acts electrically upon the organisation; for instance, it assists nature to generate that human electricity which renews and rebuilds the osseous, muscular, nervous, membranous, and organic systems. It operates on the system without exciting care or thought upon the individual as to the process. It moves the lungs, liver, heart, kidneys, stomach, and intestines, with a harmony, vigour, yet mildness unparalleled in medicine.

The Phosphodyne gives back to the human structure, in a suitable form, the phosphoric or animating element of life, which has been wasted, and exerts an important influence directly on the spinal marrow and nervous system, of a nutritive, tonic, and invigorating character, maintaining that buoyant energy of the brain and muscular system which renders the mind cheerful, brilliant, and energetic, entirely overcoming that dull, inactive, and sluggish disposition which many persons experience in all their actions.

The beneficial effects of the Phosphodyne are frequently shown from the first day of its administration, by a remarkable increase of nervous power, with a feeling of vigour and comfort, to which the patient has long been unaccustomed. Digestion is improved; the appetite increases wonderfully; the bowels become regular; the eyes brighter; the skin clear and healthy; and the hair acquires strength, showing the importance of the action of the Phosphodyne on the organs of nutrition.

Finally, the Phosphodyne maintains a certain degree of activity in the previously debilitated nervous system; its use enables all debilitated organs to return to their sound state and perform their natural functions. Persons suffering from Nervous Debility, or any of the hundred symptoms which this distressing disease assumes, may rest assured of an effectual and even speedy cure by the judicious use of this most invaluable remedy.

DR. BRIGHT'S PHOSPHODYNE

IS SOLD ONLY

In CASES at 10s. 6d. by all Chemists and Patent Medicine Vendors throughout the Globe.

Full Directions for Use, in the English, French, German, Italian and Dutch Languages, accompany each Case.

☞ *CAUTION.—The large and increasing demand for Dr. Bright's Phosphodyne has led to several imitations under somewhat similar names; purchasers of this medicine should therefore be careful to observe that each case bears the Government Stamp, with the words Dr. Bright's Phosphodyne engraved thereon, and that the same words are also blown in the bottle.*

MISCELLANEOUS.

THE GREATEST

WONDER OF MODERN TIMES!

HOLLOWAY'S PILLS.

PERSONS suffering from weak or debilitated constitutions will discover that by the use of this wonderful medicine there is "Health for all." The blood is the fountain of life, and its purity can be maintained by the use of these Pills.

SIR SAMUEL BAKER,

in his work entitled "The Nile Tributaries in Abyssinia," says, "I "ordered the dragoman Mahomet to inform the Fakey that I was a "Doctor, and that I had the best medicines at the service of the "sick, with advice gratis. In a short time I had many applicants, "to whom I served out a quantity of Holloway's Pills. These are "most useful to an explorer, as possessing unmistakable purgative "properties they create an undeniable effect upon the patient, which "satisfies him of their value."

SIMPLE, SAFE AND CERTAIN!

HOLLOWAY'S OINTMENT

Is a certain remedy for bad legs, bad breasts, and ulcerations of all kinds. It acts miraculously in healing ulcerations, curing skin diseases, and in arresting and subduing all inflammations.

MR. J. T. COOPER,

in his account of his extraordinary travels in China, published in 1871, says—"I had with me a quantity of Holloway's Ointment. I "gave some to the people, and nothing could exceed their gratitude; "and, in consequence, milk, fowls, butter, and horse-feed poured "in upon us, until at last a tea-spoonful of Ointment was worth a "fowl and any quantity of peas, and the demand became so great "that I was obliged to lock up the small remaining stock"

Sold by all Chemists and Medicine Vendors throughout the World.

May 17th, 1873. 6m.

CAUTION.

J. & F. MARTELL'S BRANDY.

It having come to our knowledge that spurious imitations are imported, Consumers should be careful to see that they obtain the genuine article with our Brand, which is to be had of all respectable Dealers.

MARTELL & Co.

January 1st, 1875. 52ins.

FRAUD.

On the 27th June, 1866, MOTEEWALLAH, a Printer, was convicted at the Supreme Court, Calcutta, of counterfeiting the

LABELS

Of Messrs. Crosse & Blackwell,

London, and was sentenced by Mr. Justice Phear to

TWO YEARS RIGOROUS IMPRISONMENT:

And on the 30th of the same month, for

SELLING SPURIOUS ARTICLES

bearing Labels in imitation of Messrs. CROSSE & BLACKWELL'S SHAIK BACHOO was sentenced, by the Suburban Magistrate at Sealdah, to

TWO YEARS RIGOROUS IMPRISONMENT.

CAUTION.—Any one *selling spurious oilmen's stores*, under Crosse & Blackwell's name, will be liable to the same punishment, and will be vigorously prosecuted. Purchasers are recommended to examine all goods carefully upon taking delivery of them, and to destroy all bottles and jars when emptied. The GENUINE Manufactures, the corks of which are all branded with Crosse & Blackwell's name, may be had from EVERY RESPECTABLE DEALER in India.

THE

Japan Weekly Mail.

A POLITICAL, COMMERCIAL, AND LITERARY JOURNAL.

VOL. VI.—No. 41.] YOKOHAMA, SATURDAY, OCTOBER, 9, 1875. [PRICE $24 PER ANNUM.

TO SUBSCRIBERS.

SUBSCRIBERS at a distance whose period of subscription may have elapsed, are informed that their papers will be addressed and charged to them *until countermanded.* This rule has been found necessary in order to avoid the inconvenience of an abrupt stoppage of the paper which might result from an omission to renew.

It is requested that notice of the intention to discontinue a subscription be so given as to reach Yokohama *before* the date of its effluxion.

NOTICE.

ON and after the 1st of July, Notices of Births, Marriages and Deaths will be charged $1 each insertion.

Such Notices cannot be inserted in this journal unless endorsed with the name and address of the person by whom they are sent.

Yokohama, 25th June, 1874.

BIRTHS.

On the 4th inst., the wife of A. C. KORTHALS, of a son.

On 5th inst., at No. 8. Bluff, the wife of W. M. STRACHAN, of a daughter.

Notes of the Week.

In view of the importance of placing before our readers translations of everything in the Japanese newspapers bearing upon the subject of the Corean affair, we have been compelled to forego the advantage of addressing them in the columns usually devoted to our leading article or articles. But a review of these translations will prove that the feeling of the country is very decidedly opposed to war. The main grounds of objection are that the insult levelled at Japan by Corea has been effaced by the punishment it incurred; and that the expense of the war would exceed the available resources of the country. These arguments will meet with general acceptance by foreigners, and by all sober-minded men in the country; though it is impossible to doubt that there is a large party, interested rather in pushing their own fortunes than solicitous about the true welfare of the Empire, who would be only too glad to hear of a declaration of war. Two years ago the Government had to deal with a similar difficulty; the Saga insurrection broke out, and the expedition to Formosa was the means employed to reduce the internal inflammation. (It is curious and gratifying to us to see how completely our translations this week confirm the facts and inferences laid before our readers at that trying time.) But the Government is now stronger then it was in 1873, and the army, largely recruited from a class which bears the *samurai* no love, is better trained, disciplined and equipped than at that time. The crisis is serious, yet we hope the lesser of two evils will be chosen in case of emergency, and that any class will be punished severely which attempts to force the Government from the level of its mature decision. The risks of 1873 and 1874 must not be run a second time, nor the expenses of those years incurred again. A couple of ships may have to be despatched to Corea to fetch away the Japanese who are residing there, provided they desire to return; but beyond this we sincerely trust that the exchequer may not be put to any expense for this affair. We should have been glad to see matters in a condition which permitted a line of action more in consonance with the general spirit of the nation. But if circumstances distinctly prohibit it, there is only one wise course to pursue. A nation which brings itself to ruin for the sake of revenge, does not exhibit spirit so much as madness; and we trust that the Government will allow no such considerations as those which undoubtedly influenced its action in 1874, to prevent its enforcing its will upon the country on this occasion.

Some of our best and most friendly critics have remonstrated with us on the subject of our note in last week's issue upon the circular of the Kobusho, forbidding all communications to newspapers from employés of that department.

It must not be supposed that we underrate the necessity for an entire loyalty in the employés of public departments to their official chiefs. The discipline of no office could be preserved were the newspapers made the field of discussion with regard to the administration of a department by the officers belonging to it. The public object of newspapers is the public good, not the private ends either of their editors or correspondents. If private ends are subserved by ministering to the public good, the commercial end of newspapers is attained,—and, primarily, this is the object with which they are established; the private ends of correspondents in a thousand ways may also be so subserved. But the public good, whether moral or material, should be the end aimed at by both editor and correspondent, and in this view, a discussion of general principles, a summary of practical experience, a digest of solid reflections upon great matters of public interest, all constitute perfectly good claims to admission to publication. The paper referred to in these remarks undoubtedly possessed such a claim, and we think that it could not be without value for the Minister to whose department its reflections were chiefly directed. In matters of this nature, all private questions are presumed to be merged in public questions, and we should soon cease to be of the smallest service either to foreigners in this country or to the Japanese, were we to permit any personal regard for this or that native or foreign official to influence the stream of those communications upon one subject or another which flows through these columns. No one should seek to make our very difficult duty more difficult than it is. In a country where every one who plays any public part is more or less known to every one else, and is often on terms of friendly intimacy with them based on personal regard, no such relations ought to be allowed any influence on the one side, or be suspected on the other. Practically, of course, this is impossible; human nature, being what it is, men will have their likes and dislikes, their personal feelings and their national feelings, their friends and their enemies. But this should at least be the theory, and the closer men strive to work up to it the better. Meanwhile it may certainly be said that the smaller a place is, the more difficult this is to do. To edit a paper perfectly in Japan a man should live on the top of Fusiyama, have the letters of first-rate correspondents brought to him twice a day, read the native newspapers attentively, and, under no circumstances, any others published in the country.

It will not be pretended by any fair critic that the native papers are one whit less interesting, instructive and practical than they were before the passing of the recent press-laws,

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

while they are certainly free from matter which was purely mischievous and at the same time extremely silly, because so indefinite and aimless. It was said that when these laws were put in operation all vigour would be taken out of the press. Is it so? We can only appeal to our own columns for the answer; but let our readers look at them. The great public questions of the day are discussed with at least as much vigour and good sense as before, and the whole general tone of the press seems to us to have been decidedly raised of late. We now begin to see the value of that criticism on this and other subjects which has evoked from the foreign press elsewhere in Japan and in China one strong and unanimous expression of indignation and disgust. We observe the native Press doing exactly that which we recommended, viz, moving freely within the large boundary drawn for it by the law, making itself strong and useful within that boundary, and applying itself worthily to the discussion of great national subjects in a spirit deserving high commendation and indicative of admirable promise. It is as clear as noon-day to us that those who have argued for an application to the Japanese of those principles which underlie our own institutions, and which constitute the radical difference between our own systems and theirs, have fallen into the error, so obvious to us from the very first that our real wonder has always been that they overlooked it. Deceived by hopes and appearances which, though specious, were visibly false, they thought that the fruits which can only be obtained by long ages of cultivation were to be had in a year or two of growth; forgetting that Nature does not, and so works by law that she cannot, perform these miracles. It is impossible to make her forego her claims. She enforces them, indeed, with no violence or demonstration. Her method of procedure is silent and her way mysterious. But not the less is it of certain operation and of rigid inflexibility.

We have never yet been perfectly clear in regard to the circumstances under which Colonel Browne's party, to which the late Mr. Margary was attached, approached China from its western boundary and made its entrance into Yunnan. He had with him a small column of Sikhs, which was followed by a rabble of Panthays and other men disaffected towards the Chinese Government. But was that Government apprized of his coming and his intentions in coming? Was he furnished with a passport from the Foreign Office at Peking, and was it distinctly understood what his movements were to be? These questions may seem absurd to those who are familiar with all the circumstances attending his expedition, and it is so impossible to conceive that any government whatever would authorize and instruct him to undertake it without first having taken the requisite preliminary steps to ensure, so far as was possible, a proper reception for it, that our question may seem doubly absurd. But we have failed to discover that any distinct arrangements were made such as those of which we speak, and hence our own questions. We all know that Mr. Margary went westward from the east coast, and arrived safely on the other side after traversing all the Chinese provinces between his starting point and his place of destination. Of course he travelled with a passport and with the full cognizance of the Chinese authorities. In returning, he was the advanced out-rider of a considerable body of men, and was attacked and murdered. This act was undoubtedly done by the Chinese soldiery, and was a very brutal one. But we wish to know whether Mr. Margary carried a passport or credentials of any kind, not to, but from, the Chinese Government.

Is the seismograph which has been in this country now something like two years, yet erected? What is the use of having an instrument like this and never allowing the world to hear what it reports? We had a really beautiful earthquake shock on Wednesday last, severe enough to throw down lamps and crockery, to tear our wall-papers and make havoc of our tiles and chimneys, and yet no one knows in the least what was its force, direction or period of duration. There are certain instruments which can always be put into practical use in order to prove them. The *samurai* used to test their swords on the Yedo dogs, a bowie-knife or Derringer easily finds a handy victim, an adept at gouging has not far to go at least for a man with one eye, a vivisector can find some poor dumb creature at any moment who will writhe under his gashes and lick the hand that makes them; an electrical shock can always be given to a neighbour's cat, and so on. But earthquakes are not to be had for asking, and, indeed, a formula deprecating their visits has been inserted into our English Church Service—though we have never known by whose authority—(the Monarch of this country, by the same token, being excluded by an equally arbitrary formula) and this makes the loss all the harder to bear. The shock was the most violent we have had for many years, and yet with a beautiful instrument in the country for recording its phenomena, we know nothing more in the world about them than our pantries or chimnies may have unfortunately revealed.

We much regret to see that Captain St. John, of the *Sylvia*, has placed himself in a very false position *vis-à-vis* of some four or five gentlemen in Nagasaki who had taken some pains to improve the shooting there by importing pheasants' eggs and rigidly maintaining the close season. Finding that Captain St. John did not observe this, but went about shooting in September, they addressed a perfectly civil letter to him, pointing out the efforts they had made and the restrictions they had imposed on themselves. Instead of replying to this in a similar spirit, Captain St. John sends a discourteous answer in the third person, and the five signitaries to the letter again reply with natural warmth at his conduct. Of course, he is as distinctly in the wrong as a man can be. These gentlemen are permanent residents and much more interested in the shooting than himself. They take steps to improve it, and would doubtless be delighted to see him in the covers after the 1st. But he prefers doing that which is very selfish and very unsportsmanlike—which is currious, because we understand that he is a good sportsman. A first mistake, arising, by the way, out of an act of undoubted selfishness; a little wounded pride; an angry word; and the want of that really fine stuff which, in spite of his indiscretions, Mr. Plimsoll showed the other day in the House of Commons; and all the mischief is done. Of course the correspondence will get into the *Field*, and a very worthy officer be shewn up as doing a thoroughly selfish and unsportsmanlike an act by a number of gentlemen who were actually catering for the amusement and gratification of all comers.

Our readers will find elsewhere a translation entitled The 'Assembly of Nobles' which will throw some light on the nature of an institution probably unknown to most of them even by name. It has been sitting in close deliberation this week, and has been most numerously attended. The Mikado was present at the sitting of the 7th inst and thus addressed the Assembly.—

My lords; I have come in person to attend this your deliberation, and to address you. In accordance with my will you united yourselves to form this Assembly last year, and I have learned with satisfaction that it has been your earnest object to promote the welfare of my Empire. Hereafter, in this Assembly, it will be your duty to extend the sphere of your knowledge and apply this to the object I have named. I trust that your counsels will be guided by prudence, by a due regard for the reputation of your illustrious ancestry, and by a dutiful solicitude for the honour my own family.

The Japanese Government has published the Returns of the last half year's foreign trade—the first of a series of statistics for national purposes which is to be regularly continued. These returns will be found elsewhere, accompanied by a careful summary of them with which we have been favoured, prepared at H. B. M.'s Legation. The science of statistics is the handmaid of the philosophy of commerce, and it is gratifying to find that the Japanese Government is paying that attention to it which is demanded by the interests of a country which

Digitized by Google
UNIVERSITY OF CALIFORNIA

must look to the extension of its foreign trade for much of its future prosperity.

Dr. Murray, Superintendent of Foreign Education, returns by this mail on a few months' leave of absence. No foreigner in Japan has more deservedly won the regard and esteem of all classes, whether native or foreign. He has laboured hard—and, we think, very successfully, in the administration of the Department committed to his charge, and may be permitted the legitimate satisfaction of thinking that he has done much towards the establishment of a system of education in this country which will advance her interests and redound to her credit. His temporary absence is not altogether unconnected with the business of his office, and we shall look for his return in the hope that the fresh experiences he will gain in America and Europe regarding those educational questions to which such universal attention is now being paid, will strengthen him for a new term of work in this country, and for the successful application to Japan of such new principles and modes of educational procedure as this attention has developed.

In noticing last week what seemed to us an outburst of somewhat sickly enthusiasm in Paris called by its author *Le Japonisme*, we touched upon a sentence written by him on this new *cultus* which ran as follows:—"The history, which is chivalrous and romantic, made up of *slaughter* and love." And thus it certainly was printed on its first appearance here. It turns out, however, that he wrote *laughter* not *slaughter*. (By the way, Macaulay made a charming riddle on a combination of this very word, the key to which was the antithesis established between 'man-slaughter' and 'man's laughter.' It begins:—

Come, let's look at it closely
It's a very ugly word,
And one that makes us shudder,
Whenever it is heard.

It is doubtless known to many of our readers.) We very sincerely beg Mons. Burty's pardon for our error. It is clear that he has the laugh against us, and may pursue us, if he will, with his own word to that which we were led to suppose he had used.

Barring his advertisement, which transgresses a very obvious and a very good law that there are subjects not open to joking, *Punch* this month is very good—and indeed it is time he showed something of a revival, for he has been dullness itself for many months past. The "Auto da Fe at Yedo" is capital—full of good points and very good fun. "The first converts," too, is excellent. "Sport" is a delightful hit at those singular freaks of the globe of the racing world which bend an axis and bring its two opposite poles together. The curious feature of these vagaries is, that men who have ransacked their vocabularies for months for strong epithets to apply to each other, become sworn brothers in five minutes. The next page depicts the reluctance of a diffident musician called on to take a share of honours to which he had no claim, though our own immoveable conviction is that he is a far better-looking fellow than *Punch* makes him. The next page is mysterious and impenetrable. The next equally so, but suggestive of a little bill of costs, damages, or some analogous transaction. The next is a choice cabinet of curiosities, animal and vegetable and particularly ornithological. Why the goose has always been held as the silliest of creatures, we have never been able to discover; but is not the artist rather hard on the poor bird? The "Speck Taturs," "Perambulators," "Observers," and such small deer are perhaps fairly used in having pins stuck through them and being placed in *Punch's* cabinet; though we miss the "Seat-holders," "Flaneurs" &c., with their masks and little ha' penny phials of wrath. At least as good as anything else is the Battle of the *Pébrine*;—the *graineurs* and their leader; the assailants, hard of hearing or histrionical, the Japanese denying all existence of malady in the worms, and the spectacled professoriate which supports him. (It is a pity that *nicht* was not added to their affidavit. We remember an old professor who used to give his lectures in decent German, but who, on finding his cigar out, once turned to his class with, *Hat keiner keine Schwamme niche*?—the *ei* of the *kein* pronounce *e*, as among the lower classes in Saxony. The effect may be imagined!) The sketch at the foot of the page is almost touching:—the weeping Japanese woman, the Lombard equally overcome, and the sculptured object of their common sorrow. We shall require, however, much more evidence before we give way to any despair about the breed of Japanese worms. The prophecies of doctors are proverbially liable to falsification by subsequent facts. Mother Hubbard may again go to the undertaker's for a coffin, and return to find her dog laughing; and the silk-worm of this country is quite hardy enough to listen with entire complaisance to the physicians who predict its extinction by corpuscles, which certainly had infected it ten years ago. Reduce the *grainage*, and take care what seed is kept in the country to continue the race, and we will repeat a wager which lately scandalized a whole kennel that we shall have good silk again.

The remainder of *Punch* is letter-press,—which 'no fellow' can read.

A rumour has been current during the day that war against China had been declared by England, but it rests on no certain warranty.

Why confound Icarus with Dædalus? *Ne Sutor &c.*

The *Hiogo News* of the 6th instant, has the following:—

A rumor has been received that a boat's crew belonging to the *Sylvia* were fired upon by the Coreans and pursued for two days (being in a land-locked position) before they ultimately succeeded in rejoining the ship, which then returned to Nagasaki. We are ignorant what—if any—action has been taken by H. B. M.'s Representative in consequence.

We reproduce the report without, however, the smallest belief in its authenticity. It is in the last degree improbable.

(From the Japan Mail Daily Advertiser.)

Dr. David Murray, Principal of the Kaisei Gakko, was honoured with an interview by His Majesty on Saturday last.

Miyaka Misaki and Chiba Takawato, who set the large temple of Shiba on fire in December 1873, and subsequently attempted to burn the temple at Asakusa were, the *Nichi Nichi Shimbun* tells us, executed on the 29th of last month.

A native newspaper revives the rumour of the Yedo and Yokohama railway having been sold by the Government to a company of *Kadzoku*. There is apparently no trustworthy foundation for the report.

The captain of the war ship *Unyokan* has been summoned to the capital in order that he may give a further explanation of the Corean business.

It has been notified by the *Daishinin* that any person who may be desirous of being present at its trials will be admitted on presentation of his card.

The *Choya Shimbun* states that ten officials were appointed to the *Sei In* on the 2nd instant.

Fifty officials of the Naimusho, according to the *Hochi Shimbun* received their congé on the 30th ultimo.

The China complication, far from being settled, as we all hoped, and as we had good authority for thinking, is very far from being so, and looks very dark at this moment. Mr. Wade has informed his colleagues that the Chinese have refused to accede to his demands, and has sent home Mr. Grosvenor for instructions. But was not the position which Mr. Wade assumed to the Chinese this: "You must accede to such and such demands or I will haul down my flag and leave the capital?" We think it was so, though we do not write with absolute certainty. He has made his demand, which has not been acceded to and yet he still remains at Peking, and must wait, we presume, until Mr. Grosvenor's return. If we are right in our facts, and we have every reason to think we are so, our position in China at this moment is a very false and most unsafe one. Either make no threats to China, or let them be of iron.

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

We are glad to see that the same feeling which dictated the protest recently made in our weekly issue against the demand of any indemnity from the Chinese by the English Government for the murder of late Mr. Margary, finds an expression in the China papers. The *China Mail* of the 25th September has the following paragraph in an article on the present complication with China.

According to our latest advices the precise extent to which punishment was to be inflicted—*i. e.*, the question of whether those indirectly responsible were to be punished or not—was then unsettled. The other points ceded were, however, important. They embraced: The punishment of the parties *actually* guilty at first hand; an ample apology under the Vermilion pencil for the outrage, and its publication in the *Gazette;* the payment of an indemnity *(which is, we venture to think, a mistake);* the issue of a formal edict recognizing Mr. Wade's status as minister, and his reception by the Emperor as such—a publication never yet made; the proper regulation of the Lekin taxes at Peking; and the despatch of a mission to England, apologetic in one sense, but intended also to reside permanently in London. These embrace a great many points which long required clearing up, and are so far satisfactory.

The *Unjokuan* may, we understand, be expected in port to-day or to-morrow from Nagasaki.

A review of the Imperial troops will take place on the 10th instant, at Narashino, in the presence of H. M. the Mikado.

General Rassloff the Danish Minister, was honoured with an interview by H. M. the Mikado, on Monday last.

His Majesty the Mikado received the *Sangi* at the Imperial Palace on Sunday morning last, at an early hour.

The Nagasaki *Rising Sun* publishes the following correspondence.

Nagasaki, 19th Sept., 1875.

Capt. St. John,
H. M. S. *Sylvia*.

"DEAR SIR:—As some of the residents of Nagasaki who have been at the trouble and expense of importing pheasants from Shanghai in order if possible to increase the number of birds in this neighbourhood, we would ask you to discontinue shooting until the 1st October. As it is necessary that the birds should have some protection it has always been a matter of honour among us not to shoot pheasants before the time appointed by the English Game Laws, and, we think by thus putting the matter before you, that by your example and influence you will prevent any of your officers who may be disposed to do so from destroying pheasants during the close time.

We are, Dear Sir,
Yours faithfully,
(Signed) A. Hall,
A. B. Glover,
Thomas B. Glover,
Fred. Ringer,
Yeend Thurer."

The following is Capt. St. John's reply:—

"Messrs Hall, A. B. Glover, Thomas Glover, Fred. Ringer, 5th Signature unreadable.

"Capt. St. John presents his compliments to the five gentlemen who have addressed him on the subject of shooting prior to the first of October, and will have no objection to seeing any one of the five at 2 this afternoon to discuss the matter. Otherwise Capt. St. John will be unable to further their views in the matter.

Nagasaki, 20th Sept., 1875.

"The Gentlemen who addressed Capt. St. John relative to shooting pheasants during close time, present their compliments to Capt. St. John, and regret that his discourteous behaviour in returning their letter, renders it necessary for them to take the only course left them, namely to make the facts known to others portsmen in Japan."—*idem.*

It is the greatest of all possible mistakes in connection with Chinese affairs to suppose that the Opium or any other branch of the foreign trade in China would be in the smallest degree affected by the outbreak of war with England. The usual quantity of tea will be prepared and exported, the same quantity of silk will come to market, and the customary seventy thousand chests of poison, in the shape of opium, will be imported from India. The Customs revenue will be collected by an Englishman and paid into the Imperial Treasury to the last farthing, the open ports will exhibit all their customary activity and every thing will go as merrily as a marriage-bell. A national war in China will no more affect the trade of the ports than a bull-fight at Seville will disturb the moon's motions; and as to the opium trade trade specially, it is easier to imagine that there will be no children born in England next year than that the annual seventy thousand chests will not find their consumers. We say nothing about this being a good or a bad thing. We only speak to the facts, which are perfectly well known to every one at all familiar with China, and especially to those who have lived there through a war.

His Majesty the Mikado will visit the "*Kadzoku Kuaikuan*" (a club which has been formed by the late nobles at Yedo) to-morrow.

The *Hóchi Shimbun* gives the rumour that it has been decided to declare war with Corea.

A Japanese newspaper announces that Signora Palmieri has intimated her intention to give another Concert in Yedo on the evening of the 9th instant.

The large Hall of the Engineering College at Tora no Mon has been, we understand, kindly placed at her disposal by the Minister for Public Works.

There is something extremely bewildering in the frequency with which appointments and dismissals are now being made by the *Sei-In*. We learn from a late issue of the *Choya Shimbun* that seven officials were appointed on the 4th instant, while three received their *congé* on the same day.

The *Nichi Nichi Shimbun* thinks the circumstance worth chronicling that during the month of September no burglaries were reported in the 1st Ward in Yedo. This it imputes to the introduction of gas and the diligent performance of their duties by the police.

The M. M. s.s. *Tanais*, sailed from Hongkong on the 5th instant for this port, bringing London mails to the 27th August.

The Great Northen Telegraph Company announces that all lines are now in order.

As a contribution to the literature of the Spurious Drug importation question, we publish the following extract from a "Price Current" issued by Messrs. A. & E. COHEN of London:—

Sulphate of Quinine (Imitation):
Brand "CASTILLON," 1-oz. bottles, in cartoons, 1/7½ bottle. Bottles free. Net.—*Hiogo News.*

The Pacific Mail S. S. Company announces the inauguration of its new Australian Royal Mail service on the 9th instant, by the *Vasco de Gama*. It is intended to despatch suitable vessels from San Francisco to the Colonies, touching *en route* at Honolulu, on the 10th of each month.

The *Hochi Shimbun* refers to the probability of the wearing of swords again becoming a common usage, and comments upon the dangers attending the old fashion.

The *Hochi Shimbun* states that, on the 5th instant, 3 officials were appointed at the *Sei In*, while 45 others of a lower rank and styled *Otoneri* were dismissed from the Imperial Service. On the same day 20 other *Otoneri* received appointments and 44 officials of a still lower grade, known as *Kotoneri*, obtained their *congé*.

Mr. Waku, Acting-Editor of the *Akebono Shimbun*, has been awarded 30 days imprisonment for a contumelious article on revenue stamps published in a recent issue of that journal.

A sharp earthquake shock was experienced at about half-past six o'clock yesterday evening.

Signora Palmieri's Concert of yesterday evening was a brilliant success and decidedly the best of the series. Both the ladies were in excellent voice; both apparently in those good spirits which enable a singer,—like a bold rider on a high-mettled horse—to face everything and clear everything, and not only this, but to do it without a shadow of misgiving, and with a keen sense of personal enjoyment in their feats. The difficulties which great music presents are, to the true artist, something like the ocean swell and the breaking waves to the fearless swimmer. That which would engulf one timid or un-

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

practised in the art, is a source of rapture to a true child of the ocean. It was in this mood that Byron wrote:—

> And I have loved thee, Ocean! and my joy
> Of youthful sports was on thy breast to be
> Borne, like thy bubbles, onward; from a boy
> I wanton'd with thy breakers—they to me
> Were a delight; and if the fresh'ning sea
> Made them a terror—t'was a pleasing fear,
> For I was as it were a child of thee,
> And trusted to thy billows far and near,
> And laid my hand upon thy mane—as I do here.

So it is with the singer in her best moods, when inspired by the consciousness of power, and by the assurance that the very rage of the orchestra only lifts her to greater triumphs: and it was apparently in this mood that Signora Palmieri approached her task last night. Signorina Persiani, too, has never done herself so much justice here, or appeared or sung to so much advantage. Whether it was Meyerbeer, or Rode or Rossini whom she approached, she made them all do her bidding, and each bar afforded a new flower for the chaplet she gracefully wove as she sang, and with which the audience crowned her when she had given it the finishing touch. What need to make a fresh list of the songs or scenes of the evening? It is not thus that the audience now think of the too short hours they occupied. Rather is it as a time when all else was forgotten in the pleasure of listening to sounds which, beautiful as they are by Nature, are made a thousand times more so by art—that art which, unlike all its sisters, has no prototype whatever in Nature, and which all men who have strained their imaginations to paint the joys of a higher form of existence, have considered indispensable to the plenitude of that happiness which they have associated with it.

Yet the concert had not only its "shadow-song," but its shadow; and as we have not spared to speak of blemishes of accompaniment in the earlier performances, justice does not permit us to pass over this without one word of remark. The Serenade from Don Giovanni is one of the most trying pieces of music which even the greatest artist can approach—not because the notes themselves present any difficulty, but because the most finished singers have lavished their very last graces upon it. Men who can do everything else, who can act well, sing divinely, who have the personal beauty of Apollo, the graces of manner of the stage which belong to the highest breeding and that commerce with the world which turns it to the best account, have failed in rendering this exquisite piece of music. One man alone, perhaps, in the history of the lyric drama has been absolutely perfect in it, Tamburini—and we shall probably sooner see another Jenny Lind than another perfect Don Giovanni. When we say therefore, that this celebrated Serenade was attempted last night by a young gentleman who has no vestige of a qualification for achieving it we shall have recorded a deed of courage, it may be, but of little wisdom. True, the ready plea of the amateur is present, but a world which opens its floodgates of sympathy to the unsuccessful man in the right place has not much to spare for the failures of him who wilfully gets into the wrong. He will hear, "Que diable allait-il faire dans cette galère?" and in this sentence will be summed up all the compassion that society can spare him.

The match between the English and Scotch four-oars was rowed last evening under somewhat unfavourable circumstances, as a fresh wind was blowing from the eastward with a lumpy sea running. On starting from beyond the P. M. S. Wharf the Scotch boat, rowing a slow stroke, took the lead and maintained the position until abreast of the French Hatoba, the English crew meanwhile husbanding their power. But on passing this point the English quickened their stroke slightly and drew up close to the Scotch, holding them until they had reached the Club. Here the English crew displayed their full strength, and, with a "spurt" that enabled them to leave their antagonists fairly behind them, arrived at the winning point opposite to Messrs. Jardine, Matheson & Co.'s Hong a clear length in advance. The Scotch crew made a valiant effort to retrieve themselves, but whether from their inferior skill or, as is probable, from the lumpy sea which was running failed to achieve their point. The victory was clearly with the South Britons.

The following are the names and weights of the competing crews.

ENGLISH BOAT.

There is a rumour in Yedo of news having been received from the South of disturbances in Saga. No particulars however are obtainable.

The members of the Nikosha Society held a meeting in their Hall on the 6th instant. The subject of discussion, the *Nichi Nichi Shimbun* adds, was the Corean Situation.

The *Nichi Nichi Shimbun* has taken pains to enquire into the rumoured disturbances in *Saga*, and declares that the intelligence is entirely devoid of foundation.

Owing to an accident which occurred to a piston of the locomotive on the line between the Terminus and the Kanagawa Station, the 7 a.m. train from Yokohama yesterday morning was delayed nearly an hour, arriving at Tôkiô at 9 o'clock a.m. The usual 8.15 trains from either terminus were withdrawn, but with this exception no interruption of traffic ensued.

The condition of Asama yama would seem to be causing much apprehension to the dwellers in its immediate neighbourhood. Loud noises have for the past week accompanied its eruptions, and as the great outbreak which occurred some hundred years since, and by which so many lives and so much property perished, was preceded by a similar manifestation, the population inhabiting its slopes is much frightened.

We understand that the members of the Rowing Club purpose to get up some Scratch Races on the afternoon of Tuesday next should the weather permit. The races will be limited to trials of skill between four-oars, pair-oars and double sculls, the interest of the latter being largely enhanced by the presence of some new boats, expressly imported for the purpose from London by members of the Club.

His Majesty the Mikado visited the *Kadzoku Kuaikuan* (or Daimio's Club) on the 7th instant. H. M. was received and entertained by the members with the usual ceremonials.

The *Hochi Shimbun* states that Captain Inouyé of the Imperial Navy, Commander of the *Unyokan* man-of-war, returned to the capital on the evening of the 7th instant.

Owing to the splendid prospects of the new harvest the price of rice had ruled low in Ôsaka for some time past. But on the 30th ultimo the intelligence brought by the *Unyokan* caused a rise in price, and the holders of grain are now demanding higher rates.—*(Hochi Shimbun)*

NOTIFICATION.

To *Shi*, *Fu*, and *Ken*.

Some time ago our ship the "*Unyo-Kan*" coasted round the eastern and southern shores of Corea. She was then further proceeding along the western coast in the direction of Newchwang in China, and in the course of her voyage was passing the neighbourhood of the Corean island of Kōkwa on the 20th ultimo when she was suddenly fired upon by the Coreans. Our men were landing to inquire the reason of this, when a hot fire was opened upon them which the ship was obliged to return. The next day a landing was made, the fort was captured, and its armament seized. Two of our men have been wounded. The ship has returned to Nagasaki. The above intelligence having been received by telegraph it is herewith communicated for your information.

(Signed) SANJO SANEYOSHI.
Daijodaijin.

October 3, 1875.

The *Rising Sun* gives the following details of the Engagement in Corea:—

Last Tuesday morning the Japanese man-of-war *Unyokan* arrived from Corea; and we learn from the *Nagasaki Shimbun*, that whilst surveying, on the 20 ult., shots was fired from the Corean forts, at the *Unyokan*, which she immediately returned, and the firing was kept up on both sides for 30 minutes. The next day she landed her marines and attacked one of the forts, but on account of its inaccessibility they did not succeed in taking it. The next day (22nd) the marines again landed and attacked the same fort, this time with better success: the forts were taken and burnt, also all houses near. After the affray, 30 Coreans were found dead, and many more jumped into the sea and were drowned. Ten prisoners, 36 cannons, 10 rifles and many other things were taken. One Japanese was killed and another badly wounded.

There is a story told of the golden image of *Kannon* (a deity of the Buddhists.) This image until recently was kept at the village Shiraki Mura, about 5 miles from *Oita Ken*, and was very famous, everyone supposing it to be of pure gold; but alas! it was only full of corruption inside—dust. A certain adventurer in the village, conceived the idea of making his future through this image: and so away he went and having purchased the god, set off on a journey to Nagasaki. Arriving here, he sought the assistance of a native, to aid him in its disposal,—no doubt discoursing at length on its wonderful powers, but above all of its great value—being pure gold. The native being somewhat dubious scratched the surface of the image a little, and found what he expected, that it was merely copper—the poor man having given his all, for a worthless piece of metal.—*Rising Sun & Nagasaki Express.*

The s.s. *Sunda* is still lying as described in our previous report. She is in four fathoms of water, and at high tide the water reaches half up her funnel. The gunboat *Hornet* was lying by, and the wreck requires to be closely watched, as the mandarin in that locality, although he gave the Captain and officers quarters in a joss-house, is not seemingly very anxious to prevent plunder. Should fine weather continue, there is—if proper appliances arrive—every prospect of her coming off, as she has sustained no damage where she now lies.—*N.-C. Daily News.*

Advices by the *Taku*, yesterday, confirm the impression that things are approaching a crisis in the North. Just before she left, a courier arrived from Peking bringing news that Mr. Wade had notified the Foreign Legations that he would leave the place in a few days, should the Government not accede to his demands. It is reported that the state of affairs was becoming known among the Chinese, and that some were leaving Tientsin under the impression there would be a fight. But possibly the Mandarins may encourage this idea, in order to appear in the eyes of the people to the last, as heroes ready to die; so that, if they do yield, they may be at least able to say:—We resisted to the last.—*N.-C. Daily News.*

In this present uncertainty with respect to the relations between the British and the Chinese Governments, it is a source of satisfaction to remember that the powerful naval squadron which is to escort H. R. H. the Prince of Wales from Aden to Bombay will, in the course of next month, be available for service on this coast if necessary. The five or six powerful frigates composing the Detached Squadron, with their crews amounting to a force of several thousand picked men, would prove an invaluable auxiliary to the fleet at present under Admiral Ryder's command. In case of need, the Detached Squadron will doubtless be summoned by telegraph to proceed to the station.—*N.-C. Daily News.*

The *Daily Press* says.—"Reuter's advices from St. Petersburg state that Yakoob Khan has been capturing Chinese towns one after the other without resistance, and that a Chinese expeditionary force sent against Kashgar three years ago has been obliged to build quarters, sow grain, and await harvest before continuing their march." This is just what we should have expected, after the memorial we published lately from the Commandant of Hami, setting forth his difficulties in the matter of supplies.—*N.-C. Daily News.*

The *Peking Gazette* of the 10th instant contains memorials from Kwechow and Hunnan, reporting the progress of the Burmese mission towards Peking. The Envoys actually arrived in the Capital on the 10th instant, and have excited some contemptuous attention among the native population, who have never seen (in the present generation) anything more "out-landish" than these half-naked, turbaned, and tattooed Southerners appear in their eyes. The elephants have not yet arrived.—*N.-C. Daily News.*

Warlike rumours were very rife yesterday; but there seems very little clear foundation for them, and speculation upon their truth is quite useless pending the receipt of more definite news. The reported packing up of the Legation furniture may be a *canard*. The telegram from Hongkong, that Mr. Wade had telegraphed to the Governor that war was imminent, seems more definite; but we should like to have the Hongkong rumour better authenticated, before paying it too much attention. A very few days, however, will probably bring authentic news.—*N.-C. Daily News.*

SPIRIT OF THE JAPANESE PRESS.

COREA.

(Hochi Shimbun.)

We have always been opposed to an expedition against Corea, and just at the moment we were about to take up our pen to discuss this question we have learnt fresh reasons for this view. As we said in our article of yesterday, except those persons who have surprisingly little thought for the independence of the Empire of Japan, nobody can agitate for an expedition against Corea. With these views stored up in our heart, we have listened carefully to the arguments of those persons who maintain the advisability of such war, not for mere empty prestige, but on grounds of expediency, fearing that even if this war is not undertaken the independence of Japan will not be unaffected by the result. "The reason," they say "why "we should not give our attention to a foreign war is "the urgent need of good government at home. There "are, however, some appearances as if the internal "tranquillity was about to be disturbed even if we do "not undertake a foreign war. There is no guarantee "that by means of a foreign expedition we may not be "able to maintain things in such a condition that matters "may gradually attain a settled peaceful condition. If "we impartially consider the history of the agitation in "favour of war with Corea, we shall find that it is now "a long time since its first germs made their appearance "in the minds of the people. Up to the year before last "it had become popular both in the capital and in the "country. In the capital some of the Government re- "signed office on this account. In the country it gave rise "to the Saga trouble. The Imperial troops succeeded in "suppressing this disturbance. The smouldering fire, how- "ever, broke forth again, and caused the Formosan Expe- "dition. Since then the fire has never been completely "extinguished, but has been growing gradually stronger "by aggregation up to the present day. The Corean affair "is therefore of deep concern for the affairs of all Japan, "and the tranquillity of the country hinges on the "question of war or no war. If we go to war, what "shall we do about the scantiness of our resources? "If we do not go to war, will not our internal "tranquility receive serious injury? If the Govern- "ment has any plan for suppressing authoritatively "the agitation in favour of a war with Corea, and main- "taining order at home, we shall contain ourselves "within the bounds of peaceable and honest policy, but "if our not going to war should cause disorder at home, "and there seemed a likelihood of great calamity befalling "the nation, it may be impossible to avoid such an under- "taking"

The writers who adopt this line of argument again go on to say: "Has the Japanese Government the power to "guide the policy of the whole nation? In the Formosan "affair, what was the idea of the Government? Did the "army of the Japanese Empire obey the order of the Japa- "nese Government? Certainly not. The troops for the "protection of this country did not respect the commands "of the Japanese Government, but sailed from Nagasaki "of their own will. The influence of Okubo Naimukiô "was insufficient to restrain them. Have we not the "same Government now that we had then? Have we "not the same army? Is there any guarantee that the "present affair will not ultimately turn out like "the former one? Our Government may have recourse "to peaceful negotiations, but if they are unable to con- "trol the ardour of the army for war, in spite, alas! of "the dislike for war of our Government and people, it is "as plain as seeing one's face in a glass that we shall be "obliged to send out our troops. Even the behaviour of "the Unyôkan in surveying the island of Kôkwa and "commencing hostilies was of course contrary to theideas "of the Government. It must be admitted that it was a "wilful provocation to battle. In the very act which "gave rise to this question, we have the Unyôkan acting "in opposition to the wishes of the Government and "appearing to act independently. If under circumstances "of this kind our Government are obliged to go to war, "they will necessarily conduct the expedition under the "directions of the army. Do they wish to do so, or do "they wish in conducting the expedition to control the "army. If the Government awaits events, it will be the "guest; but if it takes the initiative, it is the master. "Whether it is the guest or the master at present, it is "impossible to tell, but what we can foresee is that the "time will come when this must be decided. But even "supposing that the Government happily succeeded in "restraining this movement, if the result were to aid the "growth in Japan itself of the seeds of calamity, prevent- "ed the progress of the country and clogged our national "vigour, the consequence being to disturb our internal "tranquillity, it must then be admitted that the indepen- "dence of Japan would be affected. If our Government "from noting the past, comparing the present and "discerning the future, should become convinced that "such a state of things is approaching, they should then, "however painful the duty, take the initiative of the "army and have recourse to a foreign expedition, in order "to preserve order at home."

The writers will go on to say "We do not wish "for an expedition on account of mere empty honour, "nor for the sake of heightening our national "prestige. It is because we wish for peace at "home. If any course open to us leads only to "war, we should like the Government to have the "control of it, and that it should be conducted to our "advantage. What does the public think of the present "position of our Government? What do they consider is "the reason for the formation of an army and navy? "Certainly no good grounds can be discovered by an "ordinary intelligence why war should be made. If any "one considers the state of our resources, the thought of "going to war will be very far from his bosom. But if "there are apart from the Government and people some "persons who would do so, what shall we say then? The "Government should take the initiative so as to keep the "control in their own hands. It is far better to disperse "beyond the seas the flame of discontent than to allow it "to smoulder at home. Our opinion of the present state "of affairs is that we must have recourse to the resolve "to take an unavoidable step in advance. We love our "country and we feel that matters have at length reached "such a pitch that no other course is open. The reason why "it seems to us preferable to have recourse to the expedient "of going to war with Corea is that the present state "of affairs in Japan will not allow us to insist on our "views, that we are compelled to think that to decide on "war, from a policy of expediency, will be the best in "its future results. It is, however, painful to have to "propose such a policy."

This writer will say further, "We maintain that on "no grounds whatever should we make war on Corea, "but when we examine the state of affairs round us on "all sides, we find that it is impossible to adhere to the "ordinary course. The reason is that our country is "in an extraordinary condition. We have been led "decidedly to cherish the hope of advantage from a war "against Corea. We differ from the ordinary writers "who maintain the advisability of a war with Corea. "They look upon Japan as a great and splendid Empire "the insult to whose flag it is their desire to see washed "out by the heart's blood of the Coreans. A very empty "honour! But we are unable to preserve the integrity "of our country. It is absurd to talk of raising our "national prestige. Our hopes go no further than "by a painful expedient to avert internal troubles. If "we have got superfluous vigour enough to heighten "our national prestige, there are two courses open "to us—to contain ourselves and improve our Govern- "ment at home, or to take a step forward and undertake "a foreign expedition. The advantages of each "would be well weighed before proceeding to action. "We are not sure that under present circumstances it is "not the time for extinguishing fire by means of fire."

We have heard the above views expressed. They seem at first sight to have much force, but if we go a step further and consider the question more maturely, we cannot think that they are correct. Even granting that our Government were unable to control the army and were compelled to go to war, we newspapers, who have constituted ourselves the ears and eyes of the people, are bound to reflect faithfully their views. We

Digitized by Google UNIVERSITY OF CALIFORNIA

have therefore incurred the ill name of coward for the sake of our country. Some may advise a Corean war as necessary under present circumstances, but we will not seek the path of high principle, but rather follow that of expediency, nor look for advantage on the field of certain death. Even should the Government be able to control the present agitation for war against Corea, we foresee similar internal troubles in future to those which are now dreaded on this account. We will not make ourselves responsible for the having recourse to such an expedient at present. We only wish to reflect the wishes of the people at this time in doing all we can to dissuade the Government from the expedition.

The Corean affair.

(*From the "Nichi Nichi Shimbun," October 4th*, 1875.)

Upon receiving the telegram of the Corean outrage, the Tôkiô newspapers have on the 2nd instant and since with one voice pronounced decidedly against war. We are of the same opinion as these discerning writers, and, believing that the just policy is a peaceful one, we seize the occasion boldly to continue the expression of our sincere views.

If we carefully consider the changes in public opinion, we shall find that even those writers who until three or four years ago most warmly advocated a war with Corea, have gradually learnt by the experience afforded by the Formosan expedition of last year what a serious business a foreign expedition is. We believe that taught by this speedy experience, their ideas have enlarged, and that they have learned a great lesson, so that those writers who still cherish such a hope, will hardly now-a-days stick to the same line of argument as formerly. We are therefore of opinion that we may look upon any hot advocacy of an expedition against Corea as having for the present disappeared from the field of public controversy.

This discussion appears, however, to have taken a step in advance, larger issues seem to have been raised, and two different views developed, one of these we shall call the "Honour view," the other the "Expediency view." The supporters of the "Honour argument" are of course opposed to anything which injures the national security; they have a high respect for international law, and would like to open proper negotiations with China, asking her whether Corea is a dependency of her's or not. Then if the answer is that Corea is not a dependency of China, they would immediately lay the matter before the Corean Government, but if the answer is that Corea is dependent, they would demand satisfaction from the Chinese Government. If by such negotiations not only could no satisfaction be obtained, but our honour were to be more compromised than before, it would then become necessary to look to the ways and means and resolve on going to war.

The advocates of the "Expediency View," on the other hand, wish by the expedient of a foreign expedition to avoid calamity at home. Following the example (though without confessing it) of Napoleon III, they wish to preserve the national tranquility. Their policy may be explained in this way. The expenses of the Formosan expedition last year were laid out in buying up the seeds of civil war at home. But there is still a remainder which has yet to be purchased. If the impending negotiations with Corea do not lead to a satisfactory result, then they would let loose savage violence and give vent to the contained indignation which is cherished here in Japan, under the pretence of wiping away an insult to the national flag.

We must declare distinctly that from neither of these two views can a satisfactory policy be deduced. Neither of them is calculated to maintain the peace and security of Japan. Even the "Honour View" is unsatisfactory; much more would it be futile to look forward to a hap-hazard success from the "Expediency Policy." Upon this question we have ascertained the opinions of the most enlightened men, and have traced upward to their origin the success of national peace and prosperity, and are more convinced than ever of the truth of our views. When we consider the state of Japan, whether tranquil or disturbed, and the broken condition of her finances, we think that by far the best policy for us is to set our minds at ease about Corean matters, to make no Treaty, hold no intercourse, but to devote ourselves strenuously to the development of our internal administration and not to trouble ourselves about foreign matters. We shall put up with the anger of the Japanese Government and people, and bear our shame in the hope that this most excellent policy will be carried into effect. If, however, in the eyes of the nation, the urgent necessity for maintaining intact our national honour as an independent country, should bring upon us a time when the state of things would render this excellent policy impracticable, we ought to address the Chinese Government in a friendly way, persistently consider Corea as her dependency, and so obtain satisfaction through the intervention of China. If we should unfortunately not gain satisfaction in this way, the only resource would be to follow the usual course of international relations and ask the arbitration of some disinterested foreign power. This we would call the second-best plan, not to be adopted except in the improbable event of its becoming necessary to do so. We hope the Government and people will not have recourse to it at once. As to the resolution to fight, this we look upon as an entirely inadmissable policy whether on the grounds of national honour or expediency, and consider it our urgent duty along with our fellow editors to oppose it with all the might of our pens.

Even if the policy of our Government should not be able to stop at what we have described as the best plan, we believe they will certainly not proceed beyond the second, and that they should adopt the inadmissible third plan we think is out of the question. We have still, however, one subject of anxiety, and that is—Will the Government, if it adheres to a peace policy, be able by a resolute use of its authority to keep quiet the hot-headed *samurai* who want war with Corea? They are scattered over all Japan beginning with Satsuma, Choshiu, Toza and Hizen. They are all able-bodied men burning with indignant feelings, partly proceeding from patriotism, partly arising from their own sullen temper, and they will probably have power enough, though they may lose their heads in the effort, to disturb the Government. The Saga troubles of last year were an outbreak confined to a small part of the country, but was it not almost as hard to quiet the *samurai* who riotously insisted on war, as it was to quell the Saga revolt? Remember the behaviour of the Formosan troops when first despatched from Nagasaki. Did not the inability of the Government to control the war spirit which was rife among both naval and land forces, produce results which it is impossible to conceal? It may some day happen that in the course of negotiations with Corea or China a single piece of news may stir up excitement among the Naval and Land forces, a single message may move to resolutions the *samurai* of the whole island.

Under such circumstances will the Government be able to control the Army and Navy by saying to them "Troops ought to obey the directions of their Government and not to cause the Government to change its measures?" These forces have their admirals and generals through whom they may be controlled, but, in the case of the *samurai*, will the Government be able to keep them quiet by saying "The decision of war and of "peace belongs to the Government. The *samurai* have "nothing to do with it. For foreign wars we have the "ordinary naval and land forces and are supplied with "arms and munitions wherewith to attack our enemies, "and defend ourselves. We do not require to call in the "the aid of the *samurai*, who had better avoid creating "useless disturbance." If in such an emergency the slightest error is made, and the power of controlling the army and keeping order among the *samurai* is lost, it will be impossible to prevent the nation from falling under the rule of the soldiery or into the hands of the *samurai* class. Into what a foul mire would not such an event plunge our national tranquillity? We do not know, nor if we did, would our feelings allow us to describe it.

Our excessive anxiety may perhaps have led us to say too much, but just at present it cannot be denied that there are hidden tendencies in this direction. We think that both these parties, whether they talk of Honour or Expediency should for a time moderate their views, and

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

free their hearts, and should discuss what is to be done, remembering the state of things we have described, and that the first object of our thoughts should be to consider by what means quietly to maintain the tranquility of our country. In considering this, the importance of the Government preserving authority enough to control the army and to keep the *samurai* quiet should be understood, and a definite policy decisively resolved upon. If this is not done, the resolve and the execution will not agree, and we shall at last fall into the no-policy of war which we have condemned. We believe that this is not unavoidable, but that it can be helped. We shall be glad to hear what other writers have to say upon this question.

COREA.

(From the "Hôchi Shimbun" of October 5th, 1875.)

Since we received some days ago a certain very grave and important piece of news, no matter to what subject we turn our thoughts, they always come back to it; no matter on what subject we begin to write, our arguments always end by referring to it. That we have hitherto devoted our attention so much to this one matter to the neglect of other important subjects, is not owing to any pleasure we have in doing so; it is because we are unable to remain silent upon a question, the solution of which is so urgent, and in which are involved the peace and security of the Japanese nation.

Public opinion condemns unanimously a war with Corea. The peace policy is called by the Public, the right and proper policy, whilst the opposite policy is described as a stupid idea void of plan or forethought. Nor is this general tendency of public opinion due to hastily formed conclusions. Since the experience of the expedition to Formosa, sensible and keen-sighted men have become aware how grave an undertaking such an expedition is. They have observed that the Government has turned its attention to the urgency of practising economy and have noted a good many actual cases of their retrenching useless expenditure. They have also been deafened of late by the noisy lamentation of writers who deplore the great amount of our foreign debt, the want of balance between our exports and imports, the drain of gold coin from the country, and the excessive quantity of paper money in circulation. From all this they draw the conclusion that the national exchequer is at a low ebb, and see the poverty of our resources. They agree with the greatest scholars that there is no instance of, nor any reasonable expectation of a victory being reported when a war has been undertaken with insufficient means. They have also seen that our internal tranquillity is yet far from being fully secured, that everything is in an incipient stage, and that there are still many things which require to be settled. They have made up their minds not only that war is unnecessary, but that on principle, and in our actual condition, it is out of the question to go to war. How then is it possible for them not to admit that the peace policy is the right and proper one?

Again, if we turn our attention to the question of honor and disgrace, and examine whether it is great or small, light or heavy, we shall find that the insult put upon us by Corea is of the smallest and most insignificant character possible. Nothing else was to have been expected from these benighted and prejudiced Coreans, who have shown their ignorance of natural justice and of international obligations by their refusal to receive our envoy, and by their discourtesy in their communications with us. The inhabitants of a more bountiful region, endowed with more generous natures, need feel no shame whatever, or flame up indignantly for such a cause. Those persons who count such discourtesy an insult, and boil over with indignation at it, are themselves savages no better than its authors. We think therefore that the Corean rudeness affects our honour in but a small and trifling degree. We do not, however, maintain that it does not signify, no matter how much the Coreans insult us. It may be admitted that the honour of Japan cannot be injured by the behaviour of an ignorant and barbarous nation, but at the same time their offences should not go unpunished. Nevertheless, when we remember that their rudeness leaves not the slightest stain upon our national honor, while it would of course be the duty of a prosperous and powerful country making rapid strides towards civilization, to chastise them, it does not follow that it is our urgent business to do so irrespective of our poverty and of the injury which may result to the national tranquillity.

No matter what view we take or what object we aim at, it is plain as the difference between black and white, that the policy of a war with Corea is void either of plan or foresight, and that the peace-policy is the only just and proper one. The above arguments sufficiently establish this. What then do some persons mean by disturbing the people's minds with the cry "War with Corea?" We believe that this outcry proceeds from an excessive indignation at the Corean insult, and from an ardent and single-hearted desire to wipe out the national disgrace. But, after all, that which they grieve over indignantly as an insult is really not worth being angry at; that which they are enraged at as a national disgrace is not worth while lamenting as such. We therefore believe that if these superfluously indignant gentlemen would repress for a little the fire which is blazing in their heads and bosoms, if they calmed their minds and reflected maturely on the state of affairs, they would themselves see reason to regret their impetuosity. Our reason for this belief is that their excitement is due to their patriotic and public-spirited feelings, and because their only want is that they are mistaken as to the means and ignorant of the considerations which must be taken into account. If they understood the reason of the question, and repented of their mistake, they would at once become sincere and patriotic men. The persons about whom we feel a difficulty are that needy and worthless class who have lost their former means of livelihood, and have not been able to form themselves to the pursuits of civilized life, who, oppressed by poverty, and constantly dissatisfied with the present policy of our Government, are in hopes of seeing troubles arise. These are your well-known indolent knaves who are so easily converted into rebellious subjects. Their cry of "War with Corea" proceeds from selfish motives. They have no sympathy with their country's misfortunes. There is no other way of dealing with them than to repress them by authority.

There is again another line of argument taken by some writers. They say that the sending an army against Corea is to gain renown for Japan abroad, and that even the enlightened countries of Europe and America extend their prestige by force of arms. There is some force in this. But is it not a very shallow notion of these writers to imagine that Japan will gain renown abroad from an expedition against Corea? Do they think of imitating the ancient example of Taiko's expedition to Corea? They must have forgotten the difference between then and now. In former times when we had no foreign relations we were no doubt able to increase our prestige by chastising Corea, and sending a chill to the hearts (literally—the livers) of the Coreans, but now the enlightened countries of Europe and America will watch our proceedings. Even if we succeeded in frightening the Coreans, not only will they not feel impressed in the slightest, but will on the contrary cast great ridicule on our want of foresight and plan. If we insist on raising our prestige by arms, let us first of all chastise the encroachments of Russia. The truth, however, is that arms are not at present the way to heighten the prestige of Japan. The real mode is to be looked for in the state of our foreign relations. We are still unable to exercise our jurisdiction, the control of the taxes is in the hands of foreigners. On these accounts our Japanese brethren are exposed constantly to wrongs they ought not to be exposed to, foreigners escape punishment which they ought not to escape, Japanese suffer losses they ought not to suffer, and foreigners gain where they ought not to gain. We believe that the day which gives back to Japan her rights in these respects will raise one degree higher our national prestige.

War with Corea.

(Akebono Shibun.)

All the newspapers have been unanimous against a war with Corea. We do not say that war ought to be declared simply for the sake of holding a different view, but when principles are at stake, questions of profit and loss disappear. By a declaration of war we do not mean that our troops should immediately be sent to Corea and a reckless attack made upon her. First we should send an ambassador over and take steps to investigate the causes of the attack made upon us, and, according as this investigation compromises the Coreans or otherwise, we should take, or refrain from taking, further measures. If the attack on our gun-boat was not authorized by the Corean Government, then, of course, it should make an apology and punish the soldiers who were the instruments of the act. Then there would be no necessity for war, and the incident would even be of advantage to both nations. But as the Corean Government is a very obstinate one, we do not believe that it will act in this manner, so that our own Government ought to be prepared to declare war. How do those who oppose war think that the affair ought to be settled? When matters are in this state an envoy must be sent. But what if the Coreans insult him? Would it be well for us to haul down the Japanese flag which is hoisted at Fusan, and interdict all intercourse with Corea? If all should oppose war, there is nothing else left for us to do, and then could the world say with any truth that the conduct of Japan was worthy of her?

Our army and navy are small, and the treasury is not full, and, besides this, there are many who are not loyal to the Government. But an independent country must, when forced to do so, protect its rights, and, if the worst came to the worst, be prepared even to fight such countries as England and France. Thus we cannot be silent about Corea. It is not now within the power of the Government to recall the minds of the people from the direction in which they are set. This is, war with Corea, and many are ready to go, even although they have not received orders from the Government. If the Government procrastinates the settlement of this affair, the voice of war will spread throughout the country, and the sounds of Japanese guns and the glitter of Japanese swords will be heard and seen in Corea, even without the sanction of the Government. We think therefore that although we may not immediately declare war, we ought to be prepared to make it. If the decision of the Government coincides with that of the people, an army of 100,000 men, armaments and provisions would be forthcoming in an instant—within a day. Although we are not at this moment in a state of preparation for war, we ought immediately to place ourselves in such a state; and thus, differing from other writers, we are for war.*

Local Assemblies.

"Chôya Shimbun" of September 29th, 1875.

We heard some little time ago a street rumour to the effect that certain distinguished persons in this *Fu* had sent a collective petition to this Office of the Tôkiô *Fu* praying for the establishment of a *Fu* Assembly, and that the *Chiji* had given this document high praise and had forwarded it to the Home Department. Since then, being desirous of learning as soon as possible whether this *Fu* Assembly, which would be of such great advantage to the people of this *Fu*, was to be established or not, with fixed attention we have spent several weeks in waiting, stretching out our necks to no purpose, for all is blank before us, —nothing heard, nothing seen—, uncertainty reigns,—and we do not know whether the measure is to be adopted or not. The present frustration of our hopes seems very hard to bear. We have secret doubts on this matter. Has permission already been given? If so, then why have we not before this seen the establishment of the Assembly? Again, has it been decided that permission shall not be accorded? If so, then how is it that we have not heard of this?

Accordingly having no certain grounds to rely upon we are driven to the conclusion that the petition is still in the hands of the Home Department. We propose therefore to give a statement of our various opinions on the subject. That *Fu* and *Ken* Assemblies form the basis for the establishment of a constitutional Government in the country is a self-evident fact and one which it is quite unecessary for us to explain. Already, we hear, in various places throughout the country assemblies of *Fu* and *Ken* have been established on the system of public selection of members, in which the advantage and disadvantage, the profit and loss, resulting from various matters affecting the condition of the localities possessing these assemblies are discussed and settled. Such is the good arrangement which has taken place in the *Ken*. But in this our Tôkiô, which is the principal *Fu* in the country, the centre of civilization, and the degree of advancement in knowledge attained by whose inhabitants is well beyond what the various *Ken* can ever hope to reach,—these excellent *Fu* and *Ku* assemblies are still wanting—a state of things which we ever deplore. And this regret is not confined to ourselves. The evils which have resulted from the absence of these excellent assemblies are apparent to all. To take a single example as a proof of this:—It has been decided in the Tôkiô Deliberative Assembly established some time ago on the system of its members being elected from the ranks of officials, to erect gas-lamps, which have at last been erected after more than a year's work. Every night the road from Kanasugi bridge in Shiba to Asakusa is brightly lit with lamps, so that one is induced to fancy it is not night. Lanterns are thus quite unnecessary and thieves cannot pursue their depredations just as they please. The profit which that part of the town which is contiguous to the line of new lamps has derived from the presence of the gas, is by no means inconsiderable, and therefore the people of this district ought gladly to pay the cost of construction of those gas-lamps—and also the charges for the nightly light. But, on the contrary, they object to paying this and say:—"If we had been previously consulted on the "matter we would have managed somehow or another to "pay the cost, but to carry out the construction as you "pleased without giving us a word of information as to "the intention in view, and then to wish to force us to "pay the cost—what injustice!' The number of these dissatisfied persons is large. Now we are prepared to assert that if at the time the decision respecting the construction of the gas-lamps was arrived at, the debaters of the Deliberative Assembly had been selected from the members of the various *Ku*, whatever that Assembly might have decided upon, whether gas, railroads, telegraphs, or anything else, after such decision no such discussion and difficulties as above mentioned would have been raised, and this assertion we will endorse if necessary by fixing on seals to it in writing. If this be not an evil in the transaction of business which is the result of the non-existence of *Fu* and *Ku* Assemblies, what is it?

We are aware of many other evils which are caused in this way, but we should fill up too must space were we to mention them all. We will therefore cut the matter short. With regard to the establishment of *Fu* and *Ku* Assemblies in this our Tôkiô, a consideration of this one evil is sufficient to enable us to form a still clearer comprehension of the great importance of this measure. How much clearer then is it, that the advantages accruing from the establishment of *Fu* and *Ku* Assemblies, extending as they do to matters of all kinds—do not stop at this one single point which we have named. However—what happiness for us!—there are persons who are of the same mind as ourselves,—and a petition for the establishment of *Fu* Assemblies has been presented, as stated above.

Our secret opinion is that the Home Department is just now very busy, and that the various officials belonging to it work industriously in the discharge of their duties, rising early in the morning. Therefore can it be that they have not had leisure to decide for or against the petition in question? It must be so,—but how can it be so? It being the gracious intention of the Emperor by the establishment of Assemblies of *Fu*, *Ken*, *Ku*, *Machi* and *Mura* gradually to prepare the way for the establishment of an *Assembly of the country—this is an important

* It does not appear to us that the majority on this question need greatly grieve that the writer of this article is not of their opinion.—[Ed. J. W. M.]

* Parliament.

matter of business in the country. With regard to the advantage accruing from the establishment of a *Fu* Assembly in our Tôkiô, this is a consequence which directly affects the several thousands of the inhabitants of the *Fu*. How then can it be regarded as a trivial matter? It must be admitted that however busy the officials or the heads of the Government may be, they must lose no time in permitting the establishment of a *Fu* Assembly, a measure full of advantage to the people of this *Fu*, an important matter of business to the country, and in accordance with the gracious intentions of the Emperor. We are firmly persuaded and do not doubt for a moment that the required permission will be granted very shortly.

(Signed) YASUKAWA SETSUAN.
Resident in Kotohira-machi.

THE ASSEMBLY OF NOBLES.

There is an institution in Tokio called the *Kadzoku Kuaikuan* (Assembly of the Nobles), but we cannot understand the motive of the *kadzoku* in forming it. The members of the Assembly, unlike ourselves, are honourable *kadzoku*, but as it had no connection with the legislative or executive departments we looked upon it as a private club of the *kadzoku*, and imagined that whether it prospered or decayed, no great attention need be paid it, and that it possessed no claims on public interest. The institution was opened on the 27th July 1874, and it immediately attempted to enter into relations with the administration, and on the 17th August of the same year it addressed a memorial to the three *Daijin* (First Ministers) published in our issue No. 778, concerning our complications with China and Formosa. Thinking this very strange we published in the same issue a protest to the effect that it was not within the rights of the *kadzoku* to meddle with the administration. But the *Daijin* called the *kadzoku* to them and showed them all the documents connected with the above complication, and this made us suspect a connection between the Assembly and the administration.

Last June the meeting of the *Chikuhokuan Kuaigi* took place at Asakusa, Tokio, but owing to the alleged poverty of the accommodation, the Press was excluded. But the prayer contained in the memorial of the *kadzoku* was granted, and place was set apart for the members of the *Kuaikuan*. This proceeding implies that is is recognized by the Government, and that the members of it claim to have some connection with the administration. But the constitutionality of this is extremely questionable when we look into the matter. At first it appeared to be a private club; then it began to take part in public business; while our misgivings have since been greatly increased by the following:—

(Letter to Sanjio, Prime Minister.)

Since you have asked what means the *Kadzoku Kuaikuan* should adopt for the furtherance of its purposes, we have given serious consideration to the question. The institution was formed in accordanee with the Imperial decree of 1871 all the *kadzoku* are members of it, although some of them take an active part in it, while others do not. But as it is in the nature of a private institution, no compulsion can be exercised towards any of the members (to attend its meetings). Though their are men of purpose among the members, it has yielded no results. In order to do this the aid of the Government is required, and our object in forming the institution was to discharge more perfectly our duties towards the Government and the people, and although the three *Daijin* should join us, we should not reject their counsels.* If this idea were acceded to, and the *kadzoku* were all united, many ways would present themselves by which the efficiency of the institution would be promoted.

To His Excellency Sanjio
&c., &c,. &c.

(Signed by seven *Kadzoku*.

(Reply of the Prime Ministers.)

Your letter of the 2nd inst. states that the purpose of your Assembly is to enable you to discharge more efficiently your duties toward the Government and the people; that on this account, you desire the countenance of the three *Daijin*; and that should this be granted it would tend to unite the *kadzoku* and promote the efficiency of the Assembly.

We hold office as the three leading Ministers, but are of the same rank as yourselves, and belong, as you do, to the Assembly of *kadzoku*. We therefore are far from regarding the progress of the Assembly with indifference. We have no wish to act contrary to the general direction of your resolutions, or to refrain from attending your meetings; but indisposition at one time and great stress of business at another have prevented our doing so, and may continue to prevent us, though this must not be held to imply any indifference on our part. We must request therefore that you will wait until more auspicious circumstances present themselves. Meanwhile we send to you Yanagiwara Gikuan (member of the *Genroin*) to act on our behalf, trusting that his counsels will tend to promote the prosperity of the Assembly. One year has now passed since it was instituted, and its regulations were to have been reformed last August. But we hear that this has not yet been done. We believe it to be necessary to lay the foundations of the institution anew and upon a firmer basis; to abandon the discussion of matters of smaller import; and to lay aside the question of regulations, at least for the present, so that more important questions may have a due share of consideration. In the laying afresh of these foundations, Yanagiwara will assist on our behalf, and this may tend further to ensure the success of the institution.

These are our ideas, and we request your consideration of them.

(Signed by the three *Daijin*.)

September 15, 1875.

When we first glanced at these letters we were greatly astonished, and could not understand what they really meant. If we look at the letter of the *kadzoku* we are led to infer that the institution in purely of a private nature; but when they say that their object is to do their duty towards the Government and the people, what do they mean? Looking at the matter from the stand-point of the *heimin*, we can see no special duty which the *kadzoku* have to perform either for the one or the other. Do they mean that they have some indirect duties? If so, the idea is excellent. But then, surely, it is very wrong to seek the aid of the three *Daijin* who are officials and members of the administration, and the direction of a private Assembly certainly does not lie within the scope of their duties. But the entreaty of the *kadzuoku* to them to join the Assembly is addressed to them not as *kadzuoku* but as *Daijin*, and the fact that they say that they cannot do any good without the aid of the Government serves to confirm this view. If we therefore put the communication of *kadzuoku* into a few words, it means that the *Kadzoku Kuaikuan* ought not to remain a private institution, but that in order to make it a public one the three *Daijin* are required to direct it. Thus the motive of performing indirect duties disappears, and a direct participation in the executive government comes out. But if this is so, our misgivings are all the greater. The communication of the *kadzoku* was only a private letter, but that of the *Daijin* was a public document, and stated, that, although prime ministers, they had no objection to attend the meetings of the assembly, and only deferred doing so on account of indisposition and a temporary press of business. It would be impossible to say that Yanagiwara actually replabes the three *Daijin*, but we may say that a *Gikuan* who is a member of the *Genroin* has become the deputy of these ministers. Those, therefore, who examine these letters will probably come to the conclusion that the leading ministers, regarding the institution as one of a public nature, sent a *Gikuan* to represent them there, and thus gave the aid of the Government to the institution. Was it the purpose of the institution from the first to connect itself with the Government? and now that it has the countenance of the three leading ministers, does it intend to confine itself to indirect duties or to assume

* A deferential form of invitation to the *Daijin* to take an active part in the Assembly. Probably the correct shade of the original is missed in our translation.—[ED. *J. M. W.*]

direct duties in connection with the administration? If the latter is the case what difference is there between it and the House of Lords in England? And if the people say that the formation of a House of Lords is contemplated, in what sense are they wrong or is their view a mistaken one? We do not intend to discuss here whether a House of Lords like that of England is or is not a good thing for the country. This we must reserve for another opportunity. Our fear is that when the *shidzoku*, who are much engaged in political discussion, see that the *kadzoku* are forming an assembly, they will also desire to do the same thing, and to get the assistance of the Government and the countenance of three *Sanghi* to enable *them* to do their duties to the State. The Government cannot do the one without doing the other, and then we should have a House of Assembly for the nobles and one for the gentry, both of them linked on to the administration. We cannot divine whether such proceedings would conduce to the welfare and tranquillity of the country. Such ignorant persons as ourselves cannot fathom the exact intentions of the *kadzoku* or of the three *Daijin*. Our misgivings may be groundless; but we think that when people read these letters doubts will arise in their minds, and we trust that those who have any real acquaintance with the matter will give us a minute explanation of it.

The Pensions of the *Samurai*.
(Hochi Shimbun.)

I have of late very frequently come across discussions in the newspapers about the *shidzoku* and their pensions, and, being myself interested in the question, I desire to explain my views, and request that you will insert this in your next issue. It would be idle, of course, for me to decide whether the pensions of the *shidzoku* should be abolished or continued. But what necessity is there for continuing them when there are no good grounds for doing so? The *shidzoku* are of a higher grade than the *heimin*, and their conduct ought also to be better. There is no reason why the *shidzoku* should consume the hard-earned money of the people and thus be maintained free from all anxiety. Are they not ashamed of being so maintained? And, if not, why are they not so? It is because our civilization has not yet arrived at a point at which they would necessarily feel this shame. They only think of past times, and, being so habituated to feudal ideas, they know nothing of the duties they really owe to society. Should they become truly civilized, they will not wait until the Government discontinues their pensions, but would at once begin to earn their own living:—they would throw up their pensions and cease to be dependents on the Government. It cannot indeed be said that there are none among them who have begun some sort of business and are making their own living; but why do they not return their pensions to the Government? Why do they still lay themselves open to the charge that they are mere dependents on the Government—the consumers of the hard-earnds money of the farmers? It is because they have no feeling of shame, and what is the cause of this? It is because they are under the influence of ancient customs and do not see that such disgrace is disgrace. This should be reformed by the *shidzoku* who are now in the higher ranks of the Government. The views of many of these men are greatly advanced, and by the industry of the officials the whole business of the administration is conducted. As rewards for this they receeive salaries, most of them, however, being such as to allow of the officials supporting their families and having something over when this is done. But if they can easily support their families, they could as easily give up their pensions. These people may say that the general current of opinion is against me and this cannot be done. But this is so because they have neither shame nor patriotism, and, what one says, another will repeat. If the higher officials, however, would set an example in this direction, I am sure many of the lower *shidzoku* would follow it.

If we look into the doings of the higher officials, we see them building large houses and country-seats, laying out fine gardens, or purchasing the *yashikis* or lands of the old daimios so as to make their future living certain. I suppose they do this so that when no longer dependents of the Government, they may not be without the means of support. But if they are merely doing it for their own comfort there is not a word which can be said against the *shidzoku*. I have lately heard that some of the officials have gone into business, but, as this was prohibited by a special notification, I do not believe it. Yet there must be some truth where there are a thousand rumours, and I presume it is true to a certain extent, though it is possible that they have done this with the views of restoring their pensions to the Government. If the officials act in this manner the *shidzoku* can no longer remain unashamed. They will first lay firm foundations for their fortunes, and then return their pensions to the Government so that they may no longer be dependents. But I have not yet heard of any official who has given up his pension, and all hang back because the few do so. I entreat the officials therefore to lead the way by abandoning their pensions, so that no more of the labour of the poorer classes shall be used for vain purposes.

Japan—an unflattering comparison.
(Choya Shimbun.)

Of course we all love our native country, but at the same time we must not forget that it is among the poor countries of the world. When I speak in this manner the outcry is sure to be, "You ignorant creature, what nonsense you are talking! Our Japan has a fine climate and the soil is rich, the production of grain is therefore abundant, and there is propably no country which can be compared with ours, which was called by the ancients the country of abundant grain. In the mountains there are memberless mines, while the seas and rivers abound with fish. It is therefore a country truly favoured by nature, and we think that were arts and manufactures to flourish, the wealth of Europe and America would not compare with that of Japan. Why, then, do you speak in this manner?"

What these people want for Japan is just what I wish, and as I was born, have lived, and intend to lay my bones, in this country, I wish with all my heart to be proud of its wealth; but its present condition really does not permit of the adjective 'rich' being applied to it. It is true that Japan is in the best of the five zones, and the climate is temperate; but it is not the only country in that position, and the fact that we have neither excessive heat nor cold only proves that the country is not very extensive, and it is by mere good luck that we are not either in the torrid or frigid zone. The richness of our soil, in comparison with Java or Siam, where rice grows without cultivation, is not worthy of mention; all countries which possess rivers and seas are equally well supplied with fish, while our mines compare but poorly with those of Mexico and Australia. The country has existed and can exist without foreign intercourse, therefore it is not unnatural that some people should say that it the finest and richest in the world, but now that we have begun such intercourse it is very clear that Japan is a poor country. When we come to look at the necessities of mankind, food, raiment and habitations, we arrive at the following conclusions. If we walk along a street we meet with many more people ill than well clad; and the majority of them only wear clothes in the summer to avoid being fined. Of course this is better than going about naked, but this is a poor reflection to make to Europeans and Americans. As regards food, some think that there is nothing better than rice, but here even, many of our people live almost entirely on barley. Of course in foreign lands nourishment too differs according to wealth, but generally speaking their food is better than ours. When these people look at Mitsui's building which is three stories high, they are astonished; but the houses in foreign countries are often seven and eight stories high. Ginza Street in Tokei is supposed to be the finest in Japan, but it would be considered a more back street in Europe and America. All this will show the difference between the food, clothing and habitations of foreign countries and those of Japan. Leaving now this part of the question, we will try to explain how it is that we are poor from another side of the question. The metals of Sado and other parts are imported and coined; but they all go away again out of the country, and thus money is scarce, the arts and manufactures do not flourish and trade

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

is dull, so that many private persons and public companies have become insolvent. This proves clearly enough that we are poorer than Europe or America.

Such are the facts, and if people start with the idea that Japan is a rich country, it will become poorer and poorer. I therefore hope they will bear in mind that it is a poor country and become more economical and try to promote arts and manufactures. Then we may indeed be on the high road to become rich.

Forgery and Adulteration.

(Akebono Shimbun.)

The negligence of the Government in not examining into the articles which are bought and sold in the market has been of great injury to the people and the origin of extensive forgeries in this country. Some things are so perfectly imitated that they are hardly distinguishable from the genuine article, and these are the work of merchants and tradesmen who hope to make money by them. These forgeries not only deceive the ignorant and the country people, but the upright merchant loses his reputation by buying and selling them again without knowing that they are such, and thus trade is injured which is deplorable indeed. For example, the beer sold in the foreign goods' shops and the street stands, bears the trade mark of the 'hand' or the 'red trieangle,' and externally it appears to be of foreign manufacture, coming from London. Few but those who deal in wines can distinguish the spurious from genuine articles, and many are deceived into thinking that they actually came from abroad. Thus the genuine article is lowered in value and is suspected of being a forgery. Lemonade is now an article of necessity in the hot weather and is a very pleasant drink during the summer heats. But those who have this year purchased what purports to be lemonade have often been seized with vomiting and their digestion has subsequently been seriously disordered, and when we enquire into the causes of this we find it has arisen from the purchase of the spurious article. Alum and other chemical preparations have been used to imitate the tartaric acid, and by mixing them all together something is made which goes by the name of lemonade. But such lemonade brings no benefit; on the contrary, indeed, it brings an enormous amount of disorder into the system. These are not by any means all the forged imitations we have heard of. There are wholesale adulterations going on in drugs, and it gives merchants a great deal of trouble to distinguish between the sound and the false, and, as we have stated, these forgeries are committed for the sake of the present gain they bring. But, at times, they not only bring trouble but injury on merchants. We cannot regard those who forge and those who knowingly sell spurious imitations as guiltless of crime, but there is no article in our code which prohibits such acts, our Government pays no attention to them, and we fail to understand why this is so. Trade marks are of great importance as they constitute the recommendation of certain articles. We trust that our Government will make laws for prohibiting people from manufacturing and dealing in these spurious articles and enforce them strictly, so that men may be punished for their violation as the newspapers themselves have been when transgressing the laws. Thus those who carry on their business in a straight-forward manner will be protected, and we shall not only get rid of the forgeries of wines, drugs and the like, but we can lay hands on those who sell brass pipes to their countrymen as silver ones at the stalls at night.*

The Necessity for Increased Industry.

(Akebono Shimbun.)

Men must earn their living conformably with the nature of the place in which they dwell. Thus, those who live on poor land become manufacturers; on rich, agriculturists; near the sea or lakes, fishermen and salt-makers; on the mountains or in forests, hunters. This is in accordance with laws of nature, and men take the shortest roads to earn a subsistence for themselves. Now the climate of this country is mild and its soil rich, therefore agriculture is our main industry. The greater part of our population handle the plough and the hoe, and, taking the general character of our farmers, we may say that, unlike the merchants and the tradesmen, they are very industrious. But still, they cannot do one quarter the work foreigners can. It is said that when the English first emigrated to America, the implements they used were about the same as those now seen among ourselves. But a man and his wife would cultivate twenty acres, and when they had the advantage of machinery they cultivated forty acres, while in Japan a man and his wife can only manage about an acre and a half, and the reason why our farmers, although industrious, cannot do what foreigners do is because they have not the same perseverance and tenacity of purpose. Moreover, there are many men who do nothing. They live idly in the country, setting the farmers a bad example, which they in their turn are not slow to follow. Thus theatres and strolling dancers may be seen in the interior in places where people have never hitherto dreamed of them, and this tends to diminish the industry of the people. The mountains are filled with an abundance of treasure and the soil is richly covered with verdure which can be converted into meadows. But there are few who attempt to work the mines or breed cattle in order to help themselves and advance the country. Look at the lands lying waste in Oshiu and Ushiu, all of which might be fertilized and made great use of; but the people in the neighbourhood seem to care little about them, and leave them to be haunted by hares and deer. In none of the *Kens* do the people try to do all that might be done to the lands, and only make such exertions as are necessary to gain an immediate object. They think that if they can pay their expenses and maintain their families, the height of human happiness has been reached, and all that can be said for them is that they earn their living without being dependent on the Government. They merely pick up what lies under their hands, so to speak, and this is hardly the conduct of those who have much love either for themselves or their homes.

They are, indeed, better than the *Kadzoku* and *Shidzoku* who live without working at all, but they ought to make, or try to make, themselves equal to foreigners, because if they do not the balance between our exports and imports is disturbed, and this is traceable to the want of a spirit of perseverance. Oh! my thirty-five millions of brethren, every thing has a begining and an ending, an origin and result. Persevere therefore and labour earnestly, and this will bring happiness to your homes and advantage to the nation.

Army or Navy?

The neccessity for an army and a navy to a country is like that for two wheels to a cart. Were there only an army and a navy there would be some difficulty in protecting a country, but if it wishes to see itself properly protected it must have both. The proportions of the army and navy must be regulated according to the geographical position of the country and its foreign intercourse. That England posseses a comparatively small army and a great navy is due to the fact that it is an island, and that it has many colonies in all parts of the world. In such countries as France, Russia, Prussia and Austria armies amounting to a million of men are kept in readiness, and this is done because their boundaries are contiguous, and armies are required to prevent the invasion of each others' territories. The United States possess a very extensive country, and why does its army only amount to a few thousand men? Because it is very distant from the other western Powers, and there is no country in its neighbourhood which it has any reason to fear. Thus we can understand that civilized countries regulate the proportion of their armies and navies according to their position. Our country, like England, consists of a number of islands, and which do we most require for its defence, an army or a navy? I will plainly reply that, in the case of war with any country, we could not protect it without a navy, and if we regard it in relation to other countries, there is powerful Russia on the north, only divided from us by a strip of water. Without a navy we cannot curb its ambitious spirit and hinder it from advancing southwards. On the west we have vast

* It is impossible to doubt that the vigour of this writer is connected with the little incident disclosed in the last sentence. [Ed. J. W. M.]

China. Nothing is to be apprehended from her just now, but it seems as if she were about to awake from her long and obstinate dream of self-conceit, and what would be the power of that country if wealthy and enlightened? We must look well to the future and be on our guard before hand.

To protect the islands, Loochoo and others, a navy is necessary, and it is known already without my saying so that our navy consists of about ten vessels of war, some of which could hardly be used for fighting. Is not this rather a dangerous position for us to remain in? The allowance to the War Department ought to be reduced yearly by 100,000 *yen* and these applied to the Navy Department, and if there are other appropriations to other departments exceeding their necessities, the surplus should be disposed of in the same direction, and orders should be the yearly sent to England or elsewhere for new ships, so that when troubles come we are not obliged to buy old vessels at high prices.

KATO.

REPLY.

(Hochi Shimbun.)

Mr. Kato has stated in the *Choya Shimbun* that an army and navy are things of great importance to a country, that 100,000 *yen* of the annual allowance of the War Department should be handed over to the Navy Department, and that new ships should be purchased yearly. Mr. Kato writes in a manner which convinces me that he is an intelligent man, but should his opinions reach as far as the Corea I fear they might do us some injury, though this cannot now be helped as they have been published by the Press. It may be presumed that our Government knew all this before Mr. Kato, as it has already reduced the allowance to the War Department by 1,050,000 *yen*, and granted 400,000 *yen* additional to the Naval Department. I know not whether this will satisfy Mr. Kato, but it been done by the Government which makes our laws and affords us protection, and I do not see that we have thus cause to speak against it. The expenditure for war purposes must be proportioned to the circumstances of the time, and it is obvious that if Corea were to desire such a navy as that of England, or Turkey such an army as that of Russia, these would be mere follies, and when we place ourselves in a state of preparation, it is not for the purpose of conquering a place like Formosa, but to resist the force of England, Prussia or Russia. The annual taxes of England are equal to 344,739,415 *yen*, while ours are 88,867,635 *yen*, making a difference of 255,871,169 *yen*, and of course we should like to have the same amount of income, but this is as yet impossible. Poverty or wealth bear a very direct relation to the degree of knowledge possessed by a people. But those who lend their minds to war affairs and avert them from the acquisition of knowledge cannot be called the best part of our population. I have heard that the Mombusho, which is the fountain head of this knowledge in this country, has had its annual allowance reduced by 300,000 *yen*, but this was done by the Government to preserve the equilibrium between it and other departments. But if a country like Corea should do as we have done, cut down the allowance to its Mombusho and increase that of its Naval Department, so that it might have 280 vessels of war, as England has, where would the country be long before such schemes were accomplished? If we were still in the state of barbarism we were three or four hundred years ago, all the money of the nation would be spent for war purposes. But in our present more advanced condition of civilization the whole strength of the nation depends solely on our education and the progress of our knowledge. But if a statesman were now to urge that the larger provision for war must be made, and ranked this as of greater moment then the improvement of our judicial system or the education of the people, he would exhaust the treasury, the taxes of a whole year would not suffice for the expense he would incur, and after all, we could not resist a power like that of England. What is necessary for our country now is power in the people, and this will come from the spread of that knowledge which really is power, and not from making provisions against war.

SUMMARY OF FOREIGN TRADE FOR THE SIX MONTHS ENDED JUNE 30TH, 1875.

The Bureau of Revenue have published a "Return of the Foreign Commerce and Trade of the Empire of Japan" for the half year above-named from which the annexed tables have been condensed.

They exhibit the trade of this period as amounting in Imports, to 15,046,008 Gold *yen*, and in Exports to 6,969,313 Gold *yen*. The Gold *yen* at the present date may be accepted as the equivalent of the Mexican dollar.

This inequality between the Import and Export Trade is not to be looked for in the succeeding six months; as the season for Tea and Silk, which only commences in summer, will doubtless give much greater activity to the Export Trade in the latter half of the year.

This being the first occasion on which half-yearly Returns have been published by the Japanese Government, no comparison can be drawn between the six months now reported on and the corresponding period of any preceding year. In 1874, the Imports amounted to $24,223,629 and the Exports to $20,001,637, the total for the whole year being $44,225,266. The present Returns give $22,015,321 *yen* as the total of Imports and Exports for the first six months of 1875, and thus the aggregate of the trade shows, so far, no diminution on that of 1874.

The Imports on Government account, which are included in the total given above, amounted to 1,779,821 *yen* and consisted chiefly of the following items.

Arms and Ammunition.....	*yen*	970,000
Blankets, Cloth, &c.	„	220,000
Machinery	„	295,000
Iron and Metals.....	„	80,000
	yen	1,565,000

The Return of articles exported for ships' use shows that Coal has been shipped under this head to the amount of 452,811 *yen*, and this serves to explain why the export of this important article in the general Exports Return is confined to the value of 94,750 *yen*. It will thus be seen that the Total Export amounted to 547,561 *yen*, or very nearly the quantity that was exported both for ships' use and for foreign export in the whole of 1874, the value of which amounted to 564,420 *yen*. It may be concluded, therefore, that the export of Coal for the present year will exhibit a material increase on that of 1874.

The Treasure Return shows that the large flow of coin from the country which was remarked on in the Summary of Foreign Trade for 1874, continues in the present year, Treasure to the amount of 9,455,274 Gold *yen* having been exported, while the value of the Imported Treasure was only 86,544 Gold *yen*. Of the Treasure exported, six millions and a half consisted of new Japanese gold and silver coin, and two millions and a quarter of old Japanese gold and silver coin, all being equally exported as Bullion. This shipment of Treasure in the first six months of 1875 appears to have been needed in order to meet the excess of imports over exports which naturally marks the foreign trade with Japan during the first half of the year.

The Tonnage Return includes 111,222 tons of Japanese shipping, and thus exhibits a larger total for the six months than would otherwise have appeared. If Japanese tonnage should be inserted in a Return of Foreign shipping, it is difficult to explain why the number of Japanese steamers entering Yokahama during the six months should be said to be only five of 5,505 Tons, as entries of native vessels to that number occur almost every week.

The "Imports and Exports by Japanese merchants" are marked in the Returns by an asterisk, but the value of all the items thus distinguished amounts only in Imports to 12,515 *yen* and in Exports to 25,717 *yen*.

A considerable portion of the Returns is devoted to an endeavour to distinguish the amount of the Trade of the different nationalities by shewing the destination of Exports and the countries from which Imports were received. The details thus supplied possess some interest, but the result cannot be accepted as a correct representation of the commercial interests of the various nations trading to Japan.

Thus nearly all the continental trade is shewn in the

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

statement to belong to France ; a large proportion of the imports from China are of European origin ; while three-fourths of those from the British Colonies consist of sugar which, though shipped from Hongkong, is of course of China growth.

Of the total Import and Export Trade of 21,560,460 Gold *yen*, not less than 20,754,700 *yen* is entered as belonging to four nations, namely, France, the United States of America, China, Great Britain and her Colonies, thus leaving only 805,760 *yen* for distribution among the twelve remaining nations and "other countries" not enumerated.

The Imports from Great Britain (7,127,226 *yen*) consist of Manufactures, Machinery, Metals, Arms, &c., to the amount of upwards of six million *yen*, the remaining million consisting of Medicines, provisions, coal, stores, &c., &c.

The Imports from the British Colonies (1,609,721 *yen*) consist of sugar to the extent of million *yen* and home manufactures to the extent of upwards of a quarter of a million.

The Imports from China (2,744,568 *yen*) consist of sugar to the value of nearly a million *yen*, Raw cotton to the extent of 284,295 *yen*, foreign manufactures, chiefly British, to the amount of upwards of 700,000 *yen* vealing three quarters of a million for the numerous miscellaneous articles of Chinese origin, manufactured and raw, which are in demand among the Japanese.

The Imports from the United States (695,76 *yen*) consist chiefly of kerosene oil, provisions, leather, arms and ammunitions, clocks, &c.

One half of the Imports represented to come from France (2,249,297 *yen*) consist of *Mousselines de laine*. Other woollen and cotton manufacturers appear to the extent of 700,000 *yen*, leaving 450,000 *yen* for articles of a miscellaneous character.

On the side of Exports, those of Great Britain are entered as 878,000 *yen* only. Of this amount silk appears to the value of 565,339 *yen*, some of the shipments *viâ* Marseilles on British account having probably been inserted under the head of French trade. The value of Tobacco appears as 117,526 *yen*, that of Tea at only 16,925 *yen*.

Half of the exports to British Colonies (548,052 *yen*) consists of Silk and Copper, the former being evidently intended for England.

The Exports to China (1,311,723 *yen*) consist chiefly of Tea, wax, copper, camphor, (intended probably for European consumption) ginseng, coal, dried fish, seaweed, isinglass, and other marine products which are largely used by the Chinese.

Tea to the value of 2,256,185 *yen* formed nearly the whole of the Exports to the United States (2,354,039) while those to France, or the Continant, (1,236,288 *yen*) consisted almost wholly of Silk to the value of 1,174,884 *yen*. It is needless to repeat that in the latter half of the year the report of Tea and Silk will be largely in advance of the above amounts.

H. B. M.'s Legation.
Sept. 30, 1875.

扶桑耳袋
FU SO MIMI BUKURO.
A BUDGET OF JAPANESE NOTES.

READINGS OF CHINESE.

There is an approach to similarity in some of the styles of reading and the pedantic language used by the natives.

In reading a Japanese book or letter aloud, for the information of another who is not at the time looking at the characters on the page, it is necessary to translate into a near approach to colloquial, and it has been found impossible to discover the existence of established and concise rules as to when the *kan*, the *go*, the *yomi* or *zoku* should be used. This mixed style is commonly called *Jiu boku* or *yu to yomi*, these two words representing this style of mixed reading.

To render the explanation clearer the various styles are given in this form, viz.:—

Kan Gaku (or *Bun*)
Chinese classical style.

Choku doku, *Sugu Yomi*, *Bo Yomi* } Straight reading. Read either in *Kan on* or *Go on*.

Kairi Ten, *Kairi Yomi* } Skipping and returning, read in *Kan on*, *Go on*, and Yomi or rather translated into a near approach to colloquial.

Wa Kan go Japanese-Chinese *gaku bun* } style { *Kana majiri* mixture of Chinese characters and kana. } Mens style—*Kan on*, *go on kun*.

Womens style kan, go and kun { Yomi, Yoku, Wan-io.

Wa Japanese { Goku, Bom } style } Chinese letters, used partly ideographically and also as syllables, as on the Man yo kana, &c.

Hiragana—syllables only.
Wa ka—ideographically and as syllables as in poetry, &c,
Jiku ji—combinations of characters equivalent to compound words.
Wa go gaku—Japanese language (not used in books or correspondence.)
Wa mio—names of Japanese origin.
Wa kun (or yomi)—verbs &c., of Japanese origin.
Tsu yo—Colloqui containing *Koye*, both *kan* and *go on*, also *kun*, yomi, yoku, wa mio, &c.
Ko go—ancient language.
Jiku go—compound words.

The reading of the Chinese characters used by the Japanese has hitherto given rise to much discussion, and has been referred to in these notes already. As it is necessary for the full and clear understanding of much that will appear hereafter, a short explanation is now given as to the different readings of the Chinese.

The Chinese character is used in three ways by the Japanese.

Ko-bô-dai-shi who died about A.D. 835, chose 48 of the book or square characters, and abbreviating some of them formed the *Katagana I. Ro. Ha.* The Pali syllabary seems to have given him his basis, and the characters were chosen for their sound according to the *go on* as hereafter explained.

The *Hiragana* consists of current forms of Chinese characters, some of them simplified, that have the same reading or sound in the *go on* as the 41 syllables, hence *hiragana* characters representing the same syllable.

These, the *Katagana* and *Hiragana*, are not ideographic, simple syllables excepting some few arbitrarily chosen to be affixes to the Chinese character, denoting the difference between adjective or adverb, or in the case of verbs, of what we call the moods and tenses &c. Also to denote the case.

The Chinese characters are read by the *koye*,[1] or Chinese reading, also by the *yomi*[2] or Japanese reading.

Of the *koye*[1] or *on*[3] there are two sounds or readings, the *kan on*[4] which is ancient Chinese reading, and the *go on*[5] or modern reading used by the Buddhist priesthood and by them introduced to Japan. Of the *yomi*[2] there are two methods. The *wa mio*[6] or *wa kun*[7] or Japanese name, and *zoku no yomi*.[8] This character *yomi*[2] also reads *kun*.[9]

Either *on*[3] or *koyé* are used interchangeably to mean the Chinese reading, as are also *kun*[9] or *yomi*[2] for the Japanese.

For example the characters for the above words read thus.

	Koye or On.		*Yomi or Kun.*	
	Kan on[4]	*Go on.*[5]	*Wa mio.*[6] *or kun.*[7]	*Zoku yomi*[8]
1	*Sei*	*Jo*	*Koye*[1] ...	*Koye.* [*or kun*[9]
3	*In*	*On*	*Oto* ...	*Oto* also *Hiliki.*

1	2	3	4	5
聲	訓	音	漢音	呉音
5	6	7	8	
和名	和訓	谷訓	訓	

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

4	*Kan* ...	*Kan* ...	*Kara* ...	*Kara.*
5	*Go*	*Go*	*Kure* ...	*Kure.*
9	*Kin*	*Kun* ...	*Yomi*[2] ...	*Kotoba.*
6	*Mei*	*Mio*	*Na* ...	*Na.*

Properly speaking, a sentence written in Chinese characters should be read from beginning to end in the same manner, but custom has allowed this rule to become almost totally unobserved, especially when the piece is rendered into Japanese *yomi*, when the characters are not read in the order they are written, but by skipping some and then returning (*kairi yomi*) as the difference between the Chinese and Japanese syntax requires, more especially as the verb stands at the end of the sentence in Japanese, which it does not in Chinese.

The *Man yo shiu, Kojiki, Kujiki,* and other ancient books are read by the *kun* (*yomi*).

The Chinese classics by the *Koye* (*on*) if read straight down (*choku doku* or *bo yomi*).

Issai kio, complete Buddhist prayers, and all connected with temples, religion &c., read in the *go on.*

The four tones (*shi sei*) *hio, jo, kio, niu* are also used according to the Chinese rules, but only in reading, not in the colloquial. The use of the tones will be explained hereafter when treating of classical literature.

Folk Lore.—Relationship.

The Chinese character for "man" is composed of two simple characters,[1] one under the other.[2] The upper one means "field," and the lower one "strength." Thus combined[3] strength in field work, a man's duties being properly out-door and agricultural labor.*

Another way of writing in Chinese, to convey the idea of a person of the masculine gender, is by using two characters.†

Formerly in China 8 *sun* (tenths of a foot) made a *shaku* (a foot) and ten *shaku* make a *jo*. It used to be said, in compliment, "you are as tall as one *jo*"‡ and *fu* means "manly" (the latter character if used in allusion to females, strange to say has a polite signification.)

Male animals have as a prefix the character "*bo*" (Kan On) or O (yomi) birds *Fu* (Kan On) *O* or *asu* (yomi.) Therefore *O*, it appears, is generally the prefix that indicates the masculine gender.

The Chinese character for "woman" is *jo* (*kan go*) *ouna*, or commonly *onna* (*yomi*), also *me no ko*, and before marriage *mu su me* (*yomi*) unless when used in the meaning "daughter" but after marriage *fu* (*kan on*) or *tsuma* (*yomi*).

The feminine prefix for beasts is *hin* (*kan on*) or *me* (*yomi*) for birds *shi* (*kan on*) or *me* (*yomi*) thus the prefix denoting the feminine gender became *me.*

Old Chinese surgical and anatomical works describe most minutely the difference in the structure of the human frame between the sexes, the difference in the number of ribs &c., &c.

Hime (*yomi*) or *Ki* (Kanon) is a term properly only used in naming the daughter of a man of high position, it is occasionally used in a vulgar sense as "girl" would be *Okina* (*yomi*). *So* (*kan on*) which reads *Okina* (in *yomi*) *Jo* (*kan on*) which also is *Okina* or *yomi*, are used in speaking or writing of elderly people, with respect. *Ro* (*koye*) or *Toshi yori* (*yomi*) has the same signification and used to men over 42 years of age. This age is called *sho ro* (*koye*) beginning of old age.

In speaking of another's parent the term *Son O* (*koye*) *Tattoi Okina* (*yomi*) also *Son Ro* (*koye*) *Tattoi toshi yori* (*kun*) are proper expressions to use.

Children under fifteen, of both sexes, are called *Do* (*koye*) or *Warabe* (*kun*).

Men and women from twenty to thirty years of age are called *Jiyaku* (*koye*) *Yowashi* (*kun*) which means "not fully formed."

From thirty to fifty *So* (*on*) or *Sakari* (*yomi*) "full blown" (in one's prime).

From forty to fifty. *Kio (on) Tsuyoi (yomi)* fully formed and powerful.

From fifty to sixty. *Gai (on)* or *Osamaru (yomi)* "under control" one's passions fully governed.

From sixty to seventy. *Ki (on)* or *Otoroye (kun)* decline of life mental and physical power failing.

From seventy to eighty. *Mo (on) Wasureru (kun)* "forgetfulness" loss of memory.

From eighty to ninety. *Tetzu (on) Irokawaru (kun)*, the skin becomes of an iron color.

Ninety to one hundred. *Taihai (on) Samehada-(kun)* shark-skin like—the cuticle becomes rough.

Another term *Ki (on)* yellow colored.

One hundred and upwards *Ki-i (on) Motoyemodoru (kun)* going back. The teeth fall out and are replaced by others resembling those of young children.

Old persons over seventy and children under seven years of age were not liable to capital punishment even for the worst of crimes being considered irresponsible for their conduct.

Old women are termed *O (on)* or *Uba (kun)* also read *Onna (wamio).*

Children are termed *Do* or *doji (on) Warabe (yomi)* or *Warawa (wakun,* or *mio) Unaigo (wakun) Kodomo (zoku yomi),*

Shu Ten, the great robber killed by Raiko, (see legends,) had the term *Doji* applied to him because he let his hair grow like a child. *Do* may be translated playing at out-door games, *ji* or *shi*—a child.

The *Kanmuri* (head dress) was not worn by male children until the fifteenth year (fourteen by our mode of reckoning) and until then were called *Doji (koye)* or *Warabe (kun).*

Shu Ten Doji being mentioned, there is a cross-bar pattern commonly seen called *Do-ji-goshi* from Shu Ten Doji having used a peculiar, and similar pattern grating as an outer gate to his robbers' den.

Girls do not wear metal hair pins till after the thirteenth year, Japanese reckoning—and until then were called *Doniyo (koye) Warabe o mi na (kun)* also *Onna no ko (zoku yomi* or *kun)* cattle and deer before their horns or antlers grew called *Do giu (koye) Ko ushi (kun)* young cow *Doyo (koye) Kohitzuji (kun)* young sheep.

Male children were called by others than relatives, *Shisoku* (*kan on*) *Musko* (*yomi*).

Females *Soku-jo* (*kan on*) *Musume* (*yomi*).

The children of old parents were said in ancient times not to throw a shadow.

Once upon a time an old man of ninety years of age whose concubine, a young girl, gave birth to a son, felt some jealous doubts as to the child being his; but the child did not throw a shadow when placed in the bright morning sunlight, and there being no other old men in the neighbourhood, he made the child his heir. In later times some one who read of this tried if a child that was fathered on an old man of eighty threw a shadow. The child was placed alongside one of the same age, whose parents were both young, and as no difference was observed, a great dispute arose as to who was the father.

Old peoples' children are said to weigh less in proportion to their size than those of parents in their prime.

Japanese History mentions a birth of *seven* children at once.

A birth of three children, especially if boys, is most auspicious, and the Dairi and Shogun sent the family gifts of rice and money.

Ku yo-den a Chinese book says that of twins the first delivered is to be the *ji nan* (younger) and the one after delivered to be the *soriyau* (heir) but the Japanese Government in 1874 issued an edict reversing this, and the first born is to be the heir in future.

Grand children born in the family are called *son* (koye) or *Mago* (yomi) but the children of children married or adopted into or her families are *guai son* (outside grand children) Great grand children are called *So-son* (koye) *himago* or *hiko* (kun). Great-great-grand children are called *ya sha go* also *tsuru no mago (Zoku yomi).*

Their children are called *Rai son* (visiting children) and their children *Kon son* (distant relationship)—the children of their *jo son* (far off) and the 8th generation *Un ion*

* The student will find some account of this in a Chinese book called Biaku Ko Tsu (White Tiger Path) the character reads in the *Koye* (*Kan On*) "*Nan*" and in the *yomi* "Otoko."

† Which read in *Kan on Jo fu* and in the *yomi Musume.*

‡ In an old Medical book called *So Mon*, it is stated that "a man is eight feet high," but it appears that eight feet (Yatchi shaku) was only 6 4-10 feet. Japanese are on the average about 5 feet—in these degenerate days. Englishmen under five feet are called "small persons," those over six feet "great persons." Cash-bearers were called before the days of *jinrikisha* men, *roku shaku* (six-footers.)

UNIVERSITY OF CALIFORNIA

(cloudy relationship). Ti-i—a book containing a collection of the written character—states that the 9th generation is *ji son* (heard-of relation). It is rare to find it claimed or acknowledged.

Correspondence.

SERICULTURE IN JAPAN.

To the Editor of the "*Japan Weekly Mail.*"

Yokohama, October 7th, 1875.

Sir.—Will you kindly allow me some space in your valuable paper to point out an important error of fact in Messrs. Jaquemot's report on their recent tour in the Silk Districts.

Alluding in their conclusions to China Silk, Messrs. Jaquemot deliberately state that: "China produces only bivoltini cocoons."

As far as Tonking, Kwantung, Kwansi and other southern provinces are concerned, this is undisputably true. Not so, as regards Szechuen, Hupeh, Shantung, Chili and all other western and northern provinces, producing a sort of long-reeled yellow silk. There, bivoltini breeds are absolutely unknowm, the climate of that part of China being too dry and too cold to allow a second growth of mulberry leaves in time for a summer crop after the spring crop of cocoons is over.

As however, the above mentioned silks are known in the trade as "Canton" and "Szechuen," and as they form a comparatively unimportant portion of the total export of China, it may fairly be assumed that in alluding to "China silk" Messrs. Jaquemot meant that enormous quantity of white silk produced in the provinces of Chekiang and Kiangsu which are exported from Shanghae, and in fact monopolize this appellation.

Now what I have to say is: that out of a total export of 75 to 80.000 bales of such silks, the produce of Bivoltini cocoons never exceeds 10,000 bales. In the interior as well as in Shanghae I have heard the native dealers estimate under the best circumstances at from 6 to 7000 bales the produce of the second crop of bivoltini, whilst heavy rains and floods will [as occurred in 1868, and again during the present season] bring it down to 2,000 or 3,000 bales. As the rearing of the annual worms has to be carried on in spring simultaneously with the first crop of bivoltini, the latter, it will be easily understood, are rather neglected and sometimes cared for only for the take of the seed in view of the second or summer crop. Admitting however the yield of the first to be half that of the second crop of bivoltini cocoons, the total yearly out-turn in silk of both will amount at the utmost to 10,000 Bales.

If the climatic conditions which forbid drying and keeping cocoons in stock did not compel the Chinese peasant to reel his whole crop within a few weeks, and, if his reeling machine was not still more imperfect than the Japanese machine, the white annual cocoons of Chekiang and Kiangsu, I have no hesitation in saying, would yield a silk equal, if not superior to the best Japan ever exported in her palmiest days.

As further evidence of the nature and quality of those Chinese breeds, I may add that from 1857 to 1863 large quantities of seed were exported from Shanghae to Italy and France. They invariably produced annual cocoons, which in some instances yielded, for every nine kilos, one kilo of silk perfect in every respect.

It must be a matter of deep regret for all those interested in the welfare of this country that the Chinese annual breeds could never be thoroughly acclimatized in Europe, where they seldom yielded more than 15 kilos of cocoons per ounce (or card) of seed. Had it been otherwise, Japan would have been spared that severe drain on her resources by which she is now impoverished.

Mischievous however as it is, the export of Japan seed should not be offered as a scape-goat for all the grievances of the silk trade. To charge that export with a notable deterioration in seed, cocoons and silk of annual breeds is right. To make it responsible besides for an increase in the bivoltini crops is, I believe, going much too far.

In ascribing that increase to an alleged scarcity of annual seed, Messrs. Jaquemot apparently forgot that ever since 1869 the Government caused every seed-making district to contribute a certain percentage to the total yearly supply of 700 to 800,000 annual cards required for the consumption of this country, and prohibited their export; that, whether marked with a special stamp or not stamped at all, these cards, in spite of official prohibition, were invariably offered to the "Graineurs" at much lower rates than the cards of the same quality stamped for export; and that, twice during the last five years, in 1871 and 1874, the abundance of annual cards was such that hundreds of thousands were suffered to perish in Yokohama and Yedo, for sheer want of buyers in the country.

I am of opinion that the increase in the bivoltini crops has to be traced to the shrewdness and greediness which are the common characteristics of all peasantry. Favored by the vigorous vegetation of their mulberry trees, the Japanese peasant derives from a second crop a threefold advantage. He makes up for the annual cocoons consumed in making seed; he compensates the loss in yield arising from the degeneracy of the annual breeds; and on the whole he contrives to increase his production of silk. It is only natural that he should take advantage of the little discrimination made by foreign silk-inspectors between the produce of bivoltini, and that of annual cocoons,

Apologizing for the length of this letter.

I remain, Sir,

Your obedient servant,

H. P.

ENGINEERING COLLEGES.

To the Editor of the "*Japan Weekly Mail.*"

October 6th, 1175.

Sir,—I do not intend to say one word about this College; I only mean to give you an opportunity of showing "R.H.B." that the "*proof*" of his letter—as founded on an article in the "*Times*"—referring to Cooper's Hill College, was utterly without foundation and therefore his whole argument falls to the ground.

For this purpose I enclose an article from the *Spectator* of July 31st and another from the *Overland Mail* of July 30th showing plainly that the writer in the *Times* made a mistake in the article quoted by "R.H.B." which mistake Lord Salisbury, the Secretary for India, took the first opportunity of rectifying.

The *Overland Mail* also gives his Lordship's speech at Cooper's Hill, which you can read for yourself and see if it justifies the remarks of the "Times."

I also enclose you an article which appeared in the *Engineer* of July 30th which will give you the opinions of engineers generally with regard to that institution, that thus you may be in a position to compare their opinions with those held by "R.H.B."

Lastly, I send you an article from the *Engineer* of August 13th, which will show you what the Russians are doing in the way of Technical Education.

If you think these articles will interest your readers or enlighten "R.H.B," I hope you will make such extracts as you may see fit.

I am,

Very truly Yours,

HENRY DYER.

[We have selected the following extracts from those sent by Mr. Dyer. The former refers to the Engineering College at Moscow; the latter to the Cooper's Hill College.—[Ed. *J.W.M.*]

The whole course extends over a term of six years, part of which is passed in the lecture-room and part in the workshops. Should any student evince a decided incapacity for benefiting by the higher theoretical classes, he is removed into the workshops to learn a trade, and upon quitting them receives a certificate attesting the degree of competency to which he has attained. Those who pass successfully through the entire six years' probation receive a diploma of merit. It must not be supposed that no pecuniary results ensue from the labours of the students during the term of their practical instruction. On the contrary, a very considerable sum is annually added to the funds of the institution accruing from the execution of orders for work of various descriptions. In drawing attention to the means possessed by Russia for the technical and professional training of her people, we must include among them the Imperial Institution of Mines founded at St. Petersburgh more than a century ago by the Empress Catherine. Five years is the term of the whole course of study, of which three are devoted to general education, and two to especial branches and particular subjects. During the vacations the students make excursions of a geological and mineralogical character, pay visits of inspection to

Digitized by Google UNIVERSITY OF CALIFORNIA

workshops and manufactories, and carry out surveying operations both above and below ground. Detailed reports of these visits and surveys, accompanied by plans and drawings, are prepared for future examination. The especial course is divided into two sections, and the student must select for good one or the other before commencing it. The first section provides for the training of mining, and the second of metallurgical engineers. Before entering the institution the candidate must possess a qualifying certificate from a middle-class school, and also pass an examination to show that he has attained sufficient mathematical knowledge to hold his own with his brother alumni. At the final examination, to which under certain conditions outsiders—whether natives or foreigners—are admissible, a diploma of engineering is conferred upon the successful candidates.—*(Engineer.)*

It was evident, even before he had corrected it, that the *Times* had given an inaccurate report of Lord Salisbury's speech of Friday week at Cooper's Hill. The Secretary for India did not intimate that the young engineers who had left the College were in the habit of bullying the natives, for the simple reason that the first batch of students from Cooper's Hill have not yet been posted to Indian work, and have not, therefore, had time to display either their bad manners or their polish, or the idleness of which in India they are suspected.—*(Spectator.)*

U. S. CONSULAR COURT.

Before Gen VAN BUREN, U. S. Consul General;

And

F. R. WETMORE and C. DRAKE, assessors.

ITO HACHIBEI *vs.* WALSH, HALL & Co.

Monday, 4th October, 1875.

In this case, plaintiff claims a sum of $108,715.42, balance of account and interest connected with certain trading transactions he had had with defendants.

Defendants deny that they are indebted in the above amount, and claim that he (plaintiff) is indebted to them in the sums of $16,222.55, and $16,483.61, being balance of accounts between them and the plaintiff.

Mr. F. V. Dickins appeared as counsel for the plaintiff; Mr. G P. Ness for defendants.

Court met at 10 a.m.

Mr. Dickins called

Hachimoto Benzo, cautioned: I am a merchant. In 1871 my business was the same. I know the defendants very well. I know Mr. Irwin. While Mr. T. Walsh was here, I did not not know Irwin very well, but after Mr. T. Walsh returned to his own country, I became very intimate with Irwin. This was in 1871. I had transactions with defendants before the middle of 1871. I remember having been concerned in exchange transactions with defendants in the 7th month 4th year Meiji. The principals were Irwin and Ito Hachibei. Mr. Irwin proposed that the transactions should be entered into. In the 5th month 4th Meiji, I remember receiving from plaintiff certain bonds for money loaned by plaintiff to *daimio*. These bonds amounted to 100,035 yen, and were about 20 in number. They were placed in my hands to be deposited with defendants as partnership security. I took them to defendants and Iske being present I gave them to him, to give to Irwin. I asked him to look them over. The bonds were deposited with defendants before any transactions took place. The head of the firm, Mr T. Walsh, went home, and after that Irwin took complete charge of the business; then Irwin asked me what Ito's standing was, and I replied that Ito was good for anything like $100,000; that he had made some loans to *daimio*, and that his standing was first class. Then Irwin expressed a desire to enter into some profitable transactions, if any could be discovered, and I promised to mention it to Ito. Mr. Irwin then asked what sort of a guarantee deposit Ito could make. I replied that as Ito was a money lender, it would be inconvenient for him to deposit coin, but if bonds would do, Ito could deposit plenty of them, and I would see that it was all right. I saw Ito, and told him, and he said it would be a very good thing if business relations could be entered into with defendants. Ito also said it would be inconvenient to deposit coin, but if bonds would do, he could deposit any amount required. He asked me to see about the matter. After that, Ito came and said, "Here are some bonds which I am willing to deposit with defendants." They were to be deposited as a guarantee of the good faith of Ito in the transactions. No particular scheme was contemplated at that moment. There was no particular conversation. I merely gave Iske the bonds, and asked him to look them over, and give them to Irwin. The transactions were to be speculative in character. I heard that half of the securities deposited with defendants were afterwards exchanged for Government new bonds. There was no other reason in depositing the bonds with defendants than to guarantee Ito in the transactions. When I deposited them with defendants there was probably no other reason than what I have given. I know of no conversation other than that they were called for as a guarantee of Ito's good faith. I never knew or heard before this trial that defendants had deposited the securities with a bank. I was never asked by Irwin, or by anybody from defendants, that they might be allowed to deposit the securities for their own purposes. On or about the 2nd or 3rd of 7th month, I happened to call at Irwin's, and he told me that I happened to come at a very opportune moment, as the Mint was about to commence the coinage of *yen*, in consequence of which dollar transactions would be profitable. The rate of exchange was about 57 *momme*, and *yen* were somewhat depreciated. I was then requested by Irwin to ask Ito to enter into this speculation with defendants. I sent word to Ito at once about this. Zengiro and Ito came at once to my place, and then we sent to defendants' office. Mr. Irwin then repeated what he had told me about the Mint, and it was decided at once to enter into this transaction, and a partnership was immediately entered into between Ito and defendants. The terms were that the dollars were to be provided by defendants, and that Ito was to contribute a part of the funds. Ito was to put in 20,000 *rios*, and defendants were to supply the dollars. Mr. Irwin said, "Oh! we will go equal shares in the profits and losses;" but Ito replied, "As you furnish all the dollars, and I only a small sum, you should have a two-third share, and I a one-third one." It was decided that a record of the transactions should be kept in two books. We then returned. The two books were to be numbered 1 and 2, one of which defendants were to keep as a voucher of the transactions; Ito was to have the other. They were to contain only the sums of dollars received and the sums of niboos paid. Some payments to defendants were in niboos, and some in returned dollars. The exchange rate of the day would be told to Irwin the amount of dollars required would be received from him, and handed to Zenjiro, and the proceeds returned to defendants. These transactions are called *jiggy* (quick). There is a different style of transaction to this. The amount of a transaction would be decided upon at the *Shosha*, between a collector and a buyer. The time for the transaction to close would be made and a guarantee deposit made by the seller (of something like 300 *yen* for every 10,000,) as security for delivery. The seller receives from the purchaser a document stating the date and terms and amount of the deposit. On the day fixed the transaction is finished by the payment or receipt of the difference in exchange from the time the agreement was entered in to till the day of its close. During the time the last mentioned kind of transactions was going on Irwin was constantly kept posted about them. I do not know if Irwin ever objected to any of the time transactions that were entered into. The exchange transactions lasted from the 7th to the 10th month, but sometime transactions were incomplete. In some of the exchange transactions Nakamura Sobae was interested. It was after the 20th of the 9th month, during a temporary suspension of business between defendants and Ito, that Zengiro and I went to defendants' office. Mr. Irwin then projected an arrangement for Sobae and Ito to enter into partnership with defendants up to the end of the month. This was on the supposition that the market was cleaned of *niboos*. Were a cheque, under the circumstances, to be presented for exchange, handsome profit might be expected. If the cheque was met by *niboos*, the reverse would be the case. The transactions were to be short time ones, lasting from four to five days. Several time contracts were made, to be completed on the 30th of the month, in the full expectation that no *niboos* would be forthcoming; but when the 30th did come round, there were plenty of *niboos*, and the dollars were all "captured." The cheques received in the transactions were all on the Chartered Mercantile Bank, and amounted to $481,000, I think. The whole sum of $481,000 was handed back to defendants. I don't know the exact sum of dollars that was returned because there were not sufficient *niboos* forthcoming. I and Sobae received the $481,000 from defendants. It was taken to the *Shosha* by Rikichi and Murabayashi on our part, and Sobae and Rimbei on the other. It was entered in a new book for Ito and Sobae. I think only one book was used. Nakamura and Sobae jointly went to receive the money, and the accounts were not kept separate. There were probably two similar books, which would contain the seals of either party. Sobae had one half interest in the transaction, and Ito had a one-third share of the other half share, and defendants the other two thirds.

Court adjourned.

Tuesday, October 5, 1875.

Court met at 9 a.m.

Mr. Dickins continued his examination of Hachimoto Benzo: Sobae's and Ito's share of the niboos in the Sobae transaction were put en a wagon and taken to defendants' office. All the niboos in the Sobae transaction were taken to defendants' office. Sobae's and Ito's niboos were taken and locked up in the godown of defendants. After they were put in defendants' vaults they were doubtlessly taken out and used in other transactions. Benzo, Sobae Rikichi, and others—about ten persons in all—went with this money (the niboos) to defendants. There were from 380,000 to 400,000 rios worth of niboos taken to defendants. They were delivered to Irwin. I did not get a receipt for the money. It was raining, and there was considerable confusion at the moment, and as we were continually doing business with defendants the idea of a receipt never came into our minds. The rice transactions were done through me. I think it was about the beginning of the 9th month that the rice transactions commenced. It was about this time that Irwin said to me, "As rice is about to be allowed to be exported, it would be advisable to have some speculations in it." Irwin advised me to speak to Ito about it. I saw Zenjiro, Ito's banto, and he promised to speak to Ito about it. Ito, Zenjiro, and I then went to defendants' office to arrange the matter. It was understood that it was to be kept very secret. It was settled that purchases of rice should be made, and I think that the first purchases were made in the 9th. The transactions increased to a large amount in the 9th, 10th and 11th months. Eventually the prohibition against the exporation of rice was not removed, and the price of rice rapidly fell. The rice transactions were conducted in the same manner as the exchange ones. Uchida, Zenjiro, and Chojiro had the chief management of the rice transactions, but Shoske had something to do with it. Zenjiro and Chojiro acted for both parties. I did not have anything in particular to do with it. My name, as a commission merchant, was used. My name was used on account of the partnership between plaintiff and defendants. I have been frequently to defendants' office in the course of these rice transactions. When I went to defendants' office I saw no one in particular except Mr. Irwin. When I talked to Mr. Irwin about these transactions I only spoke to him about the market rates of the day, and the probability of the restriction being removed. I know of transactions in rice that Mr. Irwin objected to. Mr. Irwin was made acquainted with all the transactions in rice. The *Shosha kitte* (tickets) were all handed to Mr. Irwin. The restriction on rice was removed in the next year (1872) in the second or third month. The restriction was removed only in favour of defendants. I attribute the loss on the rice transactions to the non-removal of the restriction on the export of rice. I did not keep the accounts in the rice transactions. The rice transactions were all made at the *Shosha*. I remember about the 27th of the 12th month of the 4th year of Meiji going to Mr Irwin's with Ito and Zenjiro. We went to Irwin's at his request. Ito and Irwin had a long conversation about the losses in the exchange and rice transactions. Irwin said "We have experienced great losses in these transactions; it will be very inconvenient to settle up at present, and I think it would be better to postpone doing so till we discover and make some large and profitable speculation, when we can settle all up." Ito replied that he thought that losses in business ought to be made up by future profits, and agreed to wait till some large and profitable speculation could be discovered. Besides this, Ito requested that he might be allowed to borrow money whenever he wanted to, and to this Irwin agreed. Interest was mentioned, and Irwin said it would be at the rate of 12 per cent. per annum. Defendants were to pay Ito the same rate of interest on the accounts. If the time was to be drawn out for any length compound interest was to be charged. Nothing else was said. I recognise the $40,000 note now shown to me. This sum was borrowed from defendants by Ito.

Zenjiro received the $40,000 and took them to his house, he afterwards sold them to Yokohama brokers. He contracted to sell them by the 30th of the month. I do not know who he sold them to. He contracted to sell them, but never delivered them. Rikichi and I took the cheque back to Defendant, it not having been used. We gave it to Iske and he handed it to Irwin. I was present and saw it handed to Irwin. It was the 2nd or 3rd of the 10th month when it was returned. I think it was a cheque on the Chartered Mercantile Bank.

The cheque was made out in Irwin's handwriting. We only asked for a receipt when we gave the cheque back. I could not say positively if I knew of the existence of the $40,000 promissory note. I did not get a receipt. Defendants were busy on that day. Defendants said they were very busy and requested us to call again. I can't say who gave this answer, it was either Iske or Irwin. We went frequently after that but sometimes afterwards Rikichi and Zenjiro went from Ito's to Defendant's about it. Some time afterwards I was made acquainted that the $40,000 note was still in Defendant's hands and I and others went to get it returned. We were told that it could not be found. I can't remember if I went after this again. I only went once to demand the return of this paper. I remember going to Irwin's about the 14th day 8th month last year. I went alone. I went to request the early preparation of Plaintiff's accounts of the 4th year Meiji. Irwin said, All the books are at the Defendants and till they can be obtained the account cannot be made out. Irwin was then at No. 14. After that we talked about business affairs generally. After this I went frequently to Irwin's for the same purpose. Mr. Irwin repeated what he said before and that if Defendants did not send them (the books) up soon he would send a letter asking for them. Last year I went to Defendant's office. I went with Ito and Iske on one occasion. This was about the 6th month last year. We went about Ito's business. The subject of the interview was a proposition by Ito that a speculation in government bonds be made as a large profit could be made. Ito requested Mr. John Walsh to go in with us in the speculation.

Mr. Walsh questioned us very minutely on the subject and we requested him to go into the speculation with us to the amount of one or two million dollars and that he should provide the funds. Mr. Walsh refused and we returned. Ito then came to my house and got very angry. He stated that considering the accounts of 4th Meiji were not made up and that by the use of a million dollars a profit of 200,000 could be made it was a great pity that defendants would not enter into it. Ito then went to Yedo. He said that the accounts must then be made up. I went to defendants' office afterwards, alone and at times with Ito. Nothing particular passed and we requested the production of the 4th Meiji accounts. I carried the accounts from Defendants to Ito. I do not know if they were correct. Mr. Walsh promised the accounts should be made out when Ito and I went. Afterwards I went and received the accounts; I think I received them from Futami. [Exhibit "T" shown to witness.] I recognize that document, I received it and carried it to Ito. It is the account I received. I went again on Ito's business to defendants; it was about the 10th month to make arrangements for all the parties to appear in a room and settle the accounts. I made this arrangement. I, Ito, Kimura, Koske, Iske, Futami, defendant's accountant were present. Mr. John Walsh came in frequently. This took place about the 10th or 11th month last year. I do not remember exactly. No. 1 and 2 Day books were compared and found to agree. then the accounts received from defendants were compared with Ito's accounts and they did not agree at all.

There was a great deal of discussion as to the reason the two accounts did not agree and the day thus passed without anything definite being arrived at. I do not think I have been to plaintiffs' or defendant's offices since that time. [Defendants Exhibit "2" shown to witness.] I recognise these letters. I did not have charge of the transaction in which Ito borrowed $15,000 from defendant's so when I read it (the letter) I sent it to Iske. [Exhibit "D 1" shown to witness.] These entries [the so called false entries] are all extra, and are not connected with the entries in books "C & F." Irwin mentioned to me on a certain occasion that Mr. John Walsh was expected from Europe shortly, and for certain arrangements in his books it was necessary to have those entries made. Irwin handed me a slip with the two items written on it in English and asked to me to speak to Ito to have them entered. I promised to do so and spoke to Rikichi and Zenjiro about it. I expressed my opinion to them that it was a foolish idea to enter two items like these before the accounts were made up, and that they ought not to be written. We declined to write them as it was impossible under the circumstances to do so. Ito told Rikichi and Zenjiro that those items were required by the firm and that Irwin requested them to be made on account of the early return of Mr. Walsh. I was requested to make the entries: it was Rikichi and Zenjiro who refused it as it was foolish and absurd, but I having been requested to have them made asked them (Rikichi and Zenjiro) if it would not be better to make them. Irwin said there could be no objection as he would shortly prepare accounts that would fit in with these items.

I mentioned this to Rikichi and Zenjiro. They said it would be impossible to write them till Ito was asked. Ito came down from Yedo and a long talk took place about the items. Ito was very much perplexed. I then spoke to Ito and said that in the large transactions that had been made these items could not be far

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

from correct, and because Irwin wanted them for his books and as correct accounts were promised to be shortly forthcoming there really could not be any harm in writing them. I mean that there could not be any great difference between the two items, one being for dollars and the other *rios*. Ito finally agreed to write the items temporarily, as Irwin requested it. The book, having been prepared, I took it to Irwin and told him that it would be necessary to make out the correct account at once, or else the items would be valueless. Even now if Irwin was to make out his accounts these entries must now be incorrect, they were only made temporarily. There can be no great difference now beween the items because dollars were cheap then. I think the "book D" containing the false entries was returned to Ito in the following year. Ito read the book from Iske by order of Irwin. A conversation took place between Ito and Irwin about the making out of the accounts. Ito said, If you can't give accounts to fit in with these entries return the book.

Mr. Dickins said he had finished his examination in chief.

(Court adjourned till 10 o'clock to-morrow morning)

Wednesday, 6th October, 1875.

Hachimoto Benzo, cross-examined by Mr. Ness: I have not guaranteed Ito against all loss in case this action is lost; that is impossible. I simply asked Ito to put his seal on the so-called false entries because Irwin promised corrected accounts. I deposited the securities in 1871 with defendants. They were bonds given for money lent by Ito to various *daimio*. At the time I took the bonds to defendants, I calculated the value of them, and I remember they amounted to 100,035 *yen*. The securities that I then deposited did not contain 500 new Government bonds. I do not know anything about the deposit of 500 new Government bonds with defendants by plaintiff. I had not charge of this matter. Some time after they (the securities) had been left at my house, Ito came and looked over them. The securities were all deposited with defendants in 1871, with the exception of the 500 new Government bonds. I don't think I got a receipt for them. I was ordered to take them there by Ito, and I did not receive any receipt. When the false entries were made in 1871, I did not know them to be false. I do not know if Ito knew them to be false. I heard nothing from Ito. Shortly after the book was handed over to defendants, I found that the entries were incorrect, but I did not know them to be false. They were not records of actual transactions, but were entered by request; and Ito and all who were present must have known they were incorrect when they were signed. Irwin wanted the entries made to aid him in making up his accounts. Irwin did not say they were incorrect. There are no such items in the accounts anywhere as these two entries; I challenge anybody to find them. As far as I know, the only object in writing them in the book was because Irwin requested it. I do not know if it was done to deceive Mr. Walsh; if I had thought that, I would never have requested Ito to write them. I never told Ito that Irwin wanted them made to keep himself right with Mr. Walsh on his return from Europe. I had no control over the accounts, and knew nothing about them. I have not got the memo. Irwin gave me with the two items written on it. I only wrote the two items as Irwin promised that the corrected accounts would be forthcoming. I believed that the corrected accounts would be forthcoming within ten days at the most. I cannot give you the meaning of the word *adsukari*. At that time I did not believe that Irwin had acted in any way fraudulently. I did not write out the details of these entries at Mr Irwin's dictation. [Account shown to witness by Mr Ness, and marked "5."] I think I wrote this. I wrote the items in it at Mr Irwin's dictation after the false entries had been made. I have not particularly examined the entries made subsequently to the false entries. I do not recollect when Irwin said defendants would break off the joint interest in exchange transactions. I know nothing about the arrangement between Sobae and Irwin. I recollect a conversation at defendant's office when we applied for an advance of $480,000. I heard nothing at that time about the termination of defendants' interest in the exchange transactions; instead of that, exchange transactions to the amount of a million were contemplated. Ito and Sobae were present. Mr. Irwin was also present. I did not see Mr. Smith or Mr. Lothrop. I can't say if Iske was present. The $480,000 was not requested as a loan, it was for use in the exchange transactions, which were very large at that time. Defendants had an interest in this transaction (the Sobae transection, which has been explained over and over again). I heard nothing about interest at that interview. I don't know if interest had been charged. I remember some conversation about a loan to Mito. I know in the third year of Meiji the plaintiff deposited money with defendants, which they loaned to Mito. The amount Ito deposited with defendants was 40,000 *rios*. The loan was afterwards increased with the assistance of Ito; but whether with Ito's money or defendants' I don't know. The Mito *han* was indebted to the defendants. I do not know anything about the collection of this money from the Government by defendants. The defendants loaned 50,000 *rios* to the Mito *han*. Defendants collected the money from Government on Ito's account. I know about the particulars of the collection of this money from the Government. I know nothing about any commission being charged by Irwin for collecting the money from the Government. I know nothing about a contract to terminate the partnership in 1871 between Ito and defendants. Zenjiro had charge of the buying and selling in the transactions. I know nothing about the Chartered Mercantile Bank making some sales. Defendants' Chinese comdradore probably made some transactions in my name. I could not know of all the transactions at the *Shosha*; Zenjiro had charge of them. I do not know if there were any transactions made at the French Bank. A daily record of all transactions was kept in the cash book "F." Ito's transactions with defendants only are entered in this book.

Court adjourned till 10 o'clock to-day.

Thursday, 7th October, 1875.

Mr Ness continued his cross-examination of Hachimoto Benzo: I do not remember having seen any written agreement as to partnership in the rice business between plaintiff and defendants. In the first place I was the only one who saw Irwin about the rice business. I mentioned the matter to Zenjiro, and Zenjiro told it to Ito, and we went to defendants. The interview took place in the office of defendants in the 9th month. I think the rice business was begun with some exchange money. I think it was on the 10th of the 9th month. The rice transactions were finished later than the middle of the 10th month. On the 30th of the 9th month Zenjiro received the $40,000 from defendants. I did not receive it. I have heard that it was received by cheque. I know that three days afterwards it was paid back to defendants by Rikichi; I went with him. I do not know personally in what way the $40,000 was received, but I know a cheque was returned. Nothing else was returned at the same time. The cheque was given to Iske in the presence of Irwin. No conversation took place except that, 'As this has not been used, we return it." I do not know anything about any other sum of $40,000 being borrowed. I do not remember receiving an account from Iske in 1872, that showed a balance of $12,000 due from plaintiff to defendants. I think in 1872 $25,000 was borrowed by Ito from defendants, but was shortly afterwards returned. I do not know if some *han* notes were deposited by Ito as security for this loan. I do not know if defendants collected a debt due to Ito by the Hanabusa Ken. The *Shosha* rice receipts were all handed to defendants in the usual course of business; they were never deposited as security for advances. I do not know of any application for a balance, but I know accounts were repeatedly asked for by plaintiff from defendants. I heard plaintiff borrowed sums of money from defendants in 1873. I do not recognise the letter you show me; that is, I can't say positively. I have no idea whose it is. I do not send for Shoski to the Hotel *Isedea*, at the end of last year. I do not know what Ito may have done; but I never eat and drank with Shoski. I have never heard Shoski asked to give evidence in favour of Ito in the rice part of this action. I do not know if it was said that if Shoski could not give favourable evidence in the rice part of this case, that that part of the case would have to be abandoned. I know of no such conversation. I have always been against any dispute arising between the parties to this suit. I came into Court against my will. The three cheques shown to me are C. M. Bank ones; but as a large number of cheques were used in the business, I cannot recognise any particular cheque as used for any particular purpose. [The three cheques put in, and marked defendants' exhibit 6, A, B, C. Exhibit A was for $10,000, B for $10,000, and C for $20,000.] Zenjiro received the $40,000 on the 30th of the 9th month, so I do not know if another sum of $40,000 was received. I do not remember on that day going to Irwin's house, walking with him to his office, and receiving the money. I can't say if the three cheques produced were returned to defendants. Quite a number of cheques were returned at different times.

Re-examined by Mr. Dickins: I can't recognise these three particular cheques; they bear no mark to show that they were used for any particular purpose. A seal is put on a cheque directly it is received, whether it is used or not; this is the custom in Yoko-

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

hama. These three cheques bear a seal on the back of them. I think one cheque was returned, but as it was in Rikichi's hands I can't state positively. I am sure $10,000 was returned to defendants. I think the sum of $700,000 was altogether received from defendants in the Sobae transactions. Some was used and some not. Probably over $500,000 was used. The money that was not used was, I think, returned to defendants in cheques. I don't know if the three cheques you show me were amongst those returned. I have never exceeded the authority given to me by Ito. If I had ever exceeded my authority I should have been responsible for the consequences. The items [so-called false entries] were written on my representation to Ito that the request was made by Irwin. I told Ito that corrected accounts would shortly be forthcoming. I should consider myself responsible for the consequences of any false representations in the matter to Ito. Irwin never asked me to put on the whole seal on the two entries; when he saw the book he expressed his surprise at its absence, and I said, as they were only temporary ones, the half seal was only put on top. I have not acted as accountant in the accounts. I was not acquainted with the accounts when the account you show me was written. Mr. Irwin brought some English writing on a piece of paper, and I copied it in Japanese as he read it. Irwin did not explain any of the items. Ito's name is mentioned in it. I have no authority from Ito to settle any accounts. I never spoke to Ito about this account. I had no reason to tell Ito. Irwin wanted the two items made for some reason of his own. I did not tell Ito why Irwin required those entries, for I did not know. I simply told Ito that Irwin requested them. Irwin said Mr. Walsh was shortly expected back. I, Zenjiro and Rikichi kept Irwin fully posted about all the transactions. Sobae gave him information also. Irwin was fully informed always about the rice transactions. I know that Ito borrowed $25,000, and I also know that the Hanabusa *Han* also borrowed a sum from defendants. The sum Ito borrowed I know positively was returned to defendants. I know of no reason Ito should have for asking defendants to collect a claim for him against a *han*.

Court adjourned till 10 o'clock to-day.

Friday, October 8, 1875.

Court met at 10 a.m.

Mr. Dickins continued his re-examination of Hachimoto Benzo: I have not had any conversation with you (Mr. Dickins) since yesterday morning. I have not had any conversation about the case since that time. I wanted to see a translation of a paper sent from defendants, and Rikichi brought me it. I think there is something very curious about the two entries (the so-called false entries). I have seen the translations of two accounts received from defendants at different times, and in one account I find the two entries, and in the other I do not. Last evening I saw these translations, and I think it very singular that the two entries appear in the translation of the later one only. In thinking over the matter, I came to the conclusion that Irwin must have deceived me in some way, and as I urged Ito to make these entries in opposition to his own desire, I may have done wrong in so doing. In that event Irwin deceived me, and cheated both Ito and me. The translations of the two accounts I saw last night were copies of the two accounts received from defendants. [Exhibit "P" shown to witness.] One of the accounts I saw last night is doubtless a copy of this. [Defendants' exhibit "6 B" shown to witness.] I do not know the handwriting on the back of it (a cheque). It is not written by a Japanese, but is written by a Chinese. I can't read it.

Re-cross-examined by Mr. Ness: I have been so often examined upon these two entries that I have given considerable thought to them. I thought it so curious that I should be examined so much about them, that I sent for the accounts, and Rikichi brought me them. I looked them over, and as soon as they were firmly fixed in my mind I handed them back to him. I did not tell Rikichi what I thought about the matter. I don't know Mr. Talbot, nor did I see him last night about the accounts. I simply looked in the accounts for the two entries. I did not make any calculations about the accounts.

This finished the evidence of this witness.

Mr. Dickins called;—

Yamaguchi Koski, cautioned: I remember on the 2nd day of the 10th month 4th Meiji, going to the office of defendants. I went for the purpose of taking two documents there. They were like the C. M. Bank cheques you show me. They were worth $30,000. I received a receipt from Shoski. I delivered them to Mr. Irwin. [Document shown to witness.] This is the receipt; I saw Shoski write it. [Receipt read. Memo.: Item, $30,000, the foregoing actually received 2nd day 10th month 4th Meiji, for Walsh, Hall & Co., signed Shoski.] I was a clerk at this time of Benzo's. I do not know if any other money was returned on that day.

Mr. Ness did not cross-examine this witness.

Court adjourned till Tuesday morning at 10 o'clock.

In the U. S. Consular Court this afternoon, before Gen. T. B. Van Buren, Consul-General, and Messrs. F. Goddard and H. Roberts, assessors, G. H. Hamilton, an old offender, was charged with forging the name of J. C. Cavanagh, a man at present serving out a term of imprisonment here for an assault committed at Hiogo. The prisoner pleaded not guilty. On the 10th September last, Hamilton was charged with vagrancy, and obtaining refreshments without paying for them; this being the second offence of the nature, he was sentenced to 20 days' imprisoment. While serving out this term, he made the acquintance of Cavanagh, and learnt some of his private affairs. When Hamilton's time had expired he was discharged, and was again arrested for being drunk and refusing to pay jinrikisha hire. He was remanded on this charge, and in the meantime was charged by Mr, McManus, paymaster's clerk of the U. S. S. *Saco*, with forging the name of J. C. Cavanagh to a letter, in which Cavanagh was made to ask for a loan of $30 from Mr McManus. The Court found prisoner, by the evidence, guilty of forgery, and he was sentenced to two years' close confinement in the U. S. gaol. Mr. Ness defended the prisoner.

IN H. B. M.'s CONSULAR COURT.

Before R. ROBERTSON, Esq., Consul.

Thursday, October 7, 1875.

William Allen, seaman, was charged with assaulting a Japanese named Kashiwo Shinjiro, in Takashimacho.

Protecutor stated that the prisoner came to his house, and made a great noise, and refused to go away. When he requested him to do so, he struck him in the face. He then called a policeman, and gave him in charge.

Takehara Sozo, police constable, stated that he was called by the last witness to arrest the prisoner for assaulting him. He arrested the prisoner, who refused to walk. He called a jinrikisha, and took him to the station.

Prisoner stated that he was beat and kicked about by several Japanese and only defended himself.

His Honour sentenced him to prison for seven days.

In the Danish Consular Court yesterday there was a scene. R. Clarke sued N. Stibolt to recover some thirty odd dollars, being the principal and interest on three promissory notes. On defendant being called upon to make an answer, he at once objected to Mr. E. de Bavier trying the case, saying that he was not a Dane. His Honour told him that he was the Danish Consul-General, and that the case must be tried in this Court. Defendant refused to have his case tried by Mr. de Bavier, and had the impudence to tell that gentleman that he (Stibolt) had written home demanding the immediate dismissal of the Consul-General for having given a partial judgment in a case in which he had been a party. A verdict for the full amount claimed was given, and the defendant was called upon to apologise for his misbehaviour. Stibolt refused, and said he would let people see what the Danish Consul was like. The defendant was sent to gaol for 48 hours for contempt of Court.

Shipping Intelligence.

ARRIVALS.

Oct. 3. *Tokio Maru*, Japanese steamer, Dunn, 2,119, from Shanghai and ports, Sept. 25, Mails and General, to M. B. Co.

Oct 3, *Malacca*, British steamer, Bernard, 1,698, from Hongkong, Sept. 26, Mails and General, to P. & O. Co.

Oct. 4, *Marie Heydon II.* German barque, Mühlmann, 287, from Chefoo, Sept. 18, General, The Captain.

Oct. 4, *Punjaub*, British barque, Renaut, 883 from London, May 10, General, to Carroll & Co.

Oct. 7, *Costa Rica*, American steamer, Conner, 1,917, from Shanghai and ports, Mails and General, to P. M. S. S. Co.

Oct. 9, *Belgic*, British steamer, Metcalf, 2,652 from Hongkong, Oct. 1, Mails and General, to O. & O. S. S. Co.

DEPARTURES.

Oct. 2, *Oregonian*, American steamer, Harris, 1,914, for Shanghai and ports, Mails and General, despatched by P. M. S. S. Co.

Oct. 2, *Tokei Maru*, Japanese Steamer, Young, 960, for Shanghai and ports, Mails and General, despatched by M. B Co.

"Berkeley, Sept. 1869.—Gentlemen, I feel it a duty I owe to you to express my gratitude for the great benefit I have derived by taking 'Norton's Camomile Pills.' I applied to your agent, Mr. Bell, Berkeley for the abovenamed Pills, for wind in the stomach, from which I, suffered excruciating pain for a length of time, having tried nearly every remedy prescribed, but without deriving any benefit at all. After taking two bottles of your valuable pills I was quite restored to my usual state of health. Please give this publicity for the benefit of those who may thus be afflicted.—I am, Sir, yours truly, HENRY ALLPASS.—To the Proprietors of NORTON'S CAMOMILE PILLS."

August 1st, 1875. 26 ml

COMMERCIAL INTELLIGENCE.

For some time after the issue of our last fortnightly Report the Import market continued active and firm; during the last few days, however, a reaction has set in and general dulness must be reported.

There is little doubt that this collapse is partly due to the uncertainty which prevails with regard to the Corean question. Importers seem, however, to augur favourably of the future, and, so far, the lower offers made by Japanese dealers have not been accepted.

IMPORTS.

Cotton Fabrics.—7 lbs. Shirtings and 7 lbs. T-Cloths are still fairly saleable at previous rates, but 8¼ and 9 lbs. Shirtings are less enquired for and quotations are almost nominal. Other classes of Cotton manufactures demand no especial notice.

Grey Shirtings:—			White Shirtings:—		
7 lbs.	38½ yds. 39 in. per pce.	$2.00 to $2.10	60 to 64 reed 40 yds. 35 in. nom. per pce.	2.20 to	2.40
8 lbs.	38½ yds. 44 in. „ nom.	2.50 to 2.70	Turkey Reds 24 yds. 30 in. 2¼—3 lb. per lb.	0.75 to	1.02½
8 lbs. 4 to 8 lbs.	38½ „ 39 in. „ „	2.30 to 2.65	Black Velvets ... ... Nominal	8.75 to	10.00
9 lbs.	38½ „ 44 in. „	2.00 to 3.05	English Drills 15 lb. 40 yds, 30 in.	3.30 to	3.40
			Taffachelaes 12 yds, 43 in.	2.55 to	2.70

Cotton Yarns.—16/24 have improved and continue firm; 28/32 are in less demand, and prices must be quoted lower; 38/42 are neglected.

No 16 to 24 ... ...per picul	$30.00 to 35.00	No. 38 to 42 ... ...per picul	$41.50 to 46.00
No. 28 to 32 ... ...per picul	$37.00 to 41.50	Reverse Twist ... 16-24 ... „ ...	—

Woollens.—The aspect of business in these fabrics continues gloomy, and there is reason to fear that this season's trade will be altogether unimportant. Enquiries during the fortnight have been on the smallest possible scale, and as the stocks remaining on hand from last year, as well as those of recent importation, are notoriously heavy, and exchange rates constantly declining, holders show an inclination to realize. Second grades of plain *Mousselines de Laine* are perhaps the only article in constant demand, while English woollen and worsted fabrics are comparatively disregarded, even at prices at which it would at this moment be impossible to replace them.

Plain Orleans	40—42 yds. 32 in.	6.25 to 7.80	Figured Mousseline de Laine	30 yds. 30 in.	0.25 to 0.28
Figured Orleans	29—30 yds. 31 in.	4.75 to 5.25	Multicolored „	30 yds. 30 in.	0.35 to 0.40
Chimagoro	30 yds. 30 in.	5.25 to 5.75	Cloth, all wool plain or fancy	48 in. to 52 in.	0.80 to 1.20
Italian Cloth	—30 yds. 32 in.	0.25 to 0.33	Presidents	54 in. to 56 in.	0.70 to 0.80
Camlet Cords	29—30 yds. 32 in.	6.25 to 7.25	Pilots	54 in. to 56 in.	0.45 to 0.52½
Camlets Asstd.	56—58 yds. 31 in.	18.50 to 19.00	Union	54 in. to 56 in.	0.60 to 0.70
Lastings, Japan	22—30 yds. 32 in.	13.00 to 14.50	Blankets, scarlet & green	7 to 8 lbs. per lb.	0.40 to 0.42½
Plain Mousseline de Laine	—30 yds. 30 in.	0.18½ to 0.20½			

Metals.—There has been rather more activity in the metal market, transactions on a fair scale in wrought and pig iron having been reported. Prices are slightly better.

Iron flat and round ... ...per picul	$3.50 to $4.00	Iron hoop ... ...per picul	$4.10 to 4.50
„ nail rod assorted ... „	3.50 to 4.00	„ pig ... ... „	1.50 to 2.00
„ small size ... ... „	3.80 to 4.20		

Sugar.—The market is very quiet at present quotations. Business is on a slender scale.

Sugar:—Formosa in bag ... ...per picul	4.10 to 4.15	China No. 5 Kong-fun ... ...per picul	4.70 to	5.30
in Basket ... ... „	3.90 to 4.00	„ No. 6 E-pak ... ... „	4.40 to	4.50
China No. 1 Ping fah ... ... „	8.00 to 8.10	Swatow ... . „	3.30 to	3.50
„ No. 2 Ching-pak ... ... „	7.20 to 7.70	Daitong ... ... „	3.30 to	3.80
„ No. 3 Ke-pak ... ... „	6.20 to 6.60	Japan Rice ... ... „	3.25 to	3.30
„ No. 4 Kook-fah ... ... „	5.50 to 5.90	Kerosine Oil ... ...per case	2.60 to	2.65

EXPORTS.

Tea.—Operations in this article have again lessened, settlements for the closing week reaching only 1,900 piculs and making a total, since last American mail steamer, of a little over 6,000 piculs.

Very adverse wire advices have apparently been received from New York, caused seemingly by the simultaneous arrival of two or three extensive cargoes of Japan Teas. This has evidently for a time demoralized the New York market and our local market sympathises.

Prices for the moment are entirely nominal, some dealers talking of a reduction of $4 to $5 per picul but without meeting response on the part of purchasers. About $28.50 to $29.00 is the idea for "Good Medium," but the quality is now so poor that it is doubtful if its price has reached a low enough point to be reasonably safe on the New York market. The *H. A. Litchfield* has sailed for New York with 501,092 lbs. leaving the *Ambassador* and the *Cremona* on the berth. Freight is £2 per 40 cubic feet.

Common ... ...Nominal.	$20.00 to 23.00	Fine ... ... Nominal	$35.00 to	38.00
Good Common ... ... „	24.00 to 27.00	Finest ... ... „	$39.00 to	42.00
Medium ... ... „	28.00 to 31.00	Choice ... ... „	$43.00 to	48.00
Good Medium ... ...Nominally.	28.50 to 29.50			

Prices at present quite nominal.

[*Continued.*

Silk.—Very large transactions were effected during the earlier part of the fortnight, and prices, after rising $10 to 15 during that period of excitement, gradually receded, when a quieter tone prevailed in the market. They remain on the whole somewhat in advance of previous quotations, especially for Hamatski and other descriptions of Oshius which are scarce and much inquired for.

Settlements since the 23d ultimo, are 1,200 bales of Hanks and 200 of Oshiu, leaving a stock of 1,100 bales.

The shipments of the fortnight are 943 bales, making the total export to date 4,038 bales against 2,949 last year for the same period.

An important feature of this season is the increasing quantity of native filature silks. They fetch from $550 to $670 (say 20/6 *a* 24/9 or fr. 57 *a* 69) and this wide margin of prices is a fair indication of the degree in which they differ from each other in merit. The best are the produce of Oshiu cocoons. We must once for all warn our readers that what we style "native filature" silk never includes the produce of the Imperial Steam Filature of Tomioka.

Silk-Worms Eggs.—The first supplies of the Season were received on the 3rd instant, and total arrivals now reach 350,000 cards. Dealers are offering Senchu cards at $1.50; but there is as yet not a single transaction to record. Last year at this date arrivals were 1,400,000 and settlements 400,000 cards. Prices were ranging from $0.25 to 0.60 against $2.40 to $4 in 1873.

INK.

PRINTING INKS.

PARSONS, FLETCHER, & Co.,

PRINTING INK MAKERS,

LONDON.

From the lengthened experience Messrs. Parsons, Fletcher, & Co. have had in the Export Trade (of which they have made a speciality), and from the fact that their Inks are to be found in all parts of the world, they are enabled to adapt their goods to the requirements of all climates, and to every description of work. This is of the greatest, importance to those who may confide their orders to this house.

GENERAL LIST OF PRICES.

Job Ink, for Machine or Press, 8d., 10d., 1s., 1s., 1s 3d., & 1s. 6d. per lb.
News Ink, 8d., 10., 1s., 1s. 3d, and 1s. 6d. per lb.
Bookwork Ink, 1s., 1s. 6d., 2s., and 2. 6d. per lb.
Superior Bookwork Ink, 3s., and 4s. per lb.
Woodcut Ink, 5s. and 7s. 6d. per lb.
Red, Blue, Green and other colours, 2s., 3s., 4s., 5s., 7s. 6d., and 10s. per lb.
Varnish, 12s., 15s., and 20s. per gallon.
Lithographic Inks in every in shade of colour and variety of price.

Parsons, Fletcher, & Co. supply the cheaper descriptions of Newspaper Ink, but they recommend for warm climates the better class of Printing Inks, which in *all cases* are really the most economical.

All orders must be accompanied with a draft for the amount, or may be forwarded through any London House, or

STREET'S COLONIAL NEWSPAPER AGENCY,
30, Cornhill, and 5, Serle-street.

MISCELLANEOUS.

PROTECTED BY ROYAL LETTERS PATENT,

Dated October 11th, 1869.

Under Distinguished Patronage

DR. BRIGHT'S PHOSPHODYNE.

(OZONIC OXYGEN)

A CHEMICAL PREPARATION OF PHOSPHORUS, WITH THE VEGETABLE ALKALOIDS QUINIA, CYPRIPEDEN, XANTHOXYLIN, &c.

This Phosphatic combination is pronounced by the most eminent members of the Medical Profession to be unequalled for its power in replenishing the vitality of the body, by its supplying all the essential constituents of the blood and nerve substance, and for developing all the powers and functions of the system to the highest degree.

It is agreeable to the palate, and innocent in its action, while retaining all its extraordinary properties; and as a specific, surpassing all the known therapeutic agents of the present day for the speedy and permanent cure of—

Nervous Prostration	Lassitude
Liver Complaints	Shortness of Breath
Palpitation of the Heart	Trembling of the hands and limbs
Dizziness	Impaired Nutrition
Noises in the Head and Ears	Mental and Physical Depression
Loss of Energy and Appetite	Consumption (in its first stages only)
Hypochondria	Timidity
Female Complaints	Eruptions of the Skin
General Debility	Impaired Sight and Memory
Indigestion	Nervous Fancies
Flatulence	Impoverished Blood
Incapacity for Study or Business	Nervous Debility in all its Stages
Sick Headache	Premature Decline

and all morbid conditions of the system arising from whatever cause. The action of the Phosphodyne is twofold—on the one hand increasing the principle which constitutes nervous energy, and on the other the most powerful blood and flesh generating agent known; therefore, a marvellous medicine for renovating impaired and broken-down constitutions. It quickly improves the functions of assimilation to such a degree, that where for years an emaciated, anxious, cadaverous, and semi-vital condition has existed, the flesh will rapidly increase in quantity and firmness, and the whole system return to a state of robust health. The Phosphodyne acts electrically upon the organisation; for instance, it assists nature to generate that human electricity which renews and rebuilds the osseous, muscular, nervous, membranous, and organic systems. It operates on the system without exciting care or thought upon the individual as to the process. It moves the lungs, liver, heart, kidneys, stomach, and intestines, with a harmony, vigour, yet mildness unparalleled in medicine.

The Phosphodyne gives back to the human structure, in a suitable form, the phosphoric or animating element of life, which has been wasted, and exerts an important influence directly on the spinal marrow and nervous system, of a nutritive, tonic, and invigorating character, maintaining that buoyant energy of the brain and muscular system which renders the mind cheerful, brilliant, and energetic, entirely overcoming that dull, inactive, and sluggish disposition which many persons experience in all their actions.

The beneficial effects of the Phosphodyne are frequently shown from the first day of its administration, by a remarkable increase of nervous power, with a feeling of vigour and comfort, to which the patient has long been unaccustomed. Digestion is improved; the appetite increases wonderfully; the bowels become regular; the eyes brighter; the skin clear and healthy; and the hair acquires strength, showing the importance of the action of the Phosphodyne on the organs of nutrition.

Finally, the Phosphodyne maintains a certain degree of activity in the previously debilitated nervous system; its use enables all debilitated organs to return to their sound state and perform their natural functions. Persons suffering from Nervous Debility, or any of the hundred symptoms which this distressing disease assumes, may rest assured of an effectual and even speedy cure by the judicious use of this most invaluable remedy.

DR. BRIGHT'S PHOSPHODYNE

IS SOLD ONLY

In CASES at 10s. 6d. by all Chemists and Patent Medicine Vendors throughout the Globe.

Full Directions for Use, in the English, French, German, Italian and Dutch Languages, accompany each Case.

☞ *CAUTION.—The large and increasing demand for Dr. Bright's Phosphodyne has led to several imitations under somewhat similar names; purchasers of this medicine should therefore be careful to observe that each case bears the Government Stamp, with the words Dr. Bright's Phosphodyne engraved thereon, and that the same words are also blown in the bottle.*

MISCELLANEOUS.

THE GREATEST

WONDER OF MODERN TIMES!

HOLLOWAY'S PILLS.

PERSONS suffering from weak or debilitated constitutions will discover that by the use of this wonderful medicine there is "Health for all." The blood is the fountain of life, and its purity can be maintained by the use of these Pills.

SIR SAMUEL BAKER,

in his work entitled "The Nile Tributaries in Abyssinia," says, "I "ordered the dragoman Mahomet to inform the Fakey that I was a "Doctor, and that I had the best medicines at the service of the "sick, with advice gratis. In a short time I had many applicants, "to whom I served out a quantity of Holloway's Pills. These are "most useful to an explorer, as possessing unmistakable purgative "properties they create an undeniable effect upon the patient, which "satisfies him of their value."

SIMPLE, SAFE AND CERTAIN!

HOLLOWAY'S OINTMENT

Is a certain remedy for bad legs, bad breasts, and ulcerations of all kinds. It acts miraculously in healing ulcerations, curing skin diseases, and in arresting and subduing all inflammations.

MR. J. T. COOPER,

in his account of his extraordinary travels in China, published in 1871, says—"I had with me a quantity of Holloway's Ointment. I "gave some to the people, and nothing could exceed their gratitude; "and, in consequence, milk, fowls, butter, and horse-feed poured "in upon us, until at last a tea-spoonful of Ointment was worth a "fowl and any quantity of peas, and the demand became so great "that I was obliged to lock up the small remaining stock"

Sold by all Chemists and Medicine Vendors throughout the World.
May 17th, 1873. 6m.

CAUTION.

J. & F. MARTELL'S BRANDY.

It having come to our knowledge that spurious imitations are imported, Consumers should be careful to see that they obtain the genuine article with our Brand, which is to be had of all respectable Dealers.

MARTELL & Co.

January 1st, 1875. 52ins.

ROWLANDS' MACASSAR OIL

Is the best and safest Restorer and Beautifier of the Human Hair It prevents hair from falling off or turning grey, strengthens weak hair, cleanses it from scurf and dandriff, making it beautifully soft, pliable and glossy. Great caution is necessary to ask for ROWLANDS' MACASSAR OIL, and avoid all others, this being the only genuine. Price 3s. 5d., 7s., 10s. 6d., equal to 4 small, and 21s. per bottle. CAUTION—Each bottle has a glass stopper instead of the cork as formerly. All with the cork are spurious imitations. ROWLANDS' ODONTO, or Pearl Dentifrice, preserves and beautifies the Teeth, strengthens the Gums, and gives a pleasing fragrance to the Breath. It eradicates Tartar from the Teeth, removes spots of incipeint decay, and polishes and preserves the enamel, to which it imparts a PEARL LIKE WHITENESS. Price 2s. 6d. per box. ROWLANDS' KALYDOR realises a Healthy Purity of Complexion and a Softness and Delicacy of Skin Soothing, cooling and purifying it eradicates all Cutaneous Eruptions and Discolourations. Price 4s 6d. per bottle. ROWLANDS' ESSENCE OF TYRE never fails to produce immediately perfect change in Red or Grey Hair, Whiskers, Eyebrows, &c., to a beautiful glossy and permanent Brown or Back, which colour remains so durable that neither washing or perspiration can remove it Price 4s., 7s. 6d. and 10s. 6d. per bottle. Sold by all Chemists, Perfumers, and Bazaars throughout China and Japan. "Ask for ROWLANDS' ARTICLES."
At ROWLAND & SONS, Hatton Garden, London.

THE

Japan Weekly Mail.

A POLITICAL, COMMERCIAL, AND LITERARY JOURNAL.

VOL. VI.—No. 42.] YOKOHAMA, SATURDAY, OCTOBER, 16, 1875. [PRICE $24 PER ANNUM.

TO SUBSCRIBERS.

SUBSCRIBERS at a distance whose period of subscription may have elapsed, are informed that their papers will be addressed and charged to them *until countermanded*. This rule has been found necessary in order to avoid the inconvenience of an abrupt stoppage of the paper which might result from an omission to renew.

It is requested that notice of the intention to discontinue a subscription be so given as to reach Yokohama *before* the date of its effluxion.

NOTICE.

ON and after the 1st of July, Notices of Births, Marriages and Deaths will be charged $1 each insertion.

Such Notices cannot be inserted in this journal unless endorsed with the name and address of the person by whom they are sent.

Yokohama, 25th June, 1874.

MARRIAGE.

On the 23rd Aug., at Havre, LEOPOLD KAHN, late of China and Japan, to ADELE, daughter of Samuel Hecht, of Havre.

Notes of the Week.

The weather during nearly the whole of the week has been so beautiful as to justify the mention of it. The crops in this part of the country are being rapidly cut and carried, and the yield is said to be well above that of the average of years. The harvest in the southern provinces is over, and there too the yield has generally been large, so that we may hope the taxes will come in freely—they are certainly wanted—and that there will be a good balance of grain ready for any market which will take it off at a profit. The Corean affair is much discussed, and public opinion, so far as foreigners can gather it, is decidedly opposed to war. But there would seem to be good reasons why the great western powers who have interests in Asia, should take the present position of Corea into consideration, with a view to some united action upon it. It is rather intolerable that these various powers should one by one be defied by a set of people of whom we wish to say no more harm than that they possess very bad and inhospitable manners. First the French are driven off by them; then the Americans; then the Japanese, who are somewhat more fortunate in having some Corean guns to show that it was not wholly a one-sided affair; and, lastly, the English have come in for their turn, and have only some blistered hands, due to a row over eighty miles of water, to show for their pains. All this seems to us absurd, or at least it teaches the lesson that these hole-and-corner visits to the coast expose us all to humiliating adventures. If we cannot be there without having to answer 'bock agin' when asked where we are going, let us, at all events, stay away, and not place ourselves in positions which neither advance our *prestige* nor conduce to the progress of the world. There would be a strong feeling in Europe, and especially in England, against recourse to any violent measures for opening up Corea, and very properly so. The utmost that public opinion would sanction is a little of that *douce violence* which, skilfully applied, would probably answer all the required purpose. Not the less, however, is there a strong feeling abroad in the modern world that nations are rather the trustees of property held on certain conditions involving duties to the human family, than aggregations of men at liberty to do exactly what they like with that property, and to close all entrance to it against others. The nations only who act upon the former of these views really make any advance, and we have in Japan itself a notable example of this doctrine. And not of this doctrine alone, but of one which seems an inseparable corollary to it, viz, that the longer the isolation due to a vicious policy lasts, the greater is the travail when the change eventually comes. Look at this country, and observe what a bound it has made forward during the last ten years. What a wonderful change has come over it! And yet it has to contend with difficulties which are vastly increased by its former long isolation. Had the Portuguese who came here first, the Dutch who succeeded them, and the English who again succeeded *them*, been allowed freer access to the country, it is certain that all the difficulties with which the Japanese have now to contend would be infinitely lighter than they now are. But they killed off their Christians two hundred years ago, shut the Dutch up in Decima, and then had to face all the broad daylight let in by Commodore Perry and Lord Elgin, while their eyes were hardly fit to stand even the faintest rays of dawn. We have never thought that they have had enough of the sympathy of the western nations in all their troubles, though they have had abundance of a useless and rather misleading, sentimental admiration and flattery. The last fifteen years of intercourse with the country put one somewhat out of conceit with our higher pretensions and boasted humanities. The justice administered has been rather that of Nature, than that of man, which is far higher. It is not for us to visit the sins of the fathers upon the children. If nature is cold, inscrutable and inexorable, without bowels, without regrets, and without remorse, she has also implanted within us sympathies which we may not quench but at the expense of a blighting departure from our own highest ideals. We may not deal with men as with unfeeling atoms useful only for the generalizations of philosophers and the verifications of theories of averages, the sport of laws and the units of statisticians. We may plead the necessities of trade, the preservation of *prestige*, the obligations of our honour, and may even show instances where the use of these fine weapons and phrases has conduced to the progress and the welfare of those against whom they have been used. Not the less, however, are there some trees in the world's garden which look as if they had been tapped for their rich juices, and which will only regain their sap by some years of undisturbed growth and recuperative process. "But," we are told, "all this is not practical." We do not know. We only think it right. The trouble is that law is traversed again and again by law, each seeming as powerful, and often as just, as the other, until policy, ethics, sympathies and economics all seem to point in different ways, and a *ductor dubitantium* can only be found in some such first principle as the liberal modern doctrine of which we have spoken in reference to Corea.

The only London paper, so far as we have seen, which has noticed the promulgation of the recent Press-laws in Japan, is the *Daily News*, than which it would be difficult to find a more able or liberal journal. We had hoped that the *Pall Mall Gazette*, which usually treats Japanese questions with knowledge and ability, would have an article on this subject, nor do we yet despair of finding one in some of the numbers on the way. But, so far, we must be content with the *Daily News*, though we cannot say that the writer of the article to which we refer has gone very deeply into his subject. Now, it will possibly be remembered that in our earlier articles on

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

this most important question, we said that these laws would be regarded with general approbation in Europe, in view of the present and antecedent condition of this Empire; that they would tend to improve and increase the efficiency of the Press, and thus to promote more effectually the welfare of the people and the improvement of the Government; and that, judged by the French and German Press-laws, it was impossible to call them in any sense severe. For the latter opinion we were taken to task with somewhat of rough vigour by a German writer, himself labouring under a delusion not uncommon with his class, that the German Press is very free, and that our own boasts of superior liberty in this respect arise from an ignorant, insular vanity. As regards the first and last points of our contention, the following extracts from the article in the *Daily News* will probably convince our readers that we were entirely right in our estimate both of the opinions we anticipated and the facts we stated.

> The new Press laws of Japan do not seem to be particularly severe if judged according to the standard of Continental Europe. They contain of course the familiar clauses about obtaining a permission to publish, registering the names of proprietors and editors, the signatures of contributors, the penalties for stirring up evil-disposed persons to attack the authorities, for reviling existing laws, and for attempting by perverted reasoning to justify offences plainly contrary to the criminal law. It seems to us, however, that the journals which are published under the awful shadow of Prince Bismark's authority would be very happy indeed if they had no severer code to regulate their doings than that against which the Japanese newspapers are, some loudly, some sarcastically, some pertly, complaining. The Radical journals of France would doubtless feel that the Saturnian age was coming—we can hardly say coming back—for them, if they had such a code to deal with. "Give us liberty of the Press as in Austria," M. Thiers once exclaimed with bitter irony, appealing to the Government of the Second Empire. "Give us liberty of the Press as in Japan," many a European journalist might exclaim in sober good faith to-day.

In regard to the greater efficiency of the native Press, and the marked improvement of its tone and character since the press-laws were issued, we must again appeal for the confirmation of our views, as we did last week, to the translations which have appeared during the past two months in our own columns. We need hardly again assure our readers that these are not selected by ourselves; they come to us as a piece of cloth may come out of the loom, with no choice, sanction or endorsement of the machine which produces it, and that they represent as fairly as we believe possible, the opinions and tone of the native Press. Of their improvement of late there can be no question in the mind of any impartial person, nor can it be doubted that in getting rid of a class of writing which was calculated to do harm, but could possibly do no good, all parties have been benefited. The simple fact is, as we stated long ago, that the Japanese Government, in view of the educational value which they saw attaching to the Press in Europe and America, but chiefly in England, determined that if a free Press were possible in this country, they would allow of one. But they did not see—nor could they have been expected to see—that a Press has two different powers or perhaps, rather, potentialities, inherent in it, one educational and constructive, the other misleading and destructive. In countries like England these two forces work side by side, and the good sense of the nation, as by an analytical process in chemistry, contrives to extract a resultant which is beneficial to the commonwealth. In this country, the mind of the nation, unfitted by previous practice to perform this operation, is as yet unequal to it, and consequently the misleading, destructive and disintegrating effect must be controlled by law. The Government felt this and acted accordingly; and was only wrong so far, that it erred in giving too much liberty at starting. It should have begun with the Press-laws, which, as we now see, permit of ample freedom of discussion, instead of beginning with entire freedom and subsequently withdrawing it. But it was well to do it at once, if it had to be done. A year hence it might have been impossible, and things might have gone meanwhile into serious confusion. It erred, too, in our opinion, in enforcing the laws too peremptorily, though on this point the opinion of an European may really be of no value whatever, because we do not know what loyalty to law, as law, may exist in the mind of the nation. We do not know how far warnings, or a very lenient administration of the law, are compatible with the preservation of the idea of its force and sanctity. If Europeans are right in believing that orientals only obey through fear, the Government may have been right even in prosecutions which seemed to us not only harsh but injudicious. They certainly know the character of the people they govern better—ten thousand times better—than we do or ever can, and are very often most right where we think them most wrong. Every day that an European lives in this country must add to his conviction of the profound ignorance he shows whenever he pronounces with any absoluteness upon matters in which the character of the people is the chief factor in the equation. He who thinks that because human nature is the common measure of all nations, the institutions of one race may necessarily be buckled on to another with advantage, has much to learn, and may get his lesson in Japan at least as well as any where else.

The following facts supply a complete answer to the query propounded in our last issue regarding the circumstances under which Colonel Browne's party advanced into Yunnan, and will satisfy all who, like ourselves, were in some doubt respecting those circumstances.

Colonel Browne's party was travelling under special passports obtained for the Government of India by H. M.'s Minister at Peking, and consequently the approach of the party was known to the Yunnan authorities some months before Colonel Browne reached the frontier,—that is, if the Government of Peking gave to those authorities notice—as it was clearly their duty to do—that such passports had been issued, and instructions that all necessary aid should be furnished to the party. But the Yunnan officials must also have known from Mr. Margary, who travelled with his own passport, that the party was coming, for he told them that he was going to meet Colonel Browne and would return with him. The British Government furnished the party with two interpreters, Mr. Allen and Mr. Margary: the former was sent round by sea; the latter, to join the party, by land.

We have to acknowledge the receipt of the last work of the late Baron von Gumpach, sent to us by the courtesy of the editor, Mr. F. H. Balfour. It is entitled "The Treaty Rights of the Foreign Merchant and the Transit-System in China," and deals chiefly with the question of the *le-king* taxes, the attempted adjustment of which has been the source of so much trouble in China. The author takes for the motto of his work the following words, "Free transit through China! Nothing short of this will prevent future wars," which are to be found in one of the letters of the late Mr. Wingrove Croke, the special correspondent of the *Times* during the last China war. The author shows all the vigour and undoubted ability by which everything he wrote is characterized, as well as much of that strong personal bias which was a motive force to his pen, and urges his theme of Free transit for Merchandise through China with more severe logic than characterized his celebrated physical and mathematical investigations. He points out how the most valuable clause of the treaty of Tientsin has been allowed to become a dead letter, and how the inevitable consequence, a decennial war, is the only possible outcome of this policy. Baron von Gumpach's last book will be read; its vigour and abundant matter will compel attention and admiration; but the inherent faults of his mind are everywhere apparent in it, and we fear that there will ever remain a broad gap between the good his abilities might have achieved, and that of which he has been, or may be, the author.

It is gratifying to find that as Yokohama becomes more recognized as a halting station in that tour of the world which is one of the new prerogatives of the age, and now a part of the whole duty of man, our chances of obtaining some of the higher enjoyments of European life are on the increase. We have all lately derived great enjoyment from the performances of Signora Palmieri and her party, and have in all probability emerged from the thick darkness to which the amateur concerts of four or five years back might fairly be compared—a phase of trial which we trust we may hereafter mercifully be spared. And now, succeeding Signora Palmieri, we have to announce the arrival of Madame D. Leonowa, of the St. Petersburg Grand Opera. This lady has been endowed with a rich con-

Digitized by Google
UNIVERSITY OF CALIFORNIA

tralto voice of great power and compass, and has achieved a success in the Russian capital commensurate with her merits. She is equally at ease in the music of the great contralto parts of Italian, German and French opera, and in that of her own native land—a music little known in England some years ago, and only introduced, indeed, into English drawing-and concert-rooms since the late auspicious event which united the reigning houses of Russia and England in marriage. Madame Leonowa, who is on her way to America for the centennial exhibition of next year, has recently arrived from Vladivostock, after a very brilliant and successful journey through Siberia, and may perhaps give one or two concerts here preparatory to leaving for China. She has achieved great and deserved success in the art of her adoption, and we trust, if she remains here long enough, that she may find an audience which will do justice to the remarkable endowments which have met with so much acceptance in her own country.

We have said on one or two occasions that if the late attack on the *Unyokan* was provoked by the Japanese surveying the Corean coasts, they had no one to thank but themselves for the outrage. But we have heard it said that there is a provision in the instrument (whatever may be its nature) which determines the relations of the Coreans and the Japanese, to the effect that the latter shall be permitted to survey the coasts of Corea. We think this extremely improbable; but it has come to us from a respectable source, and we give it for what it may be worth.

The *Corps Diplomatique* was entertained at Hamagoten yesterday evening by H. I. Majesty's Ministers. Previous to the banquet a concert was given in which Signora Palmieri, Signora Persiani, and Signor Palmieri, assisted by a few amateurs, executed some of their favorite *morceaux*.

The *Hochi Shimbun* of to-day gives us the following intelligence:—

Six Loochooan officials were yesterday presented at the *Sei In*. The firearms and cannon captured from the fort taken in Corea have been handed over to the *Sei In* by the Naval Department.

The Imperial man-of-war *Moshun Kan* is about to leave for Nagasaki *en route* for Corea where she will protect the Japanese settlers.

The first performance of the season of the Amateur Dramatic Club will be given on Friday next. The entertainment comprises the comedy "A Wonderful Woman" and the farce "An Ugly Customer."

From the "Japan Mail Daily Advertiser."

A BAD PASSAGE.

The *Gaelic*, of the White Star line, but chartered by the O. & O. Company to perform the journey between San Francisco and Yokohama, which has just come in with 24 English cabin passengers, a few white steerage passengers for Japan, and 570 Chinese for China, has experienced weather so bad as to be almost without precedent except in winter in exceptionally stormy seas. The barometer on the whole voyage only once reached 30.1 inches, and on seventeen days never reached 29.8 inches. The *Gaelic* left San Francisco on the 16th September and had a fog that night off the Farralones; the 17th, 18th and 19th were fine, but on the night of the 19th at 9 P.M. it came on to blow fresh from the South West, and from this time until the evening of the 5th of October the *Gaelic* had a head sea, with four gales of wind in this period, of which two were hurricanes. The runs of the ship on the first four days were at the average rate of ten knots. On the 27th the passengers were happy to make 135 miles; and on the 2nd of October 100 miles! For more than a fortnight, the experienced master (Captain Kidley) his active chief-officer, Mr. Davidson, and the others officers of the ship, were never for one moment free from anxiety, and lucky it was that all hands, including the Chinese seamen, did their duty without flinching through sixteen days of incessant watchfulness. Lucky, too, that the *Gaelic* is a ship of the days when iron was not spared.

To resume our record of this voyage. On the 20th the glass stood at 29.6 inches with a heavy cross sea. On the 21st early a high head sea was recorded, and the afternoon was squally with an increasing sea. On the 22nd, there blew the first of the six gales, with which the *Gaelic* met. The glass fell from 29.8 to 29.4 with a high confused sea. On the 23rd the glass recovered only to 29.5 with a very high sea. On the 24th the highest glass was 29.6 with heavy squalls and a high Westerly sea. On the 25th, the highest glass was 29.8 with an increasing sea, and on the 26th it fell to 28.52 or 28.65, (the two glasses on deck differed by nearly one-tenth) with a furious gale, which at 4 a.m. reached hurricane force, and blew away the main-trysail. At 5 a.m. in a terrific squall the after-part of the wheelhouse was damaged. On the 26th there was a very nasty south-westerly sea with large quantities of water about the decks. On the 27th the glass recovered to 29.5 with fresh gale and heavy head sea. On the 28th there were heavy squalls all day, and on the 29th the glass again fell to 29.3 with a fresh gales and high sea. The 30th September was a *dies non*, inasmuch as "30 days hath September" ceased to be true this voyage, the day lost being the 30th of September. The 1st October the glass fell from 29.25 to 29.0 and recovered to 29.3 with a strong westerly gale and tremendous head sea. At 6 p.m. there were large bodies of water about the decks, and a heavy head sea struck the after-wheelhouse, bursting in the planking and filling the place with water. On the 2nd Oct. the glass rose again to 29.5 with squally weather and a high head sea. From 6 A.M. to 11 A.M. the ship was stopped to tighten up the engines, and it is lucky it was for a fearful sunset was followed by a fall of nine-tenths of an inch of the glass in nine hours, the glass at 8 A.M. reaching 28 35! or .25 lower than it had stood in the typhoon which the *Gaelic* faced on a former occasion. In the early morning the hatches were secured as the ship was taking much water on deck and a furious gale followed, with a tremendous sea from the South-West. At 1 P.M. a heavy sea stove in the after-part of the wheel-house. At 6 P.M. the ship was rolling so heavily that dinner was all but impossible, but no ship can have behaved better than did the *Gaelic* throughout the voyage. The night, from the 3d to the 4th, was terrible,—the ship both rolling and pitching fearfully, but the glass rose to 29.4 and only once again fell to 29.2 in the voyage. On the 4th there was a heavy beam sea, and on the 5th drizzling rain. On the 6th the weather had become fine. On the 8th there blew another gale, but this time a fair one. So much for "fine weather" in the Pacific!

Among the passengers were Sir Charles Wentworth Dilke, Bart., M.P., Mr. T. Eustace Smith, M. P., and his wife, and Mr. Warner, conservative candidate for Leicester in 1874, all of whom have come to travel for pleasure in Japan.

The report in the *Hiogo News* about a boat's crew belonging to the *Sylvia* being chased by the Coreans is perfectly true. Whether they were fired upon, we cannot say, and it may be presumed that they were thus chased only because they were unarmed. But the outside nations should either come to some practical resolve about Corea or agree to leave her alone. She is quite right to fire upon surveying parties, who would be permitted by no nation in the world to be taking soundings on their coasts. It is not fair that one boat's crew should be chased 80 miles, as was one of the *Sylvia's* boats, and that the lives of another crew should all be placed in the most imminent danger by being covered with the matchlocks and cross-bows of the Corean soldiery within a distance of ten yards.

His Imperial Russian Majesty's flag-ship *Boyan* arrived in harbour this morning from Vladiwostock, and on anchoring fired the usual salutes.

A fire occurred yesterday morning in Shinagawa, Yedo. Only a few houses were burnt, but we regret to learn that two lives perished.

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

It will be remembered that on New Year's eve 1874 the old and celebrated temple of Zojoji in Shiba, the ancient burying place of the Tycoons, was destroyed by a fire suspected at the time to be the act of incendiaries. Subsequent enquiry proved the guilt of two of the priests, jealous for their religion, and who had resolved that the Temple should not pass over with the new year to the Shintô sect. We recorded their execution a few weeks back. We learn that it has been resolved to erect another temple upon the time-honoured spot, and that a suitable building has been purchased in the country and will be removed to and re-erected on the site of the destroyed edifice.

"Few who were present at the fire," writes a spectator of this calamity* "can ever forget the grandeur of the scene, where the noble old pile backed by a grove of dark cryptomeria trees, blazing with exceeding fierceness, illuminated the city for miles round, the roar of the fire being audible for an incredible distance, whilst the showers of sparks belched forth, mingling with the snow-flakes then falling produced a pyrotechnic effect never probably before witnessed. During all the time, notwithstanding that the heat was intense, the great bell (one of the three celebrated bells of Japan) was steadily tolled, adding an indescribable solemnity to the scene, until, becoming red-hot, the ring by which it was suspended gave way. The alteration in its note at this time was very remarkable."

It was stated yesterday that telegrams confirmatory of the declaration of war had been received from Shanghai. But on enquiry it would seem that they only prognosticate the event as possible, thus telling us no more than our own information has enabled us to surmise. It may be presumed that the consequences of the Corean embroglio will be largely shaped by events at Peking.

The Peninsular and Oriental Steam-ship *Orissa* with the English mails of the 6th September, left Hongkong for this port on the 12th instant, at 6 A.M.

According to an American newspaper a late distinguished visitor to this country is utilising his Japanese experience.

Rev. Dr. Newman, Ex-Chaplain of the Senate, and Mrs. Newman, gave a novel entertainment at Cape May the other day A complete Japanese teaset was spread on the floor, and the guests sat around in the Japanese costume. Four ladies were attired in elaborate Japanese costumes, and tea of the superior quality that is only used by the Emperor and mandarins, brought from Japan by the Newmans, was erved in dainty Japanese cups.

Are not the *Mandarins* somewhat out of their element?

A few scratch races of pair-oars and four-oar boats, which had been got up by the Yokohama Rowing Club, came off yesterday afternoon, in spite of an easterly wind and a chopping sea. The races afforded much amusement to the spectators on shore.

We learn that the P. & O. steamer *Kashgar* with the London Mails to September 3rd broke down at Singapore. Her Mails were brought on to Hongkong by the O. S. S. Co.'s *Agamemnon*.

A certain Hayashi Jumpe, the writer of an offensive letter in a recent issue of the *Nichi Nichi Shimbun*, has been summoned to answer for an offence against the Press Laws at the *Kencho* of Kurushiki in Bishiu where he resides. This is a case of double-handed punishment, the Editor of the journal in which the letter appeared having been already imprisoned for the offence.

The three *Daijin*, Sanjo, Shimadzu and Iwakura, had an interview with His Majesty the Mikado at the Palace yesterday morning.

We learn from the *Nichi Nichi Shimbun* that Kinrinsho, a Corean of rank recently arrived in Yedo, has visited the man-of-war *Tzububakan* at Shinagawa. The men were exercised at gun-drill for his inspection.

The Editor of the *Choya Shimbun* was summoned to his divisional police-office on Tuesday last to answer an offence against the Press Laws. He is under police *surveillance*.

The Exhibition at Osaka will open on the 1st November.

We have to acknowledge the receipt of the late Baron von Gumpach's "Treaty Rights of the Foreign merchant and the Transit system in China," which we hope to notice in a future issue.

* *Our Neighbourhood* "The Bells."

The following reply was made on behalf of the *Kuadzoku Kuaikuan* (or Noble's Club) to an address delivered by the Mikado on his recent visit.

In accordance with the Imperial will we, Your Majesty's servants, have instituted this Society with the view of labouring to effect the amelioration of our people and our country. We heartily thank Your Majesty for having deigned to visit us, for the good counsel you have given us and for the countenance Your Majesty has been pleased to bestow upon our humble exertions. Encouraged by this manifestation of the Imperial goodwill we will yet more sedulously direct our attention to the objects we have proposed to ourselves, the welfare of this land and the support of Your Majesty's Imperial Throne.

We reprint the entries that have made for the forthcoming Autumn Meeting. Although the training is said to be somewhat spiritless and uninteresting, we observe that the entrance money reaches the sum of $1,565.

The native papers continue to offer favourable predictions of the large rice crops which will be gathered during the current harvest. It is tolerably certain that, despite the losses from floods in the western provences, the aggregate will exceed that of last year very considerably.

An unimportant fire at Ushigome, Tokio is reported by the *Hochi Shimbun* as having occurred on the 13th instant.

The native newspapers contain but little news. The *Nichi Nichi Shimbun* tells us that snow has already begun to fall in the provinces of Shinshiu and Hida. A bad fire had nearly destroyed the village of Adzumimura in the former province.

A correspondent requests us to draw attention to the annoyance the Public experience at the Shinbashi Railway Terminus in Yedo from the *jinrikisha* runners. There appears to be unrestricted competition, the arrival yard is filled with an irrepressible crowd, and the traveller is assailed by them on all sides. Our correspondent contrasts this sketch with the excellent arrangements made in Yokohama. The matter would seem to be deserving of attention.

M. A. Mottu made the first and M. Favre-Brandt the last bull's eye in yesterday morning's shooting at the targets. M. Brennwald make the first and M. Vannes the last in the afternoon.

SHIPPERS OF SILK.

Per Messageries Maritimes steamer *Volga* despatched on the 12th October.

	France.	London.
Sundries	507 bales.	114 bales.
		Total 621 bales.
Waste Silk	160 bales.	

The O. & O. S. S. *Belgic*, which sailed to-day took the following cargo of tea :—

From	San Fran.	New York.	Other cities.	Total.
Shanghai - -	27	2,516	532	3,075
Nagasaki - -	—	—	685	685
Hiogo - - -	—	2,554	1,024	3,578
Yokohama -	3,159	4,667	2,425	10,251
Hongkong- -	50	—	—	50
Amoy - - -	—	996	—	996
	3,236	10,733	4,666	18,635

SILK.—To New York, 754; to Hartford, 96 Cocoons; Total, 850 Bales.

IMPERIAL GOVERNMENT RAILWAYS,

YOKOHAMA STATION.

Statement of Traffic Receipts, for the week ending Sunday 10th October, 1875.

Passengers, Parcels, &c.....	$8,249.34
Merchandise, &c.....	$1,078.55
Total.....	$9,327.89

Miles Open 18.

Corresponding week last year.

Passengers, Parcels, &c.....	$7,904.23
Merchandise, &c.....	$ 832.23
Total.....	$8,736.46

THE YUNNAN AFFAIR.

IF, as Secretary for Foreign Affairs in Downing Street, we had to take leave of a Minister appointed to Peking, our last words would be, "Now, mind; no war." And by this we should mean that war with China is a wretched and rather scandalous thing, a miserable contrivance necessary only as a corrective to bad management, and indicative of a misunderstanding, or non-discovery, of the true method by which our affairs with that country should be conducted. We do not care how arrogant, supercilious, obstructive and ridiculous the Chinese are. We have now had a great deal of intercourse with them, and know the national character as fairly as we know anything of importance in Asia. And we know that this character is very hollow, very false and very cowardly. We know that it never has, and do not believe that it ever will, hold its own against the firm-fibred will of the European of the higher type of mind; and, with a fact like this to go upon, we ought never to be dragged into war. Of course the correlated duty on our side is that we ought to be just in our demands, and faithful to our obligations. We ought, too, to set about taking the suppression of the Opuim trade into serious consideration, and we ought not to allow affairs to be complicated by the bishops of a detested religion riding about in sumptuous green palanquins, followed by a numerous retinue, in scorn of the example of the fishermen who laid the foundations for the conversion of Europe and of our present civilization. If clauses have miraculously got into the treaties which sanction anything of this nature, critics should be called in to see whether the miracle has any parallel in the winking virgins or the liquefaction of the blood of San Januarius, and, if there really have been any such juggleries, they should be exposed, the performers punished, and the injury redressed. What we object to is war carried to Peking, or war, let us say, with China at all. If the Tsung-li-yamên pleads that the Government cannot inflict punishment in Yunnan on the murderers of Mr. Margary, why cannot we say :"—If your Excellencies cannot do it, we can, and are quite prepared to do it. Punished they certainly shall be; and if not by you, then by us. It is, of course, your business, and if we undertake it and save you the trouble and expense of marching the disorderly ragamuffins you call troops, into your western province, you must pay the expenses we shall be at in taking a few thousand men across the frontier. Or send your troops, if you will, and we will send some of ours, to see justice done and fair play?"

The idea of a Commission of Enquiry in Yunnan on which two Englishmen were to sit, seems to us visionary, so far as it could have led to any practical results. What could they have done; what, compelled? what, guided? They could have protested with British vigour and indignation at the chicanery, the lying, the hypocrisy and sham with which they would certainly have been confronted. But what else could they have done? And, surely, the declaration of war should naturally have succeeded the results of such an enquiry, if there were to be one, in case of its proved unsatisfactory nature; whereas, if we mistake not.—for it seems to us that the whole affair has become terribly tangled—the declaration of war was threatened first. We are in no humour to blame Mr. WADE for keeping his movements, intentions, and the purposes of the British Government, quiet, as he has done; though it seems to us quite an open question whether he would not have done better at first to take all his colleagues into council on the news of Mr. MARGARY's murder, and so make it an affair for all the Treaty Powers. There could have been no two voices about the necessity for punishment, and the manner of bringing it about would have been determined without serious difficulty. Yet it is idle to suppose that Mr. WADE did not take this into consideration, and determine on a different course, as he did, for very good reasons, though we may be ignorant of them. The same reflection occurs in regard to his constant conferences with LI HUNG CHANG—with the Governor of Chihli, rather than solely with the Tsung-li-yamen. We cannot tell why he should have done this, and, on the face of it, it seems a capital error. But we do not know his motive for this, while we all know that he is a very able man, extremely unlikely to make a mistake in a matter of this kind. The presumption, *à priori*, is that he has done the best thing which he could do under all the circumstances, and the first thing that a man in public life must learn to do is to harden himself against the lower forms of newspaper criticism, which are useful rather as reflecting the abundant folly of the world than anything else. But, to return to the position from whence we started, these wars with China should be objects of intense aversion to men who feel that whatever victories may come from them, it is an odious thing to strike a set of men like the Chinese, —the silliest poltroons in war the world has ever seen, whatever good qualities many of them may individually possess. It is like firing at sheep with rifled guns. We ought to throw down our arms and tie one hand behind our back before we approach them, to make the thing at all fair. And this, of course, is said in no spirit of braggadocio, but proceeds from a rooted aversion to wars with inferior races for what are, fundamentally, only commercial ends, important as we quite admit these to be.

But the Minister whom we supposed to be leaving for China, might fairly reply to his chief;—"My lord, if you will pardon my freedom, we can keep out of wars easily enough, if you would not be so terribly nervous at home about the danger of getting into them. It is by your orders that we give way and give way, and are fubbed off and fubbed off by these Chinese, until war arises out of the very pains we have taken to avoid it. China is to you a huge bugbear, while, in reality, she is as ready to run away as ever Falstaff was. Whether employed in hacking his sword, or stabbing dead Percy, or making eleven men in buckram out of two, or running out of Ford's house in the witch of Brentford's clothes, or jammed into a buck-basket, like a good bilbo, in the circumference of a peck, hilt to point, heel to head, it is always the same; like Falstaff, the Chinese are ever braggarts and cowards. With the best intentions, we have been instructed to deal with them by the straitest rules of our craft, while the best way to manage them—I speak metaphorically, of course, my lord,—is to knock their heads together, as the only method of getting the nonsense out and some sense in. These people have no sense of obligations. A clause in a treaty is to them only a thing which presents room for ingenious and plausible evasion. If the second table of the law were given to them, they would take the 'not' out of every one of the Commandments. China is a country where two and two make anything rather than four, —three, or five, or a million, but never four—and you want us to deal with it as we deal with France or Germany. It is impossible, my lord. It is you who make the wars, not we. You have so humoured these men with the peacock's feathers, that the ball-and-socket now frightens you. You fancy it is charged with powder and will burst in your

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

faces, whereas it is as flat as the Foreign Office on the eve of the Franco-Prussian war, and deceives you as effectually as you were then deceived. Again I entreat your lordship to pardon my freedom."

"BEMMO" ANALYZED.

A correspondent has courteously sent us an analysis of "Bemmo," which will be found elsewhere. It may be useful, as a summary, to those who have not read the work itself, and certainly will give a clear idea to all who are interested in the question of the religious change which must sooner or later come over this Empire, of the nature of the difficulties presented by the Japanese mind to the reception of a higher form of faith. But it presents one point far more interesting to a student of the history of the human mind, and that is, the nature of the objections made in it to Christianity, as compared with those most frequently heard of and felt among ourselves. Upon these we should like to say a few words, premising that we do so with no idea of provoking a theological discussion, or even taking part in one; but because the point on which we wish to touch, though theological in its bearing, belongs to the comparative history of the human mind.

If the objections, then, of the writer of "Bemmo" are analysed, they will be found to be almost exclusively moral objections. He does not see *why* so and so should have been the case—why the serpent was created and permitted to deceive Eve; why GOD did not dispose Pharaoh favourably towards the Israelites; why certain offences went unpunished; why the famine in Joseph's time was not prevented, etc. His objections to the Mosaic cosmogony are of a different order. He cannot understand how GOD can be represented in the form of a man: he does not know of what materials the sun, moon and earth were formed. Coming to the New Testament he objects to the teaching of CHRIST because it runs counter to that to Confucius, and tends to confuse or destroy the sense of the respective relations of monarch and subject, master and servant, parent and child. The doctrine of the Atonement, as well as the stories of the Resurrection and Ascension, are to him fabrications of the disciples; after Christ's burial, his body was stolen away; and even if raised, this very act tends to exalt the body at the expense of the soul.

Now, most of these objections are of the nature of those dealt with by the anti-deistical writers of the early part of the last century, most notably, by Butler. Butler's plea, as we all know, is that the constitution and order of Nature present precisely the same kind of anomalies as are presented by Revelation, and that presuming GOD to be the author of the one, there can be no objection, on these grounds, to believing him to be the author of the other. The great writer we have named covers all the ground taken by the author of "Bemmo," and a far wider extent as well, of the bounds of which "Bemmo" has no conception. But it must surely strike every reader of the work as noteworthy that the Japanese writer nowhere takes exception to the profuse display of the supernatural both in the Old and New Testaments. It may certainly be presumed that he has neither any *à priori* nor *à posteriori* objection to miracles, and, if questioned on this subject, he would, in all probability, reply that they presented no difficulty to him. The question of the date of the documents which narrate these things, their authenicity, their value as evidence, the value of any evidence to establish a miracle, and the grounds, both scientific and psychological, on which the modern objections to the supernatural rest, are all matters wholly unknown to him. Nor is this for a moment to be wondered at or censured. The objections made by Bishop Colenso's Zulu were those of a thoughtful man accustomed to move about with considerable numbers of his tribe; in other words, were objections based on the experience of his every-day life. The objections of "Bemmo" are those of a man accustomed to more or less reflection upon the rudiments of moral philosophy and theology, but wholly unacquainted with critical science or natural philosophy. Considering how entirely new to us and unknown to the Japanese, these two branches of knowledge are—new, that is, in the form in which we now possess them—it is conceivable that the specific recommended by the author of the "Analysis of Bemmo," viz, Leslie's Short Method with the Deists, a work of great merit, might avail for all the purposes of an answer. (Butler could no more be translated into Japanese than a man's hand could be got into a child's glove.) But though such an answer might be satisfactory to such a mind as that to which we have traced this work, it is idle to suppose that it will be satisfactory to the younger men who are growing up with books on Natural Philosophy in their hands. The point here is not of the absolute excellence of the answer, but its relative adaptation to the mind of the objector. We do not say that a satisfactory theory of Christianity cannot be offered to such minds, for we think that it can; but we are quite certain that it cannot be extracted from Leslie or even Butler, because the whole controversy has been carrried, by the advance of knowledge during the last hundred and fifty years, on to altogether different ground. It is not an uncommon thing to hear clergymen say—in the pulpit—that Hume's argument against miracles has been answered over and over again. Will one of them be so kind as to tell us where? If there is any answer to it, we should feel extremely grateful to any one who will point it out. With many of the more common objections to Christianity we have no sympathy whatever, and think very decidedly that they have met with decisive answers. But Hume's position has always appeared to us unassailable.

We think, then, that the author of any reply which may be made to "Bemmo" must occupy ground which which not only commands this special work, but which is a fair exposition of the Christian side of the argument at this moment. And our reason is this. The work may easily get into the hands of some one whose pursuit of natural philosophy has led him on to ground wholly unknown to the author of "Bemmo," and if he finds that such objections as have occurred to or been acquired by him, are not answered in the reply, he may easily imagine that no reply to them is possible. But the writer who undertakes this task must recollect that much ground fought over in the eighteenth century, even by the most advanced theologians, has long since been abandoned as wholly untenable. If he wishes for proofs of this, let him compare Brown's Dictionary of the Bible, published so late as the year 1870, (we write from memory, and it may easily be later), with Smith's Dictionary published ten years ago, a work which stands on the shelves of every divine who can afford it. Even Calmet, who frightened our whole clergy list when his work first appeared, is wholly superseded now. The early English geologists, many of whom were divines, fought very hard for the Mosaic cosmogony; but all gave it up who lived long enough to do so; and men who do not see the bearing of the doctrine of evolution—accepted now by most intelligent divines under forty years of age; of the conservation of force and the correlation of

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

forces, which is accepted by every one; and of the results of Darwin's researches, which are gaining ground every day on the mind of Europe, although perhaps the process by which he explains the diversities of organic life is not the only one responsible for them:—such men, we say, have simply no right to be in the position of public teachers. A man who insists on the literal acceptance of the words "And they heard the voice of the LORD GOD walking in the garden in the cool of day"—words which present no difficulty to one who has formed his theory of the Bible on the facts which it presents—is almost disqualified *ipso facto* from dilating worthily upon the sublime utterance, "GOD is a spirit, and they who worship him must worship him in spirit and in truth" It is greatly to be lamented that any set of men are suffered, or suffer themselves, to call others, *totidem verbis*, fools, or denounce them as evil livers, simply because they have a different theory of the Bible and of GOD's process of educating the world, to themselves. In all ages of the Church men have loved dearly, and clung to closely, and fought for bravely, that which they believed to be true. But they have seldom done all this for truth, the love of which is perhaps the rarest of virtues; and priests, of all other men, have most turned their backs to the light, and obscured it from the view of those whom they should have led to kneel reverently before it as the best and divinest thing of which we have any knowledge. Good and zealous, benevolent, virtuous and self-sacrificing in their individual capacity, they have, in their corporate capacity, exhibited more blindness, illiberality and ignorance, than any other class, with equal advantages, in the world. The time may come when the religion of CHRIST will regain its power over the hearts and lives of men, but to do this it must harmonize at once with their conscience and their intellectual convictions. It is idle, nay, false, to say that, as ordinarily preached now, it does either the one or the other.

"BEMMO" ANALYZED.

[*Communicated.*]

IT appears that the Essay entitled "Bemmo" has been translated, reviewed, attacked and defended—all in the English language, and chiefly for the benefit of foreigners, especially of "missionaries newly resident in Japan." The brochure has been regarded as significant of interest on the subject, from having been composed by an author who "occupies a high position amongst Japanese *literati*"; from being introduced by a commendatory preface written by no less eminent a person than Minamoto Hisamitsu *su*—the great Satsuma chieftain of former days, a high Minister of the present administration—better known amongst us by his name of Shimadzu Saburo.

Leaving the task of preparing a suitable answer in Japanese to the Missionaries who are not so "newly resident in Japan," we venture to submit, for the convenience of English-reading persons, interested in this subject, a brief analysis of the work which has—rightly, as we think—secured so much attention.

We suppose it contains the best resumé that has been, perhaps that ever will be, made of the difficulties felt by minds of Sinico-Japanese culture, to the reception of the religion of the Old and New Testaments. Let us take careful note of the nature and value of those difficulties.

PART I.—THE OLD TESTAMENT.

"Hankiushi, being an old man, has perused the foreign book, and has thrown it aside—having found its errors monstrous, and its arguments so shallow as not really to need refutation. But, seeing that some foolish people are deceived by it, even so far as to believe in its teachings and die in such belief; seeing moreover that this evil seems to be spreading, he can no longer withhold explanation, but proceeds to present the matter in a clear light.

"He objects to the Mosaic account of the Creation on the ground that GOD is represented (so he understands) as having a form like that of a man: also he does not understand with what materials the earth, sun, moon, &c. were made.

"Again: He does not understand why the serpent was created, and was permitted to deceive Eve; or why Eve's punishment (painful parturition) should extend to following generations, and even to animals. Moreover, he would like to know how things would have been carried on if Eve had not transgressed.

"He assumes that the antediluvians were untaught and unprepared, and considers that their destruction by the Flood was a "fearful act of violence" on GOD's part, evincing a disposition unsuitable for the Ruler of the Universe. He is at a loss to know where the place called "the Great Deep" is, but considers that the Deluge, coinciding in time with that recorded in Chinese annals, actually occurred; but counts it false that the mountains were submerged. More probably the Deluge was partial.

"As to diversities of language, they could not have taken place suddenly: the Bible explanation of this and other things are similarly unsatisfactory; but it would take a month to expose their falsity.

The Divine intervention in favoring Abraham, Noah and Moses; also in influencing the arrangements of Jacob's family, he regards as "petty and mean;" and he wishes to know why GOD did not prevent the famine in Joseph's time. Besides; how could the harvests of Egypt suffice to avert famine from "the whole world?"

Again: why did not GOD *make* Pharaoh well-disposed to the Israelites, instead of punishing him? And why does he punish any one—e. g. idolaters—seeing he commands us to forgive others?

Some of the moral precepts of the ten Commandments resemble "ours" (Confucianists), but GOD did not *himself* observe them, while the offences of Lot's daughters, and of Tamar, went unpunished. How can such things be said of the Creator of the Universe as that he caused Moses to steal from the Egyptious, or coveted the spoil taken from conquered tribes, or exterminated whole tribes of people? This shows a love for killing.

"Looking through the whole book [the O. T.] we find that Noah was the first believer in this malignant deity, whose worship Abraham propagated and Moses perfected; and since other lands are little mentioned, we may know that the "land" or "earth" spoken of in the book is only that little portion which lies in the adjacent corners of Asia and Africa.

PART II.—THE NEW TESTAMENT.

"Confucius taught that we should show gratitude to our parents and our rulers, besides treating relatives with due affection and all men with proper respect. "Jesus Christ, however, taught that the *true* parent and *true* ruler was in heaven; and that He himself was the Divine Son who came to save the world.

"It is true that, even according to the Celestial Doctrine (*i.e.* the Confucian) the parent and ruler have no power to give, or to destroy the *spiritual* nature; but the teaching of Jesus has the effect of diminishing the affection of children for their parents, and of estranging a wife from her husband's mother; though to a certain extent he does recognize the principle of filial affection. Lords and masters however he would have treated like other people; and, if they were not believers in him, as enemies; in which light also he regarded officers who received customs' dues.

"Claiming himself to be the Son of God, therefore, there were none above him in the world. Hence one of his followers said "I know of no sovereign," and of no other gods: I pay taxes to the Emperor, but do not bow down to him."

"The effect of such teaching is that parents and rulers are contemned; and those who are infatuated by it will sacrifice their lives and make light of punishment, rank and wealth.

"Confucius said, "I do not understand this world; how can I know the next"? But Jesus says much on this subject, and speaks of the other world as having himself been there. Now supposing (for the sake of argument) what he says to be true, it can only apply to the soul; but the soul knows nothing apart from the body; Jesus

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

cannot, of his own will, impart senses and feelings to the soul; [so his teaching amounts to nothing.]

"Jesus also declares that after death there will be no more marriages and consequently no more eating and drinking; in which case life would hardly be worth having. As for "imperishable crowns," our author declares he does not care to receive one; and moreover, that has no "fears of eternal fire." Nay, he protests that he would not abate one jot of his love to his parents, or duty to his ruler, even though it were true that Jesus is the Son of God and will reward those who do, and punish those who do not honor him above parents and lords.

PART III.—(TEACHING OF JESUS.

The story of Jesus' suffering as an atonement and of his resurrection and ascension is an invention of his followers.

He found Buddhism prevailing to the south of his native land, and the Religion of the Romans to the north, and by opposing both he brought on a struggle—causing his enemies to detest, and his followers to exalt him; and when the latter would have made him a king, the Governor was offended and Jesus was crucified.

If Jesus had intended to sacrifice his life, he would have been composed on the night preceding his execution. It was through ignorance he chose his betrayer, Judas, to be one of his disciples. He did not deliberately give himself up, of his own free will. How could he know that his death would be an atonement for the sins of mankind? By restoring his body to life, he placed a high value on it, to the neglect of his soul. He should have mixed with many people after his resurrection; if indeed he did rise; but he did not, the disciples stole his body. The application to Jesus of the prophecy of the Paschal lamb, whose bones were not to be broken, is an idle invention of his follows.

PART IV.—(BUDHISM, CONFUCIANISM AND CHRISTIANITY.)

"Some ignorant people think that Christianity and Budhism are alike in many points; (not, however, as to transmigration), and that, as the one has been long tolerated here, so the other might be, without danger. Not so: although both are bad, Christianity is the worse, in not teaching that we should pray for the *future* well-being of parent and master, but confining our regard for them to the present life alone—as though we were mere animals; also, in not tolerating other gods, so that—if it should prevail, the shrines of *Jimmu Tenno* and of deified emperors and heroes would be neglected. Confucius and other sages treated the dead in the same way as the living—the object being to lead the people in the right path of morals.

"By the teaching of Jesus, on the contrary, no regard is paid to the parent or the master, after death. His followers only care to secure happiness for themselves in the after life. If this idea (which is an allurement of profit) should prevail, our customs would become greatly depraved.

"Budhism has existed here for 1000 years, and could not be suddenly repressed: if this were attempted the whole country would be in an uproar.

"Of late years there has been a rage for innovation, and Christianity being (though shallow, yet) plausible, if the people—always ignorant and easily deceived—should be led away by it, it will gather such head-way as nothing will stop but putting to death its followers.

"There are said to be 25 Christian sects in America; and that each clings to its tenets unflinchingly, thus causing and perpetuating strife. Can this be called a Religion? Christianity attacks Buddhism and is opposed to Shintoism: if these three are all tolerated, the strife would be endless.

"Finally: though we are now on good terms with Foreign Powers, yet times may change; and if a designing enemy should come here, professing a desire to extend Christianity, native Christians would join him and turn their swords against their own countrymen. Our conclusion is, that those who favour Christianity wish our country to be disturbed, its people to be killed, and the proper respect for parents and rulers to be forgotten."

Thus far our abstract, or analysis: which we have endeavoured to make as brief as is consistent with fairness, and which presents we think the substance of the views and difficulties of the learned writer, in a form which may be appreciated by those, both here and in other countries, who are interested to know how a Japanese of the old school, is affected by the spread of Christianity among his fellow countrymen. The statement of his difficulties is made with commendable courtesy, although he says some things which are sufficiently contemptuous in their implication. Only on one occasion do we observe a dash of recklessness which is perhaps characteristically Japanese; and that is, where he says "Supposing that Jesus *were* the Son of God, and rewarded those who believe in him, and punished those who loved their parents and honored their lords and masters more than they did him, even were I to become the very devil himself, I would not fail one jot in my love to my parents, or in my duty to my master" (p 16). Let us hope that this utterance is owing to the fervor of composition, such as a writer of repute may be supposed to feel when he is finishing off the last sentence of an exciting chapter.

It proceeds, however, on the thoroughly Chinese idea that ruler and parent are *supreme*: that we know nothing about the "powers above" with sufficient distinctness to give them a claim on our ultimate allegiance.

It is no part of our present purpose to reply to this brochure. Any one moderately acquainted with these subjects knows that four-fifths of the objections it embodies have been answered and cleared up, over and over again. Part of the difficulties arise from inapt translation, or from misapprehension on the part of the reader; and almost all the remainder are objections to Natural Religion, under whatever form it may be viewed. With such a small (but pithy) book as Leslie's "Short Method with the Deists," one might go through this pamphlet and check off, sentence by sentence, the reply to each difficulty until the only residuum left would be:—

1.—Christianity will disturb our country.
2.—Will cause our people to be killed.
3.—Will dethrone rulers and parents.

PART 5.

More candid and less cautious than many in these days whose policy it is to doubt and destroy but refuse to prove and reconstruct; our author gives us his own views of the origin of the Universe and of mankind; as follows:

"In early times there was a mixture of Gods and men in Japan which caused great confusion. Whereupon a certain Emperor entrusted celestial affairs to one person, and the terrestial to another, thus bringing about a rational order of things: the Five Rules were drawn up; the Five punishments employed; and the Nine Virtues encouraged. The succeeding Emperor being eminent in learning and moral excellence, "manners and music reached a high state of perfection."

"The Western nations, not knowing Confucianism, have nothing better than the religion of Jehovah; though some of their people considering their general ability) must know that it is false; but they keep silent, in fear of encountering hostility; while some others (clever but wicked) use the religion of Jesus as a means of conquest.

"The Sages say nothing (consequently we know nothing) of the origin of mankind. But lest the people should be led astray by the fallacies of Christians, our author proceeds to state that the heavenly bodies revolve, the seasons occur regularly, &c., &c., and this order has remained unchanged from earliest ages.

But the sun is the life-giving energy, while the earth is receptive—hence male and female, man and woman, and all the animal creation.

* * * * *

There we must stop, for what follows is of such a nature as befits the medical Lecture-room rather than the columns of a public journal: it follows the Chinese line of thought on these topics, even to the adoption of divination by means of the casting of lots, prognostics and those leger-de-main combinations in which the Chinese fortune-tellers excel.

This is what our author set up to counteract Christianity; and he seems to be hopeful, especially in regard to India where he has heard that, in the last forty years, many have looked with favor on Confucianism, and have

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

translated the sages' writings; which, before long, may be expected to overspread the land, and cause other religions to diminish.

"Therefore, if Christianity be introduced into Japan now, the state of things thirty to forty years hence will be that, while in India Buddhism will have died out, an evil similar to Buddhism will remain here. Can this be denied? And surely the government "ought to see to it."

Leaving it to experts in the Japanese language to deal with "Bemmo" as they judge best, I content myself with this attempt to shew what we have to encounter among the earnest-minded men of the older culture.

CHRISTIANUS.

SPIRIT OF THE JAPANESE PRESS.

ASIA.—CHINA, RUSSIA AND ENGLAND.

(Nichi Nichi Shimbun.)

Dark and warlike conditions prevail in the East, and in our issue of the 6th inst., we said that calamities would await Asia should these conditions be realized. Our welfare or misfortune depends upon our eluding or encountering these, and those who argue for war with Corea are only advancing towards trouble. In the interest of our country we have zealously argued this question on several occasions and cannot now refrain from speech. On a recent occasion when we translated and published an article on the Central Asia Railway question, we made some reflections upon the antagonism of two powerful countries, England and Russia, who are competing for supremacy in Asia, and said that unless one or the other yielded war was ultimately inevitable.

Our readers should be more or less acquainted with the Central Asia question. The Emperor of Russia, in obedience to the will of his grandfather, always has his attention turned towards the East, with the design of making the important city of Constantinople his capital, to acquire the command of the Mediterrnean, and bring about the ruin * of Europe. But since her defeat in the Black Sea, Russia has contrived to make peace with the more distant countries of western Europe and attack those nearer to it eastward. By friendly overtures to Persia she has gradually deprived Turkey of the foundation of all Asiatic assistance in the time of need, while the Khivan war was a contrivance for extending the Russian influence into Central Asia. The Russian Emperor is now constructing a railway to extend beyond Persia to Samarcand, and when this is completed he will push his frontier as far as British Indian territory, and thus facilitate an attack on Delhi. When this time arrives, how is England to protect her subjects and interests in India? This can only end in war. It is impossible for us to know how this question will turn out, but it occupies the attention of the ablest men in Europe. Yet we think that these two nations by friendly negotiations might agree not to attack each other, although the whole Asiatic question cannot be settled by these means. If asked how we infer this, we reply that the conflicting commercial interests of the two countries in regard to China grow day by day more important.

Some ten years ago the British Government in India resolved to open a route to Yunnan through Burmah, for commercial purposes, and a survey of it was commenced. But at that time the railway system of Europe was neither so extensive nor so completely organized as at present, and it was thought that traffic by this route could not be carried on so conveniently, so cheaply, or so rapidly as by water, and steamers were at that time in extensive use in all these quarters. But the Central Asia question reviving, the opening of this land route revived with it, and Mr. Margary was ordered to go over it. But he was killed on the road, and his murder has become the principal article in the present complications with China.

Turning from these to the Russian proceedings, we find that a caravan was attacked by the Chinese between Tenzan and Kanshiku the year before last, and the Russian Government has long pressed the Chinese at Pekin for compensation or this account. But the Chinese have constantly postponed the settlement of the claim, which has now been brought forward again by the Russians. Russia is a great power in Asia, and seems endeavouring to develope its influence to the same magnitude as that of England. But as England has enormous commercial interests in Asia, Russia wishes to push her railway to Peking, stretching from Khiva to Samarcand and then crossing over from Tenzan to Kanshiku in order to secure all the traffic of this quarter. Russia despatched the caravan to China to secure these commercial interests, but when he was killed by the Chinese, Russia had the same excuse for pushing her road as the English had on account of the murder of Margary. Now China has either to comply with the demands of these two powers or to refuse them, or to allow the questions to remain open. Should she comply with the demands of the English, the Yunnan trade will be opened and a railway made there, the English will advance through Burmah to Yunnan, and the commercial supremacy in that part of China will be that of England. If, too, the demands of the Russian Government be acceded to, and the trade between Tenzan and Kanshiku be opened, the chief interests of commerce in that part of the Chinese territory will be Russian. The one will have the greatest influence in the South-west; the other in the North-west. It will be impossible to concede the demands of the one and refuse those of the other.

Whichever power opens up the commercial route to China, has the grasp of the neck of the East, so that it is no exaggeration to say that immeasurable misfortunes are bound up in the question. The Central Asia question advances steadily Eastward: it has reached China, and cannot be without the effect of arousing a warlike spirit. We cannot see exactly when and where misfortunes may arise from all this; but it is clear that an ordinary negotiation will not suffice to avert the danger. The motive neither of England nor of Russia is one of reason; both are solely actuated by their interests. Whether England and the Russians unite and attack China, or Russia and China join against England, or China and England unite against Turkey, are things wholly uncertain to-day. Wherever the trouble may break out, those who demand a war with Corea must imagine that these unfortunate times are so far fortunate that they give us an opportunity for going to war. This is a great mistake, however; Japan is not in a position to mix herself up in these complications. Let her beware lest she be swallowed up herself. Let her stand aside and look on. Were we carrying on war with Corea and another war were to spring up, we ought to abandon the former and stand neutral and contrive how we could push our commercial interests. But how much more should we do this while war has not yet been declared? Reader, open your eyes, and mark the neutrality of England when continental wars arise. This preserves her in peace and enables her to extend her commerce. Should Japan be incited by the example or influence of England or Russia to scorn China, and think the present a fine opportunity for making aggressions on Corea, the dark shadow of war may come and obscure our flag. We think that this would be a grievous misfortune.

COREA—THE NECESSITY FOR A HOUSE OF COMMONS.

Since the late attack was made upon the *Unyokan* by the Coreans, we have steadily argued against war. But whenever we come within hearing of any party of *samurai* they all seem to be urging war. And not only they, but we hear that some of the officials are doing the same, and some of the newspapers espouse similar views. But, like the *Nichi Nichi* and the *Hochi Shimbun*, we have argued that this would be a mistaken course to adopt, and it is not our intention to repeat our arguments here. We have latterly heard an important rumour outside, the foundation of which is said to be uncertain; but, be this as it may, we think it well to mention it and say a few words about it to the public.

Certain officials have said that a war was about to be undertaken against Corea, and therefore we must provide for the conveyance of our mails and merchandize on the coast. Last year when all our ships were away in Formosa, great inconveniences resulted from this source, and thus we ought to lay out a million of dollars immediately upon the purchase of four of the Pacific Mail Company's vessels, and send them to Corea, while we use those of the

* Qy. Exercise supreme influence?

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

Mitsu Bishi Company for carrying mails and merchandize as they are now doing. Should the P. M. S. Company ask too much for their vessels, we must send to England or America and buy new ships suitable for the purpose, even though this should cost us several millions of dollars.* The officials are said to speak as definitely about war as if the Government had entirely resolved upon it, and when we heard this, it at first gave us great pain, though after thoughtful consideration we have come to the conclusion that it must be false. And, alas! we have heard that the treasury is at a low ebb. Is the Government under these circumstances going to act so recklessly as this?

But the purchase of these four ships will not be the sole expense which the Government will have to incur. Of course all this is only street rumour, and rests on no reliable foundation. But as the Government is a lofty thing, we common people cannot understand its motives of action, though, if this rumour be true, it would not become us to be silent. If the Corean expedition, about which so much has been said, has actually been determined on, of course it cannot be helped. The great expenditure this affair will necessitate must first be borne by the Government treasury, and afterwards each one of us thirty-five millions must bear his share of it. In cases of this sort rulers and people must be of one mind; it is not enough that it is the will of the Government, of the officials, or even of the naval and military officers. All must agree, including ourselves.

But if this is the case, our great need is a House of Commons. Now, it is a long time since this question was first discussed, and if it is not now the right time to institute the House, when will it be so? The present question demands the unanimity of which the Chinese sage spoke when he said "No man should be condemned to death except by the voice of the people." So it is with war. Unless the whole nation is in thorough agreement on the subject, war should not be declared, and any one gifted with a little common sense can surely understand this. It is said that the Government intends sending this expedition, which will cost great deal of money. If this were granted by a House of Commons, there would not be a word to say against it; and in this view a House of Commons is our greatest requisite at this moment.

PART II.

We have above argued the necessity for a House of Commons, and we would now attempt to show of how great an advantage the institution would be to the Government.

It is said that all the four corners of this Empire are tranquil when looked at from outside; but there is in reality a disposition to make disturbances within. The south-eastern corner seems the worst, and if this cannot be tranquillized, trouble may arise from this quarter. We cannot tell how far these rumours are true, but as they certainly gather in strength, we think there must be something in them. It is in this condition of affairs that these dark tidings reach us from Corea, the warlike spirit of some is aroused, and many of the people think that war will immediately be declared. What anxiety for those who are in the Government and who hope that peace may be preserved! There are some who say that war should be declared against Corea in order that peace may be preserved at home. But we cannot and need not repeat the arguments we have already urged against war. It is not now a question of war or no war. It is a question of the establishment of a House of Commons. For if the Government acts contrary to the sense of the people and declares war against Corea without their support, everything will go wrong; and therefore a House of Commons is a matter of paramount importance. Again; suppose the Government acts on the views of those of us who are against war, what must be done to avoid disturbance at home and to secure safety both to the Government and people? By extraordinary expedients the effects of dissatisfaction may be staved off for a short time, but its origin cannot be destroyed, and this would be like giving violent medicines and only producing temporary alleviation by means of them. But we are desirous of preserving the heart of the people from this shrinking condition, and of cutting away the root of this grievous evil. This can only be done by the establishment of a House of Commons.

Some may say that it is not in uncertain times like these that so important an affair can be undertaken. Agitation for this purpose will only increase the present dissatisfaction. But this seems to us the idle talk of those who cannot discern their opportunities. Nations only fall from the too great oppression of the people, and should there always be perfect agreement between the minds of those who are below and those who are above, a nation can never fall. The establishment of a House of Commons may not prevent all the impending disturbances; but part of them might be averted by this means. Some may say that the boar does ill to sharpen his tusk after he has got into an encounter, but we think that those who talk in this manner are rather indifferent to the welfare of their country; and it is better even to be a little late in preparation than to see the enemy ravaging your premises and find yourself powerless to withstand him. We hope that the opinions of the whole people will be declared and the country saved from disturbance. A House of Commons might not prove of extraordinary advantage at first, but it could be of no disadvantage, and, moreover, being a step in a liberal direction it is the very thing towards which the minds of the people will be drawn, and by which our credit will be raised among the foreign nations. We therefore believe that a House of Commons should be immediately established.

* The playful ease with which this writer disposes of the public treasure is very edifying.

PUBLIC SPIRIT.

(*Hochi Shimbun.*)

Does a public spirit exist in the hearts of our countrymen, or is it hidden in some dark and invisible corner whence we shall hardly succeed in drawing it forth to comfort and encourage our anxious brethren?

Foreigners tell us that the power which preserves the unity and independence of a country is the existence of this sentiment, and that when it is deficient the foundations of independence and liberty will also be found wanting. But if, impressed with this truth, we turn to the condition of Japan, we find much to occasion solicitude and apprehension to our anxious minds. In other lands party divisions are the result in the main of a regard to the public welfare; but here, when opinions differ upon any question, we may be sure that private interest, not the public good, originates the dissension. In few cases do we find men with whom the welfare of their country is the predominating spirit.

As we have no opportunity of learning the feelings which underlie the movements of those to whom the Government of our country has been confided, so we must necessarily in our ignorance abstain from touching upon the subject. Let us rather, as is our wont, imagine a given condition of affairs and argue upon the supposition.

Let us assume, for instance, an oligarchical government to exist somewhere, which, as it is not of the people, cannot be expected to concern itself with the peoples' interests. With this Government, even though its members be by no means at one on all points, there is the one grand bond of their personal well-being. When any action is taken in which the satisfaction of private ends may be combined with a regard to the public welfare, their resolution is promptly notified throughout the country and thus it would seem that the latter are made to cover the former. There is no opposition party to hold them in check and a Government is not ready to reform its own abuses. Now, why is this? It is simply that our public men are wanting in public spirit and our officials in a fitting sense of responsibility. Granted that here and there the rudiments, as it were, of this public spirit are met with: of what avail are they? Government and people are thousands of miles apart, unreconciled by any affinity. What sense of responsibility can the former have when there are none to impose a check upon them? And even supposing this feeling to exist, it can only weigh upon the subordinate officials who are made answerable for everything amiss. The higher the official rank, the lower the sense of responsibility, until we find that the Chief Minister of the country has absolutely none at all. How is it possible to check the full exercise of personal will in any irresponsi-

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

ble personage, or how can the public spirit of a nation be fostered and nourished when it is man's greatest pleasure to act in accordance with the dictates of his own sweet will? In such circumstances a Government cannot identify itself with the classes below it; it considers its own prosperity exclusively, styles itself conservative and eschews all that savours of reforms which would possibly interfere with the gratification of its own aims and wishes, being careful however not so to thwart the people as to evoke feelings of angry excitement. As an illustration: a House of Commons is objected to, not because it would thwart the private schemes of the few, but because the national mind "is not ripe for it." Pure selfishness is of course at the bottom of this.

If there should be in this world a government such as this, when, let us ask, are the people to enjoy the prospect of an unclouded sky or bask in the beams of the uninterrupted sunlight? A country so circumstanced must have its Napoleon the Great or its Taiko to sweep away abuses and re-invigorate its constitution, otherwise its independence, nay, existence itself, is in danger. But as the will of the Creator alone can raise up such help, the people must apply themselves to the task before them. Is it true that a House of Commons is neither to be wished for nor obtainable? I can see no reason for the latter if the government of a country is imbued with the generous instincts of a public spirit. It rests with them to make or unmake.

Being unacquainted with the view of our own Ministers, we have imagined a purely suppositious government, and the situation in which it may find itself under certain conditions. Under these conditions it is most likely that our countrymen would desire such a course as we have indicated to relieve themselves from their burden. We are, however, hopeful that the Government that now guides the fortunes of Japan will be found to differ from the type of government we have sketched, but as we are somewhat uneasy in our feelings on the subject, we do not guarantee this to be the case.

Corea.

(Choya Shimbun.)

It is important to consider whether our Government regards Corea as our tributary, or that of China, or an independent state. We shall then be in a better position to judge of the proceedings of our Government on this question, which seems to be a perplexing one. In the year 1868 an envoy was sent to Corea to announce the Restoration, from which we might infer that the Government considers Corea to be our tributary. In 1873 Soyejima, our late Minister for Foreign Affairs, went to China, and requested certain information in regard to Corea; from which, on the other hand, it might be inferred that we considered Corea to be the tributary of China. Again when we see Moriyama acting as an Envoy in Corea, we might infer that it was regarded as an independent state. Now, much discussion is at present taking place regarding the insult which Corea has levelled at us, and some say that war should be declared, while others are for the opposite course. Yet none have discussed the question with which we started, and this may possibly arise from their being too hotly engaged in talking of war. But on a correct answer to these three questions greatly depends the decision for peace or war. If the Government considers Corea our tributary, it would manifestly be a disgrace to us as a nation if we allowed the late offence to pass unnoticed, and we should simply be laughed at by the world. If, on the other hand, Corea is the tributary of China, there is no need for us to rush recklessly into war. We are bound to discuss the question first with China before any steps are taken. And, lastly, if Corea is purely an independent state, we have no rightly to open her ports against her will and go surveying her coast. If the Coreans committed such an outrage as to fire upon our vessel, the men of the *Unyokan* at all events captured their fort and ravaged the neighbourhood, and this may fairly be held to avenge the insult put upon us. Thus there would be no necessity for going to war into which many thousands of people would be dragged, or to destroy the Corean capital and bring away the king captive.

The question of war with Corea has not been raised by the *Shidoku* alone, who were undoubtedly following the lead of the Government, a lead which is responsible for the Saga insurrection and the Formosa expedition. Nor can it be said that these feelings have yet died out. If the Government has given up all its ambitious schemes of the past, and makes it known that Corea is not our tributary, the number of those who have kept up the cry for war will decrease, and the desire for it will die out. But our Government follows in oriental ways, and keeps back from the people what our real relations to Corea are. Thus the mind of the nation is not clear on the whole question, some thinking that Corea is our tributary, others that it is the tributary of China, and others again that it is an independent country. Thus confused arguments arise out of all this obscurity, and, should this confusion increase, some dark misfortune may happen to the country. Therefore it is that I have put these questions, hoping that they may be clearly answered. I ask of all what they think.

Japan should not go to War with Corea for an idea only.

Nichi Nichi Shimbun, October 15th, 1875.

* * * * * *

Those who advocate a War with Corea for the sake of mere renown have heard that the difficulties between England and China in the Pekin negotiations about the Margary affair have not been solved, and imagine that England will not scruple to go to war merely to maintain her prestige. This is a very superficial view of the matter. They have not yet discovered what the real fact is. The resolve of England to go to war with China, if necessary, is not for the sake of the national reputation. It is in order to obtain solid commercial advantages. Nor is this policy confined to England alone. It is the usual Eastern policy of all European countries, and not only in the East, but also on the Continent of Europe. This is the true aspect of the relations between foreign countries. No matter what may be the professed grounds which may be alleged by England in regard to China, the real fact is that she wishes to take advantage of the opportunity to extend her commercial gains. If not, what reason is there why the demand for satisfaction for the Margary murder should be mixed up with the reduction of duties and roads in Yunnan which have nothing whatever to do with it. We may see from this that their ordinary policy is to aim at substantial advantage. Have we not already seen this policy of European powers exemplified by their action in Japan? In return for our consenting to postpone the opening of the ports and cities, they caused us to reduce our export duties, and the fight at Shimonoseki was the occasion of a revision of both export and import duties. If their policy is not to secure solid advantages, what is it?

* * * * * * *

The writer then goes on to cite cases from European history, and ends by pointing out that no solid advantages can be looked for by opening up Corea to trade.

SUMMARY OF OFFICIAL NEWS.

September.

(From the Government Gazette.)

Sept. 3rd.—The regulations for the Book-Press which were promulgated by the *Mombusho* in the first month of the 5th year of Meiji (January 1872) have been issued.

4th.—The *Insho Kiyoku* (Imperial Printing Office) which has hitherto been attached to the *Sei-in*, has been transferred to the *Okurasho* (Finance Department.)

5th.—The ancient *ken* of Kagawa has been reconstituted by dividing it and placing a part of Miotō *ken* and the whole province of Sanuki under its jurisdiction.

7th.—The term of *koku*, used in reference to pensions' has been abolished, and the *karoku* (hereditary rice income), *Shoteuroku* (rice income granted as reward) to the *Kuazoku* (former *daimios*), *Shizoku*, (*samurai* class), and *Heimin* (lower class) shall be granted from this year in local currency at the rate of the average price obtained for one *koku* in the 5th, 6th and 7th years of Meiji.

8th.—All the taxes, rents and imposts are divided into the following two parts: *Kokuzei* (State taxes) or the taxes collected by the *Okurasho* throughout the whole State. These are to supply the state expenditure,

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

And second: *Fu-ken-rei*, (local taxes), or imposts and tolls collected in the *Fu* and *Ken*, as enumerated by Notification No. 23, published in February last. These are to supply local expenditure.

12.—The *In*, *Sho*, *Shi*, *Chô*. *Fu* and *Ken* have been notified that no official letters concerning the affairs of any department shall henceforth be published in newspapers.

20th.—The *Chishikwa* (Geographical section) of the *Chiri Rio* (Geographical Board) has been annexed to the *Shushi kiyoku* (Imperial History Office) at the *Sei-in*.

22nd.—The offices of *Naishi* and *Gnaishi* (Secretaries to the *Sei-in)* have been abolished, and the new organization has been made as follows:—

Daishi	(1st	class Secretary)	3rd	rank.
Gondaishi	(2nd	„ „)	4th	„
Shoshi	(3rd	„ „)	5th	„
Gonshoshi	(4th	„ „)	6th	„

All the offices below the *Daishiki* (1st clerk) remain the same as before.

22nd.—The *Hoseikiyoku* (law office) at the *Sei-in* has been organized as follows:—

1 *Chokuwan* (President) 3rd rank.

10 *Hoseikuwan* (Jurists) ranked as follows:—

Itto Hoseikuan	(Jurist of 1st	class)	4th	rank.
Nito „	(„	2nd „)	5th	„
Santo „	(„	3rd „)	6th	„
Shito „	(„	4th „)	7th	„

10 *Shoki* (Secretaries) ranked as follows:—

Itto Shoki	(Secretary of 1st	class)	8th	rank.
Nito „	„	2nd „)	9th	„
Santo „	„	3rd „)	10th	„
Shito „	„	4th „)	11th	„
Goto „	„	5th „)	12th	„
Rokuto „	„	6th „)	13th	„
Shichito „	„	7th „)	14th	„
Hachito „	„	8th „)	15th	„

The Secretary's office, and all other offices with the exception of the *Hoseikiyoku*, (Law Office) and the *Shushi kiyoku* (Imperial History Office), have been abolished.

The post station named Abuda in Abuda gori, province of Ituri, Hokkaido (Yesso) has been removed.

24th.—It has been notified that hereafter all Japanese steamers and sailing vessels will have to use a common signal code, containing names and numbers of vessels, signals, signal numbers and a translation of the international signal code, which will be furnished to them, together with signal flags, by the *Kaigunsho*. Accordingly, owners of all above-mentioned vessels will have to forward to that Department their certificates as explained in the 3rd Article contained in a book accompanying the notification.

The table of military offices has been revised.

25th.—In future neither men nor women need apply to the Government for leave to become Buddhist priests or nuns. They will have simply to register their having done so at the local Government office.

28th.—The *Dsusho Rio* (Imperial Library) has become a section of the *Naimusho*, and has been ranked as the second office of that department.

The Great Northern Telegraph steamer *H. C. Orsted* arrived from Shanghai on Friday night and on the following day started for the coast of Corea for the purpose of picking up and repairing the Cable which had been broken in that neighbourhood. She succeeded in finding the damaged part in 100 fathoms of water and after effecting repairs returned to Nagasaki yesterday, having experienced delightful weather the whole time of her cruise.—*Rising Sun.*

We hear that the members of the Embassy for the transfer of Saghalien and the Kurile Islands after completing their mission, have returned from the former place, and are at present at Hakodate.—*Cosmopolitan Press.*

NOTELETS FROM THE NORTH.

To all such enterprising persons as may have it in their minds to take a journey northward, the following scraps of information—jottings by the wayside, disconnected trifles—are presented with a profound obeisance.

In those out-of-way districts which lie to the eastward of the great highway that winds its sinuous track beneath the tapering Cryptomeria and rugged *matz* and terminates at Awomori, there is much of interest for the traveller. He cannot fail to be struck by the primitive condition of the people and the simplicity of their habits and manners. Their houses, he will observe, are constructed of such materials as lie ready to hand, and are unpretending as regards their style of architecture. In fact, if the truth must be told, mud enters pretty largely into their components. Nor, after all, is this simplicity contemptible to the mind accustomed to see utility in everything. Is your house burned down? What matters it? A bucket of water or two from the well poured upon the bounteous earth, and you're building up again before the smouldering thatch has crumbled into dust. You'd throw out a bow-window, would you? Well! down with the wall, and your alcove is finished before the lamps are lit. No estimates, no contractors. The garments of these people, too, are hardly better than their houses. They might be described as out-of-elbows fellows, if it were not that, unfortunately for the applicability of the saying, they wear no clothes upon their bodies to which such an appendage as a sleeve is attached. Nor are their manners less ragged than their garments, for can it be expected that the graces of civilization should be found beneath such rude exteriors? No; it must be clearly admitted, once and for all, that civilization has *not* held out its blessings towards these aborigines as yet, inasmuch as the explorer will find them uniformly civil and obliging. Their tea-house keepers have not yet learned to be extortionate, nor are one's ears saluted with "*tempo sinjio*," or "*tojin baka*," This is of course very startling; but extended intercourse with treaty ports, when roads are better, may do much to remedy such a state of things.

Tourists are recommended to avoid pack-horses. They are dangerous animals, useful possibly for other purposes, but decidedly to be condemned as beasts of burden.

An air-cushion will be found a most useful travelling companion, as it will serve not only to relieve the tedium of a *jinrikisha* journey, but is also an invaluable agent in diverting the attention of the teahouse attendants from your combs and brushes, potted meats and jams. It is really wonderful how much and never-cloying pleasure the inflation and collapse of this piece of furniture would seem to afford these simple people.

In places such as still preserve their pristine conditions, and where the artificial rules of civilization have not interfered with the rights of women, a "larger sphere of usefulness" is open to them; but it has not yet been satisfactorily ascertained whether digging in the fields, the tending of packhorses, or the carrying of burdens—which industries they share on equal terms with the men—are more congenial to their feelings than those domestic duties to which their sex, oppressed and ill-treated as it is in other countries, is restricted. Stalwart husbands may here and there be met entrusted with the baby, whilst their wives are toiling under household gods. To this elbowing of man and treading in his groove, the generous fellow makes no remonstrance.

It can hardly be confidently asserted that in districts where *jinrikishas* are scarce it expedites the traveller much to send his baggage forward upon a packhorse, and follow in the vehicle. The effect on coming up with your horse is serio-comic, —or perhaps more serious than comic—for the animal in question, whether of malice prepense or otherwise, invariably affects a panic and deposits your gear upon the ground. This necessitates delay and gives rise to many unprofitable reflections.

At a certain town upon the Awomori-Kaido the attentions of the police may almost be characterized as overwhelming. The entire force without exception turns out to meet the traveller, acompanies him whithersoever he goeth, and stands cap in hand to bow his honor off the premises when he makes his exit. As the inspector, officers and constables are comprised in

Digitized by Google UNIVERSITY OF CALIFORNIA

a single individual, this might at first sight be accounted somewhat hard upon the poor old man. It is but fair to the townspeople, however, to mention that they assert this to be a self-imposed duty on his part, and some of them even—ill-natured fellows, fond of raking up old scores—pretend to see in him the town fool of former days, (before he got his cap and badge), and declare that he was idiotic from his cradle. That such is not the case can readily be proved, and it will put the little matter of his imbecility out of court when it is stated that no better judge of *saké* can be found for many leagues. So subtle a palate hath he for this beverage, that he may be trusted as guide to the best wineshops. And that he is keen for—but no, far be it from me to pass the scandal on. Why, my worthy burghers, know ye not that in speaking of his itching palm you prove his case, and lose your own? Can he after all be right? Are ye the fools and he the wise one?

Among the things to be remembered may be mentioned the prevalence in these out-of-way places of a certain domestic insect, not altogether confined to animals in other countries, but differing from the western species, inasmuch as "Keatings Insect Powder" has no appreciable effect upon it, unless indeed a tonic one. Camphor, too, invigorates it rather than otherwise, so that the ingenuity of the traveller is taxed to the utmost to outwit and escape from its attacks. Various methods have been devised by different persons to procure a respite, but, with the exception of the author's all have been failures. Before leaving this subject it may be as well once for all to state, that in no instance has the aforesaid author found it necessary to take a fowling-piece to bed with him, as he has never met with insects of a sufficiently large size to afford a good mark for practice, the assertions to the contrary of certain denizens of a "great country" notwithstanding.

(*To be continued.*)

THE WIFE'S APPEAL.

(From a Japanese Play.)

Since love, dear lord, lies dead within your eyes,
And pity speaks not in a single tone,
And no fond thought makes kind your cruel touch,
Take a sharp sword and slay me. I must die.
Ah! once my heart was like the rounded moon
Reflected in still waters; now it breaks,
Tossed by the whirling eddies of despair!
Sweet were the days of youth, and sweeter yet
The golden summers when your love was strong,
Before Ohana blossomed into flower.
But when that brightness came, I saw your soul
Bend like a slender branch beneath the bird
That, flushed with spring and weary of far flight,
Sinks, soft as snowflake, on the rosy world.
Dreams the fair dove among the quiet trees,
Or speeds in sunny splendour o'er the fields:
What life more free and full of pleasant things?
I am a foolish bird whose mossy nest
Is burned to ashes, and with wounded wing
I flit through flaming woods in pain and fear.
Is there a shelter in the withering world?
Where shall I go? What friend can comfort me?
O husband, love or kill me where I lie!

KAJIN.

The greater part of the week has been occupied by the Japanese in their preparations for their Odori festival, the opening of which commenced this morning in the Osuwa temple, and will be continued for two or three days. Business will be entirely suspended during the Omatsuri festival. These days will given up to boisterous gaiety and the perambulation of their exhibitions through the various streets in the native town and this settlement. We hear that a good amount of *yen* has already been spent to increase the enjoyment of these festivities. We should certainly say that money is now easier with them than it has been for several years past.—*Cosmopolitan Press.*

THE AUTUMN MEETING.

ENTRIES FOR THE RACES.

FIRST DAY.—WEDNESDAY, 3RD NOVEMBER.

1. THE TRIAL PLATE.—For China Ponies that have never won a race here. Weight for inches. Entrance $5 Once round.

Gladiateur, Sequin, Favori, Andante, Black Rod, Kuo-pu-chü, Pretender (late Oeillet).

2. THE YOKOHAMA DERBY.—A Sweepstake of $15 each, (with $150 added); $10 to be paid to the Secretary of the Race Club on or before the 31st August 1875, and $5 to be paid at the date of closing the entries; in the case of non-entry, the original deposit to be forfeited. For Japan Ponies, *bonâ fide* Griffins. First Pony to receive 70 per cent.; second 20 per cent and third, 10 per cent. Weight for inches for furlongs.

Black Douglas, Dash, Tsuji-Ura, Moonshine, The Laird, Cupbearer, Sunshine, Small, Hope, Stalemate, Mephisto.

3. THE CHALLENGE CUP.—Value, $150. For China Ponies. Weight for inches. Entrance $10. One Mile and three-quarters.

Gladiateur, Favori, Oceola, Sequin, Dixie, Braemar, Monymusk, Andante, Black Rod.

4. THE NIPPON CHAMPION PLATE.—Value, $150. For Japan Ponies. Weight for inches. Entrance, $10. Once round.

Mahstotz, Tobihino, Typhoon, Sirius.

5. CELESTIAL CUP.—For China Ponies. Winners at this meeting, 7lbs. extra. Weight for inches. Entrance $5. Three-quarters of a Mile.

Favori, Gladiateur Seqnin, Dibs, Bonito, Braemar, Monymusk, Andante, Black Rod, Kuo-puchü, Saxon, Picayune, Pice, Proselyte (late Gamecock), Grasshopper, Cyclone.

6. THE COFFEE CUP.—For Japan Ponies. Winner of the Nippon Champion Plate, or Winners of two Races at last two meetings here, excluded. Weight for inches. Entrance, $5. Half a Mile.

The Swell, Tim Whiffler, Drift, Dash, Tsuji-Ura, Moonshine, Sakuraka, Drizzle, Cupbearer, Sunshine, Small Hope, Stale-mate, Mephisto.

7. THE BRITANNIA CUP.—For China Ponies. Winners at this meeting excluded. Weight for inches. Entrance, $5. Once round and a distance.

Favori, Gladiateur, Sequin, Dibs, Braemar, Monymusk, Andante, Black Rod, Kuo-pu-chü, Picayune, Pretender, Northern Light, Grasshopper, Cyclone.

8. YOKOHAMA PLATE.—For Japan Ponies. Winner of the Nippon Champion Plate, or of two Races at the meeting 7lbs. extra. Weight for inches. Entrance, $5. Five Furlongs.

The Swell, Drift, Lodi, Ksadzuri, Typhoon.

9. BANKERS' CUP.—For China Ponies. Winners in China or Hongkong in 1875, or of two Races at last meeting here, and winners at this meeting, excluded, Winners of one race at last meeting here, 7lbs. extra. Weight for inches. Entrance, $5. Once round.

Dibs, Sequin, Bonito, Monymusk, Black Rod, Kuo-pu-chü, Pretender, Northern Light, Pontiff, Grasshopper, Cyclone Ivanhoe, Lord Harry.

SECOND DAY.—THURSDAY, 4TH NOVEMBER.

1. THE BLUFF CUP.—For China Ponies Winners of two Races at this meeting, 7lbs. extra; of more than two races, excluded. Weight for inches. Entrance, $5. Once round.

Favori, Gladiateur, Sequin, Dibs. Bonito, Braemar, Monymusk, Andante, Black Rod, Kuo-pu-chü, Picayune, Pice, Pretender, Pilgrim, Pontiff, Grasshopper, Cyclone.

2. THE MAIDEN STAKES.—For Japan Ponies that have never won a race. Weight for inches. Entrance, $5. Half a Mile.

The Snob, Black Douglas, Inozuma, Dash, Tsuji Ura, Chevy Chase, Moonshine, Mikan, Drizzle, Cupbearer, Sunshine, Small Hope, Stalemate, Mephisto, Sirocco.

3.—THE VISITORS' CUP.—For China Ponies. Winner of the Bluff Cup excluded. Winners of the Challenge Cup, or of two races at the meeting, 10lbs. extra; other winners, 7lbs. extra. Weight for inches. Entrance, $5. One mile and a half.

Favori, Gladiateur, Sequin, Oceola, Dixie, Bonito, Braemar, Monymusk, Andante, Black Rod, Kuo-pu-chü, Northern Light, Pretender, Grasshopper.

4. THE FUJIYAMA CUP.—For Japan Ponies. Weight for inches. Entrance, $5. Half a Mile.

Drift, Lodi, Mah-stotz, Sakuraka, Typhoon, Cupbearer, Mephisto.

Original from UNIVERSITY OF CALIFORNIA

5. AUTUMN CUP.—For China Ponies. Winners of more than two Races at the meeting excluded; other winners, 7lbs. extra. Weight for inches. Entrance, $5. Half a Mile.

Favori, Sequin, Bonito, Braemar, Monymusk, Andante, Black Rod, Saxon, Picayune, Pretender, Proselyte, Cyclone.

6. THE AKINDO CUP.—For Japan Ponies. Winners at this meeting, or of two Races last meeting, or of more than two Races at the last two meetings here, excluded. Weight for inches. Entrace, $5. Three-quarters of mile.

The Swell, The Snob, Tim Whiffler, Inozuma, Drift, Tsuji Ura, Chevy Chase, Moscow, Ksadzuri,, Drizzle, Cupbearer, Sirius, Stalemate, Mephisto.

7. CLUB CUP.—For China Ponies. Winners at the meeting excluded. Weight for inches. Entrance, $5. Once round and a distance.

Dibs, Oceola, Sequin, Favori, Gladiateur, Braemar, Monymusk, Andante, Black Rod, Kuo-pu-chü, Picayune, Pice, Pretender, Northern Light, Crusader, Pontiff, Grasshopper, Cyclone, Ivanhoe, Lord Harry.

8. THE KANAGAWA CUP.—For Japan Ponies' Winners of one Race at this meeting 5lbs.; of two Races, 10lbs. extra. Winners of more than two Races excluded. Weight for inches. Entrance. $5. Once round and a distance.

Ikey Pikey, Mahstotz, Tobihino, The Laird, Typhoon. Sirius, Stale-mate.

9.—THE SELLING STAKES.—Of $5 each, with $75 added. For all Ponies. China Ponies, 10st. 7lbs for 13 hands; Japan Ponies 10st for 13 hands, 3 inches, to increase for inches, as per scale. The Winner to be sold for $75, with his engagements, by auction, immediately after the race, and any surplus realised over the declared value to go to the Race Fund. If entered, to be sold for $50, allowed 7lbs; if for $25, allowed 14lbs. Five furlongs.

The Swell, $50; Monymusk, $75; Black Rod, $25; Saxon, $25; Pice, $25; Crusader, $25; Proselyte, $25; Pontiff. $50; Small Hope, $25;—Lord Harry, $25.

THIRD DAY—FRIDAY, 5TH NOVEMBER.

1. THE HURDLE RACE.—Value, $75. For all Ponies. Over six (6) hurdles. China Ponies, 11st.; Japan Ponies, 10st. Entrance, $5. Once round and a distance.

Dibs, The Snob, Braemar, Monymusk, Andante, Black Rod, Pilgrim, The Slasher, Ivanhoe.

2. THE AMERICAN CUP.—A Handicap for all winners at the meeting. To be handicapped at the close of the Second Day's racing. Entrance 10 per cent. of amount of stakes won: compulsory. Open also to beaten Ponies at the meeting, at an Entrance Fee of $5. One mile and a quarter,

3. THE SCURRY STAKES.—For all Ponies. A Sweepstakes of $5 each, with $50 added. China Ponies, 10st. 7lbs.; Japan Ponies, 10st. Three furlongs.

Favori, The Swell, Bonito, Inozuma, Braemar, Monymusk, Andante, Black Rod, Lodi, Mahstotz, Picayune, Pice, Sakuraka, Mikan, Proselyte.

4. THE SOLACE CUP.—For all beaten Japan Ponies at the meeting. Weight for inches. Entrance. $5. Five furlongs.

Tim Whiffler, The Swell, The Snob, Black Douglas, Inozuma, Drift, Tsuji-Ura, Moscow, Ksadzuri, Sakuraka, Drizzle, The Laird, Typhoon, Cupbearer. Sunshine, Small Hope, Stalemate, Mephisto, Sirocco.

5. THE CHINA CONSOLATION PLATE.—Value $100 for all beaten China Ponies at the Meeting. Weight for inches. Entrance, $5. Once round and a distance.

Favori, Gladiateur, Sequin, Oceola, Dibs, Dixie, Bonito, Braemar, Monymusk, Andante, Black Rod, Kuo-pu-chu, Picayune, Pice, Pretender, Northern Light, Crusader, Proselyte, Pilgrim, Pontiff, Grasshopper, Cyclone, Ivanhoe, Lord Harry.

6. THE SAYONARA STAKES.—Of $10 each, with $50 added. A Handicap for all Ponies. To be Handicapped at the close of the Second Day's racing when entries will be received. Winner of the Winner's Handicap excluded. Winners of any Race after publication of the Handicap, 3 lbs. extra. Once round.

At the meeting of the China and Japan Marine Insurance Company yesterday, the Report and Accounts, (including the proposal to pay a dividend of 4 per cent on the half year), were passed. The proposal to wind up the Company involved some discussion, and ended in an adjournment till Tuesday the 19th inst. The show of hands was in favor of the proposal to wind up. The Directors (under clause 61 of the Deed of Settlement) fixed the 18th for taking a poll, which will be held at the Company's office between 2 and 4 p.m. on that day; when it will, we believe, be open to all Shareholders on the Register at the present date, to vote. N. C. Herald.

Correspondence.

SERICULTURE IN JAPAN.

TO THE EDITOR OF THE "JAPAN WEEKLY MAIL."

YOKOHAMA, *15th October*, 1875.

SIR,—I have read with some interest the letter signed H. P., which appeared in last week's *Mail;* and while quite agreeing with the writer that the better classes of China Silk cannot be produced from "bivoltini" cocoons, I do not quite understand the part where he says that from 1857 to 1863 *large quantities* of seed were exported from Shanghai, &c.

I was under the impression (I may have been mistaken) that the Chinese would not allow the export of Silkworm's eggs; and that this formed the true obstacle to the regeneration of the European breeds from the old mother-stock of China.

It is now freely admitted by the European manufacturers that China Silk is the best in the world, and could we get the Chinese to take the same care in rearing their worms and reeling the cocoons as European growers do in the *magnaneries* of Piedmont, Lombardy and the South of France, that Tsatlee Silk would stand not only unequalled, but unapproached by the best filatures of Fossombrone, Novi or the Cevennes. And this belief will be found to hold water, when we remember that China is the natural home of the Silk-worm. Both it, and its favorite food, the mulberry tree, are indigenous there; and whereas in Europe the industry has been introduced within the last few hundred years, in China, thousands of years ago, the profitable use of silkworm's cocoons, was well understood.

There is no doubt that Japan herself received originally from China (together with other of her arts and sciences) both the worm and the tree, out of which she has made so much profit during the last few years.

Setting aside the old romances of priests and princesses smuggling over the border the precious seed, (although like most romances, they doubtless have a substratum of truth in them) there is no doubt that the culture of silk gradually spread westwards (as well as eastwards) from China, and in the course of centuries, passed by way of India and Persia, into Asia Minor; where now, at Broussa, or Brutia, some of the finest and most even thread is produced. From Turkey-in-Asia to Turkey-in-Europe was an easy transition, and we find the industry gradually progressing in a westerly direction, till it finally became located in the North of Italy and South of France, where at the present moment the growing of silk has attained the proportions of a science.

Now if so much can be done with an industry so many thousands of miles from its native home, what could not be achieved with the same care in that country to which it is indigenous, and where it has all the advantages of climate, soil, &c., which Nature has designed and provided. Any one who doubts the effect of culture need only look for one moment at the difference between the old native Bengal Silks and the modern filature Rangematty or Surdah. Or, to obtain a still more marked contrast, and compare the old fashioned short-reeled Brutia (much similar to the common Persian Silk of the present day) with the really splendid 8/9 denier filature Silk which that province produces now.

Any man who is acquainted with the quality of a true No. 1 Kahing Taysaam or really classical chop Tsatlee, can imagine what sort of Silk would have been produced had the worms been tended with European care and the cocoons sorted and reeled after the European fashion; instead of being reeled in the same primitive style which obtained somewhere about the first year of the Christian era. Our boasted Japan Silks (Kakéda included) would soon be compelled to hide their diminished heads.

Now, I am fully aware that the Chinese, for many years to come, are not likely to be sufficiently civilized to grow their Silk on these improved principles. There is no doubt that the trading classes at the open ports have, from their continual contact with Europeans, learned quite sufficient to admit, without scruple, the superiority of Western ideas; but, in the vast interior the Mandarin influence is far too great, to admit of any light reaching the masses of the Chinese population; unless, indeed, it be driven in, through all obstacles at the point of the sword.

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

Some people firmly believe that by this means alone (and it must come sooner or later) will that immense empire be released from its old conservative prejudices and at last become familiar with those humanizing and civilizing ideas, which free and unrestricted intercourse with European nations must eventually bring.

Now, the Japanese have hitherto shown some inclination to adopt Western ideas and civilization,—at any rate on the surface of things—and there is no doubt that, if they will give themselves up liberally to the idea of growing their silk in accordance with European usage, they may for many years to come ensure a ready, and even eager market for their produce at good and remunerative prices. On the other hand, if they do not take warning in time, the present dislike among consumers to Japan Silk will increase, until it becomes, what is so forcibly expressed by the words, "a drug in the market."

I am, Sir,

Your obedient servant,

J. G.

Law & Police

U. S. CONSULAR COURT.

Before Gen VAN BUREN, U. S. Consul-General;

And

F. R. WETMORE and C. DRAKE, assessors.

Wednesday, 13, October, 1875.

ITO HACHIBEI *vs* WALSH, HALL & Co.

In this case, plaintiff claims a sum of $108,715.42, balance of account and interest connected with certain trading transactions he had had with defendants.

Defendants deny that they are indebted in the above amount, and claim that he (plaintiff) is indebted to them in the sums of $16,222.55, and $16,483.61, being balance of accounts between them and the plaintiff.

Mr. F. V. Dickins appeared as counsel for the plaintiff; Mr. G. P. Ness for defendants.

Court met at 10 a.m.

Mr. Dickins said Nakamura Sobae had been supœnaed to produce books and documents, but had not come. He was hostile to plaintiff's case.

His Honor wrote a letter to the Saibansho to obtain his attendance.

Mr. Dickins in the meantime called

Kawamura Saburo, cautioned: I am a lawyer. There is no such word as *koshaku* in the Japanese language used in lending and borrowing money. There is such a word as *kiushaku*. This word means an old loan. ["Exhibit 2" shown to witness]. A character on that document might be read as *koshoku*. The *sosho* (handwriting) forms of *kai* and *ko* are very similar. It would be easy to write one for another by mistake. In writing of an old loan *kiu* should be used, and by a slip of a pencil *ko* might be written when *kai* was intended. The character *kiu* is not at all like the character shown me on "exhibit 2." The *warefu* (half seal) on a document, in Japanese law, is never accepted as positive proof of the genuineness of a document when disputed.

Cross-examined by Mr. Ness: The half seal is used as a check, and the document is never complete till the whole seal is put at the bottom. The half seal is never used as a sign of the genuineness of a document. In the event of a person (the stamper) admitting a document with a half seal only, it would be considered as genuine. A document is always genuine when the whole seal is put on at the foot of the signature, whether the half seal is present or not. In Japanese courts a document bearing a half seal is never accepted as evidence. [Exhibit "F" shown to witness.] I can't decide as a judge whether any entries in this book would be accepted in a Japanese Court. I can only repeat what I said before, that documents bearing only a half seal are not accepted, unless admitted by the stamper. [The so-called false entries pointed out to witness.] I cannot form an opinion on these two entries. If these two entries were brought into a Japanese Court I think they would not be accepted as evidence. I think the entries in "Book F 2" precisely the same in value. No particular training is required in becoming a lawyer in Japan; but a thorough knowledge of Japanese literature and all the laws is necessary. It is just a matter of choice who man employs to conduct his case. I have never heard of a man being a coolie one day, and a lawyer the next. A jinrikisha man might plead a case in the Saibansho to-morrow if he had the necessary training. [Witness explained the various native codes of law.] The value of a half seal is shown in these laws. I do not know if the Government has informed the Foreign Ministers of this point.

Re-examined by Mr. Dickins: I have studied the literature of my country. I practice daily at the Saibansho. I have now from twenty to thirty cases on hand. Native lawyers are not despised by their own people.

Kawamura Rimbei, cautioned: I am a servant of Nakamura Sobae. I know of some exchange transactions between my master and Ito, but I know of nothing about defendants being concerned in them. I had charge of the transactions between my master and Ito. I merely heard at that time that defendants had a partnership with Ito. During these transactions I went to the office of defendants, probably daily. I went there for the purpose of receiving dollars and paying in the proceeds of sales (*niboos*). I saw Irwin. Irwin talked about the rates. I did so, and so did Shoski. I do not know that Irwin ever objected to any of the transactions. I think a large sum, amounting to about 440,000 *rios* in *niboo kin*, was returned at one time to defendants. Waggons were used, as it was a large amount. I can't tell the exact sum, without referring to my books, that was returned. I can't tell without looking at my books if any *niboos* were taken to Sobae's. About ten persons went from Ito's to defendants' with the *niboos*. I think the accounts of this transaction were kept in two books. One book was left with defendants; the other, probably, with Ito or Sobae.

Mr Dickins then suspended his examination of Rimbei and called

Nakamura Sobae: I have that book, but I have a reason for not lending the book to you.

Mr. Dickins then said he would put Nakamura Sobae in the witness box, and examine him as to his objections.

Court adjourned, and re-assembled at 2 p.m.

On resuming

Mr. Ness said he had found the defendant's copy of the book containing the Sobae transactions.

Mr. Dickins then called Nakamura Sobae, cautioned:—I have got the book with the exchange transactions in it. Defendants had one, Ito the other. I have books relating to the partnership between Ito and myself and many other transactions. I decline to show my book alone, but I will allow mine to be compared with Ito's.

Mr. Dickins then asked the Court to compel the production of the books.

His Honour said the witness on producing his books could see those of Ito if he liked.

Witness:—My reason for objecting to show my books is that some time ago Zenjiro went to my clerk's house and stated that I had made a mistake of $20,000. I am willing to compare my books with Ito's.

His Honour said the Court had not to decide that point.

Witness:—My book is only a single account book and I submit that I am not obliged to show it. It contains my son's business accounts, he made great losses and I do not want to expose his business.

It contains no part of any other book.

His Honour said he could not order its production.

Witness: The book was kept by Rimbei and doubtlessly contains receipts and payments to defendants. It has no foreign entries in it (witness here handed in a small account book) This book is of no account; the transactions entered in it are finished. My other books contain my general accounts [a long argument took place between counsel and court about the production of this book.]

His Honour was of opinion that the witness ought to produce his book.

Witness: I have no objection to produce my book provided I first have an interview with Ito and square up accounts with him.

His Honour told witness he should be obliged to apply to the Saibansho for an order for the production of his book.

The Witness still refused and was told to stand down.

Mr Dickins then re-called Kawamura Rimbei, cautioned:—There were two cash books. I do not remember if there was foreign writing in those books, but I think so. I do not know who wrote the foreign writing. If they do contain foreign writing Irwin must have written in them. I think cash payments and receipts were written on the covers. "American No. 1," was on the top, and on the bottom were the names of Ito and Sobei.

Mr Ness did not cross examine this witness.

Mr Dickins then handed in translations of some document Ito requested to be put in at the commencement of the case [marked

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

"X 1 and 2."] Also a translation of a copy of a similar bond to those deposited as security by plaintiff with defendants.

Mr Ness objected to this as only being a translation of a copy, but finally agreed to admit it to save time (exhibit marked "Y.")

Mr Dickins announced that he had concluded his case.

Mr Ness before commencing his case handed in a translation of one of defendant's exhibits.

He then commenced his summing up for defendants; refuting the charges made by plaintiff's counsel in his opening address and reviewing the evidence at great length. He pointed out the absurdties, contradictions and the improbabilities of the plaintiff's case.

The Court rose after 4 o'clock and adjourned till 10 o'clock this morning, when Mr Ness will continue his summing up.

Thursday, 14th October, 1875.

Court re-assembled at 10 a.m.

Mr Ness resumed his opening speech, and review of the evidence given on plaintiff's side. He characterised a great part of the evidence as "a mass of contradiction, and a labyrinth of falsehood." He spoke at great length on the absence of all written testimony of documents to support what plaintiff's witnesses had said. The witnesses had contradicted one another over and over again. He referred at some length to the letter Ito had written to Walsh, Hall & Co., in which he spoke of his old indebtedness to "American firm No. 1." The story and theory of the plaintiff's case was of the most visionary and incredible character, and was not supported by credible testimony or documents in any way whatever. There was a total absence of all written proof of what plaintiff claimed. He then briefly touched upon the defence. The statement that plaintiff made a similar agreement to the exchange transaction one, in regard to rice transactions, was false. With reference to the sum of $40,000 that Ito said he had borrowed and returned, he had only to say that it was borrowed, but was never repaid to Walsh, Hall & Co. by Ito, Ito had no receipt, nor could he produce any, simply because the $40,000 he borrowed was never repaid to Walsh, Hall & Co. The so-called false entries were the true statements and balances of accounts between Walsh, Hall & Co and Ito at the time they were written, as he would prove by witnesses and the books of defendants. He would first call.—

R. W. Irwin: I am one of the defendants in this cause. During the years '70, 71 '72, '73, and '74 I was a partner in the firm of Walsh, Hall & Co. I know the plaintiff; he was a constituent of the firm. I recollect, in the year 1871, entering into an arrangement with Ito about exchange transactions. In August, 1871, I arranged with Ito an operation in *niboos* and dollars. Walsh, Hall & Co. were to have a two-thirds share, and Ito a one-third share in the profit or loss. The agreement was only a verbal one. There was no writing whatever. There was an understanding that defendants could retire at any moment. Walsh, Hall & Co. were to make the advances. Ito, Zenjiro, and Walsh, Hall & Co. were to make the purchases. Ito informed me that Benzo was his agent, Zenjiro his *banto*, and that they would look after affairs on his behalf. Ito at first deposited 20,000 *rios* with Walsh, Hall & Co. as security for any losses that might arise out of the transactions, and that was all he deposited. It is not true that he deposited with me at that time securities to the amount of 100,035 *yen*. The first operation was made by Walsh, Hall & Co. Numerous purchases and sales, were made by Ito and Walsh, Hall & Co. Zenjiro and Benzo always acted on Ito's behalf. The purchase and sales that were made by Walsh, Hall & Co. were made under my supervision. A perfect record was kept in our ledger and cash books of all the transactions. The entries in the cash-book were made immediately upon a transaction taking place. When I say "cash-book," I refer to Walsh, Hall & Co.'s cash-book,—not exhibit "C or F." The books "C and F" consist of the payments and receipts between plaintiff and Walsh, Hall & Co. The whole of the transactions in the exchange operations taken toge ther, whether in these books or through the bank, or by defendants' servants, appear in our ledger and Cash book; and that is the only complete record. The Chartered Mercantile and French Banks acted as the agents of defendants in buying and selling on the partnership account. One way of doing the business was this: I would give to Ito or his agents cheques of Walsh, Hall & Co. upon foreign banks. Ito's agents would give me a receipt for this money in one or both of the books "C and F." One of my clerks would read me what was written in Japanese, and I would write it in English over or under the entries in pencil on the same leaf in both books. One book Ito retained, the other Walsh, Hall & Co. kept. Ito's agents would subsequently bring to me the proceeds of the sale of these cheques. The accounts of these proceeds were also entered in these books as cash paid to Walsh, Hall & Co. although it was not always stated in the books that they were proceeds of sales. Then those payments and receipts would at once be entered in our cash book under my personal supervision, from thence to our ledger. I also kept a separate memorandum which I have to this day. (Witness here took both books 'C and F" in his hand and referred as an illustration to an entry dated August, 21st 1871.) "Paid to Ito $6,500; received from Ito 6,223¾ *rios* at 883 equal to $6,000 as above;" both (the two entries) bear the initials W. H. & Co, written by me. In defendant's accounts as rendered before, both items appear, the *rios* as being the proceeds of the dollars. This appears in the ledger as "$6,500 sold for 6,223¾ *rios* received." I did not always give the plaintiff's agents cheques, I often gave them foreign bank notes. The whole amount given was not always invested in purchases during the day. Sometimes they only sold a part of the money I gave them in the morning and they brought me proceeds of what they had sold, and returned me the money they had not used. Sometimes the whole of such a transaction would appear in the books, sometimes in an abbreviated form. The dollars would appear as the amount paid in the morning, less the amount returned in the evening. The entry would appear in the same form in Walsh Hall & Co's books. When Ito and Walsh Hall & Co both made separate sales in one day, the entry would appear in our ledger as one transaction. Only the transaction conducted by or through the plaintiff would appear in books "C" and 'F." I could distinguish the transactions. I kept a separate memorandum.

Court adjourned till 2 p.m.

Court re-assembled at 2p.m.

Mr Ness continued his examination of

R. W. Irwin:—I sometimes paid money to plaintiff in *niboos* to be sold for dollars these *niboos* were either in cash—the actual gold, or notes (Japanese bank paper) which were to be sold for dollars. In the time transactions I instructed Ito and his agents to buy and sell dollars for future delivery at the *Shosha*; they reported to me these transactions and I made a memorandum of them. I also bought or sold, I forget which, through our compradore $180,000. The compradore is my Chinese clerk. These purchases and sales in the joint partnership went on till about the 12th October, 4th Meiji (1871). On the 5th October 1871, I sent for Benzo and he came to my office. I notified him that the transactions and the joint venture would finish; there had been a loss up to that time of from $5 to $10,000, and I desired to close the operation. I told him to inform Ito of this. He said that the reason that the operations had resulted in loss had been due to the control that I exercised over the operations. Benzo then asked me if I would be willing to continue to make advances if the operations should hereafter be entirely controlled and conducted by Ito on his own account. I told him I would under certain conditions. First: that the loss made up to this time should be borne by Ito. Second: that I was to charge no interest upon past transactions. Third: that in the event of Ito making a loss upon his future operations, I was to charge no interest whatever upon future advances; and fourthly: that I would be willing to represent to the Government and collect for Ito a claim which he had against the Mito *han* for $60,000 upon which W. H. & Co., had advanced only $15,000 and that I would do so without commission. Benzo said he would inform Ito of this, that he would recommend Ito to do it and that he would let me know about it. He informed me in a few days that Ito had accepted the arrangement. I made further advances. The accounts attached to the answer show that I havenot charged interest and they further show that I did collect the Mito *han* loan in 1871, that I collected for his account the sum of $50,365; $10,000 at one time and $40,365 at another time, and that I charged no commission upon it. I recollect two subsequent interviews, one with Zenjiro and Benzo together and another with Ito and many other persons. The first interview was on or about the 25th October, 1871. It took place in W. H. & Co's. office and at that interview and the one that took place on the 5th Oct. Shoske was also present. At this interview, on the 25th, we spoke in general terms of the interview held on the 5th October. Benzo and Zenjiro both referred to the arrangement that had been made; they said it was a pity Ito had taken over the matter on his own account as he was making losses. I made them advances at this interview of 7,130 *rios*, on the security of *Shosha* rice receipts. They spoke about rice dealing. They spoke about them as an operations that would be successful. The interview on the 11th or 12th November, 1871 took place at defendants office.

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

There were present Ito, Benzo and Sobae on the one part, on the other Smith, Lothrop, Iske and myself. Ito and Sobae requested me to make advances to them jointly of $481,000. They informed me that they would require this money on the 15th November, that they had sold that amount of dollars at the *Shosha* for delivery on that day; and that if they produced this money in dollars their opponents would be unable, they were sure, to give them the *niboos* in cash, in which event they would make a large profit in difference. I declined to make the advance and both Ito and Sobae said that it was my duty to make the advances to them, in virtue of an agreement that I had with each of them separately and personally by which Ito had borne the losses on his part and Sobae the losses on his part. Accordingly I consented to make advances and I did make the advances on the 13th November, and they (Ito and Sobae) failed in their operation. The *niboos* were delivered to them in actual cash. Not in Sobae's presence but with Ito himself the Mito *han*, the collections by us for his account and our waiving commission was also referred to by him and myself. The arrangement referred to by Ito and Sobae when they said I had agreed separately and personally to make advances to them was the agreement made with Ito on the 12th October by me. The agreement made with Sobae was made in the early part of Nov. 1871 by which agreement Sobae was to bear the losses on the previous operations. I was to charge no interest on past advances, or on future ones if they resulted in a loss to Sobae. Ito had nothing to do with Sobae in this transaction, neither did Sobae have anything to do with Ito's transactions. On the 7th Nov. Benzo and Zengiro came to W. H. & Co. Iske was also present. They informed me, they, Ito and Sobae jointly, were going to make future purchases and sales of dollars and *niboos*, and they asked me if I would make advances on their joint receipt. I said certainly. There were no joint transactions between Ito, Sobae and Walsh, Hall and Co. There never was a transaction in which Walsh, Hall & Co. and Ito were concerned on one side and Sobae on the other. The value of interest on advances and the commission on the collection of the Mito *han* added together would have amounted to $20,000. During the existence of the joint interest between Ito and Walsh, Hall & Co. all time bargains and others were reported to me. After the 5th Oct. the time bargains were not reported to Walsh, Hall & Co but cash purchases were.

After the 12th October no purchases or sales were made by defendants or their agents. In the month of November 1871, a statement of accounts was made up of all the accounts between Ito and W. H. & Co by me and under my direction. First, I desired to have in the preparation of this statement, as many accounts as possible closed prior to Mr. J. G. Walsh's arrival in Japan. Secondly, because I intended to be absent in Yedo during the whole of December. With this view I prepared all the accounts between Ito and defendants between the 17th and 22nd November 1871. Between the 17th and 22nd November I sent for Benzo, and he came one afternoon. He brought his cash book and a lot of memoranda he had, and in the presence of Shoski, defendant's book-keeper, De Sa and myself went over the accounts. I had my ledger, my cash book "F" and my memoranda which I had written from time to time. Benzo had his Cash book "C" and *abacus*, and we went over the accounts together. This was in the book-keeper's office at Walsh, Hall & Co's. We went over the accounts together and spent some hours over it, and we agreed upon a balance. I read off to Benzoa general synopsis of our account. Benzo wrote one and Shoski the other. The balance we agreed upon was that Ito had intrusted to us 200,271 *rios* against which we had advanced $239 270.46.

Mr Ness.—Will you produce the books and papers that were used at that interview and that brought out those balances?

Witness.—I will.

Mr Dickins objected and Mr Ness said he would not press the matter.

Witness: I offer to produce the ledger, cash book, the memoranda and other materials, from which I arrived at the result contained in the so-called false entries. Since the commencement of this case I have carefully examined the books &c. again and I have arrived at the same results in the same manner. I am in a position to give details of all the entries in the ledger, and to take oath as to their correctness. I have prepared detailed statements of the entries in the ledger, showing the consistency of the ledger exhibit "F" and the memoranda, and these I am willing to produce for the Court's inspection. The papers I wish to produce are a complete record of all the transactions with plaintiff. [A very long discussion took place here between Counsel and Court, as to whether W. H. & Co. had the right to put in their own books as evidence of the truth of the entries].

Mr. Ness at last offered to produce the books and papers, to show how the entries had been arrived at only.

Mr. Dickins did not object to this course.

It was finally agreed that Mr. H. W. Denison should compare the paper (handed in by defendants' counsel) containing the extracts from the ledger with the ledger itself, to see if the extracts were full and complete.

Court adjourned till 10 o'clock this morning.

Friday, October 15th, 1875.

Court re-assembled at 10 a.m.

Mr Ness continued his examination of

R. W. Irwin: I will now place in the hands of the Court the whole of the materials from which I arrived at the results called the false entries. One book I produce is called a banker's account book; it contains extracts from the ledger and cash book, as on 16th or 17th November, 1871, of the accounts between Ito and Walsh, Hall & Co. This other paper I produce contains my memoranda from 19th August until early in Sept., 1871, written in metallic pencil. This other paper contains my memoranda between 17th and 22nd November, 1871, which I made at that time, and which brings out the so-called false entries in Book "D," and which papers were in my hands when the accounts were gone over by Benzo, defendants' book-keeper, Iske, Shoski, and myself. All these papers were made at the time, and are about the business between Ito and Walsh, Hall & Co. This other paper is the one from which Shoski made a synopsis, as I read it.

Mr. Dickins objected to these papers being received as evidence in the case.

Mr. Ness claimed his right put in Walsh, Hall & Co.'s books as evidence. He did not press to be allowed to put in the memoranda.

Mr. Dickins still argued against the books being received as evidence.

After a very long argument

His Honor decided that the books and papers produced be admitted, for the sole purpose of showing that they contain the material from which the so-called false entries were arrived at.

Witness continued: I have not altered a figure or date in the memoranda since the entries were made in 1871. I subsequently got the Book "D" from Benzo; that was after Benzo and I had settled the accounts; Shoski was with him. The book contained the entries of the settlement. They read the entries to me, and I wrote the translation in English. The "tag" that is on the leaf now was not appended at the time, nor was the Japanese writing in red ink there at the time. No remark was made as to the effect of these entries. I had asked for an acknowledgment, that Ito was indebted to Walsh, Hall & Co. $239,000 and that he had entrusted to our care 20,000 *rios*. In compliance with this request, Benzo brought me book "D," containing that entry: these two amounts having been agreed upon as the true balances between Ito and Walsh, Hall & Co., up to the 22nd November, 1871. The first entry subsequent to these two entries referred to in Book "D" is $20,000, paid to Ito on account of rice *tegata* (receipts). A rice *tegata* is an agreement to deliver rice at a future time. These rice *tegata* were taken as security by Walsh, Hall & Co. The next entry is November 30th, 1871; paid to Ito 5,000 *rios*. There is a "tag" on this page which was not there at the time, and also some writing in red ink. The next entry reads, 28th day of the 10th month, account rice, $3,000. This was a payment. Witness then explained a page; it read as follows.—239,270.46; another item of 200,271.25 *rios*, from which deduct 5,000 *rios*; balance remaining, 195 271.25 *rios* (58 *momme*), at 386¾, equals $202.003. This entry means, that I offered to take over these *rios* at 58 *momme*, at 386¾; and the offer was accepted. The account than stood: due by Ito to Walsh, Hall & Co., $57,267.46. This amount is derived by adding the $20,000 advanced November 22nd, 1871, to the balance, after deducting the $202,003 from $239,270.46. The next entry is 28th day 10th month: "Paid Ito account rice $3,000, making $60,267.46, less cash received, $10,000." This cash received was collected by me from the *Mito Han* for account of Ito, and credited to him. This left the balance $50,267,46, from which is deducted by Mito loan collected, $40,365,00,—leaving a balance due to Walsh, Hall & Co. of $9,902.46, March 30th, 1872; to which must be added, paid to Hashimotoya (Benzo) for his account $3.000; making the account against Ito $12,902.46. This last sum of $3,000 was charged to Ito at Benzo's request. This last page was written on the 30th March 1872. This is the last page written upon. The book

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

was then in my possession. I don't know how or when he got it. I never gave it to him, or authorised it to be given to him. As soon as I found it was in his possession I demanded its return, and, though not a partner, then informed Walsh, Hall & Co., I saw Benzo about the time these entries were made—I mean the time the last entry was made Benzo said he wished to send an account to Ito. These two last pages were read off to Taketana, our interpreter, and by him translated into Japanese, and the translated account handed to Benzo. That account brought out $12,902.46 as due to Walsh, Hall & Co. Benzo said Ito would be perfectly able to pay this small amount, and asked me to be patient and friendly and wait. I was always both patient and friendly, and did so. An account was afterwards rendered for payment in September or October, 1872. I wanted to collect all the money possible, so Iske, by my instructions, rendered an account to Ito, bringing out the balance $12,902.46. Iske or I may have added interest, but I can't remember. A few days afterwards Ito came with Benzo to Walsh, Hall & Co.'s office. I had an interview with him in the presence of Mr. Smith, Iske, and Taketana, the interpreter. Ito requested me to waive interest on this account, and to wait for the balance, and we had a little talk about the matter, whereupon I told him that I was perfectly willing to forego interest, and furthermore, that if he would assist Walsh, Hall & Co. in obtaining from the Japanese Government repayment of our advances upon Yoshida Shinden land (the swamp), together with full interest upon the advances, then Walsh, Hall & Co. would not only forego this debt of $12,902.46, but would also give him $10,000 besides. Ito's son-in-law was at that time Governor of Kanagawa. Ito accepted my proposition readily, and went to work at once, and during the balance of 1872 and 1873 he rendered most valuable assistance in the matter, and conferred constantly about it with Iske, J. G. Walsh, and T. Walsh also with myself in the latter part of 1873. He (Ito) did not succeed; he failed. Defendants never entered into any joint venture in the year 1871 in rice with Ito Hachibei. The term "account rice" means that these payments were made against rice *tegata*, these receipts being received as security for the repayment of the money. The first time I ever heard that Walsh, Hall & Co. had a joint venture in rice with Ito was in the spring of this year. I met Mr. Dickins at Walsh, Hall & Co.'s office. Mr. Dickins was speaking about the Ito matter generally; he spoke about losses on rice, and about a claim on Walsh, Hall & Co. for a payment of their share of the losses. J. G. Walsh and I repudiated the very idea, and as Mr. Dickins left the office he said to us, "I may have no claim for rice: it has been added to swell the amount: it is a lawyer's trick."

Mr. Dickins: That is an utter falsehood from beginning to end.

Mr. Walsh: I can corroborate every word of it.

Mr. Dickins: I repeat; it is false.

We came to the conclusion it was a bogus claim. There is no truth whatever in Ito's statement that in an interview that took place a partnership was arranged in regard to making rice transactions.

Court adjourned till 2 p.m.

Court re-assembled at 2 p.m.

Mr Ness continued his examination of

R. W. Irwin:—I remember defendants making a loan to Ito on the 12th Nov, 1871. I made the loan in the form of three cheques on the C. M. Bank. The cheques are marked as defendant's exhibits 6 A. B. C. I, personally, made the loan and wrote the cheques I handed them to Benzo. It was on Sunday morning, 12th Nov. A receipt was given for them, and not a promissory note. Exhibit "B" is the receipt that was given to me. No other advances were made that day or other cheques drawn. These cheques were never returned to me till a few days ago when I received them from the C. M. Bank. I never saw them from the time they left my possession till I got them from the C. M. Bank. This loan of $10,000 has never been returned to defendants in any shape or form whatever. I do not remember any payments being made to me on the 15th Nov., but I was paid some money on the 16th Nov. by Ito and Sobae for the credit of their joint account. That account is entirely separate from Ito's. The payments on the 16th Nov., were two in number, one of $13,000 and one $40,000 both of which were placed to joint account of Ito and Sobae. Accounts were rendered then showing these sums to their credit. The sums to the credit of Ito and Sobae are annexed to the answer. No other sum of $10,000 was borrowed by Ito.

In the latter part of Oct., 1872 Ito applied to W. H. & Co. for a loan of $25,000 for business for his own account, J. G. Walsh and I declined at first to make the loan; we told him we had not got the money. He offered to give us security a promissory note of the Hanabusa *han* or *ken* for $24,800, upon which W. H. & Co. had advanced nothing. He also offered to give us additional security 114,425 upon certificates of indebteness called *Han-no-shomon*. Iske was present. We had a long consultation about it. Ito told us the object he wanted money for. It was to enter into a dollar speculation for his own account and in conjunction with others. He told us that through his friends in the Government he was in receipt of intelligence of the future intentions of the *Okurasho* in regard to some finance operations. He intended if he obtained the money from us to buy or sell $500,000 at the *Shosha*. He anticipated a very large profit would result from this speculation, looking to his private information. Iske urged us strongly to make this advance, he said the security was perfectly good. Walsh and I consulted together and we informed Ito, that we would endeavour to procure the money from a foreign bank and let him have it. We told him clearly and distinctly that we had not the money ourselves, and that we required all the money we had for our own use. We told Ito that we would deposit with a foreign bank, the promissory note of the Hanabusa *Han* and the other security as security for the loan if we succeeded in obtaining it. We also told him that we should charge upon this loan the same rate of interest precisely that we had to pay the foreign Bank, and that for our intermediary compensation we should charge him commission. I think it was 1 per cent the first month and ½ per cent for each succeeding month. We also told him that I would write privately and semi-officially to the assistant Minister of Finance to know if these *Han* receipts and the *Han* promissory note would be good security for a loan of $25,000. We did write to the assistant-minister and his answer was favourable. We applied to the Deutsche Bank for a loan of $25,000 and we got it at 12 per cent per annum. The money was given to Ito and the securities were pledged with the Bank. In October or November 1873 we collected for Ito's account at his request the Hanabusa *Han* or *Ken* promissory note of $24,000. The collection was made from the government, and by this means our advance of $25,000 was paid by Ito. We rendered him an account of the transaction and charged him 12 per cent per annum and a commission of 3 per cent, Mr Walsh and I agreeing that the original commission of 1 and 1½ per cent per month was not intended for such a long period. By this means the securities for $104,000 and odd were released and they remained in our possession until the end of 1873. In October 1873 Ito borrowed from Walsh Hall & Co. $10,000, and he deposited 50,000 *rios* worth of securities upon certificates of indebtedness. That loan was also obtained from a foreign bank and those 50,000 *rios* worth of *Shomon* were pledged to the bank as security. This loan was made by J. G. Walsh and T. Walsh (for the firm) to Ito. I can't say positively if a portion of the 50,000 *rios* of securities are included in those mentioned in the petition. A portion of the $104,425 securities deposited with us at first by Ito are partly included in those mentioned in the petition. Ito authorised me to pledge the securities for $104,425 in order to obtain the loan for $25,000. As long as I was a partner in the firm of W. H. & Co., none of Ito's securities were pledged for money for the use of the firm. I frequently saw Ito in 1873 and 1874. Up to last year Ito never contested his liability for the payment of the debt of $12,000 and odd. In December last year Ito had two interviews with me at No. 14. At one interview a great number were present. I asked Ito for a copy of book "D," I asked him for the book and I told him I would make him produce it in Court if he did not produce it then. He said, I will bring it in a few days, or would show me it in his house in Yedo, if I would go up. He came to me in a few days and at this interview there were only present Ito and his interpreter Namekawa, Smith and myself. Ito produced book "D" showed it to me, declined to give it to me and handed me a copy of it (Defendants' exhibit "A 1.")

I looked at exhibits "A 1" and "D" and I compared them together very carefully, especially the foreign writing and the seals to see whether the two books corresponded. They did, with the exception of the foreign writing, the word "don" for Mito "loan" for example. The seals were alike and they were otherwise alike in every particular. After now looking at them they are not the same; the book "D" has been changed, a full whole seal has been put upon the entry Nov. 22nd, 1871, and when I saw that entry in Dec., 1874, there was only a half seal upon that and no whole seal and the copy was then a true one. They are different in that respect now. Ito told me at that time that he intended to bring a law suit against W. H. & Co. and asked me to assist him in this law suit. He told me that if I would do so he would hold me harmless of my share of any money that he might recover. He told me that if I would assist him at this Consulate not only would he do that but he would give me 30 per cent of anything that he might recover. He said, If you will assist me, I will be your friend, but if you oppose me

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

I will be a devil. In order that there might be no mistake he brought an interpreter so that Mr. M. Smith heard every word. I rejected indignantly his proposition, and I told him that I was an honest man. And I told him to go out of the office. The whole meaning of Ito's conversation was conveyed to me in English and Japanese. (Exhibits "E 2" and "P" handed to witness). These accounts are consistent in so far that they bring out the same results but the exhibit "P" has not been made out with care. Exhibit "P" is an account from defendants—an informal one—to Ito. It is a "sketch" account. It is an account that is not final: in fact a memorandum. There are inaccuracies in "P," what I should call clerical errors. [Witness here gave an example of one of the clerical errors.] In exhibit "E 2," which is complete the entry appears correctly. [Witness again gave some examples of clerical errors in "P" These errors were not in the actual figures, but in the description of sales, receipts, exchange, &c., &c.] Exhibit "E 2" is the correct and abbreviated form of Exhibit "P." The items in the two accounts when added together amount to the same thing,

Court adjourned till Monday morning next, at 10 o'clock, when Mr. Dickins will commence his cross examination of Mr. R. W. Irwin.

IN H.B.M.'s CONSULAR COURT.

Before R. ROBERTSON, Esq, Consul.

Saturday, October 16, 1875.

W. Hockings, seaman of H. B. S. *Charybdis*, was charged with drunkenness, assaulting the Japanese police, and damaging a policeman's coat.

Prisoner admitted having been intoxicated, but pleaded that he did not remember assaulting anybody.

His Honour, after hearing the evidence, ordered prisoner to pay the value of the coat destroyed, 3 *yen* 50 *sen*, and to pay a boo and a half jinrikisha hire.

IN H. B. M.'s PROVINCIAL COURT.

Before C. W. GOODWIN, Esq., Assistant Judge.

Tuesday, Oct. 12, 1875.

D. Welsh was charged with assaulting a Japanese man, who also sued him for a debt of $6.92.

His Honor, after hearing the evidence, ordered that the debt and costs be paid within three days; also that defendant should pay to plaintiff the sum of a boo and a half for damage done to his (plaintiff's) coat.

WIEGAND *vs.* HARRYMAN.

This was a claim to recover $27.25 for beer supplied to defendant.

Defendant did not appear, and His Honor ordered that the amount be paid within 10 day, and costs.

CHANG CHOW *vs.* C. LESTER.

This was a claim for $12.00, for clothes supplied. Defendant said he would be able to pay the amount at the end of this month, and His Honor made an order to that effect.

Saturday, October 16, 1875.

J. PEARCE *vs.* WAINWRIGHT AND J. E. CARTER.

This was an action brought to recover $100 lent on a joint promissory note.

Only one of the defendants (J. E. Carter) appeared, and pleaded non-indebtedness, on the ground that the amount had already been paid through Mr W. Cheshire, deceased.

His Honour said he did not think this was a good defence. Plaintiff was still in possession of the promissory note.

Mr Carter said he did not know plaintiff in the matter. He had borrowed the money from Cheshire, and when he repaid it he thought the note was done with.

His Honour said he did not think this was any answer. It was very unfortunate if he (Mr. Carter) had paid it to Mr. Cheshire, who was now deceased.

Mr. Carter said he wanted to prove that Mr. Cheshire was the agent of plaintiff.

His Honour said plaintiff must not lose his money.

Mr. Carter showed a receipt from Cheshire for $100, which was to have been given up in exchange for the promissory note when it could be found.

His Honour said he would put plaintiff in the witness box.

J. Pearce, sworn. I did not see defendants sign the note. I lent the money on a promissory note and a deed of mortgage. I handed the money to Cheshire. I did not see the defendants Wainwright or Carter at the time. I have never received payment of the note. The note has been in my possession. I sent the note for collection when it fell due. I endorsed the note to Mr. Singleton. Cheshire had no authority to receive the money for me, nor did I know that it (the note) was ever paid. I know who I lent the money to perfectly well. I have seen Mr. Carter before.

By Mr. Carter: You never asked me to lend you any money. Mr. Cheshire did. I did not lend my money through Cheshire, nor did he collect for me. Cheshire made no other loans for me at that time.

By his Honor: I swear I never authorised Cheshire to receive this money, nor was I aware that it was paid.

His Honor said there was no evidence before him to prove that Cheshire was authorised to collect money for plaintiff. Mr. Carter had incautiously paid the money, and besides that, he ought to have got back the note. If the mortgage was still in existence, as stated, that was also evidence against the defendants. He thought the money must be paid to plaintiff.

Mr. Carter called attention to the fact that it was a joint note, and his Honor made an order that both defendants should pay it between them, together with costs of Court.

THE OLD CATHOLICS.

(Pall Mall Gazette.)

The unexpected success of the Old Catholic Congress in constructing a formula of agreement has evidently robbed the criticisms of some of our contemporaries of their intended point. We were on the eve of being told that the questions in dispute were so hopelessly difficult and abstruse that it was folly to aim at compromising them. As it turns out, the moral is of another kind, and yet one, we fear which cannot afford much gratification to the Old Catholics and their allies. Unless the whole history of Christian opinion suggests a false inference, these questions have only been settled because people have ceased to take any strong interest in them. Unquestionably they have been burning questions in their time. They are the very controversies which supplied the population of the Roman Empire for centuries with its sole mental food, and which, according to one school of writers, so emasculated its energies that it became a prey to heathen barbarians on one side and Mahommedan fanatics on the other. But there is plenty of evidence that, except perhaps in the Greek Church, they had lost their vitality and were in some danger of being forgotten. The one among them which survived longest in the Western Church was the dispute about the relations of the First and Second Persons of the Trinity. The decay of interest in it is shown by the decline of the once important Unitarian sect. Less than a century ago, one of the greatest men of his generation, Coleridge, left the university at which he was on the point of obtaining the highest honours and enlisted in a cavalry regiment, because he could not find standing room for his mind in the propositions of the Church of England on the subject. But at the present moment it is hardly possible to keep the sect together. The young men will not sacrifice the unquestionable social advantages of membership in the Established Church for so small a matter, and there is a tolerably well-known cynical saying of a Unitarian clergyman as to the effect upon a Unitarian's creed of putting a second horse to his carriage. The point which most occupied the attention of the Congress at Bonn—the relation of the Third Person of the Trinity to the others—has so thoroughly dropped out of of sight in the West that several eminent theologians, Roman Catholic as well as Protestant, are said to have fallen into the plainest heresy simply through having forgotten, or through never having learned, the technical phraseology appropriate to the matter. No doubt in the Eastern Church it was otherwise, and the true success of the Congress consists in having brought the delegates of the Greek Church to a compromise. This class of questions did really retain their vigour in the Greek Church longer than any other, and it might have been interesting, though perhaps perilous and not quite civil, to put to the Greeks a few questions about the Light on Mount Tabor. Moreover, the Church, which is by eminence the Orthodox Church, had come to take such a pride in its orthodoxy as apparently to care little for its Catholicity, and rather to repel than welcome additions to its fold. The pliability which its representatives exhibited is a curious result of the vehement anger which must have been stirred up in Eastern Europe by the Vatican Decrees.

There are at the same time plenty of theological questions in which the men of our day take as keen an interest as was once taken in the points of doctrine which the Old Catholic Congress

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

has found it so easy to compromise. Suppose any such assemblage were to undertake to deal with any such theses as the following:—What bearing have the biological and physiological theories of Darwin on the argument from Design? What are the most probable dates of the writings which form the New Testament? What relation have the opinions of the authors of these writings to the Christianity which prevailed at the period of Council of Nicæa? There would be no fear of a mighty audience for such discussions, or of a European interest in them. The real difficulty would be that no agreement could be hoped for and no measure would be observed between the controversialists. In point of fact, the violence and disorder which characterized the earlier Christian Councils were a natural consequence of their being in earnest; and it is only a more indifferent age which regards them as scandalous. No one of the questions we have suggested could be argued between zealous opponents without much danger of a riot. The British Association has of late years shown some uncomfortable symptoms of a taste for theology in respect of the first of them; but, though scientific disputants have the inestimable advantage over others of mostly dealing with facts which are beyond controversy, nobody could contemplate without misgiving a public controversy on the Darwinian philosophy between Mr. Huxley and Mr. Mivart. Who can doubt that if the author of "Supernatural Religion" were to drop his veil and, have it out on a platform with Professor Lightfoot, there would be an immediate end to the *aigre-doux* tone which runs through that curious controversy? On the last of our three moot points it would be vain to hope for a handsbreadth of common ground. The distance by which the more extreme controversialists are removed from one another may be inferred from a sermon of Cardinal Manning, which was reported in abstract a few days ago. The Cardinal distinctly denies that Christianity had its origin in the writings which constitute the New Testament He asserts that there was from the first an independent source of doctrine in the collateral teaching of the Holy Ghost, and that from this last have descended those wonderful stories about the Virgin Mary which Protestants regard as at the very best mere trumpery and frippery. Thus the bewildered Protestant would find the main point he was prepared to argue conceded at the outset, and would have to meet his adversary on ground on which not a tittle of evidence is available to either disputant.

Dr. Döllinger's address to the Congress has evidently been placed before us in a most imperfect shape, but even as we have it it is extremely interesting. There are many aspects of theological controversy in respect to which his vast learning gives him a remarkable advantage over Protestants, Anglicans, and Roman Catholics alike. That a great part of the body of Roman Catholic doctrine is modern, and even extremely modern, has been well recognized ever since the Reformation; and, indeed, it is admitted by all instructed Roman Catholics, though the form of the admission differs in the famous "Essay on Development" and in the sermon of Cardinal Manning to which we have referred. But Dr. Döllinger is able to meet the explanation offered both by the Cardinal and by Dr. Newman in a much more conclusive way than the ordinary Protestant controversialist. Not only can he show that a particular doctrine has no warrant from the earliest Christian records, but he can point out the exact time at which it made its appearance and came under the patronage of the Church. Thus in this very address he explains that Purgatory grew out of the belief, not altogether even now repudiated by Protestants, of a suspended condition of the soul between death and its final doom, but that the doctrine of purifying flame, of which the Church subsequently made such account, was invented by a definite person, Pope Gregory the Great. The line of argument is extremely interesting to historical scholars and to all who, on political or polemical grounds, dissent from the innovating and aggressive Romanism of our day. But, on the other hand, we cannot be sure how far our agreement with Dr. Döllinger extends. Will his reasoning hold of the earlier Christian centuries? Will he or can he tell us whether any or what changes in the creed of the Christians described in the Acts of the Apostles had been accepted by the party which prevailed at Nicæa, and on what grounds the creed thus modified should be regarded as Christianity? All the parties who met at Bonn agree in fixing some period of time as that which the divinely dictated portion of the Christian creed may be found in unalloyed purity. What is the exact amount and kind of the authority for this limitation of time? We do not doubt that Old Catholicism can inspire enthusiasm. Obviously Dr. Döllinger is sincere and Mr. Gladstone is not only sincere but alive with zeal. But those who do not share this fervour must be forgiven for thinking that Old Catholicism is not a specially credible creed. It is hard to believe in a Church perpetually but infallibly legislating on supernatural matters through a human organ; but to believe in a Church which professes to have had this legislative virtue for several centuries and then to have mysteriously lost it is to some minds still harder.

Shipping Intelligence.

ARRIVALS.

Oct. 9, *Niigata Maru*, Japanese steamer, Walker, 1,685, from Shanghai and ports, Oct. 3, Mails and General, to M. B. Co.

Oct. 11, *Ukraine*. American barque, Melcher. 680, from Nagasaki, Oct. 4, Coal, to P. M. S. S. Co.

Oct. 11, *Gaelic*, British steamer, Kidley, 2,652, from San Francisco, Sept. 16, Mails and General, to O. & O. Co.

Oct. 11, *Decres*, French corvette, Captain Bose, 900, from Kobe Sept. 14.

Treasure ... ... 1,000 *yen*.

REPORTS.

The Steam-ship *Gaelic* reports, left from San Francisco Sept. 16th with 28 European and 567 Chinese Passengers, 1,660 tons merchandise $312,934 in treasure and 18 bags of U. S. mails. From the 16th to 28th, had fine weather; from the 20th to 28th, had a strong gale blowing from the S. W. ½ of the time. October 3rd. we had a severe storm: the oldest traveler said he never experienced any thing like it except a typhoon, it lasted 2 days and nights: Oct. 9th, we had a gale which lasted about 12 hours, during which time it rained most of the time. It has been a very severe passage in general, and had not the ship been a good substantial one she would undoubtedly have suffered severely. We did not meet or see a sail of any kind during our voyage. Arrived at Yokohama Oct. 11th 1875 at 4.06 p. m.; this ship brings for this port 94 tons merchandise and 9 bags of mail matter. For Shanghai 46 tons merchandise and 5 bags mail. For Hiogo 8 tons merchandise. No. of crew 94.

The *Tana's* reports, fine weather and strong N.E. winds throughout.

The *Mary Jane* reports: Left Kobe on the 7th inst., and had fine weather throughout the passage.

The *Vsadniek* reports fine weather, calms and N.E. breezes.

COMMERCIAL INTELLIGENCE.

IMPORTS.

Cotton Fabrics and Yarns.—During the week closing to-day great dulness has prevailed in our Import market, and in some instances prices must be quoted lower.

Grey Shirtings:—				White Shirtings:—	
7 lbs.	38½ yds. 39 in. per pce....	$2.00 to $2.10		60 to 64 reed 40 yds. 35 in. nom. per pce....	2.20 to 2.40
8 lbs.	38½ yds. 44 in. „ nom.	2.50 to 2.70		Turkey Reds 24 yds. 30 in. 2¼—3 lb. per lb...	0.75 to 1 02½
8 lbs. 4 to 8 lbs.	38½ „ 39 in. „ „	2.29½ to 2.65		Black Velvets ... ... Nominal ...	8.75 to 10.00
9 lbs.	38½ „ 44 in. „ ...	2.60 to 3 05		English Drills 15 lb. 40 yds, 30 in....	3.30 to 3.40
				Taffachelaes 12 yds, 43 in....	2.55 to 2.70
No. 16 to 24 ... ...per picul...		$30.00 to 35.00		No. 38 to 42... ... ...per picul...	$41 50 to 45.75
No. 28 to 32 ... ...per picul...		$37.00 to 41.50		Reverse Twist ... 16-24 ... „ ...	—

Woollens.—In its business aspect last week resembled very closely its predecessors. Trade in *Woollen Fabrics* remains altogether dull, and even the demand for *Mousselines de laine* is no longer as active as before reported. On the whole a very small business has been transacted and prices are looking weak though we make no actual change in them as yet.

Plain Orleans	40—42 yds. 32 in....	6 25 to 7.80		Figured Mousseline de Laine ..30 yds. 30 in...	0 25 to 0.28
Figured Orleans	29—30 yds. 31 in. ..	4.75 to 5.25		Multicolored „ ...30 yds. 30 in...	0.35 to 0.40
Chimagoro	30 yds. 30 in....	5.25 to 5.75		Cloth, all wool plain or fancy.. 48 in. to 52 in...	0.80 to 1.20
Italian Cloth	—30 yds. 32 in....	0.25 to 0.33		Presidents ... . 54 in to 56 in...	0.70 to 0.80
Camlet Cords	29—30 yds. 32 in....	6.25 to 7 25		Pilots ... ...54 in. to 56 in...	0.45 to 0.62½
Camlets Asstd.	56—58 yds. 31 in ...18 50 to 19.00			Union ... ... 54 in. to 56 in...	0.50 to 0 70
Lastings, Japan	22—30 yds. 32 in....13.00 to 14.50			Blankets, scarlet & green 7 to 8 lbs... per lb...	0.40 to 0.42½
Plain Mousseline de Laine	—30 yds. 30 in,...	0.18½ to 0.20½			

Sugar.—The market continues extremely dull, and Formosa descriptions are declining. In *China Sugar* we do not alter prices. Stocks of these are large and transactions are altogether unimportant.

Sugar:—Formosa in bag ... ...per picul....		3.90 to 4.10		China No. 5 Kong-fun ... ...per picul ...	4.70 to 5.30
in Basket ... ... „ ...		3.00 to 3.90		„ No. 6 E-pak ... ... „ ...	4.40 to 4 50
China No. 1 Ping fah ... ... „ ...		8.00 to 8.10		Swatow... .. .. „ ...	3.30 to 3.50
„ No. 2 Ching-pak ... ... „ ...		7.20 to 7.70		Daitong... ... ... „ ...	3 30 to 3.80
„ No. 3 Ke-pak ... ... „ ...		6.20 to 6 60		Japan Rice ... ... „ ...	3 25 to 3.30
„ No. 4 Kook-fah... ... ... „ ...		5.50 to 5 90		Kerosine Oil... ... ...per case ...	2.60 to 2.65

EXPORTS.

Silk.—Since the 8th instant, arrivals are 800 bales, and deliveries about 600 piculs.

Prices for Medium, clean, full-sized Hanks are well maintained, and Hamatski continue in great favor. Meanwhile, the comparative value of fine-sized silks, unless the thread is of superior quality, is manifestly falling off. We quote:

Hanks.—				Oshiu.—	
„ Best No. 1 to 2		$465 to 480		„ Best	$530 to 550
„ Good No. 2		$450 to 460		Hamatski.— 25 to 50	$430 to 480
„ Medium No. 2½		$420 to 440			
„ Common to inferior		$380 to 410			

Silk worms' Eggs.—Total arrivals to date are 586,000 cards. No transactions to report.

Tea.—A quiet tone generally pervaded the market for the early part of closing week, but within the last two days buyers have resumed operations to some extent, and will thus relieve the pressure on holders to realize.

Prices remain much as last quoted, and, although stocks are heavy, holders retain a certain amount of confidence which, should any amount of activity be apparent on this market, will at once enforce a return to old prices.

The *Ambassador* and *Cremona* are on the berth for New York, rate of freight £2 per ton of 40 cubic feet.

Common		$20.00 to 23.00		Fine	$35.00 to 38.00
Good Common		24.00 to 27.00		Finest	$39 00 to 42.00
Medium		26 00 to 28.00		Choice	$43.00 to 48.00
Good Medium		29.00 to 32.00			

EXCHANGE AND BULLION.

Exchange.—The business of the past week has been more than usually limited to small settlements of Private Paper at 4/1 3/8 to ½ with a decided appearance of firmness at the close, and but little demand for Bank Bills.

Rates close as follows:—		On Hongkong—Bank sight.....	par.
Sterling—Bank 6 months' sight.....	4s. 1d. to ¼	„ Private 10 days' sight.....	¼ per cent disct.
„ Bank Bills on demand..... ...	4s. 0d. to ⅜	On San Francisco—Bank Bills on demand.....	97½
„ Private 6 months' sight.....	4s. 1¼d.	„ 30d. sight Private	100¼
On Paris—Bank 6 months' sight..... ...	5.19	On New York—Bank Bills on demand	97
„ Private 6 mo. sight..... ...	5.27	„ 30 days sight Private	100¼
On Shanghai—Bank sight.....	72⅛ to ¼	Gold Yen.....	401¼
„ Private 10 d.....	72⅜	Kinsatz.....	405

Sold by all Chemists, Perfumers, and Bazaars throughout China and Japan. "Ask for ROWLANDS' ARTICLES," At ROWLAND & SONS, Hatton Garden, London.

Yokohama July, 3, 1875. 10ins.

THE GREATEST

WONDER OF MODERN TIMES!

HOLLOWAY'S PILLS.

PERSONS suffering from weak or debilitated constitutions will discover that by the use of this wonderful medicine there is "Health for all." The blood is the fountain of life, and its purity can be maintained by the use of these Pills.

SIR SAMUEL BAKER,

in his work entitled "The Nile Tributaries in Abyssinia," says, "I "ordered the dragoman Mahomet to inform the Fakey that I was a "Doctor, and that I had the best medicines at the service of the "sick, with advice gratis. In a short time I had many applicants, "to whom I served out a quantity of Holloway's Pills. These are "most useful to an explorer, as possessing unmistakable purgative "properties they create an undeniable effect upon the patient, which "satisfies him of their value."

SIMPLE, SAFE AND CERTAIN!

HOLLOWAY'S OINTMENT

Is a certain remedy for bad legs, bad breasts, and ulcerations of all kinds. It acts miraculously in healing ulcerations, curing skin diseases, and in arresting and subduing all inflammations.

MR. J. T. COOPER,

in his account of his extraordinary travels in China, published in 1871, says—"I had with me a quantity of Holloway's Ointment. I "gave some to the people, and nothing could exceed their gratitude; "and, in consequence, milk, fowls, butter, and horse-feed poured "in upon us, until at last a tea-spoonful of Ointment was worth a "fowl and any quantity of peas, and the demand became so great "that I was obliged to lock up the small remaining stock"

Sold by all Chemists and Medicine Vendors throughout the World.

May 17th, 1873. 6m.

ASTHMA AND
CHRONIC BRONCHITIS.

The most effectual remedy will be found to be

DATURA TATULA,

prepared in all forms, for smoking and inhalation, by SAVORY & MOORE, 143, New Bond-street, London, and sold by them, and all Chemists and Storekeepers throughout the World.

THE

Japan Weekly Mail.

A POLITICAL, COMMERCIAL, AND LITERARY JOURNAL.

VOL. VI.—No. 43.] YOKOHAMA, SATURDAY, OCTOBER, 23, 1875. [PRICE $24 PER ANNUM.

TO SUBSCRIBERS.

SUBSCRIBERS at a distance whose period of subscription may have elapsed, are informed that their papers will be addressed and charged to them *until countermanded*. This rule has been found necessary in order to avoid the inconvenience of an abrupt stoppage of the paper which might result from an omission to renew.

It is requested that notice of the intention to discontinue a subscription be so given as to reach Yokohama *before* the date of its effluxion.

NOTICE.

ON and after the 1st of July, Notices of Births, Marriages and Deaths will be charged $1 each insertion.

Such Notices cannot be inserted in this journal unless endorsed with the name and address of the person by whom they are sent.

Yokohama, 25th June, 1874.

Notes of the Week.

Negotiations which have been in more or less of an advanced state during the past six months, for the taking over by the Mitsu Bishi Company of the local traffic of the P. M. S. S. Co., were matured ten days ago, and on Monday last, the necessary announcements to that effect were made to the public. The ruinously low rates which have obtained for some months were at once raised, and we hope the line will enjoy prosperity and a good reputation. The promoters will do well to lay the foundations of their success in moderate charges and strict attention to the legitimate requirements of the public. The world is very full of money now-a-days, and competition soon springs up if the duties owed by mercantile corporations to their great customer are ill discharged.

Our readers will find elsewhere a translation of an article which appeared in the *Hochi Shimbun* a few days ago accusing the British minister and the British community generally of fomenting the idea of a war with Corea for their own personal and national advantage, as well as a translation of the declaration which appeared this morning in the same journal of the falsehood and slander contained in the charge. A more shameful and absolutely unwarranted attack never was made upon a minister or the community he represented. We assert without hesitation that there is neither a shadow of excuse nor ground of any kind for it, and it would be wholly ridiculous but for the suspicion to which it gives rise that foreigners who regard the policy of England in this country with enmity and jealousy have not been altogether unconcerned in it. We infer this from the miserably false guage applied to English policy and interests in the east, and the thoroughly mean tone of the prompting throughout. The day has not yet come, Heaven be praised, when a British Minister, in any country, foments war either for the purpose of making contracts himself or getting them for his fellow-countrymen. The sole interest of England in Japan is to see her strong and prosperous, and they slander us as grossly as on this occasion who say that we have either designs or interests other than this. We can only say that if the Native Press is about to lend itself to this kind of proceeding, it will become as much discredited in the eyes of foreigners as in those of the Japanese people, and all the advantages we have hoped to see springing from it will prove to be so many illusions instead of realities. There are parts of the world, we would have the Japanese know, where a newspaper lie is as good as a newspaper truth; nor need they look far for examples of journals conducted on these principles. But this is a kind of journalism which it is not desirable to see growing up in this country, and we hope that this first flagrant offence against first principles, atoned as it has been by a sufficiently humiliating retractation, will be the last.

As the revival of the Race-lottery system at the Club has been made the subject of a kind of triumphant comment directed obviously against ourselves, we shall not hesitate to say that we think it is a subject for the gravest regret. The lotteries were known and acknowledged to be not only associated with, but inseparable from, practices which tended to lower the already extremely low and deplorable morality of the turf, and now, of course, after the sweeping and garnishing of last year, we shall have the consequences not dimly described in the passage which furnishes our illustration. We think racing an excellent sport, and though never enthusiasts about it, we have always thought that the evils attending it were not more inseparable from it than are the evils attending a thousand kinds of recreation, theatres, and games into which skill and chance alike enter, and in respect of which it would be folly to interdict that moderate betting which serves to heighten their interest, and the limit of which must be left to every man's good sense and feeling of what is expedient and prudent. But the tendency of all wise regulation is to diminish as much as possible necessary evil, admitted to be such. Our own ideal of racing is that of a man who keeps horses for his pleasure, trains them for his recreation, runs them for his sport, and decorates his sideboard with the prizes they win for him. This is the racing which alone is worthy of gentlemen. When men keep horses in order to make money out of their performances, they degrade a fine sport, and might just as well open a roulette-table. This is the best view of it. The worst is that they may do things, or cause things to be done, for which a roulette-table keeper would inevitably find himself in Milbank.

Since they made their farewell bow for the season last spring, the admirers of the drama have organised a Society for the cultivation of the art, reviving for this purpose the title of the defunct Amateurs Dramatic Club, and securing for their representations, and as a source of income, the Gaiety Theatre. The first performance of the season was given there last night and a fairly well-filled house assembled to witness it. The lighting was sufficient, and the atmosphere—as compared with some recent experiences—very endurable. A few amateurs had kindly united their services to furnish music for the occasion.

In dealing with the efforts of amateurs the critic's duty requires some heavy compromises, unless indeed the performers disclaim all comparison or rivalry with the professional standard. In this case, however, he must reverse his quill, and tickle gently with its plumed end where a rigid judgment would counsel him to bite in his sentence with the sharpest of nibs and most mordant of ink. Nor need his conscience plague him, for his judgment has holiday, and, for the occasion at least,

Digitized by Google
UNIVERSITY OF CALIFORNIA

the elastic laws of taste allow him to forego his task of trustee for the public. The code of criticism is for the nonce suspended, and appreciation or blame, admiration, faint praise or utter damnation are regulated, not by their reference to the 'eternal fitness of things,' but by the state of the liver or the satisfactory progress of digestion of an antecedent dinner. With the formation of the new Society we shall hope, however, to have fewer appeals to our sympathy and larger calls upon our judgment, and the improvement visible in the performances during the past season amply justifies the expectation. There is every stimulus. Not alone does the professional rival threaten to invade its stronghold, but the dramatic schoolmaster is abroad, running through all the modes of his art, embracing all knowledge, and imparting instruction which, to quote his memorable manifesto, extends not only to the vernacular of Japan, but includes, also "the French, Greek, Latin, and Italian languages which constitute its general *savoir faire*."

The selection of "A Wonderful Woman," a tame, conventional but elegant drawing-room piece was somewhat unfortunate. The actors in such plays perform in a gloom of their own making, and disseminate dulness where all should be bright and radiant. The story is well-worn, there is no novelty in the situations, the characters are not well marked or strongly contrasted and the dialogue is excessively watery. It was on the whole such a piece as nothing but the poverty of a répertoire or the thinness of a company should guide a manager to select, and Mr. Spurgeon, the new Master of the Revels, has probably been led to it by some such reason. As *De Frontignac* he gave a very pleasant and spirited impersonation of the ruined nobleman and made the best of a part that is far from generous. Good looks, good elocution and a good manner are as much as the best of players can bring to the *rôle*, and this Mr. Spurgeon thoroughly realised. Mr. Vernon's *Crépin*, decidedly one of this excellent performer's happiest assumptions, evinced a very large advance on his part, not only in more intelligent reading, but in the repression of farce and extravagance which was usually his besetting fault. He rendered the character of the generous cobbler with sobered, while yet unctuous humour, and threw in here and there some touches that betrayed the possession of a true artistic spirit. He has done nothing better than *Crépin*. Mr. Fredericks as the *Marquis de Millefleurs* had but a small and unimportant share of the drama, but his representation must be commended for its spirit and good tone. Miss Ella Herbert's impersonation of the ambitious *Hortense*, while marred with some of the defects of mannerism which linger in her style, was certainly freer than most of her preceding assumptions and showed greater care and a less random study. The *rôle* is a serious and impressive one, was given with discriminating effect and taste, and marks a decided improvement in the lady's acting. Miss Sprightly as *Cecile* wanted the ease which a further acquaintance with the stage will no doubt confer.

"An Ugly Customer," removed the disappointment which the comedy had undoubtedly raised. With little or no plot and no large share of humour in its dialogue, its situations are so provokingly comic that laughter was irresistible and peal after peal followed the drolleries of the farce. Mr. Toddles as *Coobiddy*, the fraudulent army contractor, and Mr. Latham in the part of *Snapdragon*, divided the honours of the piece and gave full play to its extravagant humour. The latter gentleman as (we think) a débutant may be commended for his broad sense of humour. Let him study ease and we shall not doubt his success. Miss Mathews in the part of *Sophia*, and Miss Morass as *Mary*, acted with appropriate feeling and archness, and Mr. Coventry did the utmost for the slender part of *Alfred*.

We should add that the dresses provided for the comedy were in excellent taste. The scenery, too, was appropriate.

General Williams, who was recommended to the Japanese Government some four years ago by the Government of the United States, to assist in the Financial Department at Yedo, had an audience of H. M. the Mikado on Friday week last, preparatory to leaving for America. We have not the least intention of reflecting upon General Williams personally when we say that no more scandalous piece of nepotism or more flagrant breach of trust than this appointment ever disgraced a modern Government. The Japanese urgently wanted a man accustomed to handle large questions of finance, taxation and book-keeping, of the true principles which they confessed and lamented their ignorance, and applied to Washington for such a person. General Grant must have known that General Williams had no such experience, and was wholly unfitted by his antecedents to furnish the assistance sought. Yet he sent him out, and delayed by four years much good work which should have been done in reducing to a more scientific and satisfactory condition the taxation of the country and the organization of its financial machinery. To make all this worse, General Williams was for at least two years attended, as secretary, by a relative more profoundly ignorant than himself of the duties expected from him. Nothing but an indisposition to reflect upon a man more sinned against than sinning, and who is only open to the reproach of having done nothing because he could do nothing in regard to the special work he was appointed to discharge, prevents our saying more on the subject. But the poison of the United States political system has indeed eaten its way far into the world's economy when we find that it has paralyzed the action of the very heart of this country, delayed its progress, and made a mockery of a trust which demanded a special sense of responsibility for its proper discharge. Of course, as the Japanese are an extremely polite people, there have been the usual farewell audiences and letters and presents. But it would be wrong to permit this flagrant case of misdoing to pass without recording an opinion upon it which is more decisively that of the public than almost any we have ever published.

As it is possible that our German opponent to whose opinions on the freedom of the German Press we referred last week, may still cherish some illusions on the subject, we extract for his special benefit the following item from the *Pall Mall Budget* of the 27th August last.

Some German journalists, at a congress held in Bremen, have passed a resolution demanding immunity from punishment on behalf of those who publish truthful reports of public proceedings in the courts of law. They also uphold the anonymous principle of journalism, and ask that it should not be compulsory to give up the name of any author or contributor.

The *Einigkeit* of which] we have all heard so much, has come, though for its permanence and stability there are fewer guarantees than for any condition of first-rate importance and magnitude in Europe. For the *Freiheit*, which used always to be associated with it, Germany may yet pray, and pray in vain, for many a long day. It is always well to be a little *under* the mark in any statements on this subject made of the continental nations.

On the occasion of the sinking of H. M. S. *Vanguard* by collision with the *Iron Duke*, off Wicklow Head, on the 1st September last, "Captain Dawkins (commanding the "*Vanguard*) called to the men of his ship that if they preserved "order all would be saved, but if there was any confusion all "would be lost. The men stood all along the deck in regi- "mental order, and not a man moved until ordered to do so." We shall not pretend that our only object in transcribing this passage is to show that the discipline in the British navy is as good as ever, in opposition to some who pretend that it has relaxed of late years; but it is one of our objects.

A very interesting translation will be found elsewhere of the diary of a young officer of the *Unyokan*, giving an account of the late affair in Corea. His narrative has entirely the air of truth, and the action of the Japanese seems to have been in a high degree creditable to them, an opinion in which we are sure all our readers will heartily join.

Mr. Harry Stanley has taken the Gaiety Theatre for a few nights for the purpose of exhibiting his panorama of the American War. The panorama is favourably spoken of by the Eastern journals as furnishing accurate illustrations of the events of the war.

We have to acknowledge the receipt of the Report of the Commissioner of the Imperial Mint, Osaka, for the six months ending July 1875, but too late to allow of our commenting upon it this week. The Report will be published in our next issue.

Monsieur Vertelli and Madame Eugénie gave two performances in legerdemain, &c. at the Grand Hotel in the course of the past week. The impression made has not been favourable.

From the "Japan Mail Daily Advertiser."

The Shanghai mail adds nothing to our information as to the situation in China. The ultimatum of Mr. Wade has certainly been only partially conceded, and that perhaps in its least important feature.

The question of another attempt to open negotiations with Corea is said to be under consideration by the Japanese Cabinet. It is believed that either Kido or Soyéjima will be charged with the Mission.

It will be observed from an advertisement in our columns that the Mitsubishi Company has undertaken the Shanghai Branch service of mail steamers hitherto carried on by them and the Pacific Mail S. S. Company. The Company's steamer *Nevada* is announced to sail on Saturday next for Shanghai.

A new educational institute, to be called the Hoto Gakko, was opened yesterday in Yedo.

The half yearly shooting of the Tir Suisse was brought to a close on Saturday afternoon. Several of the Japanese Military and Naval authorities were present and took part in firing. The prizes were distributed by Mesdames Morff, Evers and McDonald. The following represents the scores of the marksmen.

CIBLE PATRIE.

1.—Une Coupe en argent—Mr. Favre-Brandt.
2.—Une Cave à Liqueurs Tuya—Mr. Mottu.
3.—Une Coupe en argent—Mr. Schoene.
4.—Un Stéréoscope palissandre avec 2 douz. de vues—Mr. Perregaux.
5.—Une Longue-vue Marine—Mr. Beretta.
6.—Un Baromètre Anéroïde avec Thermomètre—Mr. Haenni.
7.—Un Briquet argent, guilloché—Mr. Vannes.
8.—Un Portemine or avec plume—Mr. Colomb.
9.—Un Couteau, en écaille, écusson argent—Mr. Triulzi.
10.—Un Couteau Jockey Club—Mr. Lescasse.

CIBLE A POINTS.

	Points.
1.—Un Milieu de Table en Christofle, Plateau Cristal—Mr. Favre-Brandt	54
2.—Une Pendule de voyage répétition, réveil, ancre & gong—Mr. Brennwald	50
3.—Une Coupe en argent—Mr. Oyama	50
4.—Un Rond de Serviette riche, guilloché—Mr. Schoene	43
5.—Un Portemine or avec plume—Mr. Beretta	42
6.—Un Portemine or—Mr. Mottu	39

CIBLES TOURNANTES.

	Points.
1.—Une Coupe en argent—Mr. Mottu	203
2.—Un Sac de voyage garni—Mr. Brennwald	173
3.—Une Coupe en argent—Mr. Favre-Brandt	130
4.—Une Corbeille Cristal gravé—Mr. Beretta	118
5.—Un Porte-Cigares Tonneau—Mr. Schoene	101

A number of sportsmen were stopped by the police in the neighbourhood of Yedo on Sunday last and had to turn back. The police performed their unpleasant office with perfect civility but with such firmness as to indicate the resolution of the Government to initiate at once repressive measures. There are grounds for thinking that the right of shooting within treaty limits may be pleaded by reason of antecedent regulation made by the Government and recognised custom. But the expediency of pressing as a right, and thus placing beyond the reach of regulations very necessary to prevent its abuse, a privilege which has become such rather through the absence of regulation than by reason of it, is at least an open question. We do not think it well that the Japanese should feel that a privilege liable to grave abuses in thoughtless hands—take the present condition of the country for instance, the paddy full of grain, and the fields swarming with harvesters—should be exercised without their having the power of saying a word about it. This seems to us a violation of natural justice, and all good sportsmen would condemn it as well. But we shall treat the question more at large in our weekly issue.

There are no grounds whatever for the rumour of a rupture between Russia and China.

A newspaper, to be printed exclusively in *Kana* character, will be published in Yokohama on the first of next month. The success of the *Yomiuri Shimbun*, printed also in *kana*, which is largely sold in Yedo at a low price, would seem to have suggested the desirability of the new enterprise.

The Tôkio *Fu* would also seem to be engaged in a general retrenchment. Within the past fortnight some seventy of its officials have been dismissed from their posts from, it is understood, motives of economy.

The *Hochi Shimbun* informs us that Her Majesty the Empress visited the palace of Hamagoten on Sunday last.

The *Nichi Nichi Shimbun* says that the usual snowfall at Sapporo, in Yesso, began this year on the 14th instant.

The editor of the *Nichi Nichi Shimbun* appeared at the Yedo Saibansho on the 18th instant, charged with writing articles of dangerous tendency. He was, however, released without punishment.

Another fire is reported to have occurred at Trifune chô, Yedo, on the 19th instant. Some thirteen houses were destroyed.

The entries for the approaching Athletic Sports show a favourable change in the disposition of competitors as compared with the apathy evinced at the Spring Meeting. From the lists of entries completed yesterday we may fairly augur the probability of a highly successful season.

On the faith of a telegram from the *Kasuma Kan*, one of the Japanese 'men-of-war' now in Corean waters, the *Hochi Shimbun* states that the Coreans are preparing for war. The marines from the ship had, it is said, been landed for the protection of the foreign settlers.

The *Hochi Shimbun* relates that an Austrian subject who accompanied the Japanese Commissioners on their return from the Vienna Exposition, has expressed his intention to become naturalised. Kinriusho, the Corean, whose arrival in Japan we reported a short time since, has expressed a desire to the same effect, and petitions have, in both cases, been sent in to the Government.

The Editor of the *Choya Shimbun* attended at the Saibansho, Yedo, on the 19th instant, to answer the charge of having offended against the Press Laws.

Mr. George Williams, whose term of engagement with the *Okurasho* has expired, was honoured with a farewell interview by H. I. Majesty at the Palace on the 15th instant.

The *Moshun-kan* was despatched on the 20th inst., for Corea.

The *Hochi Shimbun* writes: the three *Daijin* and all the *Sangi* attended at the *Kunaisho* on the 19th instant and were honoured with an interview by the Emperor.

The day of sailing of the Shanghai boats has been altered by the Mitsubishi Company to Wednesday. This change has necessitated an alteration of the days fixed for the Athletic Sports, which will take place on Thursday and Friday of next week.

A company of native *artistes* in the Capital have announced their intention of offering a Japanese musical entertainment to Signora Palmieri as a mark of their appreciation of her ability. An extensive hall in Yedo has been selected for the purpose. The *Hochi Shimbun* adds that the concert will be followed by a performance of Italian music.

A majority of the members of the Yokohama Club decided, at yesterday's meeting, to permit the resumption of the holding of Race Lotteries in the building.

It is intended to despatch the Messageries Maritimes Steamship *Volga*, bringing European mails to the 12th September, from Hongkong at 6 o'clock this (Saturday) evening.

H. M. S. *Charybdis* proceeds to sea on a cruise this morning.

According to the *Nisshin Shinjisshi* it was originally intended that the production of silk-worm cards should be limited to 1,739,804 this year, one-half of these to be retained for home consumption and the remainder to be available for export. This number, it is said, has been gradually reduced, and the present standard is fixed at one million and a-half, 780,000 of these to be retained in the country leaving 720,000 cards for sale to exporters.

It has long been known, writes the *Hóchi Shimbun*, that extensive deposits of coral of which the Government expressly prohibited the removal existed upon the coast of the province of Tosa. This year, however, the divers have been permitted to search for it, and as a result large quantities have been sent to market; so much so, indeed, that certain merchants of Osaka, who were large holders of coral, have sustained enormous losses through its depreciation.

The only further news we have from the North, is a report that Mr. Wade is coming down to Shanghai immediately, in order, it is presumed, to be near the telegraph. It is believed that the present state of affairs may be fitly described as "patched up." There is no doubt a rupture was very imminent towards the close of last month. A telegram from England says Lord Derby has, in a speech at Liverpool, said our demands on China were reasonable, and would be enforced. —*N.-C. Daily News.*

We hear it is estimated that that the cotton crop in this neighbourhood will be, at most, 40 per cent. of an average one Prices have opened at Tls. 14 and 14½ per picul, for cotton packed for the Hankow market, which is, we believe, some Tls. 5 or 6 over the opening prices last year. It is said that the Cotton hongs which, last year at this time, were buying 50 or 60 piculs a day are now getting only three or four; the country people clinging to what they have, partly, no doubt, in hope of higher prices, but partly also because they think they will not have much more than will occupy the women and furnish seed for the next year.—*N. C. Daily News.*

From information which has been received here Tientsin today from Peking, there is reason to believe the state of affairs is more satisfactory than it has appeared to be for some days past. It now looks probable that Mr. Grosvenor's Mission of enquiry will be enabled to proceed without delay to Yunnan. This of course implies the satisfaction of preliminary requirements, the details of which are not yet known. The Governor-General Li-hung-chang arrived at Peking on the 3rd inst., and called on Her Majesty's Minister on the following day. He has likewise had several conferences with the Tsung-li Yamên, beside audiences of the two Empresses.

Oct. 7th.

—*N.-C. Daily News.*

THE SHOOTING QUESTION.

THE interference in the early part of this week by the Japanese authorities with several sportsmen pursuing their recreation in the fields within the treaty limits, has brought the Shooting Question prominently before the public, and demands a few words of comment. The facts may generally be summed up by saying that the sportsmen went out as is their custom at this time of the year, and were accosted by the Japanese police, ordered to desist, and accompanied back to their various *points de depart.* The ostensible reason given for this proceeding is that the rice is still in the fields and that the lives of the harvesters are endangered by the sportsmen. It is gratifying to observe that all the proceedings were conducted with civility on the one side, and, generally speaking, with compliance on the other, so that we have no violence or discourtesy to resent or atone for in either case. Nor can it be denied that the grounds for remonstrance, at least in regard to the lower grounds, are good. The fields are full of people and accidents will occur even to careful sportsmen, while a considerable percentage of the men who carry guns are neither careful nor skilful. A Government which did not step in to protect its subjects under such circumstances would not be discharging its duties towards them properly.

Having said this much, we may add that the whole question came up some three years ago, when certain regulations were framed to meet the rights of the Japanese on the one side and the wishes of foreigners on the other. They were over thirty in number, but were drawn up in such utter defiance of good sense, acquaintance with the subject and knowledge of grammar, that the British Minister refused to agree to them, and they were successively thrown over by every one of the western Governments to whom they were submitted. Substitutes for them were afterwards drawn up and submitted to the Japanese, some slight modifications being suggested either by one side or the other to meet the fair requirements of the case, and they have now been ready for some time awaiting the agreement of the Japanese authorities. The only point at issue, as we hear, is the question of the disposal of the fines which may be levied in cases of offence against the Regulations. The Japanese think these fines should go to them; while on the other side it is pleaded that no departure can be allowed from the general custom by which the Crown claims them. We are disposed to think that such modifications in these Regulations as have been suggested by the Japanese, have been met by the Ministers of the Treaty Powers with every disposition to consider the wishes, rights and feelings of the Japanese Government and people, though, as we have not yet seen the draft we are unable to pronounce any final opinion upon their general bearing and spirit. But it is to be regretted that at this advanced season of the year, any cause whatever should delay the issue of Regulations the main points of which have been agreed to by both sides. It is improbable that the British Government will sanction any departure from its general rules in the matter of the fines, though the point may perhaps be raised and settled by a special reference after the issue of the Regulations. Certain it is that both for the sake of the Japanese people, the Government and the foreigners, the issue of the Regulations at as early a date as possible is desirable and even important, and we hope that the events to which we referred in the opening of our article will bring the question to an early and satisfactory issue.

We have been at some pains to ascertain the feelings of sportsmen on this subject, and can safely say that

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

there is a strong desire among them all to recognize the rights of the Government and the wishes of the people throughout the whole question; nor indeed could anything else be expected from true sportsmen, who are, speaking generally, humane and considerate men. But all of them have their own story of very deplorable things they have witnessed; a field trampled over here, there a compound entered for the purpose of shooting pigeons or small birds on the thatch of the house which it enclosed; sometimes even an accident, occuring in spite of undoubted care and atoned for in a manner which left no lasting trace of regret behind it. Yet all agreed on one point, viz, that the farmers and peasantry were glad to see them. No remonstrances were ever made, no black looks ever seen, no uncivil word ever spoken or muttered. More than this; unless very busily occupied, the greatest delight of the peasant is to show the sportsmen where the game lies, where are the best known "finds" for pheasants, and the surest chance of a woodcock. Go where they will, the same pleasant willingness and good-nature follow them, and at once invite and extort a reciprocal civility. Thus one great difficulty, not unknown elsewhere, has no existence here. The fields are unenclosed, too, so that there is no question of breaking down hedges, and nowhere perhaps ought the regulation of the whole matter to present fewer difficulties than in this country. Lastly, the sportsmen themselves are perfectly ready and willing to pay a gun-license, not a mere nominal one, but one of a substantial amount—relatively, of course, to the fees levied elsewhere. They feel, with some justice, that going about the country as they now do, under no regulations or the protection which regulations give, with no license or the feeling of right which it confers, with no certainty that they may not be stopped and turned back, is not agreeable or satisfactory. They do not desire a lawless freedom, and chafe under rather than rejoice in it. They all desire the issue of the Regulations, and are anxious to pay their gun-licenses in token of their acquired rights, so that in all this again, no difficulty presents itself.

But, on the other hand, they think that if they pay for a license, the game should be protected by game laws, a close season should be declared, and it should be penal to snare, shoot or sell game so long as this lasts. We are very much with them in this, not on any grounds of reciprocal right—which we do not see our way to urge with any justice,—but because a close season will preserve the game and improve the position both of the sportsman and the peasant. For some years the birds have been so harried, netted and snared at all seasons of the year that the shooting within the treaty limits has fallen off very much. It has improved a little of late, perhaps, because the snaring and netting have been given over for very want of game. Now whatever value this game has is exclusively due to the presence of foreigners here. But for us it would feed no one, keep no one, bring revenue to no one. And why should not matters be so arranged that while we derive pleasure from the pursuit of it at certain times of the year, the people should also derive a lasting profit from our disposition to consume it? The preservation of game is as necessary to its perpetuation as the preservation of the fur-bearing animals. If there are no regulations, the race is exterminated. Is this desirable? The objections to a close season are solely that it is a novelty, necessitating a law without any immediate advantage, depriving perhaps a very few men of a means, we will not say of livelihood, but of bettering their condition during a few months, and the cooks, of two or at most three dishes—and this in very few instances, for on few tables is game ever seen except in the open months. But the people would easily be brought to understand the advantages of a system which preserved to them a source of revenue. They must surely have some equivalent for the fable of the golden goose, and the law in question would illustrate the moral of it.

We shall hardly be accused of a desire to treat Japanese rights with any want of consideration. But we think these may be perfectly observed while at the same time the objects of the sportsmen may be attained. To regard their recreation with any jealousy, or to make it a peg on which to hang issues of wider moment, seems to us at once unwise and illiberal, and in this view we hope the Regulations as they now stand will be agreed to by the Government with the least possible delay.

NEWS FROM COREA.

THE "UNYOKAN" AFFAIR at KOKWA.

("Nichi Nichi Shimbun," of October 13, 1875.)

No. 1.

We have borrowed a volume of the pencil notes of Kawamura Kwanshu, an officer of the *Unyokan*, written during the cruise he made in the sea of Corea when he was stationed at Nagasaki last July, and we intend to publish three or four sheets of it daily under the title of "News from Corea."

Our *Unyokan*, having received orders to survey the track of vessels from Tsushima to Corea, left Shinagawa on the morning of 19th May, and, calling at the harbours of Kuki, Hiôgo, Moji, Yobukô and Karatsu, arrived on the 22nd at Idzu no hara in Tsushima.

On the 24th we weighed anchor from the above place, and on the following day anchored off Sôriyo in the Bay of Fusan in Corea (Latitude 35° 6 N., Longitude 129° 1 E., distant from Hamada in Iwami on the opposite coast about 140 miles). The scenery in the Bay is very fine. These are small islands in it. The one to the south is large and called Tetsuye. The height of the mountains is about 300 feet. Houses are scarce and hundreds of horses are reared on the moors. Hence this island is also called Makishima (pasture island). The fort of Fusan on the northern side is built on a moderately high hill, with the sea on the south. This castle is built like our castles and enclosures, but a mud wall in the shape of the letter ~ *hé* rises from the centre of the mountain. We saw rude habitations in the forest. As to the land, mountains are numerous. The soil everywhere is of a dark ruddy colour and firs grow here and there at the foot of the mountains. In the S. W. are numbers of tile-roofed houses and mud godowns on the high ground. We were all unexpectedly delighted at seeing our national flag fluttering in the air which marked our Public Office. Many Japanese junks were moored to the wharf within the Legation, and of the larger ones the steamer *Manshiu Maru*, which is attached to the Public Office, lay at anchor. To the fort of Fusan, the distance by the sea coast is one *ri*, and Torai-fu lies behind Fusan and is said to be over three *ri* from the Public Office. This city is the head-quarters of the Governor. The mountains as seen from the sea are not high, but they are bare from an absence of vegetation. Neverthless there is a plain at the base of the mountains, but it is totally uncultivated. It is said that by the law of that country various taxes are immediately levied if any one cultivates it, and hence that no one ever puts his hand to it. Wheat is cultivated in the mountains. The ears do not yield well and they use sea-weed in manuring the ground.

The prow and stern of fishing boats are alike, and the planks are neatly nailed together with wooden nails. They use round stems of trees in their natural state for masts. The sails are made of straw, plaited together with cross bars of bamboo like the frame of a window. The sail is at the stern of the boat,—the reverse of what it is in Japan. They sail well within three points of the wind and their fishermen are very skilful in managing them.

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

I had already heard that in time of emergency these fishing boats under the name of ships of war were made to carry wooden guns, and that because the fishermen were drawn as soldiers and a naval commander headed them, they went by the name of soldiers, but were ignorant of their duties. The boast of the Coreans that they have tens of thousands of soldiers is known from this fact.

There are two ways of wearing the hair; one is to tie up the whole of the hair and roll it round the top of the head into the shape of a ball of rice, the other, adopted by young people, is to make a long plait of the hair and let it hang down the back as Chinamen do. The women tie up their hair; their upper dress is like that of the men, but below the waist it is like that of Europeans; it also resembles the Japanese *hakama*. What appeared to be summer clothes were of white cotton and reached to the waist. The sleeves are wide and like foreign sleeves. Below the waist they wear trowsers, but the division is low down. Officials wear lightgreen or red upper garments, and they tie a narrow girdle round them. The rank of an official is distinguished by this girdle and by the colour of his coat. Hats are all alike. They are made of plaited horse hair. The Coreans are all fond of tobacco. They generally use pipes two feet long, and they carry a wallet of white cotton hanging down in front in which they put tobacco and money. Their complexions are usually of a reddish-brown and sometimes persons of sallow complexion are seen. The Japanese settlement is said to contain about 400 *tsubo*. Firs grow abundantly. The building has probably not been repaired since the Sô dynasty, as portions in ruins were observed. Moriyama, the resident agent, and a number of officials live there. They hire natives and employ them in their service. There are no women in the Japanese settlement. It is exactly like a monastery. Furuya of Tsushima is a very rich merchant, and lives within the Japanese settlement and transacts all the business of the place. Furuya was ordered to purchase the provisions required by the ship. Furuya gives the natives whom he hires Corean money, and sends them every morning to Tôrai where they purchase beef, fowls, fish, eggs and vegetables which he sends to the ship. Japanese are strictly forbidden to pass the barrier gate. As Japanese money has never been current it is very inconvenient. Furuya sells Japanese productions to Corean merchants, and with the money which he gets he buys Corean products. Therefore, as vessels of war pay in Japanese money, the price of articles is very high. Corean soldiers are on guard at the gate of the settlement. Passing this gate and walking along the beach about 20 or 30 chô, there is a barrier gate. Here also Corean soldiers are on guard. Japanese are forbidden to go beyond this gate. If the soldiers on guard neglect their duty in this respect, it is said that the fellows are at once condemned to death. They have no arms: each has a long-stemmed pipe only. Rudely built houses are seen here and there outside the gate, along the sea-shore as far as Fusan. Within the barrier the place where the Japanese walk is level, and a little way from it is an old house by the side of the road. This is where in old times the representative of the Sô dynasty was entertained. It is now in ruins. With this exception there are no houses. There are numbers of fine fir trees. The peculiar things are the crows. Their wings are white or dappled and their size is small. Their cry is deep and hoarse. In this country they point to a steamer and call it a divine ship. The reason is that they say their country is such that foreigners cannot cross over to it as they please. But this sort of vessel now and then comes, having passed over 10,000,000 *ri* of sea and endured the wind and waves. This, they say, could not be done by human strength and that it must be a divine act.

No. 2.

On 1st June, the Agent Moriyama and a number of his officers witnessed ball-practice and fire parade. On the 12th the "*Thabor*" left Tsushima on a surveying expedition and entered the Bay. On the 13th the Kundo Gensekiun and his officers, accompanied by 30 or 40 Corean soldiers, visited the ship. When Gensekiun, after making his two attendants carry his long-stemmed pipe, was slowly entering the ship from the gangway, his soldiers assisted him by leading him by the hand and pushing him from behind. It seemed just as if he were an old man. I do not think that he is yet forty, but it is said that it is customary in this country to treat all high officials thus. The captain and his officers advanced to the gangway to meet them, and after mutual compliments the captain took the Kundo and his officers into the cabin and entertained them by offering them tea and cake. Shortly after he went on deck with the Kundo &c., and let them see the guns and weapons, and he kindly explained their uses, but they did not appear to understand him. The Corean soldiers had often before begged to be allowed to see them and had been refused, but they now fully obtained their wishes and they conversed amongst themselves, both walking about and siting down. After this the captain with the Kundo and his officers, together with the interpreter attached to our establishment, mounted the bridge and said that he would shew them the manœuvres of a fight; he also ordered the *Thabor* to go through them. The Kundo appeared distressed, but he was compelled to give his consent. Whereupon, as soon as the bugler was ordered to sound the roll-call, all the soldiers appeared at once on the deck, the officers put on their swords, the marines and gunners took their arms, each ran to his own gun-carriage, loaded, and the marksman took in his hand the rope which pulls the trigger. Various other preparations for battle were made in the short space of seven minutes. What could have been the cause of the wonderful speed with which all the preparations were made on this day? It was because they were eager to show the power of Japan and their longing to crush that country. After this the officers attached to the gun-carriages and other positions informed the captain that all the preparations were complete. Therefore, as soon as the captain gave the order to fire, the report from every cannon simultaneously reverberated far and wide and the sea and mountains shook. It was exactly like a clap of thunder and black smoke enveloped the ship, and as the weather on that day was very cloudy and the place mountainous, and as the "*Thabor*" fired at the same time, the noise was still more terrific. The Kundo was greatly astonished and frightened, and, sitting down on the bridge, bowed down his head and covered his ears with both hands and the colour of his face changed at once. Even the illustrious Kundo acted thus. How much more did his soldiers assembled near the 110-pounders tremble! When the guns had been fired three times the captain changed the order and a continuous fire was kept up for seven minutes. The Kundo was yet more terrified, just as women and children are at the rumbling of thunder. The Kundo repeatedly pulled interpreter's sleeve saying that he had business to attend to, and in addition that the weather was cloudy, wished to leave the ship. Thereupon the interpreter had to inform the captain of this. The manœuvres were not half over. Fresh orders were given from time to time, and now all the men on the deck were stooping to avoid the shot which came from the front and rear of the enemy. Then, the order being given to engage at close quarters, they both advanced, and as each side approached the other, balls and small shot were fired together; at another time small shot was fired alone with the object of shooting the officers of the enemy's ship from the cross-trees. After this both ships came alongside each other, the firing ceased, and, brandishing their bayonets and swords, they boarded the enemy's ship or repulsed those of the enemy who tried to board their ship, or, guarding the wounded, led them to the Hospital. Having divided the soldiers into a front and rear division, they came to the assistance of those in danger, advanced and retreated and urged one another to fight, or they prevented fire breaking out from the shot and other things. It was intended to proceed with other tactics, but the captain, seeing the terrified looks of the Kundo &c., took pity on them and changed the word of command. Having twice discharged his guns simultaneously, he ordered the bugler to sound the call for the cessation of firing. Then the Kundo unclapsed his hands and appeared to come to life again. The marines and gunners took their arms and drew up in file by the side of the starboard gangway, and the two companies of swordsmen drew up in line with them. After this the officers inspected the guns in their charge

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

and the other arms and made their reports to the captain. Thereupon the captain gave orders for the men to go through fire parade, and as soon as the bell sounded each division which was drawn up laid down their arms and became a company of firemen and pumpmen. Then the marines seized their arms and guarded their respective positions. Next the firemen took up buckets and the pumpmen drew up in line facing the pumps. The slow ringing of a bell was the signal for the men to form in the front division, and the slow beat of drum that for men to form in the rear and extinguish the fire. The officers in charge of the two divisions waited for orders. As soon as the captain gave the order the pumpmen worked the pumps, and the sea-water rose 30 or 40 feet above the deck. The firemen drew water from the pumps, and hastily forming in the front and rear divisions extinguished the fire. The fire parade was soon over. The two divisions of firemen and pumpmen at once put down their implements and breaking out of these divisions they all returned to their former positions and drew up in file. When the order to cease firing was given on our ship, the *Thabor* also ceased. The Kundo, having seen the last of the fire parade, descended from the bridge, and went on the deck. The captain also descended, and intended to take him to his cabin, but he firmly declined, and having been assisted as mentioned above, he at once left the ship. This day being Sunday was a day of rest, and when the men were at a loss for something to do they found an unexpected amusement (in going through drill) for the sake of the Kundo. With respect to the Kundo's visit to the *Thabor*, he felt bound to go, as he had previously promised. The captain of the *Thabor* intended to invite him to his cabin. He did not go as he appeared to be greatly afraid that there might be some more firing. He walked tremblingly over the deck looking about, and in a few minutes turned to the captain, thanked him for having seen the ship and said, "When we heard the report of cannon some time ago we disliked it excessively and I beg you not to detain me." Shortly afterwards he left the ship. The captain and officers, though loth to do so, as there was no help for it conducted them to the gangway. At this time the weather grew more and more cloudy, and when the boat in which the Kundo went reached the wharf, the rain fell in torrents.

I heard that Gensekium was of the same rank as a *Shosammi* and that he held the high office of Kundo. He is attended by five or six retainers, and is entitled to ride in a sedan chair (*agegoshi*) and respect is paid to him by having the road strewn with sand. He is the high officer ordered by the Court to conduct the intercourse between the two countries. He had at last visited our ship. As this was an excellent opportunity for Corea to acquire renown, he ought, by carefully observing the characters and customs of our people, their gunnery practice and wonderful engines, and by noting what was superior what inferior, what was unskilful what skilful, to have had at heart the good of his country. But how unexpected was the result! How could the noise of cannon have terrified him and how could he have lost his presence of mind and shewn such an undignified bearing?

He was a coward destitute of a sense of right and of courage, and it is self-evident that he did not know that it would bring disgrace on his country. Nevertheless the Coreans boast of the civilization of their country and cleave to the old customs of China, and calling Europe, America and other countries "cross-lettered countries" they look upon every country as barbarous except Japan, China, Manchooria and Loochoo. Unaware of their own uncivilized state they despise others. (When we think of our own ancient condition, our customs were akin to those of Corea, but our character was one *per se*. Hence our intellect and knowledge differed from that of the Coreans.) Their stupidity is very great. To give an example of it now. Like the badger which dies on the hill on which it was born, these exclusive people will never get a good sight at what is going on behind other people's curtains. What a dangerous (policy)! If it does not take its rank now with other nations by means of Providence sending down into the holes of these badgers men of genius to benefit the country, and washing out their old habits, it will never be able to rectify the disordered state of its Government. The upper classes crush the lower by their cruelty. The lower classes deceive and delude the upper by calumny and flattery. Because both classes are hypocrites, disorder is liable to spring up. The riot among the people in April 1875 is a proof of this. As the origin of this is known, I have added it here.

No. 3,

Certain evil-minded subordinate officials of Urusan helped themselves plentifully out of the Treasury of that city, and fearing that if they were discovered they would get themselves into difficulty, they deceived the Governor by clever speeches and bribes and got him to petition Taikin, the Government inspector of officials, to this effect "As capital punishment is not beneficial to the country, the best plan would be to abolish it and to establish taxation." To this the Inspector consented. Thereupon the evil-minded officers, having taken counsel together, issued a proclamation that each family in the city was to pay three times as heavy fixed taxes as formerly. The farmers sent in a petition to say that they could bear to have their taxes doubled, but that it was really most distressful when they were trebled. Instead, however, of paying the least attention to it, they persisted in arresting and imprisoning the headmen in every village, and they often took them from prison and beat them with big rods, whereby six died of their injuries. Thereupon the farmers were greatly angered and more than 3,000 assembled and rushed to the castle gate to petition the Governor personally for a pardon. The Governor at once ordered the artillery to fire upon them and 12 men fell. As the farmers had not a single weapon with them they forthwith withdrew on the 19th May. Having again made up their minds, they all brought bamboo spears, and, taking advantage of the rain, attacked the castle gate. The evil-minded officials having escaped, they seized and bound the Governor who was left by himself, and placing him on a shutter they carried him outside the boundaries of the city and cast him away in the Province of Kegu saying, "People like you are not fit to be Governors of our city. Quickly return to the Emperor." Having abused him in this way they departed. It is said that the Inspector, having heard of this riot, sent the Governors of two cities of Kimbai and Yakusan to quell it. Two men of the twelve who had been killed by the order of the Governor belonged to the Yampu league.

This Yampu league consisted of men of any rank in life who forsook the world and journeyed through the eight circuits. [They resemble the *Komosô* in Japan, and are not under the jurisdiction of the Government. There is no one in either *Fu* or *Ken* who can inflict punishment on them.] Thereupon it is said that this league sent a circular to those who were travelling through the country, and that the number of those who collected at Urusan amounted to 3,000. The Governor, after lying in concealment some time outside the city, again returned to his city and hid himself in the house of a Councillor. The latter, who was next in rank to the Governor, said that he had nothing to do with the affair at all. Then the Yampu league made a fierce attack and their strength was exceedingly great. The Governors of Kimbai and Yakusan kindly reasoned with them, but could not quiet them. It is said that Teidôrei, a descendant of the King of Koma, became the leader of a band of over 800 men, and having raised soldiers at a place ten *ri* north of the capital, and styled the Government a tyranny, plotted an insurrection. The above occurred in the end of May before our man-of-war came to the Bay of Fusan, and as we shortly afterwards crossed over to the sea coast of Hamikian, and after calling once more at Fusan proceeded to Nagasaki, we did not know the result of this affair. This abominable governor, alas! instead of attending to his important functions, coveted bribes, and was expelled the city after wringing the blood from the people and slaying the innocent, but he returned to the city and concealed himself in the house of a Councillor. We must detest this want of a sense of right, of intellect and courage and the shameless proceedings of this man. How could the honest, simple-minded people get rid of the object of their hate unless by slaying him together with the evil-minded officers. We must, alas! presume from this the

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

character of the officers of this country. On 19th of same month we weighed anchor opposite Hamikian on the N. part of the E. Coast, and on the 22nd we anchored in the Bay of Rasareux (Lazareff) in Yekôfu in the Hamikiandô (39.20 N. Lat., 127.30 E. Long. It is a place opposite Mogami in Ushiu, at a distance of 600 miles, and about 300 miles to the North of Fusan Bay. It is thirty *ri* from the Capital.) The Bay is wide and the land flat and spacious. Rivers flow into the sea and the scenery is fine. The soil is like that of Fusan. On this day a fire burst out in the house of a native on the sea shore. Having put pumps into two boats of the ship and sent firemen it was speedily put out. The natives gathered round, but they merely looked on and not one attempted to put it out. On the following day the Captain being sorry for this sudden disaster gave 2,000 cash in Corean money (2 *riyôs*).) Their delight was excessive. They wrote a letter of thanks.

On the 23rd, when the officers and marines entered a river in a boat, the assemblage of spectators was as great as when foreigners first landed in Japan. Coreans did not know at all to what country the boat bolonged. At this place, unlike Fusan, they did not prevent our landing. Corean officials, soldiers and people assembled and followed us, and when we threw them tobacco and bread they pushed and scrambled and vied with one another in getting to the front. They resembled monkeys in eating without even brushing off the dirt. Those who had not picked up anything followed, and their mode of begging was exactly similar to that of a Japanese beggar. The women keep within the houses and do not go out. As they seldom appear in the streets they are greatly agitated (when they do) and run home quickly. The houses are low and rudely built, with thatched roofs. There are salt manufactories in their vicinity. The Coreans seldom take a bath, and only wash their bodies now and then in river water. Unless their white clothes are pretty well torn they do not take them off. As they wear their clothes asleep and awake, most of them are very filthy, and the fearful stench from them is unbearable.

No. 4.

On the 25th we weighed anchor from this Bay and on the 27th anchored in the Bay of Unkôtsuki in Kegushakudô (36° N. Lat. 129°. 10′ E. Long) opposite to Tamagawe in Echizen, the distance being 300 miles. From Fusan to this place the distance is 60 miles. The Bay is wide and level ground abundant. The sea shore is sandy and the soil resembles that of Fusan.

On the 28th three officers went on shore in the ship's boat, and shortly afterwards, upon the sound of a bell and a drum, 300 or 400 Corean soldiers came up. The general dressed in a light-red coat rode in a sedan chair, and they all came close to our men and sat down. The general made persons, whom they took for his officers, converse with them in writing. They said "To what country and circuit do you belong and what manner of men are you?" (They had to hold their sides from laughter when they asked them according to the etiquette of their country to what circuit they belonged and what manner of men they were. It was because there are eight circuits in Corea they asked to what circuit they belonged. As to their asking what manner of men they were, all the people in that country have a ticket which states their circuit, village, name, age, height, appearance, whether they have beards or not, and, in addition, their complexion is distinguished whether it is dark or fair. Nevertheless seven or eight-tenths of the people are dark.) "Why do you anchor here?" They replied. "Our ship "is a vessel of war of the Empire of Great Japan. We "are travelling round all the countries in treaty with us, "and we are landing here for the purpose of getting "wood and water." They said, "Why do you carry arms "in your ship? They also said, "The officer who sits in "the military tent on the sea shore is the local Gover- "nor of the Gejitsu *Ken* in the Kegushaku circuit. "When foreign ships anchor, the officials of the place "according to custom make minute enquiries, and it is "the law of our country for them to report to the Gover- "nor of the Province, who informs the Sovereign; it is "forbidden to people of other countries to land. With "reference to your request for wood and water, after "we have examined [illegible] your ship, we may "give them to you." They also said, "As you "are Japanese how is it that your dress and ship "are foreign?" Also, "The paper and money which "you use belong to our country. Where did you "get them?" (During our conversation in writing we used Japanese paper. The reason of their asking this peculiar question was because the paper of that country was the same as ours. As to the Corean money, we got it at Sôniyo. It is said that they were astonished when they saw our cook use this for the purpose of purchasing fish.) Our officers took no notice of any one of their questions, and thought it better to call officials and ask why they made these impertinent questions, than to waste time uselessly. Having learnt the reason, and promised to return to the ship, they at once went to it and reported the circumstances to the captain. On looking then towards the country a tent was seen pitched on a high hill, and hundreds of Corean soldiers in white dress filled the hills and plains. After a time soldiers in white coats sailing in many boats made for our ship. When they were not far off they dispersed the boats of sight-seers which had assembled and came alongside. When we saw the Corean boat alongside our gangway there were three officers in it dressed in light-green coats. The name written on the flag of one was "Bunjô-bepposhoshuki," on that of the other "Bunjô-gunkwan-hiyôki." They held in their hands a yellow muslin flag, about a foot square, and these two men asked leave to enter the ship. Thereupon, when we told them to tell their chief to come, they pushed off and another similar boat pulled up. Hence we allowed them to come on board in order to make enquiries. Then one, together with the two who carried the flags, came on board and the captain and officers met them on the after-deck. They merely peered about without saying a word. They took up an opera-glass which was on the deck and looked through it. They looked into the cannons, &c., and finally the three men sat down on the deck and the men who carried two flags put them in the collars of their coats. The captain and officers were disappointed in them, and on enquiring their rank, title and names of them, they said "Our title is "Tenkuntaifu, and we are officers of the Gejitsu ken as "well as being Chinye-heiba-sessetoi of the province of "Kegu; my family name is Kin and my name is Meikin." (A man who carried no flag was their Secretary). When we consider the conduct of these men they can never surely, even in such an uncivilized country as Corea, give important high duties to such fools. This suspicion rose from the rank, title and name of their leader. Hence, on enquiring again, they (the two men with the flags) replied that they were inferior officers. Lying is excessive. Then we asked the reason of their curious enquiries. They said "Japan and Corea being neighbouring countries, why had we anchored here without cause?"

They also said "How many men are there in the ship?" and that they wished to examine the articles stored in it. As one of the men who had put the flag in the collar of his coat made signs of drinking, he was told to write down what he meant. Whereupon he wrote "If you have good "jars of wine, give me two." Then the captain and officers, being angry at their insolence and want of politeness, turned them out of the ship. These men were not ashamed of themselves, and going off in their boat returned to the shore in company with the boats of the soldiers. The captain thought that the Coreans ought not to have treated us with contempt, and that they certainly ought not to have asked for the jars. He sent five officers on shore to investigate the matter. The officers armed the boatmen with rifles, and they went off in a boat to speak at once with the local officer. When they looked towards the land Coreans in white dress were assembled on the shore. When the boat was near the shore officers and soldiers pulled up their clothes and went into the water, and surrounding the boat inspected it. The boat's crew to make way brandished their swords and waved the rudder (*sic*; oars probably are meant) backwards and forwards and tried to make them retire. Some of the Coreans beat the water with their staves behind the spectators to keep them off. But the assembled spectators kept dispersing and coming up again, so that they could not [illegible] a passage. When our officers were greatly perplexed the men with the staves

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

luckily changed their tactics and beat both officers and soldiers without distinction of person. They were greatly bewildered at this. In this way they unexpectedly made a passage and were able to land. The men with staves went before, so we took our boat's crew with us and went to the sandy-place where we saw a tent pitched on the high'ground, and in another place several thousand soldiers in white dress were collected. Another band of men in white dress followed in the rear of the officers, kicking up the dust and sand with their feet, and what with the men who had previously assembled on the shore the confusion was very great. The crew of the boat having brandished their swords and driven them off, they hastened towards the tent.

No. 5.

After reproving the officials who came on board on that day for their rudeness, and after sending them back, the captain despatched five officers with armed sailors on shore to investigate their insulting conduct. When they had driven off the soldiers who had collected, these latter fled towards the tent on the rising ground, and the intervening space was about thirty feet. On looking at the tent, it consisted of a temporary hut abont six feet square, and to the front, left and right of it, officers and soldiers were drawn up. The soldiers carried matchlocks with balls of three *momme* and rusty spears. They had a very clownish, clumsy appearance and were exceedingly ludicrous. Some of them were laughing with their spear points stuck in the ground, and some were talking, using their rusty spears as sticks. Some were kneeling and some were standing with their backs turned to us. When the Coreans saw our officers advancing quickly, the soldiers on the right and left, vehemently shaking their hands, made signs to them to advance by a side road, but our officers continued to laugh and did not obey them. Having at length proceeded within twenty-four or twenty-six yards, they saw a thing like a tall umbrella sticking in the ground, and at the bottom of it were heaped up what appeared to be money, drums and trumpets, all old, broken and unsightly. They went six or eight yards further and looked; the man who was seated inside the hut, clad in a light red dress, was no doubt the officer of the Kegushaku circuit. The under officers were seated on the right and left outside the tent. Greatly astonished, several stood up and prevented our men approaching the entrance. Then the spectators who had been previously driven away again came to this place. As they surrounded our officers, the sailors in the rear tried to drive them off, but as they were numerous they were unable to do so. The spectators kept pulling the clothes of the officers and looking at them, touching their epaulettes and swords and staring at them, and their rudeness was very great. But as it was merely admiration for what was novel to them, it would have been foolish to have scolded them unreasonably and we endured it for a long time. In considering this from our point of view—we cannot say that it was not rude, but how was it that they did not think it rude? This depends upon whether the Government instructs the people or not, and it was not the fault of the people alone. Some delay took place while our officers were seeking for an opportunity to speak with the Corean local officials. The men mentioned above who carried staves again ran up and dispersed the spectators, and as they suddenly beat two or three men in the crowd they were greatly bewildered; some dropped their hats and some threw away their spears and fled, some fell down and some were trodden upon and made wry faces. The officers having by this means gained an opportunity, they took the sailors with them and at length sat down before the local officer. As there was no help for it, his attendants, by his orders, spread rough mats in front of them and begged them to sit down. Our officers took off their hats and were polite, but they took no notice of his request. The sailors grounded their arms and drew up in line behind the officers. When our officers gave their cards the attendants received them, and immediately kneeling before the local officer handed them to him. Although the spectators, being terrified by the men with the staves had withdrawn, they assembled and came up again, but fell back through fear of the stave-bearers' fierce eyes. They withdrew to a distance and made a boisterous noise. When the attendants greatly pressed our officers to sit down, they came before them with their caps off and said that it was the etiquette of their country to stand erect. Thereupon the local officer made his attendant say, "Our chief will get up and offers you his compliments." The local officer then came forward and raised both his hands in his sleeves above his eyes. Our officers returned the politeness. After mutual compliments were over, the local officer sat down and again pressed our officers to sit down, but, as they paid no attention to it, his attendants, by his orders, brought out a great, old common chair, and although he begged them to sit down, they firmly declined. Whenever the local officer looked at the book in which the conversation was written, his attendants gathered round him and put their heads next to his, and read aloud after him. It was very peculiar. Then our officers said to the Governor, "We have been ordered by our captain to ask you a number of questions." After this, a conversation was carried on between the officers of the *Unyokan* and the Corean Governor, and the latter at length, having no arguments to bring forward, could not reply. Upon this he threw the blame upon the subordinates and intended to punish them, but our officers interposed and they were pardoned. The particulars of these things are long and we will therefore postpone relating them till to-morrow.

No. 6

When the *Unyokan* was anchored in the Bay of Unkôtsuki in the Kegushaku circuit the officers landed and had an interview with the local officer. They communicated the captain's order by means of writing, and carried on the following conversation with the object of complaining of the inferior officers for their rudeness. "After "our vessel entered the Bay, officers were ordered to land. "Upon this, you, accompanied by many soldiers, came to "this place and by means of persons who appeared to us "inferior officers said, To what country, to what circuit, "and to what village do you belong, and what manner of "men are you and why do you anchor here? As you "are the local officer of the province of Kegu, how is it "that you do not know the flag of a neighbouring country? "You said, "Why do you carry arms in your ship. If "you do not know the use of arms, how is it that you are "the general of a number of soldiers?" You also "said "The officer who sits &c. (above part 4.)" You "prevented our officers landing: this was a breach of good "faith. In order to make the intercourse between our "two countries perfect, we endeavoured to be friendly, "but you on the contrary were opposed to this, and "further, what was the meaning of your insolent words "that you would give us wood and water after you had "examined our goods?" You said "If you are Japanese, "why are your dress and ship foreign? How is it that "you were unaware that we had already informed your "Government of the style of our dress and of other "reforms: we are not now the same as in the periods "Tensho and Bunroku (end of 16th century). Ac-"cording to changes in the times customs must also "be changed. Our Emperor by his transcendant "genius noted the condition of the world, and the result "was the institution of numerous reforms and the re-"organization of the State. By strengthening our navy, "adopting improved guns and investigating all manner of "things, we endeavoured to enlarge our knowledge. We "are not alone in this; this is the age for every State in "the world to vie one with the other. At such a time "if we are behind the times, what will Heaven say if we "are unacquainted with the civilization of the world? "That we are not fulfilling our duties as men. Do you "consider this well." With reference to our money and paper.—"The paper is a production of Japan—the money "was what was used at our public office in Fusan. What "do you mean by your unreasonable suspicions and your "unnecessary language, as if you had arrested and were "examining thieves? However, our officers did not care "about wasting time in a useless and long conversation, "and as it was customary to make enquiries, we promised "to come again and returned to our ship. After a time "three officers accompanied by a number of boats contain-"ing soldiers came to our gangway, and said that they "wished to make enquiries. The captain allowed them "to come on board, and as they were representatives of

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

"the local officer we treated them as we would have done "the local officer himself, but not one shewed us any "politeness, but (their demeanour) was just as it was at "the moment of their coming on board. Without saying a "word they stood at the guns and taking up an opera-"glass looked through it, and finally, having put the flags "they carried in the collars of their coats, they sat down "on the deck. Thereupon when we enquired their rank "title and name, one of them wrote that his title was "Tsukun-taifu and that he performed the double duties of "an officer of the Gejitsu *Ken* and of Chinye-heiba-"sessetoi of the province of Kegu, that his family name "was Kin and his name Meikin. But on considering "their conduct we thought that not one of them held a "high rank, and on enquiring again we were told that the "men who carried the flags were inferior officers. On "enquiring the reasons of their asking questions one of "the inferior officers said, Japan and Corea are neigh-"bouring countries: why do we anchor in this place? "You asked how many sailors there were and said that "you wished to examine the articles on board. But in "the middle of the conversation the man who carried "the flag with the words "Burijô-bepposho Shuki" "on it in his coat collar, suddenly made signs of "drinking and wrote, If you have any good jars of "wine, give me two. The captain and officers seeing "their demeanour, were very angry, and at once con-"cluded the interview. With reference to what the "officer said about Corea and Japan being neighbours— "this was the reverse of facts. As Japan and Corea "have always been neighbours and had intercourse with "each other, what is the meaning of saying that we have "had no reason for coming? With reference to your "speaking about the number of sailors, we have no "objection to tell you, but why do you want to examine "our goods? You thought to frighten us by insolent "language and a large force of soldiers, and you sent "inferior officers with a number of boats full of soldiers, "but you had no clear course of action and you not only "have no method, but your asking for jars of wine during "a conversation was like a child or a madman. Why do "you assume such airs and treat others with contempt? "If they were officials, sent by you to make enquiries, I "must consider that everything was done by your desire. "If this be so, how can we be silent? A great disgrace "to our country cannot be overlooked. If this was after "all unintentional, and arose from the rudeness of an "inferior officer, I beg that you will fully explain it and "answer our questions. As this is a matter concerning "the intercourse of our two countries, it is important that "by carefully discussing this in a mutually friendly spirit, "we should long preserve, without estrangement, our "intercourse intact. Do you think over this well."

We will publish the day after to-morrow the answer of the Governor, and how, having summoned the subordinate officers, he censured and punished them.

October 12th. For certain reasons we do not publish the rest of the Corean News.

("Nichi Nichi Shimbun" of October 13, 1875.)

The *Unyokan*, having returned from Corea to Nagasaki in July, proceeded from thence to Kobe. She left Kobe on the 26th August and again went to Nagasaki; on the 12th September she anchored at the Goto islands. Thence she traversed the Corean sea, passing the neighbourhood of Quelpart, and shaped her course towards Newchwang in China. As she was only a small man-of-war, she had no very large supply of wood or water, so that on the 19th, when passing the island of Kokwa, at the mouth of the river leading up to the Corean capital, she anchored about three *ri* from the land, and having lowered two boats, examined the ship's position, and sounded the depth of the anchorage. They then turned towards the land to enquire whether coal could be had, to make arrangements for getting water, and to buy fowls or fish. They passed the first fort, and were between the island and third fort when a musket was suddenly fired at our boat, which was compelled to return the fire. The firing continued for some time, but none of the balls took effect. Meanwhile it had begun to rain heavily, so they tried to get back to the ship, when the fort fired guns on them, but did not take effect, and they were able to retire safely. On the following day (the 20th) the ship attempted to approach the shore, but found it too shallow, so that they were obliged to open fire upon the forts from a long distance out at sea. Two shells went right into the middle of them, and some of the Coreans must have been killed. It was, however, too far off to gain any decisive victory, so that the fighting was given up, though it was not yet dark, and the ship's head turned the other way. There are a great many small islands in this place, and there was great danger from the strong current of the river. It was very hard to put the ship about, or to cast anchor. Our ship accordingly retired about 2 *ri*, where she stopped and made preparations for attacking the Castle of Yesô. The next morning before daybreak two boats were lowered with thirty-two officers, marines and sailors in all. They landed just under the eastern gate of the Castle. The Corean white-coated soldiers then began to shoot arrows and fire matchlocks through the loopholes. Here one of our sailors was hit by a ball, and one wounded in the loin by an arrow, but the officers pressed on, climbed over the mud-wall, entered the castle and opened the eastern gate. The bugle for the assault was then blown repeatedly, and marines and sailors rushed in together, firing volleys of musketry. They quickly went round to the south gate and set fire to the houses. The ship also fired guns into the Castle from time to time. The white-coated soldiers seeing this, imagined they were attacked by a strong force, and all took to flight from the western gate. Six of our men had however posted themselves on the Bansei Bridge, outside this gate, and cut off their retreat, so that not one of them passed it. They were in a great state of alarm when they found their means of escape taken away from them, and both men and officers clambered down the steep bank on the south-eastern side, and in the hope of escaping to the opposite island of Matsuyama, they stripped off their clothes and plunged into the sea. Unfortunately for them it was full tide, and they could not cross by wading. As they were hesitating, we fired on them and killed twenty-four, besides whom a great many must have been drowned. Not more than six or seven reached the island of Matsuyama. In the castle the fire gained strength rapidly, and the whole scene presented the aspect of war. We then searched out a dozen of Corean soldiers who had concealed themselves in different places. Three of these seemed to be officers from their sticks of command.

This happend on the 21st September at 11 o'clock in the forenoon.

As we stated in yesterday's paper, the "*Unyôkan*" anchored off the castle of Yesô, which is on the coast in the circuit of Kenki in Corea, and sent on shore soldiers in two boats. When the castle had been quickly stormed before 11 o'clock on the 21st, Inouye, the captain, landed and sacked the castle: they took as booty 36 cannons, and besides these, not only bows and arrows, spears, swords, and guns, but drums, trumpets, books and all sorts of things, and having made the angry Corean soldiers carry them, they stowed them all away in the ship. After this they hoisted the national flag of Japan on the top of the castle, and having set soldiers to guard it they waited, thinking that soldiers would certainly march out from the capital and come (to attack them), but not a single report of a gun was heard on the land. As the day closed without anything happening, we were all greatly disappointed. A feast was spread on the deck of the ship to which the sparks of the burning castle gave a relish, and whilst raising shouts of victory and drinking wine the morning of the 22nd broke, but on all sides everything was quiet, and as there was no sign of horsemen coming (to attack them) they thought that all was over, and the *Unyokan* set sail early in the morning of 23rd and after six days arrived at Nagasaki, on the 29th. The whole of this affair occurred unexpectedly and certainly did not arise from any attack on our part. It appears that it was because the Corean soldiers did not know what was right when they commenced firing on the ship of a neighbouring country, the crew of which attempted to land for the purpose of getting wood and water, when on their journey, that we fired upon them in return as a caution to Kôrai. Well! it was capitally managed. There are

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

a few other particulars, but we will give these to-morrow.

The Castle of Yesô is on an island a little way from the land, and it is not 2 *ri* in circumference. On each of the four sides there is a gate. The *Unyôkan* anchored at a distance of three *ri* off the eastern gate. Our attack was made from the Eastern gate—the number of our men was thirty-two, of whom three were officers, ten were marines and the rest sailors. The strong forts of this castle are on the seashore between the E. and S. gates. Outside the Western gate is a bridge named Bansei. The road over it leads to the mainland. As our men blocked up this road, the Corean soldiers in white coats fled, and losing their way descended the steep cliffs and entered the sea with the intention of crossing over to the Island of Matsuyama on the South, but unfortunately for them it was high tide at that time and numbers were drowned—of these, one whom we took to be the general was drowned. The sleeves of his coat were red and the back of it was brown. The valuable things of the plunder were thirty-six bronze cannons: and the curious things consisted of a drum more than six feet in diameter In addition to this there were four drums three feet in diameter. Their trumpets were very like toy trumpets used by children in Japan. Their bows also were very like the Japanese. Their arrows were exactly like those in Japan. The swords were numerous, but they must have been bought in Japan. The guns were all matchlocks. Among the booty was a French book on gunnery translated into Chinese. In a journal owned by a soldier who was taken prisoner, it was written that the garrison of the castle of Yesô usually amounted to 250 men. This place stretches into the sea to the S. E. of the Bay of Kôkwa, and the thermometer stood at seventy-five or seventy-six. It faces, though at a distance, Yentai in China.

In the first instance when two of the ship's boats with soldiers in them were making for the Eastern gate, two men were shot by a gun fired from one of the loopholes of the castle. The captain and every one, upon seeing this, felt anxious, as they did not know what the Coreans intended to do. Just as the trumpet from the castle sounded the signal to fire, smoke rose from the back part of the castle, and finding that our men had certainly set it on fire and that the victory was theirs, it is said that they felt comfortable.

The *Unyôkan* set sail from the Bay of Kokwa on the 23rd, and, having called on the way at a certain island and obtained water, arrived at Nagasaki on the 29th. The above circumstances were at once telegraphed to Yedo. Moriyama, too, who had returned to Nagasaki at this time, telegraphed the news to Yedo, and in accordance with the answer from Yedo "Sail at once in the *Kasugakan* and go to Bay of Fusan," he set sail on the 1st at 4 a.m. from Nagasaki and proceded at once to Corea.

SPIRIT OF THE JAPANESE PRESS.

Corea: Reported Interference of the British Minister.

(Hochi Shimbun, October 17th)

We have heard the following street rumour, viz, that the British Minister has advised the Japanese Government in favour of war against Corea. Of course we do not lightly give this our belief, but though we cannot as yet tell whether or not it is true, yet judging from the state of circumstances, it seems that it may possibly be true, so that we shall assume for the moment that it is correct and make a few remarks upon it.

If we consider the position in which Mr. Parkes stands at the present time, we see that he is an Ambassador to Japan as representative of H.M. the Queen of England and of the English Government. Every person enrolled on the English register and having the name of Englishman who is resident in Japan, is under his jurisdiction. It follows therefore that English residents in Japan closely observe the action which he takes for their protection and in accordance with his action, they blame or praise him, they give him their adherence, or withdraw their support. His interests are therefore the interests of the English residents and consequently it is greatly to his advantage to gratify their wishes by taking up their interests.

Now if there were at present war in the Eastern seas, who would lose by it, who would be the gainers? It must be admitted that the men of the West would be the gainers, and the men of the East losers. Amongst the former the English would become the capitalists to advance the money, contractors, or agents, to the Japanese army and Navy, supply agents, and in addition they would discover at once many other employments such as missions, etc, connected with this matter. The English would therefore pray almost all for a war with Corea. Is not the design of furthering one's own interest by disturbing other countries an insolent and audacious one? Now as Mr. Parkes, with his well known acuteness, has fully penetrated this disposition, it must be admitted that it is not impossible that he should use all his efforts to comply with their desires. Hence we see that if the report is true that Mr. Parkes has advocated war with Corea to our Government, this is not the language of Mr. Parkes, but is the same as if the English foreign residents had caused Mr. Parkes to say this. At any rate this is not the language of a man charged with a national responsibility, (by Japan) but of a man seeking his own interests, and there is no doubt that its tendency is disadvantageous to Japan. We earnestly hope that our Government will not be led away by such beguilement.

This is however after all nothing more than a street rumour, and has not been verified, and therefore we cannot pronounce a positive opinion, but if by any chance there were such a thing, we pray that the Japanese Government will stand firm nor lend their ears too readily to the instigations of Englishmen who are looking after their own interests. The Japanese Government have plenty of debates to listen to at home, they can have no time to give their attention to the loquacity of foreigners.

Miura Katsuhito.

The Same.—An Absolute Denial.

(From "Hochi Shimbun" of this date, Oct. 23rd).

The article in the *Hochi Shimbun*, No. 806 of the 17th instant, in which it is assumed that Sir Harry Parkes, Her Britannic Majesty's Envoy-Extraordinary and Minister Plenipotentiary and the English residents in Japan, favour a war with Corea, is false and slanderous. The said Minister has never advised this Government in favour of a war with Corea, but on the contrary advised them not to go to war without very grave cause.

(Signed) Minister for Foreign Affairs.

Corea—War or no War?

(Chôya Shimbun.)

Some of the writers on the Corean question say the present complications had their origin in the views of the *ex-Sanghi* Saigo, Soyeshima and Ito, who urged the matter. But I think that the *Sanghi* urged it because they found such views prevailing throughout the country. This question had its true origin with Sada Yoyejiro of the Yamaguchi *ken*, who went over to Corea as Japanese envoy immediately after the Revolution. He stated to the Coreans that the Mikadoate had been restored, and tried to induce them to pay tribute as they had done in former days. But the Coreans refused to comply with this demand, and said something like the following:—

"Some years ago, in the neighbourhood of Kirin, we had battles at sea with the Americans and the French, and our people protected the country, caring nothing about their lives. They all struggled in spite of intense suffering, while you did not even send over an envoy. Was this indicative of such friendship as a neighbour ought to feel? In olden times when our country was in great distress, your Shogun Taiko Hideyoshi sent a great force against us, which overran and subdued nearly the whole country. We showed, indeed, outward signs of submission at that time, but our hearts were bitterly opposed to you, and our conduct was solely due to the fact that we had not the power to oppose you. From that time we have cherished a feeling of resentment towards you, and determined to revenge ourselves whenever we had the

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

power and opportunity. We would advice your return as soon as possible. If you choose to send over a fleet into our waters, do so; and if you do not come over here, we will make war upon you, and institute some investigations into your past proceedings."

When we read the above evidence of the insolence of the Coreans, it caused in us pain and anger. But, on further reflection, we thought, What could have been the object of the Government in sending this envoy? Have we not given these people cause to insult us? Subsequently we heard that there was much division among the political parties in Corea, and this seemed to prove that all the Coreans were not so reckless as might be inferred from the preceding, so that this insolent reply might only have come from one of these parties. Our Government took the same view of the question, and acted in a very straight-forward manner, sending several envoys with the idea of reviving our old friendship. But the antagonistic party in Corea has largely increased in strength and members, and the Corean affair became a Cabinet question which caused the resignation of several of the *Sanghi*, led to the Saga insurrection, the Formosa expedition with its Chinese Indemnity, the Osaka assembly, the limitations imposed on the highest seat of power, and the *Chikuhokuan Kwaigi*. All these had their origin in this one cause. Moriyama, Hirotz and others, who are well acquainted with all these past affairs, went over to Corea, and remained there a long time in the hope of restoring a feeling of amity between the two nations. Rumour said some time back that the party opposed to us were becoming more powerful, while, on the other hand, we have lately heard that the party who are desirous of making reforms are coming into power and are disposed to be friendly. It was therefore with much surprise that we heard that while our ship of war the *Unyokan* was passing Kokura Island, the Coreans suddenly opened fire upon her, which our people returned, landing afterwards, taking the fort, and carrying away the guns as trophies. This action has caused much excitement among our people, and some urge an expedition to Corea, while others oppose it, both having their reasons for their views, while others again are indifferent whether war be declared or not.

Yet we think that those who urge their country to war at this moment can hardly escape the imputation of recklessness. Their main ground is that unless war is declared our country's honour will be tarnished. They say that if a country is to remain independent its honour must be preserved from injury; that our treatment of the Coreans has not been insulting, while their treatment of us has certainly been so; that a hostile expedition should be sent over there or we shall be regarded with contempt by foreigners; that our power will be diminished by this, and that our certain decadence will prevent our going to war at all in future. Those, on the other hand, who argue against war say:—Corea at present is like past Japan. We fired upon foreign ships at Shimonoseki, but neither the Europeans nor the Americans came and made an immediate attack upon us. They treated us with moderation, and in like manner we ought not to make war suddenly on Corea. We must bear with this for the present, and wait until entire order has been restored among ourselves, when it may be more expedient to make war. Perhaps, too, meanwhile, the Coreans will come to a better frame of mind, and peace and amity between us may be restored.

But those who urge war again reply, that such arguments seem reasonable and sober enough, but that they are not so much impressed with the kindness of the western powers, who took several millions from us in the shape of an indemnity, an act which has no softness of treatment in it. If an envoy should be sent to Corea and an indemnity were obtained, of course we could no longer urge a war; but, in case our terms were not agreed to, there is nothing to be once but to declare war and throw a force into the country."

These are the views of the most moderate of those who urge war, but we cannot bring ourselves to agree with them. We are not of opinion that we are going to conquer the eight provinces of Corea in a day, or that we can so easily subdue the country with our well-disciplined troops.

And now a few words to those who say that it would be dishonourable to us if we do not make war and that a war would promote the civilization of this country. Should I plead fully against war at this moment, I should fail for want of space; and as many other writers have done this from various stand-points, I will confine myself to touching the only one which here seems to demand notice. What is that honour which those speak about who urge war with Corea? A name is but an emblem of a thing, and when a good thing has been done, we call it good. In war it is the same. If, after taking every thing into consideration, we were sure of being successful, we might talk about honour.* But does it not make one tremble to talk about going to war in our present circumstances? I will not argue the point presented by the Shimonoseki affair, but is it not a little far-fetched to compare Japan to Europe or America, who are always prepared for war? If this fact were taken into sufficient consideration, one conclusion only could possibly be arrived at. If you are desirous of risking the blood and treasure of the nation under these circumstances, you cannot escape being called reckless. Of course, although I argue in this manner, if any enemy were to attempt to invade us, whatever its power might be, we must fight. I cannot tell what the Coreans may do in future years, but I say that a hostile expedition to Corea at this moment would be madness, and thus to the full extent of my power I shall agree against war.

Corea.

(Akebono Shimbun.)

On the question of war or peace with Corea, our opinion differs from that of other journals. We think that an investigation should be made into the last outrage upon us, and if war is necessary, we should go to war. These grounds we have repeatedly taken in arguing the question. But the other journals and their correspondents are constantly attacking our views, and say that we care only for the honour of the country, and nothing for its welfare and tranquillity, though is not pretended that we stand alone in our views. Thinking that the decision for peace or war is one of vital moment, we have meditated silently upon it for some days, but being now more decided in our opinion than ever, we would address the following words to those who hold contrary opinions.

We observe, then, that our opponents give no reasons for their views, but simply express a dislike for war, a feeling which we attribute to fear. Those who hold these views are not few, and they apparently have but one ground for it, and with this we are treated daily in the newspapers. If put into a few words, their position seems to be this:—The treasury is exhausted, the minds of the people are not in harmony, we are not in a state of preparation, and those who go a step further say that we have no interests which could be advanced by a war with Corea. They further say that trouble may arise between ourselves and China, and should foreigners become mediators between the two countries, war could not be prosecuted.† Many of the lower orders fear that the troops would become arrogant and refuse to obey their superiors, and that after the Coreans had been beaten, these troops would return home and give trouble by their turbulence.

Now, although our Japan is but a small island in the East, and our country is poor and weak, is it not one of the independent countries of Asia? And are we not to investigate such an affair as this late Corean outrage? Can we preserve our claim to be called an independent nation if we pass it over without proper notice? We cannot tell beforehand whether or not our interests would be subserved by an expedition, and there is no

* This writer little thought that he was hovering on the confines of Shakespeare's world when he wrote this. Yet what says Falstaff?—

"Honour pricks me on. Yea, but how if honour prick me off when I come on? how then? Can honour set to a leg? No. Or take away the grief of a wound? No. Honour hath no skill in surgery then? No. What is honour? A word. What is in that word, honour? What is that honour? Air. A trim reckoning!—Who hath it? He that died o'Wednesday. Doth he feel it? No. Doth he hear it? No. Is it insensible then? Yea, to the dead. But will it not live with the living? No. Why? Detraction will not suffer it:—therefore I'll none of it: Honour is a mere scutcheon, and so ends my catechism."

† This is a reference to the means by which the late quarrel between China and Japan was adjusted.

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

reason to suppose that foreigners would step in and act as mediators. Although Corea may be a small country, we must not despise it. This affair has no analogy with the late Formosa *imbroglio*, and we ought to send an envoy to China first to treat about it. If China does not agree to our views on the question, we ought to declare war against Corea, bearing this in mind, that if we keep well on our guard we have no reason to fear anything.

It is very evident that this Corean affair cannot be suffered to remain as it is. An envoy should be sent to enquire into it, and if we cannot obtain satisfactory explanations about it, there is only one course open to us, viz, to declare war.

Some object to these views that although Japan has undoubtedly received an insult, it comes from an Asiatic nation, and this is not disgrace to us.† But powerful countries like England and France have made war upon Asiatic countries for insults arising during their mutual intercourse. At this very moment there is trouble between China and England, and the latter has a claim on the former, and should China not concede the demands made on her, war will probably be declared. This is due to the sentiment that when one nation has offered an insult to another, it must either be repaired or avenged. But if England should shrink from war on account of the expense, and say that an insult from the Chinese is no reflection upon her honour, what would the English people say? We do not see why a difference should be made between England and China, and Japan and Corea.

The Samurai's Pensions.

(Choya Shimbun.)

A disease called idleness has been very prevalent in Japan for a long time past among the *kadzoku* and the *shidzoku*, while it is rare indeed among the *heimin*. Is not this strange? I have suffered endless anxiety lest the *kadzoku* and *shidzoku* should lose their precious lives by this disease, but, until lately, I never was able to understand why it prevailed so extensively among them. I have, however, recently discovered both its origin and the remedy for it. I hear that the *jinrikisha* men, who are supposed to be among the lowest of the people, can only earn about 50 or 60 cents a day by very hard labour. It is obvious that these people run about from morning to night in order to get their living. But if they had enough to live on from day to day without working for it, of course they would merely idle away their time. If they did so, however, in their present circumstances, another ugly disease would set in called starvation, so that they are compelled to labour from fear of this. Sufficiency, therefore, seems to be the origin of this disease, while poverty is the remedy for it. When we reflect upon the nature of the malady and the reason why it is rare among the *heimin*, we find that it is not infectious, but that it has a transforming power. Among the *kadzoku* and *shidzoku*, however, it is altogether different, for when they once catch the disease there is no fear of its transforming *them*, while it becomes infectious in the class, and is transmitted to remote generations. And thus when it has taken hold of one, there is not a single member who escapes it. I dare say the *kadzoku* and *shidzoku* will say "Look at the way in which we behaved at the time of the Formosa affair; we said that we would not accept our pensions, and we would voluntarily go to war, so that we are useful enough in the time of need." But this is merely like a dependent going out with a piece of firewood or the like to beat a robber who was attacking the house in which he lived. It does not prevent his being in the position of a dependent.

I entreat the *Kadzoku* and *Shidzoku* to return the pensions which are the source of this terrible disease, and become hard-working men of the world.

† We have here a singular instance of the objection taken by the Japanese, to which we referred at some length in our summary of the events of last year, to be classed as Asiatics. The feeling, though not without some ingredient of vanity, is far from an unworthy one, and might be made a powerful lever in the hands of a friendly and sympathetic ally.

NOTELETS FROM THE NORTH.

II.

In a certain town upon the northern route—which for obvious reasons shall be nameless,—there dwells a worthy man who, if any body can be said to thrive in such a sleepy hollow may be regarded as doing well. His fellow townsmen so regard him, and their opinion must be allowed to carry great weight in such a matter, inasmuch as, to judge from the confidence with which they are always ready to speak definitely and to the point upon any subject, no matter what, they are sure to be very well-informed fellows indeed. In deference to their opinion it is that their place is called a "town." Yet persons exist who have disputed its right to such a designation, and the uppish place beyond the hill which takes some credit to itself for calling a spade a spade—as if it could be anything else—is content to speak of itself as a hamlet, although it has one house the more. That's no reason however why it should point the finger of scorn, for if eleven buildings and one Buddhist temple are not enough to settle the question, why to demonstrate anything at all in this world is an impossibility. It is true that the maps make no mention of this *urbecula*, but the good people are trouble-hating folk and have not insisted upon its being mentioned. And yet it must have been a place of some importance once, and have contained at least one fireproof storehouse. That is inferable from its name, but, hold,—to go further were to betray the secret and put a modest follow out of countenance. Not that he has anything to blush for though. For an honester or more hardworking individual—in his own opinion—does not exist, but to some persons notoriety is disagreeable, even though coupled with praise.

Pluralism is an institution at ——— and the little man alluded to may be regarded as its embodiment. For should the traveller, intent on hiring pack horses from him in his capacity as *Kaisha* officer, have committed an indiscretion, he finds himself forthwith brought up before him in the character of Mayor. What wonder if his countenance betrays a consciousness of his dignity and importance when to this is added that he is also Postmaster-general, and has entire control of all the correspondence—business and otherwise—of the community. Most ordinary persons would surely be satisfied with so much honour and emolument, but our energetic little friend is not one of these. He finds time, notwithstanding the multiplicity of his appointments—it is to no purpose to mention that he has nothing to do as Mayor, and that no letters ever go his way—to let apartments, and even to vend such simple merchandize as rapeseed oil, tobacco, sweet potatoes, cakes, straw shoes, &c. By such and suchlike industries he has acquired a little wealth, and is ever ready to share it with a needy neighbour,—when he is given good security. He has likewise from time to time improved his residence so much that his best parlour does not now let in the rain in above three places at a time. A good season last year enabled him to add three brand new props upon the side where the mansion leans most from the perpendicular, and he is in hopes, he says, if all goes well this year, to be able to relay the flooring between his two best apartments—to be sure he has but two—so that it will be possible to pass from one into the other through the sliding doors, instead of being obliged as at present to go round by the verandah for that purpose. So many and great improvements necessarily have enhanced the value of the property so much that it has become worth the looking after and is a source of very constant anxiety to him as is but natural. "Many are the accidents which may befal a house" he is wont to say, "earthquakes, typhoons and "fires. As to the two former why I snap my fingers at them. "If my house is not solidity itself with those three new props— "not unornamental either—there's no stability in anything. "But as to fires, they're real dangers. However, I have done "as much I think as any mortal man can do to meet so signal "a calamity: see there." And indeed there is a reassuring sight to be encountered on following the direction of his forefinger, for there, in full view of the visitor, is ranged a goodly row of fire buckets, painted black and duly numbered from 1 to 10 and each capable of containing at least a quart of water. Nor

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

is this all, for by their side hang ten new scoops also duly numbered and of a like capacity to the buckets. This at first sight would seem an overwhelming proof of his sagacity, and it is not until further reflection that the matter presents itself in any other light. It is obvious, however, that ten fire buckets and ten scoops to fill them with would require that twenty pairs of hands should be employed at once, a man a piece to each bucket aud a scoopifer, in attendance! Now each scoop is numbered to correspond with a bucket, and does it become a point of honour for a ladler to fill none but his own special pail it may be asked? Again, if ten buckets are being handed to and fro along a line in rapid succession, one scoop only can possibly find work to do as but one bucket can arrive at any time to be refilled. What then are the other nine about? Then, last of all, from whence the water? As there is no tank or pond at hand a well must be depended on. But if a well, how use the scoops? Must the water be drawn from the well and poured into a receptacle and ladled out again into the buckets? All his is very puzzling, and on being put before the little man has not been satisfactorily explained. He "was never so bothered by questions before" he said, and although he frankly admitted that water is a useful element at a fire, he was ready to confess that until it was put in "that way it had never given him a moment's concern before."

TRAINING NOTES.

During the past fortnight the weather has been all that could have been desired for training; but, notwithstanding this, the attendance at the course in the morning is smaller than we ever remember having before seen, even for an Autumn Meeting, and beyond mere matter of fact, all work and no play, we have nothing to report.

The Tartan Stable, as usual, have again strengthened their already strong string by importing fresh blood viz: *Black Rod* and *Andante*; the former has brought with him a poorer reputation than he deserves, and of the other hardly too much can be said. The long experience, together with the intuitive knowledge which the owner of this stable possesses, makes him a formidable competitor so far as training goes and bringing his ponies to the post in good condition. In addition he has secured the services of a rider whose cunning is proverbial, and whose ability will go far to secure two-thirds of the races which we understand they already expect. All the China ponies in this stable are in excellent condition. *Monymusk*, however, appears to have somewhat lost his old dash, but his long training will tell at the finish, while *Braemar* may still be looked upon as the flower of the flock. Of the Japanese ponies in this stable little—if anything—is known. *Drift* has been in the Vet.'s hands; and the griffin *Dash* has greatly disappointed the privileged few who have seen him.

The Mystery Stable. This long string contains a great deal of new blood,—amongst them *Gladiateur* and *Favori* being the chief celebrities. They arrived rather late, but seem to have greatly improved with their work, and if they go in anything like their Shanghai form should score many wins for their noble owner. The stable, however, labors under a great disadvantage from the absence of their expected Kobe and Shanghai jockeys. *Sequin* and *Oceola* are also new arrivals, but their style of going is not much to our liking as apparently they require special races of from three to six miles to show their powers. *Dibs* is being carefully hacked,—permitted only an occasional view of the course, but the trainer's insufficient knowledge will not allow him to bring this pony to the post in proper form. *Black Douglas*, the only new Japanese pony in this stable, is not of much account; and the old ponies *Tim Whiffler*, *The Swell* and *The Snob*, are, much as at last Meeting—good ponies but not racers. The last named jumps well, but cannot compete against China Ponies. *The Laird* is another griffin from the same stable, but showy and weedy and can neither stay nor carry weight.

The Combination Stable ponies, although generally neglected, are by no means to be despised. *Kwo-pu Chin*, an old China veteran but a fresh arrival here, receives careful training between daylight and dark in the company of *Saxon*, who does great credit to his trainer for his outward appearance; and if either of them retain anything of their old speed, they will make very hot work of it for their opponents if they do not actually win themselves. *Grasshopper* is a perfect glutton for work and has vastly improved since last Meeting, and though regrets are vain, we should have much liked to see this pony entered for the Challenge Cup. The Japanese griffin *Sunshine* has made too many trips to Inoshima to be a Derby or even a Solace winner.

Captain Costigan has a remarkably handsome griffin in *Tsujiura*, though he has scarcely numbered sufficient summers to be successful this Meeting; but with good wintering he will made his mark in the Spring. *Ikey Pikey*, we have his owner's word for it, is being exclusively trained for, and will win, the Kanagawa Cup.

The Cherry and Black have no new blood in their stable except an Owner, unless, indeed, the happily named *Pretender* (late Oeillet). *Northern Light* has by no means improved since last Meeting. *Pice* is, as usual, one day lame and one day sound with no apparent reason, so that his chances in some exclusion race are just as good or doubtful, as ever. *Picayune* has lengthened out and become a racing-looking pony and is much fancied for the short distances.

Mr. Radley has not wholly forsaken the turf, as *Lord Harry* and *Ivanhoe* will still carry his colors. The former, however, although going well, stands but a poor chance unless lightly handicapped. The latter will, in the Hardle Race, meet many better jumpers than himself, but as the result of this race is invariably more doubtful than that of flat races, some happy chance may again land him a winner.

The Doctor trains on purely scientific principles and has all the latest appliances for recording the weight of his ponies daily, but we venture to think that he might do better by weighing the food and seeing that the ponies get it, as they are in anything but good condition for hard work. *Small Hope* is a compact griffin, and if better fed and not overworked would stand a good chance for the Derby. *Stale Mate* is fancied by his Owner but by no one else. *Sirius*, like his stable companions, could consume more oats than are placed before him. *The Slasher* would be more in his element hauling shirting bales than on the race course.

John Peel is a late acquisition as a pony Owner and already gives promise of being a strong supporter of the Turf. He possesses in *Bonito* a handsome pony and a pretty mover, but his China work has been too much for him to show to advantage this Meeting, beyond an exclusion race on the second-day; while the Japanese griffin *Saozuma* is too short of work to hazard an opinion regarding him.

The Russo-Mexican stable are, as usual, very strong in Japanese ponies, and possess the favorite for the Derby in *Moonshine*, a dun-colored pony with peculiar action, though it will really surprise us if he can gallop well. *Mikan*, another griffin, is more to our liking as regards style, but we doubt his being able to carry weight. Of the old ponies *Lodi* works the best and will doubtless score many wins. *Ma-stolz* is still rather gross, but goes well and strong and will make a close race for the Nippon Champion. *Moscow*, has never been a favorite with us, for though he possesses speed he has a bad temper, which the Mexican has failed to cure even with bread and jam.

General Saigo. The public generally are at a loss to know where the Russo-Mexican interest ends and the Formosan veteran's liability begins, but beyond this the ponies in this stable attract little, if any, notice. *Tabihino* can stay fairly well; he is ridden daily by a supposed cadet of noble family, but if our memory does not mislead us we have a strong suspicion of having seen him ride second in the *B tt's* race some years ago on a pony then called *Magic*. *Kondzura* and *Sakuraka* are two griffins in the same stable, also ridden by *noble* cadets, whose defective knowledge both of their own language, and that of the Club to which they have just been admitted as members, has necessitated a new vocabulary, in compiling which the Bishop of Homuroku is at present actively engaged, and which will appear before the forthcoming Meeting.

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

Mr Burnside, if he does nothing else, consumes plenty of valuable oats, and his medicine-bill must be quite a study. His latest idea is to train a pony for a sack-race at the Athletic Sports, having failed to proselytise him to racing. *Pontiff* has never been known to go beyond a jog-trot, for fear of injuring his nervous system. *Pilgrim* has no competitor in his own line, but unfortunately the committee have neglected to give a prize for the best kicker.

Blue and Silver.—The little man is being more carefully looked after than ever, and altho' he seems to lack somewhat of his old spirit, will add one more Nippon Champion to his long list of winnings. *Sirocco* is a fraud, being neither useful nor ornamental.

There are many others who possess one ewe-lamb and expect to win. They are all, we fear, doomed to be disappointed with the exception of the Owner of *Crusader*, as this pony can still run the best ponies on the course to a neck for 1¼ miles. *Drift* receives regular work but he has not the pace for the ponies which are here now. *Cyclone* would make a better show of winning now than he will do a fortnight hence, unless he receives some rest.

The German stable is represented by *Mephisto*, who won't run if he could, and we seriously doubt if he is able to do so. The same may be said of the Railway griffin *Cup-bearer*, and it will certainly astonish us if *Drizzle* tries to gallop at all, much more to win.

ASIATIC SOCIETY OF JAPAN.

A General Meeting of the Society was held at the Kaisei-Gakko on the 20th instant. The Chair was taken by Sir Harry Parkes.

The Chairman opened the proceedings by drawing attention to a supposed ancient bell, presented to the Society by the Kenrei of Hiogo. Quite a number of similar bronzes had been found in Japan presenting this peculiarity, that they are always found buried, and also that Japanese antiquaries, though familiar with their appearance, were entirely ignorant of their history. The size of these bronzes varied from two inches to five feet. He had seen a very large specimen exhibited at Nara. The present bronze was found by a priest in a hole in a rock. It had been questioned whether these bronzes were Chinese, and therefore the bronze before them was sent for inspection to Mr. Meadows, H. B. M. Consul at Shanghai. The bronze was afterwards forwarded to Dr. Bushell of Peking who had made bells his special study. Neither of these gentlemen however could give any information. He believed that it was of very early date and would prove to be of Corean origin, but the present disturbed state of Manchuria rendered research in that part of the globe impracticable for the present.

Mr. Syle proposed, "That the Secretary be requested to "address a communication to the German Assiatic Society, in-"viting the attendance of its members at our General Meet-"ings, whenever they may find it convenient."

This proposal was seconded by Professor Grigsby and carried unanimously.

Professor Smith rose to propose that a Physical Sub-section be formed in the Society, to facilitate research and summarise papers that *in extenso* are too technical to be of interest to a majority of the members.

Dr. Antisell thought a body such as proposed should organize itself independently of the larger Society, and, when it had achieved existence, become affiliated to the Society.

Prof. W. E. Ayrton proceeded to read Dr. Geerts' paper on Useful Metals and Minerals of the Japanese (D. Quicksilver.)

In reply to a question from the Revd. E. Syle, Dr. Antisell remarked that the geological position of mercury or its ores could not be exactly stated; it was found running through a large range of deposits.—Thus, at Idria it was found in bituminous schale of the older transition series (Silurian); at Almaden in Spain in mica schists broken up, and porphyritic granitic intrusions more recent than the coal deposits; in new Almaden and other points in California it is found higher up in the Newer Cretaceous or Older Tertiary (Eocene) beds, giving thus too great a range to warrant locating it in any exact series.—In this it resembles petroleum, which is found in the older slates as well as in the Kainozoic series.

The meeting terminated with an account given by Prof. Smith of the method he had employed for testing the strength of woods, and the results thereby attained.

Owing to the lateness of the hour the Meeting was adjourned to a Special Meeting, to be held on Wednesday, October 27th, when the paper read on the afternoon of the 20th instant will be discussed.

Correspondence.

HUME'S ARGUMENT UPON MIRACLES.

To the Editor of the "Japan Weekly Mail."

Yedo, October 20th, 1875.

Sir,—In last week's issue of the *Japan Mail* you insinuate that clergymen say things in the pulpit which they would not dare to say in ordinary conversation, feeling secure that no matter how bold the assertion, they will, owing to the circumstances, come off scatheless. I myself should have thought that after the recent case in Yokohama, in which a clergyman was made to say in the public prints even things which he did not say, but which it was probably thought he ought to have said, such a theory was fairly exploded. As it seems, however, that it is not so, I shall be much obliged if you will allow me to say a few words—out of the pulpit,—in reference to your challenge as to the unassailability of Hume's position with respect to miracles. I will promise to be as brief as I can—even I fear at the expense of clearness—though the subject is one which to argue fairly would take more time than I can afford and more space in your journal than would be at my disposal.

The two great arguments against miracles in our day are that they contradict (1) universal experience; and (2) natural law—and although both of these do ultimately resolve themselves into the same thing, yet for the sake of clearness we will at present keep them distinct.

What, then, in the first place is this universal experience which renders the belief in miracles impossible? It is the universal experience of individuals. And in what does the experience of any individual consist? It consists in the observation of facts. We see in nature in numberless instances various species of facts taking place, and various other species of facts invariably attend them. For example, if I have cut my finger I have observed that a particular sensation which we call pain has invariably followed. This apparent relation then between the two classes of facts, we, without at all understanding it, summarily call cause and effect. And the observation of the constant conjunction of two facts in this relation begets in us the expectation that if the first, which we call cause, takes place, the second, to which we give the name of effect, will certainly follow. But that this expectation is without any solid foundation is clear if we only consider that we know nothing whatever of any real connexion between these two classes of objects, or any necessary sequence. I have observed that one fact does follow the other fact, but when I search for the reason I am in darkness. The inference from one to the other rests upon no ground of the understanding, and therefore the experience that they have always happened in this connexion is not available for divining what may happen in the future. We can have—as you will acknowledge—no experience of anything that has not yet happened, and there is no logical ground for our expectation that the present order of nature will continue for one instant longer like what it has been in the past. Although this truth appears to me self-evident, I will in support of it quote one or two passages from the writings of the great philosopher himself—who, to do him justice, did not, in my opinion, in private attach so much weight to the conclusiveness of his argument against the possibility of miracles as some of his followers have done. In Part III, Section VI, of his Treatise of Human Nature, Hume says—"There can be no demonstrative arguments to prove that those instances of which we have had no experience resemble those of which we have had experience." And again, after an examination of the basis upon which the belief in the order of nature rests—

Digitized from the UNIVERSITY OF CALIFORNIA

"When it is asked," he says, "what is the foundation of all our reasonings and conclusions concerning the relation of cause and effect, it may be replied in one word —*experience*. But if we ask, what is the foundation of all conclusions from experience? this implies a new question which may be more difficult of solution..... Experience can be allowed to give direct and certain information of those precise objects only, and that precise period of time which fell under its cognizance; but why should this experience be extended to future times and other objects? It must be acknowledged that there is here a consequence drawn by the mind, that there is a certain step taken, a process of thought and an inference which wants to be explained. These two propositions are far from the same. I have found that such and such an object has always been attended with such an effect. I shall allow, if you please, that the one proposition may be justly inferred from the other; I know in fact that it always is inferred; but if you insist that the inference is made by a chain of reasoning I desire you to produce that reasoning—I cannot find, I cannot imagine any such reasoning. You say that one proposition is an inference from the other; but you must confess that the inference is not intuitive, neither is it demonstrative. Of what nature is it then? To say it is experimental is begging the question. For all inferences from experience *suppose* as their foundations that the future will resemble the past: it is impossible therefore that any arguments from experience can prove this resemblance. Let the course of things be allowed hitherto ever so regular, that alone without some new argument or inference proves not that for the future it will continue so.—No reading or enquiry has yet been able to remove my difficulty. Can I do more than propose it to the public, even though perhaps I have small hopes of obtaining a solution? We shall at all events by this means be sensible of our ignorance, if we do not augment our knowledge." *(Enquiry concerning the Human Understanding, Sec, iv.)* So much then for the slender grounds which experience affords for an argument against the possibility of miracles.

Again, secondly, if we turn to an examination of the inferences drawn from what we call natural law against the possibility of miracles, we shall find that exactly the same reasoning applies here as in the previous case. For our idea of natural law traced to its foundation is found to arise from our experience that, as I said before, certain special facts in nature are always followed by certain other facts, as, for instance, the fact that flame is always accompanied by heat. But the observation of these two separate facts in no way proves any real connexion between them. When the first observer beheld an apple fall to the ground, he must, if he were a thoughtful man, have certainly been astonished, and he could have formed no expectation that such a thing would happen a second time, because he could have formed no conception of the inert earth possessing any power of attraction. He had lived on it and constantly observed it, and it had never given such a sign of life and power before. Whence then did it derive this new power of drawing bodies to itself? Consider a parallel case. If I were to open my window now and a bat flew in, what reasonable expectation could I form that the same thing would happen if I opened the window a second time? But, if every time I opened my window a bat flew in, and if I found it to be a fact of universal experience with all men that every time a window was opened, a bat entered, I should in time cease to wonder, and calling the opening of the window the cause and the entering of the bat the effect, I should, notwithstanding the unpleasantness of the circumstances, set about discovering what I might of the relations subsisting between the two facts. You may say this is absurd and different to the case of the apple falling. I answer it may seem absurd, but the reasoning applies equally well to both cases Neither you nor I know—nor shall we ever know —of any *reason* why the apple should fall any more than we do why the bat should enter. We know that the loosing of the apple from the tree *is* followed by its fall, and we have discovered a certain proportion which appears to exist between the size of the apple and the rate of its velocity in falling, but that is all, and as I do not know any reason whatever for the falling of the apple, as I can see no connexion whatever between the loosing of the apple and its falling, so neither have I any solid logical reason whatever for supposing that the next time I dislodge an apple from the tree it will fall. That I have the expectation of its doing so is very true; and that this expectation is grounded on my experience that an apple has always fallen under the circumstances in the past, is true also, but why this experience should be extended from the past into the future it would, as Hume confesses, be difficult to say.

The fault is in ourselves that the fact has ceased to seem strange, and, perhaps I may be allowed to say miraculous. We have got used to it—nothing more. The death of a dear relative is, in point of reason, as great a loss twenty years after the event as the day it happened, but we do not feel it so simply because we have got accustomed to the loss; and the case is precisely similar with respect to the wonderful and incomprehensible facts in nature with which we are surrounded. Some see in them the working of irresponsible natural law, which cannot be interfered with—which cannot change. I see in them the *direct* and *present working of the will* of an eternal and unchangeable God. My belief I believe to be the larger circle which embraces theirs,—and I venture to say that a time will come when it will be cast as the bitterest reproach at those who are now so fond of calling us obstructive, and teachers of falsehood, and clouders of the light, that they were unable to rise above the idea of fixed law to Him who is the Fountain of all law, and who, because he is unchangeable, has formed all things in harmony and proportion in this universe.

What presumption then—I will not say what proof—remains against the possibility of miracles? The presumption of experience? We have seen in what it consists. Its province lies only in the past—except by courtesy it has no voice in the determination of the future. The presumption of Natural Law? I know not what it is. In confidence I fall back upon the old hopeful words "With God all things are possible." I know that if he be really infinite, it must be—using my weak human language—no more difficult for him to interfere, if need be, with the order of nature now than it was to create the universe at first, *because it is his will* that constitutes the order of nature. I know too—in conclusion—very well that my intellect is not the measure of all truth or of every possibility, but I am responsible for the use of that intellect in the search after what is the secret of the universal, and if I arrive at a different conclusion as to what that secret is to others, it can be but a spirit of intolerance and bigotry, much as it would disclaim the charge, that would call me hard names, and hold me up to scorn.

I remain, &c.,

A. C. S.

[We have some difficulty in following our correspondent's first paragraph, but the only meaning we can extract from it is that because a clergyman was recently misrepresented by some of the Yokohama newspapers, clergymen cannot be said to fear to make statements in the pulpit which they would not make to (say) four instructed men in private conversation. We fail to see any connexion between the two positions. We certainly did imply that clergymen make statements and use arguments in the pulpit which, for whatever reason, they would not use in private conversation with instructed and accurate reasoners, and we attribute this partly to the fact that the argument of the pulpit passes for the most part without analysis and always without reply. We will do the clergy the justice to believe that the intellectual difficulties presented by the Scriptures are arrived at, by many of them at least, from their own processes of reasoning. A man of mature age in these days who feels none of these, can have no sound conception whatever, or the rudiments of it, of the constitution of the external world, or of man's mind in relation to it. The clergy may not think it wise to declare these difficulties to their congregations, and in this they have our entire sympathy. Whatever may be the soundness of their general beliefs, they undoubtedly are for the most part sincere in holding them, though rarely intellectualy scrupulous, as we think, in defending

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

them. Their ingenuity is chiefly occupied with the question how they may traverse a counter-statement, not in examining into its truth. But we have no desire to press this point, which does not touch the real question at issue.

Our correspondent professes to take up the issue of the assailability of Hume's position in regard to miracles, but he seems unaware of Hume's argument to which we referred. He pleads, if we understand him rightly, that what we are apt to call the relation of cause and effect is merely a relation of sequence, and in this he is perfectly correct. But when he pleads that we have no logical ground for supposing that the present order of nature will be for one instant longer like what it has been in the past, he permits himself to be deluded by a misconception. For it is, on the contrary, most logical that we should suppose this; not on grounds of causation, but on grounds of experience, fortified by research into countless past ages of the world's history. Our correspondent will surely admit that the probability that the sun will rise to-morrow is of the nature of certainty to us, and that this is a result of our experience. On this belief in a settled order of nature, the whole framework of our life, material and intellectual, clearly rests. He seems to think that because there is no proved causation between two facts following each other in invariable sequence, that there is no argument of probability from experience. Can he have seriously reflected upon the meaning of the words he uses?

But it is not the possibility of miracles to which we referred. Of this we know and can know nothing. Hume's position is that, whether possible or impossible, we can have no proof of them. His ground, which A. C. S. does not even allude to—though we are sure that the omission is no intentional evasion, but rather a misunderstanding of the special argument to which we referred—is that while we have abundant evidence that human testimony is constantly in error, we have no good evidence that the sequence of the operations of nature has ever been disturbed, and that it is therefore far more probable that, in any given case of testimony, the asserted fact, or the explanation of it, should be erroneous, than that this invariable sequence should have been disturbed. It is a case of the balance of probabilities, and the balance is as clearly against human testimony as possible. We have no evidence whatever that a piece of stone has ever been turned into a piece of bread, or that a man who has died has come to life again; while we have countless statements that such events have occurred. We should at once concede that the authors of these statements believed, or might have believed, what they asserted. But we should not the less refuse our own belief to it; in other words we should reject the human testimony, and accept the guidance of our reason instead. We know that the annals of all religions abound with statements involving violations of natural law, and we reject these without exception on Hume's ground that it is far more probable that human testimony has erred, than that an order of nature of the violation of which neither our own experience nor our researches into the world's past give us any trustworthy evidence, has been violated. Two hundred years of science have done this for mankind: They have produced the grand conception of universal law; of the determinate relation of atoms to each other; of the necessary chain of orderly connexion between these atoms; and the absence of any evidence that this connexion can be disturbed by anything but physical cause, operating according to fixed laws.

If our correspondent will examine his illustration of the fall of the apple, he will see that it contains two obvious fallacies. He says "neither you nor I know, of any *reason* why the apple should ever fall." But we plead that we *do* know. We know that it falls in obedience to a law which, so far as its operation can be traced, is a law not only of our system, but of the universe. We may not, and do not, know the mode by which this law compels all atoms of matter to obedience, whether by means of an ether diffused throughout space, or by some other material connexion, without which it may be remembered that Newton could not conceive of the possibility of its operation. But, in opposition to our correspondent, we plead most distinctly that the apple falls in obedience to this law, and that by the same law we calculate the moon's motions, the eclipses, the time of the transit of Venus, and have even solved the huge problem of the position of Neptune when his very existence was unknown.

When A. C. S. says that "the fault is in ourselves that we no longer think these things strange, I may be allowed to say miraculous," he betrays a condition of mind with which we can have no sympathy. This seems to us—and we say so in no sneering mood, we can assure him, thinking that such humour ill becomes the discussion of these subjects—the attitude of a child, to whom all is strange, all wonderful, all unrelated to law and the calm sublime mechanism of the universe. He who is always wondering is in an ill mood for discovering. We believe with A. C. S. that these laws of which we have spoken declare the will and, in some sense reflect the mind, of an eternal, unchangeable God. But man's highest faculties are best occupied in discovering and applying them, not in standing in blank wonder before the phenomena they produce. In the one attitude of mind the nations of the world have really made vast advances: in the other their activity has been little else than a dreadful history of mutual destruction. The last sentence of our correspondent's letter is merely our own thought of last week in other terms. His brethren call us laymen hard names for coming to other conclusions than themselves about the divine government of the world. It is not we who cast the first stone. When we are upbraided as fools or evil-livers because we do not agree with them in conclusions the fallacy of which is obvious to every mind which will admit light into it, we very firmly say, It is not so, and it is at your peril that you use this language. We give you every credit for sincerity, for zeal, for your pure lives, your bright examples, your devotion. All the advantage you may derive from an appeal to history, we ungrudgingly concede. But you must take its verdict entire, and do not forget that there is not one single step by which our race has advanced in positive knowledge and in an acquaintance with the laws of nature which have been applied towards the improvement of its condition, which you have not bitterly opposed and denounced together with all those who first made it.

We wish we had no better authority than our own for the view we took of the difference between clergymen in their individual and their corporate capacity, but as we are challenged on it we must invite our correspondent's attention to the following extract from one of the most eloquent, impartial and philosophical English works of modern times—Lecky's History of European Morals.

There are also particular kinds both of virtue and of vice which appear prominently before the world, while others of at least equal influence almost escape the notice of history. Thus, for example, the sectarian animosities, the horrible persecutions, the blind hatred of progress, the ungenerous support of every galling disqualification and restraint, the intense class selfishness, the obstinately protracted defence of every intellectual and political superstition, the childish but whimsically ferocious quarrels about minute dogmatic distinctions, or dresses, or candlesticks, which constitute together the main features of ecclesiastical history, might naturally though very unjustly lead men to place the ecclesiastical type in almost the lowest rank, both intellectually and morally. These are, in fact, the displays of ecclesiastical influence which stand in bold relief in the pages of history. The civilising and moralising influence of the clergyman in his parish, the simple, unostentatious unselfish zeal with which he educates the ignorant, guides the erring, comforts the sorrowing, braves the horrors of pestilence, and sheds a hallowing influence over the dying hour, the countless ways in which, in his little sphere, he allays evil passions, and softens manners, and elevates and purifies those around him—all these things, though very evident to the detailed observer, do not stand out in the same vivid prominence in historical records, and are continually forgotten by historians. It is always hazardous to argue from the character of a corporation to the character of the members who compose it, but in no other case is this method of judgment so fallacious as in the history of ecclesiastics, for there is no other class whose distinctive excellences are less apparent, and whose mental and moral defects are more glaringly conspicuous in corporate action.

—Ed. *J. W. M.*]

Mr. N. McLeod, whose researches in Japan have satisfied him that the people of this country are of Jewish family, has just given another work to the world. We have not had the advantage of inspecting a copy, but find the following enumerated by the *Hiogo News* as forming part of its subject matter.

"Final Battle of Gog and Magog"—"Brazen Serpent"—"Mikado and Kuge's pedigree"—"Extracts from Mythological History"—"Saga Insurrection"—"Formosan War"—"Japanese Code of Morals for Women"—"Christianity"—"Education"—"Agriculture and Minerals."

THE NATIVE POST-OFFICE.

TO THE EDITOR OF THE "JAPAN WEEKLY MAIL."

Yedo, October 22nd, 1875.

SIR,—The administration of the Japanese Post Office is not all that could be desired, as the following cases will show.

A letter, posted to me at Yokohama on the 15th instant, at 2 p.m. was delivered at my house (within twenty minutes walk of the Yedo Railway Station) at 6 p.m. on the 16th instant; another, posted at Yokohama on the 16th instant, at 4 p.m. was only delivered at my residence at 1.30 p.m. on the 17th instant; while a third, posted at Yokohama on the evening of the 15th inst., reached me only at 1.30 p.m. on the 17th inst.

Taking the three cases together, this will make an average of 31 hours for each letter to be conveyed a distance of about 22 miles, or, say an hour and a-half per mile. This is celerity with a vengeance! In cases of emergency I would advise any one at Yokohama, who desires to communicate quickly with a Yedo resident to employ a special messenger and not trust to the native Post Office.

Yours faithfully,

C.

[Our own experience enables us to corroborate the statement of our correspondent. That it is within the power of the Department to accelerate the mails is evidenced by the fact that letters are, under ordinary circumstances, delivered in Hakone, a distance of some fifty-five miles from Yokohama, in less time than is now occupied by the Yedo service and with great regularity.—ED. *J. W. M.*]

Law & Police

U. S. CONSULAR COURT.

Before Gen VAN BUREN, U. S. Consul General;

And

F. R. WETMORE and C. DRAKE, assessors.

Monday, October 18th 1875.

ITO HACHIBEI *vs.* WALSH, HALL & Co.

In this case, plaintiff claims a sum of $10[illegible],715 42, balance of account and interest connected with certain trading transactions he had had with defendants.

Defendants deny that they are indebted in the above amount, and claim that he (plaintiff) is indebted to them in the sums of $16,222.55, and $16,483.61, being balance of accounts between them and the plaintiff.

Mr. F. V. Dickins appeared as counsel for the plaintiff; Mr. G. P. Ness for defendants.

Court met at 10 a.m.

Mr Ness said he had anther question to ask Mr Irwin.

R. W. Irwin: When Exhiblit "E 2" was made out, it must have been taken from my memos, of account to Ito, dated November 22nd, 1871, in which the November 20th appears. The dates in the ledger are different, and are correct.

To Court: The dates were immaterial. I merely put in down in the ledger. They refer to the same thing.

Witness: I see on my memorandum (exhibit "8") some writing, that is not mine, in pencil for $66.71. It reads: "Correct, brokerage $66.71, not included: Ledger, Nov. 6th." The appendage to this document bears my handwriting.

Cross-examined by Mr Dickins: I don't know whose handwriting it is; I think it is Mr Engart's. It looks like that of a German. This paper [exhibit 8], dated Nov. 17, 1871, was written on the 17th November, 1871. The second sheet was written between the 17th and the 22nd Nov., 1871. The third the same. They are all written in pencil. The first page is headed, "Ito Hachibei, rios." The second page is not headed, but the first amount is, "Paid Ito." The third is headed, "Ito Hachibei." I know they were written on the days I have said. I have a perfect memory. Book "D" is one proof, the papers themselves are a strong proof, and the memory God has given me is a very strong proof. I remember that those papers were on the archives of the house, and were produced when I ceased to be a partner. I wrote the figures you show me in my memorandum on the day they are dated as having been written. The small memorandum was written at the same time. I have not written anything on those papers since the date at which they were written. Figures in pencil may be rubbed out very easily and written over, but would leave some trace. I have a strong, powerful memory as to dates and figures. I have had to exercise it for 17 years, and practise makes perfect. I have known Ito since 1870. I have had extensive transaction with him up to the end of 1873. During the *niboo* transactions Ito or his agents had cheques or money in their possession at times for which no acknowledgement was taken. It was generally received in the evening or the next morning. Outside of the niboo transactions we never lent him money without security. I shall be able to tell you this positively this afternoon after examining the books. In "F" and "C" there are certain receipts not certified by the seal of Ito. In book "C" I think there are only two such. I had an acknowledgment in our book; a half seal of Ito's. A half seal is good enough. The half seal of a man is different from a block seal. The device is different. There is a difference in the ordinary tally seal from a man's half seal, in device, value, and form. The tally seal is called *warefu*, the whole real seal is *ingio*. I don't know what Japanese law or custom is as to the value of the half seal. From my experience I should state that no Japanese could raise the slightest question of fraud as to a half seal when that half seal is the half of his own seal. I would not enter into business with a man unless I did not know or believe him to be an honest man, but I would sell him merchandise or loan him money on security. I believed Ito and Benzo up to December 1873 to be honest men. Ito told me in December 1871 or January 1872 that Zenjiro was a thief. I never transacted any business with Zenjiro after I was told that he was a thief. I never saw Zenjiro about rice business after that. I have no personal knowledge of Zenjiro's thieving. Ito told me Zenjiro had robbed him in the *niboos* transactions. Ito told me of no specific amount of thievery on the part of Zenjiro. From the end of 1873 to the end of 1874 I knew of nothing to impeach the character of Ito and Benzo. I should say that Ito, Benzo, Zenjiro, and Rikichi, had entered into a conspiracy to defraud the defendants. I think they entered into it from the time they asked legal advice. I do not know when they first took legal advice. I first met you (Mr Dickins) about this case in Febuary or March this year. I do not know when the claim was first made on Walsh, Hall & Co., I heard from Mr Walsh that there was a trouble in the fall of last year, and in December I heard from Ito himself that he intended to bring a law-suit. I heard from Mr Walsh about October or November last year that accounts were sent to defendants by Ito. I only heard it was a large claim, Mr Walsh did not tell me the amount I did not have conversations with him about this claim. I think a notion of conspiracy was then in the germ, but it has been fully developed since. When they first sent their detailed claim I think the conspiracy was in the germ. In December 1874, I told Ito he had no case against defendants. We were not enemies at the time. I had never quarrelled with Ito. We were comparatively friendly. I did not think there was anything in his claims. I thought that he was only threatening an action to get back his securities, upon payment of the $15,000 loan. That was the time he (Ito) said he would be a devil. I have tried to go carefully through plaintiff's accounts, but failed to understand some of them. The accounts are all wrong. Walsh, Hall & Co. are debited with their share of losses, which are all wrong. If Walsh, Hall & Co were liable the additions would be correct. I should say that these accounts were made up by an accountant from a mass of papers in Japanese just thrown to him. Many of the rates of exchange in account "F" are correct. Several appear that I do not believe to be correct. Those items that I have been able to examine and understand appear correct. Some of the items I do not understand and I can't say if the rate is correct. [Witness went into some items]. I consider the balance in account "A" is "forced;" I think that the party who made it has found a certain account due as a balance; that he has taken this amount and converted it into another currency—*rios*, at an arbitrary rate—that is one he has fixed himself; that after taking this amount and deducting another amount from it, he has arbitrarily discovered a balance. Mr. Dickins calls it "cooking" I call it "forcing." Thus there is a balance of 278.652: 69 advance due Walsh, Hall & Co. November 17th, 1871, equivalent at the average exchange at date $93\frac{333}{1000}$, equal to *rios* 26,075.85. Cr. Side November 14th 1871 to balance due Ito *rios* 289,665.28, by balance carried down 29,588.43 *rios*. November 7th 1878 by cash omitted in foregoing statement 7,000 *rios*: November 14th 1871 to balance due Ito *rios* 22.589.43. I say that that balance is false. The rate of exchange is wrong. It is not the rate of exchange of that day. The true rate was 88½ per cent. instead of $93\frac{3}{100}$ per cent., being a difference of nearly 13,000 dollars. This rate of exchange I take from the daily journal of Mr. M. Smith. Mr Smith got his rates from me and our Chinaman. The rates were those of

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

Yokohama at the time. The rates would be found at the *Shosha*. All the transactions were not made at the *Shosha*.

Court adjourned till 2 p.m.

Court re-assembled at 2 p.m.

R. W. Irwin:—(The accounts annexed to the petition put in witness's hands). I can't tell by merely looking at the account "H" if 93 $\frac{333}{1,000}$ would be a fair average rate of exchange from September 14th to November 12. The rates on the rice transactions in account "G, H and M" are different. There is a difference in one instance of from five to ten cents per picul. I believe that they are generally incorrect, that is some of the items I have gone over. I believe a good many are incorrect, that is according to the diary kept by Walsh, Hall & Co. The items of account in account "A" are not put in the form that I would put them in if I had made up the account. Every debit and credit item is taken from book 'F," except an item of 7,000 *rios* which appears on a separate slip. Account "A" and "F" would in book-keeping be more properly made up in one account. Every item in "A" appears in our accounts. No accountant could take our account and compare it with "A" without assistance, because account "A" is an incomplete one. An accountant would see at once that from Books "C" and "F" he could not make a comparison. "E 2" is an abbreviated account of "P". Certain entries appear in "E 2" in an abbreviated form I did not mean that one account was longer or shorter than the other. In "E 2" the two so-called false entries appear, but they do not appear in "P." "P" is an incomplete account. It is not signed. (Witness gave examples of items that did not appear in account "P".) I do not know who made up account "P." I don't know whose hand-writing it is in. I do not know when it was made up, or if it was ever sent. I know nothing about it, except what I have heard. I don't know when it was sent. I never heard when it was sent. I have made no particular enquiries about it. I do not know how it came to be in Ito's possession. I heard that Mr Walsh had shown an English account to Ito. I think it was in the summer of last year. On second the page of "P" is an error, namely that on that day $40,000 was received from Ito. On the 26th November we received from Ito $40 000 and from Nakamura Sobae an amount of $43,000. These two amounts were received to be placed to the credit of the joint account of Ito and Sobae; by an error the amount of $40,000 was put in the Cash Book to the credit of Ito. The error was rectified by me, by my orders, on the 17th November 1871, by an entry in the account current book on the following day. And the sum was transferred to the joint account of Ito and Sobae and appears in that account. Upon the joint account of "Ito and Sobae" Ito and Sobae made payments indiscriminately. In account "P" the $40,000 is both debited and credited (witness went into explanations). The $40,000 that was lent to Ito has never been repaid. Benzo told me he wanted to send it to Yedo. I had security at the time, the Mito promissory note. We had full general security. The promissory note was due to us; it was guaranteed by Ito. The note was collected from the Government. The gurantee had Ito's seal on it. The guarantee was given up to Ito, when the money was paid by the Government. I will see if we have a copy, I think one was made. When Ito's agent Benzo brought the $40,000 on the 16th November, he did not appropriate it by any document to any special account The next day he said that it was to be placed to the credit of the Ito and Sobae joint account. The $40,000 I think was in two cheques drawn by Walsh, Hall & Co. upon the C. M. Bank. They were the same cheques as I had advanced on account of the Ito and Sobae joint account. The 16th November was a Thursday. They were two cheques on the C. M. Bank for $20,000 each. I think they had been used. They bore the stamp of Benzo on the back. Cheques of Walsh, Hall & Co., and other mercantile houses passed current as money amongst the Japanese from hand to hand. I have known cheques of Walsh, Hall & Co, to pass current. I have received back cheques of Walsh, Hall & Co., that had passed from hand to hand, in payment of goods and other accounts. Sometimes cheques that had been given to Ito were returned. I kept them in the safe as cash. I can't say if they bore the stamp of Benzo. I do not know if Benzo always placed his seal on cheques as soon as he received them. I should think it would be unlikely that a Japanese would stamp a paper before using it, I never heard of any transaction between the witness Kahei and Benzo or Ito. On the 14th November. Koske returned me $30,000. It was part of an amount of $33,400. I can tell you to-morrow morning if it was by two cheques. I do not remember if a cheque for $10,000 was returned the next day. I have thoroughly been through the account "B and C" appended to the petition, and I do not understand them. They are incorrect. "B and C" do not properly represent the accounts between defendants and Ito and Sobae. There is a very serious error on the debit side of "C." There is one amount of $240 000 that was received by defendants from Ito and Sobae on the 14th November 1871 that does not appear in that account at all. In account "B" on the credit side there are defleiences (Items gome into by witness). The book you show me (marked 'Z") is somewhat incomplete. On the 8th November there was a cheque for $5,000 given and no receipt appears in this book. The receipt should have been given by Ito and Sobae who received the money. An amount of $125,000 on the 10th November, which we received does not appear except in my hand-writing. I think the $5,000 paid on the 8th was received back on the same day. In other respects the book is correct. I think there are some items in *rios*, money received by us, that do not appear.

Court adjourned till 10 o'clock to-day.

Tuesday, 19th October, 1875.

Court re-assembled at 10 a m.

Mr. Dickins continued his cross-examination of R. W. Irwin,

Witness: Returned cheques that had not been used were frequently put into circulation, whether they had been used or not. The fact of a cheque having been passed through a bank would not necessarily show that it had been used by Ito. If used there would probably be marks upon it showing that it had been used. I did not make marks upon returned cheques. [Defendant's exhibits "6, A, B, C."] Besides Benzo's seal on the back of these three cheques, there is no mark to show what they were used by Ito. The $40,000 paid on the 16th November, was paid to the credit of Sobae and Ito's joint account. I have no written proof that that sum was paid in to the joint account of Sobae and Ito. Nothing was written except the entry in our books. On the 14th November Koske paid me $30,000, but in what form I do not know. I think that sum was paid in numerous cheques. I know it was not in two of the three cheques marked "6 A. B. C." I do not remember the history of every cheque used in these transactions, but I followed those three cheques clearly. I found out through whose hands those three cheques passed on the 13th November. On the 15th or 16th November no money was paid by Ito's agents besides the $30,000 paid in by Koske on the 14th. An item of $43,000 was paid in on the 16th to the credit of the joint account of Ito and Sobae. It was paid in by Sobae. $40,000 was paid in to the credit of the same account. On the 14th a sum of $200,000 was paid in by Benzo, and $40,000 by Sobae, making $240,000 paid in to the credit of joint account of Ito and Sobae. The entries were made at the time by my book-keeper. I think on the 14th $175,000 was paid besides for the joint account of Sobae and Ito. I do not remember any other sums without referring to my books. In the account "A and B" attached to the answer there are some cross-entries of some amounts that do not appear. The account "A" is correct. Debit, $125,000 and 125,000. Cr $125,000 and $125,000. These were the cross-entries. The credit amounts were paid in our cheques. With these entries added, the account is absolutely correct. I have said that the sum of $30,000 paid by Koske was part of the sum of $33,4000. This item appears in sheet "H" of defendants' accounts]appended to the answer. I am sure of this. I should say, if you had a receipt for $30,000 and $33,400, paid by Koske, that the one for $30,000 was a temporary one, as I gave a receipt for $33,400 afterwards. I cannot suppose that the $33,400 receipt is dated prior to the receipt for $30,000. [Plaintiff's account "C" and "B" handed to witness, and some items gone into.] I know of no transaction of $60,000 on the 9th November. On the 5th month, 4th year of Meiji, or about that time, I had general talks with Benzo about Ito. I had several interviews. Except the Mito *Han* security, I think no security was received by Walsh, Hall & Co. from Ito. This security was a promissory note of the *Han*. It was made payable to Walsh, Hall & Co. It was given to Walsh, Hall & Co. as security for a loan of $15,000. Besides this security, there was Ito's guarantee on a separate piece of paper; Ito guaranteed the note. The guarantee was a general one, and I think the note was dated May 9th, 1870. I do not remember the exact date of the promissory note of the Mito *han*. I think there were two notes—one for 50,000 *rios* and one for 15,000 *rios* making 45,000 *rios* altogether. I think the date of the 30,000 promissory note was the 2nd month 3 year Meiji. I do not remember the date of the 15,000 *rio* promissory note. In August 1871 the exchange business was settled upon. It was not settled that it should go on for three or four months. Nothing was said about time. 20,000 *rios* were deposited with Walsh, Hall & Co., at that time. None of the securities

Digitized by Google UNIVERSITY OF CALIFORNIA

mentioned in the petition were deposited then. I never heard of a memo. handed in to Iske in which the terms were mentioned by which Ito was to do the business. I have never asked Iske about it; I never thought it of any importance. I considered it immaterial at that time whether there was a written agreement or not. I would like to have one now, that is since this trial I never thought about asking Iske for the document handed in by Ito. I considered it a frandulent one. It was never handed to me. I do not think that there could be a copy of a document that did not exist. I heard part of it read in Court. What it said about defendants having a two-third share, and Ito a one-third share was correct. The exchange transaction business could be given up by either party any day. Iske was present when the exchange agreement was agreed upon, possibly Shoske might have been there. Zenjiro, Ito, and Benzo I remember being present on the other side. I do not think Rikichi was present. Nothing was said about the business being done in the name of Benzo. I have heard that the transactions at the *Shosha* were made in Benzo's name; that is some transactions. I heard this from both Iske and Shoske. They did not tell me at the time. I was told the other day. I understood generally that they were done in Ito's name. I never enquired fully about the matter. I never recollect enquiring at all. Zenjiro was not to act for both of us. I was to act for defendants. I superintended the payments. I was to have entire charge on our part of the transactions. I bought and sold through several clerks. Nobody had charge of the actual buying and selling in these transaction on our behalf. Benzo and Zenjiro came almost daily and reported the rate of transactions to me. They reported all the cash transactions till the 6th or 7th November. The time transactions were reported till 5th or 12th October. At the time they ceased to report the transactions the agreement ceased.

Court adjourned till 2 p.m.

Court re-assembled at 2 p.m.

Mr. Dickins continued his cross-examination of R. W. Irwin.

Witness; It was not later than the 12th Oct., 1871, when the partnership in the exchange transaction terminated. It was inclusive of the 12th October. The $110,000 paid to Ito on Oct., 13th was not to be used on the partnership account between defendants and Ito. It was a loan to Ito—an advance. All the sums paid to Ito after the 13th October were loans. The sums paid to Ito before the 13th October were on the partnership account; those after the 13th October were loans. I have never read what is on the back of book "F." I have never asked my *bantos* what was on it. The writing on the first and second pages was read to me at the time, but I do not remember what it was. There is no difference in the entries before and after the 13th October, 1871, showing that some were loans, some on joint account. There is not a word from beginning to end of the book, showing that the partnership ended on or about the 12th October. I have no written paper showing when the partnership came to an end. I have not read the answer carefully yet; I trusted Mr. Ness implicitly. (The answer put into witness' hands.) In paragraph 8 of the answer, there is a mistake in a date, and with that exception everything stated in it is true—perfectly true. At my first meeting with Benzo in July, 1871, I asked him to bring about further business relations with Ito. At the meeting in August, I asked Benzo to ask Ito to enter into exchange transactions. I told him I thought it would be profitable. I think Iske was present at the meeting in July. I do not remember if Benzo handed any documents in Japanese to Iske at that time. He could not have handed any to Iske in my presence, except those documents concerning the Mito *Han* loan. I talked to Benzo frequently about that time, about Ito. Ito's guarantee was amongst the documents handed to Iske. Iske told me that Benzo handed no other securities at that time to him, besides the Mito *Han* loan. I have general confidence in Iske. I have found him honest up to the present time. Except the 20,000 rios I had no other security during the exchange transactions. I had perfect confidence in Ito, Benzo, and Zenjiro, up to the time that Ito told me he (Zenjiro) was a thief. I told Benzo on the 5th October, when he came, that the exchange traesactions would at once cease,—that was in a few days. I told him it was on account of the losses that had been made. The losses were nearly $10,000. I proposed to Benzo on the 5th October the terms of cessation; he said he would name them to Ito. Benzo carried them in his head. Benzo was of opinion that the transactions would be successful if Ito controlled them. Benzo agreed to recommend the agreement to Ito. I never personally proposed these terms to Ito, nor did I submit them in a document to Ito. I have no document from Ito confirming them. It was a rather important agreement. Book "D" [illegible] agreement. [Book "D" put into witness' hands and the so-called false entries pointed out.] There is not a word in those two entries that show the agreement was entered into, but I consider the fact of the entries being there a proof. The absence of all interest in this book indirectly shows that the partnership ended. There is no interest charged in book "F." There is nothing in books "F" and "D" to show directly that the partnership ended on the 5th October. I have no other writing than book "D" to show that the partnership ended. Ito's letter does not refer directly to the ending of the partnership, but an expression does refer to it. The word *koshaku* (old debt) refers to it expressly. It is either *kiushaku* or *koshaku* in the lettle, but I have heard that it is *koshaku* On the 25th October I had an interview with Benzo and Zenjiro; Shoski was present. I have confidence in Shoski, but I know very little about him since the end of 1873. I think the book "Z" shows that there was no partnership interest by defendants in the Sobae-Ito transaction. The entries in book "D" show it, too. I have nothing else to show it. If defendants had had an interest in it, it might have been shown by some other entries. [The question of an entry and a seal on it gone into.] Benzo was not the accountant of Ito. I never saw him use Ito's seal. As far as I know, I do not know that he was entrusted with Ito's seal. I knew Benzo slightly in the 3rd year of Meiji. Benzo went to America in 1870. He went in conjunction with some merchants and brokers. I did not hear that he was charged with a mission by the Government. I heard that he had a share in the *Shosha*. I never saw him wearing two swords that I can remember. Anybody who paid a few *rios* could wear two swords. I never saw any letter from Ito, giving Benzo authority to transact business for him. I have seen a good many letters from Ito to Benzo, but I do not know at this moment if I have any letter of Ito's, giving Benzo authority. In the exchange transactions, no moneys were wrongfully detained by plaintiff. $874,000 was about the total sum advanced to Ito and Sobae in their joint transaction; that includes those cross-entries already spoken of. I have been through account "D" of the plaintiff's, and endeavoured to understand it. I do not understand it at all; the account is all wrong; I do not understand an item in it. The first item reads as an exchange operation. I understand the account as an account, but I have no knowledge of the transactions. I found no error in the figures in going over it. Assuming the rate of exchange to be correct, it is a correct account of the $501,000 transaction. With regard to account "E," my answer is the same. I have no knowledge of the items in it. The balance of the account is wrong. Part of the securities mentioned in the petition were deposited in the latter part of October, 1872. I took a list of the securities at the time they were deposited. I can't tell you now about them, but the amount was 101,425 *rios*. They were either given to Mr. Walsh or me; I think they were given to me. They were given to me by Ito. [The witness referred to a paper.] This is a true list of the securities, [Handed into Court and entered on the minutes.] Those securities were deposited as security for a loan of $25,000. This loan was made to Ito in the latter part of October, 1872, or November, 1872.

The Court adjourned till 10 o'clock this morning.

Wednesday, October 20th, 1875.

Court re-assembled at 10 a.m.

The witness Nakamura was placed in the stand and examined by Mr. Dickins.

Witness: My book contains transactions I had with Ito, It contains a correct account as to the transactions in which I was concerned. I have no other books or documents in my possession relating to this transaction. I have no objection to leave my book in the hands of the Court. The day before yesterday I met Ito and compared accounts with him, and I found nothing wrong. [The book left in the hands of the Court.]

Cross-examination of R. W. Irwin continued: I can't tell you how many cheques were used by Koske in paying the sum of $30,000. There were many money transactions that day. I do not remember Koske paying in more than $30,000 on that day. Four cheques, making $30,000, were paid in on that day. There were also six cheques, making $30,000, paid in. The guarantee Ito gave was a general one. It was specially to guarantee the Mito *Han* note. The 20,000 *rios* deposit was not to guarantee anything else. The Mito *Han* promissory note was made in 1871. I think it was a one note. The amount of it was 62,000 *rios*. The note was in exchange for those made in 1870. We advanced 15,000 *rios* on the promissory notes; they were not deposited as security for this sum. The first note given in 1870 was for 40,000 *rios*; the second note 26,000 *rios*. The partnership was terminate on the 8th October, 1871

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

During all the interviews with Ito or his agents I had some one besides myself present. I do not remember if I had more witnesses in all the interviews than Ito. There was no special agreement on the 12th October about the termination of the partnership. If there had been no agreement to take over the losses made up to that time, we should be responsible. I think there were losses on the cash transactions. I know there were on the time ones. $7,000 was a fair charge to make for collecting $67,000. I collected altogether from the Mito *Han* $67,000 or $69 000. I collected $68,775 from the Mito *Han*. The last collection was made from the *Gaimusho* in December, 1871. On the 10th day, 11th month, I received a promissory note from Inouye, Assistant Finance Minister, to the following effect: "One year after date I promise to pay Walsh, Hall & Co. $590,000. Interest, at the rate of 6 per cent. per annum, to be paid every six months." I made this loan to the *Gaimusho*. It is private business of Walsh, Hall & Co. I loaned the money at the request of Inouye. In 1871 I wrote a letter to the *Okurasho*, stating that the amount of the Mito loan was 53,740 *rios*. We collected the loan. During the exchange transactions, Ito only had money in his hands from morning till evening—from six to seven hours. About the 9th month, 1871, I did not request Benzo to tell Ito to come and talk about rice. I talked with Benzo about rice. He asked my policy as regards rice, and I told him. Ito and I did not enter into a verbal agreement about a partnership in rice transactions. Zenjiro was present at the interview on the 25th October. During the rice transactions I was not constantly informed about them. Our Chinaman told me the market rates. Persons connected with Ito may from time to time have told me the market rates. They never spoke to me about their rice transactions, except that they hoped they would result profitably. I never asked one of my *bantos* to explain the meaning of the Shosha receipts. I knew they were contracts for the purchase of rice. I was never told that if the price of rice fell these receipts would be valueless. I should be surprised to find any admission of liability on any of the rice receipts. I should not be surprised to find my writing on some of them. The entries in book "D" about rice are loans made on the security of rice receipts. I don't know if the greater part of the money used in the rice transactions came from Walsh, Hall & Co. I know what money Ito got from Walsh, Hall & Co. Possibly not a ninth of the money used came from Walsh, Hall & Co. I heard the evidence of Chojiro in this cause. I do not know anything about it. I do not know if Chojiro's evidence is true or false, but I believe it to be false. I never asked Ito to postpone the settlement of accounts. [Items of accounts gone into.]

Court adjourned till 2 p.m.

Court re-assembled at 2 p.m.

Mr. Dickins continued his cross-examination of R. W. Irwin.

Witness: I know a Japanese rice merchant called Itohei. I do not know of a sum of $75,000 having been paid to defendants as proceeds of a sale to Itohei. Possibly in the nibao trasactions a sum of $75,000 was paid to Walsh, Hall & Co. by Ito. I am certain no such sum was paid to Walsh, Hall & Co. during the rice transactions. $75,000 was brought to me in a sealed envelope in Walsh, Hall & Co.'s cheques. It was brought to me by Iske. It was not a present. In Jan., 1872, Ito and Benzo came to me, and in the presence of Iske asked for an advance of $75,000. Ito told me he had made large purchases of rice at the *Shosha*. He also told me that if he had this money the other side would probably not be able to deliver the rice, and he would make a profit. I declined to make the advance; so did Mr. Walsh. Finally Ito said that if he had the $75,000 in Walsh, Hall & Co.'s cheques in a sealed envelope, with Walsh, Hall & Co.'s seal, he would be able to carry out his operation and make a profit. Accordingly it was agreed to write these cheques and put them in a sealed envelope. I handed it to Iske. The cheques were returned to me, with the seal on the envelope unbroken. The cheques were used. I think there was an opponent of Ito in the transaction. Walsh, Hall & Co. were to have a commission on the $75,009 transaction. The moneys given to Ito were "advances." I did not charge interest or commission. We were not interested in Ito's rice transactions. Once in October, 1873 there was a rice transaction in which we were interested. We advanced Ito $10,000. I don't remember a rice transactions in Yedo in 1870, by which Walsh, Hall & Co. lost about $7,000. [Some rice *tegata* shown to witness.] The foreign figures on the *tegatas* are not in my handwriting. They look like attempts to imitate my figures—like forgeries. I don't think any of them were written by me. I don't know what the figures represent, or that they are the amounts deposited at the *Shosha*. Defendant's Exhibit "7" is in my handwriting. Benzo agreed to the balances in the so-called false entries before I read to him the synopsis, which he copied. The facts and figures were gone over with him carefully before. This was between the 17th and 22nd November. I think it was before the 22nd. I do not think it could have been on the 22nd November. Benzo wrote Walsh, Hall & Co.'s "Exhibit 5." He took it away with him, and I do not know if he wrote the date then, or subsequently. I think the day on which Benzo wrote the synopsis of the so-called false entries, he was at my office from 5 p.m. to 9.30 p.m. I think book "D" was brought to me on the 22nd November. On the 17th November I first spoke to Benzo about settling accounts. I do not know how the synopsis of account written by Benzo came into Walsh, Hall & Co.'s possession. Exhibit "P" I consider of no value; it is not not headed or signed. I should reject it as an accountant. Exhibit "5" is neither headed nor signed, but is of great value, as Benzo has acknowledged the handwriting to be his. On the 10th day of the 10th month I did not receive 200,000 and odd rios from Ito. On the same day I did not pay to Ito 239,000 and odd dollars. These two entries in book "D" are like the others in the book. These entries upon their face show that no interest is to be charged. The details of these items were never given in a written form to Ito or his agents. Ito has agreed to that balance in book "D." I knew very little about Saito and Rikichi. I always spoke to Benzo, who was Ito's agent. I never allowed the book "D" to be given to Benzo after the so-called false entries were made in it. Mr. J. G. Walsh let Benzo have it in 1874. About the end of last year I asked Ito for the book "D."

The Court adjourned till 10 o'clock this morning.

Thursday, 21st October, 1875.

Court re-assembled at 10 a.m.

Mr. Dickins continued his cross-examination of R. W. Irwin.

Witness: I have referred to the books of 1869 and 1870; there were large importations of Saigon rice. There was a verbal agreement that we might pledge the $104,425 worth of Ito's securities, as security for a loan of $25,000. I told the manager of the Deutsche Bank that the loan was for Ito. The Bank looked for repayment of the loan to Walsh, Hall & Co. Iske and Walsh were present when the securities were authorised to be pledged to a bank; Ito and Benzo were present on the other side. Defendants had other transactions with the Deutsche Bank at this time. I think we were indebted to the bank on other securities. I think the usual form of hypothecation was not used in pledging these securities. We gave a promissory note to the bank of our own. The correspondence of the bank with Walsh, Hall & Co. did not refer to Ito till a few days ago. [Correspondence of Walsh, Hall & Co. to Deutsche Bank, and from Deutsche Bank to Walsh, Hall & Co., on the subject of the $25 000 loan, read.] The loan was made to Ito through Walsh, Hall & Co. Ito was responsible to the Bank, besides us. His promissory note to us, we endorsed to the bank. Our promissory note was a sort of guarantee. When the loan of $25,000 was re-paid by Ito, we did not return his securities. It was re-paid in November, 1873. I never gave back Ito's securites to him. The securities in the petition other than the Government Bonds were deposited in October, 1873. I had my knowledge of the deposits from Mr. Walsh, and the records of the house. I have no proof besides what Mr. Walsh told me. The securities which were released in November, 1873, by the Deutsche Bank, were afterwards exchanged for 50,000 *rios* worth of New Government Bonds. Ito told me in December, 1874, that he would bring a lawsuit; that was when I told him I would make him produce the book "D" in Court. I had not a copy of book "D" then in my possession. Ito, when he asked me to assist him in the lawsuit, did not ask me to swear falsely. Ito said he would be a devil. I do not recollect the phrase that he used. The note given by the Hanabusa *Han* to Walsh, Hall & Co. was for 24,000 *rios*. The date of that note was January, 1872. About the 2nd month 3rd year Meiji, Mr. John Walsh was in Europe, and I was in Nagasaki. The records of the house do not show a deposit of 40,000 *rios* for Ito's account, either by Ito or Benzo at that time. In the fall of 1871, the promissory notes of the Mito *Han*, aggregating about 62,000 *rios* were changed. The reason why, in my receipt to the Finance Department, the Mito *Han* note was stated at 52,000 and odd *rios*, was because I had collected 10,000 *rios* from Mito *Han* officers. Benzo's and Iske's names, I think, appear on the first Mito *Han* note. Iske did not know anything about the substitution of the notes. The original advance was 15,000 rios; it was made on May 9th, 1870. [Items of accounts gone into.] The interest we paid the Bank for the moneys borrowed for Ito, Ito was to pay. When the $431,000 advanced in Nov., 1871, to Ito and

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

Sobae, jointly was repaid, I did not return their joint receipt. On the face of that receipt is a memo. in my handwriting that they returned $290,000. On the 1st of the 10th month (13th November) I do not remember if Rimbei and Sobae brought me $90,000. I think they brought a larger sum on that day. About the 10th November I received a large sum of money. I cannot remember if it was $100,000. I think the two seals you show me are Iske's. Iske was never authorised to sign for Walsh, Hall & Co. I think I never left the compound at that time. If Iske has signed for anything, he is responsible himself, and not Walsh, Hall & Co. In sheets "I" and "H" of the accounts appended to the answer, many of the items could only be explained by reference to our books and papers. On the 11th December I did not receive $10,000 from Ito. It was received from the Mito *Han* for Ito's account. It was part of the principal of the note. In paying Ito the proceeds of the Mito *Han* note collection, we retained the $15,000 advance and interest. The accounts "A" and "B" annexed to the answer I do not think were sent to Ito before the commencement of this action. Account "C" (defendants') was sent to Ito before the action commenced. It was included in the synopsis made by Benzo in Nov., 1871. In comparing these accounts now, although "C" is included in Benzo's synopsis, the latter contains a few other items. No written explanation was sent to Ito about the items in account "C." I believe that the transactions managed by defendants compradore, Sin Coy, at the *Shosha*, were done in Benzo's name. [Items of accounts gone into.] In Saito's books I do not know if Walsh, Hall & Co. are constantly treated as partners in the rice transactions. Ito has no books of accounts. I prefer Dr. Hepburn's translation of Ito's letter to Walsh, Hall & Co.'s. Ito was to pay advances on the *niboo* advances. Ito never agreed that compound interest should be charged. I do not think that compound interest is lawful, unless it was specially agreed to.

Mr. Dickins announced that he had finished his cross-examination of Mr. R. W. Irwin.

Court adjourned, on the application of Mr. Ness, till 10 o'clock to-day.

Friday, 22nd October, 1875.

Court re-assembled at 10 a.m.

Mr. Ness commenced his re examination of R. W. Irwin.

Witness: In accounts I and H, annexed to the answer, is an extract from the ledger. The ledger contains a full record of the transactions. Book "F" and the receipts show Ito's only. I always informed them of the transactions we conducted through the banks. By the aid of the ledger, I can show the whole transactions and analyse them. I offer to put in a complete written analysis of the ledger, showing the operations of Ito and Walsh, Hall & Co I have prepared it from the book and memoranda made at the time.

Mr. Dickins objected to their being put in as evidence.

Mr. Ness only offered to put them in to save time.

His Honour said they could not be admitted.

Witness: The ledger and the accounts annexed to the answer agree with Benzo's written paper, taken by me to him. In exhibit "P" the so-called false entries in book "D" practically appear. I had perfect confidence in Ito and Benzo. When they came and informed me daily of any of their transactions, I would ascertain through my servants the market rates, and there was no discrepancy. I had no other means of checking Ito than I had with my own servants. I have fully traced cheques "6 A, B, C," from the time they left my possession on Sunday, November 12th, until they came into possession of the bank on the 13th. I never saw these three cheques for $40,000 from the moment I handed them to Benzo till I received them from the bank. The two cheques marked "6 A" and "C" were in possession of the Netherlands Trading Society on the 13th November, 1871. They were not handed by me to the Netherlands Trading Society. This cheque, "6 C," was received by them on the 13th November, from Foo Kee, a man with whom neither I nor Walsh, Hall & Co. ever had any transaction, and whom I do not know personally. I ascertained this from the books of the Netherlands Trading Society and the Chartered Mercantile Bank. Cheque "B" was received by the Oriental Bank Corporation on the 13th November, 1871, from Foo Kee. The two cheques for $20,000 each which were paid to me on the 16th, amongst others, I gave previously to Ito and Sobae jointly. They were included in the $481,000 advance. I have this knowledge from my memoranda. My books show that these identical cheques of $20,000 were returned on the 16th November. My books show they were part of the advance of $481,000. The credit slip of the Chartered Mercantile Bank also shows it. These two cheques are numbered in red ink, 484, 486. [The Chartered Mercantile Bank slip put in and marked defendants' exhibit "9."] I produce also my cheque book foil, that shows that no other cheques were drawn on the 13th November, 1871, excepting those making the $481,000 advance, all of which were issued for the joint account of Ito and Sobae, with the exception of one cheque (over and above those making the $481,000 advance) of $4,500, in favour of the Chartered Mercantile Bank, in payment of a Kobe draft. Twenty-two cheques composed the advance of $481,000. All these cheques bear Benzo's seal. [Foil book admitted, and marked defendant's exhibit "10." Two cheques also handed in, and marked defendants' exhibit "11 A and B."] [Bank correspondence put in witness' hand.] This forms the Bank correspondence between the Deutsche Bank and defendants, concerning the loan of defendants in 1872 to Ito of $25,000. [Bank correspondence put in and marked defendants' exhibit 12--1, 2, 3, 4, 5.] The market value of the securities deposited with the Deutsche Bank was about 29,000 rios. They were *Han* certificates for 104,425 rios. These were afterwards exchanged for 500 new government bonds. When the *Han* certificates were exchanged for the new government bonds, we considered one security as valuable as the other. Ito said to me, at the time of the conversation at No. 4 in December last, "Walsh made me a loan of 15,000 rios against government bonds. Those bonds are worth about 30,000 rios. Walsh wont give up these bonds unless I pay the old indebtedness, with interest. I have sent Walsh, Hall & Co. my account, showing a large claim due to me by Walsh, and I intend to bring a law-suit unless I can get satisfaction." I answered him and said: "I don't think it would be difficult to arrange about your getting the bonds upon payment of the advance against them. I don't think Walsh can retain the bonds for the old debt if you repay this special advance, and as far as I am concerned I am perfectly willing to forgive you the interest on the old debt. I will tell Walsh this, and you are at liberty to tell him also also." I said, "In regard to a law suit, you will surely lose it; my evidence alone will destroy you completely and I remember everything about the old transaction." And I further said to him,—"You know my evidence will defeat you," whereupon he turned and said:—"If you will assist me at the U. S. Consulate, I will agree to give up any share you as a partner are liable for in what I recover from Walsh, Hall & Co., and I will further give up to you 30 per cent, of any amount I may recover. If you assist me I will be your friend; if you oppose me, I will be a devil, or act like a fiend." I said, indignantly, "I am an honest man;" and I opened the door that he might go out, and he went out. The receipt for the $481,000 was not returned because only a portion of it was repaid. $390,000 were paid, and that was marked on the face of it. [Receipt produced, put in, and marked defendants' exhibit "13."] The pencil writings on the face of the receipt were put there on the dates they bear, except the words, "10th month, 1st Jap." On the back of it, in pencil, is some writing of Mr. Walsh's.

Witness: Of the three cheques marked "6 A, B, C," two passed through the Netherlands Trading Society's hands, and one through the O. B. C. They passed through Foo Kee's, and might have passed through other hands.

To his Honour: Foo Kee is a Chinaman who lives at No. 14. He kept an exchange shop at that time.

To Mr Dickins: The conversation I held with Ito at No. 14, in December, was carried on through an interpreter named Namekawa.

This concluded the evidence of Mr Irwin.

The Court adjourned till 2 p.m.

Court re-assembled at 2 p.m.

Mr Ness called

Futomi Noburi, cautioned:—I am a servant of defendants. I am an interpreter of theirs. I began to be their interpreter in 1873. I know Ito. I first saw him in the summer of 1873. Ito made a complimentary call, and I saw him then. Ito talked simply of the topics of the day. Ito stated that he had had many previous transactions with Walsh, Hall and Co.; that he owed defendants a balance and desired time to pay it it. Ito said, At the time of such settlement the defendants may serve me by waiving interest. Ito in acknowledging a balance due to the defendants referred to the niboo transactions, and admitted his liability for them. I again saw Ito in the autumn of 1873. He came to congratulate Mr Walsh on his return from his country. There was a conversation about the niboo transactions. Ito said to Mr Walsh, During your absence I entered into niboo speculations with your firm, and considerable losses were experienced. Ito admitted he had to pay the losses, and as it was

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

inconvenient to him to pay just then requested time to pay in. He further told Mr Walsh that Irwin had been of great help to him in collecting the Mito loan, and by this assistance had enabled him to get cash. Otherwise he (Ito) would have had to receive bonds payable in 50 years. On several occasions Ito came to defendants. Ito came on one occasion to borrow $10,000. Ito, Iske, I. and Mr J. Walsh were present. Ito requested a loan of $10,000. Mr Walsh replied, I can't lend money to you without security, and even then I must borrow it from elsewhere. Ito replied, You still hold certain securities of mine, and I have brought others. The securities I bring to day are *Han* certificte's of indebtedness to the amount of about 50,000 *rios*. Ito said, I want the money (the $10,000) for rice speculations. The Hirosima *Han* guarantee this transaction, and I will add its guarantee to the securities named. The former securities being in defendant's hands and these being deposited defendants made the loan to Ito. By Mr. J. Walsh's instructions I told Ito that as he (Walsh) could not let him (Ito) have money of his (Walsh's) own he (Mr Walsh) would have to borrow the money and Ito must see the necessity of of depositing these securities with a bank. Ito said "Go ahead, all right." Ito said that Irwin having asked the value of those already in defendants' hands he (Irwin) must know the value of the securities he had brought. Defendants were to receive a certain proportion of the profits of this rice transaction, besides the interest. They were to receive the profit as their reward or commission on the transaction. With regard to the old losses on the *niboo* transactions, Ito was told that defendants desired to have the losses paid. Ito replied it was inconvenient at that time to pay these losses, and eventually a profitable transaction might be made (guaranteeing by his language to secure defendants from all losses). He asked them to wait. At another time Ito borrowed $10,000 more in the beginning of the 10th month 1873. This sum was borrowed in connection with the former loan. It was borrowed for or to be used for a Japanese vessel the *Hoan Maru*. In making up the rice accounts, on which the former $10,000 was borrowed, this ship was handed over to defendants instead of cash, and the value of this ship being greater than the first amount, it was to be taken over as security for a value of something like 18,000 *rios*. At this time the 50,000 *rios* (certificates of *Han* indebtedness) were in a Bank. Nothing was said by Ito about them. Ito came to defendants' office on the 1st month next year. Ito, Shoske and I went into Mr J. Walsh's presence. Ito requested for his own use a sum of $5,000, and when he was asked for security, he said the securities that he had deposited, previously ought to be sufficient. Mr Walsh then calculated the the value of the securities, that had been deposited up to that time, and made the loon. Nothing was said about any remuneration to defendants for making the advance. As the money was to be obtained from a Bank it was agreed that the interest charged should be the same as that charged by the Bank. This arrangement about interest was made on three different occasions. Mr. J. Walsh again expressed his desire to Ito to have the balance on the niboo transactions paid. Ito replied, as before. I saw Ito again on business in the 6th month, 1874. During the interval I frequently met him. Ito came in the 6th month for the purpose, he said, of borrowing a million dollars to make a government bond speculation with. Ito, Iske, I, and Mr. Walsh were present. Ito said that for a long time he had done business with defendants and that profits and losses had been made which he (Ito) had had to take over, and particularly during recent exchange transactions. Meanwhile he had looked about for some kind of business to make them good, and at last he had found it, and that if he made a profit in this transaction he would pay the past losses, Therefore, he said, please lend me the money. Mr T. Walsh said it was impossible for him to lend money for the purpose of such a speculation (buying government bonds). I have written letters to Ito, with reference to the exchange transactions and seldom about anything else. At the end of 2nd month last year, my first letter was sent to Benzo and was written by order of Mr J. Walsh, to Ito. I gave it to Shoski to take. The second time I wrote to Ito was between the 5th and 10th July, 1874 I posted this letter. I received a reply to this letter on the 13th July, 1874, (handed in and marked Defendants' exhibit "14") I know that up to the Autumn of last year, Ito never denied his liability to defendants. Ito never did so in my hearing. I went with Ito to No. 14, on the 18th December, 1874 Ito, Zenjiro, J. Milne, Namekawa, and Irwin were present. Ito asked Irwin to give him the exchange account. Mr Irwin said, There is a small book that contains a settlement of account, give me that, and I will give you what you want. The reason I went with Ito was, because Ito told me he had that book on his person, and when Irwin asked for it, Ito said he could not show him the book. After some talk Ito said, I have not got it about me just now, but I will bring it to you in a few days, or you may come to my house and get it. At the time Ito refused to give it, Mr Irwin said, You ask me for accounts, and how can I give them without the book? I will make yon show it in Court. Nothing was said about Court previously to that. Nothing was then said about the entries in that book being incorrect. I first saw book "D" in August last year. Ito told me there was a book of this sort in defendant's possession, and said he wanted to see it. I took it out of Walsh, Hall & Co.'s godown and showed it to Mr Walsh. I said to Mr Walsh, Ito has requested the loan of this book, may I let him have it? Mr Walsh said "yes," so I gave it to Ito. I gave nothing else to Ito. I have a copy of book "D." I made it in defendants' office on the 23rd December, last year. Ito brought book "D" to defendants' office, and I went with him to Mr Walsh, and Ito said, This is the book that Irwin requested to see; I have taken this book to Mr Irwin's place and shown it to him. By Mr Walsh's order I made a copy at once. This is it. (Put in and marked defendant's exhibit "15"). I am sure it is a correct copy of the book I copied from. The books differ now. There was no full seal on the $20,000 entry in book "D" when I made the copy, now there is. The long tag in book "D" was not there when I made the copy (exhibit 15). The short tag in book "D" was there at the time, also the red writing. (The question of the value of a seal and half seal gone into).

The Court here adjourned till Tuesday morning, at 10 o'clock.

Shipping Intelligence.

ARRIVALS.

Oct. 17, *Takasago Maru*, Japanese steamer, Eckstrand, 1,440, from Shanghai and ports, Oct. 10, Mails and General, to M. B. Co.

Oct. 17, *Curlew*, British gun-boat, Captain Church, 676, from Kobe, Oct. 17.

Woollens and mixtures maintain their former quietness. Small transactions only in the better class of *Plain Black Orleans, China figures* and *Chimagorro* are reported, showing invariably a loss on cost, or such trifling profit as to afford no compensation for the risk incurred and work performed. *Italian Cloths*, entering last year so largely into consumption, are almost entirely disregarded, the small wants having been previously satisfied by contracts. *Broad Cloth*, of which stocks are very heavy, attracts no attention whatever, and *Blankets* not are in a much better position.

Plain Orleans	40—42 yds.	32 in....	6.25 to 7.80	Figured Mousseline de Laine...	30 yds.	30 in...	0.25 to 0.28

„ No. 3 Ke-pak	„ ...	6.20 to 6 60		Japan Rice	„ ...	3.25 to 3.30
„ No. 4 Kook-fah...	„ ...	5.50 to 5 90		Kerosine Oil...	...per case ...	2.60 to 2.65

EXPORTS.

Silk.—Since the date of our last publication arrivals are 1,211 bales, and deliveries 462 piculs.

Fair Hanks continue in demand as last quoted, and Oshiu are in favour. We have to report an advance in Hamatski.

Hanks.—				Oshiu.—			
„ Best	No. 1 to 2	... $465 to 480		„ Best			$530 to 550
„ Good	No. 2	... $450 to 460		Hamatski.—	25 to 50		... $440 to 480
„ Medium	No. 2½	... $420 to 440					
„ Common to inferior	... ...	... $380 to 410					

Silk worms' Eggs.—Total arrivals to date are 710,000 cards. No transactions of importance to report. Sales at $1.30 to $1.65 are reported by Japanese.

Tea.—Native holders having at length given way to some extent, a brisker business has been done during the closing week, settlements amounting to 3,900 piculs. The decline has been most marked on "Medium" and lower grades which shew a fall of about $4 per picul; better class, *i.e.* "Good Medium" and "Fine" following at $2 to $3, while "Finest" and "Choice" are firmly held and only obtainable at full rates.

Supplies have been rather withheld, but no doubt a full stock could be poured into Yokohama did the demand warrant it.

The *Ambassador* for New York has obtained a full cargo, and will have speedy despatch, the *Cremona* for same port is also reported fully engaged, rates of freight £2 to £1.15. per 40 cubic feet. Total export to date from this and Kobe amounts to about sixteen and a-half millions pounds.

Common	...$16.00 to 20 00			Fine	...$33.00 to 36.00	
Good Common	... 21.00 to 23 00			Finest	...$37.00 to 44.00	
Medium	... 24 00 to 27.00			Choice	Nominal.	
Good Medium	29.00 to 31.00					

EXCHANGE AND BULLION.

Exchange.—Rates have fluctuated during the week between 4/1¼ to 4/1⅝ for 6 months sight Bank Bills, with a moderate demand for remittance; the supply of Private Paper is very limited and rates close easy.

Rates close as follows:—

Sterling—Bank 6 months' sight.....	4s. 1¼d.	On Hongkong—Bank sight.....	par.
„ Bank Bills on demand..... ...	4s. 0⅞d.	„ Private 10 days' sight.....	¼ per cent disct.

MISCELLANEOUS.

PROTECTED BY ROYAL LETTERS PATENT,

Dated October 11th, 1869.

Under Distinguished Patronage

DR. BRIGHT'S PHOSPHODYNE.

(OZONIC OXYGEN)

A CHEMICAL PREPARATION OF PHOSPHORUS, WITH THE VEGETABLE ALKALOIDS QUINIA, CYPRIPEDEN, XANTHOXYLIN, &c.

This Phosphatic combination is pronounced by the most eminent members of the Medical Profession to be unequalled for its power in replenishing the vitality of the body, by its supplying all the essential constituents of the blood and nerve substance, and for developing all the powers and functions of the system to the highest degree.

It is agreeable to the palate, and innocent in its action, while retaining all its extraordinary properties; and as a specific, surpassing all the known therapeutic agents of the present day for the speedy and permanent cure of—

Nervous Prostration	Lassitude
Liver Complaints	Shortness of Breath
Palpitation of the Heart	Trembling of the hands and limbs
Dizziness	Impaired Nutrition
Noises in the Head and Ears	Mental and Physical Depression
Loss of Energy and Appetite	Consumption (in its first stages only)
Hypochondria	Timidity
Female Complaints	Eruptions of the Skin
General Debility	Impaired Sight and Memory
Indigestion	Nervous Fancies
Flatulence	Impoverished Blood
Incapacity for Study or Business	Nervous Debility in all its Stages
Sick Headache	Premature Decline

and all morbid conditions of the system arising from whatever cause. The action of the Phosphodyne is twofold—on the one hand increasing the principle which constitutes nervous energy, and on the other the most powerful blood and flesh generating agent known; therefore, a marvellous medicine for renovating impaired and broken-down constitutions. It quickly improves the functions of assimilation to such a degree, that where for years an emaciated, anxious, cadaverous, and semi-vital condition has existed, the flesh will rapidly increase in quantity and firmness, and the whole system return to a state of robust health. The Phosphodyne acts electrically upon the organisation; for instance, it assists nature to generate that human electricity which renews and rebuilds the osseous, muscular, nervous, membranous, and organic systems. It operates on the system without exciting care or thought upon the individual as to the process. It moves the lungs, liver, heart, kidneys, stomach, and intestines, with a harmony, vigour, yet mildness unparalleled in medicine.

The Phosphodyne gives back to the human structure, in a suitable form, the phosphoric or animating element of life, which has been wasted, and exerts an important influence directly on the spinal marrow and nervous system, of a nutritive, tonic, and invigorating character, maintaining that buoyant energy of the brain and muscular system which renders the mind cheerful, brilliant, and energetic, entirely overcoming that dull, inactive, and sluggish disposition which many persons experience in all their actions.

The beneficial effects of the Phosphodyne are frequently shown from the first day of its administration, by a remarkable increase of nervous power, with a feeling of vigour and comfort, to which the patient has long been unaccustomed. Digestion is improved; the appetite increases wonderfully; the bowels become regular; the eyes brighter; the skin clear and healthy; and the hair acquires strength, showing the importance of the action of the Phosphodyne on the organs of nutrition.

Finally, the Phosphodyne maintains a certain degree of activity in the previously debilitated nervous system; its use enables all debilitated organs to return to their sound state and perform their natural functions. Persons suffering from Nervous Debility, or any of the hundred symptoms which this distressing disease assumes, may rest assured of an effectual and even speedy cure by the judicious use of this most invaluable remedy.

DR. BRIGHT'S PHOSPHODYNE

IS SOLD ONLY

In CASES at 10s. 6d. by all Chemists and Patent Medicine Vendors throughout the Globe.

Full Directions for Use, in the English, French, German, Italian and Dutch Languages, accompany each Case.

☞*CAUTION.—The large and increasing demand for Dr. Bright's Phosphodyne has led to several imitations under somewhat similar names; purchasers of this medicine should therefore be careful to observe that each case bears the Government Stamp, with the words Dr. Bright's Phosphodyne engraved thereon, and that the same words are also blown in the bottle.*

INK.

PRINTING INKS.

PARSONS, FLETCHER, & Co.,

PRINTING INK MAKERS,

LONDON.

From the lengthened experience Messrs. PARSONS, FLETCHER, & Co have had in the Export Trade (of which they have made a speciality), and from the fact that their Inks are to be found in all parts of the world, they are enabled to adapt their goods to the requirements of all climates, and to every description of work. This is of the greatest, importance to those who may confide their orders to this house.

GENERAL LIST OF PRICES.

Job Ink, for Machine or Press, 8d., 10d., 1s., 1s., 1s 3d., & 1s. 6d. per lb.
News Ink, 8d., 10., 1s., 1s. 3d, and 1s. 6d. per lb.
Bookwork Ink, 1s., 1s. 6d., 2s, and 2. 6d. per lb.
Superior Bookwork Ink, 3s., and 4s. per lb.
Woodcut Ink, 5s. and 7s. 6d. per lb.
Red, Blue, Green and other colours, 2s., 3s., 4s., 5s., 7s. 6d., and 10s. per lb.
Varnish, 12s, 15s., and 20s. per gallon.
LITHOGRAPHIC INKS in every in shade of colour and variety of price.

PARSONS, FLETCHER, & Co. supply the cheaper descriptions of Newspaper Ink, but they recommend for warm climates the better class of Printing Inks, which in *all cases* are really the most economical

All orders must be accompanied with a draft for the amount, or may be forwarded through any London House, or

STREET'S COLONIAL NEWSPAPER AGENCY,
30, Cornhill, and 5, Serle-street.

THE GREATEST

WONDER OF MODERN TIMES!

HOLLOWAY'S PILLS.

PERSONS suffering from weak or debilitated constitutions will discover that by the use of this wonderful medicine there is "Health for all." The blood is the fountain of life, and its purity can be maintained by the use of these Pills.

SIR SAMUEL BAKER,

in his work entitled "The Nile Tributaries in Abyssinia," says, "I "ordered the dragoman Mahomet to inform the Fakey that I was a "Doctor, and that I had the best medicines at the service of the "sick, with advice gratis. In a short time I had many applicants, "to whom I served out a quantity of Holloway's Pills. These are "most useful to an explorer, as possessing unmistakable purgative "properties they create an undeniable effect upon the patient, which "satisfies him of their value."

SIMPLE, SAFE AND CERTAIN!

HOLLOWAY'S OINTMENT

Is a certain remedy for bad legs, bad breasts, and ulcerations of all kinds. It acts miraculously in healing ulcerations, curing skin diseases, and in arresting and subduing all inflammations.

MR. J. T. COOPER,

in his account of his extraordinary travels in China, published in 1871, says—"I had with me a quantity of Holloway's Ointment. I "gave some to the people, and nothing could exceed their gratitude; "and, in consequence, milk, fowls, butter, and horse-feed poured "in upon us, until at last a tea-spoonful of Ointment was worth a "fowl and any quantity of peas, and the demand became so great "that I was obliged to lock up the small remaining stock"

Sold by all Chemists and Medicine Vendors throughout the World.

May 17th, 1873. 6m.

DIETZ & CO.,

St. Paul's Buildings, Carter Lane,
LONDON,
INVENTORS & MANUFACTURERS OF THE CELEBRATED

PARAGON LAMPS,

Burning Kerosine, Petroleum, or Paraffin.

THE

Japan Weekly Mail.

A POLITICAL, COMMERCIAL, AND LITERARY JOURNAL.

VOL. VI.—No. 44.] YOKOHAMA, SATURDAY, OCTOBER, 30, 1875. [PRICE $24 PER ANNUM.

TO SUBSCRIBERS.

SUBSCRIBERS at a distance whose period of subscription may have elapsed, are informed that their papers will be addressed and charged to them *until countermanded.* This rule has been found necessary in order to avoid the inconvenience of an abrupt stoppage of the paper which might result from an omission to renew.

It is requested that notice of the intention to discontinue a subscription be so given as to reach Yokohama *before* the date of its effluxion.

NOTICE.

ON and after the 1st of July, Notices of Births, Marriages and Deaths will be charged $1 each insertion.

Such Notices cannot be inserted in this journal unless endorsed with the name and address of the person by whom they are sent.

Yokohama, 25th June, 1874.

BIRTH.

On the 23rd instant, at Niwa Yashiki, Sano, Tokei, the wife of J. G. H. GODFREY, Esq, of a daughter.

Notes of the Week.

The retirement from the Cabinet of Shimadzu Saburô and Itagaki is the event of the week. Other resignations are spoken of but without certainty of their truth. Tôkio is in a state of disquiet, the police have been increased in number, and certain houses are said to be specially watched and guarded. 'Civilization,' 'development' and 'enlightenment' have not yet banished from Japan the idea—not unknown elsewhere, indeed,—that assassination is one of the legitimate weapons of political opposition, and so deeply rooted does the custom seem in this country, that it must be many years before the leading men of the nation can feel perfectly safe during even such a crisis as the present. This is a subject to which the newspapers might fairly turn their attention when the present commotion has somewhat subsided. They will find that the Christian moralists have treated it very fully and exhaustively. The prolonged life of the first Napoleon, after he became Emperor, cost the nations of Europe millions of men and hundreds of millions of treasure, and was a grievous scourge to the earth. But the leading men of the allies sternly rebuked the many offers which were darkly made to them for his assassination. Had they listened to them, all Fouché's vigilance could not have prevented it. We hope we may look forward to the time when the crime will be held here as detestable as among ourselves. Although it is one to which men may be instigated by the purest patriotic feeling and a sincere devotion to the interests of the commonwealth, it also cuts at the root of all vigorous political action, and could only be defended by the bad plea of doing evil that good may come.

The Spectator is apparently a little laughed at for suggesting that if we have trouble with China, we should make a close alliance with Japan in order that she may be useful to us. We may be very blind, but the joke escapes us. We cherish no illusions about this country, but men who do not see that it will one day become a great power in the East, and that our duty and interests lie in encouraging it in every way to become so, seem to us singularly blind. Its position, the character of its old institutions, and the disposition of its people—the multitude trained to agriculture, and a considerable class brought up on military traditions—qualify it admirably for an ally to a leading power in the East, and the western nation which plays its cards best, will secure this alliance. The necessity for it may not come in the time of this generation, but assuredly it will come one of these days. The lion was shrewd who helped the mouse in his need and made no particular analysis of mouse-nature, habits or disposition. A certain vanity and self-assertion are the invariable concomitants of rising and promising youth. There are thirty millions of people in these islands—not Bengalees or Cochin-Chinese, but clever, intelligent people, fairly on the road to civilization and a place in the world. They will get over their money troubles and party troubles, as children get over chicken-pox and measles, and if they are a little irritable during the attacks, no great harm comes of it. England will be wrong if she despises the day of small things. Japan could never give her trouble except as the annoying ally of some great power, while with a warm feeling from Japan towards herself, she may be prepared for such action in China as the development of Asiatic history may necessitate. One of the writers on the question says "On whatever side she may stand, she may be sure either to be swallowed by the victorious, or to be afterwards attacked by the vanquished." This kills her either way, so that neutrality is alike inglorious and useless! No Englishman will ever believe that his race is going to be displaced in the East. If the struggle for supremacy is to come, let it come. We may safely start in it with the same conviction which has animated us in all our struggles—a conviction of ultimate success; but it will be our own fault if Japan is not with us.

Surely the letter addressed to Mr. Medhurst by Mr. Wade for the purpose of reassuring the public mind as regards his present line of action, is little calculated to have the desired effect. The public has not the slightest belief that any good will come of Mr. Grosvenor's going to Yunnan to be present at the enquiry into the circumstances of Mr. Margary's murder. It believes quite the contrary, in fact, and thinks that it is precisely by this means that the Chinese will throw a glamour of fairness over proceedings which they do not intend to be fair, and will take good care to prevent being fair. Mr. Wade acknowledges that he has insisted very earnestly on a more perfect observance of various Treaty provisions, indifference to which has so often been cause of complaint; notably to those which bear upon the taxation of our trade. But does he think that all the insisting in the world will move the Chinese? He says that no convention made by himself single-handed would be operative. Why not? If the power which has four-fifths of the China trade in its own hands cannot make a convention at a moment like this, stipulating for the observance of provisions which would place that trade on a footing equally advantageous to ourselves and the Chinese, we know nothing of the opportunities which clever administrators seize to advance their positions. If we thought an extension of trade with the Chinese robbed them of anything, or was not as advantageous to them as to us, we should most resolutely contend that we had no right to make Mr. Margary's murder a plea for doing anything of the kind. But we are utterly convinced that the mandarinate of China sits on the shoulders of the Chinese like a wretched Old Man of the Sea, delaying their progress, thwarting the aspirations of the most intelligent of them, and preserving a darkness around them which better influences would dispel. And it is on this

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

account that we think the opportunity should be seized to place the whole trade on a sounder footing than it has enjoyed since the Treaty of Tientsin. It certainly is by the direct and indirect effects of trade that the obstructive influences of the mandarinate can best be overcome, and now that Mr. Wade has public opinion at home with him, as it is abundantly clear that he has, he should turn the situation to account, and make a vigorous push for a radical change in the whole demeanour of the Chinese Government towards our trade.

Madame Leonowa's Concert took place yesterday evening in the large upper room of the Machigaisho, which had been courteously placed at her disposal by the Governor of Kanagawa. It is better adapted for musical purposes than the Gaiety Theatre, although so large that no audience likely to be brought together here by a musical entertainment could possibly fill it.

The concert opened with an air from the Opera *Lucrezia Borgia*, which gave Madame Leonowa an opportunity of displaying the qualities of her voice and style. It is not fine music, but was sung with feeling and judgment. This was followed by Schumann's song *Ich grolle nicht*, to our mind one of the finest he ever wrote. But it had the disadvantage, to those to whom it was new, of being sung in the Russian instead of the German language, and thus they could not enter with any true sympathy into the feelings which Heine, who wrote the words, depicted by them, and which Schumann so greatly intensifies by the music to which he has set them. The musicians of his age found no poet who more often inspired them than Heine. Mendelssohn, Schubert and Schumann all went to him as a fount of inspiration. The former, intense, devout and full of a fine idealism, passed over all the cynicism, the mocking spirit, the bitterness, the scorn of life and of man which abounded in Heine's mind, for those beautiful little pictures of love, fidelity and happiness which he draws in his better moods. Schubert, too, chose him for the happier thoughts which naturally link themselves with flowing spontaneous melody; while Schumann selected such of his poems as reflected some of that despair and anguish which each in his own art could reflect with such truth and intensity. In the song of which we now write, these feelings, added to a defiant bitterness altogether without parallel, appear in their severest form. We hardly know—do not indeed at this moment remember—anything more passionate than this music—anything which seems to catch all the heat-rays, so to speak, of emotion, and throw them into so burning a focus. The feelings are excited by it to so great a tenseness that it is almost a relief when they are released from it. It may be well to know of how much we are capable, but the strain placed on us in this song by Schumann is painful and leaves the mind overwrought and exhausted. Madame Leonowa sang it with great breadth and power, and produced an effect so marked that the audience demanded its repetition with equal enthusiasm and unanimity. She also sang it better the second time, and many of those present must have felt themselves, possibly for the first time in their lives, under the spell of an art of whose potency they had no previous conception. We have not time here to analyse as carefully as we should like to do the distinctive difference between Madame Leonowa's reading of this fine work, which was that of a woman, and the ordinary reading of it by male artists—(for it was written for a bass voice.) Certainly the latter usually reflect more of that intense bitterness which belongs to the words than the anguish which was more apparent in the reading of last night. A wounded pride is reflected in the one case; in the other a lasting desolation is the prominent characteristic. Byron's words perhaps will suggest to our readers the train of thought which we are now unable to pursue:—

"Man's love is of man's life a thing apart,
'Tis woman's whole existence:—
* * * * * * *
Men have all these resources, we but one."

This was followed by a violoncello solo called *Ungeduld*, played with excellent execution, taste and good feeling by an amateur, a resident of Tokio, and received with sincere pleasure by the audience. The air which followed it, *Quando a te lieto*, from Gounod's Faust, is allotted to the part of Siebel, but is usually omitted on the stage. It is extremely melodious and pleasing, beautifully written, and, when supported by an orchestra, is remarkable for a graceful *obligato* violoncello accompaniment to which the piano-forte can do but scant justice. It was sung with much taste and feeling by Madame Leonowa, and produced a charming impression. Passing over two more pieces in the first part, both of which, however, were equally attractive and well rendered, we come to the second half of the concert which opened with the deeply pathetic *Ah! mon fils!* from Meyerbeer's *Le Prophète*. It is not easy to over-praise this masterly piece of writing, which seems to us to belong to no school, but to reflect only passions and feelings which are universal to humanity, irrespective of their national garb. Those who remember the effects produced in it by Madame Viardot Garcia, whose greatest *rôle* was that Fidès, will have had them powerfully recalled yesterday evening by Madame Leonowa. This was succeeded by a cleverly written and very effective song by Tito Mattei, sung by an amateur in excellent style, and redemanded by the audience in recognition of his sterling merit and unfailing readiness to place his talent at the service of the public. We have particular pleasure in alluding to the duet which followed this song, because the baritone part of it was taken by a young gentleman whom we recently treated with a little of that paternal severity which we venture to think is sometimes demanded by such authority as we may possess in these matters. Here he was well within his powers, and achieved a thoroughly legitimate success. His voice is good and flexible, and he has some really musical feeling. His intonation is never at fault, though he must conquer or avoid the notes on which his voice shows a tendency to break. Above all he must approach music in an attitude of love and reverence, not as a means of attracting applause or ministering to the gratification of feelings which should have no place in a devotee; but as one who loves it for its own sake, and who wholly forgets himself in the desire to be the interpreter to others of its beauties and mysteries. This is the sole worthy incentive to its study and cultivation. We must not attend our forms of worship, be they what they may, to be seen or heard of men, but to warm and intensify our higher emotions, to elevate and purify our own nature, to impart this effect to others, and to rejoice that those higher sensibilities which the Almighty has given to man find external realities so exquisitely adapted to their gratification and development as those arts of which music is, to our mind, the most purely ideal representative.

The *notturno* for violoncello which followed the duet, is a pretty piece of melodious writing by Goldermann (not Haydn as was stated in the programme) and was extremely well played by Mons. Tichai. The modulations are easy and pleasing and there is no straining after recondite and startling effects. The stream of melody flows on with a natural grace which recommends it alike to the connoisseur and the less instructed listener. If it rouses no enthusiasm, it causes no disappointment. It leaves the mind happy and at ease, and if it tells of none of the ecstacy of passion, it also contains no traces of regrets, disappointment or sorrow. There is no art but music in which man, as he might be but for his fall, can portray his mind and his emotions. In all the other arts something is seen of his sad history, his toil, his grief, the shadows which his mind throws as it moves, while he is in the light, or the painful steps with which he labours to find his way in the darkness by which he is ordinarily surrounded. Music may, of course, be made to reflect these; but they do not inhere in it, and in a pure flowing melody we find none of them. Of such is this little *notturno*.

Madame Leonowa closed the concert with a *mazurka* of an extremely characteristic and interesting form, which she sang with great spirit and effect, and her reception by the Public can hardly have failed to cause her great gratification.

We have not in these columns carefully estimated her position as an artiste relatively to the great European singers,

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

and we must be excused from doing so, but none but those who have heard her in a large room can possibly do justice to the great power and compass of her voice, and the more than ordinary command she possesses of the pathetic emotions, as evidence of which her singing of *Ah, mon fils!* may be adduced. Our critical conscience however, will not be satisfied, without a gentle protest against the excessive use of the *vibrato* effect in the voice, which is now so common amongst all singers, and which, in our opinion, is radically incompatible with the vocal art in its highest perfection. It should be remembered that it was only resorted to by Rubini in his declining years, to cover the defects which he felt were creeping over his voice. The public worshipped him to such an extent as to regard this *ruse* as a new beauty, and it is certain that it has since become an object of imitation and rivalry, instead of one which ought to be most exceptionally resorted to for the production of certain effects which, we think, are undoubtedly heightened by it. It has crept into our organs in the shape of the detestable tremulant stop—an abomination of the first order—, violinists have adopted and exaggerated it—though it is a beautiful lesson to observe how rarely Joachim resorts to it—and our singers have gone further still in the same direction. (Amateurs who attempt it should be immediately put to death). Except in very rare instances, we hold it to be incompatible with all art of the highest class, and shall be very glad when the world returns to a purer faith on this point.

We have one word more, and we write it with some diffidence—yet with the greater sense of pleasure that we are so often opposed to, and opposed by, the views of those whom we are in the habit of addressing. It is a real gratification to assist in any musical performance before the members of this community. Never was there an audience containing so many good judges of music—men and women who have heard and learned to understand it fairly, if not well—alike so tolerant and so appreciative. Quite alive to the appeal of fine music, of which it shows an excellent appreciation, it is invariably kindly and encouraging to efforts which would be treated elsewhere with less consideration, and we only do the members of the community justice when we say that nothing can exceed the admirable disposition invariably displayed here towards those who, either in the exercise of their professional avocations, or as amateurs, place themselves at the bar of public criticism. No temper appears to us more amiable than that which, while fully instructed as to the true standards of knowledge or perfect effort, yet responds with pleasure and complaisance to attempts falling far short of these standards, if only made in its service. It is the true courtesy of the Duke in A Midsummer Night's Dream when he says:

> I will hear that play:
> For never anything can be amiss,
> When simpleness and duty tender it.

We need hardly say that these remarks have no reference to Madame Leonowa's own performance; though the reflection they embody occurred to us yesterday evening as on many previous occasions.

There is a rumour that Shimadzu Saburo, who was placed under the surveillance of the authorities and commanded to remain in Tokio, has left the capital.

Several Japanese merchants of Yedo have been arrested for having sold silk worms' egg cards which did not bear the Government stamp to an Italian dealer.

It is understood that a change in the uniform now worn by military officers is in contemplation.

From the "Japan Mail Daily Advertiser."

Mr. Harry Stanley's Diorama of the American War, exhibited to the Yokohama public for the first time on Monday evening at the Gaiety Theatre, deserves every praise. The events depicted, commencing with the attack on Fort Sumter, have been selected with judgment, the scenes offer abundant variety and the artistic execution of the work is in most respects satisfactory. We must notice also with praise the clever mechanical Diorama illustrating the famous fight off Cherbourg, and the more ambitious, though less satisfying, Funeral of President Lincoln. The panorama is explained by Mr. O'Brien in a running commentory on the scenes presented and accompanied by a small orchestra. As it presents a vivid view of the events of this memorable struggle, which we are assured may be depended on for general accuracy, we have no hesitation in recommending the exhibition as very excellent of its kind.

We are informed by by Agent of the P. & O Company that the *Bombay*, with English mail via Brindisi to the 17th September, sailed for this port from Hongkong on Sunday, the 24th instant, at 10 o'clock A.M.

The precipitation of some of the former nobility to invest their pensions in trade would seem to lead to difficulties. Another bankruptcy of a *Kuadzoku* named Yamanoi was reported yesterday in the *Choya Shimbun*.

We learn from the *China Mail* that no sale of the s.s. *Lyeemoon* has yet been effected, there having been only two or three persons present at the time advertised for the auction.

A considerable fall in the price of rice in the southern markets indicates not only the possession of an ample harvest but that peaceful counsels have prevailed. All our intelligence tends to this effect.

Alluding to the foreign debts of Japan and to the frequent discussions to which they have given rise in respect to their payment, the *Hochi Shimbun* tells us that it is said the Government has come to a decision to pay them off in this manner: After having ascertained the price obtainable abroad for goods of Japanese manufacture, (and, it is to be presumed, being satisfied that they afford a fair margin of remuneration), the Government will make advances to the manufacturers of such wares upon security, and employ the clear interest so gained in extinguishing their debt to the foreign creditor.

We venture to predict a short life for this latest financial emanation. Can it be the Parthian shot from a departing "long bow"?

The *Hochi Shimbun* mentions a rumour that a memorial had been forwarded to the Government by General Saigo (presumably on Corea?) but that its purport had not been divulged. It adds that the Japan will not go to war.

After a somewhat lengthened delay the Government, we are glad to observe, has done Mr. Brinkley the justice to grant him protection for the valuable grammar of the English language with which he has enriched Japanese literature, and which obtained on its publication the favourable suffrage of the most accomplished Japanese scholars. As the author may legitimately anticipate that further editions of his work will be called for, he has resolved to reduce its price to such a sum as to bring it within the reach of all. It is now on sale at the librarians, Japanese and foreign, at $3:00 for 3 volumes. Messrs. Wetmore & Co., and Lane, Crawford & Co., are agents in Yokohama.

A lantern maker in Yedo is employed in making large numbers of paper lanterns for the American market. So at least it may be presumed, the bird of freedom being conspicuously painted thereon.

The resignations of Shimadzu Saburo and Itagaki, recently tendered to the Government, have been accepted. The former has been intriguing to displace the present Prime Minister as head of the Satsuma party, but the Government has resisted his demands and pretensions and he has accordingly retired from the Cabinet. He is understood to maintain as strongly as ever the anti-foreign views with which his name has been so long associated.

There is little doubt that a feeling of some insecurity prevails in Yedo. Following the intelligence that the dwelling-houses of some members of the Council were guarded by police, we now learn that the guard at the various Arsenals has been strengthened by an additional force. To this the *Nichi Nichi Shimbun*, which is usually well informed, adds the rumour that some 500 or 600 men, who outwardly resemble the *rónin* of

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

former times, are now to be met with in the Capital where they occasion some apprehension to the people. It adds that the police force within the great moat will be increased at once.

It may be doubted whether cheap law is an unmitigated blessing to a people. Since the commencement of the present year some 35,000 cases, an average of 3,500 per month, have been heard before the Civil Courts of Yedo. So laborious indeed has been the duty of adjudicating in these, and so incompetent the staff of the establishment to deal with them singly, that cases of bankruptcy are considered in batches of twenty or thirty at a time, so as to prevent their undue accumulation. It is to be hoped that like Sheridan's sergeant the Counsel "argue in platoons," as the simultaneous addresses of some twenty gentlemen of the long robe—we presume that Japanese practitioners are not without some distinctive *toga*—might be too much for any judge who was not hopelessly deaf.

We notice the rumoured retirement of Kido, Okubo, and Ito from the Ministry. The rumour is in all probability premature.

According to the *Hochi Shimbun* one of the *sangi* is about to proceed to China on a special mission having reference to the Corean difficulty.

The *Nisshin Shinjisshi* gives a rumour that some 18 or 19 Government officials have sent in their resignations, consequent upon the retirement from office of Shimadzu and Itagaki.

The Imperial war-ship *Tsukuba Kan* will shortly proceed to San Francisco, in order to give the cadets of the Naval Department an opportunity of gaining practical experience of their future duties.

The *Akebono Shimbun* says that the residence of Iwakura, *Udaijin*, is most jealously guarded by the police. The names and addresses of visitors are inscribed in a book, and no person is admitted without a pass.

The Editor of the *Hioron Shimbun*, a journal which has for some time past strenuously urged the necessity for sending a hostile expedition against Corea, called together the proprietors on learning the retirement of Shimadzu and Itagaki and resigned his office.

The haste of the people of Ôsaka to adopt the customs of civilisation would seem to have drawn down upon them the serious attentions of a paternal Government. The fluctuations of the rabbit market, it appears, have lost all fascination to speculators. In its place, however, they recently found the requisite excitement in the game of European billiards. But so great has been the spirit of gambling evoked by this dangerous game that it has been found necessary to interdict it altogether.

AMATEUR ATHLETIC ASSOCIATION.

The usual Autumnal Sports of the Society took place at the Rifle Range yesterday afternoon in presence of a very fair muster of spectators, who entered, apparently with much interest, into the amusements provided for the fête. A chilly afternoon robbed the day of some of its attractions, but the excitment of the contests and the skill shown by some of the competitors was fully equal to any of the Society's previous exhibitions. The Ladies' Purse was won, in a race of 54¾ seconds, apparently without much effort, by Mr. Hohnholz who received the prize at the hands of Mrs. McDonald. The "One Mile Flat Race" fell after a good contest to Mr. A. H. Dare. The following are the sports of the day.

100 Yards Flat:

1st Heat.

C. P. Hall, 6 yds. ...	1
A. T. Watson, scratch	2
G. Hamilton, 7 yds.	0
H. B. Henley, 13 yds.	0

Time 10¾ secs.

2nd Heat.

J. J. Dare, 4 yds. ...	†1
H. J. Snow, 6 yds.	†2
C. Esdale, 9 yds.	0
F. J. Smith, 10 yds.	0

Time 11½. A dead heat, subsequ[illegible]

3rd Heat.

E. F. Kilby, 6 yds.	1
J. L. O. Eyton, 8 yds.	2
A. H. Dare, 1 yd. ...	3

11 secs.

4th Heat.

H. W. Hohnholz, 13 yds.	1
F. M. Jonas, scratch	2
F. Walker, 5 yds. ...	0
J. Dodds, 5 yds. ...	0

10¾ secs.

Putting the Shot.

H. W. Hohnholz, 4ft. 6 in ...	1
G. Hamilton, 3ft. ...	2
A. H. Dare, 5ft. ...	0
F. J. Smith, 5ft. ...	0

Favoured by the weather the second days Sports of the Society passed off very pleasantly, and brought to a conclusion a successful Autumn Meeting.

The one-mile walking match was vigorously contested by two of the competitors, ending in the victory of Mr. Hamilton who received an enthusiastic ovation from his friends. The honours of the steeple-chase fell, as they not infrequently do, to Mr. J. J. Dare whose skill in taking water jumps makes him *facile princeps*. He was closely followed by Mr. Hamilton on this occasion.

The prizes were presented by Mrs. Wheeler and Mrs. Kirkword, accompanied by the usual felicitations.

The band of the *Hertha* was in attendance and performed a pleasant selection of music.

FINAL HEAT. 100 YARDS FLAT.

H. W. Hohnholz, 13 yds.	1
E. F. Kilby, 6 yds.	2
J. J. Dare, 4 yds.	0
C. P. Hall, 6 yds.	0

Run in 11 secs.

The *North China Daily News* has the following:

Mr. Wade has written to Her Majesty's Consul, for publication, a despatch which will be found below, explaining to some extent the purport of recent negociations at Peking. It confirms the information we received on Thursday, that the causes which had delayed the journey of Messrs. Grosvenor and Baber to Yunnan have been at length removed. In regard to the welfare of British trade, Her Majesty's Minister states that he has insisted very earnestly upon the duty of more perfectly observing various treaty provisions, and has obtained from the Chinese Government an engagement that enquiry shall be made into the question of taxation of Foreign trade, and that a report should be prepared on which, if necessary, modification of existent conditions might be negociated. The views on this subject enunciated by Mr. Wade will be read with interest.

The undersigned has much pleasure in publishing for general information the accompanying copy of a despatch just received from T. F. Wade, Esq., H. B. M.'s Minister Plenipotentiary, &c., &c.

W. H. MEDHURST,
Consul.

H. B. M. Consulate,
Shanghai 17th Oct., 1875

Shanghai 17th Oct., 1875.

Sir,—I have to request you to state, for the information of Her Majesty's subjects at this port, that arrangements have been made which enable me to allow Mr. Grosvenor to proceed without farther delay to Yunnan, in order that he may be present at the investigation of the circumstances of the attack on Colonel Browne's mission and the murder of Mr. Margary.

Mr. Grosvenor's long detention, and the fact that I was known to be engaged in negotiations bearing more or less on the matter of his mission, have not unnaturally excited apprehensions which will, I hope, be set at rest by the announcement I have authorised you to make.

I should not here refer farther to the negotiations in question, did I not conceive it expedient to set speculation on one point at rest. I hear it rumored that I have signed a convention by which British Trade was to be materially influenced.—This is not the case. I have availed myself of the opportunity to insist very earnestly upon the duty of more perfectly observing various Treaty provisions, indifference to which has been so frequently matter of complaint; notably of those that bear upon the Taxation of our trade. Were the conditions of the Treaty, as it stands, to be fulfilled, there would, of course, be no occasion for a convention. Were it shewn to be expedient to modify the existing conditions of the Treaty affecting trade, a Convention would be, doubtless, necessary. But no Convention could be operative, that had been negotiated by myself, or the Representative of any Treaty Power, singlehanded. Foreign Trade in China is a common property changes in the regulation of which, to be effective, must have been duly considered and accepted by all alike. What I have striven to obtain, therefore, in this direction, is a formal engagement on the part of the Chinese Government that enquiry should be made into the question of Taxation of Foreign Trade, whether at the Consular Ports or beyond their limits, and that a report should be prepared on which, were it found otherwise impossible to rectify practices at present objected to, modification of existent conditions might be negociated. An engagement by which I hope that the desired object may be attained, has been conceded.

You are at liberty to publish this despatch.

Your obedient servant,
(Sgd.) THOMAS FRANCIS WADE.

W. H. MEDHURST, Esq.
&c., &c., &c.

THE CABINET.

THE resignation of SHIMADZU SABURO and ITAGAKI has taken Tokio by surprise and caused some commotion there, but judging from the ready manner in which it has been accepted by the TENNO, we should be inclined to infer that it boded no danger. We suspect that the progress of affairs has left the old Satsuma Chief behind. His mind has never really accepted the change which has come over the country, and which is undoubtedly slowly but surely making its way in his own province—brave and loyal certainly, but a thought stupid. Unlike his clansman SAIGO KICHINOSUKE, who prefers the life of a country gentleman to "that laborious, that invidious, that closely watched slavery which is mocked with the name of power," SHIMADZU SABURO has taken office to find himself opposing and opposed by every measure which the new order of affairs has suggested or necessitated. He has apparently forgotten nothing and learned nothing. Whether he latterly persisted in sitting Japanese fashion at the Cabinet Councils, or finally succumbed to the attractive blandishments of a chair, we do not know; but he seems to be of that inflexible nature which would almost protest against the advance of the years in the century. His idea is that nations should go round in orbits, not proceed on the straight line of progress. His mind was too entirely formed and 'set' at the time of the Revolution to see that that event was an effect bearing in it the germs of a thousand other consequences, and not a mere transformation having no other end than itself; and thus it is, if report speak truly, that he has been constantly out of harmony with those with whom he has had to work. It would be unjust to blame this condition of mind in a man of his age and antecedents; but it is obvious that it has diminished the weight of his influence, and the Government which at one time courted him assiduously, if not humbly, now accepts his resignation without remonstrance or loss of time, together with that of a colleague less generally known, indeed, by name, yet who has now been prominently before the public for some years.

The origin of the dispute which has caused this secession from the Cabinet may be pretty clearly inferred from one of our translations this week, though we also infer from it that there are probably undisclosed questions which are deeper sources of disunion. It is easy to imagine that the Heads of the great executive departments of the Government would resent their extrusion from the Cabinet, where, if the usages of other nations may be held as precedents for the Japanese, they certainly ought to sit. A Council of State in which the Ministers of War, of Foreign Affairs, of Finance, of Public Works, of the Interior, of Public Instruction, do not sit, becomes far too speculative and unpractical a body, and walks and talks in the clouds instead of doing so on the solid earth, though no foreigner, ignorant as we all are of the real machinery by which this unique Government is carried on, would presume to pronounce definitely on such a point. When we see the large wheels, in the shape of new institutions, which have been introduced into this machinery during the present year, or the equally large wheel taken out of it, we can only confess our profound inability to understand the whole engine or the relation of any one part of it to another. The admission is humiliating enough, but we should gravely question the honesty of any foreigner who pretended to much greater knowledge. Thus we must be content with the statements made on this subject in the native papers, and see how far they are borne out by the progress of events. Of course the late Corean affair has not been without its effect in producing the present disunion; but the sense of the country is decidedly against war, and the *samurai* will not improbably acquiesce, with better or worse grace, in a decision which will avert an expensive and unprofitable contest, and afford them greater security for the future payment of their pensions. When the present issue is represented as a Corean war or a civil war, and either alternative is hedged round with a number of oracular provisions which may mean anything or nothing, we can only wonder at the simplicity of those who make them or imagine that the public will attach the slightest weight to them.

The general impression seems to be that SHIMADZU SABURO has overreached himself in bringing charges against the PRIME MINISTER and intriguing for the political leadership of the Satsuma clan. This is exactly what the Government is determined to avoid. The supremacy of the clan is the real bar to the unification of the nation. The PRIME MINISTER seems to work extremely well with his colleagues, he is certainly most assiduous in his attention to the business of the state, and a very general regret would have followed his displacement by SHIMADZU SABURO, had such an event occurred.

SPIRIT OF THE JAPANESE PRESS.

THE RESIGNATIONS OF SHIMADZU AND ITAGAKI.

(The *Nichi Nichi Shimbun* of October 28th, contains the official announcement that the resignations of Shimadzu Hisamitsu, *Sadaijin*, and Itagaki Taiske, *Sangi*, have been accepted. It also contains a leading article on this event of which the following is a translation.)

Shimadzu Hisamitsu, *Sadaijin*, and Itagaki Taiske, *Sangi*, were on the 27th instant, relieved from office at their own request. The official announcement of this circumstance has for no very definite reason at once caused considerable excitement in the public mind accompanied by a general feeling of uneasiness. Discerning men are looking forward with knitted brows and bowed heads, strenuously endeavouring to forecast the changes which the future has in store, and which are pregnant with danger for our national tranquillity. Under these circumstances, we cannot meet our readers with the assertion that at present our country is in the enjoyment of repose.

There are many conflicting rumours afloat among the public. One is that Shimadzu is in league with Itagaki to support the separation (of the Council of State from the Administrative Departments) and that he has presented a secret memorial containing charges against Saujo and requesting that he should be dismissed from the high office of adviser to the Crown. This report further says that the suggestion was not approved, and that Shimadzu and Itagaki thereupon sent in their resignations, and have in consequence been relieved from their official duties. We have reason to believe that this account is not far from correct, and the draft of this secret memorial (whether authentic or not we do not know) has found its way among the public during the last few days. We are prevented from publishing it by our fear of offending against the press laws.

Another report is that there is a secret assemblage of so-called "Patriots" in Tokiô, which already numbers five or six hundred persons. Whether they belong to the "Feudal" party or to the "Corean War" party we do know. It is said that the *Daijin* and *Sangi* are taking steps for their protection, and that their residences are guarded by police specially detached for this purpose. It is further reported that strict guard is being kept over the arsenal and powder-magazines, and that the police on duty within the precincts of the castle have been reinforced. Those people who are always conjecturing what is about to take place have seized greedily on these

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

rumours, which they look on as the forerunners of change, and say that some unforeseen commotion is inevitable. Not only do we not join with these persons in credulously accepting such reports, but we hope to expose their falsehood. For the present however, we are compelled to remain silent for want of positive evidence that they are ill-founded.

We have been told that the disscusions in the Council, whilst these two gentlemen held office, had their origin in the question of separating the Executive Departments from the Council of state. But can such a question have been the real cause of these dissensions? This is what we cannot guarantee. When this matter comes to be investigated by the historians of posterity, there may perhaps be some learned man who will state his views somewhat as follows.

"The objects of those persons who advocated this "separation in view of an impending danger to the "national development, was not the separation itself, but "something else. Nor was the intention of those Minis- "ters who opposed this measure on the score of a press "of public business the defeat of the measure itself, but "was certainly something else. The 'Separation' "question of October 1875 was therefore only an apparent "cause, and must not be considered the real one."

If this "Separation" question has been only the apparent cause, it must be admitted that little is to be gained by our discussing it at present. We have some ideas regarding this separation which we intend to make public, but we shall reserve them until the time comes when it is considered by politicians as a practical question.

The following objection will, however, be made. "If "therefore the real cause of the dissensions in the Council "was not "Separation" question, what was it?" But even if we had the penetration to discover the minute causes of this disunion and could appreciate the hidden objects pursued, we do not think that we ought to invite calamity on ourselves and others by conjecturing the plans of intriguers before they are disclosed. How then can we do so, when our intelligence is unable to penetrate their motives? We will therefore refrain for the present from publishing our private opinions regarding the real causes of these dissensions. Embarrassed as we are to right and left, we have promptly given up the task of looking in facts for proof of the real causes, and we think we shall have done our duty if we refrain from this investigation, and content ourselves with a discussion of the general principles applicable to the question.

In the last days of the Roman Republic, the country was ruled by an assemblage of eminent men, the leaders of various political parties which were opposed to each other in their objects. Now it was impossible for any consistent policy to be carried out except by these men sacrificing their own views, and if they brought themselves to do so, they sacrificed the power of their own party at the same time. All attempts to form a harmonious combination of these leaders of parties radically opposed in their views, even if successful for a time, soon fell to the ground again. Their agreement on matters of Government brought about one revolution, their dissensions produced another, but through them all, the vice of obstructiveness was not eradicated. There was much labour and little result. As soon as the leaders saw that they could not maintain an equal position, the oath of agreement was instantly broken, the parties broke out into open dissension, each tried to lessen the power of the other or to dislodge its adherents from important offices, and finally according to the character of the quarrel the excitement spread to the whole nation.

When a party is unable to maintain its policy against its opponents, and cannot gain its ends even though represented in the Council, its mortification induces it to take advantage of any difficult question to embarrass its enemies and to seize the opportunity of occupying their places. Hence they take up for the time as their party-watchword any phrase which may have chanced to hit the fancy of the day. The phrase "Drive out the Barbarians" was in this way formerly used as the watchword of the monarchical party for the purpose of annoying the Shogun's Government. The mortification of defeat therefore often caused both patricians and plebeians to abandon their usual differences and adopt similar opinions. When things come to this pass, they do not deserve the name of political parties. They are merely followers of certain leaders.

Are not the causes of the dissensions in our own Government similar in their character to those which were in operation at Rome? If it is impossible to harmonize different views so as to preserve the public tranquillity, the best plan is that the Government should fall into the hands of one party only. The reason is that every quarrel brings about a change of policy, a state of things full of evils which the people find it hard to endure. If the party which yields its position in the Council were to cease to exert its influence as the personal following of certain leaders and become a genuine political party, it might do valuable service by protecting the people in secret against arbitrary and oppressive rule. This would be far preferable to quarrelling in the Council of State. In our opinion, these dissensions have been caused by the desire of each of these leaders to assume to himself the responsibility in presence of a national difficulty. This is a proof of how much they have at heart the repose of the country. We shall unite with the intelligent public in judging of the merits in this question of Shimadzu and Itagaki from their future behaviour.

The Mitsu Bishi S. S. Co.

("Hôchi Shimbun," of October 20, 1875.)

We have learned from the two newspapers the *Gazette*, and the *Herald*, an item of news that forms a subject of the greatest rejoicing and congratulation. We had already indistinctly heard a report to the effect that between our Mitsu Bishi Co., and the American No. 4 Co., (the P. M. S. S. Co.,) there had been set on foot negotiations in regard to commercial matters, and we now consider that those negotiations must have been about this affair. What we have gathered from the two newspapers is none other than this:—that an agreement has lately been effected between the P. M. S. S. Co., and our Mitsu Bishi Co., whereby the three vessels, the "*Oregonian*," "*Golden Age*," and "*Costa Rica*," have been wholly purchased by the Mitsu Bishi Co., while the "*Nevada*," although flying the American flag and passing for an American mail boat, is under the control of the Mitsu Bishi Co. The reason for this is that the contract whereby the P. M. S. S. Co., are bound to connect with the San Francisco steamers and carry a monthly mail, has not yet expired. This contract will terminate at the end of next year. The price of the vessels has not yet been paid, but it is said that they have been purchased at a suitable cost. Although, in consequence of the above agreement, there may certainly be occasioned to passengers some degree of inconvenience, it must be a common source of profit to both companies. By means of this arrangement the control of the navigation of the neighbouring waters has fallen into the hands of the Mitsu Bishi Company alone.

The above are the facts as translated, in extract, from the foreign papers, and they cause us to feel both pleasure and rejoicing. We have long mourned over the fact that the control of navigation—the very life of our national commerce—had not reverted into our hands. While our Government, in imitation of the policy of that English Ruler who, with the desire of arousing the energy of his people in respect to navigation, led them on by holding forth the bait of elevation to noble rank, has been wishing to give due attention to this point, the Mitsu Bishi Company have already advanced ahead of the Government and have eagerly pressed forward in the matter. Last year the expedition against Formosa, though it appeared likely to be a source of loss to the people of our country was, on the contrary, to the advantage of the Mitsu Bishi Company. They have finally obtained an opportunity of extending their wings, and at the present time have put forth the bud of increasing the prosperity of our countrymen, which may be understood from the fact that our Government of Japan have already given them thirteen steamships and a yearly subsidy of 265,000 *yen*. We are therefore convinced that our Government and the Mitsu Bishi Co. will in accordance with our own hopes, by agrees attain to exceedingly great prosperity, the one by not having mistaken their action in

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

rendering aid, and the other, that receives such assistance, by displaying all zeal in their duties. We were, however, in dread of one obstacle that might have impeded their advance, and we were constantly turning over in our mind the doubtful question of the measures which would be adopted by the Mitsu Bishi Co., in regard to that obstacle. It is time for us to give expression to our fears.

In consequence of the competition caused by the equal distribution of power between the P. M. S. S. Co. and our Mitsu Bishi Co., the charges for freight have been fixed at exceedingly low rates, and the losses of both Companies have been considerable, and over this state of affairs we have continual anxiety. Everything has its proper price, and this, even though it might be said to be by reason of competition, could not be termed "proper." On account of the losses incurred, it was quite impossible to calculate for how long (the Companies) would exist. It is obvious that even though they might be possessed of countless wealth, they would by a steady loss for a lengthened period be in the end reduced to poverty. Thus it is clear that though the lowering of freight-charges to an extraordinarily low rate on account of the competition might be termed an expedient for the time being, it would not be a beneficial arrangement for a lengthened period. From the very outset, neither of the two Companies rested upon its own basis; and the prosperity of the one depended upon the failure of the other. And even if they had stood independently, the regulations for navigation would not have been suitably determined, and in such matters as freight &c., there could not have been fixed any average standards, and the affair could only have ended in loss to both Companies. On the part the Mitsu Bishi Co., then, it was considered that a suitable agreement ought to be made with the P. M. S. S. Co., so as to cause the direction of navigation in the neighbouring seas to revert into their single hand. We had for a long time fixed our attention on this. In our leading article of the 20th ultimo, we propounded statements regarding the Mitsu Bishi Co., which will no doubt be remembered by our readers. We observed therein that the P. M. S. S. Co., which was measuring its strength with that Company, seemed to be the cause of a very great hindrance to our country's navigation, and that thus, unless their attack were repelled, it could not but come to pass that the object of that Company would run counter to the design of the Government in granting them the subsidy: That we were unable to tell what plan was entertained by the Head of the Mitsu Bishi Co., with regard to this point, but that if our Government were to grant a further subsidy and so induce the Mitsu Bishi Co., to overthrow the P. M. S. S. Co., we believed that the former would certainly be able to carry on affairs in a proper manner.

Within these thirty days from the time when we mooted this idea, can our Government have lent their aid to the Mitsu Bishi Co.? It would seem as though our desire has certainly been accomplished, and that the control of our navigation has already wholly come into the possession of our country. Now that the vessels belonging to the P. M. S. S. Co., have, together with their branch establishments at Yokohama, Kôbé, and Nagasaki, come into the hands of the Mitsu Bishi Co., the obstacle to our navigation has quite disappeared. Thus the regulations for navigation have spontaneously become well defined, and a suitable rate of transport charges has been fixed, so that unless some unforeseen disaster befall there is no fear lest this Company shou'd sustain loss, and a perpetual foundation will be secured to it. Upon a perpetual foundation being secured, the power of navigation will of course become flourishing in our land. By this means the ladder whereby a large proportion of our countrymen are to ascend to increased prosperity will have already been prepared.

Some persons may say that even supposing the Mitsu Bishi Co. to have effected the purchase of all the vessels belonging to the P. M. S. S. Co., these Americans who are so smart at acquiring gain will, under a different name, again throw hindrances in the way of the Mitsu Bishi Co. According to our own belief, no such event will occur. Just give due consideration to the matter. How comes it that the P. M. S. S. Co. have now, without gaining any exorbitant profit, sold off (the vessels &c.)? It is because they have not only failed to gain by the competition, but have sustained heavy losses thereby, and therefore, perceiving the truth of the old adage "to gain by giving," these Americans have finally entered into negotiations for the sale. If any other persons be now desirous to put their hand to this business, they will have to follow in the track of the P. M. S. S. Co. submit to losses, and eventually fall back upon the expedient of effecting a sale. It is by such reasoning as this that we arrive at the conclusion that there will not arise any further source of hindrance.

Even though there be opened some indirect way of planning a second attempt, the members of the Mitsu Bishi Co. will not on their part lose sight of this knowledge on account of any gain or loss to themselves. We cannot hazard a conjecture as to the nature of the agreement that has been determined between the two companies, but we feel sure that the above provisions will form a clause in the contract.

The Mitsu Bishi Co. have altered their passenger rates to $20 first class from Yokohama to Hiôgo $40 to Nagasaki, and $65 to Shanghai. We are of opinion that these cannot be called excessive rates. Unless they be fixed at this figure, it would be impossible to effect the foundation of a lengthy existence (for the Company). What is desired of the Mitsu Bishi Co., by the writer to the *Gazette* is that they should guarantee their affairs well, and not fall into the evil course of monopoly. We will answer for it that so long as they do not lose sight of the mode of acquiring "lawful gain," this Company will certainly not fall into such evil course. They cannot but be aware of the mode of acquiring "lawful gain."

We will merely add a single word. The burden that now rests on the shoulders of this Company is indeed excessively heavy. The duties that they have taken upon themselves and those that have been imposed on them by the public, are very weighty. As the old sage said, "when one undertakes many obligations, the road "that lies before one is long,"—and this adage is not inapplicable to this Company. They must determine on a fixed line of conduct and follow it out. The desire of our Government and of ourselves is that the day may be not far distant when they will be repaid, with interest. This is the reason why we have uttered the words "a "subject of the greatest rejoicing and congratulation."

The above is the news we have gathered from the two Yokohama journals, and which we now make known to the public. Should we at a later date obtain further particulars we will discuss them in detail. As this is a question that is intimately connected with the important consideration of our country's navigation, we beg the public to await the day when we shall give full explanations.

The Corean question, which has for some days continuously occupied our editorial columns, is not yet settled, but still the advocates of war have been only urging what they deem right and have not got beyond the question of hostilities. In their bigoted adherence to the impetuosity of the wild boar ("specious reputation") and the cunning of the ape ("expediency") they are even now chattering about their ideas, but if the learned gentlemen amongst the public be able to exercise, even in the slightest degree, the powers of reflection that appertain to mankind, it must already be apparent to them on which side will lie the victory,—whether for the peaceful or for the warlike policy. It is on this account that we devote one day's editorial to a different subject.

Arguments for a Deliberative Assembly.

Choya Shimbun, Oct. 22.

From times past the prevention by wise rulers and able statesmen of the outbreak of disorder, and the suppression by them of dangerous evil which has already broken out, have equally been the result of conformity to the will of the people, of the adoption of right principles, and of decisive action taken without the least hesitation or fear. Several days ago we publicly asserted that the establishment of a Deliberative Assembly was the most important and urgent duty of the present time.

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

If we consider the present aspect of affairs and listen to the talk of the streets we find lying concealed the signs of impending trouble and disorder of no small magnitude. We will proceed to give a rough statement of these ; do you, our fellow countrymen, give heed in corresponding manner!

The (signs) of these troubles and disorders are many in number. One of these is the dissent which prevails between the views held by the members of the Cabinet. Another is the carelessness of officials, which is owing to the feeling of uncertainty engendered by the morning appointments and evening dismissals. Another is the discussion caused by the heaviness of the taxes and the distrust of the action of the Government ; another the discontent occasioned by the inability of scholars and politicians to write books * and publish their views just as they please. Another is the prevalence of distressed people and lawless characters who are exceedingly discontented and desire the occurrence of some difficulty in the country. Another is the large number of *Shidzuoku* wedded to ancient customs who wish for a recurrence to the feudal system. These various matters are not things the clear and trustworthy traces of which we have discerned with our own eyes, but if we reflect upon them, having regard to the worse way in which they are discussed in the streets, they seem to be matters which cannot be regarded as reports altogether without foundation.

Even supposing that these various matters be dismissed as for the most part untrue, still if there are evidences of the truth of one or two only, without entering into the question of whether troubles will really arise or not, it is clear that this is a circumstance which cannot be regarded as conducive to the happiness of the state or of the nation. The statesmen at the head of the Government should give this subject their attentive consideration, and devise an expedient for dealing with the case satisfactorily ; and this expedient should be none other than that which lies in the selection of a right course of action, and in conforming to the wishes of the people. Do the views of the leading statesmen not agree ? What is right should be adopted, what is wrong rejected. Are the officials uneasy ? The number of officers should be fixed, and their selection should be conducted with strictness. Are the people dissatisfied ? The state of the case should be considered and one unswerving line of policy should be avoided. Is there cause for discontent among the scholars and politicians ? They should be given full liberty for the expression of their views. Are distressed people and lawless characters unquiet ? They should be reasoned within a right and proper manner, censured and converted into good subjects. And as for those *Shidzoku* who desire the feudal system and cling to ancient customs,—these are fellows who are wrapt up in their own desires, and do not understand fair and open argument. How can there be many of these in the present state of the country ? The power of the Government should be sufficient to deal with them. If it now be desired to prevent these various evils from causing trouble and disorder, the only way to do this is to conform to the Imperial mandate, and establish a Constitutional Government and a Deliberative Assembly chosen by the people.

Politicians will some of them say :—"If a Deliberative "Assembly chosen by the people be established, this will "not be sufficient to arrest the outbreak of trouble and "disorder." It may be so. But if a Deliberative Assembly be established now, the evil of trouble and disorder being yet small will easily be arrested ; if it be not established it will be impossible to tell to what extent this same evil will reach. How much more then is it right and proper that this Deliberative Assembly chosen by the people should be established ? Labouring under what fear and under what hesitation is it that the Government do not carry out the Imperial mandate and do not establish a Deliberative Assembly ? This prevention of the outbreak of disorder, and the suppression of dangerous evil which has already broken out—how can it possibly be done by two or three Cabinet statesmen acting according to what they think is correct ? Supposing that these statesmen are able by their own unaided action to avoid the occurrence of disorder and evil, this will be merely a piece of incidental and unexpected good fortune ; it will most certainly not have been the effect of a course of action which is fair and right having regard to the whole of the country.

Therefore we have been unable to hold our peace and have ventured to give expression to ignorant statements. Leading statesmen, be so good as not to censure our ignorance, but to believe in our attachment to the government !

* How is this? Has not the book-press been freed?—[Ed. *J.W.M.*]

Corea.

Choya Shimbun, Oct. 27.)

It is a matter for rejoicing and congratulation that the Government appear little inclined to follow the shallow and ignorant advice of the advocates of war with Corea, but seem on the contrary disposed to adopt a pacific policy which is the true one for Japan. We have discovered evidence of this which we will impart to those of the same mind with us, in order that they may join us in rejoicing over it. This evidence lies in the fact of the approaching departure for San Francisco of the "Tsukuba Kan," one of the finest and most serviceable ships of the fleet. This vessel would not be sent away if there was any intention on the part of the Government to go to war shortly with Corea. But on my making such a sudden statement as this there will be some who will say :—"We "do not require many vessels of war to chastise Corea, "small weak and barbarous country as she has always "been. The mere fact of the departure or retention of "one ship, the "Tsukuba Kan," is not sufficient to de- "cide the question as to whether the Government are "going to chastise the Corea or not." We shake our head and reply to these. "Trouble comes when least expected ; "disaster happens when people are unprepared. Because "a small country like Corea is attacked, there is no rea- "son why military preparations should be diminished, "and how much less reason when there is fear of a great "and formidable rival * appearing on the scene if a "Japanese force were to invade Corea. Ours is a careful "and far-seeing Government ; and it is quite evident "without any assurance on our part that if they enter- "tain any design upon Corea they do not lose sight of "this consideration and would not send away to remote "seas the smallest gun-boat of our navy. Moreover "this "Tsukuba Kan" is one of our finest ships, and there "are able officers on board of her, whose services would "be indispensable to the country in the case of anything "occurring between us and Corea. Thus if the sending "out into the waters of the Pacific of the "Tsukuba "Kan" be not the effect of an intention on the part of "the Government not to go to war with Corea, what can it be ? "

Guaranteeing as we do then that our Government does not purpose going to war with Corea, we invite those gentlemen who are of the same mind as ourselves to join us in rejoicing over this circumstance. The only point on which we are not at ease is respecting the Japanese settlement at Fusanhai.

According to a telegram received a few days ago, ever since the fight at Kok'wa the Coreans have been making warlike preparation, and it is impossible to tell whether they are meditating an attack upon the Japanese settlement of Fusanhai or not. This is truly a rumour calculated to cause uneasiness. Supposing that the Coreans were to endeavour to wipe out the disgrace of their defeat at the island of Kok'wa by attacking the Japanese settlement, what decisive action would our Government take ? If such were to take place, the limits within which patience in accordance with the policy of "not chastising Corea," could be exercised, would be exceeded. Would our Government at once send out thousands of soldiers and take Corea to task for her two offences? If this were to be done, of what profit would be the forbearance and patience exercised hitherto and the firm and unswering attitude adopted which is founded upon the view that the strength of the country is yet insufficient for the chastisement of a foreign foe ? The earnest and fixed purpose which has animated the advocates of the policy of "not chastising Corea" in the countless arguments which they have

Original from UNIVERSITY OF CALIFORNIA

poured forth for the good of the country would melt away like froth.

But would our government leave off half-way in their fixed adherence to the true and pacific policy hitherto maintained? If so what cause for regret would there be in the abandonment of the mercantile official establishment at Fusan? What other policy can there be in this case but to give up all design of war with the termination of friendly relations between the two countries? for the profit derived from the maintenance of friendly relations cannot nearly come up to the loss which war would occasion. This is clear and needs no mention from us. We ourselves would like to see the Japanese settlement closed and all the Japanese residents withdrawn before anything occurs between the two countries. If Corea, however, be not really arming for war, and if things are as they were before, then there is no occasion for such a step to be taken. The decision in this matter rests with the Japanese resident official, and it is not for us to offer our ignorant opinion.

Resident in Atagoshita.

CHANGES IN THE ADMINISTRATION.

(Nichi Nichi Shimbun.)

Ever since the early part of this month it has been rumoured that there is disunion of opinion in the Government and that changes in the Cabinet are not improbable, but as we thought it could not be so, we did not say to the world what we did not believe, for that would be falsehood. But now these rumours are spreading about the country, and whenever the administration is spoken of men talk anxiously on this question. We have been for some days trying to get to the bottom of it, but the secrets of the Government are not within our reach, and to this very hour we do not know the facts. We therefore do not hold ourselves entirely responsible for the trustworthiness of what we shall state, but place it before our readers and leave them to see how it accords with future events. But they need not imagine it is wholly without foundation, and may rely on this much, that there is disunion in the Administration. The rumours are as follows.

The Government was said to be divided in opinion on the question whether the Heads of Departments had better be distinct from the offices of *Daijin* and *Sangi*. What conclusion was arrived at this spring at the Osaka meeting is unknown. But although the Imperial decree of the 14th April had been issued, and the institution of the *Genro-in* and *Daishin-in* had taken place, there were some who still held the two posts of Head of a Department and *Sangi*, and thus there was no real division between the legislative and executive bodies. It seems that the question had been discussed before, but a division of opinion on it occurred, and it was never settled. Again, it is said that when the news of the *Unyokan* affair arrived, the question became more prominent again among the higher officials, and there is now a strong party called the Party of Separation, while the other is called the Party of Union, (some again caring little about the matter). A good deal of discussion has taken place among the people regarding the Corean affair, but it is said that there are none among the higher officials who deliberately urge a war. All that is said to be known is that a *Sangi* went to the *Daijo Daijin* to consult over the matter, while another official asked the *Sadaijin* for troops, and even this is said to be uncertain. Again, it is said that some of the *Daijin* had often discussed the question of the machinery of the administration, and that on the 20th instant about twenty of the *Kadzoku*, Daté* among others, had presented a memorial, the purport of which, however, is unknown. It is further said that one of the *Sangi* had presented a memorial asking why it had not been decided to separate, and stating that some had broken promises previously made. At the end of this it was stated that some of the *Daijin* had sent in a memorial to the effect that the question in regard to separation ought to be decided. Again we heard that all the *Daijin* and *Sangi* had gone to the Kunaisho to decide the question, and again that his Majesty said that matters should remain as they are, so that the administration should not be changed. Some of the *Daijin* and the *Sangi* remained there and returned after the others, and since the 20th the officials are said to have gone in succession to the Kunaisho, and that all this is not yet over. On the 20th some of the *Daijin* hearing that the prayer of their memorial would not be granted, sent in their resignations, and some of the *Sangi* acted in the same manner on the same day.

As all this is mere rumour we give no names. But it is clear that one party desires a change in the Administration while the other does not. Should the above rumours prove not to have been false, some changes among the higher officials will surely take place, and then everything will be made clear. As any change in the Administration is a very important thing for the people of Japan, we must pay strict attention to it, and although these are but rumours, we have placed them on record.

* The well-known ex-prince Daté.

THE PRICE OF RICE.

(Chôya Shimbun).

Every one knows that the harvest this year is very abundant, and that the price of rice in the different *ken* has fallen greatly. But rice at Tôkiô and Osaka is still high and does not get cheaper. This is caused by there being many bad merchants who keep up the price, and those who are supposed to be learned men, *samurai*, and poor students, wrangle about a war with Corea and publish their views in the newspapers, and these causes combine to keep up the price of rice. As long as men discharge their own duties properly, things work smoothly. The Government will take the Corean question into its own hands, and it will be settled in such a manner as to bring no disgrace on the nation, so that it is idle for a set of noisy people to be discussing it.* Should the Government declare war, it would create no disturbance in the country, nor would rice necessarily rise on that account. For example; let us suppose that war was declared, and that 10,000 men were to be sent over. One man would consume 1 *to* of rice per day; which gives 100 *koku* for the whole force, or 250 bags containing 4 *to* each. This would be 7,500 bags a month or 90,000 bags a year. But no man, however large, could eat a *sho* of rice a day, and the average of a man's consumption is 5 *go* a day, and this only makes 45,000 bags a year. But an army of 10,000 men will not be required for an expedition to Corea. Let us say that 5,000 men are enough. They would require 22,500 bags, and certainly it would not require a whole year to beat Corea. Let us therefore say it would occupy us but six months, and in this case only 11,250 bags would be wanted. The taxes of any district would provide this, and it could easily be sent over from the most convenient place, Kiushiu or Shikoku. Therefore even though war should break out, the quantity of rice required would be small. When the taxes which used to be paid in rice are paid in money, rice will fall and there will be no more murmuring about its price. Starving persons cannot exist long, and dull times must come to an end. By next spring business will very probably improve. I therefore advise all to bear their troubles a little longer. Let every one discharge the duties which devolve upon him without becoming disheartened, and the breeze of prosperity will soon begin to blow again.

* It is impossible to imagine newspapers holding more unworthy [illegible] Their very prominence is to [illegible] J. W. M.]

DIVINATION.

(Nichi Nichi Shimbun.)

There exists a work written during the Min dynasty in which it is stated that the Japanese are given to divination. Now it is true that we have some strange superstitions among us, and it is not rare to hear that the spirits of Oinari Sama and Kobodaishi and others have been summoned and appeared. Recently an old woman called Oshakababa has become very popular in Tôkio. She is of great age and much wrinkled. When asked to offer a prayer, she repeats words which sound like *Hara ke Sobakawa* and she becomes distended to an enormous

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

size. She tells people that Shaka has entered her stomach, and, making use of the mouth, answers all varieties of questions, from the origin of sickness, down to the doings of the living and dead, the operations necessary to effect cures, the places where doctors may be found &c., and the people believing this, she is visited by people of both sexes and all ages. Is she not a benevolent person?

The next fact is equally wonderful. There is another woman in Hongô, Yedo, near the temple of Ekôin, called the Yakujin (Demon) Baba, and she has the power of casting out evil spirits which cause suffering to various persons, and curing them. Thus no doctor, operation or medicine is required. It is said that when fever is prevalent she is very popular. The mode in which she operates is as follows. She first places near the pillow of the patient a *keisoku*, or paper strips on a stick, lights a lamp, burns incense, and brings different sorts of sweet cakes and boiled rice on a tray. Then, after striking fire with a flint, she begins to pray, which sounds like muttering to herself, at the same time stroking the back and breast of her patient. After a few moments she cries out "Go away, go away; I must take you with me now;" and then suddenly she opens the door taking all the things she had offered (not forgetting the rice and the cakes) and runs out, throwing the *keisoku* into the river or on to the side of the road. She then returns, and the evil spirit, which is supposed to have caused the suffering of the patient is presumed to have left. After the process some of her patients really say that their bodies are lighter. I hope that some day a woman will arise who will cast out the evil spirit which causes our poverty. Oh, how eagerly I would go to her!

RELIGION.

(Choya Shimbun.)

The religions which have begun to spread in the east are the Roman Catholic, the Greek and the Protestant. That which flourishes most is the Roman Catholic, while, although the number of its missionaries is great, the Protestant faith has the fewest converts. Of course the missionaries of these various denominations are not useless, but there are some of them who think that Asiatics are barbarous and ignorant, and they teach them about columns and clouds of fire and about diving into a whale, and try to convert them by telling them about God and Christ. But to teach Asiatics such things, who have been for many generations steeped in their own superstitions, only tends to make them cling all the closer to their own beliefs and far from attracting them to it, only drives them further away from Christianity, for we have a mass of traditions of supernatural deeds in our own mythology. At this moment even we have those of Onsaki, Kuasaki, Inari, Kobodaishi and the like. I know not whether such beliefs are true on not, but, at all events, this supernatural influence proposed to do away with evil and replace it with good, so that it is natural that people should be more drawn towards those miracles which happen in the present day than to those which happened thousands of years ago. I have lately heard that there is such a sect as the Unitarians, which flourishes most in the United States. The sect is disliked by all the others. But its members plead that miracles were only wrought to convert barbarians, and that though Christ possessed great powers of this kind, he was in fact nothing but a man. It is said that virtue is the sole foundation of this religion, and that its teachers never seek to lead the people astray by untruths. Should this be true, I have little doubt that there would be many Japanese of the middle class who would embrace it.

"AN ENEMY HATH DONE THIS."

[The leading article of the *Hochi Shimbun* of October 13th contains the following passage.]

* * * * * *

Consider, for example, the disgrace which our country has had put upon it by England. There is no comparison between it and the insult we have received from Corea. The negotiations which took place(*i.e.* the claims which were made) with England in respect to the Mamanoura affair some years ago belonged to this category. We have not yet been able to forget them. When we read its history we feel like Kosen, the King of Etsu, who placed by him a gall-bladder (to keep up his bitter feelings). In the feudal times if any one interfered with a Daimio's procession, the old custom sanctioned his being cut down. That the English government should have insulted the Tycoon's government, which was then the power of Japan, for this single matter we really cannot bear to speak of. Nor can we for shame recount our negotiations with foreign powers which have taken place since then—they being always armed and threatening, and concluding conventions in a language which gives them all the advantage. Even at present there are many points in which they refuse to acknowledge our equal rank with them as a nation. If these things do not constitute a great insult to Japan, what are they?

THE SAMURAI'S PENSIONS.

(Nichi Nichi Shimbun.)

There are some affairs which demand urgent reform, while there are others which can be dealt with by slower and gradual processes. Should the former be delayed, or the latter done in too great haste, serious calamity may arise. And it is the duty of the Government to make these reforms in an appropriate time and manner.

The *kadzoku* and *shidzoku* question is one which must be dealt with in this slow and gradual manner. I see that it is often discussed in the newspapers, some saying that the pensions paid to these classes should be abolished immediately, others that they should be continued. But I cannot agree with the writers who urge either of these views On the contrary, indeed, I shiver every time I read them, and therefore will express my own opinion on the subject.

Should the question be argued on theoretical grounds, we should say that there is no reason for paying those who perform no duty, and it is unjust both to the Government and the people that they should receive pensions. When their services were no longer required, their pensions should have ceased, and as ordinary members of the community they ought not to enjoy any special treatment. What object can there be in making and keeping them dependents? This is a just and reasonable position. But should those who argue thus separate themselves for a moment from theory and look to the practical side of the question, they will soon discover that there is another view of the matter. Look for a moment at the *kadzoku* and *shidzoku*. All their ideas and actions are those of the feudal times. Their minds were then free from all anxieties, and I will venture to say that eight or nine out of every ten of them would vote for a return to feudal institutions if asked for their opinion on them. This it is which causes anxiety and fear to the Government, because should their pensions be suddenly discontinued and all their connection with the Government be cut off, they would soon fall into starvation and ultimately into rebellion which might overthrow the nation, and if they raised an insurrection it would not be like the farmers coming out with bamboo spears or such-like rude weapons. It is on this account, I say, that the Government fears them and continues to pay their pensions. Of course this is wrong in the light of reason, but the Government has to act from motives of expediency.

The Government has notified that those who are desirous of surrendering their pensions may do so for the equivalent of six years' purchase of their annual value, and may become merchants or farmers or the like, in order that the number of pensioners may be decreased, which proves that the Government is bestowing deep attention on the subject. And it was at the same time notified that those who could not show that they had some assured or very probable means of support should not claim this commutation of their pensions. They were not to be allowed to squander recklessly the money they received from this source, and in this the care of the Government may be also discerned. Notifications were subsequently issued that the law respecting the commutation of the pensions was repealed, and many rumours were freely set in motion on this subject, all of them unworthy of belief. We imagine that the proposed change in the land taxation was the cause of the repeal of this

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

measure, and if we remember that the pensions once paid in rice are now paid in money, we can understand the reason for this. It many be, too, that after some little time the commutation of the pensions will be resumed again.

These, then, are the conditions of the *kadzoku* and *shidzoku* question, and thus it is that while some are for abolishing the pensions, others are for continuing them. Should an order be issued by the Government to stop them suddenly, it may be as clearly seen as a reflection in a mirror that blood would flow in rivers and bones would be heaped into mountains. Indeed, we might ultimately lose our independence. Such a decree could not represent the will of the Emperor, and therefore the question cannot be settled on mere theoretical grounds.

But, on the other hand, I do not mean that the question ought to remain for ever in its present condition, and I am sure that the Government is of the same mind. I think the pensions ought to be reduced gradually—say within eight or nine years—and by that time the whole class should have laid some firm foundations for their fortunes. Should some of them be unable to get their living independently, a certain sum of money might be appropriated for them to commence business with, and this should at once terminate their anxieties and those of the Government. The *kadzoku* and *shidzoku* will then become like the rest of us, and when these times arrive we can institute a House of Commons and a limited monarchy, the germs of which have already made their appearance. Then for the first time Japan might be called an independent country and would take her fair position in the world, which would be a great source of happiness to us. It is for these reasons that we think the solution of the *kadzoku* and *shidzoku* question demands patience. What do ye all think?

Correspondence.

A REPLY.

To the Editor of the "Japan Weekly Mail."

Yedo, October 27th, 1875.

Sir,—Will you kindly give room to the following remarks in answer to your criticism of my letter in last week's issue of your paper.

I did not imagine that my answer to your insinuation that clergymen make statements in the pulpit which they would not venture to do in ordinary conversation, was so obscure as it seems to have been to you. You implied then, and you state directly in your criticism of my letter, that they make them because from the circumstances of the case they cannot be answered. I replied in effect that it was untrue to suppose that they could not be answered, for they continually were in the public prints, and as a case in point I cited that of a clergyman who recently visited Yokohama, and whose pulpit statements were most unsparingly criticised in some of the Yokohama journals. Your charge is of course a grave one, as it taxes clergymen with deliberately taking advantage of their position for party, if not for dishonest purposes. I forbore to urge that exactly the same argument as yours applies to the editor of a newspaper, who cannot be answered at the time of the publication of his statements, and whose argument passes with the mass of people "without analysis." As to your statement that clergymen are rarely intellectually scrupulous, as you put it forward merely as your own opinion, I shall content myself with denying its correctness.

And now with reference to the next portion of your criticism. If you look at my letter again you will see that the position I started to prove was that *belief* in miracles was not impossible, which it would be granting the truth of Hume's formula. I showed that as probability was founded on experience, and the conclusions from experience were founded upon nothing *logical*, as Hume shows over and over again, and as you must allow if you will only attentively consider the question, that therefore probability could not be allowed to influence the question in the case of a reported miracle, being an incompetent witness, but that each case must be examined on its own grounds. I do not, for one instant, touch upon the question of experience in its capacity as a practical guide to us. Of course it is so—of course the probability of the sun's rising to-morrow is *practically* of the nature of certainty to us: but what if two suns rose to-morrow—*practically* the probability is of the nature of certainty to us that two suns will not rise to-morrow—*logically* probability has nothing to say in the matter, because the experience upon which it is founded can tell us nothing at all of the ultimate reason why one sun should rise, or why any should rise at all. If you were told, on competent authority, or if you saw some such marvel as I have just mentioned, what would the previous probability against it be worth, against the evidence of your senses? Simply nothing at all. I forbear to press this point now because I shall have occasion to take it up presently, but you fail to distinguish between the two terms logical and practical.

Since, however, what I have said is not sufficient, it will perhaps be better, if you will allow me, to examine Hume's formula itself, and test its correctness on other grounds. He thus states his argument. "The source of our belief in the uniformity of nature" he says "is experience, and this experience is constant; the source of our belief in testimony is also experience, but this experience is variable, because testimony has sometimes deceived us; we follow the constant experience which is against the miracle, in preference to the variable which is in favour of it." A more plausible argument was surely never constructed. That it contains several fallacies I hope to show.

Supposing, then, the argument to hold good in the case of miracles, it will of course be equally true of any phenomena contrary to experience. If practically applied, then, could there be a more tremendous bar to all scientific progress? Consider that the great mass of mankind are dependent upon testimony, and that generally of books, and especially of newspapers, which it is the experience of all are often most untrustworthy—for all that they know of new inventions and discoveries in modern science. Must all such testimony be regarded as insufficient to establish the credibility of any new fact contrary to previous experience? We have all heard of the story of the Eastern prince who had never seen nor heard of frozen water, until one day a traveller told him that, in his country, people were accustomed to walk and even ride on water. Now water and its properties were quite familiar to the prince. He knew by experience that water never did become hard or solid. Would he have been right therefore in at once rejecting the testimony that water did sometimes become hard and solid? Yet, according to Hume's rule, he would have been obliged to do so. Examples of this kind might be multiplied; such for instance as that of the contraction of water under the influence of heat as its temperature rises from 32° to, I think, 39°, in contradiction to the law of expansion by heat. To reject such facts as these because on the balance of probabilities the ground of the testimony in favour of them is less—as it must always be—than the experience against them, would be absurd. And, in fact, the rule breaks down in Hume's own hands, when he gives, in a hypothetical case, an example of that kind of marvel which is capable of being proved by human testimony, and supposes a period of darkness extending for eight days over the whole earth, something totally contrary to all human experience.

Wherein then do the fallacies underlying Hume's argument consist? First, there is a slight one in the argument itself, in that it omits to notice that by far the larger portion of the experience to which any one appeals is founded on the testimony of others, and hence is weakened in precisely the same manner, by the chance of its proving false as the testimony in favour of an alleged miracle would be. Testimony is the weapon by which Hume assails testimony.

Another fallacy is the assumption that experience has proved that miracles have never happened. This, if you will consider it, you will see to be a begging of the question. Whose experience has proved that miracles have never happened? The experience only of those who have never seen them—and, if we add to this the experience of those who profess to have seen miracles, it is plain that no such universal experience as is claimed has established the uniformity of the laws of nature. The

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

argument will then be as follows: experience proves the uniformity of the laws of nature with the exception of the experience of those who have seen miracles. That is, the experience of the uniformity of nature is not constant.

But the chief defect in Hume's formula is that it is not a complete statement of the question. When I have a new scientific fact presented to my notice what do I do? Do I simply compare my past experience with the testimony to the fact, and on their balance base my final opinion? Most certainly not. I enquire further concerning this new phenomena—by what agencies it is said to have been brought about?—under what circumstances it is said to have occurred? and so on. And my object in making these enquiries is to see whether my experience has any right to guide me in the matter. For if there be any important circumstance or agency of whose influence I know nothing, then of course I have no experience to which to appeal, and my contrary experience being found to be irrelevant, the whole of the previous balance of probabilities is at an end. Take the story of the Eastern prince to which I have just referred. When he was first told that water was sometimes solid, he would naturally ask—how?—under what circumstances? And being answered, When the weather was very cold, and knowing nothing of such weather, or of the effect which such cold might have upon water, he would at once conclude that his previous experience of water under ordinary circumstances was no guide to him under these altered circumstances. He might object to the efficiency of the cause assigned, but his objection to the phenomenon as contrary to past experience would be no longer tenable. Whenever we have any strange or new fact, contrary to our past experience, brought before us, we at once examine into the circumstances and the cause of the phenomenon, and as soon as we are satisfied that there is something connected with it of whose influence we are ignorant, we immediately give up the balance of probabilities, because it is wholly inapplicable.

And this is exactly the case with respect to miracles. It is alleged concerning them that "they are phenomena brought about by agency and relating to circumstances essentially different from anything which ordinary experience is cognizant of." Belief is not claimed for them as mere wonders, but as wonders wrought by God's special agency, for *special moral ends*. This is what is claimed for them, and unless this claim be proved entirely baseless—which from the circumstance of the case it can never be—the argument from experience drops out of account entirely, because in such a case it is wholly irrelevant.

With reference to the remainder of your remarks, I have, personally, more fault to find because you so greatly misrepresent me—though I know unintentionally,—when you impute to me the attitude of a "child to whom all things are strange," &c towards the phenomena of the universe, because I had said that custom had in this, as in other things, familiarized me with the wonderful nature of those phenomena. I for my part can neither understand nor sympathize with a mind in whom an examination into the mechanism of nature does not excite both wonder and admiration. Is it then your belief that the man of science when he enters into that "dry light" in which his examinations into physical science are rightly carried on, leaves behind him the faculty of wonder? To my mind one principal effect of all scientific investigation must be to increase, in an infinite degree, the feeling of admiration and wonder in the mind of every investigator susceptible of such emotion. But will this, as you seem to think, produce the attitude of idly "standing in blank wonder?" Has it ever done so from the days of the father of inductive philosophy down? Does it not rather excite the mind to new vigour in the research?

In conclusion I can only say that you must have been unfortunate in your experience of clergymen. I have had a good deal of experience of them, both publicly and in private, and I can say with assurance that I never yet heard a layman upbraided in any way by one of them because his opinion differed from theirs. Such language as you impute to them, if it were even used, belongs to a day that is long passed. Professor Tyndall, who is not supposed to be particularly partial to them as a class, yet bears this strong testimony to their liberality of thought. "The clergy of England" he says "or at all events the clergy of London—have nerve enough to listen to the strongest views which any one among us would care to utter; and they invite, if they do not challenge, men of the most decided opinions to state and stand by those opinions in open court. Let the hardiest theory be stated only in the language current among gentlemen, and they look it in the face; smiting the theory if they do not like it, not with theological fulmination, but with honest secular strength." Your remarks and your quotations from Lecky apply, so far as they are true—and I am quite willing to admit their general truth,—to a past age, and it is unfair to bring them forward to the prejudice of the clergy of the present day if it can be shown that the case is different with them, and such remarks as those of Professor Tyndall show it is. They prove only that the clergy as a body were not in advance of their age. They lived in days in which it was considered right to punish what was considered error in faith, and honestly holding their opinions they followed the spirit of their age.

I remain, &c.,

A. C. S.

[Will our correspondent forgive us for deferring our answer to his letter until next week?—Ed. *J. W. M.*]

Law & Police

IN H. B. M.'s PROVINCIAL COURT.

Before C. W. Goodwin, Esq., Assistant Judge.

Wednesday, 27th October, 1875.

H. Weintraub *vs.* John Robertson, as agents of the Oriental Bank Corporation.

Mr. Duncan appeared as counsel for plaintiff, and Mr. Dickins for the Bank.

Mr. Duncan said that this was an action brought by the plaintiff against J. Robertson, as agent of the Oriental Bank, to recover a sum of $3 000 in trover, for loss sustained through the wrongfu detention of certain goods. The answer, he said, was very long and pleaded "Not guilty" to the allegations in the petition The facts of the case were very simple. On the 12th January, 1874 the plaintiff went to the Oriental BankCorporation, and asked the bank to purchase two bills of exchange,—one for $2,000, the other for $1,800. The bank asked for the usual security. Plaintiff made out a list of certain goods to be shipped, and declared their value to be $3,700. Mr. Robertson said, on looking over the list, "I will give you what you want" (the money). Plaintiff then signed the two bills of exchange, which were drawn on his (plaintiff's) firm at Hongkong. The goods were then shipped to Hongkong by the P. & O. Co., and plaintiff went with them in the same steamer. Plaintiff, on arriving at Hongkong, accepted the bills in his firm's name there. The market for the class of goods was not then in a good state. At this time plaintiff received a letter from his wife in Yokohama, saying that an offer had been made for the goods (the goods that had been shipped to Hongkong,) and that $500 had been deposited Plaintiff, on receipt of this letter, went to the Oriental Bank in Hongkong, and paid to the Bank $1,800, obtaining a delivery order for six out of the twelve cases of merchandise,—all the twelve cases being then in the possession of the Oriental Bank, and remained so till the 4th February, 1874. Plaintiff selected six cases from the twelve in the bank's godown, and obtained a bill of lading for them from the P. & O. Co., as he had them shipped on board a P. & O. steamer for Yokohama. Plaintiff was met in Hongkong by a clerk of the Oriental Bank Corporation, and asked to come to the office of the bank. When he got to the bank, Mr Cameron said to him, "You have only paid $1,800, and taken six cases of the goods; for all we know, they may be the most valuable ones." Plaintiff thereupon paid $200 more, and got back one of the bills of exchange (the $2,000 one he had signed). Plaintiff then asked if the ban would permit him to ship back to Yokohama the other six cases. Mr Cameron refused, unless on order of, or Mr Robertson's consent could be got. Plaintiff then returned to Yokohama, and asked Mr Robertson if he would advance $1,800 on the bill of lading he (plaintiff) had for the six cases shipped back to Yokohama. Plantiff wanted this advance, in order to release the other six cases at Hongkong. Mr Thomson, of the Oriental Bank Corporation here, asked him to endorse the bill of lading for the six cases, which he did, and to call again in the

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

afternoon. He called again, and asked for the $1,8000 advance. Mr. Thomson refused to make it. On his asking why it was refused, Mr. Thomson said Mr. Robertson would not make the advance. He then asked that his bill of lading be returned to him, but the bank also refused to give it up till the advance of $1,800 on the goods at Hongkong was paid. The goods were sold by auction by the bank. He (Mr. Duncan) would produce evidence as to their value.

He then called—

J. Rickett, jr., sworn: I am the agent of the P & O. Company in Yokohama. In February, 1874, I believe a bill of lading for six cases of goods, marked H. W. passed through the P. & O. office here. The bill of lading was for six cases of goods by the P. & O. steamer *Madras*.

Mr. Dickins did not cross-examine.

Mr. Duncan then read the evidence (taken at the British Consulate in Nagasaki) of a man who had had something to do with the goods in Yokohama as to their nature, value, etc.

Mr. Dickins objected to a great part of it as being merely hearsay.

H. Weintraub, sworn: [Mr. Lotz acted as interpreter.] I am the plaintiff. I remember the 12th January, 1874. I went to the Oriental Bank Corporation on that day. I asked for $3,800 (on goods deposited with the bank) on two promissory notes,—one for $2,000, the other for $1,800. They were written by Mr Thomson of the bank. I signed them. The two notes you show are the ones I signed. I also signed two letters of hypothecation. I gave the bills of lading to the bank, after signing them. They were for six cases each—twelve cases in all. I went with the goods to Hongkong in the same steamer. I tried to sell the goods at Hongkong. I could not sell them at a good price, as the Chinese holidays were then on. I received a letter from my wife. I went to the Oriental Bank Corporation in Hongkong and paid $1,800. I then received six cases of goods back, and sent them to Yokohama. I took them in a boat on board at 11 o'clock. I received a receipt for the cases. I went to the P. & O. office and paid freight and got a bill of lading. I met a manager [of the bank] and he said, "Show me the cases, as there is one lot for $2,000 and one for $1,800, so that no mistake happens." The manager asked if I had the right cases and I replied, "Certainly." I asked the reson why the manager wanted to know, and I said, "In case I have made a mistake I will pay $200 more." I paid it. I paid the $200 when I came back from the ship. I asked the manager at Hongkong to forward the bill of lading to the manager in Yokohama. He said, "Call again." I called, and Mr. Cameron of the bank took the bill of lading and promised to forward it to Yokohama. I returned to Yokohama and went to the manager of the Oriental Bank Corporation here, on 13th February, 1874, and asked him to advance money on the six cases in Hongkong. I asked Mr. Robertson to write to Hongkong and order the other six cases to be sent up. Mr. Robertson told me I could have $1,800 advance. Mr. Robertson said, "Come on Monday." I went, and Mr. Robertson told Mr. Thomson to ask me how long I wanted the loan of the $1,800 for. This was on the 16th February. Mr. Thomson made out a promissory note for $1,800; at least he commenced to write it. Mr. Thomson asked me if I had settled the interest with Mr. Robertson, I replied that I would pay the usual interest. Mr. Thomson told me to sign the bill of lading. I signed the one you show me, in presence of Mr Thomson. On coming bank after tiffin, Thomson said, "You must speak to Mr Robertson about the affair." Mr Thomson said Mr Robertson would not advance me any money. I then asked for my bill of lading; but the bank refused to give it up to me, unless I paid $1,800 advanced on the goods then at Hongkong. I replied that that bill was not yet due. I asked Mr Robertson for my bill of lading, but he refused to give it back to me.

On re-assembling, after the adjournment, Mr Lotz (the interpreter) did not appear, on which a discussion arose as to who should go to the expense of paying for one.

His Honor thought plaintiff knew enough English to do without one.

Mr. Dickins protested against this, and a note was made of his objection.

His Honour said plaintiff was suing *in forma pauperis*, and therefore could not be ordered to go to the expense of employing an interpreter.

Mr. Duncan continued his examination of the plaintiff, H. Weintraub.

Witness: I gave a list of the goods to the bank, contained in the twelve cases shipped to Hongkong. They contained shirts, Italian cloth, shoes, collars, sponges, alpaca, and other articles. I received account sales of the things sold in Hongkong. I received the account sales. The goods were sent to Hongkong with two bills of lading. I swear it. I did not ask the manager at Hongkong to allow me to pay my bills by drawing fresh ones on Yokohama. I paid $2,000 altogether at Hongkong, and got back from the bank the $2,000 promissory note. The cases were marked "Yokohama," in black ink. I put the figures (very small) 200 and 1800 in the corners of the cases. Some of the goods were bought at auction in Yokohama. I paid about $3,700 for all these goods. According to the account sales, they (the goods) brought only a little over $1,000. I have not got a copy of the list I gave to Mr. Robertson of the goods. I did not promise to give the bank any other security besides the goods. I paid the $2000 in the afternoon. Mr. Cameron did not reproach me at Hongkong for not giving any further security than the goods. It was not arranged that the bill of lading should be given up to me when I paid the the $1,800 bill. I paid the $200 in Hongkong after I returned from the ship. On the 13th February I saw Mr. Robertson. I told him I wanted $1,800 to get the other six cases up from Hongkong. I was told to come on Monday, as Mr. Robertson was very busy then. I went on Monday. The bank got me to sign the bill of lading, on promising to make the advance of $1,800.

Mr. Duncan said that this was his case for the plaintiff. He had another witness, as to the value of the goods, who was ill to-day, but who would, perhaps, be able to attend to-morrow.

Mr Dickins said his case was a very simple one. Plaintiff had made a direct charge of fraud against the bank. The plaintiff had not sustained his allegations. He would apply that the plaintiff be non-suited.

His Honor declined to do so.

John Robertson, sworn: I am the agent of the Oriental Bank Corporation. I remember, in January, 1874, having bill transactions with plaintiff. Plaintiff called and requested an advance on certain goods he was going to send to Hongkong. He asked for about $4,000, which I agreed to let him have. Plaintiff gave me a memo., or list of the goods, which I took to be correct. It is not usual to advance up to the full value of goods. I gave plaintiff the rate of exchange; he said it was too high. I told him I did not care about it. In the afternoon plaintiff came back and said it was all right. He was to ship the goods and send in the documents to the bank. Two bills were given at the request of plaintiff. I agreed to lend about $4,000. I would not have cared if 20 bills had been given. It did not matter what number. [Letter read from the bank in Hongkong to the bank in Yokohama.] It is not true that the bank promised to loan plaintiff another $1,800. I told plaintiff to settle up the transaction before commencing another one. I told him he could have all his goods back as soon as he paid us all our money back.

Cross-examined by Mr Duncan: If plaintiff came when I was busy, I very likely told him to call again. I do not remember any arrangement about the bill of lading. I do not remember telling Mr Thomson to give plaintiff $1,800. I do not think I ever saw the bill of lading. I may have seen it, but I did not examine it.

Re-examined by Mr. Dickins.—I am perfectly certain I never agreed to make a fresh advance to plaintiff till this transaction was closed.

G. W. Thomson, sworn.—I am the assistant accountant of the O. B. C. I remember in January, 1874 Mr. Robertson coming into my room with plaintiff. Mr. Robertson told me he had agreed to advance $3,800 to plaintiff on 12 cases said to contain miscellaneous articles of wearing apparel. I was about to make out one bill for the amount when plaintiff said he wanted two bills, one for $2,000 and one for $1,800. I thought this a little strange. I went and asked MrRobertson if I might make out two bills for plaintiff to sign. Mr Robertson raised no objection, so I made them out. The bills were drawn at 30 days sight. There were two bills of lading. There was one letter of hypothecation and that is plaintiff's signature on it. Plaintiff came on one or two occasions, anxious to see Mr. Robertson. On one of these occasions I asked him if he could take up the bill for $1,800; he said he could not do so. I asked him to endorse the bill of lading, which we had received from Hongkong. He did so without any remark. Once or twice he spoke about wanting a loan and I told him he must speak to Mr Robertson about it. The bill for $1,800 was not paid and we proceeded to realise the securities. Mr Robertson never instructed me to draw up a promissory note or bill for $1,800, a further loan to plaintiff. I did not induce plaintiff to endorse the bill of lading by a promise of a further loan. I do not know if plaintiff asked for the bill of lading but, I know there was no chance of him getting it till he paid the bill for $1,800. I told

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

plaintiff I was a clerk. The sale of the securities, the 12 cases, did not realise enough to pay one bill, the bill for $1,800. The balance was partly recovered in the German Consulate from plaintiff.

Cross-examined by Mr Duncan:—I do not remember when plaintiff first called after his return from Hongkong. I think it was on his first visit that he (plaintiff) endorsed the bill of lading over to the Bank. On one or two occasions Mr. Robertson asked me to find out what was the object of plaintiff's visits to the Bank. I do not remember Mr. Robertson telling me to settle with plaintiff. I saw plaintiff sign the letter of hypothecation. There was probably a duplicate to go with the 2nd of exchange. Plaintiff must have signed the duplicate. I saw the list of goods plaintiff brought; I thought it a suspicious looking document and carried it in to Mr. Robertson. He told me to send it to Hongkong. I do not think the value of the goods was written on the list.

Re-examined by Mr Dickins.—The duplicate letter of hypothecation was a fac-simile of the original.

Mr Dickins here read the cross-examination of the man now at Nagasaki who had had something to do with the goods in Yokohama. Mr Dickins also read the evidence of Mr Cameron of the Oriental Bank Corporation (now at Point-de-Galle) at Hongkong at the time plaintiff got there with his goods. He then read the evidence of Mr Scott of the O. B. C. who was also at Hongkong at this time.

Mr Dickins then summed up for the Oriental Bank and Mr Duncan replied on behalf of the plaintiff.

Judgment was reserved.

U. S. CONSULAR COURT.

Before Gen VAN BUREN, U. S. Consul-General;
And
F. R. WETMORE and C. DRAKE, assessors.
Thursday, 28th October, 1875.
ITO HACHIBEI *vs.* WALSH, HALL & Co.

In this case, plaintiff claims a sum of $108,715.42, balance of account and interest connected with certain trading transactions he had had with defendants.

Defendants deny that they are indebted in the above amount, and claim that he (plaintiff) is indebted to them in the sums of $16,228.55, and $16,483.61, being balance of accounts between them and the plaintiff.

Mr. F. V. Dickins appeared as counsel for the plaintiff; Mr. G. P. Ness for defendants.

Court re-assembled at 10 a. m.

Mr. Ness continued his examination of defendants' interpreter.

Futami Noburi: I first saw accounts from the plaintiff to defendants during the 11th month last year. That account claimed about $110,000. I spoke to Mr. Walsh about it. A letter about the account was written to plaintiff by defendants in English, and had a translation attached. This letter was sent in the 8th month last year. The letter stated that on the 27th of the 9th month plaintiff came to defendants' office and promised to settle everything up by the 10th of the 8th month. "We write to you in advance about it, as you have so often broken your promises, and if you do not settle up by that day it may make trouble with the bank." I have seen the letter you show me before. During the latter part of the 9th month, last year, somebody came from Ito's and asked for the $40,000 promissory note. I said I would look and see if it was amongst the papers of Walsh, Hall & Co. I could not find it. Several days afterwards, Ito's son and Kaske came on the same errand, and said the paper must be in defendants', and requesting that another search be made. I made another search, but could not find it. On my telling them this, they took up a piece of paper and wrote this (document produced), and requested that I would write a translation of it, get Walsh, Hall & Co.'s signature appended, and send it to Ito. I made a translation, and showed it to Mr. Walsh; and he said he did not know anything about such a receipt, but when everything was settled up with Ito he (Walsh) would hand it, with any other documents, to Ito, provided it was there. Shoske, Kaske, Hachiro and I, were present when this document was written. Kaske wrote it. I took 104,425 *rios'* worth of securities to the Tokio *Fu* in Yedo and changed 50,000 rios' worth of them; this was in February, 1874. The officer of the Tokio *Fu* exchanged 50,000 rios' worth for Government Bonds. One of Ito's sons (Hachijiro) made a memo. at the time of the securities exchanged (document produced). I saw Hachijiro write it. [Document marked exhibit 16.] I received 500 new Government bonds in exchange. Besides these, Ito received a box of 20 cent silver pieces. I brought the securities not exchanged and the new bonds, back, and handed them to Mr. Walsh. The part of securities not exchanged was handed to Ito a few days afterwards. I and Mr. Thomas Walsh were present.

Cross-examined by Mr. Dickins: No receipt was taken when they were handed back to Ito. Ito came and stated they "wouldn't do." I think Ito meant by that that they were of no farther use. They were returned to Ito. I have never seen them since. The ones now in the bank are different ones. When, in the year before last, Ito borrowed from Walsh, Hall & Co. $10,000, these other bonds were deposited with the bank. I have examined the two lots of securities. I have a list of the securities that I took to Tokio *Fu* but I do not know which ones were exchanged. This was in the summer of 1873. I made up a list because Irwin wanted to get their value from the Okurasho. It is possible that I showed this list to Ito. I knew the bonds were Ito's; they were addressed to Ito. I was a *shidzoku* before I entered the employment of Walsh Hall & Co. I was never a boy at No. 6. I entered Walsh Hall & & Co.'s service in the beginning of 1873. I was not turned "neck and crop" out of No. 6 for misconduct. I came to Yokohama a few days only before I entered Walsh, Hall & Co.'s service. I had been an interpreter at Yedo. I first saw Ito in the summer of 1873. I don't tell lies; I never did in my life. If I have, prove it. I acted as interpreter to Walsh Hall & Co. many times in 1873. I saw Ito ten or fifteen times in 1873. I remember some of the interviews at which I was present. I am not a god, and cannot remember all. It was during the latter part of 1873 that Ito told me he was to bear all the loss on the *niboo* transactions. Ito was not to bear the loss only till the accounts were settled. During 1873, Mr. Walsh frequently asked Ito to pay the balance, and as often Ito asked for time; I do not remember what sum was named. I never before heard of a Japanese pressing a claim against a Japanese through a foreign house. I have not seen promissory notes from Mito to defendants. Ito told me he would have had to accept bonds payable in a number of years for the money he loaned to Mito *Han*, only for defendants collecting it. Ito was told when he wanted to borrow money that his securities must be deposited with a bank. Ito was not told that the bank would have a general lien on the securities. Ito was not told that the bank might detain the securities on account of defendants' indebtedness to the bank. I did not see a promissory note of Ito's to the bank. I do not think there was anything on the back of the note which Ito gave to Walsh, Hall & Co., so far as I know. It promises to pay Walsh, Hall & Co.; it does not promise to pay anybody else. It was addressed to the defendants. The *Hoan Maru* belonged to certain Japanese at that time. I can't say positively if the *Hoan Maru* was handed over to defendants as security, or sold to them. I interpreted during the transaction. I do not remember if Ito said that the *Hoan Maru* was handed over as additional security. I have never seen a document by which Ito handed it over to Walsh, Hall & Co. I have seen the ship's Government transfer document. The ship was taken over as worth 18,000 rios. Ito's other securities were not returned to him.

The Court here adjourned till 2 p.m.

Court reassembled at 2 p.m.

Mr Dickins continued his cross-examination of Futami Nobori.

Witness:—There were no other securities as far as I know besides those mentioned in the petition, and those that were exchanged for Government bonds. I have a list of the securities exchanged for Government bonds. [Witness here compared two lists of securities together.] None of the securities mentioned in the petition are in my list, the amounts are entirely different. [A very long examination here took place about the securities, when they were deposited, &c., &c.] In the 6th month 1874 Ito came after a loan of a million dollars, which was refused. Ito said he was very sorry. I often met Ito after that [Exhibit "T" shown to witness]. I sent this to Ito in June last year. On the 27th or 28th June Ito came to Walsh, Hall & Co.'s office very early in the morning. I am sure I sent exhibit "T" to Ito on the day I have named. I sent exhibit "P" to Ito in the 7th month last year. Defendants received Ito's account in the 9th or 10th month last. I heard between the 15th and 20th August that Ito was going to bring a law-suit. The first I heard about Ito denying his indebtedness to Walsh, Hall & Co. was when he sent in his account to them. I sent this account [exhibit "U"] to Ito in January this year. Previous to writing account "U" I do not if I wrote, or translated, an account containing the so-called false entries. I do not remember if the so-called false entries are in account "P" [defendants' exhibit "15" shown to witness]. This is an exact copy of the first page of book "D". I wrote it at Walsh, Hall & Co.'s office. I used a tea cup to make the round marks to represent the seal. The seals are in the copy the same as they were in the

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

original when I copied it. I did not see Ito write the letter I received from him (exhibit "15"); I received it by mail. I do not know if it is in the handwriting of Ito. I have written a number of letters to Ito. I have copies of some of them. (Exhibits "14" and "2" shown to witness) The handwriting of these two documents is different. On the 18th of 12th month I knew Ito had book "D". Ito had the book to make up the accounts with. Ito refused to show it to Irwin or give it to him, unless he (Irwin) gave up the $40,000 paper. After refusing to show it Ito denied having the book. [The value of seals gone into]. I know a little about Japanese law and accounts.

The Court adjourned till Monday morning at 10 o'clock.

IN H. M. F. M.'s CONSULAR COURT.

Before J. J. KESWICK, Esq., Acting Consul-General for Portugal.

Friday, 25th October, 1875.

C. J. GARDINER *vs.* F. DA ROZA.

In this case plaintiff claimed a sum of $2,385.50, being a sum of $1,963.53, the difference between $6,500 lent by plaintiff to defendant on mortgage on lot 86A, and what that property subsequently realised at auction (after deducting expenses of sale, &c.), when sold by plaintiff (as per terms of mortgage), because defendant fell into arrear in paying the interest on the $6,500 loaned to him by plaintiff, and a sum of $422 interest on the loan of $6,500,—making the sum of $2,385.50. Plaintiff also claimed interest at 12 per cent. per annum from the date of filing the petition, and costs of suit.

Defendant, in his answer, did not deny the facts of the petition, but pleaded that plaintiff had been negligent in selling the property, —meaning that it had been sacrificed.

Mr M. Kirkwood appeared for plaintiff, and Mr G. P. Ness for defendant.

Mr Kirkwood, after opening his case, called the plaintiff.

C. J. Gardiner, sworn: He lived at the British Camp. He had received no interest on the $6,500 loan he had made to defendant He had applied for it. Wrote a letter on 30th July last, which he left at defendant's house. The letter produced was a correct copy letter read, in which plaintiff applied for the interest then due, and threatened to sell the land by virtue of the mortgage if the interest was not paid). Afterwards saw defendant, who promised to pay in a few days, as he (defendant) was about to receive $80,000 from some Japanese. He saw Mr Ness at the Bluff Gardens, at a concert. Mr Ness said defendant had promised to pay in a few days. Did not subsequently receive the money, so he wrote a letter to Mr Ness as defendant's lawyer. (Letter read, in which plaintiff spoke of defendant not keeping his promises, and said he would sell the (and, and that defendant would have to bear any loss.) He saw defendant again; afterwards met him at Mr Ness' office. They desired plaintiff to put off the sale of the land, and said that the money would be forthcoming in a week. This was on the 22nd. Did not hear anything till the 30th of the month, when he received a letter from Mr Ness, saying defendant would pay by the end of next week. He answered the letter, and told Mr Ness in the letter that he did not believe in defendant's promises, but agreed to wait. Went and saw Mr Wallace, the auctioneer, and put off the sale for five days. He received no money from defendant, as promised, and had the property sold. The property was sold to Mr. A. Plummer for $4,700, and conveyed to him.

Cross-examined by Mr Ness: The property was sold on the 5th October. Mr Plummer had agreed to give him (plaintiff) a mortgage over the property. Mr Plummer did not agree to give him more than $4,700 for the land. He had no arrangement with Plummer about the difference between $4,700 and $6,500. Plummer was not to make good any loss to him. He had no mortgage of Plummer's. He had a verbal agreement with Plummer. He had no written document or scrap of writting of Plummer's about it. He agreed to loan Mr Plummer the money to buy the land with. He could not transfer the land to defendant now unless he purchased it from Plummer. Plummer is open to an offer for the land He had a conversation with Plummer at the sale of the land. He met Plummer before the sale, He did not ask him to buy the land; he suggested it to him. He told him the land should go for what it would fetch. It was a *bonâ fide* sale to Plummer. Plummer had not executed any mortgage with him. Plummer was to pay him in three months. He did not hope to obtain money in the interval from defendant. He did not know that Plummer was willing to cede the property to him on demand. He sold the property privately to defendant. When acting for himself he put a reserve of $7,000 on the property. He refused to put off the sale on the 5th. He did not put a reserve on the property when he ordered it to be sold for defendant. He bid at the sale. He started the bidding with $4,000.

Re-examined by Mr Kirkwood: He would not receive more than $4,700 from Plummer for the land.

T. Wallace sworn: On the 10th September he received instructions in writing from plaintiff to sell the land. He advertised it in the *Herald* on the 10th Sepetember. It was to have been sold on the 1st October, but eventually was sold on the 5th October. It was sold for $4,700. He had been paid his charges by plaintiff.

Cross-examined by Mr Ness: He knew nothing about the sale of this land to Plummer. He did not sell the property; his brother did. Mr Gardiner gave Plummer an order on himself (Gardiner) for the money the land fetched.

Mr Ness had no witnesses to call, and Mr Kirkwood briefly summed up for plaintiff. Mr Ness replying for defendant.

His Honour, in giving judgment, said he must comment strongly on the way in which the property was sold to Plummer. He felt bound to comment on the plaintiff's conduct in the affair, but there was no evidence to show that the sale of the land to Plummer was not a *bonâ fide* one. The judgment was that defendant pay Plaintiff the money he was actually out of pocket—that was, the sum of of $2,385.50. Costs to be borne by plaintiff.

The following case base has been heard in the Judicial Court, Kanagawa:—

[TRANSLATION.]

SITWELL, SCHOYER & CO. *vs.* UYEHARA SHIROZAEMON and YENOMOTO SHEISKI.

In this case plaintiffs claim that defendants were indebted to them in the amount of $9,999.82, on a document bearing date of the 10th October, 1873, and payable on the 21st of the same month; and that there is still a balance of $2,229.82 due to them on said document, together with interest thereon from the 17th day of January, 1874.

Plaintiffs deny they agreed to receive said sum by instalments, as is alleged by defendants.

Shirozaemon, one of the defendants, states that in the 2nd year of Bunki (1872), he engaged Seaski as his business manager in general, and that he entrusted him with his mercantile seal; further, that in October, 1873, he gave him instructions to raise a loan of $5,000, which he (Seaski) succeeded in doing from a Mr. Bauduin of No. 5,—which amount was afterwards repaid. In January, 1874, Shirozaemon went to the Yamanashi Ken, and during his stay there received a letter from one Sumogea Tsunesaboro, of Minami-nakadori, 3rd Ward, informing him that the above loan was made on 4,300 pieces of shirtings that had been hypothecated to the Netherlands Trading Society, No. 5; and that said shirtings had been purchased from a Messrs. Sitwell & Schoyer, an English firm, and costing $10,000; and that on the documents that were given, his (Shirozaemon's) seal had been attached, also saying the whole affair had been carried out by Seaski's own accord.

On receipt of this letter, Shirozaemon was, he says, much surprised, and after considering the circumstances he came to the conclusion that Seaski had concealed from him the manner in which he raised the money. In a reply to this letter, he requested Tsunesaboro to assist him in any way that he was able in connection with the affair; and at the end of the month he returned here, and made full inquiries concerning the matter from Tsunesaboro. Seaski made some excuses through Tsunesaboro, for keeping the matter secret. After this, Seaski went to Messrs. Sitwell, Schoyer & Co's, and it was arranged so that Shirozaemon had no further responsibility in the matter; he, therefore, claims on this ground not to be held liable.

Seaski stated that he was in Shirozaemon's employ for a long time, and acted chiefly in all his business transactions, and was in possession of and used his seal without any power of attorney. He says further, than in the month of October, 1873, one Nakamura Yohichi, who was in the same employ, requested him (Seaski) to raise quickly the amount of 4,5000 *yen*, saying that in the event of his inability to do so, the master (Shirozaemon) would lose 1,500 *yen*, —this sum being bargain money that the master had paid to some other party. Taking into consideration that if this sum of 1,500 *yen* should go unredeemed, his master's business reputation would be greatly injured, and that he himself would not appear useless as he was in charge of his master's seal, he used his exertions to obtain the money required, by way of purchasing 4,300 pieces of shirtings from the plaintiffs, at a cost of $9,999.82, for the payment

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

of which he gave plaintiffs a document for $10,000, and the shirtings he hypothecated to the Netherlands Trading Society for $8,000, and being requested by his master, he handed him $5,000, keeping $3,000 to use in his own private transactions.

Some time after this Shirozayemon handed him the $5,000 to return to No. 5; but instead of taking that sum there, he paid it to plaintiffs as part payment of the $10,000, and after that he himself also paid plaintiff the sum of $1,700; and on the 20th December he handed plaintiffs the document for $3,382 and some cents, being the balance due on the above accounts,—also on which documents he affixed his master's seal. In the meanwhile the market greatly fell, and he had no means of raising any money to pay off the balance. So he thought Somogea Tsunesaboro made an explanation to Shirozaemon of the affair, showing how the $5,000 had been obtained, and informing him that his seal was then on the existing document.

Seaski further says that it was then arranged that he was to receive, through the aid of Tsunesaboro, a further sum of $1,000, and that he undertook to pay off the balance himself, and for which purpose he gave plaintiffs a document, and entered their service, and remained in it from January to August of 1874. He on those grounds claims his non-liability to plaintiffs, to pay at once.

The decision of the Court is as follows:

1st—The dispute concerning the original document lies merely between the two defendants. It has been proved that Seaski did use Shirozaemon's seal; and Shirozaemon not having the seal cancelled, or taken back the original documents, he is held liable. 2nd—With regard to Seaski's statement that he was in one of the plaintiffs' employment, and that he had arranged the matter, it is disallowed by the Court. 3rd—The amount of $2,229.82 claimed by plaintiffs, together with legal interest, is ordered to be immediately paid the plaintiffs by above said defendants.

JUDICIAL COURT, KANAGAWA.

October 28th, 1875.

NAPOLEON III.

(The Times, September 2nd.)

This is the anniversary of the Battle of Sedan, and therefore of an event which may be placed in the same rank as the Battle of Waterloo, for it was a day of deliverance, not merely to France, but to Europe. When the news of the German victory arrived, five years ago, we all felt that much more had happened than the greatest capitulation of historic times. It signified that an immense change had occurred in the forces which shape the political life of the Continent and affect the interests of the whole world. The destruction of a great army was an enormous event, but men's imaginations were probably still more touched by the swift overthrow of a Ruler who had controlled the destinies of Europe more absolutely than any man since the First Napoleon. More, however, than all this was the destruction of the Napoleonic influence itself, and with it the shifting of the chief seat of power from Paris to Berlin. The policy of the Bonapartes was henceforth to be dismissed from political calculations, perhaps for ever; and France, half-Catholic, half-sceptical, was to yield the first place to Protestant Germany. Every Statesman in Europe felt that a new leaf of history had been turned over, and the leaders of the Roman Catholic Church were quick to confess the immense importance of the blow which had been given to the political power of the Papacy. The victory of the Germans seemed, in fact, to have let loose new currents of influence, which might colour the stream of history for generations, and every day tends to strengthen that anticipation. For good or evil, Sedan brought a great change to England as well as France and Germany, and we believe that, on the whole, the event was laden with as unmixed good as we can expect to find in any of the great incidents of human affairs.

It would be unjust as well as ungenerous to deny the benefits which Europe had received from the influence of France; but, nevertheless, it is the simple truth that if she had won an overwhelming victory at Sedan the result would have been a calamity to the whole world, for it would have been pre-eminently the triumph, not only of France, but of Imperialism. It may be quite true that the French people were not unwilling to be launched into a war which promised to restore their waning influence; but it was not the less essentially an Imperial war, because it would never have been undertaken if the interests of the Napoleonic dynasty had not been at stake. France was growing weary of her gilded servitude, and, in the opinion of those who were skilled in reading the signs of coming revolution, she would soon have thrown it off, if her passions had not been let loose in one of those wars which the Empire had more than once found politically convenient. Paris was becoming more hostile every day, and its satire on the Imperial family had never been so unsparing. The peasantry seemed to be losing some of their faith in the sagacity of the Emperor, and, worst of all there were ominous signs of discontent in that Army which had been the final reply to all the arguments of the Opposition. We do not say that the Emperor deliberately sought for the distracting influence of a war because he felt that his power was slipping from him, and that his son might never succeed to his Throne; but he was not sorry to take advantage of a shadowy pretext for asserting the influence of France, although when he came to the arbitrament of battle he seems to have anticipated its perils with a surer judgment than his infatuated courtiers. Nor can there be much doubt that the Clerical influence of the Court was put forth to make him seize the opportunity of crushing heretical Prussia, in which the instinct of Rome taught her to discern a deadly foe. These influences seem to have been overpowering at the last moment, when the Emperor was still hesitating. Slight although the pressure may have been, it sufficed to turn the delicate balance of his vacillating judgment, and the Rome he had befriended had the honour of pushing him into the abyss. If he had been victorious, and had added the Rhenish Provinces to his territory, his enemies believe that he would have permanently established his dynasty. And what did that mean? Even the twenty years of his reign scarcely give a sufficient measure of the evil that would have befallen Europe. The *Coup d'Etat* was only the first link in a long chain of calamities. The breaking of a solemn oath, the massacre in the streets of Paris, the imprisonment of the best men in France, and the wholesale banishment of all who seemed dangerous to her new master were certainly crimes for which there can be no excuse so long as truth and falsehood, justice and injustice, keep their old-fashioned meanings. But the worst effect of these crimes was not the injustice they inflicted on individual Frenchmen; it was the fact that they presented the triumph of wrong. And yet the Emperor was almost the arbiter of Europe for nearly twenty years. Great Sovereigns semed to forget how he had won his authority, and courted his favour. Diplomacy could not move without asking him what he would do next. His slightest public words seemed sometimes to be laden with the issues of peace or war. His public speeches, even when most obscure, were scanned as closely as if they were the oracles of Heaven. His very phrases were held to be more important than the great deeds of lesser mortals. When men wished to know whether the map of Europe was to be changed, they went to the Tuileries. The Hapsburgs read their fate in the seemingly careless phrases of a New Year's Day greeting. The Pope was dependent on the Imperial will for his retention of the Temporal Power, which had come down to him through the vicissitudes of a thousand years. The same will could give Italy leave to become a nation. It was felt in Mexico as clearly as at Rome, and the whole world seemed to lie under its dominion. English influence was nothing compared with the Imperial power, although we had once freed Europe from the despotism of the Bonapartes. We were nowhere in the estimation of European diplomacy; Prussia, our fellow-conqueror at Waterloo, was nowhere; France—Imperial France—was everything; and Imperial France meant the triumph of the *Coup d'Etat*. Thus the whole moral fibre of Europe was weakened by the sight of the absolute triumph which had rewarded the Empire. But the effect in France was still worse. Her historic families, her ablest men, the men whom every nation would have been proud to rank among its rulers, would not take service under the new Government. The best intellects and the highest culture of the nation went into Opposition, and the Court had to rely chiefly on adventurers. But the Clergy made up for the hostility of all that was intellectual and historic in France by becoming the devoted servants of the Empire.

If the Emperor had conquered at Sedan he might have disdained the threats of Revolution, and set himself to spread the rule of Imperialism. The French would have obtained just as much liberty as would have been compatible with the absolute sovereignty of one family, and no more. They would have been held in that state of tutelage which assumes that there is peace because the stream is shut in, but which is always followed by an explosion. Seeing the triumphs gained by the rule of one man, the faith of Europe in Parliamentary institutions would have been weakened, and impatient ignorance would have preferred the swift results of despotism. The French passion for military glory would have received a greater impulse than it has found since the triumphs of the First Napoleon. The worship of success would have been the newest and most potent form of idolatry. And worse still in its moral effects would have

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

hands of the Catholic Church. The Clergy would have been freed from control so long as they obeyed the dictates of the Court; the Temporal Power of the Pope would have been sustained in spite of the demands for an united Italy; the influence of the greatest Empire in the world would have been placed at the service of Catholicism, and therefore of an Ecclesiastical Power which has declared war against modern civilization. All these calamities have been averted by the Battle of Sedan. We do not say that it has brought unmixed blessings. Germany, we admit, is no more a paragon of political justice than she is a model of courtesy. Her military spirit is mischievous, even although it is evoked by the necessity of self-defence, and the domineering temper of her legislation and diplomacy is fruitful of embarrassment. Still, her truthfulness, her honesty, the healthiness of her public spirit, the vigour of her Protestantism, with all her faults, inspire a deep thankfulness for the victory which she won at Sedan.

COMMERCIAL INTELLIGENCE.

The disturbed condition of the Capital, owing to recent changes in the Administration, has to some extent reacted upon trade. This, taken in connexion with a week of partial holiday, leaves us little to report as to the state of the local market.

IMPORTS.

Cotton Fabrics.—The unimportance of transactions during the closing week affords no criterion as to values. We continue, therefore, our former quotations.

Grey Shirtings:—					White Shirtings:—		
7 lbs.	38½ yds.	39 in.	per pce.	$1.97½ to $2.05	60 to 64 reed	40 yds.	35 in. nom. per pce. 2.20 to 2.40

„ No. 4 Kook-fah	„ ...	5.40 to 6.00	Kerosine Oil	per case ... 2.60 to 2.65

EXPORTS.

Silk.—During the closing week the Silk market has exhibited considerable activity. *Hanks* have been dealt in more generally at steady rates, and *Oshiu* remain firm at our former quotations.

Settlements are reported to be about 650 bales of *Hanks* and 150 of *Oshiu*.

The arrivals have been about 500 bales. Stocks are 1,100 bales.

Hanks.—		Oshiu.—	
„ Best No. 1 to 2	$465 to 480	„ Best	$530 to 550
„ Good No. 2	$450 to 460	Hamatski.— 25 to 50	$440 to 480
„ Medium No. 2½	$420 to 440		
„ Common to inferior	$380 to 410		

Tea.—Business in this market has been quiet during the week, and settlements, which are unimportant, are confined to lower-class teas. We quote:

Common	$16.00 to 20.00	Fine	$33.00 to 36.00
Good Common	21.00 to 23.00	Finest	$37.00 to 44.00
Medium	24.00 to 27.00	Choice	Nominal.

THE GREATEST

WONDER OF MODERN TIMES!

HOLLOWAY'S PILLS.

PERSONS suffering from weak or debilitated constitutions will discover that by the use of this wonderful medicine there is "Health for all." The blood is the fountain of life, and its purity can be maintained by the use of these Pills.

SIR SAMUEL BAKER,

in his work entitled "The Nile Tributaries in Abyssinia," says, "I "ordered the dragoman Mahomet to inform the Fakey that I was a "Doctor, and that I had the best medicines at the service of the "sick, with advice gratis. In a short time I had many applicants, "to whom I served out a quantity of Holloway's Pills. These are "most useful to an explorer, as possessing unmistakable purgative "properties they create an undeniable effect upon the patient, which "satisfies him of their value."

SIMPLE, SAFE AND CERTAIN!

HOLLOWAY'S OINTMENT

Is a certain remedy for bad legs, bad breasts, and ulcerations of all kinds. It acts miraculously in healing ulcerations, curing skin diseases, and in arresting and subduing all inflammations.

MR. J. T. COOPER,

in his account of his extraordinary travels in China, published in 1871, says—"I had with me a quantity of Holloway's Ointment. I "gave some to the people, and nothing could exceed their gratitude; "and, in consequence, milk, fowls, butter, and horse-feed poured "in upon us, until at last a tea-spoonful of Ointment was worth a "fowl and any quantity of peas, and the demand became so great "that I was obliged to lock up the small remaining stock"

Sold by all Chemists and Medicine Vendors throughout the World.

May 17th, 1873. 6m.

GOLD-THREAD MANUFACTORY.

THE LARGEST IN EUROPE,

THE

Japan Weekly Mail.

A POLITICAL, COMMERCIAL, AND LITERARY JOURNAL.

VOL. VI.—No. 45.] YOKOHAMA, SATURDAY, NOVEMBER, 6, 1875. [PRICE $24 PER ANNUM.

TO SUBSCRIBERS.

SUBSCRIBERS at a distance whose period of subscription may have elapsed, are informed that their papers will be addressed and charged to them *until countermanded*. This rule has been found necessary in order to avoid the inconvenience of an abrupt stoppage of the paper which might result from an omission to renew.

It is requested that notice of the intention to discontinue a subscription be so given as to reach Yokohama *before* the date of its effluxion.

NOTICE.

ON and after the 1st of July, Notices of Births, Marriages and Deaths will be charged $1 each insertion.

Such Notices cannot be inserted in this journal unless endorsed with the name and address of the person by whom they are sent.

Yokohama, 25th June, 1874.

Notes of the Week.

Race week is holiday week. The sun rises in it, and the earth, if only from mere habit, still turns on its axis. But mortals prefer rest from work and relaxation, and who will blame them for seeking and taking it? The meeting seems to have given great general satisfaction. The running was good and the prizes have apparently fallen as impartially as rain, so that all the world is in good humour. The rise or fall of statesmen, disunion in cabinets, rumours of wars, commercial dulness or distress, the law's delays or perplexities, all matter nothing in race week. It irks no one who is out and who in. The weather is all we care for, and, on the whole, it was good—the second day was lovely. The Japanese seemed to enjoy the sport at least as much as the foreigners, and their interest was specially excited this year by General Saigo having entered some of his horses. He won a prize, too, and might perhaps have done more with an European jockey to ride for him.

The Japanese newspapers speak of dissensions in the Cabinet which range Sanjio, the Prime Minister, and his partisans on one side, and Iwakura, the Udaijin, with his partisans on another. The fact may be doubted on very good grounds. The two Ministers have usually worked in great harmony together, and the late attempt of Shimadzu Saburo to displace the Premier would, in all probability, have strengthened the union between Sanjio and Iwakura. Among the demands made by Shimadzu Saburo, that of recruiting the army from the *samurai* class alone, instead of forming it from the *heimin* class, seems to have excited the greatest opposition in the Cabinet. And justly so. So long as the power of the sword in this country is in the hands of the *samurai*, there can be no peace for the Government, no vigorous legislation, no progress which may not be stopped, no calm which may not be disturbed at any moment. But it must not be imagined that all is quiet yet. There is much excitement throughout the Empire, and the Government seems to be making great efforts to allay it. That it may succeed in doing so must be the earnest wish of every one interested in the welfare of the country.

In view of the unsuitableness to public discussion of the questions argued in the letter of our correspondent of last week, A. C. S., we have decided, after correcting the proof of our answer, to send it to him instead of publishing it. We had no wish to enter upon a theological discussion, as we said in our article entitled "Bemmo Analyzed." But it was manifestly our duty to discuss the nature of the answer which we thought should be made to the work of the Japanese critic, and we did so in a manner which we review with approval for everything but its inadequacy to the large question at issue. We may add that our sole ground for thus sending the answer to our correspondent, instead of publishing it, is that given above, and we are sure that our decision will be approved of by all who know anything of the vast extent of the subject, and of its important direct and indirect bearings, both speculative and practical.

A paper will be found elsewhere under the heading 'On Some Copper Bells,' which was contributed to the Asiatic Society by Mr. Kanda, the Governor of Hiogo, and we have great pleasure in drawing attention to it, not only on account of its intrinsic interest, but because it is the first paper which has been contributed to the Society by a Japanese, and suggests the hope that others of his countrymen may follow his example, and assist the Society in its endeavour to collect and diffuse information regarding the interesting objects and institutions with which this country abounds.

A notification has been issued by the Prime Minister to the effect that tea-house keepers within treaty limits will henceforth be permitted to receive foreigners in their houses. They must, however, intimate their arrival to the *Kencho*, and should the inmate be detained by illness, or other like cause, the fact should be reported to the *Kencho* once in every seven days.

There have been several slight shocks of earthquake felt during the week, bearing a relation to the severe shock experienced about two months back of perhaps 2 or 3 to 10, the latter figures denoting the intensity of that shock. But all is guesswork on this and similar subjects which is not brought to the test of measurement by instruments.

From the "Japan Mail Daily Advertiser."

There is no truth whatever in the statements published here last week that Kido, Ito and Okubo had resigned their respective offices.

Yedo is quiet. It is generally felt that the Government has acted with courage and wisdom in accepting the resignation of Shimadzu Saburo and Itagaki—especially the former. If it shows the same determination in treating any possible attempt at insurrection with instant and unwavering severity, civil strife need not be feared; but the crisis is undoubtedly one of a serious nature.

The *Nisshin Shinjisshi* writes:

A great earthquake in the Senate is imminent. We do not know exactly where to look for its manifestation, but those who are in its expected neighbourhood must be at the moment in fear and trembling.

Original from UNIVERSITY OF CALIFORNIA

Since Shimadzu Saburo resigned office a split in his party of followers is said to have occurred, one section recommending his return to Satsuma while the other opposes his departure from the capital.

A native paper relates that ex-*Sangi* Itagaki has gone on a hunting expedition to Shimosa, in which he is accompanied by Goto, *gicho* of the *Genro-in*.

A report has reached us from Yedo this morning that war with Corea was determined on yesterday afternoon. It comes to us on good authority, but we give it with all reserve.

The indifference with which the police witnessed the struggle between Mr. Ullmann and the scoundrel who obtained access to his sleeping apartment on Saturday night deserves, and we hope will meet with, the severest blame. Mr. Ullmann shouted for help for several minntes before they made their appearance. They then grouped themselves helplessly before his house and did nothing. Luckily Mr. Ullmann was more than a match for his antagonist, but the conduct of the police should assuredly be enquired into.

We regret that, through an oversight, our report of the decision of the case of Messrs. Sitwell, Schoyer & Co. against Uyehara Shirozaemon and Yenomoto Sheiski in the native Court of Kanagawa omits to state that Mr. Litchfield conducted the case for the plaintiffs, in whose favour the decision was given.

The Birthday of the Mikado will be observed throughout the Empire to-day with the usual honours. His Majesty will attend a review of the troops at Hibiya, in Yedo, in the forenoon and will subsequently receive congratulatory visits from his Ministers. The foreign *Corps Diplomatique* will be entertained at a Banquet at Hamagoten and the Governor of Kanagawa will receive the Consular Body at dinner this evening.

Ten persons were arrested by the Police at Atago Yama, Yedo a few days since. There is an impression that they were concerned in some plot against the *Daijin*, but no accurate account has been obtained.

The *Hochi Shimbun* gives the report that it is intended to despatch some officials to Oshiu—in which province, it would seem, the people are loudly demanding an expedition to Corea—in order to allay the excited feelings of the population. As this resolution was arrived at yesterday, it may be presumed that the rumour of a forthcoming declaration of war is at least premature.

One or two thousand of the *Shidzuoku* from Kagoshima *Ken* are about to visit the capital in order to be present at a meeting at Shokonsha, Tokio. It may be expected that their movements will be closely watched.

Messrs. Reuter & Co's. agent has obligingly furnished us with particulars of the agreement arrived at by the various telegraph companies at the recent convention in St. Petersburg. Some important modifications have been introduced, most of them with the view of facilitating communication and increasing the intelligibility of cypher messages, and a possible augmentation in the eastern tariff at some future time is hinted.

We understand that Madame Leonowa proposes to give a second concert at the *Machiguaisho* on Friday evening next.

The Birthday of the Mikado was observed on Wednesday with the customary honours by the Japanese. A general salute was fired at midday by the war vessels in harbour, which were dressed with flags, and the Japanese ships were illuminated at dusk.

The *Nisshin Shinjisshi*, in referring to the erection of the telegraph as far as the limits of the Shirakawa Ken, remarks that though it is intended to extend it to Kagoshima Ken both Japanese and foreigners express a dislike to undertaking work in that province.

The Exhibition at Osaka was opened on the 1st instant.

The Kaitakushi Department is said to have purchased some thirty asses, for introduction, it is presumed, into Yesso.

The races at Yedo will take place to-morrow and on Sunday next.

The *Hochi Shimbun* states that officials from several departments of the Government were despatched to the interior in order to allay the excitement which prevails in several of the provinces.

The native newspapers report a not improbable division in the Cabinet, Ito joining with Kido in supporting the policy of the Prime Minister, while Okubo and Okuma are adherents of Iwakura.

Mr. Dave Carson announces his first performance at the Gaiety Theatre this evening. The entertainment is spoken of most favourably by the Indian and Far-Eastern newspapers.

Moriyama the Corean Envoy is reported to have returned to Yedo on the 3rd instant.

The extent of litigation in Kioto may be estimated from the fact that 11,000 cases were brought before the Civil Courts there within the ten months of the present year which have already elapsed.

Stuart Eldridge, M.D.,
Surgeon in Charge.

We have recently seen an official copy of the Balance Sheet of a Japanese bankrupt, which is a highly edifying document. There were one foreign and two Japanese creditors, whose claims altogether were allowed at some $900. The sale of the Bankrupt's property realised $1.05 and there was one good debt of $0.60. And yet there are people who maintain that the Japanese are not yet quite level with Western nations in point of civilisation!—*Hiogo News.*

A complaint has been sent in to the Consuls by the Governor of Hiogo concerning a Japanese who was shot by a foreigner on Sunday the 24th ultimo. It is alleged that a man was shot through the hand, that he fainted away and that the foreigner decamped without rendering any assistance or giving any clue to his identity. The complaint speaks about friendly relations and makes much of the inhumanity displayed, but we are inclined to believe from the rumors in circulation that this has been exaggerated. We heard on or about the 25th ultimo that a foreigner had accidentally lodged a few shots in the arm of a boy, but we heard it as nothing serious and supposed that the shots had been picked out and a Mexican applied to the wound. We supect that this is the same report clothed in the language of the Saibansho, but should it turn out that any one did really seriously hurt a Japanese and then "bolt," the last quarter to which he need look for any assistance in smoothing over his troubles will be the office of the *Hiogo News.*

CHRISTIAN MISSIONS IN JAPAN.

WE have been requested to publish the following extracts from the September number of the "Missionary Record of the United Presbyterian Church." They are taken from an article upon Christian Missions in Japan, and have been suggested partly by an article entitled 'The Missionary Ideal' which appeared in the *Japan Weekly Mail* of the 29th May (*Japan Mail* 10th June), and partly by many translations from this journal, also republished in the Missionary Record above referred to, touching upon missionary exertions in this country. The fate of our own article was curious enough to justify a few words upon it. It was abundantly republished and commented upon in some of the best newspapers of the East; it excited some attention at home; and the views expressed in it met with almost universal approbation, in spite of one rather serious error which it contained, for the correction of which we were subsequently indebted to an old and valued correspondent. It was reserved for an angry writer in this place, himself, we fear, a missionary, to characterize it as "claptrap," and to ask who would listen to the ravings of an enthusiastic Fusi-yama pilgrim, however divinely he might be gifted! He pleaded that during the last eighteen hundred years Christianity had undergone an "elevation"; that the missionaries were men of education, culture and refinement, who possessed far more than the average capacity and knowledge; and intimated that any such enthusiasm as that for which we contended, however well suited for those who laid the foundations of the world's conversion, was a ridiculous thing in men of such attainments and polish as those whom he pretended to represent on this occasion. Alas! alas! this savours but little of the "elevation" of Christianity, little of that divine calm which belonged to its Founder, and of that transcendant superiority to everything ordinarily associated with such poor worldly words as culture and refinement, which has constrained the love and worship of humanity for these eighteen hundred years past. We most willingly dissociate the great body of the missionaries from any such claims as those advanced for them by their champion, and equally willingly rate the graces thrown around the lives of many of them at more than the value we set upon any culture and refinement whatever. We are quite convinced that by precept and example they have done and are doing great civilizing work in the world. For the shortcomings and fallibilities of human systems we have no harsh words, when the intention is so pure as for the most part it is among the members of the missionary bodies. But we appeal for the justification of what we formerly wrote to the following words from the article written avowedly in answer to us:—"*Doubtless a great accession to the wise and devoted heroism of missionaries would, under God, bring in its train a great additional success; and this high type of missionary life must come before the final triumph.*" Is it possible to conceive a more frank and almost absolute concession than this to everything we claimed in the article which excited the anger of our critic and, we fear, proclaimed his disqualification for his office?

The passages we have been requested to publish are the following.

The spirit of wide-spread inquiry in Japan; the disposition at least to give a fair hearing to any qualified expounder of Western ideas; the prevailing sense of the need of change in all departments of life; and especially the spreading conviction among the Japanese that the superstitions which have prevailed among them under the guise of religion are incapable of defence,—all these things present to the missionaries a favourable opportunity for preaching a faith which, while above reason, is in harmony with it, and makes its appeal to that sense of guilt and want which lurks deep in the natural heart.

It is most pleasing and encouraging to observe among the Japanese the spirit not only of inquiry, but of bold speculation, which new-born thought, formerly repressed by the changeless fixity of old custom, has awakened among that once conservative people. Not only religious truth, but religious liberty, one of the latest-born sentiments of civilisation, are both being vigorously discussed by the native press. Who can regret discussion of this kind among a people at such a stage of national development? And why should any one with adequate confidence in truth tremble for its safety, if it have only a fair field, and have representatives morally and mentally competent, amidst the present breaking up of old forms of national life and of religious belief? Bold speculation has come in also on the missionary enterprise, its tactics, and its economics. Even the newspapers in Yokohama, inspired by Western minds, are discussing the comparative merits of Jesuit and Protestant missions, not as to the systems they seek to establish, but as to the methods they employ; and one writer in the *Japan Mail* of 10th June boldly questions the existence of any special self-sacrifice on the part of the ordinary missionary, in countries like China, India, or Japan. In the interests of Protestant missions, and of the high character of their missionaries, he quotes the decided testimony of men like Lord Lawrence, Lord Napier (Baron Ettrick), and Sir Bartle Frere, and subscribes the glowing testimony of these men; but he claims for missions a return to the apostolic plan of thorough self-sacrifice, and puts the matter thus: '*If you wish to convert nations, you must do as the Franciscans and Benedictines did, not as we now do.*'

We have no objections to the utmost freedom of speculation in regard to self-sacrifice, and the need of a lofty and heroic enthusiasm, on the part of those who go forth to evangelize the nations. Doubtless a great accession to the wise and devoted heroism of missionaries would, under God, bring in its train a great additional success; and this high type of missionary life must come before the final triumph. Yet, as to the self-sacrifice of missionaries, we have two remarks to make: *First*, that this is likely to bear some proportion to the spirit of consecration in the Churches which send them forth; and, *secondly*, the Church is not at liberty to demand from her messengers sacrifices of a kind which she herself, by generous arrangements on their behalf, has it in her power to obviate. What are we, that we should ask any man as our representative, going with our message, and doing our work among the heathen, to endure hardships which we can alleviate or entirely prevent, and which we are ourselves utterly disinclined to bear?

This view of the matter sets aside for ever any scheme or argument of niggardly economy in dealing with our missionaries in respect of all *remediable* hardships in their great warfare. Their conflict is one in which the true soldier will ever hold, whether he know it or not, the post of highest honour when he faithfully holds the post of highest difficulty. Here it is that as an offering due not to the Church, nor primarily even to the perishing heathen (to whom, indeed, all Christians are debtors), but due to Christ, every missionary who presents himself as a living sacrifice on the missionary altar, totally annihilating self, does a service which, if performed for worldly ends, would be insanity, but which, as done to the Lord of missions, is no more than a 'reasonable service.'

SPIRIT OF THE JAPANESE PRESS.

On Geographical Influences.

(Chôya Shimbun, Nov. 2.)

Japan, our country, stands by itself in the midst of the sea and is in the vicinity of the great continent of Asia. England is situated similarly with respect to the great continent of Europe. It needs no words therefore to shew that in developing her navy and in avoiding the contempt of foreign nations Japan must do as England has done.

An ancient King of England, named Alfred, recognizing that that country could only be properly guarded against foreign invasion by a fleet, paid great attention to the navy, and his policy was strictly observed by succeeding generations. The defeat of the Spanish Armada in the time of Queen Elizabeth, and the present superiority of the English Navy are due to this. Edward the 1st of England endeavoured to conquer Scotland, but died at the head of the Army which he had summoned for that purpose. His son Edward II did not carry out the dying instructions of his father and was defeated in the battle of Bannockburn by the Scotch. The Scotch were defeated by Edward the 3rd, but the instant that the latter withdrew his forces the Scottish nation regained its former position. Edward III laid claim to the Crown of France on the death of the Sovereign of that country, his claim being founded on the fact of his being the nephew on his mother's side of the deceased monarch. In his expedition to France he was successful, and in the end, after inflicting great loss on the French, he returned to England, taking with him as prisoner the French King who disputed his claim, having conquered more than half of France the control of which he left to his son the Black Prince. But though Edward III thus easily conquered France, he could not keep his possessions, for what with the death of the Black Prince, and the advanced age of Edward III, the French ultimately recovered all their lost territory without having to strike a single blow for it. The reason Edward III could not keep what he won so easily was owing to the geogra-

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

phical influence arising from his country being divided by a narrow belt of sea from France. Had he only not undertaken a useless war but occupied himself entirely with the subjugation of Scotland, this would not have been delayed until the summons by the English people to James I, consequent on the lack of a successor to Elizabeth. We say so because England and Scotland form together one distinct island,—and it is impossible for territories which adjoin each other in this manner to remain independent states.

The conquest by Edward III, of France is exactly like the subjugation of Corea by Hidéyoshi. Since the attack on our gunboat the *Unyokan*, every argument that exists both for and against a war with Corea has been brought up, and the question has in fact been exhaustively treated. I have therefore been moved to add my quota by writing this article on geographical influences.

(Signed) MURAI TADAI,
resident beyond Mansébashi.

WAR.

(Nichi Nichi Shimbun.)

When Napoleon the Third was on the brink of his trouble with Prussia he asked his Minister for War how far he was prepared for a campaign. The minister replied that his preparations were perfect, and that war could be carried on for many years without the purchase of a single object. Napoleon, wise as he was, believed this, and declared war, losing battle after battle and at last surrendering himself at Sedan, after which the streets of Paris flowed with rivers of blood. The cause of all this was the false answer of the Minister of War. Had his answer been like that of Burke when England was sending an expedition to America, these misfortunes would not have befallen France. When I think over these facts, I tremble.

Materials of war are dangerous things which must not be used recklessly, and there is even a party in America who plead that war should be abolished altogether, while a Chinese sage said that the true general was he who gained his victories without fighting.

Last year after an expedition was sent to Formosa, trouble arose between us und China and we were on the very brink of war. But owing to the sedulous industry of His Majesty the Mikado and his Ministers, war was averted. After this my mind was at ease, and I felt convinced that whatever happened our Government would not make a reckless use of its war material. But since the news of the Corean attack upon us arrived, my peaceful heart has again been troubled. Although I believed that our Government would not recklessly rush into war, I thought also that we might have a minister like him of France, and that this might bring bloodshed upon us. What, under these circumstances, would become of our treasury, I know not; but although we might have a minister like the French, it is very improbable that our Emperor would act as did Napoleon the Third. When I revolve in my mind all the evils of war and see how dreadful they are, I cannot but feel that the American party of which I spoke and the Chinese sage are not far from the truth.

Advices are said to have been received from Yunnan to the effect that the authorities have succeeded in catching nine men who were engaged in the murder of Mr. Margary, upon the persons of seven of whom were found various articles indentified as having belonged to him. We give the rumour for what it may be worth, although it is difficult to avoid thinking that it sounds suspicious. But we never imagined that the mandarins of Yunnan would find any difficulty in having a batch of victims ready by the time Li Han-chang arrived. The chain of evidence will doubtless then be quite complete. The Yunnanites also have it that Suey, a former Tao-t'ai of Shanghai and subsequently Fu-t'ai of Soochow, is to arrive at Yunnan-fu the same time as Li Han-chang, in order to act with him in the judicial proceedings on [illegible]. *Celestial Empire.*

ON SOME COPPER BELLS.

A memorandum read before the ASIATIC SOCIETY OF JAPAN, on 20th October 1875.

These copper bells are a of a description that has frequently been dug out of the ground in Japan. There are no trustworthy traditions with regard to the use to which they were put in very ancient times. One report is to the effect that they were suspended from the corners of the roofs of temples or pagodas, and this is the opinion that I myself hold; but still, the fact that upon the dragon-shaped handle there have not been left any marks of friction of some other metal fastening affords grounds for doubt. These copper bells have only been dug out of the earth, and there is no instance known of one having been handed down from olden days *above* the ground. The localities in which they have been found have mostly been to the west of Kawachi, Tôtômi, in the five Home Provinces, the Central Provinces, and in Shikoku. Nothing has been heard of their being discovered in the circuit to the east of the Hakoné Barrier, in the Aok'kaidô, or in Kiushiu. Their size, also, differs considerably. The very largest go so far as four or five feet, while the smallest are but one or two inches. Their apparent shape is for the most part similar, except that in some cases there may be slight differences in the pattern of the outer surface. These slightly different specimens are of greatly enhanced value in the eyes of Japanese antiquarians, the reason being that they are thus enabled to offer them as a basis for speculation regarding traces of very ancient times. The first instance of the discovery of a copper bell is of exceedingly old date. A short time ago I visited a friend of mine, Mr. Yokoyama Yoshikiyo, a widely read and well informed antiquarian, and questioned him on the subject, when I obtained from him a written reply that is of great importance. This I give below:—In Vol. 5 of the "Fusô-riyak'ki" it is stated that on the 17th day of the 1st month of the 7th year of the Emperor Tenji's reign—corresponding to the year 669 A.D. of the foreign calendar—when the temple of Sô-fuku-ji was being erected in the Department of Shiga and province of Ômi, and the earth was being preparatorily levelled, a strange and valuable bell was dug up from the ground. Its height was 5 ft. 5 in. There was also dug up a wonderful kind of white stone, 5 inches in length, which shone brightly at night.

Again, in Vol. 6 of the "Nihonki" we find it said that in the 7th month, in the autumn of the 6th year of the period Watô, corresponding to the year 714 A.D. of the foreign calendar, during the reign of the Emperor Gemmei, a person named Muragimi Adzumando,—a *Taishôi no-jô*,*—belonging to the village of Namisaka, in the Department of Uta and province of Yamato, found, in the uncultivated district of Nagaôka, a copper bell, which he accordingly offered up (to the Emperor). It was three feet in height, and measured one foot across the diameter of the mouth. Its style of manufacture differed from that ordinarily known, and its sound came under the *ritsu* and *riyo* tones. Orders were given by the Emperor to the officials to lay it up in the storehouse.

In the 2nd part of Vol. 11 of the "Nihonkiriyaku," it is stated that in the 5th month of the 12th year of the period Kôniu,—corresponding to the year 822 A.D. of the foreign calendar,—during the reign of the Emperor Saga,—as a man in the province was digging in the ground he discovered a copper bell. It was 3 ft. 8 in. in height, and the diameter of the aperture was 1 ft. 2 in. The people styled it the Bell of King A-iku's† Pagoda.

Again, in Vol. 11 of the "Nihongôki," we read that in the 6th month of the 9th year of Shôwa,—corresponding to the year 843 A.D. of the foreign calendar,—there was presented (to the Emperor), from the Province of Wakasa, a copper utensil that in shape very nearly resembled a bell, which had been dug up from out of the ground.

In Vol. 4 of the "Sandai Jitsuroku" it is stated that on the 14th day of the 8th month of the 2nd year of Jôkan,—corresponding to the year 861 A.D. of the foreign calendar,—there was presented to the Emperor, from the Province of Mikawa, a copper bell. It was 3 ft. 4 in.

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

in height, and one foot four inches in diameter, and had been discovered in the hill called Muramatsu in the Department of Atsumi. It was observed by some one, "This is a precious bell of King A-iku."

Apart from the above, there must also be other instances. The fact of King A-iku having in one single day erected 84,000 pagodas is mentioned in Vol. 4 of an old book called "Konjaku Monogatari," and in Vol. 13 of that called the "Jinkaishô," &c. &c. The first mention of him is made in Vol. 3 of "Shokiyo Yôshiu," but as this is a long affair, it is not fully given here.

(Signed) YOKOYAMA YOSHIKIYO.

Many years after the above, during the period of Tenshô (1573-92 A.D.) a copper bell was dug up in the Province of Yamato, and was presented to the Taikô Toyotami. The Taikô regarded this as an object of great value, but afterwards conferred it, as a reward, upon a general who had achieved some great exploit. In the times of the Tokugawa family, during the period of tranquillity and peace, those bells that were dug up were very numerous. Sixty or seventy years ago, there lived an antiquarian called Yashiro Taró, who held the office of historian to the Bakufu. He was a man of profound knowledge and a lover of antiquities; and he collected together drawings of several tens of these copper bells, and made them into a volume, which he offered as a basis for speculation (about these bells.) Unfortunately, however, these were not engraved on blocks, and so there are at present very few persons to whom (copies of) this volume have descended. Just now there is no lack of persons who are in possession of these copper bells. They are frequently sold at the old utensil shops in the three cities (Yedo, Kioto and Osaka), and their price, too, is not excessively dear, which is a proof of the numbers that have been dug up. The articles that have been handed down from antiquity in my country (i.e. Japan) are of three kinds,—stoneware, earthenware and copper arms. The stone articles found are: *raifu*,‡ stone swords, flint arrow-heads, &c.,—among the earthenware sacred jars,§—and among the copper ones small round bells *(sudzu)*, copper swords, and copper bells (like the present). Constant enquiry has from olden times been set on foot by Japanese literati with regard to these various articles, but still, down to the present time, there has not been found anyone able to give clear explanations either as to their age, their owners, or the purposes for which they were used. My own opinion is that the one point to be investigated over and above these, is the single question as to whether such articles as these do or do not exist in countries beyond our own seas, and especially in China, Corea, Manchuria, &c. If enquiry be made into my reason for this, it is that supposing, in those other countries, there should exist similar articles, then this would afford a proof of the common origin of the ancestors of those nations and of our own. I have not, however, been able as yet to effect this search, and this is a matter for which I feel constant regret. I have heard that in Yokohama some learned foreign gentlemen have established a Society for the purpose of investigating Asiatic Antiquities, and I think that some decisive conclusion may be arrived at by that Society with respect to the above three kinds of articles. I consequently now beg the kind offices of the English Minister, Sir Harry S. Parkes, and send to the Society a copper bell that has been kept in my possession for a long time, with the desire of inviting discussion thereon. Should the various gentlemen belonging to the Society hold any opinions on the subject, let them be so good as to make them known. If, in consequence of their exertions, it come to pass that we obtain some basis for ascertaining the place from which the ancestors of the Japanese people originally came, no small benefit will be conferred upon the land, and it will be a matter of rejoicing not to myself alone.

USEFUL MINERALS AND METALLURGY OF THE JAPANESE.

D.—QUICKSILVER.

By Dr. Geerts.

Read before the Asiatic Society of Japan on the 20th day of October 1875.

LITERATURE.—*Kaempfer's*, History of Japan I Book, Chap. VIII. *Thunberg*, Voyage au Japon, traduit par *Langlès*, Paris, 1796, Vol. III p. 440. *Stan. Julien A Champion*, Industries, &c., Paris, 1869, p. 58, Tabula III. [This table is an exact copy of the figure in the Chinese Technology *Ten-ko-kei-butsu*]. Japanese Edition of the Chinese Technology TEN-KO-KEI-BUTSU, Vol. VIII, Tab. 11 and 12.— 天工開物 (Chinese: "Thien-kong-khaï-wu"). ONO RANZAN. *Hon-zo-ko moku Keï-mo*, 本草綱目啓蒙 Ed. 1847, by *Ono-Tsunenori* and *Te ken-shi-yeki*.

The metallurgy of mercury has never reached any great degree of importance in Japan, because the chief quicksilver-ore—natural cinnabar—does not seem to be found in sufficient quantities, to make the separation of the metal a profitable industry. Since the opening of Japan to foreign trade especially, nearly all mercury used in this country has been imported from Europe or America. In former times the Chinese of Nagasaki also imported Chinese-made mercury into Japan, but now, even the Chinese, notwithstanding they have large quantities of cinnabar in their own country, buy foreign quicksilver, because it is much purer and relatively cheaper than their own metal. In former times small quantities of mercury were distilled at the island *Hirado* (province of Hizen), in Nagasaki and Osaka, but now these manufactories are wholly given up.

The only quicksilver ore I have met with in Japan is the cinnabar or sulphide of mercury, (Japanese *Shinsha*, 辰砂 *Tan-sha* 丹砂. Syn. *Ri-se*, *Mei-ko-jin*, *Shusha*). I saw only a few specimens, consisting of amorphous masses of a dark brownish-red colour. According to Ranzan it seems to occur sometimes in Japan in a sandy small crystalline form, but I have only seen *Chinese* cinnabar in this state. Cinnabar was known in China since the earliest times and much esteemed as a wonderful, mysterious, celestial substance, which could give liquid silver, when heated. The old Egyptians with their Hermes Trismegistos—the mysterious founder of chemistry and the school of Spagyrical philosophers, in whose mysterious grave the "Tabula Smaragdina" should have been detected by Alexander the Great, bearing the inscription "*Itaque vocatus sum Hermes Trismegistos habens tres partes Philosophiæ totius mundi*"—the old Egyptians, I say, have very probably known cinnabar, although Theophrastos (371 B.C.) gives us in his work on minerals (Περι λιθων) the first information about this substance. It is a remarkable fact that the Chinese had even in the second century before our era considered the cinnabar as a celestial or fairy substance, (Sen tan 仙丹 *Chinese Siën-tan*) and have used the same in their alchemical pursuits to find "the medicine of immortality" or *elixir vitæ* of our western alchymists. If we may believe Mr. Edkins* it would seem certain that Ko-hung, a Chinese writer on alchemy, and editor of the book *Pau-p'uh-tsi-p'ian*, printed in the 4th century A.C., gives different minerals and herbs which ought more or less to possess the properties of a celestial medicine. The best of all, however, was considered by this Chinese writer to be cinnabar. Mr. Edkins' translation of a part of this as regards cinnabar runs as follows: "When vegetable matter is burnt it is "destroyed, but when the *tan-sha* (cinnabar) is subject to heat it produces mercury. After passing through "other changes it returns to its original form. It differs "widely, therefore, from vegetable substances, and hence "it has the power of making men live for ever, and raising them to the rank of the Genii. He who knows this "doctrine is he not far above common men? In the "world there are few that know it, and many that cavil

* Transactions of China branch of the Asiatic Society, (Hongkong). Vol. V. 1855.

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

"at it. Many do not know that mercury comes out of "cinnabar. When told, they still refuse to believe it, "saying that cinnabar is *red*, and how can it produce a "*white* substance? They say also that cinnabar is a "stone, that stones when heated turn to ashes, and how "can anything else be expected of cinnabar? They can- "not even reach this simple truth, much less can it be "said of them that they have been instructed in the doc- "trine of the Genii." It is in every case a fact that the Chinese had some alchemical literature anterior to the period when alchemy was studied in Egypt and the West; now, if we take this fact in relation with others it becomes very probable that the Egyptians, and later the Europeans, got the first idea of alchemy from China. We find, in fact, the earliest notices of alchemical pursuits, that is to say of the art of goldmaking (Χρυσο ποια), in the works of Greek authors after the 4th and 5th century. They speak of this art as having originated in Egypt. In the *Historia Naturalis* of Pliny the Younger (Born 23 A.C.) *Liber* 33, *Cap.* 32, mercury (*argentum vivum S. Hydrargyrum*) is referred to as a "*venenum rerum omnium*" and he also mentions cinnabar. Dioskorides (50 A.C) mentions in his Materia Medica (Περι Υλης Ιατρικης) the preparation of mercury from cinnabar, but neither of these two authors have related anything of the art of goldmaking or alchemical pursuits, so that we may conclude that in their time alchemy was yet unknown in the West. The Arabians of the eighth and ninth century occupied themselves ardently with alchemy and brought this pseudo science in 711 to Spain. We see, therefore, that the Chinese have decidedly led the way in alchemical pursuits, and may believe that the West obtained the idea of "goldmaking" from the inhabitants of the Celestial Empire. There are several grounds for this opinion, the chief of which is that the Persians often came to China at the beginning of our era. After the invasions of the Mohammedans of Persia, the Persians continued their intercourse with China. Persian, Arabian and even Greek embassies fom Constansinople visited from time to time the Chinese Court at *Shensi.*† Arabian merchants settled in several Chinese ports and had frequent intercourse by sea with the ports near the Persian Gulf. It is for this reason very probable that an art so full of interest as the art of goldmaking was introduced into Persia from China, and from that country to Egypt and the countries of Asia Minor.

In Japanese books we have not found any trace of alchemy. According to Ranzan cinnabar was, for the first time, used in Japan in the year 629 A.C. (the 2nd year of Mon-mu Tenno). At this time the Chinese no longer occupied themselves much with alchemy, although the later Chinese works still speak of cinnabar as the first substance of all minerals, because it can transmute, in equal periods of two hundred years, into each of the five principal metals, finishing with gold. I have never seen in Japan natural mercury (in the metallic state) as it is found in some countries as natural minute globules. Neither have I met with samples of natural quicksilver amalgam.

Metallurgy of Mercury.

Like most of the other metallurgical processes, the Japanese also learned the use of cinnabar and the distillation of mercury from the Chinese. Their method is nearly an exact copy of the process described in the well-known Chinese Technology *Ten-ko-kei-butsu*,

The cinnabar is first powdered by means of an iron boat-shaped mortar with a circular knife (the same as is used by Japanese druggists and called *Ya-gen* 薬研.) It is then washed to remove the foreign stones and to obtain the cinnabar in a finely-powdered state. This is, after being dried, mixed with an equal weight of half-burned charcoal (half coal and half ashes) and the whole is put into an iron pot, which is carefully covered with a round iron cover. This cover has in the middle a round opening, into which a curved tube of plate-iron is fixed and cemented with a mixture of loam, salt and a little water, the other extremity of the tube ending in a pot filled with cold water. The whole tube is wrapped up in old clothing, or some fibrous substance, and kept cool by the aid of cold water. The whole is gradually heated on a small open charcoal furnace, the quicksilver distilling into the pot of water. This process is founded on the fact that the sulphur of the sulphide of mercury (cinnabar) is retained by the ashes (calcium salts) and perhaps also by the iron of the inner-surface of the pot, the mercury evaporating by the heat. This quicksilver is, however, not pure; heavy mercurial containing always a small quantity of foreign metals (lead, copper etc.) which were also present in the ore.

The chief employment of quicksilver in Japan is in the manufacture of bronze mirrors. Another application is in the art of gilding in the dry way and in the manufacture of different mercurial preparations used in medicine. The Japanese are well acquainted with the method of testing the purity of mercury, by heating a small quantity in a small open iron dish and estimating the amount of non-volatile matter after all the quicksilver has been evaporated. Foreign mercury is justly preferred by the Japanese to the Chinese or Japanese product.

Cinnabar occurs, as far as my own observation extends, in:

Province Hizen, ... *Place* Island of Hirado.
„ Yamato,... ... „ Yoshino-mura.

Ono Ranzan gives, besides, the following provinces, without, however, indicating the localities. I give these with reserve as to their accuracy:

Bizen, Isé, Hitachi, Iyo, Hiüga, Buzen, (at Shimokegun), Oshiu, (Sendai).

Cinnabar is imported for medical uses and lacquer-ware from China and the Liu-Kiu Islands.

Appendix.

On some useful Japanese preparations and applications made from Mercury.

1st. Mirrors.—The manufacture of bronze mirrors consists in first casting the bronze in very neatly and accurately made moulds. The Japanese metal-founder is admirably apt in the art of moulding, and must be praised for his skill in obtaining such accurately cast objects, without the aid of any machinery whatever. For preparing the mould,—which consists of two valves, put together with their concave surfaces,—the workman first powders a kind of rough plastic clay and mixes this with levigated powder of a blackish "Tuff stone" and a little charcoal powder and water till the paste is plastic and suitable for being moulded. It is then roughly formed by the aid of a wooden frame into square or round cakes; the surface of the latter are covered with a levigated half liquid mixture of powdered "*chamotte*" (old crucibles which have served for smelting bronze or copper) and water. Thus well prepared the blackish paste in the frame receives the concave designs by the aid of woodcuts, cut "in relief." The two halves of the mould are put together in the frame and dried. Several of these flat moulds are then placed in a smelting box, made of clay and *chamotte*. This box has on the top an opening, into which the liquid bronze is poured, after it has been smelted in small, fireproof clay crucibles. The liquid metal naturally fills all openings inside the box and consequently also the cavities of the moulds. For mirrors of first quality the following metal-mixture is used in one of the largest mirror-foundries in Kiôto.

Lead	5 parts.
Tin	15 „
Copper	80 „
	100

For mirrors of inferior quality is taken:

Lead	10 parts.
Natl. sulphide of lead and antimony (*Shirome*) from Choshiu or Iyo....	10 „
Copper	80 „
	100

Champion and Pellet give in the Industries l.c. p. 64, the composition of Chinese bronze-mirrors to be:

Copper	50.8
Tin	16.5
Zinc	30.5
Lead	2.2
	1.000

† Duhalde, *Description de l'Empire de la Chine* Vol. I p.q. 5. *La Haye* 1736.

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

The difference of Chinese and Japanese mirrors is, therefore, very great, and the quality of the Japanese metal superior to the Chinese. After being cooled, the melting box and moulds are crushed and the mirrors taken away. These are then cut, scoured and filed until the mirror is roughly finished. They are then polished first with a polishing powder, called *to-no-ko* which consists of the levigated powder of a soft kind of whetstone *(to-ishi)* found in Yamato and many other places. Secondly, the mirrors are polished with a piece of charcoal and water, the charcoal of the wood *ho-no-ki* (Magnolia hypolenca S.Z.) being preferred as the best for this purpose. When the surface of the mirror is well polished, it is covered with a layer of mercury amalgam, consisting of quicksilver, tin and a little lead. This amalgam is rubbed vigorously with a piece of soft leather, which manipulation must be continued during a long time until the excess of mercury is expelled and the mirror has got a fine, bright reflecting surface.

The great fault of Japanese mirrors is that they are very soon attacked by obnoxious gases (sulphuretted hydrogen, &c.,) which are always more or less to be found in the air. The mirrors require, therefore, to be repolished from time to time, which is done at a relatively low price. Bronze mirrors which are well made have, however, the great advantage of giving very accurate images of objects, and are very suitable to be used in physical instruments, where great exactness of reflexion is necessary, when the mercurial surface can remain unaltered. The parts of Japan most celebrated for the manufactory of bronze mirrors are Kiôto, Osaka and Nagoya in the province of Owari. Small glass mirrors with tin-amalgam are now also manufactured in Japan in imitation of those of foreign make.

2. Mercurial Ointment.—Mercury with a little lead is mixed by the Japanese druggists with fat or vegetable wax till they obtain the well known grey ointment, the *unguentum cinereum* or *hydrargyri* of pharmaceutists. In mixing the mercury first with a little lead, the Japanese druggist easily gets over the difficulty of finely subdividing the mercury in the ointment.

3rd. Medicine for causing abortion.—Mercury in the metallic state is sometimes taken by pregnant women as an *abortivum*. It is believed that it can be administered for this purpose with success without danger to the mother. Instead of the liquid, mercury pills are sometimes used, which are made from a tough mass, obtained by boiling quicksilver with hemp-oil.

4. Vermillion by sublimation. *(Suï-gin-ro,* 水銀澞) This substance occurs in crystalline crusts or acicular loose crystals of a fine dark red colour, and is mostly imported from China or the Llu-kiu islands. It is made by smelting and sublimation of various qualities of mercury and sulphur. There are many prescriptions of manufacutre varying in the quantity of both ingredients. The *Hon-zo-ko-moku* prescribes the trituration of six parts of mercury and four parts of sulphur for a long time together, subliming the blackish mixture thus obtained in an iron vessel. According to the chemical constitution of vermillion one part of sulphur to six parts of mercury would be sufficient. This vermillion is extensively used in the manufactory of the red lacquer-ware; it finds also some application in medicine.

5. Vermillion by the wet process or by Levigation.—*(Gin-shu-shu* 銀朱. Syn. *Shin-ko. Sui-kuwa-gin-shu. Shi-fun-so. Seïko.)*

This substance forms a very fine, soft, red powder, with some slight differences in the shade of the red colour according to the quality. The Japanese believe that the best kinds come from China and Liu-kiu. The best Japanese kind is manufactured at Sotogahama, in the province of Oshiu, district Tsugaru; but I have seen even finer specimens prepared by a Japanese in Nagasaki by the wet process, which I shall afterwards describe. In China, Ma-yang in the province of Kui-tchu and Yn-tchu in the province of Tse-tchuen are most famous for the preparation of levigated vermillion. In China and most parts of Japan it is prepared by powdering and carefully levigating the sublimed vermillion, especially that part which is attached to the sides of the cover. When this is thoroughly ground and levigated it gives a beautiful red colour.

In Nagasaki a fine kind of vermillion is prepared by mixing together in square, strongly stoppered bottles three parts of mercury, one and a quarter of sulphur and six parts of a solution of caustic potash. These bottles are lain in lots of six or eight in a kind of sledge, each bottle in its own compartment; the sledge is regularly and ingeniously moved forwards and backward on a pair of rails, by means of a turning wheel and with driving gear. By this continuous shaking of the contents of the bottle the vermillion is formed within the space of twenty to twenty-four hours. It is carefully washed, levigated and dried on porous stones.

This levigated vermillion is extensively used in China and Japan for stamping and writing purposes, for colouring paper, varnish, candles, &c. After being mixed with glue from cow-hide, small square sticks are formed, which constitute the well known red (vermillion) ink, *Shu-sumi,* 朱墨, used for making corrections of or comments upon printed or written matter. The best sticks come from Liu-kiu.

6. Black Sulphuret of Mercury and Sulphur. *(Reï-sha* 靈砂. Syn. *Niki-tan; Niki-sha. Ki-sha. Koku-sha.)*—This is found sometimes in the drug shops as a black crystalline, striated mass, together with some crystalline powder. It is obtained in the same manner as the sublimed vermillion, the difference being the quantities used in smelting. Five parts of mercury are mixed with three parts of sulphur and then heated. It is recommended in medicines for several diseases, but of late it is seldom used in Japan.

7. Crystalline red Oxide of Mercury. (*Ko-sho y·ku* 紅升藥. Syn. *Ko-sho-shaku. Seki-ko-ko. Ko-sho-tan.*) As prepared by the old Chinese method this substance consists of red, heavy, crystalline fragments, mixed with a crystalline powder. We found it to be nearly pure oxide of mercury with very little nitrate of mercury. It is prepared by subliming a mixture of mercury, nitre, alum and sulphate of iron in small iron bowls, covered with round plates of earthenware in the same way as is done with vermillion. Besides this method there are many other prescriptions, mostly taken from Chinese pharmaceutical books. These preparations are sometimes distinguished by different names, although their chemical constitution is chiefly the same, namely oxide of mercury. Thus a kind consisting of a crystalline powder of red colour is named: *kô-fun* 紅粉 (Syn. *san-sen-tan* 三仙丹). Another kind of a more yellowish colour, which contains a considerable amount of nitrate of mercury is distinguished by the name of *o-sho-yaku.* 黃升藥

At the present time foreign made oxide of mercury replaces more and more the old Chinese or Japanese preparation. In Nagasaki oxide of mercury is now being made after the foreign method by heating quicksilver with nitric acid. This is ordinarily called *Pürcshipitātŭ* after the Dutch name "*precipitaat.*"

8. Impure protochloride of Mercury.—*(Keï-fun* 輕粉. i.e. "Light powder." *Sui-gin-fun* 水銀粉. Syn. *Kiyo-fun, Harahe, Haraya, Tsé-oshiroï, Ha-oshiroï Sui-gin-saku, Gin-fun, Sui-fuu.)*

This interesting preparation was known since the earliest ages to the Chinese, long before we, in Europe, had any knowledge of calomel or corrosive sublimate. Our first knowledge about both the chlorides of mercury date from the time of the Arabian chemist Geber ‡ who has given a prescription which differs but slightly from the old Chinese method of preparing *keï-fun.* The product obtained by Geber's method is a mixture of calomel with a little corrosive sublimate, whilst the Chinese knew how to prepare calomel (*keï-fun*) and a kind of corrosive sublimate (*sho-ko)* each separately. Until the 16th century we did not make in Europe a careful distinction between these two chlorides of mercury. Libavius and Oswald Crall first prepared pure calomel

‡ *Gebri* de invent. veritat. cap. 8, pag. 270, editio 1572, or cap. 8, p. 173 ed. 1545.

"Argentum vivum sic sublima. Sume de eo libram unam, vitrioli "rubificati libras duas, aluminis rochae calcinate libram unam et salis "communis libram semis, et salis petrae quartem partem et incorpora- "tum sublima et collige album, densum, clarum et ponderosum, quod "circa vasis sponditia invertum fuerit, et serva, ut tibi de aliis scripsi- "mus. Sed si in prima sublimatione invertum fuerit turbidum vel "in mundum, quod tibi accidere potuit propter tuam negligentiam, illud "cum eisdemfecibus noveris iterum sublimare et serva."

Digitized by Google UNIVERSITY OF CALIFORNIA

(1606-1608) under the names of *Draco mitigatus, Manna metallorum* or *Mercurius dulcis.* It seems very probable that the old Egyptians learned also the preparation of this substance from the Chinese, and we believe that there could be found many proofs of the influence exercised by old Chinese works on the sciences of the west, if the numerous volumes of the old library of Alexandria had not been so barbarously burnt.

According to Ranzan *keï-fun* was for the first time manufactured in Japan in the year 714 in the province of Isé. It was then presented to the Empress Gen-miyo, who reigned at that time. Remarkably enough the preparation of this substance has regularly been effected in this province up to the present time and the *Isé-oshiroi* (cosmetic of Isé), as this calomel is sometimes called, has even largely contributed to the glory of the celebrated temples of Isé. Many of the travellers recovered their health or that of their parents, by the use of this important medicine, and attributed the excellent medical properties of this substance largely to the *kami* of Isé.

The Chinese or Japanese calomel occurs according to its quality in fine, brilliant, transparent, flat crystal plates, or as a crystalline powder. Although pure when it is properly made, it is very often—we could say nearly always, adulterated with variable quantities of small crystalline gypsum, (*selenite*) or with mica-powder or with both these substances. I once found even more than one-fourth consist to of sulphate of lime and we have very seldom met with pure *keï-fun.* It is prepared to some extent in Japan (Isé, Osaka) but it is also imported in considerable quantity by the Chinese merchants of Nagasaki. The mode of preparation is the following.

Two parts of alum, one part of mercury and one part of common salt are mixed in a mortar with a little water until a very accurate mixture is obtained, in which no globules of mercury can be perceived. After being dried this mass is placed in an iron bowl which is closed with a mixture of earthenware, carefully plastered with a mixture of loam, ashes and salt. The whole is then gradually heated on a charcoal fire and the covering plate in the meantime cooled with wet cloths. The calomel sublimates within four to five hours on the inner side of the cover as a very porous, light, crystalline, powder. The more the sublimate has a light, soft and porous appearance, the more it is esteemed. There are several other prescriptions for preparing this salt, which are kept secret by the manufacturers. The above prescription is given by the large Chinese Materia Medica *Pun tsaon kang muh* (Japanese *Hon-to-ko-moku*). The sulphate of lime, or selenite and mica-powder are added afterwards purposely to make this expensive mercurial preparation heavier and cheaper.

If the calomel thus obtained has undergone a second and third sublimation, it is thought to be much better and bears then the name of *Fun-sô* 粉霜 (Syn. *Ushu oshiroï. Isé-oshiroï-no-yaki-kayeshi. Kin-yeki.*) This substance is really calomel in small, soft, tubular crystals.

The *kei-fun* is found in every Japanese drug-shop, packed in oblong square wooden boxes or black shining paper. It is a medicine with extensively used and often abused by excessive doses, so that the number of sufferers by mercurial poisoning, or the effects of so long protacted use of quicksilver preparations, is by no means small in Japan.

Foreign-made calomel is now more and more becoming popular, especially in the open ports and those places where the influence of the Dutch medical school has been of some importance. The Japanese distinguish this preparation by the name *karomerû* or *kan-ko* 甘汞. In Osaka and Kiôto calomel is also prepared after the foreign manner.

9. Impure bichloride of Mercury.—(Corrosive sublimate) (*Sko-ko* 昇孔. Syn. *Seï-seï-niu, Haku-yo-tan, Haku-ko).*

This substance forms crystalline, sublimed masses, often bearing on one side the convex form of the vessel, in which it is sublimed. Sometimes it is found in fine, acicular crystals of the rhomboidal systems, which are obtained by crystallisation out of an aqueous solution. These rhomboidal prisms bear ordinarily the name of *seï-seï-niu.* There are many different and very complicated prescriptions for preparing this highly poisonous substance. Some Japanese manufacturers take variable quantities of mercury, nitre, borax, salammoniac, yellow sulphide of arsenic, cinnabar and oxide of lead.

In Nagasaki a Japanese manufacturer uses the following, rather ridiculous compound prescription:

Arsenious acid	(Yo-seki)	3	Monmé
Powder of Mica	(Ummo)	2.5	„
Saltpetre	(Sho-seki)	16.	„
Mercury	(Sui-gin)	2	„ 6 fun.
Alumen	(Ban-seki)	12	„
Blue Iron vitriol	(Roku-ban)	18	„
Dry salt	(Shiwo)	15	„
Copper-vitriol	(Tan-pan)	5	„ 6 fun.
Salt of wells	(Seï-yen)	3	„ 6 „

The quicksilver is first mixed intimately with the arsenious acid and then the other materials are gradually added. The whole mixture is sublimed in the same manner as is already described under calomel. It is difficult to trace the exact chemical reaction which takes places in this quite unnecessary compound mixture, but it is chiefly as follows. The saltpetre oxidises the mercury at the high temperature, the sulphuric acid of the iron, vitriol and alum combine temporarily with the oxide of mercury and the sulphate of mercury is converted by the salt into chloride of mercury which sublimes together with some arsenic-acid in the inner surface of the covering plate. It is believed that the arsenic neutralizes is a certain degree the injurious properties of the mercury!

When crystallized out from the aqueous solution this impure, arsenical chloride of mercury loses a little arsenic, so that the acicular crystals of *seï-seï-niu* may be regarded as a little less poisonous.

At the present time this old Chinese preparation is displaced by foreign-made corrosive sublimate. Many Japanese doctors, more or less accustomed to the foreign art of medicine, now use our bichloride of mercury, but often, alas, in immoderate quantity. The foreign preparation bears the name Mô-kô or ordinary *Supûri* 孟汞, the last name being a corruption of the Dutch word "*Sublimaat.*" In Osaka and Kiôto, and perhaps also in other parts of Japan, corrosive sublimate is now prepared after the foreign method.

THE AUTUMN RACE MEETING.

First Day.

Wednesday, 3rd November.

The weather seemed likely to mar the success of the Meeting, as the day was bleak and chilly in the extreme and rain fell occasionally, but, notwithstanding these drawbacks, the ladies were present on the Grand Stand in unusual force, thereby in a great measure, causing the uncomfortable state of the weather to be forgotten.

The Entries for the various events were all that could be desired; and, as new blood had been imported to a considerable extent, and a more than usual degree of mystery had been observed by some owners during the training, the racing generally bid fair to be exciting. The band of the *Vsadnick* was in attendance, and discoursed sweet music during the monotonous intervals between the various races.

1.—The Trial Plate: For China Ponies that have never won a Race here. Weight for inches. Entrance, $5. Once round.

Mr. Morrison's *Andante*, 10st. 11lbs.	... 1
Mr. Robertson's *Gladiateur*, 10st. 11lbs.	... 2
Mr. Broughty's *Kuo-pu-chü*, 10st. 11lbs.	... 3

The start was not a good one. *Andante* led off but was collared by *Gladiateur* at the top of the hill when the two raced in together, both jockies did their best, and *Andante's* rider succeeded in cleverly winning by a neck. *Kuo-pu-chü* was never able to reach the others. Time 2.21.

2—The Yokohama Derby: A Sweepstake of $15 each, (with $150 addded); $10 to be paid to the Secretary of the Race Club on or before the 31st August, 1875, and $5 to be paid at the date of closing the entries; in case of non-entry, the original deposit to be forfeited. For Japan Ponies, *bonâ fide* grillins. First Pony to receive 70 per cent.; second, 20 per cent.; and third, 10 per cent. Weight for inches. Five Furlongs.

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

Dr. Buckle's *Smallhope*, 10st. 4lbs....	...	1
Mr. Morrison's *Dash*, 10st. 2lbs. ...	...	2
Mr. Ola's *Moonshine*, 10st. 6lbs. ...	...	3
Mr. Robertson's *Black Douglas*, 10st 6lbs.	...	0
Capt. Costigan's *Tsuji Ura*, 10st. 6lbs.	...	0
Mr. Watson's *The Laird*, 10st. 4lbs.	...	0
Mr. Roberts' *Cupbearer*, 10st. 8lbs....	...	0
Mr. William's *Sunshine*, 10st. 6lbs. ...	...	0
Dr. Buckle's *Stalemate*, 10st. 8lbs. ...	...	0
Mr. Carl's *Mephisto*, 10st. 2lbs. ...	...	0

For a wonder all the ponies which were entered started, and strange to say there was little or no trouble at the post. *Dash* led off, being closely followed by *Moonshine*, and these two seemed to have the race between them, but *Smallhope*, very well ridden by his owner, came up at the distance post, passed the leaders, and won with something to spare. Time, 1 min. 22 secs.

3.—THE CHALLENGE CUP: Value, $150. For China ponies. Weight for inches. Entrance, $10. One Mile and three-quarters.

Mr. Sinbad's *Dixie*, 10st. 8lbs. ...	...	1
Mr. Morrison's *Monymusk*, 10st. 11lbs.	...	2
Mr. Robertson's *Gladiateur*, 10st. 11lbs.	...	3
Mr. Robertson's *Sequin*, 10st. 8lbs....	...	0

A good start was made, the favourite, *Monymusk*, leading, being closely followed by *Gladiateur*. *Sequin* was finished at the hill, but *Dixie*, who was carefully kept behind the others to the half mile post, took first place when called upon and won easily. *Monymusk* had some trouble in beating *Gladiateur* for second place. This event was the great upset of the Meeting, as *Dixie* was not even mentioned in the betting. Time, 4 min. 16 secs.

4.—THE NIPPON CHAMPION PLATE: Value $150. For ponies. Weight for inches. Entrance, $10. Once round.

Mr. Ola's *Mohstotz*, 10st. 6lbs. ...	...	1
Mr. Marlborough's *Typhoon*, 10st; 2lbs.	...	2
Dr. Buckle's *Sirius*, 10st. 6lbs. ...	...	3
General Saigo's *Tobihino*, 10st. 4lbs.	...	4

For this there were only four entries and all started, but it was looked upon, as the result justified, as being a match between *Typhoon* and *Mohstotz*, and the two made a capital race of it. The little pony was not up to his former condition or his opponent was better than ever, as *Mohstotz* went ahead on entering the straight and won in a canter. Time, 2 min. 20 secs.

5.—THE CELESTIAL PLATE: For China Ponies. Winners at this meeting, 7lbs. extra. Weight for inches. Entrance, $5. Three quarters of a mile.

Mr. Robertson's *Dibs*, 10st. 8lbs. ..	..	1
Mr. Morrison's *Andante*, 10st. 11lbs.	..	2
Mr. Pringle's *Picayune*, 10st. 5lbs.	..	3
Mr. Robertson's *Gladiateur*, 10st. 11lbs.	..	0
Dr. Buckle's *Cyclone*, 10st. 8lbs. ..	..	0

Picayune led off, *Dibs* and *Gladiateur* being left, by a bad start, far behind, but the Kobé jockey who rode *Dibs* brought him well up, and four of the ponies came down the straight together, when *Dibs* won a splendid race by half a length, cleverly beating *Andante* who was second, closely followed by *Cyclone* and *Picayune*, who ran a dead heat for third place.

6.—THE COFEEE CUP: Presented. For Japan Ponies. Winner of the Nippon Champion Plate, or Winners of two races at last meeting or of more than two races at the last two meetings here, excluded. Weight for inches. Entrance, $5. Half a mile.

Mr. Morrison's *Dash*, 10st. 2lbs. ..	..	1
Dr. Buckle's *Smallhope*, 10st. 4lbs.	..	2
Mr. Ola's *Moonshine*, 10st. 6lbs. ..	..	3
Mr. Robertson's *The Swell*, 10st. 4lbs.	..	0
General Saigo's *Sakuraka* 10st. 4lbs.	..	0
Mr. Reid's *Drizzle*, 10st 8lbs. ..	..	0
Mr. Roberts' *Cupbearer*, 10st 8lbs. ..	..	0
Mr. Williams' *Sunshine*, 10st 8lbs. ..	..	0
Mr. Carl's *Mephisto*, 10st. 2lbs. ..	..	0

Nine started out of thirteen entries. *Dash* went away with the lead and was never headed, winning as he liked. *Smallhope* made an excellent race for second place, just beating *Moonshine* who was third. Time 1 min. 4 secs.

7.—THE BRITANNIA CUP: Presented. For China Ponies. Winners at this meeting excluded. Weight for inches. Entrance, $5. Once round and a distance.

Mr. Williams' *Grasshopper*, 10st. 5lbs.	...	1
Mr. Morrison's *Braemar*, 10st 8lbs....	...	2
Mr. Robertson's *Favori*, 10st. 5lbs. ...	...	3
Mr. Pringle's *Pretender*, 10st. 11lbs.	...	4

Four only started. *Bracmar* led to the three-quarter miles post when *Grasshopper* came to the front and disposed of his opponents as he liked. *Pretender* was as good as his name. Time 2.39.

8.—THE YOKOHAMA PLATE: For Japan Ponies. Winner of the Nippon Champion Plate, or of two races at the meeting, 7lbs. extra. Weight for inches. Entrance, $5. Five Furlongs.

Mr. Ola's *Lodi*, 10st. 4lbs. ...	...	1
Mr. Marlborough's *Typhoon*, 10st. 2lbs.	...	2
General Saigo's *K'sadzuri*, 10st. 6lbs.	...	3
Mr. Robertson's *The Swell*, 10st. 4lbs.	...	4

The Swell was left at the post and was consequently out of of the race, which lay between *Lodi* and *Typhoon*, the former winning a very fast race hands down. Time 1. 20.

9.—THE BANKERS' CUP: Presented. For China Ponies. Winners in China or Hongkong in 1875, or of two races at last meeting here, and winners at this meeting, excluded. Winners of one race at last meeting here 7lbs. extra. Weight for inches. Entrance, $5. Once round.

Mr. Morrison's *Black Rod*, 10st. 8lbs.	...	1
Mr. John Peel's *Bonito*, 10st. 8lbs.	...	2
Mr. Radley's *Lord Harry*, 10st. 11lbs.	...	3
Mr. Robertson's *Sequin*, 10st. 8lbs.	...	0
Mr. Broughty's *Kuo-pu-chü*, 10st. 11lbs.	...	0
Mr. Pringle's *Northern Light*, 10st. 2lbs.	...	0
Mr. Burnside's *Pontiff*, 10st. 8lbs....	...	0
Mr. Radley's *Ivanhoe*, 10st. 5lbs. ...	...	0

If *Bonito's* owner had had more time to train his pony the result of this race would doubtless have been different. As it was *Bonito* made a very game struggle and got second place, but had to succumb to *Black Rod* who won by a length. *Lord Harry* was a good third.

SECOND DAY.

Thursday, 4th November.

The weather on the second day was all that could be wished, so that the attendance at the Grand Stand was better than on the previous day. The band of the *Vsadnick* was again present.

1.—THE BLUFF CUP: Presented. For China Ponies. Winners of two Races at this meeting, 7lbs. extra; of more than two Races, excluded. Weight for inches. Entrance, $5. Once round.

Mr. Robertson's *Dibs*, 10st. 8lbs. ..	..	1
Mr. Morrison's *Braemar*, 10st. 8lbs.	..	2
Mr. Robertson's *Favori*, 10st. 5lbs.	..	0
Mr. Morrison's *Andante*, 10st. 11lbs.	..	0
Mr. Burnside's *Pilgrim*, 10st. 11lbs.	..	0

This race brought out a field of five who were started without any difficulty. *Pilgrim* made the pace and kept the lead for some time, but was passed by all the others; the race finally lying between *Dibs* and *Braemer*. The latter was leading on entering the straight, but *Dibs* gradually closed with him, and won a well contested race by half a length. Time 2 min. 15 sec.

2.—THE MAIDEN STAKES: For Japan Ponies that have never won a Race. Weight for inches. Entrance, $5. Half a Mile.

General Saigo's *Mikan*, 10st. 2lbs...	..	1
Mr. John Grigor's *Sirocco*, 10st. 4lbs.	..	2
Mr. Reid's *Drizzle*, 10st. 8lbs. ..	..	3
Mr. Robertson's *The Snob*, 10st. 4lbs	..	0
Mr. Robertson's *Black Douglas*, 10st. 6lbs.	..	0
Mr. John Peel's *Inozuma*, 10st. 6lbs	..	0
Capt. Costigan's *Tsuji Ura*, 10st 6lbs.	..	0
Mr. E. Mason's *Chevy Chase*, 10st. 6lbs.	..	0
Mr. Robertson's *Cupbearer*, 10st. 8lbs.	..	0
Mr. Williams' *Sunshine*, 10st. 6lbs ..	..	0
Dr. Buckle's *Stalemate*, 10st. 8lbs. ..	..	0

For this there were fifteen entries and eleven starters who were got off after one false start, when General Saigo's little pony *Mikan* almost immediately took the lead, kept it all the way and won as he pleased. Luckily for the General *Mikan* was *not* ridden by a noble cadet. *Sirocco* was second and *Drizzle* third. Time, 1 min. 3½ secs.

3.—THE VISITOR'S CUP: Presented. For China Ponies. Winner of the Bluff Cup excluded. Winner of the Challenge Cup, or of two Races at the meeting, 10lbs. extra: other winners, 7lbs. extra. Weight for inches. Entrance, $5. One Mile and a half.

Mr. Robertson's *Gladiateur*, 10st. 11lbs.	...	1
Mr. Williams' *Grasshopper*, 10st 12lbs.	...	2
Mr. John Peel's *Bonito*, 10st. 8lbs....	...	3
Mr. Robertson's *Sequin*, 10st. 8lbs....	...	0
Mr. Robertson's *Ocyola*, 10st. 5lbs....	...	0
Mr. Sinbad's *Dixie*, 11st. 4lb	...	0
Mr. Morrison's *Monymusk*, 10st. 11lbs.	...	0

Digitized by Google ORIGINAL FROM UNIVERSITY OF CALIFORNIA

This was a very exciting race between *Grasshopper* and *Gladiateur* who ran neck and neck for the last half mile, and finally *Gladiateur* won by a nose. *Bonito* ran a good third. Time, 3 min. 28½ secs.

4.—THE FUJIYAMA CUP: For Japan Ponies. Weight for inches. Entrance, $5. Half a Mile.

Mr. Ola's *Lodi*, 10st. 4lbs.	1
General Saigo's *Sakurada*, 10st. 4lbs ..	2
Mr. Marlborough's *Typhoon*, 10st. 2lbs. ..	3

This was looked upon as a certainty for *Lodi* and the result was never in doubt. *Typhoon* was pulled up before passing the winning post, thus allowing General Saigo's very indifferent pony *Sakurada* to take second place. Only the three named started. Time, 1 min. 3 secs.

5.—THE AUTUMN CUP: For China Ponies. Winners of more than two Races at the meeting exoluded; other winners, 7lbs extra. Weight for inches. Entrance, $5. Half a Mile.

Mr. Pringle's *Picayune*, 10st. 5lbs. ...	1
Mr. Morrison's *Braemar*, 10st. 8lbs ...	2
Mr. Broughty's *Saxon*, 10st 8lbs.	3

Again only three started of which one, *Saxon*, was of no use at all, so that the race resolved itself into a match between *Picayune* and *Braemar*. *Picayune* passed *Braemar* soon after leaving the post and won without much apparent effort. Time, 1 min. 2 secs.

6.—THE AKINDO CUP: Presented. For Japan Ponies. Winners at this meeting. or of two Races last meeting, or of more than two Races at the last two meetings here, excluded. Weight for inches. Entrance $5. Three-quarters of a Mile.

Mr. Ola's *Moscou*, 10st. 4lbs.	1
Dr. Buckle's *Sirius*, 10st, 6lbs.	2
Mr. Reid's *Drizzle*, 10st. 8lbs.	3
Mr. Robertson's *Tim Whiffler*, 10st. 12lbs. ..	0
Mr. Morrison's *Drift*, 10st. 2lbs.	0
Capt. Costigan's *Tsuji Ura*, 10st. 6lbs. ..	0
Mr. E. Mason's *Chevy Chase*, 10st. 6lbs. ..	0
General Saigo's *K'sadzuri*, 10st. 6lbs. ..	0
Mr. Robert's *Cupbearer*, 10st. 8lbs. ..	0

A field of nine showed up out of fourteen entries, and gave the starter lots of trouble at the post, but were finally got off with an excellent start. *Moscow* ran through his ponies and took the lead, winning a good race with *Sirius* second and *Drizzle* third.

7.—THE CLUB CUP: For China Ponies. Winners at the meeting excluded. Weight for inches. Entrance, $5. Once round and a distance.

Dr. Buckle's *Cyclone*, 10st. 8lbs.	1
Mr. Robertson's *Favori*, 10st. 5lbs. ...	2
Mr. Savile's *Crusader*, 10st. 5lbs.	3
Mr. Morrison's *Monymusk*, 10st. 11lbs. ...	0
Mr. Pringle's *Northern Light*, 10st. 5lbs. ...	0
Mr. Burnside's *Pontiff*, 10st. 8lbs.	0
Mr. Radley's *Ivanhoe*, 10st. 5lbs.	0

Eight started, *Crusader* and *Monymusk* being the favourites, but had to give way to *Cyclone*, who took the lead on entering the straight and won a very fast race by a length. Time 2 min. 33 secs.

8.—THE KANAGAWA CUP: For Japan Ponies. Winners of one Race at this meeting 5lbs.; of two Races, 10lbs. extra. Winners of more than two Races excluded. Weight for inches. Entrance, $5. Once round and distance.

Mr. Ola's *Mohstotz*, 10st. 11lbs.	1
Mr. Watson's *The Laird*, 10st. 4lbs. ..	2
General Saigo's *Tobihino*, 10st. 11lbs. ..	3
Capt. Costigan's *Ikey Pikey*, 10st. 2lbs. ..	0
Dr. Buckle's *Stalemate*, 10st. 8lbs.	0

The most unintesting race of the meeting as, *Mohstotz* cantered in as he liked; his four opponents being unable to make him run. Time, 2 min. 49 secs.

9.—THE SELLING STAKES: Of $5 each, with $75 added. For all Ponies. China Ponies, 10st. 7lbs. for 13 hands; Japan Ponies, 10st. for 13 hands 3 inches, to increase for inches, as per scale. The Winner to be sold for $75, with his engagements, by auction, immediately after the Races, and any surplus realised over the declared value, to go to the Race fund. If entered, to be sold for $50, allowed 7lbs., if for $25, allowed 14lbs. Five Furlongs.

Mr. Morrison's *Black Rod*, 9st. 10lbs. ...	1
Mr. Burnside's *Proselyte*, 9st. 7lbs. ...	2
Mr. Radley's *Lord Harry*, 9st. 13lbs. ...	3
Mr. Broughty's *Saxon*, 9st. 10lbs.	0
Mr. Pringle's *Pice*, 9st, 10lbs.	0

Black Rod was the favourite for this race and won easily by a couple of lengths. *Proselyte*, perhaps to Mr. Burnside's astonishment, was second, and *Lord* [illegible] third. Time, 1 min. 21 secs. The winner was sold by auction for $130 as the shades of night fell on the conclusion of the second day's proceedings.

THIRD DAY.

Friday, 5th November.

The day was fine and attendance at the course good, but a strong wind raised too much dust to make it quite comfortable for the spectators. The band of the *Vsadnick* again did excellent service.

1.—THE HURDLE RACE: Value, $75. For all Ponies. Over Six (6) hurdles China Ponies, 11st.; Japan Ponies 10st. Entrance, $5. Once round and a distance.

Mr. Robertson's *The Snob*, 10st	1
Mr. Morrison's *Andante*, 11st	2
Mr. Burnside's *Pilgrim*, 11st	3
Mr. Robertson's *Dibs*, 11st	0
Dr. Buckle's *The Slasher*, 10st	0
Mr. Radley's *Ivanhoe*, 11st	0

For this six started, but one, *Slasher*, might just as well have been left in the stable. *Pilgrim* led off, all of them taking the hurdles neatly. *The Snob* was leading in the straight, being closely pressed by *Andante* who, however, never could head him, and *The Snob* landed a winner by about a length. *Ivanhoe* shied at the last hurdle and a stirrup breaking at the same time, his rider was unfortunately thrown and stunned, but subsequently recovered under Doctor Wheeler's care. The fact of a Japan pony beating China cracks in this race was never expected, and the result rather interfered with book-makers.

2.—THE AMERICAN CUP: Presented. A Handicap for all winners at the Meeting. To be handicapped at the close of the Second Day's racing. Entrance 10 per cent of amount of stakes won: *compulsory*. Open also to beaten Ponies at the meeting, at an Entrance Fee of $5. One mile and a quarter.

Mr. Morrison's *Braemar*, 11st.	1
Mr. Ola's *Mohstotz*, 11st.	2
Mr. Williams' *Grasshopper*, 11st. 4lbs. ..	3
Dr. Buckle's *Smallhope*, 10st. 2lbs.. ..	0
Mr. Sinbad's *Dixie*, 11st. 2lbs.	0
Mr. Robertson's *Gladiateur*, 11st. 4lbs. ...	0
Mr. Robertson's *Favori*, 10st. 10lbs. ...	0
Mr. Peel's *Bonito*, 10st. 8lbs.	0
Mr. Saviles' *Crusader*, 10st. 7lbs.	0

Time, 2 mins. 50¾ secs.

Nine started, *Grasshopper* and *Gladiateur* carrying top weight, *Mohstotz* rushed with the lead, making the pace very hot. Down the straight *Mohstotz* and *Grasshopper* raced neck and neck, nearly every one's attention being fixed on them and not noticing *Braemar*, who running wide made a desperate effort at the finish and won by about half a length, running close to the outside rail. *Mohstotz* beat *Grasshopper* by a head for second place. Time, 2 ms. 50¾ secs.

3.—THE SCURRY STAKES: For all Ponies. A Sweepstake of $5 each, with $50 added. China Ponies, 10st. 7lbs; Japan Ponies, 10st. Three Furlongs.

Mr, Ola's *Lodi*, 10st.	†1
Mr. Pringle's *Picayune*, 10st. 7lbs. ...	†2
Mr. Burnside's *Proselyte*, 10st. 7lbs. ...	3
General Saigo's *Mikan*, 10st. 0lbs. ...	0

Though only four appeared at the front there was some difficulty in starting them. Eventually they went off with *Mikan* leading, who had, however, soon to give way to *Picayune*. *Lodi* gained on the latter in the straight and a most exciting race resulted in a dead heat between the two last named. Time 45¼ secs. The deciding heat was run off after the Sayonara Stakes, but with another rider for *Picayune*. Mr. Pringle had probably a right to make this change if he liked, and the objection which was officially made to it was disallowed by the Committee, but it would seem more conformable to natural justice to have run the heat under precisely identical conditions. Both ponies started well together, but *Lodi* forged ahead and won in a second under the previous time. The result was received with uproarious demonstrations of delight, principally on account of the change which had been made in *Picayune's* jockey.

4.—THE SOLACE CUP: For all beaten Japan Ponies at the meeting. Weight for inches. Entrance $5. Five Furlongs.

Mr. Marlborough's *Typhoon*, 10st. 2lbs. ..	1
Mr. Robertson's *Black Douglas*, 10st. 6lbs. ..	2
Mr. Watson's *The Laird*, 10st. 4lbs. ..	3
Mr. Robertson's *Tim Whiffler*, 10st. 12lbs. ..	0
Mr. Robertson's *The Swell*, 10st. 4lbs. ..	0
Mr. Morrison's *Drift*, 10st. 2lbs.	0
Capt. Costigan's *Tsuji Ura*, 10st. 6lbs. ..	0
General Saigo's *K'sazduri*, 10st. 6lbs. ..	0
General Saigo's *Sakurako*, 10st 4lbs. ..	0

Digitized by Google
UNIVERSITY OF CALIFORNIA

Mr. Reid's *Drizzle*, 10st 8lbs. ..	.. 0
Mr. Robert's *Cupbearer*, 10st. 8lbs.	.. 0
Mr. William's *Sunshine*, 10st. 6lbs.	.. 0
Dr. Buckle's *Stalemate*, 10st. 8lbs.	.. 0
Mr. John Grigor's *Sirocco*, 10st. 4lbs.	.. 0

This brought out a field of eleven, and of course there were no end of false starts, and when they did eventually get away it was to a bad one. *Drift* was left at the post while General Saigo's *Sakuraka* dashed off with the lead, but only maintained it to the straight where he ran wide. The ponies were here together in a ruck and the result of the race seemed very doubtful, but *Typhoon's* rider called on his pony and brought him in a winner by over a length. The success of this old favourite was very well received. *Black Douglas* was second and *The Laird* a close third, the others being well up. Time, 1 min. 25½ secs.

5.—The China Consolation Plate: Value $100, for all beaten China Ponies at the meeting. Weight for inches. Entrance, $5. Once round and a distance.

Mr. Saville's *Crusader*, 10st. 5lbs...	.. 1
Mr. Radley's *Ivanhoe*, 10st. 5lbs. ..	.. 2
Mr. Robertson's *Favori*, 10st. 5lbs..	.. 3
Mr. Robertson's *Sequin*, 10st. 8lbs..	.. 0
Mr. Robertson's *Oceola*, 10st. 5lbs..	.. 0
Mr. John Peel's *Bonito*, 10st. 8lbs..	.. 0
Mr. Morrison's *Monymusk*, 10st. 11lbs.	.. 0
Mr. Broughty's *Kuo-pu-chii*, 10st. 11lbs.	.. 0
Mr. Pringle's *Pice*, 10st. 8lbs. ..	.. 0
Mr. Burnside's *Pilgrim*, 10st. 8lbs.	.. 0
Mr. Burnside's *Pontiff*, 10st. 8lbs...	.. 0
Mr. Radley's *Lord Harry*, 10st. 11lbs.	.. 0

Twelve ponies appeared at the post and got off well together. *Pice* who never ought to have been sent out, led, but was soon passed by *Crusader*, who was never afterwards headed and won easily with plenty to spare. Time 2 min. 46 sec.

6.—The Sayonara Stakes: Of $10 each, with $50 added. A Handicap for all Ponies. To be Handicapped at the close of the Second Day's Racing, when Entries will be received. Winner of the American Cup excluded. Winners of any race after publication of the Handicap, 3lbs. extra. Once round.

Mr. William's *Grasshopper*, 11st. 7lbs.	... 1
Mr. Robertson's *Dibs*, 11st. 10lbs. ..	.. 2
Mr. Robertson's *Gladiateur*, 11st. 2lbs.	... 3
Dr. Buckle's *Sirius*, 10st.... ...	... 0
Dr. Buckle's *Cyclone*, 11st. 2lbs. ...	... 0
Mr. Robertson's *Tim Whiffler*, 10st. 3lbs.	... 0
Mr. Morrison's *Black Rod*, 11st. ...	... 0

This was a very interesting race for which seven ponies started, after having been kept at the post for some time by *Cyclone*, who declined to face the starter without showing how troublesome he could be. The race lay without the other four China ponies and was spendidly won by *Grasshopper* by a head.

It was too dark to run the Betto's race, as usual, so that it was deferred until the next day.

To-day.

Saturday, November 6th.

To-day was devoted to the Bettos' races which could not be run yesterday, and various matches which had been arranged. The proceedings commenced with:—

The Bettos' Race for China Ponies. Once round and a distance. For this seven ponies started. *Lord Harry*, with a *youngster* of about 5 stone on his back, took a most decided lead which he maintained throughout. *Black Rod* was second, and *Crusader* third. The time was fast.—2 min. 34 secs.

Then followed

The Betto's Race for Japan Ponies. Five Furlongs. Ten ponies went out for this, the winner *The Laird* ridden by the same boy who won the previous race. In each case he lost his seat after passing the winning post. *Sirocco* was second and *Dash* third. Time 1 minute 20 seconds.

After this came a match between *Tim Whiffler* and *Ivanhoe*. Owners up. Once round. *Tim Whiffler* led off at a good pace and kept many lengths ahead of *Ivanhoe* until he came to the straight, when the China pony overhauled the native and won easily.

An amusing match followed, between *Iky Piky* and *Summer* for a mile and a half this owner bring up in both cases. The success of the former seemed to depend on the rider of *Summer* falling off, and as this occurred early in the race *Ikey Pikey* cantered in quite leisurely.

Cyclone and *Pretender* were then matched for three quarters of a mile, the former being an easy winner. Both ponies gave some trouble at starting.

A certain stout resident and an equally stout Captain then had a race for a mile. The Captain won easily, but was taken round the course twice more before he could succeed in getting his pony through the gate.

The Meeting on the whole has been a thoroughly successful and enjoyable one

An analysis of the race meeting which has just come to an end discloses the following results to which we may direct attention.

Mr. Robertson won 4 events with 3 ponies having 9 entered.
„ Morrison „ 5 „ 4 „ „ 6 „
„ Ola „ 6 „ 3 „ „ 4 „
„ Pringle „ 1 „ 1 „ „ 4 „

There were twenty owners competing, and of these only eleven succeeded in winning.

ASIATIC SOCIETY OF JAPAN.

At the adjourned meeting of the Society held at the Kaisei Gakko in Tôkio, on the 27th October, the Revd. Professor Syle having been elected to preside, Professor Ayrton read the minutes of the previous meeting which were approved.

The Chairman laid upon the table two packets of Japanese quicksilver presented to the Society by Mr. Erasmus Gower, one for the museum in Tôkio, the other for the museum in Yokohama. He stated also at the same time that Mr. Hatakeyama, the Director of the Kaiseigakko, had placed a room at the disposition of the Society to be specially appropriated to its uses as museum, &c., within the college.

After a few desultory remarks, the discussion of the paper of Dr. Geerts on Quicksilver in Japan was proceeded with.

Professor Atkinson remarked that the Society was very much indebted to Dr. Geerts for his interesting and valuable communication, and for his exertions in bringing into notice the metallurgical processes employed in Japan. His work was of the greatest interest, as it permitted a comparison to be made between the processes used in this country with those in use in other countries. In Europe, where mercury had been extracted from the earliest times, improvements had been made from time to time, commencing with the simplest of all possible apparatus, and gradually introducing more complicated arrangements. None of these processes, however, had given a satisfactory yield of metal; that arrangement which gave the best results, was invented by Dr. Ure for the purpose of extracting the mercury from the poor ores in Rhenish Prussia. It consisted of a series of iron retorts, like those used in gas works, terminating at one side in an iron tube, which dipped into water, the condensed mercury being carefully collected. The ore of mercury was mixed with quicklime, and the mixture heated in these retorts; mercury distilled over into the condenser, while the sulphur remained behind in combination with the lime. The resemblance between the Japanese process and Dr. Ure's was striking. The Japanese used an iron pot, covered with a lid, into which was fitted a bent tube, the other end of which dipped under water. The ore was mixed with wood ashes, which no doubt played the same part as the quicklime. It was exceedingly interesting to observe that the Japanese process, or rather the Chinese, as it was introduced from China, resembled so nearly one of the best of the foreign methods. It was, however, to be regretted that Dr. Geerts had not mentioned what percentage of mercury was obtained from the ore, so that the relative efficiency of the condensers might have been ascertained.

The *Nagasaki Shimbun* says that a number of Japanese children, who were sold to Chinese during the present year, and secretly conveyed to China, have been brought back by the authorities and are now under the protection of the Kencho. The authorities got information of these unnatural transactions and despatched an official from Nagasaki to bring them back. On the 15th inst., the parties who sold them were brought before the Court and were sentenced to imprisonment for 60 days, and others not so guilty were subjected to fines varying from 25 cents to $3.00.—*Nagasaki Express*,

Law & Police

U. S. CONSULAR COURT.

Before Gen. VAN BUREN, U. S. Consul-General;
and
F. R. WETMORE and C. DRAKE, assessors.
Monday, 1st November, 1875.

ITO HACHIBEI *vs.* WALSH, HALL & Co.

Futami Nobori: Cross examination continued: I do not remember Hachiro and Kaiske going to Iske about the $40,000 loan, (Exhibit 3 produced). I know of this being written in the 8th month of last year. Kaiske and Hachiro came to my office. Keiske wrote it and left it with me. I saw Kaiske write it. They had previously asked for the $40,000 paper saying that as the money had been paid and the paper was not forthcoming, this paper was to take the place of the other one which was worthless as the amount had been paid. Kaske wrote this out of his own head, and from his own ideas, and left it with me to have one made out like it. Hachiro, Kaske, Shoske and myself were present. Iske was unwell about the 7th month. I do not know that Kaske and Hachiro had an interview with Iske in the 7th month. I do not know if it is true that they went to Iske in the 7th month during his illness about the $40,000 matter, and then Iske wrote the original of this paper, and that Kaske made a copy of it because Iske was ill and wrote it badly. I remember that Kaske wrote this in my presence only by my memory. I remember it distinctly. [Exhibit 2 produced dated 16 day 7th month 1874.] I do not know when this was received, nor who brought it. I first knew of this paper three or four months ago. I know the date by the contents of the letter. Iske and Shoske are honest men in my opinion. If money was paid to them as servants of Walsh, Hall & Co., I do not think that they would retain it, nor give an acknowledgment for money that they had not received. I do not think that there is any Japanese book in which the compound word *koshaku* occurs. When the securities were taken to Yedo, I do not know if there were were, besides the securities pledged to Walsh, Hall & Co., others not pledged to them. I recognise this (paper produced) as a document emanating from the cash department of the Tokio-fu. It is doubtless a list of the securities exchanged for the *shinkosai*, but I do not know without examination if it is correct. [Marked exhibit B B.] As far as I am concerned the securities I took up belonged to Walsh, Hall & Co. I do not know if Hachibei took up any others. Amongst Japanese, if the payee of a promissory note wishes to transfer the debt to a third party, it is better to do so by a separate letter of transfer, naming the person to whom he transfers it. Sometimes it is not done, but usually it is. They never write a transfer on the note. In the absence of the extra paper there is no indication of the transfer. Sometimes it is on the back of the note. There is no fixed rule. When it is put on the back of the note, the name of the transferee is put on it. [Papers marked G, A, B, C, shown.] These were all written and sent on the dates mentioned on them in the year 1874. [Papers shown, and marked C C, and D D.] These are my letters. I do not remember the exact date when the plaintiff and others came to defendants' office and went over the accounts with Mr Engert and myself. It was about the middle of the 11th month last year. It was not on account of discrepancies in the accounts that the farther settlement was postponed until Mr Irwin should be present; it was in consequence of certain details which Ito wanted, and Mr Irwin was wanted to explain these details of purchases and sales in the business. When Ito's servants asked for the $40,000 note they were told that it could not be found. When they came about it in the summer they asked me to look it up, and I said I would look for it. They came again in the afternoon, but I could not find it. I do not remember Iske telling them that they need not trouble themselves about the $40,000 note, because the money was accounted for in the accounts. They came several times about the accounts in the latter part of 1874. These letters (exhibits 2 and 5) were not shown to plaintiff on any of those occasions. The letter from Ito to Futami was not shown to him. Before the 18th December, 1874, I frequently asked Ito to bring book T. The first time he was asked to bring it was some time in the month of November. I did not hear Mr Irwin ask him to bring the book before the 18th December. Ito told me that Irwin had asked for the book. It was about the middle of November when Ito asked for the accounts. Ito said that Irwin told him that the accounts could not be made up without it. I did not call Ito's attention to the fact of these entries having been made before the middle of the 11th month.

Kumagai Iske cautioned.—In 1871 I was employed by defendants as a clerk. I had been with them for ten years previously. I did not act as their clerk in some *niboo* business, but I know all the transactions. It may have been in the 3rd but I think that it was in the 4th year of Meiji that Ito came to me. I was the general agent between the firm and Japanese. Ito asked me to tell Mr Irwin that he wished to enter into some *niboo* transactions. As a guard against any losses which might be experienced Ito said that he wished to deposit 20,000 *rios* with defendants; that he wanted to make a partnership affair of it. As this was to be the case I could not settle it, but mentioned it to Mr Irwin. There were not any papers drawn up about it. The affair was settled two or three days afterwards when Ito brought the money. Ito, Benzo, Irwin and myself were present. The arrangement was that of the profits and losses defendants were to share two-thirds. The other third was to be borne by Ito. This was Ito's proposition and was accepted by Mr Irwin. Mr Irwin was to furnish the dollars, Benzo was to have charge of the affairs on Ito's behalf in conjunction with Zenjiro, and the proceeds of each day's sales were to be brought to defendants' office. There were times when the dollars were taken to exchange for *niboos* three or four times in a day, sometimes only once, and at others there would only be one transaction in two or three days. Those acting on the part of the plaintiff were to make the purchases. There were purchases made on defendant's side. The date of this agreement was about the 7th month of 4th Meiji. Plaintiff did not deposit any other securities at that time besides the 20,000 *rios*. It was after the end of the *niboos* transactions that Ito deposited other securities for another purpose entirely. No other securities were deposited for the *niboos* transactions. Benzo, on the part of the plaintiff controlled the *niboos* speculations, the Chinese compradore of defendants also took part, but the ruling head was Mr. Irwin. The records were kept in two books prepared for purpose. These are the pass-books alluded to (books produced.) They contain the payments of dollars made by Mr Irwin and the *niboos* received by defendants. Mr Irwin's transactions are doubtless not in them, only those made on the part of Ito. This joint interest in the *niboo* business lasted about 30 days. I first heard of its termination about the middle of the eighth month. I heard of its termination in a conversation between Taketani and others, with reference to future business transactions. This took place in defendants' office. There were also present Benzo and myself. Ito was not present.

Mr Dickins objected to this evidence being received. Objection over-ruled.

Question asked, What was said at that interview?

This was objected to and the objection was sustained. The exception of defendant's counsel was noted.

(A long discussion here took place as to the admissibility of certain evidence relative to Benzo's agency for the plaintiff which was not admitted.) I recollect a transaction about the loan of $481,000. A meeting took place about it in defendants' office in the 9th month. There were present Benzo, Sobae, Zengiro (and perhaps Ito was there, but I am not sure,) myself, Irwin, Lothrop and Smith.

The Court here adjourned till 2 p.m.

Court re-assembled at 2 p.m.

Kumagai Iske, examination continued.—As had been repeatedly done before this interview Ito, Benzo and Sobae requested the loan of five or six hundred thousand dollars, which loan was refused. They urged defendants to grant it, saying that all loans they had previously required had been granted them. The defendants finally agreed to give them the $481,000. They promised to return it in three days and to make good all the losses sustained in the exchange transactions, provided the loan was made. When Irwin first refused the money plaintiff said "You promised the other day to lend me any money I wanted, and as the losses were severe, and I have promised to make them up, you must really grant the loan." It was finally agreed to grant it without interest. The losses mentioned were those on the exchange transactions. It was mentioned at this interview that Ito was to bear the losses. I had heard previously that Ito was to bear them, in return for which he was to have any money advanced to him which he wanted. Previously to this interview I knew that the *niboo* partnership was terminated. I knew this because the accounts were gone into. I heard that in consideration of Ito bearing the losses he was to have what money he wanted both from plaintiff and Irwin. I heard this when the loan of $481,000 was made and previously. I think that I heard it about the eighth month. In the beginning of the fifth year of Meiji, I think that Book T. was in Mr Irwin's possession. I do not know where it was in the third

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

month of that year. I was present when the last entries were made. Benzo, Taketani, and Irwin were also present. It was in defendant's office. It was decided then that the accounts were balanced and that this balance was due to defendants. The balance, including the amount of $3,000 obtained by Benzo, was some $12,000 odd. I never heard that the so called false entries were false. I have not heard of a partnership in rice between plaintiff and defendants. It could not have been carried on without my knowledge. I do not know of any rice *tegatas* being brought to Irwin. Shoske had charge of that. He was under me. I was *banto* to defendants in the end of 1871 and beginning of 1872. Never having heard of it. I should say that there was no rice partnership at that time. I know the general details of the business. The partnership would not have existed without my knowledge, Ito did not pay me on the 3rd 10 month the sum of $40,000 which he had borrowed from defendants but had not used, but I heard that Ito had paid $40,000 but not for a returned loan which he had two or three days previously, but for a sum for which he had given his note, and that Ito had asked for the note back. I heard it from one of Ito's messengers. Two or three days afterwards they claimed to have paid the money they asked for the note back. Mr. Irwin said he was busy and did not know where he had put the note. I gave them this message. They came twice afterwards on the same errand. I never heard of a partnership between Sobae and any one else. I simply heard that Ito and Sobae had gone into partnership but I know nothing about it. It was daily talk. I did not hear it from Ito but as they came together I concluded it was true. I have never heard of a partnership between Ito, Sobae and defendants. I rendered an account to Benzo of the balance in the exchange transactions. The account was made in the 3rd month and rendered in the eight month 1872. About the time this account was rendered there was no interview with Ito. The accounts were made up in defendant's office. Benzo, Taketani and Irwin were present. Benzo presented an account. It is at my house. It was a full account bringing out two entries (book T). Mr Irwin's and Benzo's books and accounts were gone into and this balance of $12,000 and something agreed upon. Nothing farther was done then. Benzo agreed to the balance then brought out. I simply wrote out the account as it stood. I have got it (paper produced.) This is what I wrote. This contains the balance arrived it.

Paper handed into court (Exhibit "17.")

Mr Dickins objected to its reception.

Objection overruled.

After the balance was arrived at Benzo was frequently asked to make payment, but he invariably begged off. Nothing was said about payment on the day the balance was arrived at. I have seen Ito several times after the balance was struck. I spoke to him about payment, but he asked to have it postponed on account of having experienced losses. I have heard Irwin speak to Ito about it. In the ninth and tenth months of fifth Meiji, Irwin said to Ito that he "must have payment "of the money; if you cannot pay it now your son-in-law is Governor, "and if you will give your assistance in getting back the large sums "advanced on the Uchida lands, I will forgive you this balance and "add $10,000 to it in the event of your success." Ito agreed to see what he could do. He did not succeed although he tried. Plaintiff, Irwin and myself were present, and I think Benzo was there as well. There was no particular interview between Ito and Mr T. Walsh about this balance, but Ito came to the office about it. It was about the 5th and 6th month of last year. He saw Mr T. Walsh. He came to request a loan, and the subject of this balance came up. Ito came and said he had a large and profitable transaction in hand, and he would require about $1,000,000. Mr. T. Walsh said that he could not do it as they were using Bank money at the time, and Ito must pay him the balance of $12,000. Ito then said if that was so he must go through the accounts and Mr. Walsh said that he could do so with Irwin. Ito made a loan to the Hanabusa *han* and finding difficulty in getting the money he made it over to defendants in the end of the fifth or beginning of the sixth Meiji. Defendants lent plaintiff $25,000 out plaintiff loaned $24,000 of this to the Hanabusa *han* and had the note made and in defendants name, and as additional security Ito deposited other *han* certificates of indebtedness to the amount of a little over 100,000 *rios*. The note of the Hanabusa *han* was deposited with defendants before he received the money. On making the loan Mr T. Walsh gave plaintiff to understand that he would have to obtain the money from a bank. Mr Walsh took the securities. I heard the talk about the banks, and I knew that it was necessary for defendants to borrow the money from the bank. Another loan of $10,000 was made to Ito in the 10th month 1873. Other securities to the amount of $50,000 were deposited at that time. They were *han* certificates. I was present when this loan was made and took the money to Tokio. Mr Walsh mentioned to Ito that as he had not the money, he would have to borrow it from the bank. I handed the securities to Mr Walsh. The $25,000 loan was repaid by the Finance Department at the request of plaintiff through the U.S. Consul; 28,000 *rios* were received from the Okurasho. It amounted to this because it was received in dollars, and the difference in exchange and the interest made it amount to this. When this was repaid the lot of securities for 100,000 *rios* were still held as security against the former loan of $10,000. Plaintiff stated his inability to pay this unless defendants' would take, instead of cash, a steamer called the *Hoan-maru*. They accepted this and lent him an additional loan of 10,000 *rios*. There was another sum of 5,000 lent and the securities, the 50,000 and 100,000 *rios*, remained as previously held. When these loans were made the talk all went to show that the money was to be obtained from the bank. Mr Walsh repeatedly said to Ito that he had put out lots of his money on the Uchida land &c., and that he would have to get the money for all of these loans from the bank. The interest to defendants for making these advances, was 12 per cent. I do not know if they charged the Bank rate. Commission was charged on the $10,000 loan I took to Yedo, I do not know about the other. Ito came to me last year, stating that the bonds were to be exchanged for Government bonds and asked for copies of them. Mr. Walsh expressed his regret at not being able to comply with his request as they were at the bank. Ito said "get them from the bank." Mr. Walsh did so and told Ito to copy them there. Ito said his clerks would do this, and wished to take them to Benzo's which he did. He did not complain of their being in the bank's possession. (Paper shewn Exhibit 18) This is Ito's writing. (Paper shewn Exhibit 19) This is Kaske's security.

The Court here adjourned till **Monday next, November 8th.**

IN H. B. M.'S PROVINCIAL COURT.

Before C. W. Goodwin, Esq., Assistant Judge.

Tuesday, 2nd November, 1875.

JOHN MIDDLETON & Co. (of New York, U. S. A.,) *vs.* EDWARD FISCHER & Co.

Mr. M. Kirkwood appeared for plaintiffs, and Mr. G. P. Ness for defendants.

This was an action brought to recover the equivalent (on day of payment) of $23,354.23, U.S. currency, being the alleged balance of account due to plaintiffs by defendants.

Defendants, in their answer, disputed the claim, and showed a set off of $6,000.

Mr. Kirkwood called—

John Middleton, sworn: I am living at No. 4, Bund, Yokohama. I was a partner in the firm of John Middleton & Co. Jesse S. Blydenburg was my only other partner. On the 14th August, 1875 this partnership was dissolved. I went to America from here on the 26th April last. I know the handwriting of my partner. (Accounts produced, and admitted by Mr. Ness, being accounts forwarded by John Middleton & Co., New York, to Edward Fischer & Co.) During October or November last year a consignment of rags was made from Kobe to Middleton & Co. by Fischer & Co. There was an arrangement about commission; it was to be 4 per cent. Five per cent. is charged in New York if no special rate is agreed upon. I never heard any objection to the account now shown me, except certain commissions. I frequently saw Mr. Fischer in New York. I do not remember if he objected to the commission on rags. I returned to Japan about the 7th Sept. last. Mr. Irwin called upon me, and spoke about business matters. I asked Irwin if he had remitted to New York the balance of account. I finally asked him to put any claim he had against me in writing. He did so. (Produced.) No other objection was raised to the accounts. I asked them to state the whole of their claim, and received that paper.

The Court here adjourned till half-past 1 o'clock.

On the re-assembly of the Court, Mr Kirkwood continued his examination of Mr. J. Middleton.

Witness: I have never offered to waive the commission on the rags, because a heavy loss was made. I offered to reduce the commission when all the other accounts were made up, and a settlement arrived at. (Letter produced and read.) This is in my handwriting. I wrote it to Irwin in answer to what he wrote about defendants' claim. I called upon Irwin, and had a long conversation with him. (Other letters read). Mr Smith called upon me, and told me Mr Irwin would not telegraph to Lothrop in New York to

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

settle the account. I knew Mr Irwin to be the manager of Ed. Fischer & Co., nor would he pay an apprroximate amount to me here. By Mr Smith, I mean Mr M. Smith, a partner of Fischer & Co., I believe. (Letter read) I did not receive any reply to that letter, and two days after sending it I determined to commence proceedings. As far as I know, all the items in the account shown me are correct. My attention was drawn to one item about fire-insurance by defendants. I was asked to explain it. My attention was not called to any other item in the account. Another item was afterwards objected to, namely, commission on a shipment of oil. The paper I received from defendants was the only one I received in which a claim was made on me. I had a verbal claim made upon me afterwards. I have no interest in the first oil shipment. That shipment of oil was entirely on defendants' account. It was bought on account of defendants.

Cross-examined by Mr. Ness: At the time of liquidation, Mr. Blydenburgh and I had dissolved partnership. I was not a partner when the petition was filed. I have no written authority to represent Mr. Blydenburg in this country. I consider myself entitled to sue for him. I do not hold Mr. Blydenburgh's power of attorney. The firm of Middleton & Co. is now in liquidation. The partners are no longer carrying on business together, except for the purpose of liquidating the old business. Defendants have had various transactions with Middleton & Co. We have had consignments made to us by defendants. We have made mutual advances. I have examined the account you show me. I have looked it carefully over. I have not examined the other account you show me. I should be surprised to hear that all the items appear alike in the two.

Mr Ness asked witness to compare the two accounts and point out any difference between them.

Mr Kirkwood objected and His Honour allowed it. A note was made of the exception to this ruling.

Mr Ness and witness here went into items in the accounts.

Witness:—Middleton & Co., acted as agents for the defendants in chartering the *Hope*. 1,500 cases of oil belonged to me; and 4,500 cases to a constituent of ours. (*Hope's* manifest produced). I think this is the manifest of the *Hope*. On the manifest the rate of freight is entered as 55 cents a case. The vessel was chartered for a lump sum. Ships offered to take it at 45 cents. I was in Japan, I believe, when the rags were shipped to our firm in New York. I was here when my firm telegraphed and asked if they should accept an offer that had been made for the rags. I had a conversation here about the matter. I do not remember if I said the loss was a heavy one. I never said at that time to Mr Irwin in the presence of Mr Smith that I would forego all commission. I said, I believe, that I might make some concession as a heavy loss had been sustained. I was here when the telegram arrived from New York about the sale of the camphor. I never said I would treat the camphor commission the same as the rag one. I may have said that if they would place the camphor in other hands and repay my advances I would forego the commission. Part of the camphor was taken out of my hands. I offered to take $1,800 less than was due to me to effect a settlement with defendants. My firm and defendants entered into a joint venture for the purchase of 10,000 cases Kerosine, which were shipped per *James Condie*. The defendants, furnished the fonds. We purchased the goods with the money and shipped them. The shipping documents were handed to the O. B. C. in New York. The *James Condie* was lost, so were the goods, which were insured for $22,000 U.S. currency. We handed the policy to the O.B.C. in New York. I have not heard that that policy has not been admitted by the underwriters. I admit my liability for a third share in the goods when the transaction is closed. A part of the camphor has been sold. (Letter read from Mr. Blydenburgh to Mr Middleton). It depends on circumstances how accounts are kept; sometimes they are kept in gold, sometimes in currency. It is not a question of profit in this instance. The charges down in the account are correct. When I commenced transactions with defendants I did not stipulate for any particular mode of keeping accounts. The way I have made up my accounts gives me exactly what I paid to defendants. There is a difference by keeping the accounts in the two different ways. In rendering accounts to other merchants here I have adopted the same way of keeping accounts as defendants. My connection with defendants commenced through my connection with Walsh, Hall & Co.

This closed the cross-examination of this witness.

The Court here adjourned till 10 o'clock on Thursday morning next.

Thursday, Nov 4, 1875.

R. W. Irwin, sworn: I am in defendants' house. I recollect that in the autumn of 1874 an account was opened with plaintiffs' house. It was opened with Mr. Middleton in person. We were at that time preparing a shipment of rags and camphor to New York. It was arranged that they should be consigned to plaintiffs. The goods were forwarded, and we heard about them in February, 1875 We were told that a certain price could be got. We telegraphed back for them to sell. Afterwards we received a telegram saying there would be a heavy loss, about $10,000. (Copies of the telegrams produced). Mr Middleton was here when these telegrams arrived and I showed them to him. Mr Middleton, in a conversation, said he would waive the commission on the rags. Mr Smith was present at the time. Mr Middleton said the loss was heavy. We received a telegram on 9th April, saying that the camphor had arrived and was unsaleable. Mr Middleton was then here. We had several conversations. In one of them he said he would make the commission satisfactory. The commission on the rags is $2,067.14 U.S. currency. In our account we have not deducted commission on the camphor. I gave plaintiff an order for kerosine oil. Previous to reciving plaintiff's account I considered that the commission was at an end. Mr Middleton sent his account to us from New York. I never did anything to admit their charge of commission. Mr Middleton came to Yokohama in September. We were then friendly. I had several conversations with him when he arrived. In one I told him we differed in the accounts, and both of us expressed a wish that we could settle in a friendly manner. Some days afterwards he called upon me and asked for a remittance to New York, and a statement of our claim. He asked me to state it definitely in writing. I did so. I told him he ought to waive commission on the camphor and the rags. I showed him the freight list of the *Hope*, and asked for an explanation of it. Mr. Middleton finally agreed to deduct $1,800 from $2,000 commission. I thought the matter over, and accepted the offer by letter (read). I received a letter from Mr. Middleton, which was unsatisfactory. Mr. Middleton arranged with us in the fall of 1874 for the purchase and shipment of 10,000 cases kerosene oil. He was to have a one-third share and we (Fischer & Co.) a two-third share. No commission was to be charged. We furnished the funds. The vessel the goods were shipped in (the *James Condie*) was lost. We never had possession of the policy of insurance. The amount has not yet been paid, and I am not aware that the policy has yet been admitted. We have received no proceeds of the sale of camphor from plaintiffs. We have not yet received account sales. The gross proceeds amount to $13,383. From this, about $1,000 has to be deducted, not including commission. I do not think plaintiff's account is made up in proper form. Our account is properly made up. By the way plaintiffs have made up their account it makes a difference of about $1, 500 against us. [Witness explained the way in which gold and currency accounts should be kept.] Plaintiffs had no right to keep their accounts in this way. Some goods are always bought and sold for gold and some for currency. All the transactions as they appear in our account are correct. I have been in business in Japan eight years, and nine years in New York. I first knew Mr Middleton in connection with business with Walsh, Hall & Co. Similar transactions took place between plaintiff and Walsh, Hall & Co. In dealing with Walsh, Hall & Co, plaintiffs adopted our system of keeping accounts. I offer to produce all the accounts between plaintiffs and Walsh, Hall & Co., during the years 1871 and 1872. In the absence of an agreement, it is the custom to keep accounts as we have done. There was no special agreement that the accounts should be kept otherwise. The rate of freight in June for kerosine, from New York to Yokohama, was from 54 to 60 cents per case. The plaintiffs chartered the *Hope* for us. They were acting as agents for us at the time. I am always willing to settle accounts, as soon as a balance can be struck. Plaintiffs' firm is in liquidation.

Cross-examined by Mr. Kirkwood; Part of the time, Mr. Middleton was in Yokohama during these transactions. No special arrangement was made with me about commission. I found fault with plaintiff's accounts in September, but never before that. Mr. Middleton said he would waive the commission on rags. I thought it liberal. I would do so myself. Mr. Middleton had to pay $2,700, on our account in connection with the rags.

The Court here adjourned till this morning at 10 o'clock.

Friday, 5th Nov., 1875.

Mr. Kirkwood continued his cross-examination of

R. W. Irwin: I said yesterday that Middleton & Co. were never more than $10,000 out of pocket without security. (Account also

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

of rags produced.) The rags were a cash sale apparently. We remitted £1 800 to Middleton & Co. The proceeds of the rags paid the freight. The freight on the camphor was over $4,000. On the rag deficiencies, we were, I think, jointly responsible. The loss on the shipment of oil per *James Condie* (lost) will be about $1,200 to $1,400, if the policy is paid. Middleton's share would be about $400. The Oriental Bank Corporation holds the policy, and if not paid may call on us for payment at any moment. It is our custom to pay about 12 per cent. on money obtained from the Bank. I do not know if there is a special agreement in this case, but I think we are to pay 12 per cent. The telegrams from New York were paid in currency. All the *James Condie's* accounts were kept in Mexican dollars.

Mr. Ness wanted at this stage to refer the case to arbitration.

Mr. Kirkwood refused to do this, and a very long argument took place, but finally it was settled that the case should go on.

Witness: I have not gone through the accounts appended to the answer. I have glanced over them. I can't say I have read plaintiffs' accounts over very carefully. Between merchants in New York most transactions are in currency. Accounts are kept both in gold and currency. The freight on camphor would be paid in pounds sterling. The legal tender for all debts in New York is U.S. currency. I believe we would lose about $1,500 by the way plaintiffs kept their accounts. Freight is payable in approved bills on London. Gold is always of the same value in New York. Currency rises or falls daily. (Items in accounts gone into.) I think the camphor freight has been partially paid in merchandise. I think Mr. Middleton an honourable man. The way he has made up his accounts has done us an injustice. I believe Middleton & Co. will be fairly reimbursed if they take our accounts as correct.

The case was here adjourned till Wednesday, at 10 a.m.

IN H. B. M.'s PROVINCIAL COURT AT YEDO.

Before M. DOHMEN, Esq.

Saturday, June 12th, 1875.

J. HARTLEY & Co. *vs.* GEORGE EATON.

This was a claim made by plaintiffs for the sum of yen 1136.14.

Decision for plaintiffs for the sum of yen 1136 14, and costs.

The defendant applied for a re-hearing, having important evidence to produce.

Re-hearing October 30th, 1875.

Plaintiffs were represented by Mr. J. Hartley; defendant by Mr. G. P. Ness.

Decision November 6th, 1875, for plaintiffs, for the full amount of claim, with costs.

FIRST REPORT
OF THE
COMMISSIONER OF THE IMPERIAL MINT,
FOR THE
Half-year ending 30th of 6th Month of 8th year of Meiji.

YOUR EXCELLENCY,

The undersigned, the Commissioner of the Imperial Mint, has the honour to submit to Your Excellency's perusal this First Report of the Commissioner of the Imperial Mint for the Half-Year ending 30th of 6th month, to follow the Fourth Report of the Director, for the information of His Majesty's Government.

AMOUNT OF GOLD OF STANDARD FINENESS IMPORTED INTO THE IMPERIAL MINT DURING THE HALF-YEAR.

Imported by.	Ounces Troy, at ·900 Standard.
Japanese	762 85
Chinese	None.
Other foreigners	None.
Imperial Government	43,077 81
Total.	43,840 66

DESCRIPTION OF GOLD BULLION IMPORTED FROM THE PUBLIC DURING THE HALF-YEAR.

Description.	Ounces Troy.
Gold bars of known fineness	4,109 95
Refined gold bars of unknown fineness	46,170 65
Total.	40,280 63

AMOUNT OF SILVER OF STANDARD FINENESS IMPORTED DURING THE HALF-YEAR.

Imported by.	Ounces Troy, at ·900 Standard.
Japanese	99,842 64
Chinese	3,896 23
Other foreigners	None.
Imperial Government	368,300 17
Total.	472,039 03

DESCRIPTION OF SILVER BULLION IMPORTED FROM THE PUBLIC DURING THE HALF-YEAR.

Description.	Ounces Troy.
Silver bars of unknown fineness	163,321 49
Refined silver bars of unknown fineness	266,210 05
Chinese sycee	3,570 95
Total.	433,102 29

The following coins have been struck and passed for issue :—

Denominations.	Number.	Value.
Gold 20 Yen	...	...
10 Yen	...	...
5 Yen	158,891	794,455.00
2 Yen	...	...
1 Yen	...	...
	158,891	794,455.00
Silver 1 Yen	115,449	115,449.00
Trade Dollar	38,360	38,360.00
50 Sen	60	30.00
20 Sen	225,455	45,091.00
10 Sen	2,825,346	282,535.63
5 Sen	2,802,540	140,127.00

Copper 2 Sen	14,398,875	287,977.50
1 Sen	14,718,179	147,181.79
½ Sen	8,139,104	40,695.52
1 Rin	2,815,330	2,815.33
	40,071,488	478,670.14
Grand Total	46,237,599	1,894,717.74

The agreement between the Imperial Government and the Oriental Bank Corporation having expired on 31st day of 1st month of this year, the latter have ceased to act as Agents of the Government with regard to matters relating to the Imperial Mint. The Corporation had been connected with the Imperial Mint for five years and during that interval they have always transacted the matters accredited to them to the satisfaction of the Government, and they therefore deserve the highest praise.

Major Kinder, the Ex-Director of the Imperial Mint, having completed the period of his services to the Government at the expiration of the agreement above referred to, has left this country for England during the 2nd month of the present year. While being in the service he has ceaselessly and indefatigably exerted himself in this office of Director, so that the progress at present attained by the Mint results principally from his labour, for which the undersigned, on behalf of the Imperial Government must express the acknowledgment due. Previous to his leaving this country, on the 14th day of the 2nd month this year, he has been presented to His Majesty the Tenno, who addressed him as follows:

(*Official Translation.*)

"THOMAS WILLIAM KINDER,

"Late Director of the Imperial Mint, Osaka, Japan.

"From the opening of Our Imperial Mint at Osaka to the present time you have been engaged in the arduous and responsible duties incumbent on you as Director of that establishment, such as the coining of money, the formation of the various departments and other works, &c. The success which has been the result thereof is entirely due to your efforts and industry.

"We, therefore, desire to express Our great satisfaction for the same, and as you are now about to return to your own country, We wish you a prosperous voyage and every success in the future."

The services of the following European officials have also terminated simultaneously with those of Major Kinder :—

Mr. G. W. HUNTER, *Assayer of Pre-melted Silver &c.*

Mr. EDWARD ATKIN, *Superintendent of Gold and Silver Melting.*

Mr. HERBERT WHEELER, *Director's Secretary.*

Mr. HENRY SHEARD, *Die Engraver.*

Mr. EDWARD WYON, *Foreman Coining Department.*

Mr. ROBERT SMITH, *Foreman Copper Rolling Mill &c.*

Mr. R. FINCH, *Foreman Sulphuric Acid Works.*

Besides the above, Mr. V. E. Braga, the accountant and book-keeper, has been ordered by Your Excellency to Tokio, and the services of Messrs. C. J. Braga and Louis Swaby, the assistant accountants and book-keepers, have also terminated at the same time with those of the other European officials above mentioned.

Mr. EDWARD DILLON, B.A. *Assayer, and Superintendent of Melting Department.*

Mr. WILLIAM GOWLAND, Assoc. R. S. M. *Chemist & Metallurgist.*

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

The above two officials have, since the 2nd month this year, been appointed "Technical Advisers" to the Commissioner, with Your Excellency's authorisation. and are chiefly entrusted with the control of the actual operations of minting.

Mr. ROBERT MACLAGAN, *Engineer.*
Mr. THOMAS HOWLETT, *Coiner.*
Mr. CHARLES NICOLA MANCINI, *Roller.*

The above three officials have also, since the 2nd month, been appointed in the similar manner to their respective offices.

Although the coinage of gold had been confined to "five yen" pieces, there was an increase in amount compared with that of the last half year. The coinage of silver has principally been restricted to small subsidiary coins.

Although the coinage of gold has been confined to "five yen" pieces, there was an increase in amount compared with that of the last half year. The coinage of silver has principally been restricted to small subsidiary coins.

According to the Government notification of the 28th of the 2nd month this year, the silver coin for the purpose of trade, and designated the "Trade Dollar," has been coined since, of 420 grains weight, with a permitted deviation for weight of 1 per mille in each direction (the standard of fineness and its legal remedy being the same as in the case of the silver yen), and the silver yen entirely ceased to be coined.

The average amount in value of copper coins produced ranged originally from fifty to sixty or seventy thousand yen per month, but on account of the pressing demand by the Government for copper coins, not only have the working hours of the Copper Department been increased, but certain Departments have for a time been working during night, and the result has been the production of an average amount of one hundred thousand yen in value per month.

All the working dies for gold and silver coins that have been in use while the Ex-Director held his office, and to which he is responsible, have been locked in a box and not used since, according to an understanding arrived at between the Ex-Director and the undersigned, previous to the former leaving this country, and the line of demarcation has been clearly drawn on the gold and silver coins struck since the 2nd month of this year, by the fact that the new dies, and therefore coins, bear the characters (8th year of Meiji) on them.

In obedience to a Government decree, the war medals are being struck at the Mint, numbering in all 3,677 pieces, and it is said they are intended to be given to those who served in the Formosan Expedition last year.

As the experience since the first publication of the Regulations rendered some additions and modifications desirable, the improved and modified Regulations were made known by Notification No. 62, dated 20th day of 4th month of this year. Previous to this some improvements have been introduced, by Your Excellency's special order, both in the menagement of the Mint and the regulations of the annual assay.

After the tables of the relative value of old and new coins—the result of a great number of analyses and examinations at the Mint—have been published during the 9th month of last year, old coins are reported to be graoually issuing out from the hard, to the great benefit of the entire public.

The erection of the new barracks having been completed on the 15th of the 5th month, the infantry now occupy them, and the old barracks have been removed.

The number of officials, sub-officials and men at present employed at the Mint is as follow :—

Officials	}	151
Sub-officials		
Coin selectors		
Workmen	}	347
Servants		
Total		498

Every Tuesday has been kept as an ordinary visiting day of the Mint, and the number of visitors from the 2nd month to the 6th month was in all 11,441, and besides the above, visitors on extraordinary days were :—

Japanese	450
Foreigners	153
Total	603

The above accounts principally refer to the Mint proper, and a brief sketch of the two Departments, the Refinery and the Sulphuric Acid Works, will now be

The amount of bullion refined during five months from the 2nd to the 6th month, was as follows :—

Imported by.	Pure Gold. Ounces Troy.	Pure Silver. Ounces Troy.	Total. Ounces Troy.
Imperial Government ...	35,323.21	247,210.96	282,534.17
Japanese	530.31	93.82	623.62
Total	35,853.31	247,304.78	283,158.09

Amount of sulphate of copper produced during the five months was :—

Sulphate of copper ... ... kin 33,900

Amount sold :—

Sulphate of copper ... ... kin 20,700
Average amount sold per mouth.. ... „ 4,140

The original arrangements in this Department for the refining of gold and silver, as well as concentration and crystallisation of the sulphate, having been found inadequate for the amount of work, have since been enlarged.

The workmen in this Department having acquired considerable skill in concentrating or otherwise managing sulphuric acid, the expenses of the works have been largely decreased, and the consequent reduction of its price has brought an increased demand for the acid, as may easily be seen from the following :—

Sulphuric acid during twelve months ending 31st of 12th month last year.....	103,170 lbs.
Monthly average, therefore	8,597.5 lbs.
Amount sold during five months ending 30th of the 6th month this year.....	105,502 lbs.
Monthly average, therefore	21,101.8 lbs.
Excess of the monthly average of this year over that of last year	12,504.3 lbs.

The apparatus for the manufacture of nitric acid being now completely fitted, large quantities of the acid can be produced and suppled to the public.

The "Tower Condensers," which were in a dangerous condition, have been put in order dnring the earlier part of this half-year.

Having now completed a general review of the outlines of the work done at the Mint during the last fine months, it is highly satisfactory for the undersigned to be able to state, in conclusion, that although the services of many European officers have terminated since the important change in the management of the Imperial Mint which has taken place in the 2nd month of this present year, the various operations of the Mint have been efficiently and successfully carried on, with the diligence of the officials, both Foreign, and Japanese, and the acquired skill of the workmen.

The review of the various operations in detail will be found in the Memorandum of the Advisers, attached to this Report.

I have the honour to be,
Your Excellency's most obedient Servant,
T. ISHIMAI,
Commissioner of the Imperial Mint, Osaka.

To His Excellency
SANGI OKUMA SHIGENOBU,
Minister of Finance.

FREE TRADE *V.* PROTECTION IN AUSTRALIA.

[The *Times* publishes the following letter from a correspondent in Sydney, N. S. W.]

New Colonies must of a necessity have a population of more than average energy, and possibly intelligence also, as it requires a good share of both to induce the bulk of emigrants to forsake the old nest for a new and unknown one; therefore, coupled with the naturally large undeveloped resources of all young countries, there is a wider and fairer scope for bringing to a successful issue whatever industry is either necessary or a natural result of circumstances, either of growth or produce, than in an older and more artificial state of society; so that where, as in the case of New South Wales and Victoria, we see one colony deliberately adopting Free Trade and the other Protection, we may reasonably assume that there is a "fair field and no favour," and by dispassionately judging the proved results of each system through a period of years, quite long enough for a sound basis of calculation, unprejudiced by-standers may at once see which is the true and which is the false one.

New South Wales originally comprised also its (now) sister Colonies of Queensland on the north and Victoria on the south, the latter being the first to be dismembered from us and to set up on its own account. From its small area and other causes Victoria held a very second-rate position, till the extraordinary finds of gold in 1871 first attracted to it, and then kept, a large population, principally from Great Britain and the Continent.

Digitized by Google

As its pastoral resources are so limited as compared with ours, and it has no coal, and neither copper, tin, nor other minerals in quantities worth speaking of, it threw all its spare energy into fully developing its gold reefs, and at they began to fall off, and its population to grow larger, they started—Protection to Native Industry! And with what ultimate results an extract from one of the leading Victorian journals shows, without further argument, though I may premise that, as their population is as eight to our five, the relative results in favour of Free Trade are still more pronounced:—

"But there is a middle ground in politics between the camp of the Free-traders and that of the Protectionists, occupied by numbers of persons who, for want of inclination or of opportunity, have never seriously investigated the question, but have suffered themselves to be misled by the plausible cry of protection to native industry, and who have given an unthinking assent to the proposition that to tax every consumer for the benefit of a few producers must be advantageous to the whole of the community, and that to rob all for the gain of a privileged minority is both a commendable and a patriotic proceeding. To such persons we now address ourselves, and we propose to show that, under Protection, Victoria is making a miserably slow progress in manufactures, and, that, by a policy which is avowedly tending towards Free Trade, the neighbouring colony of New South Wales is rapidly forging ahead.

"Let us take the statistics of manufactures of our colony for the year 1873 and those of New South Wales for 1872 respectively, and see how they stand, remembering, at the same time, that our population is, in round numbers, 800,000, and that of the adjoining colony 500,000 only. These are the figures:—

	New South Wales.	Victoria.
Total number of manufactories and works ..	2,217 ..	1,269

Now, what has been the progress made by each colony in this respect since the year 1863? In that year there were 771 manufactories and works in New South Wales, exclusive of flour mills, and there were 716 in Victoria. Therefore, while in ten years the number had been nearly trebled in New South Wales, in 11 years it has not even doubled in our own colony. Protectionists are accustomed to point to our clothing factories, boot factories, carriage building establishmeuts, shirt manufactories, and so forth, as proofs of the admirable working of our tariff; but in 1863 New South Wales had none of these. She now has 15 of the first, 38 of the second, 85 of the third, and 5 of the fourth. But the rapidity of her advance as a manufacturing colony, when compared with our own—regard being had to the difference in the number of the population in each colony—will be shown most conclusively by the following figures:

	Victoria.		New South Wales.	
	1863.	1873.	1863.	1872
Agricultural implement manufactories..	27	40 ...	0	37
Tobacco	4	13 ...	31	34
Tanneries and wool-washing establishments...	70	118 ...	92	136
Distilleries and sugar refineries... ...	3	6 ...	17	56
Ship and boat builders	19	11 ...	3	90
Limekilns...	9	27 ...	83	107
Boot manufactories	0	21 ...	0	38
Confectionery manufactories	0	6 ...	0	28
Machinists and engineers.	8	24 ...	52	57

"In the return of manufactures, works, &c., for this Colony are included 186 corn-crushing and chaff-cutting machines, and if these were included in the corresponding statistics for New South Wales the total would be 7,769. On the other hand, the latter include and very properly so, 290 wine presses, while there is no similar entry in our own list.

"In an admirable pamphlet just published by Mr. G. H. Reid, of Sydney, he offers a striking illustration of the soundness and stability of those industries which are not 'forced into precocity by the stimulants of protective legislation, whose effect on industry has been compared with that produced by the lash on the labour of the slave.' He states that 20 years ago, under the Free Trade tariff introduced by Mr. E. Deas Thomson, two establishments for working in metals were founded in Sydney, which have continued to flourish ever since. One employs, 700, and the other 400 persons at the present time. And in order to exhibit still more vividly the growth of manufactures and handicrafts in that city under the fostering influences of open competition, Mr. Reid points out that while the increase in the number of skilled workmen and artificers was 12 per cent. in the five years between 1856 and 1861, it was 58 per cent. in the ten years from 1862 to 1871—a difference in favour of the latter period of 34 per cent.

"There is one other fact in connexion with the industrial progress of New South Wales which we must not omit to mention, and that is that under a non-protectionist tariff the manufacturers and producers of New South Wales have succeeded in replacing 16 important articles of import by home grown and home made commodities of the same kind to the extent of £1,752,830. This has been effected in ten years—namely, between 1862 and 1872, and, as Mr. Reid significantly adds:—

"'These facts disclose a development which leaves but little to be desired. Being the result of natural enterprise and free competition, our progress has been a threefold benefit—a conversion of resources, an increase of employment, and a reduction in price.'"

In justice however to "Protectionist Victoria," I admit that we also are protected in a degree, by our command of coal, and necessarily, therefore, of cheaper steam power, the saving being at least 20s. per ton when it is used; but, as all our inland and up country mills, &c., burn wood, and must do so till our railways reach them, there is not so much real as apparent difference—though, in the future, when we smelt our own iron, and weave our own wool, and establish other industries requiring steam power, then the real value of our illimitable coal and iron deposits will force us ahead naturally and tell in our favour strongly.

The "moral" from the above facts and figures is so obvious that they need no further comment.

Referring to another matter, in conclusion. In a letter you did me the honour to publish some time ago, my statement there "that Victoria exported large quantities of our copper and tin," seemed ambiguous and to require explanation. It is this:—In the first place, Victoria draws a large proportion of her meat supply from our live stock, driven over her borders; the wool, skins, hides, and tallow from which she exports; also, about 25,000,000lb. of our own wool is shipped from Melbourne, as being nearer than Sydney (until our railway reaches "Riverina" in a year or two more).

This, coupled with her own pastoral produce, enables her to load a very large fleet annually; but as she produces scarcely any metals or minerals for dead weight (which wool ships must have) and as we produce more copper, tin, and other heavy freight than our own fleet can profitably take, we send all we can spare down to Melbourne, where it is transhipped for London at from 20s., even up to 30s., per ton sometimes, less cost than our ships will take it at, from their likewise being able to pick and choose from so many articles of freight through Sydney being also the entrepôt for the South Sea Island trade.

New South Wales also bids fair to add galena to its exports, as a lode has just been found and opened up 2ft. thick, assaying 70 per cent. lead, and rich in silver and gold as well, and now that mining has been settled into an industry and not a mania, we may expect other discoveries and results, which will all serve to make New South Wales the wealthiest, as she is the healthiest and oldest of the Australian Colonies.

Shipping Intelligence.

ARRIVALS.

Oct. 30, *Volga*, French steamer, Nondedeu, 965, from Hongkong, Oct. 23, Mails and General, to M. M. Co.

Oct. 31, *Tokio Maru*, Japanese steamer, Dunn, 2,119, from Shanghai and ports, Oct. 23, Mails and General, to M. B. Co.

Nov. 1, *Bombay*, British steamer, Davis, 1,325, from Hongkong, Oct. 24, Mails and General, to P. & O. Co.

Nov 1, *Yantic*, American sloop of war, Commander Lewis, 470, from Nagasaki, Oct 27.

Nov. 1, *Alexandra*, British barque, Lamont, 386, from Newcastle, Aug. 24, Coal, to P. M. S. S. Co.

Nov. 1, *Alaska*, American steamer, Howard, from San Francisco, Oct. 1, Mails and General, to P. M. S. S. Co.

Nov. 5, *Adeline & Marianne*, German Barque, Dahl, 300, from Amoy, Oct. 16, Sugar, to Chinese.

Nov. 6, *Costa Rica*, American steamer, Conner, 1,914, from Shanghai and ports, Oct. 30, Mails and General, to P. M. S. S. Co.

DEPARTURES.

Nov. 1, *Gaucho*, British barque, Crighton, 367, for Nagasaki, Ballast, despatched by E. C. Kirby & Co.

Nov. 1, *Belle Sauvage*, British ship, Simpson, 890 for Shanghai, Ballast, despatched by Captain.

Nov. 1, *Ambassador*, British ship, Prehn, 692, for New York, Tea and Sundries, despatched by P. Heinemann & Co.

Nov. 1, *Vittor Pisani*, Italian frigate, Captain Castellucci, for Guatemala.

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

Nov. 2, *Orissa*, British steamer, Harvey, for Hongkong, Mails and General, despatched by P. & O. Co.

Nov. 2, *Alaska*, American steamer, Howard, for Hongkong, Mails and General, despatched by P. M. S. S. Co.

Nov. 2, *Nevada*, American steamer, Williams, 2,145, for Shanghai and ports, General, despatched by M. B. Co.

Nov. 3, *New Republic*, British barque, Reynolds, 580, for Batavia, General, despatched by J. P. Von Hemert.

Nov. 3, *Tokio Maru*, Japanese steamer, Dunn, 2,119, for Shanghai and ports, Mails and General, despatched by M. B. Co.

Nov. 3, *Ukraine*, American barque, Melcher, 680, for Nagasaki, Ballast, despatched by Captain.

PASSENGERS.

Per *Volga* from Hongkong.—Madame Bosch and family, Miss Meyer, Mr. and Mrs. Lemoine and 2 children, Messrs. Durand, Paufet, Uramatre, Iamazapi, Iwakura, Salabelle.

Per *Tokio Maru* from Shanghai and ports.—Mr. and Mrs. Hornby Evans, Mrs. Wignal and Son, Mrs. Nickel, P. V. Grant, Captain Law, J. P. Marquis, R. Hughes, Yoshida Kimourasha, Kobayaske, Okubo, Kamadzuki, E. P. Weaver, H. S. Clayton, and 196 Japanese, 3 Chinese and 1 Malay in the steerage.

Per *Bombay* from Hongkong.—Mr. and Mrs. Hansen and child, Mrs. Hewitt and child, Mr. Laudells and Mr. J. Driscoll.

Per *Alaska* from San Francisco:—For Yokohama: R. W. Fowler, Miss H. E. Fielding, Mrs. C. F. Goodrich, Surgeon J. H. Gaines, U.S.N., Miss Anna H. Kidder, Ed. Morton, Takero Manroka, Surgeon J. H. Painter, U.S.N., R. Passavant, F. L. Runals and wife, Miss Clara Sands, Mr. Shimodz, Mrs. C. A. Irving, Captain Von Eisendecher, Baron Von Gutsmidt, Mrs. E. E. White, child and nurse, G. E. Winants and wife, C. M. Otto. For Shanghai: Mrs. M. B. Capp. Mr. J. M. Carney, wife and servant, Miss L. Capbell, Miss L. Jerman, Miss J. J. Mansfield, Mr. J. H. Copenhagen. For Hongkong: Mr. Wm. Wotton, Mr. Howland, wife and child, Miss Shepard, Miss Hillman, Rev. W. H. Mc Kibben and wife, and 515 in the steerage.

Per *Nevada* for Shanghai and ports.—Messrs. C. Atteimann, Wagner, Taylor, Ishi, Mr. and Mrs. Rasch and Maid, Miss M. J. Mansfield, Messrs, Hudoffsky and Otska, and 2 Europeans, 1 Chinese and 7 Japanese in the steerege.

"Berkeley, Sept. 1869.—Gentlemen, I feel it a duty I owe to you to express my gratitude for the great benefit I have derived by taking 'Norton's Camomile Pills.' I applied to your agent, Mr. Bell, Berkeley for the abovenamed Pills, for wind in the stomach, from which I, suffered excruciating pain for a length of time, having tried nearly every remedy prescribed, but without deriving any benefit at all. After taking two bottles of your valuable pills I was quite restored to my usual state of health. Please give this publicity for the benefit of those who may thus be afflicted.—I am, Sir, yours truly, HENRY ALLPASS.—To the Proprietors of NORTON'S CAMOMILE PILLS."

COMMERCIAL INTELLIGENCE.

IMPORTS.

Cotton Fabrics.—The native and race holidays which have been observed during the week leave nothing to be said upon the subject of imports goods generally. The few transactions that have taken place have been too unimportant to test values.

Grey Shirtings:—				White Shirtings:—	
7 lbs.	38½ yds.	39 in. per pce....	$1.97½ to $2.05	60 to 64 reed 40 yds. 35 in. nom. per pce....	2.20 to 2.40
8 lbs.	38½ yds.	44 in. „ nom.	2.30 to 2.55	Turkey Reds 24 yds. 30 in. 2¼—3 lb. per lb...	0.75 to 1.02½
8 lbs. 4 to 8 lbs.	38½ „	39 in. „ „	2.27½ to 2.60	Black Velvets ... ... Nominal ...	8.50 to 10.00
9 lbs.	38½ „	44 in. „ ...	2.60 to 3.05	English Drills 15 lb. 40 yds, 30 in....	3.30 to 3.40
				Taffachelass 13 yds, 43 in....	2.55 to 2.70

Cotton Yarns.

No. 16 to 24 ... ...per picul...	$31.00 to 34.50	No. 38 to 42... ... ...per picul...	$42.00 to 46.00
No. 28 to 32 ... ...per picul...	$37.00 to 41.00	Reverse Twist ... 16-24 ... „ ...	—

Woollens.—With the exception of a small current demand for plain *mouselines de laine* we are unable to report any business in these goods.

Plain Orleans	40—42 yds. 32 in....	6.25 to 7.80	Figured Mousseline de Laine...	30 yds. 30 in...	0.25 to 0.28
Figured Orleans	29—30 yds. 31 in....	4.75 to 5.25	Multicolored „ ...	30 yds. 30 in...	0.35 to 0.40
Chimagoro	30 yds. 30 in....	5.25 to 5.75	Cloth, all wool plain or fancy...	48 in. to 52 in...	0.80 to 1.20
Italian Cloth	—30 yds. 32 in....	0.25 to 0.33	Presidents	54 in. to 56 in...	0.70 to 0.80
Camlet Cords	29—30 yds. 32 in....	6.25 to 7.25	Pilots	54 in. to 56 in...	0.45 to 0.52½
Camlets Asstd.	56—58 yds. 31 in....	18.50 to 19.00	Union	54 in. to 56 in...	0.50 to 0.70
Lastings, Japan...	22—30 yds. 32 in....	13.00 to 14.50	Blankets, scarlet & green 7 to 8 lbs....	per lb...	0.40 to 0.42½
Plain Mousseline de Laine	—30 yds. 30 in,...	0.18½ to 0.20½			

Sugar.—We have no change to report in the market for China Sugars.

Sales of Formosa sorts to the extent of about 25,000 piculs are reported to have taken place during the closing week.

Sugar:—Formosa in bag ... ...per picul....	3.75 to 3.85	China No. 5 Kong-fun ... ...per picul ...	4.50 to 5.00
in Basket ... ... „ ...	3.60 to 3.70	„ No. 6 E-pak ... ... „ ...	4.10 to 4.30
China No. 1 Ping fah ... ... „ ...	8.00 to 8.10	Swatow... .. .. „ ...	3.00 to 3.10

THE GREATEST

WONDER OF MODERN TIMES!

HOLLOWAY'S PILLS.

PERSONS suffering from weak or debilitated constitutions will discover that by the use of this wonderful medicine there is "Health for all." The blood is the fountain of life, and its purity can be maintained by the use of these Pills.

SIR SAMUEL BAKER,

in his work entitled "The Nile Tributaries in Abyssinia," says, "I "ordered the dragoman Mahomet to inform the Fakey that I was a "Doctor, and that I had the best medicines at the service of the "sick, with advice gratis. In a short time I had many applicants, "to whom I served out a quantity of Holloway's Pills. These are "most useful to an explorer, as possessing unmistakable purgative "properties they create an undeniable effect upon the patient, which "satisfies him of their value."

SIMPLE, SAFE AND CERTAIN!

HOLLOWAY'S OINTMENT

Is a certain remedy for bad legs, bad breasts, and ulcerations of all kinds. It acts miraculously in healing ulcerations, curing skin diseases, and in arresting and subduing all inflammations.

MR. J. T. COOPER,

in his account of his extraordinary travels in China, published in 1871, says—"I had with me a quantity of Holloway's Ointment. I "gave some to the people, and nothing could exceed their gratitude; "and, in consequence, milk, fowls, butter, and horse-feed poured "in upon us, until at last a tea-spoonful of Ointment was worth a "fowl and any quantity of peas, and the demand became so great "that I was obliged to lock up the small remaining stock"

Sold by all Chemists and Medicine Vendors throughout the World.

May 17th, 1873. 6m.

GOLD-THREAD MANUFACTORY.

June 5, 1875. 1f. 12ms.

INK.

PRINTING INKS.

PARSONS, FLETCHER, & Co.,

PRINTING INK MAKERS,

LONDON.

From the lengthened experience Messrs. PARSONS, FLETCHER, & Co. have had in the Export Trade (of which they have made a speciality), and from the fact that their Inks are to be found in all parts of the world, they are enabled to adapt their goods to the requirements of all climates, and to every description of work. This is of the greatest, importance to those who may confide their orders to this house.

GENERAL LIST OF PRICES.

Job Ink, for Machine or Press, 8d., 10d., 1s., 1s., 1s 3d., & 1s. 6d. per lb.
News Ink, 8d., 10., 1s., 1s. 3d., and 1s. 6d. per lb.
Bookwork Ink, 1s., 1s. 6d., 2s., and 2. 6d. per lb.
Superior Bookwork Ink, 3s., and 4s. per lb.
Woodcut Ink, 5s. and 7s. 6d. per lb.
Red, Blue, Green and other colours, 2s., 3s., 4s., 5s., 7s. 6d., and 10s. per lb.
Varnish, 12s. 15s., and 20s. per gallon.
LITHOGRAPHIC INKS in every in shade of colour and variety of price.

PARSONS, FLETCHER, & Co. supply the cheaper descriptions of Newspaper Ink, but they recommend for warm climates the better class of Printing Inks, which in *all cases* are really the most economical.

All orders must be accompanied with a draft for the amount, or may be forwarded through any London House, or

STREET'S COLONIAL NEWSPAPER AGENCY,
30, Cornhill, and 5, Serle-street.

LONDON: AND

Under Distinguished Patronage

DR. BRIGHT'S PHOSPHODYNE.

(OZONIC OXYGEN)

A CHEMICAL PREPARATION OF PHOSPHORUS, WITH THE VEGETABLE ALKALOIDS QUINIA, CYPRIPEDEN, XANTHOXYLIN, &c.

This Phosphatic combination is pronounced by the most eminent members of the Medical Profession to be unequalled for its power in replenishing the vitality of the body, by its supplying all the essential constituents of the blood and nerve substance, and for developing all the powers and functions of the system to the highest degree.

It is agreeable to the palate, and innocent in its action, while retaining all its extraordinary properties; and as a specific, surpassing all the known therapeutic agents of the present day for the speedy and permanent cure of—

Nervous Prostration	Lassitude
Liver Complaints	Shortness of Breath
Palpitation of the Heart	Trembling of the hands and limbs
Dizziness	Impaired Nutrition
Noises in the Head and Ears	Mental and Physical Depression
Loss of Energy and Appetite	Consumption (in its first stages only)
Hypochondria	Timidity
Female Complaints	Eruptions of the Skin
General Debility	Impaired Sight and Memory
Indigestion	Nervous Fancies
Flatulence	Impoverished Blood
Incapacity for Study or Business	Nervous Debility in all its Stages
Sick Headache	Premature Decline

and all morbid conditions of the system arising from whatever cause. The action of the Phosphodyne is twofold—on the one hand increasing the principle which constitutes nervous energy, and on the other the most powerful blood and flesh generating agent known; therefore, a marvellous medicine for renovating impaired and broken-down constitutions. It quickly improves the functions of assimilation to such a degree, that where for years an emaciated, anxious, cadaverous, and semi-vital condition has existed, the flesh will rapidly increase in quantity and firmness, and the whole system return to a state of robust health. The Phosphodyne acts electrically upon the organisation; for instance, it assists nature to generate that human electricity which renews and rebuilds the osseous, muscular, nervous, membranous, and organic systems. It operates on the system without exciting care or thought upon the individual as to the process. It moves the lungs, liver, heart, kidneys, stomach, and intestines, with a harmony, vigour, yet mildness unparalleled in medicine.

The Phosphodyne gives back to the human structure, in a suitable form, the phosphoric or animating element of life, which has been wasted, and exerts an important influence directly on the spinal marrow and nervous system, of a nutritive, tonic, and invigorating character, maintaining that buoyant energy of the brain and muscular system which renders the mind cheerful, brilliant, and energetic, entirely overcoming that dull, inactive, and sluggish disposition which many persons experience in all their actions.

The beneficial effects of the Phosphodyne are frequently shown from the first day of its administration, by a remarkable increase of nervous power, with a feeling of vigour and comfort, to which the patient has long been unaccustomed. Digestion is improved; the appetite increases wonderfully; the bowels become regular; the eyes brighter; the skin clear and healthy; and the hair acquires strength, showing the importance of the action of the Phosphodyne on the organs of nutrition.

Finally, the Phosphodyne maintains a certain degree of activity in the previously debilitated nervous system; its use enables all debilitated organs to return to their sound state and perform their natural functions. Persons suffering from Nervous Debility, or any of the hundred symptoms which this distressing disease assumes, may rest assured of an effectual and even speedy cure by the judicious use of this most invaluable remedy.

DR. BRIGHT'S PHOSPHODYNE

IS SOLD ONLY

In CASES at 10s. 6d. by all Chemists and Patent Medicine Vendors throughout the Globe.

Full Directions for Use, in the English, French, German, Italian and Dutch Languages, accompany each Case.

☞ *CAUTION.—The large and increasing demand for Dr. Bright's Phosphodyne has led to several imitations under somewhat similar names; purchasers of this medicine should therefore be careful to observe that each case bears the Government Stamp, with the words Dr. Bright's Phosphodyne engraved thereon, and that the same words are also blown in the bottle.*

Wholesale Agents for—

BOMBAY.....D. S. KEMP & Co.

INVENTORS & MANUFACTURERS OF THE CELEBRATED

PARAGON LAMPS,

Burning Kerosine, Petroleum, or Paraffin.

Unrivalled for Simplicity, Economy, Durability, Safety & Brilliancy of Light.

OVER 5,000 PATTERNS OF

Handle Lamps	Factory Lamps
Table Lamps	Ship Lamps
Hall Lamps	Chandeliers
Church Lamps	Brackets
Billiard Lamps	Lanterns
Railway Lamps	Stoves

Fitted with our famous PARAGON BURNERS, which give a magnificent white and steady light, equal to 25, 20, 14 & 11 candles.

Our CLIMAX COOKING & PARAGON HEATING STOVES, in six sizes, will be found extremely useful in every household, being always ready for use, and saving time and money, coals, trouble of lighting fire, dust, and refuse.

Our HURRICANE LANTERNS are absolutely wind-proof and safe; simple in construction, and give a splendid white and steady light. They are the most serviceable Lanterns for use in Stables, Farms, Gardens, Boats, Cellars, &c.

Having been exclusively engaged in the production of Lamps for many years, the reputation which we have established for our manufactures in America, Australia, China, India, & all other Foreign Markets, enables us to satisfy the requirements of every buyer; our assortment being large & complete in every branch. For brilliancy of light, simplicity and durability of construction, our Lamps cannot be excelled; whilst the style, finish, & decorations are exquisite, & generally much admired. We therefore can confidently invite the attention of all Importers, & in recommending to you the above course, we point to our prospective mutual advantage. Catalogues, containing more than 1,000 Patterns, sent free of charge.

THE

Japan Weekly Mail.

A POLITICAL, COMMERCIAL, AND LITERARY JOURNAL.

VOL. VI.—No. 46.] YOKOHAMA, SATURDAY, NOVEMBER, 13, 1875. [PRICE $24 PER ANNUM.

TO SUBSCRIBERS.

SUBSCRIBERS at a distance whose period of subscription may have elapsed, are informed that their papers will be addressed and charged to them *until countermanded.* This rule has been found necessary in order to avoid the inconvenience of an abrupt stoppage of the paper which might result from an omission to renew.

It is requested that notice of the intention to discontinue a subscription be so given as to reach Yokohama *before* the date of its effluxion.

NOTICE.

ON and after the 1st of July, Notices of Births, Marriages and Deaths will be charged $1 each insertion.

Such Notices cannot be inserted in this journal unless endorsed with the name and address of the person by whom they are sent.

Yokohama, 25th June, 1874.

BIRTH.

On the 9th instant, at No. 22, Mrs. E. B. WATSON, of a son.

Notes of the Week.

There are rumours,—unconfirmed, we rather think—of fresh aggressions by the Coreans, who are said to have fired again upon some Japanese vessel on the coast. If true, this is annoying, because it has certainly been done under the smart of the late chastisement, and any attempt to punish the insolence would meet with far more resistance than was shewn two months ago. Whether the little Japanese colony at Fusan is safe or not, we cannot tell, though we may hope so as a vessel or two of war was lately despatched to assist or convey them homewards in case of emergency. We regard a Corean war as only probable under the contingencies of which we have written more fully elsewhere. It would only be declared as the probable lesser of two evils, and under any circumstances, is greatly to be deprecated. It is not desirable that Europe should have any fresh grounds for thinking that Japan is making the first use of her new civilization to imitate the worst part of the example of her instructors.

A translation found its way into print this week from one of the native newspapers, expressive of the satisfaction felt by the Japanese at the success of General Saigo in one of the late races, the prize for which he carried off. And the writer remarked, what was very true, that the foreigners were quite as much pleased as the natives at the success of our new rival. It is pleasant to think there is a new influence at work calculated to advance our more agreeable relations with the Japanese, and if they will only avoid our lottery and betting system, with all the evils to which they give rise, as well in England as here, they might make racing a national sport, and improve their breed of horses on a far larger scale than we can do it for them. The dispersion of the Arab horses among the country people in the north of China after the late war, when they were sold almost for nothing, has exercised an astonishing effect upon the breed of China, and though we have no wish to see similar results brought about in this country by the same means, there is much which might be done here under good guidance, and with very little expense, which would vastly improve the Japanese breed of horses. It would be curious to know the fate of General Capron's half-breeds, which certainly ought to have been seen in the paddock long before this. We have no wish to twit him now that he has gone and cannot reply to us in one of those sturdy letters which we once or twice had from him. But if he has a successor who reads the *Japan Mail*, we may safely throw down a challenge to him on behalf of the racing members of this community, and if he do not take it up, we must be permitted to form our own inferences on the subject of the efforts made under the direction of the Kaitakushi Department to improve the breed of horses in this country.

Madame Leonowa gave her Second Concert on Wednesday evening last in the upper room of the Machigaisho, courteously placed for the purpose at her disposal by the Governor of Kanagawa. The room was well filled, though had it been better known how much pleasure awaited the audience, it is presumable that the attendance would have been larger.

A second hearing of this lady enables us to speak of her talents and endowments with greater certainty and accuracy than we felt justified in using on a former occasion. Owing to the fact that the pleasure of accompanying her was more equally divided among the amateurs than at her first concert, the advantage of listening to her was also more equally shared by them, and a revision of judgment may fairly be made after an addition to the facts which present themselves for analysis and the opportunity of a more careful examination of them. Nor shall we admit by mere implication, or permit our readers to arrive only by inference at the conclusion, that our first judgment did less than justice to Madame Leonowa's gifts and powers. She may have been in better voice on the second than on the first occasion, the music selected may have been better suited to her—though we do not think it was so—or she may have overcome that feeling of strangeness to her audience which is not without its effects upon the most practised singer. Be the cause, however, what it may, the effect was as certain as anything can be which does not admit of scientific demonstration, and the impressions produced by the evening's performance were of a nature in the highest degree favourable to Madame Leonowa. Her delivery of the first phrase in Schubert's *Wanderer*, with which the concert opened, could have left no doubt in the mind of any moderately competent critic that an artist of rare gifts and powers was before him, and at the close of the song he must have been divided in admiration between the genius of the composer and the excellence of the interpretation which made his mind known to the audience. We shall say without the slighest hesitation or misgiving that nothing equal to this has ever been heard in this place,—more, indeed, nothing has approached it. All the deep pathos which the poet threw into his words and the musician into his music, were reflected by the singer. The sense of desolation which pervades the opening bars, the loneliness which they reflect, the infinite tenderness of the burst in which the Wanderer conjures up the bright picture of home and native land, with all those lost joys for which the heart yearns, as they alone know who feel all the pangs of enforced exile, that recollection of happier days which forms the very crown of sorrow, and, lastly, the deep despair of the words.

Dort wo du nicht bist
Dort is das Glück.

all these, we say, were manifested by the singer with fine and deep sensibility, the modesty of nature never being over-

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

stepped, and a perfect discretion guiding her to the very last. It is possible that the appeal which this beautiful song makes to the heart is intensified to us all out in this distant land, and that we can feel all its power as they never do whose happier lot is cast on their own native soil. The advantage of feeling the full beauty both of the words and music is indeed dearly purchased, and there is not one of us who would not willingly surrender it. But surely it is reserved to exiles alone to know all its power.

The *Malédiction* from *Le Prophète* which followed this was finely rendered, but it is essentially a stage peice, demanding the support of the chorus and orchestra, and the accessories of stage effect. On the piano-forte the accompaniment is practically unintelligible, its modulations cannot be followed, and all the sombre effects of the brass instruments are lost or can only be realized by the imagination. Yet the withering power of the music could be realized by all who know the original, and Madame Leonowa's reading of the scene was in a high degree effective and artistic. For such music as Donizetti's *O! mon Fernand*, we have no words. It is too heartless and contemptible. If men and women were mere butterflies, there might he something to say about it; but considering all that the human heart really is, it is too hard that sorry stuff like this should be put forward to represent its master passion. All that could be done for it was done by Madame Leonowa; but all such music should be sent to the limbo of the contemptibilities, and kicked over the rim of things into everlasting darkness and oblivion. A pretty violoncello solo, very nicely played, served as a restorative after this mephitic stuff, and gave Madame Leonowa a little rest, speedily broken again, however, by her obligation to sing two Russian romances which closed the first part of the concert. This she did with equal spirit and feeling, throwing a grace over these pretty national trifles which was infinitely attractive.

The second part opened with Alceste's song, *Divinités du Styx*, by Glück. It is of the severest simplicity, but is full of feeling and meaning, and gave Madame Leonowa an excellent opportunity of displaying the rich full quality of her voice. Here, again, the accompaniment required the weight of the orchestra, and the song demands the grand action which makes it so imposing on the stage. Its dramatic effect was somewhat marred on this account, and the extreme simplicity of the music perhaps prevented many of the audience from appreciating its large outlines and depth of meaning. But it is essentially a great piece of writing, and an excellent specimen of the style by which Gluck replaced the trivialities and affectations of the school of Piccini.

This was followed by Meyerbeer's "*Grace*" from *Robert Le Diable*, very finely rendered by Madame Leonowa. Here again the orchestra is practically indispensable, but the music was very grandly delivered and produced great effect. All that we need further speak of particularly is some Russian music, specially a song of Southern Russia called *Handzia*, which gave special pleasure to the audience. It was sung with characteristic attributes by Madama Leonowa, and its archness and winning grace won all hearts. The concert was closed by a Russian song, sung in the dress of a Russian princess of the tenth century. It is a wild, dramatic and powerful piece of music, highly inspiriting and exciting, and recalling the character of those appeals which, in the early history of all nations, their bards have made to them on great national occasions or emergencies. It was not difficult to imagine a Scythian queen of this ancient date thus inspiring her people to repel some invasion or avenge some insult, and leading them on to action in these impassioned tones.

Taking the concert as a whole, it afforded more opportunities of hearing fine music finely executed than any concert ever given in Yokohama. Madame Leonowa's voice rose rich and round and full on the evening, and shone, at least at times, with the blaze of a star of the first magnitude. We are still satisfied that the habit she, in common with all the great European singers, has acquired, of using the *tremolo* effect excessively, should be tempered by more discretion. At times indeed, she seemed to forget its use, or possibly remembered what she must have heard about it from far better critics than ourselves, and permitted her voice to flow unchecked in its magnificent volume. How much she gained, and what effect she produced, at such moments, we can hardly tell without the appearance of exaggeration, but to us it seemed like the difference between the clear definition of a brilliant star when seen through a perfectly adjusted telescope, and the same object seen through a haze or in an imperfect focus. If she will believe a critic, of small practice indeed but of fairly large experience in her art, she will modify her reliance on this effect. We shall not deny its value in exceptional cases, but they must be exceptional. The resort to it on all occasions is a mistake of the first order. We do not impeach her more than nearly every great living singer, for all alike have given way to the fashion. But they may rely upon it that it is a false effect, that it produces pleasure to the listener only if exceptionally resorted to, and that, if exaggerated, it is fatal to fine music and to high art. In the cause of these—a cause higher and dearer to us than any individual reputation ever can be—we must not forbear from speaking on the subject, and when we have said this we have pointed out the single flaw in an evening of enjoyment such as it can rarely be the good fortune of foreigners in Japan to pass.

We have omitted to speak of the accompaniments, for which Madame Leonowa was indebted chiefly to two gentlemen who played them with taste, intelligence and accuracy; and of an adagio from one of Haydn's quartetts (No. 45) introduced for the purpose of giving her some little rest during the fatigues of an evening the main burden of which she supported alone,—a weight more oppressive and trying than is commonly imagined.

Sir Harry and Lady Parkes left for Nagasaki in the *Thabor* yesterday.

Mr. Dave Carson's minstrel troupe gave a second performance at the Gaiety Theatre on Tuesday evening last in the presence of a very numerous audience.

As we have already hinted, the performance of "nigger minstrels" does not admit of a very scrupulous criticism, and we must further confess that we have to plead ignorance of the true standard of excellence by which its character is to be determined. But if we may assume that to raise a good-humoured laugh is its aim and end we must allow all praise to Mr. Carson's eccentricities. He possesses considerable vivacity and spirit, a strong perception of humorous situations, and a fairly good voice, and his extravaganzas, while of the usual professional jocularity, were free from offensive allusions. Some local "hits" were interspersed here and there and told effectively. Mr. Carson is supported by Messrs. Henri and Talbot who, each in his department, added to the evening's amusements, nor must we omit to notice that Mrs. Carson, who accompanied the entertainment on the piano-forte, sang a little romance sympathetically.

Mr. Carson proposes to give four more performances at the Gaiety Theatre and may fairly claim support from those who desire to renew their acquaintance with a branch of the black art which is less tolerable perhaps in the hands of amateurs than any of their assumptions.

From the "Japan Mail Daily Advertiser."

The *Nichi Nichi Shimbun* hears that that more than 1,000 families now residing in Karafuto (Saghalien) have expressed their desire to be removed to Japan.

The *Hochi Shimbun* is informed that a letter has been received from the *Moshunkan* (man-of-war in Corean waters), giving the intelligence that the uneasiness and apparent preparations for war which were noticed on her arrival have given place to a more assured feeling, and that the people were hopeful of peace.

According to the *Choya Shimbun*, Shimadzu Saburo has sent to Satsuma to desire the elder Saigo and Kiriao to join him in Yedo. It is however considered highly improbable that they will do so.

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

The *Hochi Shimbun* mentions the fact of a whale of about fifty feet in length having been captured in Yedo Bay.

Yamagata, Oyama and Saigo of the War Department are, says the *Choya Shimbun*, urging the Government to fit out a Corean expedition.

A new number of *Punch* was published yesterday upon which, however, we are unable to comment so favourably as usual.

The Messageries Maritimes Steam Ship *Menzaleh*, with European mails to the 26th September, sailed from Hongkong for Yokohama yesterday, at 6 P.M.

Mr. Nathan Newwitter, the newly appointed American Consul for Hiogo and Osaka, was a passenger by the *Oceanic* from San Francisco.

The Ito-Walsh, Hall & Co., case drags its slow length along. The plaintiff has, it seems, been called upon to furnish a further security for costs to the extent of $700, and the Court has postponed its sittings until Friday next in order to allow him time to do so.

The *Hochi Shimbun* says that copies of the memorial lately submitted by Goto, President of the *Genro-in*, are current in Yedo. There is much reason to doubt their authenticity.

The *Malacca* with the English Mail of the 1st October left Hongkong on Tuesday, the 9th instant, at 3 p.m., bound for this port.

A number of native physicians entertained Dr. Hoffmann at a farewell dinner at Nakamura Ya, Riogoku, Yedo, on the 7th instant.

The annual Celebration of the Harvest holiday will be observed on the 23d instant. An official representing the Mikado will proceed to the Daijingu Temple at Isé on the 13th instant.

The *Choya Shimbun* reports the presence of large numbers of *samurai* in the islands of Oshima and Yuwogashima in Satsuma. The larger number of these, it is said, have arrived from Maibashi, Shidzoka and Yetchigo.

A native newspaper tells us that foreigners are engaged in purchasing the disused flint guns of which a considerable number is on hand, the conjecture being that they are intended for export to China or Corea.

It is related that the Mikado requested Shimadzu to resume his former office as Cabinet Minister. He replied that his health demanded a change and that he wished to go to Kagoshima. His Majesty declined to give his consent.

Mr. Mori Arinori, Vice-Minister for Foreign affairs, proceeds to China for a few months. Sameshima formerly attached to the Berlin mission and representative of Japan at Paris, was appointed to succeed him on the 10th instant.

The sale of racing ponies yesterday was languid in the absence of competition, and many of the animals failed to bring the reserve price named by their owners. The following were sold by Messrs. Mitchell, Cope & Co:—

Kuo-pu-chu, $50; *Proselyte*, $25; *The Slasher*, $45; *Smallhope*, $26; *Chevy Chase*, $25; *Northern Light*, $45; *The Swell*, $70; *Saxon*, $27; *Drift*, $72; *Pretender*, $100; *Glencoe*, $15; *Inadzuma*, $36.

THE CONSCRIPTION.

IT is somewhat remarkable that the address of the MIKADO to the nation on the subject of the formation of the army, republished by the daily papers during the week and to be found elsewhere in our columns today, attracted no attention from foreigners at the time of its first issue. The principal subject with which it deals has, indeed, been commented upon from time to time in this journal, and in our issue of last week we spoke of the demand made by SHIMADZU SABURO that the new system of recruiting the army from the *heimin* class should be abandoned, and that the *samurai* should alone be regarded as the natural and only defenders of the nation, whether in case of civil or external war. It is obvious that compliance with this demand is incompatible with the new order of things which the Government has sought to establish since the Restoration. To permit the power of the sword to remain in the hands of the *samurai* class would be to keep a possible return to feudal institutions, and even the restoration of the Tycoonate, hanging perpetually over the head of the nation. In such a condition of affairs no orderly progress would be possible, no form of Government could be stable, no administration could sit firmly in its seat and carry on the necessary business of the nation. To have yielded on this question would have been to abandon all the work of the last seven years, and the prospect of persevering in those reforms to which the nation owes, and from which it hopes, so much. The frivolous and unintelligent spirit which has too much animated the comments of the foreigners living in this country, has derided the idea that statesmanship, in any true sense of the word, was to be found in the government which has held the reins since the Restoration. Making no allowance for the radical differences which exist between the views of the Japanese and ourselves, or for the highly refracting medium through which we see their affairs and they imagine that they see our objects, devoid of all large catholic sympathy with the aspirations of a new-born nation, intolerant of errors which it would have needed almost miraculous intervention or insight to avoid, foreigners have been too prone to impute their own blindness to those on whose doings they commented, and to deny to plans the extent of which they were unable to grasp, any purpose, wisdom or intelligent design. Against any such criticism we may legitimately adduce the important case now before us, the solution of which has demanded at once a clear view of the object to be attained, wisdom in the choice of means, resolution to adopt them, and courage to persevere in their adoption. In grappling with this formidable question, the Government has had to deal with the whole force of a class naturally indisposed to abandon rights which are not without foundations in natural justice, but which are certainly incompatible with the welfare of the entire commonwealth. Nor is the question one of the disposal of the mere "unearned increment of land," which divides political philosophers in Europe, and which ranged on two opposite sides men who agreed so completely in their views on most great questions as MILL and GROTE. It is here a question of whether a large and vastly influential class shall be forced, for the good of the entire nation, to abandon those claims on the land which they have asserted and enjoyed for many generations, but the possession of which has kept the country miserably poor, and prevented that progress in civilization which depends upon a fund of accumulated wealth. With great wisdom the Council of State appealed to the ancient rights of the people which

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

were wrested from them during the usurpation known as the Shogunate, and retained by the *samurai* class during the whole of that period. The severity of the late struggle between the advanced party of the Government and the whole body of the *samurai* as represented by SHIMADZU SABURO, may be inferred from the necessity under which the Council of State has felt itself called upon to republish and diffuse throughout the Empire the proclamation of December 1872, restoring to the *heimin* class, or common people, their right to serve in the ranks of the army. Nor can it fail to be observed that the aid and countenance of the old Satsuma chief, which the Government sought in weaker times with at least as much compliment to him as a monarch can well display towards a subject, are now regarded as of far less importance, and his resignation was accepted with extremely little hesitation by those who, three years ago, could not dispense with his adherence. The awakened intelligence of the nation, the increased power of the Government—not as a clique of individuals, but as a body carrying on the necessary business of the nation, and doing so generally to its satisfaction, in the face of grave and constant external and internal difficulties—together with a tide of opinion setting steadily in opposition to the general body of sentiment and opinion which SHIMADZU represents, have combined to weaken his influence, though not yet, perhaps, to curb his ambition. It is impossible to doubt that he staked all upon the chance of the Government being compelled to retain him in its councils, and the stake was the aggregate rights, claims and pretensions of the *samurai*. He played, and the game has gone against him and against the whole class and the great clan which he represents. The great mass of the nation and the union of all the other clans oppose themselves to the predominance of the *samurai* class and the Satsuma clan. The issue of the struggle is yet to be seen.

We have witnessed so many great organic changes in this country of late years, that no great surprise or apprehension need perhaps be felt at that of which we now write. But the gravity of the situation is not easily overrated, and none can predict its consequences. If the *samurai* accept the position, we may dismiss all fears of a war with Corea, and expect some new measure dealing with their hereditary incomes. If sections of them in those provinces where their sway is the strongest, raise the standard of insurrection, the Government may be expected to deal summarily and severely with them, until or unless it is convinced that the movement cannot be withstood, in which case the troops may be ordered to Corea. Rather than face anything like general rebellion, the Government will undoubtedly adopt the alternative of an external war, and grounds are not wanting for turning its arms upon a country which it certainly could chastize, if not conquer, with comparative ease. But the state of the national finances is such that this alternative will only be adopted with great unwillingness. It would necessitate another foreign loan, to which there is much general objection, especially as the money would go in unproductive directions. But it would allay a good deal of excited national feeling, increase the popularity of the Government, and, possibly, enable Japan to dispose of some of her discontented *samurai* in a manner equally agreeable to themselves and the nation at large. We do not wish to suggest incentives to or examples of territorial aggression which might excite a nation which has plenty to do at home, to enterprises of doubtful character from many points of views. But in view of the undoubtedly solid consistency which the new order of affairs in this country is assuming, and the absence of all further doubt upon the power of the nation to sustain the movement initiated by its Government, we might point to the manner in which nations possessing an inherent superiority over others have thrown out colonies and made and maintained settlements abroad which have been ultimately new sources of wealth and power to them. If the Government only succeeds in carrying the whole question through with as much sagacity as it has certainly shewn in dealing with it up to the present point, foreigners need not greatly fear the issue, one of the more distant results will certainly be an accession to the wealth of the country, and the rapid growth of this wealth by means of an extended external trade.

THE SILK TRADE OF JAPAN.

WE have read with much interest in the third annual Report of the Silk Association of America, the portion which concerns the raw silk culture of Japan, and the letter of the Japanese Vice-Consul at New York accompanying samples of silk from various districts of this country. The remarks of Mr. TETSUNOSKE TOMITA on the degeneracy of the Japanese silk-worms are the more appropriate as they are fully confirmed by practical men who have observed the deterioration of silk for several years past. We are however unable to agree with him as to the results of the reaction which he says has set in, "forcing the rearers to again devote their attention to the care of the silk-worm, that good eggs be produced." That an improvement in the quality of the seed now produced is wanted, no one will deny. But this wished for consummation has not come to pass yet, and how long it will be before we can see seed and cocoons equal in general to what they were before the export *furore* began, is more than we or other people can tell.

We trust that the miserable result of this season will be at length a sufficient lesson for the native silk-worm eggs dealers, and that henceforward all the good annual seed which can be produced in Japan will be kept for the exclusive use of the native rearers. Then, but then only, we may hope to see annuals in sufficient quantity to supersede the cultivation of *bivoltinis*, if not entirely, at least by degrees to such an extent as to enable the silk reelers to recover the ground they have lost in the last seven or eight years. By taking for the future a proper care of the worms, by properly feeding and tending them, and especially by no longer forcing the reproduction beyond the actual requirements of this country, it may be expected that the abnormal state of health and strength into which these interesting little insects had fallen, may be gradually remedied and finally brought round to the formerly existing standard. But let us not forget that it is, above all things, a question of time and patience. We are not sanguine of a very speedy recovery, even if *no more seed at all were to be sold out of the country*. We fervently wish that rearers of worms may persevere, and never relax for one moment in their attentions; such is, in our opinion, the only condition of success. Every judge of silk will agree with Mr. TETSUNOSKE TOMITA that the reeling of Japan silk was very unsatisfactory. But it is not only by making new machinery, or by erecting filatures on foreign systems that it can be improved. We have seen quite recently in the interior girls at work in their own houses, with the antiquated and rude little reel which would excite both wonder and pity in the filatures of Europe, turn out by dint of skill and attention silk as good as

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

any which can be produced by the latter. We well know that filature silk will be, in the generality of cases, superior to that which is reeled by any given number of girls working separately and independently in their homes. The facility of superintending the workers, the uniformity of the sizes in which silk is reeled, the better selection of cocoons, the emulation which arises between girls reeling together, all this is in favor of filature compared with home-reeled silk. But even all these advantages may be set at nought or neutralised by a proper want of superintendence, or by the carelessness, the ignorance and the slovenliness of the girls. We have seen many of what are now called filatures in the interior, that is to say, buildings in which a greater or less number of girls work together, instead of reeling separately in their own homes, which have therefore nothing of filatures but the name, and where silk is turned out no better than that which can be seen on any market-day in the country towns.

Mr. TETSUNOSKE TOMITA says "there are now over three "hundred filatures in Japan for the reeling of silk by machi- "nery." We are quite sure that in that number of 300, 290 at least must be of the class of the so-called filatures, in which the old system of rude native machinery is retained without the least attempt at improvement and with scarcely any superintendence. We have seen these *pseudo*-filatures all over Joshiu, Shinshiu, Koshiu and Bushiu, and there must be quantities of them in the other silk districts of Japan which we have not lately visited. But we do not think much of them, and their produce is not a whit better than the silk which the country dealers used to buy piecemeal in the market towns, and bring down to Yokohama, years ago, by parcels of three, four or six bales at a time, after sorting and putting them together so as to make them more merchantable. As for the real filatures on the European system, such as those of Tomioka, Nihonmatzu, Nakano, Matsushiro, Kofu, Kankorio, Uyeda, &c., they deserve certainly every commendation and reflect great credit on the owners or the managers. We cannot help, however, expressing here our deliberate opinion, which we think is shared by many foreign silkmen, that it will be long before these filatures enjoy a reputation and confidence equal in every respect to that of the French or Italian establishments. The Japanese reelers have learned a great deal from the European teachers they have had; and so long as these teachers or superintendents remain with them, they may go on improving. But the moment they are left to their own resources and devices, doubts will be sure to arise as to the honesty, quality, regularity, uniformity, evenness &c., of the silk that will be turned out or offered for sale. Everybody acquainted with the silk trade abroad knows that bales of filature silk are always bought from a small sample, in the perfect conviction that, from one end to the other, all are alike in nature, quality and size. The experience we have had hitherto of the dealings of the Japanese silkmen does not warrant us yet in believing that Japanese filature silk is to be entitled to as perfect a confidence as is reposed in the European product, at least not until it has been proved long enough and not found wanting. Let us hope, however, for the best.

We are extremely glad to see that Mr. TETSUNOSKE TOMITA does not hesitate to condemn the faults of his country's silk, especially the casing and the false packing with which it is justly reproached. The manner in which he states this, instead of disguising or concealing it, is quite refreshing and, were it on that score only, we hope he may be successful in inducing the American manufacturers to use it to a greater extent than they do. But, for reasons unknown to us, Japan silk is not a favorite in America, where China silk seems to obtain a marked preference. But the time may come when a change in that respect may take place—a change which will be all the more certain as the reelers of this country seriously endeavour to raise their produce to the required standard for giving general satisfaction.

THE TEMPERANCE HALL.

WE shauld be very glad indeed if, by means of the few following words, we could succeed in interesting the Residents of this Port in the affairs of an institution which deserves, if, indeed, it may not be said to demand, their support.

The Temperance Hall, which is situated, as many of our readers are aware, near the Chaplaincy, was established some two years ago with the idea of affording to foreigners out of employment, in distress, or visiting the port as sailors, engineers or otherwise, some place of resort where they could be boarded cheaply, and obtain such amusement, recreation, and refreshment, the latter within certain strict rules, as men on shore, under the circumstances incidental to their employment or condition, might naturally desire. That some such institution is needed in a port as large as this, is quite evident, and its excellent effect is seen not only it what it does, but what it prevents. The classes we have alluded to must have their resorts ashore. The desire for society and amusement arises from man's social and gregarious nature, and one class feels it as much as another. In one form or another men will gratify it, and if they cannot do so in places which they subsequently quit with advantage, they will do so in places the aggregate influences of which combine to do them injury. The low taverns and grog-shops become their haunts and the means of their debasement and even ruin. Admitting that some of these places are conducted in a spirit of moderate fairness towards their frequenters, many of them are little better than dens where men are drugged and robbed. We are speaking now of facts which have come before those who have managed the institution to which we wish to call attention, and we are assured that men have sometimes been inveigled into these places with many months' earnings in their pockets, amounting in some cases to three and even four hundred dollars, and, on being restored to the consciousness of which poisoned drink had deprived them for a time, they had little or nothing left of these large sums. It is only fair that men should be guarded in some way by society against dangers and temptations of this nature. The unwritten law of the modern world obliges us to feel and acknowledge some responsibility in these matters, and it is not well that the whole burden of supporting an institution like the Temperance Hall should fall upon half-a-dozen or a dozen men who give not only their time and labour, but their money for this purpose. None but those who have enquired into these subjects, or have taken part in the conduct of institutions of this nature, have any idea of the large amount of distress they are called upon to witness, and, if possible, to relieve. Nor can it in any way be said of this, as may fairly be urged against certain charitable institutions, that it tends to produce the distress which it is its province to relieve. The chief recipients of its bounty or frequenters of the institution, are men whom temporary want of employment, or accidental distress, arising from whatever source, has

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

overtaken, as it may overtake any man. At times such men are without money, and here they obtain board and shelter on credit until they again find employment. Assistance under these circumstances is like a life-buoy thrown to one in the water. Without it he may sink; by its aid he reaches a raft, a ship, or the shore, and is saved. The means is small, the benefaction paramount. Nor is it one of the least of the claims which this institution has on the Residents, that the large charity which has animated its conductors has extended its bounties to men on the brink of ruin from excessive drink. The habitual drunkard, so far demoralized that he has lost the power of withstanding the temptation he feels to be his ruin, and whom, under the charitable term of dipsomaniac, the world has agreed to regard rather as a patient than an offender, here finds assistance which protects him from himself and external temptation, supports, and ultimately reclaims him. We are not writing now of what might be done if an ideal and impossible theory of the institution could be put in practice. Cases of this kind have occurred and have been dealt with in the manner we mention. Men whose ruin was as inevitable but for the care bestowed on them here as it is inevitable that without food men must starve, have been taken in charge, treated, supported and reclaimed, and this not in one in one or two, but in many cases. These are, of course, extraordinary, but they occur from time to time, and here alone in this port are they dealt with. In more ordinary cases substantial relief is given, and this has been done to over a hundred men this year. Many cases of extreme destitution and misery have presented themselves, and the relief of them sometimes falls on those who have already done more than their fair share of work in this direction. It may be added, too, that those whose interest lies in paralysing the institution, make strenuous efforts to entice men away from it, and supply them with drink gratuitously while in distress, in order to establish a claim upon their future earnings.

When we come to look into the finances of the institution, we find that though no improvidence can be charged upon its conductors, they still are under heavy personal responsibilities, which should hardly be allowed to rest on individual shoulders. The debt on the Hall is large, and the reduction of it would lighten a burden, cheerfully borne indeed, yet not the less one of a serious nature. The money spent on the erection of the building has been borrowed at 12 per cent., and the Trustees have about $2000 to meet which is now due. If this sum could be paid off, they might fairly hope to borrow $5,000 at 10 per cent. on account of the increased value of the security. The $100 shares are principally held by those to whose efforts the institution mainly owes its origin, and they are redeemable at any time, the greater part of the interest payable on them being returned to the Hall in the shape of annual subscription—in other words, the claim for interest is waived in its favour. Now, towards the support of the institution, which, as have said, has really an excellent claim on public favour, only $220 have been subscribed, while the sum given by the few promoters of it stands at $387, including $170 by one member alone, their claims for interest having in most cases been waived, as we have already shewn. Is this quite a fair distribution of a burden which has large claims on the general support of the Residents? Hardly, we think. We would draw attention to the spirit which pervades the whole of Mr. HENDERSON's Report, published yesterday morning and reproduced in our columns to day. "It has been the Committee's desire," he says, "never to refuse aid to those unfortunate and in distress, and who are honest in their intentions and anxious to obtain employment. They have always assisted these as much as possible, and often, they are glad to say, with success." "The Committee," he adds, "would desire to call attention to the Subscription-book, as, till the debt is reduced, they must depend much upon such assistance. The Hall is a public want in a community like this, and is doing a public good." It is not easy to imagine anything more modest than this statement of the work done by the institution, than its appeal to the good will and assistance of the public, or more eloquent in its simple earnestness than the union of these two features.

The Hall is largely resorted to by the men-of-war's men of all nations—though chiefly, for obvious reasons, of the English-speaking nations, and it saves them from the necessity of going to the only other places open to them the grog-shops. All the admirals who have visited the port have bestowed warm commendations on it, and Admiral RYDER even ordered a plan of it to be prepared for his use with the view of seeing whether it would be possible to found similar institutions at other ports. So much is it visited that when there is any unusual number of men-of-war in port, beds have to be made up on the floors and benches, and this proves at once the value set by the men upon the institution, and the necessity for extending as far as possible the accommodation it is intended to provide.

If we have not succeeded in substantiating the claim we have urged, the failure must rest with us, but we trust that it will not be visited upon the institution. We are aware that the community has many claims on its purse, and that the means for manifesting that generous spirit for which all eastern settlements have been ever so remarkable, are not so plentiful as in more prosperous times. But much of this generous spirit arises not more from benevolent impulse than a sense of duty to others. The duty in this case seems fairly established, and we appeal to it without hesitation or misgiving.

SPIRIT OF THE JAPANESE PRESS.

SILK-WORM'S EGGS.

(Nichi Nichi Shimbun.)

We are sorry to hear that the price of silk-worm's egg cards is very low again this year. The reason why so few cards were sold last year until late in the season was, we suppose, because there were many brought to market and few people to buy them, and even then considerable quantities had to be burned. Many said at the time that the merchants were acting foolishly, but we thought that at all events it would be a good lesson to them, and that they would bring smaller quantities to market this year and thus obtain better prices. We fear it did not do as much good in this direction as we hoped and expected.

We heard that some of those who were sufferers by the burning of the cards last year went to the Kangiorio (Sub-department of industry) and requested that the number of cards to be made this year might be limited. But the request was refused on the ground that it is not the province of the Government to intermeddle with the affairs of merchants. Then the merchants formed themselves into something like associations, and all the members consulted and concluded that 1,500,000 should be made this year, of which one half should be exported, leaving the other half for home consumption, and that these should be of the best quality in order that the price might be maintained. The plans were thus made and the cards were brought to market, but prices were very low and only 200,000 have been sold. Again, we hear that upwards of sixty buyers came from Italy last year, while only about twenty have come this year, and as they hear

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

from home that Japan silk is very dull, they can only give low prices. When these cards were first exported they fetched good rates, and thus the numbers of those who prepared them increased largely and rapidly and the trade became one of the utmost importance in the country. But the reason why Japanese cards were exported so extensively was that the silkworms of Italy had become diseased, and it is now but natural that as the disease has disappeared there should no longer be any demand for Japanese silk-worms. Europeans inform us that the rearers of silk-worms in Italy have carefully investigated the causes of the disease, and that during the past few years the old breed has again thriven in Lombardy, and that the eggs of the Japanese cards grow yearly worse and worse. Thus the Italian rearers are beginning to think they can dispense with our seed. It is said, too, that some people have pasted Italian eggs on old Japanese cards and called them Japanese eggs, and that during the time that the Japanese cards were in good repute they used to sell at from 20 to 25 frs. a-piece, while now they are only worth 5 or 6 frs. But we think that if the European eggs were of sufficiently good quality there would be no necessity even for twenty *graineurs* to come to Japan to purchase eggs, so that we may infer that they come because our eggs are still good, and we might have hoped that they would give good prices for them. At the opening of the trade this year cards sold for 1,50 *yen* a piece. But some difficulties connected with the business arose, and prices soon fell, and now 30 *sen* is asked for best quality, and at this price there are no purchasers. At this rate the loss this year must be as severe as that of last year.

We have heard that the native merchants have held meetings and propose sending about 600,000 cards to Italy for sale, removing them altogether from the market in Japan. This may prove a successful move, though if done this year, it should be done regularly in future.* Therefore we entreat that if they follow this course this year they will continue to do so, and thus the Italians will yearly look for supplies from us.

The Press.

(Shoya Shimbun.)

There are many ways in which civilization may be promoted and the welfare of the people furthered, but nothing in this respect exceeds the means which newspapers afford for the education of the people and the expression of public opinion. Indeed, they are of vast importance, and express the minds of the wise and learned, commenting, too, upon the acts of the officials when these do not appear to be just. In aiding the administration, therefore, and enlightening the people, they are of the first importance. But the good which should accrue from them depends upon men boldly expressing their opinions and saying that which they deem good for the country, as, if they merely do homage to the Goverment, and withhold their own views, they simply inculcate a spirit of subserviency. Such being the efficacy which newspapers ought to have, I have heard that certain newspaper companies have changed their views, owing to assistance having been given to them by the Government, and that their bold and straightforward arguments have become weak and are turned into obsequious flattery. When I heard the above rumour, I could not believe that it should be true of editors who are advanced in enlightenment, learned, and prominent among the best men in the country. But I am not disposed to discredit common report in this respect. My doubts led me to examine the newspapers of seven or eight months back, and, comparing them with those of the present time, I find there is a great difference in their tone and the spirit of their arguments, and this increased my misgivings. Be the cause what it may, the facts are apparent. But it has struck me, is this change owing to the altered circumstances of the times? Yet, in all times and under all circumstances, the beneficial and the injurious spring up side by side, and it is for bold men to maintain the former and oppose the latter. Whatever be the circumstances of the day, I cannot think that it is the duty of a learned man to permit his own interests to prevail over those of the people. In the time of Louis the Fifteenth of France the learned men abandoned their own views and sought only how they might please the Government in order to obtain pensions, and the result of this was sad enough. My mind was not free from sorrow for one moment while I was reading these passages in the history of France.

I have never yet believed that the Japanese Government gave rewards to learned men for writing in its favour. But should the above rumour be true, and the newspapers have changed their views owing to such rewards, while they have flattered the Government in consequence, then, ignorant as I am, I must credit it. Again, should the writers plead that the condition of the times has changed, I should also admit the plea. But as education is but very partially diffused among the people and their minds are but little developed, is not this the very time when the newspapers should seek to enlighten them? If the editors of newspapers under these circumstauces give way to the spirit of flattery, public spirit will decline or never be developed as it ought to be, and newspapers, instead of aiding, will become impediments to civilization. Thus, as the advance or retrogression of the national mind depends much on the conduct of the newspapers, I have written these things down, though they may reflect mere rumours, and offer them to the editors of the * * * * and the * * * * Now you, gentlemen editors, if you will convince me that these things are false, you must argue boldly to dispel my doubts, for these have arisen from the tameness of your arguments. Therefore consider the above well in your hearts.

Komatzbara Yeitaro.

Capital Punishment.

(Hochi Shimbun.)

In the execution of laws, why is capital punishment deemed the harshest penalty? Because the life which has once been taken can never be restored. This penalty, exacted from one, is intended to be a warning to thousands. The officials whose duty it is to pronounce sentence of death must therefore be learned, and, while they are skilled in the affairs of the world they must be conversant with the laws of nature, for they judge concerning the guilt of men as though they were deputies of Heaven. If such officials are unlearned, and are guided by precedents in a mechanical way without seeing that they exactly apply to the case of the moment, or if they follow their own caprices, the punishment of Heaven will assuredly overtake them, and thus they must be extremely careful in the discharge of their duties. Some one may say that, if I am right in speaking thus, capital punishment ought to be abolished. This may sound very enlightened, but it is very unpractical. Even in civilized countries it cannot be done, and, if we think for a moment of how much harm in a semi-civilized country might be done by men bent upon doing harm to their fellow creatures, violators of the law would become numerous, and capital punishment at this moment alone deters them. This being the case it is highly instructive to the people. Were the wise numerous and the ignorant but few, such penalties might well be abolished. But as the reverse is the case at present, this abolition would only be a blessing to the wicked.

Since the time of the civil war, we have changed many things in our country and imported many good ideas from abroad. We imitate the English mode of administration and the laws of France. And many men now in office are seeking by hard labour to promote the welfare of the people, and it is thus the duty of the people to compensate the officials for this labour. In some respects our changes of law are suggested by the laws of more civilized countries, and this is as it should be. But the people are idle and never think about enriching the country. Thus it is that they perpetually want the care of the officials.

It seems to me that the excessive number of those condemned to capital punishment is due to the fact that so many men are incapable of shame. To become capable of it they must first be taught, but if capital punishment were abolished these men would become equally numerous and unbearable. But modern Japan and ancient Japan differ widely. The people have gradually acquired a

* Why? [Ed. J. W. M.]

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

certain amount of reason and patriotism, and I would now only entreat those who desire the abolition of capital punishment, to labour so hard in Japan that the condition of society which demands it may be also abolished.

The Dissensions in the Cabinet.

(Akebono Shimbun.)

A short time since Shimadzu and Itagaki resigned office and it was rumoured that Kido and Okubo had also submitted their resignations to the Mikado. Now the offices of *Daijin* and *Sangi* stand in the same relation to a country as do the foundations and supports to a building, and it is upon their sagacity and experience that a people must depend for their well-being. But if the foundation be upon quaking ground, and the supports therefore in motion, the building would be liable to be overthrown, just as a people deprived of their councillors is filled with a sense of uncertainty and apprehension. How can a people be free from anxiety when members of a ministry resign office simply because they are unable to acquiesce in the views of some of their fellow officials? What will be the comments of the historian of the future when he reviews their conduct? Will it be answered that they cared, not for themselves but for their country, or for their country and not for themselves? I cannot tell.

It was for some time rumoured that the ex-*Sangi* Itagaki desired a separation between the offices of *Sangi* and heads of departments, while the ex-*Sadaijin* Shimadzu, being discontented with the slow movements of his colleagues, sought especially to obtain the dismissal of Sanjo from the councils of the nation. The wishes of these officials could not be gratified, and Shimadzu and Itagaki resigned their respective offices.

On learning that their resignations were accepted we were induced to believe that the Cabinet had thus acted from a feeling that the satisfaction of their wishes could not tend to the national welfare and that some ulterior purpose would be disclosed in due course. We therefore awaited the result with anxiety. On learning, however, that both Kido and Okubo had tendered their resignations our expectations proved false, and we are left in a state of doubt.

Kido and Okubo are men upon whose wisdom and patriotism the people may justly rely, and we do not doubt that it is their intention to watch judiciously over the interests of their country. They are, in short, not men who would be likely to resign simply because they differed in their views from their colleagues. We are therefore convinced that these rumours are false. Again we are told that the Cabinet is split up into two divisions, Kido and Ito joining with the Prime Minister on the one side, while they are opposed by Okuma, who with Okubo and Iwakura is ranged on the other. Thus the Cabinet is represented to be divided, its members as private enemies and their official duties necessarily neglected. But as in dealing with the affairs of a nation the public good must first be consulted, we hesitate to credit the current rumour.

That no business has been transacted by the Cabinet since the resignations of Shimadzu and Itagaki may doubtless be accounted for by the short interval of time which has elapsed, and our knowledge of the character of its members forbids the belief that any such dismemberment as that alluded to in popular rumour has in truth taken place.

Chiristianity.

(Choya Shimbun.)

Some one has very kindly taught me that Christ was the son of God and not a man, and that Almighty God sent him to deliver mankind from their sins, to make his voice heard and his form seen among as, and, by his mirculous powers, to give evidence that he was an ambassador from God, differing from him, indeed, in form, but identical in spirit. It may be owing to my ignorance and inexperience, but there is something I cannot understand in all this. If God is almighty, and created and governs every thing, why did he not make men better from the very beginning? My instructor told me that the power of God can [illegible] neither by words nor pen, and that man was at first created good, but that having afterwards fallen from his first estate, Christ was sent to redem, raise and save him. Is not this making too much account of us men? If God had the power to do so, he should have given to man the disposition to persevere in maintaining himself as he was created, or strong enough to resist the approaches of evil. This would have saved the immense future sacrifice necessary to restore him. I felt very grateful at the thought that God deals with men with this benevolence, but on reflection, it seems that we are used but as toys, our evil dispositions being permitted to enthral us, and then Christ being sent to lead as back again. All this lessens my sense of gratitude. My idea of a true God is of an almighty being about whom there is nothing changeable and who would endow men with his good spirit. But as in the lapse of time men would fall away from God, a lofty personage would appear and declare that he came out from God and was his son. At first, as this was only a declaration, men would not believe in him. He would then perform miracles in order to produce belief in himself as a messenger of God. But, finally, his adversaries would prevail against him and put him to death on a cross.

God is a very just spirit, and however much I reflect I cannot understand why man's distrust of him should have been excited by capricious methods of treatment. My doubts may arise from ignorance and inexperience, so that I should feel grateful if any one versed in religion would make these points clear to me.

Order for the Enrolment of Troops, forming enclosure to Notification No, 162.

By the laws of the ancient monarchical form of Government *(Gunken)*, military camps were formed by the selection of young men from the whole country, and by this means the state was protected; there was then, of course, no distinction between the soldiery and peasantry. In the middle ages, however, the military power became vested in the armed class, a distinction was created for the first time between the soldier and peasantry, and the feudal system of Government was established. The new order of things which was founded in the year Tsuchinoyé Tatsu (1st Meiji, 1868), is, in our opinion, the greatest revolution which has taken place in the course of the last thousand years and more. Now that we have reached the present time, military laws affecting the army and navy must be drawn up in a suitable manner, as circumstances require. Accordingly, we now desire by taking as a basis the ancient law of the country, and by examining and making selections from the regulations of various foreign countries, to establish a law for the enrolment of soldiers from the whole nation, and thus to construct a foundation for the protection of the State.

Do all of you, officers of the state, carefully take heed to this Our wish, and make it known generally throughout the country.

Meiji, 5th year, 11th month, 28th day.

December (?), 1872.

Proclamation concerning the Enrolment of Troops.

By the ancient laws of Our realm, all persons throughout the country were, without exception, soldiers. Whenever any troubles occurred, the Emperor acted as commander-in-chief, all young men who were able to serve as soldiers were called out, and thus malcontents were chastised. If their services were no longer required, and they returned to their homes, they became peasants, artizans, and tradespeople. In those times there was none of what happened later on, when persons wore two swords, were called *samurai*, conducted themselves arrogantly, did not work for their living, and who when they happened to carry matters to excess, and kill people, were not called to question for such acts by the authorities.

When Jimmu Tennô gave Iyahiko charge of the province of Yamashiro, military camps were subsequently formed, and laws for the appointment of *Yeishi* and *Bônin* were established. In the periods *Jinki* and *Tempiô* there were six *Fu* and two military camps existing in the

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

country. During the periods *Hôgen* and *Heiji*, and subsequently, the authority of the Emperors declined, and the military power passed into the hands of the armed class; the feudal system was established, and the distinction between the soldiery and peasantry was created. Later on the Emperors lost all influence in the State, and the evil became greater than words could describe. However, on the establishment of the present Government, the Daimios made restoration of their territories to the Emperor. Thus in the year *Kanoto no Hitsuji* (1871) the country reverted to the ancient system of monarchical Government *(Gunken)*; the allowances of the hereditary *samurai* who did not work for their living were reduced, they were allowed to discard their swords, and an endeavour was set on foot to give the poor classes of the nation the right of liberty of action. This course being one adopted with the view to fix both upper and lower classes on an equality, and make men's rights equal, was the first step towards the amalgamation of the soldiery and peasantry. Thus the *shizoku* of to-day are not the *samurai* that were; and the people of to-day are not the people that were. As all alike are now the people of this Our Empire, the manner of their requiting the obligations they owe to the State must be the same. There is nothing now in the country which does not contribute its share of the taxes, and these go to meet the needs of the State. This being the case, it follows that it is only right that the people should apply both mental and bodily labour to the repayment of the obligations which they owe to the State. This is called by foreigners a "blood tax," because the obligations owed to the State are repaid by the sacrifice of life-blood. Moreover, if there be calamity in the State, each individual throughout the nation must inevitably come in for his share of it. It is clear, then, that the reason for people to apply themselves to mental and bodily exertion in averting calamity from the State is, that they are in effect averting this calamity from themselves. Given a country, there must be a military establishmeut; if there be a military establishment, the nation must take service in it; therefore, if the question be studied, it will be seen that a law whereby soldiers are drawn from all ranks of the people, is a self-evident and natural principle, and no law founded on hasty conjecture. And in the establishment of such a law the past and present must be examined, and selections made from both, and a system must be drawn up which shall be suited to the occasion. In foreign countries, for hundreds of years back, theories have been established, and these have been put to practical test in warfare, and in this way their military systems have been formed. Consequently the laws of those countries are very complete. However, forms of government and the geographical features of countries differ, and therefore these laws could not be adopted (by Japan) in their entirety. The valuable portions of these will accordingly be selected, and applied to meet deficiencies in our military system; the two branches of navy and army will be established, and all youths throughout the country, belonging to the four classes of the people, of 20 years of age, will be enrolled on the military register, and held in readiness to meet any emergency which may occur.

Head officials of villages and hamlets will carefully bear in mind the wish of His Majesty, and they will give explanations to the people in accordance with the Order for enrolment of Troops, and cause them to recognize the true foundation for the protection of the state.

(Signed) COUNCIL OF STATE.

Meiji 5th year, 11th month, 28th day,
Dec. 1872.

—*Japan Herald.*

PEOPLES' RIGHTS—SHIMADZU AND ITAGAKI.

(Hioron Shimbun.)

In our two last issues we published the memorials of the ex-*Sadaijin* Shimadzu and ex-*Sangi* Itagaki, so far at least as common report on the subject might be trusted, and to this we added our own comments. We now propose to return to the subject of Shimadzu having co-operated with Itagaki in advocating the separation of the duties of heads of Executive Departments from those of the Council.

Two years since Itagaki, together with Soyeshima, Goto, Eto, Uri and Mutz, being irritated by the partiality displayed by the Government, presented a memorial urging the creation of representative institutions. This was the first occasion upon which we in Japan heard anything of people's rights.

But now, "Give the people their rights" is a common cry, and it is to the two retiring Cabinet Ministers that the nation is indebted for the ventilation of this subject. Itagaki is assuredly a great man, and I cannot conceive it likely that his judgment would be influenced by the four or five hundred *yen* which is the monthly salary of the *Sangi*. I conclude, therefore, that conscienciously feeling that the power of the *Sangi* was unduly large he recommended its curtailment. But how to account for Shimadzu's support in this movement? We have hitherto pictured to our minds this nobleman an admirer of an absolute throne and of despotic institutions. We are undeceived; he is a 'Friend of the People.' Have then his views suffered some modification in consequence of his residence in the capital, or has his sympathy with *other projects* of Itagaki brought about a rapprochement on this subject?

If he should really have changed his views, and now sincerely desires the promotion of popular rights, I find in the circumstance matter for general rejoicing.

ON THE SAME.

(Hioron Shimbun.)

It is interesting to note that Shimadzu Saburô appears in the new character of a promoter of peoples' rights. This is indeed a novelty. We have been accustomed to hear that he has hitherto urged with much vigour the necessity for concentrating the sole and absolute control of Army, Navy, Exchequer and Foreign Affairs in the hands of His Majesty's advisers, pointing out the evil results of diminishing their power in this respect. Hence the friends of "peoples rights" looked upon him as an adversary whose influence was to be dreaded. Much to our surprise and joy we now learn that that he has coalesced with Itagaki, the champion of popular rights, on the separation question. Tears of happiness start to my eyes, and my joy is, I feel assured, shared by all who demand for the people the enjoyment of their natural rights.

ART IN THE STREETS.

Our Artist may be met in quiet streets and sunny corners, where pedestrians are few and loitering is possible without interfering with the traffic by creating an obstruction, and yet not so far from busy thoroughfares; for, now and then, a waif and stray is washed shoreward from the rushing human tide beside him, to find a haven with his widening circle of spectators and become a critic of his skill. He is a quiet fellow, meanly clad, and melancholy-looking, all the lines and angles on his face,—and they are many—are directed downwards. The muscles that lift up the corners of the mouth and disclose the teeth in laughing, are atrophied—perhaps from want of use. He glides stealthily about, as if anxious of escaping observation, and his glance is rarely lifted from the ground. He comes and goes in a mysterious manner:—a moment before he is on his knees—and hard at work you'd swear the street was empty.

To-day is the festival of Kompira, and a smiling happy crowd, well dressed, and having alms about them, is his opportunity, and, sure enough, he's sweeping up a little space on which to make his picture. The materials for his work are close at hand: his colour box and palette, bright-colored crayons or resplendent oils, think ye? No, nothing half so costly. A few handfuls of silver sand, dyed red and black and blue and wrapped in paper bags. He is ready now, but he hesitates a moment (as he tucks the corners of his coat beneath his *obi*) as though undecided what to limn. He is not long in making up his mind, however, for, thrusting his hand amongst the sand, he is trickling a fine white line with marvellous rapidity a moment later. In and out and up and down he goes, a glistening line ever following wherever the hand has gone before, spread out a little here or rounded off a trifle there by his busy little finger.

Digitized by Google Digitized from UNIVERSITY OF CALIFORNIA

Dear! dear! how the crowd presses; it does not give him breathing space. It is a holiday and every one a sightseer. He cannot work. "Good people give me room, or I can't complete my picture." But those behind press on those in front and the poor Artist is well nigh smothered. In ancient times 'tis said a rope of straw restrained a crowd. To-day a rope of sand suffices. For, quick as thought, he runs a trickle round the space required, a white line outside and a red within, and not a toe intrudes beyond it.

He can work at leisure now:—already a scroll of Chinese characters has grown beneath his hand,—black letters on a white ground,—and the outlines of a figure large as life are taking shape and form. A shower of copper coins descends upon him. The breathless crowd is all attention. The figure's cap is finished; a silvery beard appears and grows with wonderful rapidity. An eye is just emerging from obscurity. Hurrah! the face is completed, and the spectators, drawing breath once more, relieve their feelings by largesse of copper. Now who was that unlucky giver whose bounty has descended as a *tempo* on the figure's sandy face, and smudged the features out so ruthlessly? For a moment's space the Artist is dumbfounded; his color box is empty and the injury is irreparable. But taking up the *tempo* he has flung it back amongst the crowd, who hum in approbation of his act, and then, remembering the rudeness of his conduct, has bowed his head upon the ground and begged forgiveness. It matters little after all, however, for a drop or two of rain is the precusor of a shower by which the crowd is speedily dispersed, and a muddled mass of colors, re-arranged without regard to form, is all that remains some twenty minutes later to show that the dreary miry corner had just now contained a smiling crowd and a toiling Artist.

ON SOME JAPANESE WOODS.

By J. A. Lindo, Esq.

Read before the Asiatic Society of Japan, at Yedo, on the 27th October, 1875.

The following particulars on Japanese woods have been gathered from an article in the Proceedings of the Royal Institution of Engineers in Holland, by Mr. Akamats, at the present moment a Rear-Admiral in the Japanese Navy. Thinking they might be some value to the Society, I asked Mr. Akamats' consent to make an extract from his article for the Asiatic Society, which he very willingly gave me.

2. *Hibanoki.*—Grows in clayey-ground, more especially where rocks are under the surface; at 250 to 300 years of age, the trees are from 30 to 35 meters in height and 3 m. to 3½ m. in circumference. Of these trees timber of very large dimension is to be had; it resists well enough to alternate dampness and drought, is almost everlasting under water, very elastic and easily worked. In ship-building it is used for decks and outside parts; in house-building for uprights and doors. The timber of this tree comes principally from the provinces of Suruga and Kai. Specific gravity 0.560.

2. *Hinoki.*—Grows in red clay; spread all over the country, but more particularly to be found in Mino and Owari; large quantities and dimensions in trade; somewhat resinous; more elastic than *hibanoki*; for the rest same qualities as this latter. Specific gravity 0.421.

3. *Suginoki* (Cedar wood).—To be found in large quantities between degrees 32 and 40 N. L., moist ground. At 150 to 200 years of age furnishes timber of tolerable dismensions. Height of full-grown tree 40 to 45 meters; circumference 5 to 6 m. Does not stand alternate damp and dryness as well as *hibanoki*, being much more liable to extending and shrinking by the influence of weather. Durability under water next to *hibanoki*; elastic and difficult to be worked. In shipbuilding used for lining purposes; in house-building for beams, ceilings, uprights and lining. Specific gravity 0.416.

4. *Akamats.*—Grows in sandy dry clay; spread throughout the country, especially in Hinga; this wood is renowned for its very fine appearance. If grown in wet ground the timber is white and of inferior quality. Height 35 to 45 m.; circumference 4 to 5 m. at 250 to 300 years of age. Even larger dimensions are to be found, but in this case the wood is more liable to wet-rot. Very resinous; resists a long time alternate wet and dry; is elastic and easily worked. Generally used in house-building and in shipbuilding for masts, jibbooms, etc. Specific gravity 0.489.

5. *Kasinoki.*—Grows in clayey ground; seems not to vegetate north of 40° N. L., best qualities in Satsuma and Totomi. To be found in large quantities but of inferior dimensions; it is very porous, so that if blown at one end of a stick of 4 to 5 meters length, the air will be seen to escape at the other end; by which porousness very easily split along its length. Resists badly alternate dampness and droughts; very liable to destruction by sea worm; tough, but not elastic; not easily worked. Used in shipbuilding for rudders, pivots, etc.; also used for water-mills, wheelworks, etc.; only of very little use in house-building.* Specific gravity 0.779.

6. *Keyaki.*—Grows in poor clay; spread throughout the country and of different dimensions; 35 to 40 m. in height, 3 to 3½ m. in circumference at 250 to 300 years age. Its principal feature consists in a great number small pores, $\frac{1}{8}$ to $\frac{1}{10}$ of a millimeter in diameter, and regularly divided between the annual cycles. Capable of resisting alternate wet and dry; very elastic, not much liable to cracking; easily worked. In shipbuilding its principal use is for deckbeams, sleepers under engines, etc.; in housebuilding used for doors; a knotty grown wood, which is of a very fine appearance for furniture. Specific gravity: 0.609.

7. *Kusunoki.*—(Camphorwood). Grows in clay and never in sandy ground, specially in the provinces of Kishu, Idsu, Kai, Oomi, Busen and Chikusen; best qualities are grown in moist ground. The biggest trees are about 10 m. high and 10 to 25 metres (?) in circumference; very large branches, from 4 to 4½ m. in circumference, usually cut for timber. The stem is generally hollow; some of them are to be found of 20 fathoms in circumference, with a hollow of 65 square meters and with a luxuriant crown. Does not resist alternate wet and dry weather well; under the ground not so much liable to destruction by worms as other kinds of wood. Very elastic. Used in shipbuilding for keel joists, lining of cabins, etc. No use in housebuilding, but generally used for boxes and furniture. Specific gravity: 0.529

It must be remarked that the specific gravities were determined upon samples which Mr. Akamats furnished to the Royal Institution; but this specific gravity seems to vary within very wide limits. At least I myself determined the specific gravity of *keyaki*, *hinoki* and *sugi*, which were to be used in constructing the new Etai-bashi and I found for:

Keyaki	0.937.
Hinoki	0.448.
Sugi	0.549.

the first and last of which differ, as will be seen pretty much of Mr. Akamats' samples.

Under water of course all these kinds of wood are very durable, if not everlasting, provided no seaworms are in the neighbourhood; *kashinoki* seems to be most liable to destruction by this insect.

Until of late I believe the Japanese used no preventive against this disease, but in the construction of the new Etai and Riogoku bridges they have taken to coppering, which, copper being comparatiuely cheap, I suppose will promise effective results.

As to the durability of wooden structures in Japanese waterworks, it is very difficult to compare it with that of works of a similar nature in Europe, as these latter would never be allowed to remain in use in such a bad and often dangerous state as is the case here. Much could be done by effectually tarring and painting and by maintaining this tarring and painting continually in a well-conditioned state.

But the principal thing to which attention should be given, is the use of well seasoned and dry wood. That the Japanese know its value I have seen many instances of last summer along the Tenriu-gawa, one of the chief outlets of timber from the interior, (the yearly export amounting to a money value of 400,000 *yen*). The

* Generally used as firewood.

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

villages along the lower part of this river are inhabited for the greatest part by wood-merchants, the salerooms of whose houses are constructed with the most beautiful pieces of timber, serving in this way at once as samples for visitors and buyers. One house I may mention in which the floor of the *tokonoma* consisted of one piece of *sugi* of 6 by 3 by 0.4 ft., while all the sliding-doors (of the ordinary dimensions) consisted of one single board; moreover the ceilings, linings of walls, etc., were ornamented with similar large planks. This house was not new and the fact of all its wood being without a single rent and looking as sound as if quite new, may well be taken as a proof that much care had been taken in drying it, which indeed was affirmed to me by the owner. A great difficulty which foreign engineers experience in designing wooden structures in Japan most certainly consists in nothing being known about the strength and stiffness of the timber or of its limit of elasticity. Experiments on a large scale to this purpose have, as far as I know, never been made, or at least published; although they are of an elaborate and rather expensive nature, it would certainly prove an economy to the Government, if one of its departments were to undertake them and publish the results.

ASIATIC SOCIETY OF JAPAN.*

Professor R. Smith called the attention of the members to the collection of Japanese plants in a dry state that was about to be sent to Europe by the Educational Department of the Government.

Mrs. Chaplin Ayrton then proceeded to read a portion of a paper upon Japanese woods, translated with additional notes by Lieut. Lindo, from the Transactions of the Royal Institution of Engineers of Holland from a paper by Rear-Admiral Akamatsu. The reading was interspersed with remarks from Mrs. Ayrton as to the characteristics of the trees and the uses to which the various kinds of woods were applied.

Mr. Aston said that the notice of this meeting given in the newspapers had hardly prepared him for some interesting features of it. The advertisement had led him to expect a "paper" on the *Woods of Japan* from Professor Smith; but he found that an unwritten lecture was given instead, and no notice was given to the Society of the interesting observations on Japanese woods with which Mrs. Ayrton had agreeably surprised the meeting in connexion with Mr. Lindo's paper on that subject. Mr. Aston thought it was desirable that the Society should, as far as possible, be made acquainted beforehand with the business which was to come before it.

Dr. Antisell remarked upon the great interest of Mr. Lindo's paper, and also that of Mr. Smith's experiments on the strength of timber. The remarks of the reader of Mr. Lindo's paper, on the slender viability of the young *matzu* tree, and its inability to bear sunshine, reminded him that this was the true reason of the disappearance of forests from certain parts of Europe when they had abounded some centuries past, as in Denmark the prehistoric beech forests have given way to different species. Thirty years ago, when the mineral theory of Liebig was in full popularity, the reason assigned was the exhaustion of the soil of the elements appropriated by these trees; but it is more likely it was owing to some climatic conditions unfavourable to the growth of very young trees, like the peculiarity mentioned of the *matzu*. Something of this kind has been observed along the coasts of California. Formerly the pine grees grew down to the water's edge, giving a peculiar feature to the landscape, but since the establishment of sawmills to convert the large trees into lumber, the ground has been considerably cleared and the young pines do not come up as abundantly as before, so that the landscape now looks as if the pine tree had disappeared. With regard to the relative strength of Japanese and European timber of like dimensions, it is evident that Japanese timber must be weaker; at least that portion of timber which grows on this island where there are no heavy winter frosts. To make good timber there must be temporary arrests of growth by which the sap is drained out of the tubes and the fibres shrink together from the cold, while the new wood of next year, forming a ring round the old, prevents its future expansion and thus renders it more dense. The strength of timber (ceteris paribus) resolves itself into this formula,—how many wood fibres are in a square inch of cross section?—Those having most are of course strongest, and those will have most which are grown in countries where the growth is temporarily arrested, that is, in countries where winters are well marked.

Professor Perry then addressed the meeting stating that Mr. De Boinville had placed in his hands a paper relative to the felling and seasoning of timber, which he begged to have read to the members present. In this it was stated that timber used to be felled only in June and July, but that since the greater demands for large timber had arisen the period was extended to September. But as an exception oak was felled in March. The wood is softer in summer, having the sap in full flow, and hence the choice of June and July to enable the wood cutters to carry on their task with greater ease. The Japanese season their wood by immersing the newly-felled tree (after being barked) in water for a longer or shorter period, from 30 to 70 days according to the use to which it is to be put. There is, however, an exception to this method of seasoning in case of *maki* (a species of pine) which is generally used under water. As regards the growth of timber, Mr. De Boinville's paper contained some interesting facts obtained by comparing the ages and sizes of the same trees in France and Japan. Pines growing in the Vosges valleys required 80 years to equal the size of Japanese pines of 50 years of age. And this rapid growth in Japan accounted for the comparative weakness of the timber. There was also a difference between the same wood grown in the valleys and on the mountain sides or on high land, the latter requiring more time to mature, but being closer of grain and consequently stronger.

Referring to Dr. Geertz' paper, Dr. Antisell observed that among the localities where cinnabar is found, that of Tsushima had been omitted: it was there that this ore was first observed, and from there no doubt Klaproth obtained the specimens from which the first examination of the Japanese variety was made. The ores are not rich in Japan, but in a country where labor is so cheap a poor ore might be worked economically. Those of Almaden in Spain do not average more than 15 per cent. The various processes used at New Almaden, Cal. to obtain metallic mercury of pure quality were then reviewed, and attention called to the method of Violette which consisted in the use of superheated steam, which so far as known had been used with success.

* The Report contained in our issue of last week of the meeting of the Asiatic Society which took place on the 7th ult., requires to be supplemented by the following particulars.

THE YOKOHAMA TOTAL ABSTINENCE SOCIETY.

The annual Meeting of the members of this Society took place at the Temperance Hall last night at 8 p.m., the chair being taken by the Revd. Henry Loomis.

An opening Temperance hymn having been sung and a prayer delivered by the Revd. George Cochran, refreshments of tea, coffee and cake, which had been kindly provided by friends of the Institution, were partaken of.

The Secretary then read the following, the Annual Report of the operations and financial position of the Society.

REPORT.

In presenting their second annual report your committee would congratulate you on the increasing usefulness of the Society and the good which has been done in the Temperance Hall during the past year. At the same time they would regret that the treasurer's report is not so favourable as was anticipated.

During the winter months, and till the end of June, temperance meetings have been held, with two or three intermissions, once a fortnight, and have proved to be productive of much good. Many have signed the Society's pledge, and your committee feel sure that those who have kept it,—and they form a large majority, do not regret having done so but find themselves much richer in health and wealth and better prepared for the struggle of life.

On alternate weeks musical entertainments were given which were well attended and afforded innocent and profitable amuse-

Digitized by Google

ment to very many who could not otherwise easily obtain such. In the latter end of the year (1874) Mr. Pauncefort gave a series of readings partly in aid of the funds of the Insiitution. These were pretty successful and produced a fair balance to the good. On Christmas-Day a subscription dinner was given to the members and friends of the Society, and, though the rain came down in torrents, about eighty men sat down to a substantial and hearty repast. In the beginning of March a farewell tea meeting was given to the English marines, over one hundred of whom were present. The meeting was in every way a success and two of the men returned thank for their companions and warmly testified to the great benefits they had derived from the Temperance Society and Hall. The departure of this fine body of soldiers was a great loss to the Hall, as they composed a considerable proportion of the audiences of the various meetings and very often largely filled the programmes. It was with much pleasure that your committee received testimonies from Col. Richards and officers of the battalion of the good influence which had been brought to bear upon the men, and that through this some of the worst characters among them had become entirely reformed.

In June, a feast of strawberries and cream, largely supplied by friends, was provided for the sailors of H. M. S. *Challenger* and the other men-of-war then in harbour. The band of the *Challenger* was in attendance and, with one or two speeches and a capital and varied programme of music, the evening's entertainment was much appreciated by the tars.

The first anniversary meeting of the opening of the new Hall was held on the 6th July. Admiral Ryder occupied the chair and, in his opening remarks expressed his great pleasure in finding such a place as the Temperance Hall in Yokohama and warmly advocated the desirability of having similar institutions at all the ports in the East. A few addresses were given after which the band of H. M. S. *Audacious* performed a selection of airs, the remainder of the programme being filled with part songs, solos, &c.

Your committee would call attention to the fact that during the year, principally on account of the bad times, not a week has passed without there being in the Hall two, three, and often more, men out of employment, many of them without money. It has been the committee's desire never to refuse aid to those unfortunate and in distress, and who are honest in their intentions and anxious to obtain employment. They have always assisted such as much as possible and often, they are glad to say, with success. The committee would therefore beg to draw the attention of employers of labour to the fact that all kinds of workmen are generally to be found at the Hall and they would be glad to supply as much information as possible as to character, &c. Of course, though much of this outlay is recovered, yet it is a heavy drag upon the funds of the institution. It is always difficult too to determine who are worthy of assistance; for many men, after having spent their all in those dens of iniquity which infest the settlement, come and apply for aid at the Hall.

The Library is now well supplied with books of every description and your committee regret that it is not patronized as it deserves. The reading tables are always covered with local and foreign newspapers and, magazines and with the various games of billiards, bagatelle, chess, draughts, dominoes, &c., &c., are affording a profitable and agreeable way of spending an evening.

The Good Templar's lodge has continued to meet every Saturday evening in one of the rooms of the Hall and the Young Men's Christian Association meetings have been held regularly during the year, and have exercised a beneficial influence. A Bible class has been conducted every Sunday afternoon by a lady which has been well attended and the interest well sustained.

In September last year, a paper was started in Nagasaki, at the suggestion of one of your committee, entitled the *China & Japan Temperance Record* with the object of making it a centre of information relating to the various Temperance Societies and Halls in these two countries as well as to let friendly sailors know what is going on at their old rendezvous. This paper has been considerably improved of late and is worthy of all commendation and encouragement.

The Treasurer's Report, (monthly statements of which have appeared in the *Record*,) shows a deficit of $131.50; but, when it is considered that a large sum was paid for furniture during the year, necessary for the new premises, as well as the fact that so many men have received substantial aid, it will not be much wondered at. The Committee would desire to call the attention of the public to their subscription book, as, till the debt is reduced, they must depend much upon such assistance. The Hall is a public want in a community like this and is doing a public good. Some have declined subscribing recently with the excuse that the Hall ought now to pay for itself. This can be done, but it must be at the sacrifice of its main objects, viz.:—that of assisting the fallen and unfortunate.

The position of manager in such an institution is one difficult to fill and your committee have had trouble in finding a man with the peculiar qualifications needed. This too may account to some extent for the unfavourable balance. At all events, your committee have every reason to hope in the future, and, if their successors should makes extra efforts to reduce the debt, they would crave for them them the indulgence and assistance of the public.

In September last the respected treasurer of the Society. Dr. Elliott, departed for other lands. A meeting was held to bid him farewell and God speed, and many were the testimonies from all classes to the good he had done in the community in his quiet unassuming manner His readiness to assist in measures for the benefit of his fellow creatures and to put his hand in his pocket to help the unfortunate has made his departure a heavy loss to those with whom he was associated.

The hearty thanks of the Society are due to the friends who have paid regular subscriptions and to those who have given presents of papers, magazines, books &c; to the Ladies Benevolent Society for their timely gift of $100; to the gentlemen who have so often rendered valuable assistance at the musical entertainments; to the editors of the local news-papers for their much appreciated contributions; and to the ladies who have assisted at the various tea-meetings.

In conclusion your committee in resigning office would testify to the great pleasure they have had in working in this cause and they trust their successors may find their duties as agreeable.

JOHN Y. HENDERSON,
Hony. Secretary.

JOHN Y. HENDERSON,
Acting Treasurer.

The Revd. Mr. Piper in an able address moved the adoption of the Report which was agreed to.

The election of office bearers was then proceeded with and resulted in the return of the resigning members for a fresh term, with one addition to fill the vacancy caused by the departure of Dr. Elliott.

The Revd. G. Cochran proposed a vote of thanks to the committee for their exertions in favour of the cause during their term of office, and took the opportunity to express a hope that a larger measure of public sympathy and support might be given to the excellent object of their labours.

The Revd. Mr. Piper expressed himself to the same effect.

Two lady members of the Society then kindly sang a few songs to the great gratification of the audience, and the proceedings were brought to a close shortly after 10 o'clock by the song 'God bless our Temperance cause' which all present heartily joined in giving good effect to.

We were pleased to observe that the attendance was very good. Fewer sailors were present than has been usual on former occasions, but the boisterous state of the weather during the afternoon and evening had doubtless prevented many of them from visiting the shore.

Law & Police

U. S. CONSULAR COURT.

Before Gen VAN BUREN, U. S. Consul-General;
And
F. R. WETMORE and C. DRAKE, assessors.

Monday, 8th November, 1875.

ITO HACHIBEI *vs.* WALSH, HALL & Co.

Mr Ness continued his examination of Kumagai Iske.

Witness: I recollect an advance of $75,000 being made by defendants to Ito. That advance was made during the 11th month, 4th year Meiji. It was made through me. The money was to fulfil a time contract of Ito's at the Shosha for rice. Mr Ito and I made several applications to Irwin for the money. Irwin always replied he had not got it. We expressed regret at not being able to get it. Irwin said we had better see Mr Walsh, who had just returned. Ito and I called upon Mr. J. Walsh, and urged him repeatedly to let us have the money. After an immense deal of urging we got it. We got $75,000, and promised to return it, without fail, in two or three days. Ito was to get rice delivered for it. Defendants had no interest in the rice. When the loan was made, Ito said "I will go to the Shosha and get the rice, but I do not think I will get it. If the rice is not delivered I will get the difference in price, and pay defendants the loan, with interest. If the rice is not delivered, other arrangements will have to be made" Nothing was said about a partnership by either party at any time. I had an interview with Ito, in Benzo's house, in the 8th month last year. I was sent for by Benzo. A messenger came from him. Mr. Ito said he had had a great many business transactions with defendants, and that certain requests of his had not been complied with, and that he (Ito) would be compelled to appeal to the Court. I answered that I thought that would be of no avail. Ito said, "You may say it will be of no use, but I am going to try." Then I said, "Would it not be better for us to try and come to some arrangement about the $12,000 advance?" I suggested to settle it in a friendly manner, as I had known Ito for 12 years. Ito positively declined to do this, and said he would apply to the Consul for redress. I replied that in that case I could say no more. I had another interview at Benzo's house with Ito and Benzo. Ito said he should certainly bring a suit against defendants, with reference to the partnership between him and Walsh, Hall & Co, and asked me to maintain that there was a partnership between the parties all through. I said that would be impossible. Ito said, "If you will maintain the partnership right through, it will fix the fact." I again declined, and he pressed me again to do so. Ito then said if I would to do so, he (Ito) would provide me with a pension. I said I was grateful, but did not desire it. I did not desire it because I could not say what was not true. I could not say there was a partnership when there was none. Something was said about rice. I was requested to maintain that there was a partnership in the rice transactions, which I refused to do. Ito then said, "We will have to leave it out in the claim." I said, "You can do as you like." Benzo heard all this, word for word. There were two or three interviews between Mr Walsh and Ito about the $1,000,000 loan. I was present at the first interview. Mr Walsh, at the first interview, said to Ito, "You must pay the balance of $12,000, and then afterwards you can bring forward a proposition for a new business." Ito replied, "If you force me to pay this now, you will cause me great trouble," and requested time.

Cross-examined by Mr Dickins:—I have known Ito and Benzo for a long time, they are my friends. I know of an instance when one of them committed a wrong action, I can't call it a fraud. Ito lost money by Benzo. I do not know of any fraudulent or wrong action on the part of Ito or Benzo. I do not remember any exchange transaction in which the proceeds were not returned to defendants. I do not think money advanced by defendants was ever used for other transactions. My opinion is that during the partnership all the money advanced for exchange operations was so used. I know from hearsay that cheques were returned to defendants sometimes. They were never returned to me. Sometimes cheques not used were kept for two or three days and then returned. I know of one instance only where this was done. It (the cheque) was kept for twenty or thirty days. Ito first came to me in the 4th Meiji about the exchange transactions. I am sure it was not in the third year Meiji. In the fifth month, fourth year Meiji I remember having business conversations with Benzo. I saw him daily. I do not remember what the conversations were about. I talked daily with so many people. Benzo could refresh my memory; I do not remember at that time talking to Benzo about the advisability of doing an exchange business. I had daily conversations with Benzo about exchange matters. Doubtless I had numerous conversations at this time about Ito, but do not remember any particular one. The conversations also referred to the Mito loan. The dollar transactions at the Shosha were conducted in the name of Benzo. They were probably done in his name, at the *Shosha* and elsewhere. Mr Irwin made his own transactions through Sin Coy (defendants' Chinese compradore). I do not know in whose name the outside transactions were done.

The Court here adjourned till 2. p.m.

On re-assembling Mr Dickins continued his cross-examination of Kumagai Iske.

Witness:—It was Ito's proposition that he should deposit 20,000 *rios*, as security. Mr Irwin did not ask for it. I never heard Irwin ask for it. (Exhibit "H" shown to witness). I have never seen that or a copy of it. There was nothing said as to the time the exchange transactions were to last. I had been in defendants' employment about six years previous to this. Previous to that I was a merchant, I sold foreign goods. During my career as a merchant I had a good many transactions with defendants and when defendants' compradore Ah Sin left for his own country I was requested to take his place. I did not hear Ito promise to take upon himself the liability for exchange operations of which he was ignorant. I know that Ito, or persons from him, explained the exchange transactions to Irwin that Ito transacted. This was done from the beginning to the end. It was from the 7th to the 11th month. Up to the end of 4th year Meiji, plaintiff or his people were constantly coming to defendants. I usually acted as intermediary. I was not often absent. The subject matter of these persons who came was dollars and exchange. Benzo came and talked about a cessation of partnership in the 8th month 4th Meiji. Ito never came and agreed to it. Never heard Ito inform Benzo of a cessation of partnership. I do

Digitized by Google UNIVERSITY OF CALIFORNIA

not know when the partnership was to end. I do not know the exact date it was to end, but I believe it was in the 8th month. No paper was drawn up. Irwin said so much money had been lost that it (the partnership) should close. Ito said he would carry it on. Irwin did not mention any date; only said that it should end during the 8th month. I had not charge of book "F". I merely had to carry it in to Mr Irwin when it was brought to me. It was my duty to see that the entries in this book were correct, but I had many other duties to perform, and sometimes the work was not as carefully looked after as it might have been. The joint entries are all contained in this book. I did not have charge of every entry in the book. This is only a daily pass-book and contains receipts and payments of coins.

All these entries appear as if they referred to the same business, but I did not make them so cannot say if they do. I never saw a paper stating when the partnership come to an end. I do not believe there is such a paper. I have heard from Irwin the terms on which the partnership was to close. I do not know much about this business. During the transactions I had nothing to do with the accounts. The pass-book was passing between the parties and I often saw it. I know Nakamura Sobae, he is an honest man. He would not make false entries in his books. I remember a large amount of *niboo kin* coming to Walsh, Hall & Co.'s about the time of the termination of the Sobae transaction. Coolies brought it in lots of 30 or 50,000 at a time. A large sum of about 500,000 was to come in one sum, but it did not. The sum was not brought back in one lot. 35,000 *rios* of the sum were lent to Sobae, but in the end it was all paid. Sobae made the last payment to defendants in the 4th or 5th month this year. As far as Ito is concerned there is money owing by him yet in this transaction. Taking the accounts from beginning to end there was a balance owing by Ito of over $9,000 and then Ito authorised Benzo to get $3,000 making $12,000. Benzo was always considered as Ito's substitute (agent?) and when he asked for $3,000 and that it should be put down to Ito's accounts it was given to him. I did not see Benzo in possession of Ito's seal at this time. In the tenth month, fourth year Meiji I do not know about a transaction in rice in which a heavy loss was made. I made a transaction in rice in the ninth or tenth 3rd Meiji; I borrowed the money from Irwin. I do not recollect a conversation in which it was agreed that the rice transactions should be kept private and secret. I should not be surprised to hear that such an agreement existed. I do not know that Ito or his people came and informed Irwin of rice transactions. Chojiro ran off with $800 of mine. I set him (Chojiro) up in business. I do not know if he was a witness in this case. I saw the plaintiff frequently. I sometimes saw rice tickets. Shoski told me they were securities for money lent. During this time I possibly saw Benzo. Shoski is my son. He is under me. Shoski reports some things to me, but not all.

His Honour called Mr Dickins' attention to the question of costs, and it was finally ordered that plaintiff was to deposit $700.00, more having already deposited $300.00.

Mr Dickins said he knew plaintiff at the present time had not that amount in his possession.

The Court finally adjourned till Friday next at 10 a.m. in order to give plaintiff time to raise the necessary funds.

IN H. B. M.'S PROVINCIAL COURT.

Before C. W. Goodwin, Esq., Assistant Judge.

Wednesday, 10th November, 1876.

Middleton *vs* Fischer & Co.

Court assembled at 10 a.m.

Mr. Ness stated that his clients had, since the last meeting received a current account from the plaintiff's firm in America, which struck off more than 50 per cent of the present claim. By this account it appeared the proceeds of goods desired to be set off by the defendants had been received on 30th September last. He now proposed te accept the reduction of $1,800 in lieu of commission offered by the plaintiff, to waive his objections to the system adopted by them in rendering their accounts, and to hand them the *James Condie* policy if they would hand over the original cost of the venture paid by the defendants, or he would give security that the proceeds of the policy were duly accounted for if the plaintiff's one-third of the original cost of the venture was now credited. This arrangement would leave a small balance, about $1,000, due to the plaintiff, and unless the offer was accepted, he proposed going into evidence on the disputed questions.

Mr. Kirkwood, after consultation with Mr Middleton, accepted this offer, it being understood that the plaintiff's accounts, as rendered to 30th September, should be accepted, and that the defendants would pay interest on the balance at that date after crediting the defendants with their two-thirds share of the *James Condie* oil venture, and would also pay half the Court dues in the cause.

The case was then proceeded with, the only point before the Court being plaintiff's claim for commission.

Mr. Ness commenced his re-examination of R. W. Irwin.

Witness: There was a very clear agreement with Mr. Middleton that his firm should not charge commission on the sale of the rags. It was made in February or March. It was made between Mr. Middleton, Mr. Smith, and myself. A telegram arrived in regard to the rags, and showed that there would be a loss upon them. Mr. Middleton said he was sorry for it, but that he thought it better to sell. He said he would waive commission on the rags, and we (the two firms) would do some good business together. The agreement was a clear and distinct one. We gave Mr. Middleton some large orders for kerosine oil. Plaintiffs have made a claim of $2,067.14 in U.S. currency for commission on the rags. Middleton & Co. have charged commission on the camphor. They have also charged commission on the oil per *Hope*, which they agreed not to charge.

Mr. Kirkwood put some questions, by permission of Mr. Ness.

Witness: Mr Middleton did not say what commission he would waive, whether it was guarantee commission or not. I remember his saying he would waive commission. I did not say anything about giving him future business to do. I objected to the commission on the rags in a letter I wrote to Mr Fischer at New York. No arrangement was made as to what commission was to be charged in New York on the rags. I was willing to settle with Mr Middleton on his offering to reduce the commission by $1,800.

To Mr. Ness: The consideration expressed when the commission was agreed to be waived, was future business. We did future business together.

J. M. Smith, sworn: I am in the house of Fischer & Co. I remember an interview with Middleton about the commission on rags. A telegram was received, reporting sale of rags at a considerable loss. Middleton said it was an unfortunate business, and he would waive commission, and do future business with us. It was Middletons's proposition to waive commission, and I considered that matter settled.

Cross-examined by Mr. Kirkwood; Irwin and I have talked about the interview with Middleton since the commencement of this suit. I have not compared notes with him as to what was said. I do not think any one else was present besides Irwin. I did not take a memo. of what Middleton said. I expressed a feeling of thanks when Middleton said he would waive commission on the rags. I expected him to do so, under the circumstances. Commission was charged in the account sales.

Re-examined by Mr Ness: I think I told Mr Brown of the arrangement Mr Middleton, had made. I have known many instances in which merchants have waived commission when a sale has turned out badly.

R. M. Brown, sworn: I am partner in the firm of Fischer & Co. I knew about the arrangement that Middleton was to waive commission on the rags. I heard about it when I returned from Kobe.

Cross-examined by Mr. Kirkwood: I wrote the letter of July 9th. An exception was taken to an item of freight charged in the account.

The Court adjourned till 2 p.m.

On re-assembling, Mr. Kirkwood recalled Mr. J. Middleton.

Witness: I arrived here from China in last autumn. The shipment of rags was then in preparation. I asked Mr. Smith if he intended to consign them to my firm in New York. He replied that he did. I told him the commission would be 4 per cent. I think the question of commission was not referred to till February or March this year. I think it was after the telegram was received. I voluntarily stated, that when the account sales were received I would, in view of the heavy loss endeavour to make some concession in regard to commission. This is the only settlement I recollect making. I was not, on that occasion, promised future business. All business since then has been on joint account. It was afterwards decided, in May or June, that we should not be interested any longer and we charged them commission. I simply made the offer to make concessions in regard to commission to get a settlement. It is not a business practice to waive all commission on a transaction. I did not agree to waive all commission. I did not write to my firm.

To Mr. Ness: I did not mention, in a letter to my firm, that I had agreed to reduce the commission. I do not recollect all that

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

passed. I do not think Mr. Smith and Mr. Irwin would tell a lie about a trumpery sum like the one involved.

To Mr Kirkwood: At the time of the interview about commission I do not remember being promised future business. Fischer & Co. were at liberty at any moment to break off all business connection with me.

Mr. Ness then summed up for defendants, and Mr. Kirkwood replied.

His Honour reserved judgment.

The following judgment has been rendered in the case of WEINTRAUB *v.* ROBERTSON.

In this case there is a conflict of evidence which renders a satisfactory decision extremely difficult. The Plaintiff pledged 12 cases of various goods to the defendant, the Manager of the Oriental Bank Corporation at Yokohama, as security for a loan of $3,800, for which two bills one of $2,000 and the other of $1,800 both payable 30 days after sight were given by the plaintiff. One letter of hypothecation only on the whole of the goods appears to have been given. The goods were shipped for Hongkong whither the plaintiff accompanied them, and they were received by the Manager of the Oriental Bank Corporation there and stored in the Bank's godowns. The plaintiff proposed to the Manager to pay one of the notes before maturity, and ultimately paid that for $2,000 and had the bill for the same delivered to him, at the same time he was allowed to withdraw six out of the twelve cases and to reship them in his own name to Yokohama. He obtained a Bill of Lading for 6 cases which he afterwards handed to the Manager unendorsed, and it was sent by the same ship to defendant the Manager at Yokohama. The point upon which the case turns is what was the understanding upon which this Bill of Lading was handed to the bank at Hongkong

The plaintiff avers that the Manager received it merely to oblige him, in order to transmit it to Yokohama because he might probably wish to borrow money upon it of the bank there. The Manager at Hongkong Mr. Cameron and the clerk Mr. Scott both agree that it was because the plaintiff had been allowed to take the goods for reshipment only on the understanding that he was to replace them by some other security, which he failed to do. Mr. Cameron mentions that in conversation upon the matter the plaintiff said, after he had handed over the Bill of Lading, that the bank now held against the balance the same security as they originally had against the full amount of both bills. Although the re-delivery at Hongkong was not complete as the Bill of Lading was given unendorsed by the plaintiff, yet after arriving at Yokohama he signed it without demur and thus made the possession of the bank complete. As I can see no good reason why the plaintiff should not have returned the Bill of Lading and brought it himself to Yokohama, unless he had felt himself bound to give it up through failing to comply with the terms upon which he had been allowed to take away the goods for re-shipment, I must hold Mr. Cameron's account of the matter to be the more probable one. I also conclude that the plaintiff is mistaken in supposing that the defendant Mr. Robertson entertained the idea of advancing him again $1,800 on the six cases. It is denied by both Mr. Robertson and Mr. Thompson that any such promise was made. The goods therefore were restored to their original state of hypothecation, under which the whole 12 cases were security for all and every part of the original loan of $3,800; and it follows that the plaintiff's claim cannot be sustained. The plaintiff has been allowed to sue *in formâ pauperis*. The order for admission *in formâ pauperis* was made after the suit commenced and strictly speaking the plaintiff might be liable for the costs of the other party incurred up to the time of the admission. The plaintiff however is out of jurisdiction of the Court, and no sum has been deposited as security for costs, and a security which was given at the outset was objected to by the defendant as insufficient, and in fact unavailable. I am therefore unable to enforce any order as to costs and make none.

The long-pending case of Dunn *v.* Petroleum Oil Company of Yedo, came to a conclusion favourable to the plaintiff on the 30th October last. The plaintiff claimed $26,000 damages for wrongful dismissal by the defendants from the post of chief engineer to the company. The defendants pleaded disobedience and other matters in justification of the dismissal. Mr. Dunn's case was conducted by Mr. Dickins; Mr. Ness defended. The judgment of the Court (Joto Saibansho) was, that the defendants pay to the plaintiff his full salary from the date of his dismissal up to the 30th October, 1875, being the day on which his engagement with them terminated, with interest; and the further sum of $50 per month for the same period in lieu of house rent together with costs and travelling expenses; thus, in effect, granting almost the whole demand of the plaintiff.

In the U. S. Consular Court, this morning, the case of Ito Hachibei *vs.* Walsh, Hall & Co. was, at the request of plaintiff's counsel, farther adjourned till Thursday morning next, the 18th inst., at 10 o'clock.

IN H. M. F. M.'s CONSULAR COURT.

Before JAMES JOHNSTONE KESWICK, Esq.,

Acting Consul-General for Portugal.

Saturday, 13th November, 1875.

J. SMEDLEY *vs.* F. DA ROZA.

This was a claim for $340, for plans furnished and work done by plaintiff as an architect.

Defendant admitted his liability to the amount of $150, which sum he had paid into court.

Mr Kirkwood appeared as counsel for plaintiff; Mr Ness for defendants.

Mr Kirkwood desired to amend the petition, and claim $600 instead of $340.

Mr Ness strongly objected to this being done.

His Honour ruled that it could not be allowed.

Mr Kirkwood still argued that he had the right to amend the petition, and proceeded to cite authority, but

His Honour ruled that he had not. Mr Kirkwood might bring a fresh action for the recovery of the difference, if he pleased.

Mr Kirkwood then opened his case. It was a claim for work done by plaintiff for defendant. Plaintiff had made certain plans for shops to be built on No. 50, Main Street, for defendant, and had not been paid. Defendant was still in possession of the plans. Plaintiff had rendered his account, had asked for payment, and had not received it. No answer had been filed, and therefore he had merely to prove his case.

Mr Ness said $150 had been deposited in court, and this sum was offered in full satisfaction of the claim.

Mr Kirkwood refused to accept this. Besides he wanted costs. He would first call the plaintiff.

John Smedley, sworn: I live at Yedo at present. My office is at Yokohama. I am an architect and civil engineer, and have been so about 15 years. I recollect defendant coming to my office in the early part of this year. He desired me to prepare certain plans for shops, &c., to be built on Lot 50, Main Street, showing accommodation. He requested me to make a rough plan, which I did. When it was finished I presented it to him at his residence at Shinagawa. (Plan produced.) I believe I showed this plan to defendant myself.

Mr Ness: We admit receiving the plans.

Witness: They (the plans) were approved of by defendant. That was on the 22nd March last. The estimated cost of the buildings was about $70 per *tsuboo*, or $22,750. Mr Taketaru (a Japanese contractor,) estimated that they would cost 24,900 *rios*. My usual charge for plans and detailed information is 3 per cent. on the cost of the buildings. If I do all the work of superintending, &c., &c., I charge 6 per cent. for buildings costing over $5,000, and 7 to 8 per cent. for buildings costing less than that sum. A higher rate is paid architects here than in England. My reason for sending a bill for only $340 was, that defendant told me the buildings would not at present be put up. I am entitled to receive 3 per cent. on the estimated cost of a building.

Cross-examined by Mr Ness: A week ago I came to your office, and said I would take $150 to avoid litigation. In this case I did not prepare specifications, or supply them. I should have charged just the same if I had supplied them. In the account I have rendered, I have charged 2 per cent. on $17,000. I took my own estimate. This Japanese contractor could not build the buildings for 9,000 *rios*. Defendant did not tell me he wanted cheap buildings made out of old materials. I have been on friendly terms with defendant. He introduced me to Mr Goto, and others at Yedo. He may have got me business; he never charged me commission. Defendant never asked me the cost of the plans. I did not not say to him at any time, "Never mind; it does not matter, as we are good friends." I only supplied the plans of the buildings. I have measured the ground, and examined the site, and prepared the plan of the buildings. I made a plan for defendant's house at Yedo, for which I never charged anything.

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

Re-examined by Mr Kirkwood: The reason we do not make specifications here is, because the Japanese do not understand them. I have in this instance rendered the usual plans. In similar cases, I have charged 3 per cent. As a rule, I have always been paid. People have sometimes grumbled, but, as a rule, I have generally been paid.

Samuel Parry, sworn: I live at No. 85, Yokohama. I have practised as an architect here. The plan shown me is a rough one. In my opinion the building it is intended to represent could not be built under $70 a tsuboe,—equal to $22,750. It would be impossible to build it for $9,000. If materials were all found, the labour would cost about $20 per tsuboe. I should make my charge on the total cost of a building. I should charge 2½ per cent. for plans only. The plan shown me is a finished one. I should charge 2 per cent.

Cross-examined by Mr Ness: In the event of the building being of tiles and wood, and not stone, it would cost $50 per tsuboe; but in tiles and wood this plan could not be carried out.

Re-examined by Mr Kirkwood: These plans could not be carried out in tiles and wood. Carved wood-work would cost as much as stone.

Mr Ness said he would call defendant.

F. da Roza, sworn: I am the defendant. I have introduced Mr Smedley, the plaintiff, to considerable business. I introduced him to Mr Goto, Mr Shimada, and Mr Gilbert. I did not charge him any commission. I recollect calling on plaintiff in reference to this plan, and I told him that I wished to repair No. 50. He said, "Why do you not take down the old buildings?" He said it would not cost more than $5,000, and that he would not charge for the plan. I never saw any bill from him till I told him I was going home. I have had an estimate of the cost of the buildings, as per plan, by a Japanese contractor, who thought they could be done for 9,300 *rios*. I did not tell plaintiff the house I wanted a plan of would be wood and tiles, or in stone. He said it would cost $5,000.

Cross-examined by Mr Kirkwood: Plaintiff showed me the rough copy of the plan. I did not approve or disapprove of it. I did not tell him the buildings were to be of stone. I did not object to the finished plan. I was surprised to receive an account from plaintiff. I objected to the amount of the bill. I advised my counsel to pay $150 into Court.

This finished the evidence, and

Mr Ness summed up for defendant, and Mr Kirkwood replied for plaintiff.

His Honor, in giving judgment, said the plaintiff was entitled to his remuneration for the work he had done. He thought 2 per cent on $17,000 (which was a fair estimate of the cost of the buildings), a fair and just per centage to charge. The judgment would be for the full amount claimed. In regard to the question of costs, he thought, from all the circumstances of the case, that each party should pay his own costs.

Mr Ness gave notice of appeal against the judgment.

Mr Kirkwood applied that the plans be returned. Mr Ness objected, and said they would be given up to plaintiff whenever the buildings were built.

RAW SILK CULTURE IN JAPAN.

[We extract from the Annual Report of the Silk Association of America, the following chapter upon the silks of this country to which we have elsewhere referred.]

The laudable efforts of the Japanese to improve the quality of the raw silk raised in Japan are deserving of special mention.

Following upon the report made to his Government last year by the Hon. Tetsnoske Tomita, Vice-Consul of Japan at this port embodying the views of the Association on the comparative of value to manufacturers of the raw silk received in this market from Japan, the following communication from the same gentleman was submitted to the Association in February last.

NEW YORK CITY, N. Y., Feb. 4th, 1875.

Dear Sir,—While on my recent visit to Japan, it gave me much pleasure to collect from different silk districts, eighty-two samples of raw silk, together with such information, contained in a report to the Silk Association of America, herewith submitted.

These you will please place before the Association, at its next regular meeting, and oblige,

Yours, very respectfully,

(Signed,) TETSNOSKE TOMITA.
Vice-Consul of Japan.

To FRANKLIN ALLEN, E-Q.,
Secretary Silk Association of America,
93 Duane St., N. Y. City.

To the Silk Association of America:—

THE PAST.

The foundation of the raw silk trade was nearly undermined by the degeneration of the silk-worm. A profit of nearly ten times that on the cocoon or raw silk was realized by the sale of silk worm eggs. This enormous profit induced "rearers" to turn their attention entirely to the propagation of silk worms; and in many cases the stock was so increased their care became a burden, and the worms were not properly cared for. Neglected and not fully fed, they became poor and unhealthy, consequently their eggs were correspondingly poor, and the next generation of silk worms yielded cocoons of weak and almost worthless silk. These poor eggs were scattered throughout the country, and the error became generally known. Great care was then shown by the purchasers of silk worm eggs, and a reaction set in, forcing the "rearers" to again devote their attention to the care of the silk worm, that good eggs be produced.

The reeling of silk was very unsatisfactory, mostly done by hand and on reels of different sizes; the operator often became tired or careless, and neglected the work; the silk was therefore uneven, and with many loose ends.

The skeins were also put up in a manner that caused much dissatisfaction and loss. The "Oshio" especially, was tied with many strings at each end, and the outside of the skein carefully combed, so as to present a fine appearance, while inside it was full of uneven and broken threads.

THE PRESENT.

There are now over three hundred places in Japan for filature reeling of silk by machinery; yet many of the operators are inexperienced, so it will take time to do the work perfectly.

There has also been a reform in the manner of putting up the skeins for market. They are of more uniform length and size, twisted and fastened without the use of string.

Last year there was about 750,000 lbs. of raw silk produced at "Oshio" Of this 250,000 lbs. was reeled by machinery, and put up in this manner. The entire production of raw silk for last year was about three million pounds, of which seven provinces (Iwaki, Iwakushio, Uzan, etc.,) produced 750,000 lbs.; five provinces, (Joshio, Koshio, Shinshio, etc.,) produced 1,250,000, lbs.; twenty-eight provinces, (Mino, Hido, Kaga, etc.,) produced 1,000,000 lbs.

The better silk is produced at Oshio and Shinshio; it being of bright color, very fine, and greater strength and length than that of others.

The seasons for producing silk are Spring, Summer and Fall. Spring is better, as the silk is stronger and of greater length, yet the color is not so pure and bright.

In Summer the silk is weaker, of shorter length, but in color bright and pure, as shown by samples Nos. 7, 8 and 18.

Fall is an unpopular season and but little silk is produced; a sample is numbered 75.

THE FUTURE.

I now desire the co-operation of your society, with its vast and numerous interests represented, to give such clear and concise directions to my countrymen, that no unnecessary delay occur in bringing the raw silk trade to perfection. With this end in view, carefully examine each and all the samples herewith submitted and give an unqualified opinion as to their.

1st. Quality, compared with silk from other countries in regard to color, strength, smoothness, twisting and reeling.

2d. Adaptation to this market, stating for what purpose each may be used.

3d. If any kind are used not represented by these samples, please designate them by description or samples.

Annexed is list of samples herewith submitted showing name of maker, province, season, color, and by what process reeled.

Respectfully submitted,

(Signed,) TETSNOSKE TOMITA,
N. Y., Feb'y 3d, 1875. Vice-Consul of Japan.

On the reading of the foregoing at a meeting of the Association held on the 10th of the same month, the following resolutions were unanimously adopted:

Resolved, That the thanks of this meeting be and the same are hereby tendered to the Hon. Tetsnoske Tomita, Vice-Consul of the Empire of Japan at this port, for his unwearied exertions in the interest of our industry, as particularly evinced in the large numbers of samples of raw silk recently contributed by him.

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

Resolved, That the communication of the Hon. Tetsnoke Tomita and the accompanying samples of Japan raw silk, be referred to a Committee of manufacturers who are particularly interested in the different classes of stock represented by the samples, in order that their respective merits may be investigated and a report thereon be made in accordance with the desire expressed in the communication referred to.

The samples were detained for some time at the office of the Association, No. 93 Duane Street, in order to give a full opportunity for their examination at the convenience of manufacturers and importe.

The special report provided for is now being prepared several members of the Committee having sent in returns which will be submitted to the Association at this meeting.*

* It is a cause of satisfaction that the samples submitted by Mr. Tomita warrant the expectation that we shall soon be able to get from Japan a supply of raw silk as good as the product of any other country. These samples afford positive evidance of the ability and honest intention of the Japanese to recover the position which has been in a great measure lost by their silks in the markets of the world.

While, however, the general character of the silk submitted by Mr. Tomita is high, and instances of exceptional merit are found among them, it is to be regretted that the major portion is so fine in size as to be unsuited to the needs of our manufacturers, who as yet can only employ a limited quantity of certain grades of silk.

The American market requires only the best and strongest silks reeled fine, and then not much under 14 to 16 deniers. The medium grades should be put into coarser sizes, say 16 to 24 deniers, to be used for sewings and twist, and other purposes for which China re-reeled silks are used.

The very fine silks should be of the utmost degree of uniformity and strength; else there is no compensation of the extra labor expended in producing them in the first place, or in working them afterwards. The samples submitted are undoubtedly not equal to the standard of the best European filature in this respect.

The best work of the native reeler is desired in the grades most suited to our requirements. The fact that an intelligent application of skill and patient labor will double the value of the silk production, being now understood by the Japanese, they will need no other incentive to do their best to bring all of their process to a high state of perfection.

Shipping Intelligence.

ARRIVALS.

Nov. 7, *Oceanic*, British steamer, Parcell, 3,707, from San Francisco Oct 16, Mails and General, to O. & O. Co

Nov. 10, *Haydamak*, H. S. R. M. corvette, Captain Tirtoff, 1,100 from Hakodate, Nov 4.

REPORTS.

The *Oceanic* reports strong winds and a heavy sea during the passage.

The S. S. *Gaelic* sailed from Hongkong November 1st at 3 p.m., with 3 cabin European and 184 steerage (China) passengers. 1,297 36.30 tons merchandise and 5 bags mails. Same date at 4.30 p.m., passed by the ship *Weymouth* of London which wished to be reported in quarantine. Fine weather up to 2nd at 3 p.m. when it commenced to freshen up and during the night a strong N.E. breeze set in, which lasted up to 6 a.m., of the 4th during which time the sea was confused and high. Shipped quantities of water across the ships deck. November 5 at 9 p.m., it commenced to blow a heavy gale which continued with a confused sea up to 8 a.m. of the morning of the 6th, when it moderated. Had fine weather all the remainder of the trip to Port. Nov. 9th at 6.33 a.m., met and exchanged signals with the O. & O. Co.'s str. *Oceanic*, bound for Hongkong. Arrived at Yokohama, Nov. 9th at 11 p.m. This steamer brings 3,654 packages sugar, 2,018 packages merchandise and 7 parcels, total 402 24 40 tons

COMMERCIAL INTELLIGENCE.

(*Japan Mail*, November 11th.)

IMPORTS.

Cotton.—Since our last report the usual autumnal holidays have intervened and trade has been consequently in a large degree suspended. We have been but little business to report. A moderate demand exists for *Grey Shirtings* and low quality 16/24 *Mock-Water Yarn* but, apart these, cotton fabrics are neglected by buyers.

Prices rule lower than at the departure of the last mail, and the season is unmarked by that activity which the trade has usually exhibited at the present season.

Grey Shirtings:—				White Shirtings:—	
7 lbs.	38½ yds. 39 in. per pce....	$1.95 to $2.05		60 to 64 reed 40 yds. 35 in. nom. per pce....	2.20 to 2.40

Woollens.—The fortnight has been very quiet one as far as *Woollens* are concerned, the small business already noticed as taking place in *Plain Black Orleans* and fancy mixtures having completely ceased. Prices for all articles remain nominal and without change. *Mousselines de Laine* are in less inquiry also, and *Cloth* seems altogether unsaleable notwithstanding the low prices holders are willing to accept.

Plain Orleans	40—42 yds. 32 in....	6 25 to 7.80	Figured Mousseline de Laine...	30 yds. 30 in...	0.25 to 0.28
Figured Orleans	29—30 yds. 31 in....	4.75 to 5.25	Multicolored ,, ...	30 yds. 30 in...	0.35 to 0.40
Chimagoro	30 yds. 30 in....	5.25 to 5.75	Cloth, all wool plain or fancy..	48 in. to 52 in...	0.80 to 1 20
Italian Cloth	—30 yds. 32 in....	0 25 to 0.33	Presidents	54 in. to 56 in...	0.70 to 0.80

,, No. 3 Ke-pak ... ... ,, ...	6.20 to 6 60	Japan Rice ... ... ,, ...	3.25 to 3.30
,, No. 4 Kook-fah... ... ... ,, ...	5.40 to 6 00	Kerosine Oil... ... ...per case ...	2.55 to 2.60

EXPORTS.

Our fortnightly report dated 11th inst., was to the following effect:

Silk.—Since the 26th ulto. transactions, in spite of the unfavourable advices received from the home markets have been very active, and there has scarcely been any change in prices which close weak at previous quotations.

Settlements are 1,275 bales of Hanks and 226 bales of Oshiu sorts, say in all 1,600 bales, leaving a stock of 1,300 bales.

The shipments of the fortnight are 1,992 bales making the total export since 1st July, 7,076 bales against 5,225 last year for the corresponding period.

Prices for native *filatures*, a few bales of which are occasionally bought, range from $525 to $680 according to merit (19/7 to 25/ or fr. 54 to fr. 70)

Silk-worm's Eggs.—Total arrivals since the beginning of the season are 812,000 cards. Total settlements are estimated over 550,000 cards, about 400,000 of which have been shipped via Suez. A large portion of the balance is expected to go by bearer via San Francisco.

The firm resistance of buyers has at last compelled the Japanese dealers to give way and the course of prices during this fortnight has been one of heavy uninterrupted fall. They have ranged as follows:—

For Oshiu Green from $1.50 down to 0.40.
For Joshiu, Shinchu and Bushiu Green, from $1 down to 0.30.

White Oshiu and Shinchu were scarce and much inquired for. They have brought from $2.50 to $1.30 and there are none left in market.

The stock, now reduced to about 250,000 cards, is almost entirely composed of current to inferior green sorts which holders are anxious to sell at from $0.30 to 0.15.

Last year at this date total settlements were one million and stock 400,000 cards.

Kakeda, Good to Extra		...$530 to 600 19s. 9d. to 22s. 2d.	frs. 55 to 62

Since the above was written arrivals have been 300 bales, and deliveries 150 piculs.—No change to report in prices.

SILK-WORM'S EGGS.—Total arrivals are 818,000 cards, and total settlements over 609,000 cards. The American mail took about 200,000 cards making the total export to date fully 600,000 cards.

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

Tea.—Our market has continued fairly supported, business since the date of our last issue amounting to fully 7,000 piculs.

Prices on the whole have ruled rather easier, but it is difficult to quote a decline on any particular class as desirable parcels are only parted with at full rates. Holders of "fine grades" are more willing to submit these for offers and apparently there is a fair amount of them yet to come forward.

The *Jessie Jamieson* has obtained full freight and will sail for New York about the close of the current month. No other sailing craft is at present on the berth.

Common	$16.00 to 20.00	Fine	$33.00 to 36.00
Good Common	21.00 to 23 00	Finest	$37.00 to 44.00
Medium	24.00 to 27.00	Choice	Nominal.
Good Medium	29.00 to 31.00		

EXCHANGE AND BULLION.

Exchange.—Business has been somewhat interfered with during the past week by the race holidays, but there has been nevertheless a fair amount of Private Paper offering, principally in francs against silk and silk-worm eggs. The demand for Bank Bills has been almost nil.

Gold Yen remain at a slight premium, and *Satz* at par.

THE FOLLOWING

IS AN

EXTRACT FROM A LETTER

dated 15th May, 1872, from an old inhabitant of Horningsham, near Warminster, Wilts:—

"I must also beg to say that your Pills are an excellent medicine for me, and I certainly do enjoy good health, sound sleep and a good appetite; this is owing to taking your Pills. I am 78 years old.

"Remaining, Gentlemen, yours very respectfully,
To the Proprietors of L. S.

NORTON'S CAMOMILE PILLS, London.

FRAUD.

On the 27th June, 1866, MOTEEWALLAH, a Printer, was convicted at the Supreme Court, Calcutta, of counterfeiting the

LABELS

Of Messrs. Crosse & Blackwell,

London, and was sentenced by Mr. Justice Phear to

TWO YEARS RIGOROUS IMPRISONMENT:

And on the 30th of the same month, for

SELLING SPURIOUS ARTICLES

bearing Labels in imitation of Messrs. CROSSE & BLACKWELL'S SHAIK BACHOO was sentenced, by the Suburban Magistrate at Sealdah, to

TWO YEARS RIGOROUS IMPRISONMENT.

CAUTION.—Any one *selling spurious oilmen's stores*, under Crosse & Blackwell's name, will be liable to the same punishment, and will be vigorously prosecuted. Purchasers are recommended to examine all goods carefully upon taking delivery of them, and to destroy all bottles and jars when emptied. The GENUINE Manufactures, the corks of which are all branded with Crosse & Blackwell's name, may be had from EVERY RESPECTABLE DEALER in India.

THE GREATEST

WONDER OF MODERN TIMES!

HOLLOWAY'S PILLS.

PERSONS suffering from weak or debilitated constitutions will discover that by the use of this wonderful medicine there is "Health for all." The blood is the fountain of life, and its purity can be maintained by the use of these Pills.

SIR SAMUEL BAKER,

in his work entitled "The Nile Tributaries in Abyssinia," says, "I "ordered the dragoman Mahomet to inform the Fakey that I was a "Doctor, and that I had the best medicines at the service of the "sick, with advice gratis. In a short time I had many applicants, "to whom I served out a quantity of Holloway's Pills. These are "most useful to an explorer, as possessing unmistakable purgative "properties they create an undeniable effect upon the patient, which "satisfies him of their value."

SIMPLE, SAFE AND CERTAIN!

HOLLOWAY'S OINTMENT

Is a certain remedy for bad legs, bad breasts, and ulcerations of all kinds It acts miraculously in healing ulcerations, curing skin diseases, and in arresting and subduing all inflammations.

MR. J. T. COOPER,

in his account of his extraordinary travels in China, published in 1871, says—"I had with me a quantity of Holloway's Ointment. I "gave some to the people, and nothing could exceed their gratitude; "and, in consequence, milk, fowls, butter, and horse-feed poured "in upon us, until at last a tea-spoonful of Ointment was worth a "fowl and any quantity of peas, and the demand became so great "that I was obliged to lock up the small remaining stock"

NOTICE.

ON and after the 1st of July, Notices of Births, Marriages and Deaths will be charged $1 each insertion.

Such Notices cannot be inserted in this journal unless endorsed with the name and address of the person by whom they are sent.

Yokohama, 25th June, 1874.

Notes of the Week.

There were rumours in the early part of the week of troubles in Bizen, and some colour was lent to them by the despatch on the following day of a detachment of troops along the Tôkaido through Kanagawa. But careful enquiry has satisfied us that the rumours have no substantial foundation, and the autumn manœuvres of the troops account for the passage of the Tôkaido by a couple of batteries of artillery. The native newspapers have not a word on the subject, and were there any truth in the reports alluded to, it is impossible that we should not find some confirmation of it in their columns. The country is said to be quiet and both willing and anxious to remain so. The Corean affair has blown over, and while there is every disposition to deal tenderly with the Satsuma clan—as a rather remarkable translation in our columns to-day shows—there is a fixed determination on the part of the Government to have its own way and not to allow the clansmen to have theirs. So long as they feel that they can enforce anything and prevent anything, as they may be disposed, the centre of the Government is at Kagoshima and not at Tôkio.

A translation will be found elsewhere in our columns to-day giving a short account of the relations which appear to exist between this Empire and a small group of islands known as the Bonin group, which lie about five hundred miles nearly due south of Yedo Bay. Various incidents have occurred during the past few years to attract attention to these islands, the condition of which is anomalous and unsatisfactory—so much so, indeed, as to call for some action, both of the Japanese Government, which claims possession of the group, and of the Representatives of those Powers whose subjects or citizens have settled there. Our translation above referred to strongly discourages the idea of Japan assuming the sovereignty of the group, or going to any expense on this account, and every one would be pleased to think she should be spared this. But this course would necessarily involve a disclaimer of their possession, and leave it open to any other Power to assert a right over them, which rather might than might not be done sooner or later, and this, though not very important, perhaps, is rather undesirable for Japan. As things stand at present, if the Japanese undertake the management of the islands, the whole question of foreign jurisdiction comes in under peculiarly complicated conditions, for it is certain that the Treaty powers interested will not send a staff of officials there to look after a few graziers or run-away sailors. They also will hardly agree to give the Japanese jurisdiction over them. Yet it is far more easy to say that something ought to be done than to say exactly what that something should be. H. M. S. *Curlew* leaves to-morrow for the Islands, taking the British Consul as a passenger, and the Japanese are also sending a steamer down, but whether or not they have determined to resume their old and abandoned claim to the group is not known.

The German Asiatic Society has published the 8th volume of its Transactions, which contains some good and interesting papers, amongst which the following claim chief notice. Dr. Miyake's on Japanese Obstetrics—a continuation. Mr. H. von Siebold's upon the *Tsutschi Ningio*, or clay figures employed in ancient times in the funeral rites of the Japanese. The paper refers to a terrible ancient custom, according to which, on the death of an Emperor or Empress, some of the most prominent court attendants were buried up to the neck and left to die through all the pangs of hunger, and gives instances of this from history. Mr. H. Himly contributes a very exhaustive paper upon the etymology of the word 'typhoon,' which he traces to an Arabic source. It has always appeared to us that Webster, usually so admirable and trustworthy in his etymologies, was astray in taking τυφω, τυφων, as the origin of the word, and though Mr. Himly hints at a connection between the Arabic root and the Greek word to which Webster refers us, he decides against Webster and against those who have identified the word with the Chinese *tai foong* (large wind) now undoubtedly in use in southern China, though chiefly, we think, in the European settlements there. Mr. C. Schenk contributes an illustrated paper upon the boring apparatus in use by the Japanese for finding water, and thinks we may fix the date of its earliest use after the introduction into this country of the strong European iron which seems to be necessary for its construction. The same gentleman contributes a second paper upon a journey from Kofu to the quartz and rock-crystal mines at Kurobara. Dr. Goertz gives an interesting account of the lacquer- and fish-poison so well known to residents in this country. In regard to the latter, there are certain of the fish of Japan which may be eaten with perfect safety by some, while they are rank and violent poisons to others. Dr. Goertz gives one very remarkable case of this, though it seems possible that one of the organs of the fish, esteemed by the Japanese as a special delicacy, was the cause of the death of one man of a party of seven who all made their meal from the same dish, the remaining six without the smallest ill effects. There is an excellent, firm, well-tasted fish brought constantly to this market and often seen on the table of foreigners, called the rock-cod, which affects the present writer as a rank and violent poison, while others eat it without danger.

The next paper is a very full and elaborate one by Mr. Westphal upon the Japanese and Chinese *soroban* (the *abacus*,) showing first how it is used in the four simple rules of arithmetic, and, afterwards, in the extraction of square and cube roots. The subject was treated some years ago by Mr. Goschkewitsch of the Russian Legation at Pekin, in a paper to which Mr. Westphal refers, with the remark that his own investigations have gone somewhat deeper than those of his predecessor, who stopped short with the first four rules. We

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

greatly doubt whether many foreigners in this country have ever seen the instrument in thoroughly practised hands, but those who remember the Canton merchants of old times will recall the extraordinary rapidity and accuracy with which they worked by it. The processes, of course, were simple enough, but it was wonderful to see how rapidly they were pursued. Any one who is tired of working out chess problems, or playing right hand against left, may take Mr Westphal's paper and extract square and cube roots as an amusement during the coming long winter evenings. Mr. J. Knoblauch follows this up with some notes upon Formosa, interesting perhaps to those whose attention has been newly attracted towards the island by the events of 1873 and 1874, but in which we see nothing not to be found in previous writings on the subject. Mr. Arendt follows with a paper upon recent Chinese literature, aud Professor Doenitz with one on the origin of the Japanese Race. He contends it is not a pure race, at least in the southern parts of the Empire, where he finds undoubted traces of Malay origin. Primarily he regards the Japanese as Mongols with probably two branches, one of which is yet seen in its purity in the Ainos of Yedo. This is followed by a continuation of Dr. Müller's paper upon Japanese music, a translation of the first part of which—made with the general permission of the first President of the Society—appeared in our columns in October last year. The contribution is one of high interest, but is far too full and elaborate to permit of any extracts from or analysis of it. Mr. Westphal follows this up with a paper upon the use of the *soroban* in fortune-telling and divination, and some short papers bring to a close a very excellent number of the Transactions of the Society. We ought not to omit saying that it also contains, as a supplement, a translation from the Chinese by Mr. Arendt, entitled *Das Schöne Mädchen von Pao*, to be continued hereafter.

Mr. N. McLeod has published a little work entitled "Epitome of Japanese Ancient History and Guide Book," in which his principal object appears to be to establish the identity of the lost tribes of Israel with the descendants of the princes, *samurai* and people of Jimmu Tenno. But it appears very doubtful if he adduces any evidence whatever which will avail to support this thesis. Taking his stand upon certain texts in the Jewish Scriptures which seem to imply that the erring tribes will be swallowed up by the nations among whom they would be cast and thus forget their own customs and practises, he pleads that the absence of all trace of the rite of circumsicion among those classes of the Japanese whom he seeks to identify as Jews, is an argument in his favour, whilst he adduces no positive evidence to substantiate his position but a Jewish cast of countenance found here and there. But this process of argument might be made to prove anything. If certain sections of the Japanese practised the rite, the fact would be an argument *primâ facie* for identifying them with the Jews, though it would prove nothing, because many other nations practise it. But to plead the fact that they do not practice it in support of the same thesis, on account of certain texts which lead to the belief that they will have lost the rite, is surely an inversion of all logic. A fit parallel to this mode of reasoning may be found in the following sentence among many others in Mr. McLeod's book "By the "law of Moses all who did not circumcise were proclaimed "outcasts, hence Isaiah calls Israel outcasts, which is a clear "proof of their non-circumcision." This is to argue that because some A's are sometimes B's, therefore all B's are A's. What would Mr. Mill say to this? The school of divinity to which Mr. McLeod belongs has taught him that passages in the Old Testament, the intended and true application of which is now in the highest degree doubtful, if not wholly irrecoverable, apply to events now taking place, and even to events yet in the far distant future, and thus he identifies the battle of Fushimi with the opening of the strife between Gog and Magog; Tarshish, Pul and Lud with localities in Japan; the bankruptcy of such of the *samurai* as have gone into trade with the curse pronounced by God upon his stiff-necked people; and the devastating fires and typhoons so common in this country with the same cause. It would be no more fair to reproach night for being night, than to reproach this school for such reasoning, nor would any one do so if its members were not unhappily given to denouncing those who differ from them as men of corrupt lives and contemptible intellects. The days have arrived when the ignorant alone dogmatise on such subjects, when certainty is the true measure of blindness, and voluble rancour a sign at once of a narrow mind and incurable ill-breeding. Mr. McLeod—to do him justice—does not err in this respect; but he might be asked to enquire whether there are any sound grounds whatever for holding this waning view of the old Jewish writings, and to investigate some few of the numberless cases in which men with equal positiveness have applied these predictions to different and manifestly inapplicable events. In real truth, Mr. McLeod's views on these subjects are only a fresh stimulus to hope that the time is coming when men will try to extract from these old writings the sense which the author had in his mind at the time of writing them, and when, freed from the incrustations of time, the overlaid fancies of fathers and schools, of wise men and ignorant men, of bad and good men, we shall see an important section of history as it actually was, the mind of a remarkable race in its own native strength and beauty, and the ways of God as it has really pleased him to walk in them.

Mr. McLeod gives an alphabetical enumeration of certain customs as common to the Jews and the Japanese, and if we give a few of these we shall enable our readers to judge of how far these customs are exclusively common to the two races.

A.*

Aceldema. Field of blood, crucifixion ground, pit where the criminals' bodies are thrown into outside of Kiyoto.
Agriculture. Hills terraced, irrigation, instruments.
Avenger. In Sendai two girls challenged and slew their father's murderer.
Adultery and murder, burnt alive. In Shimabara a woman was tied to a cross and killed by snakes.
Armies, only Samurai, or soldiers of a fortified mountain city, not unlike word Samaria, and nearly same meaning.
Ark (mikoshi) tabernacle shape, torii like cloudy pillar at entrance, some have three arches.
Archery famous, Anoint head, Anger throwing dust and saying beast. Amulets made by women worn under the arms. Arms described, Bansho spears fenced iron rods for taking sons of of Belial. Armour cap-a-pie. Armour bearer.

B.

Bed, Silk and cotton quilts, also mats.
Blood drank, enemies' liver eat.
Bowing three times, bow the knee on approach of prince.
Beggars in towns collected poor rates, cash every morning.
Baths, where Japanese become civilized, will not herd like cattle, but each will have separate bath.

C.

Cities or castelated towns, in the centre is the citadel generally built on the top of mountain, surrounded by a deep moat full of water and bulwarked to the bottom,—generally built with turrets three tier high commanding a view of the princes territory, within this keep there are two inner keeps, the princes palace is within, where are extensive wooded pleasure grounds and lakes abounding with fish and wild fowl, outside of the inner moat are the highest officers houses and their families who have large gardens, and artificial ponds, three streets surrounded by mud walls generally divide the different ranks of Samurai the lowest facing the merchant town, these castellated towns have six walls and nine gates.
Christ, as Jews of old said Away with Him crucify him, he hath a devil, in Shimabara if he dared to come to Japan they said they would slay him and cut off his head. Nagasaki people yearly trod on an image representing Christ on the cross, even infants feet were put upon it.
Crucifixion and cross Median, two spears passed through each side, one man, woman and a boy above 15 years old were crucified at Kiyoto for forging paper money, saw their remains, Cisterns supplied from dragon wells, Crocodile original of sea dragon Chronicles, or book of kings, from 660 B. C. to present date. Combat single. Calves of lips rendering, worshippers in temples kissing Kumano Inu, rub them with hands afterwards, apply hands to sick body, also women weeping to Shinto gods, Cities of refuge principal Shinto temples, shaved head and retired to for safety and became inkiyo; but death if they left, political offenders often shielded. Censer incense, also Jewish.
Crowns, Jewish the head band worn by Jingo kogo, Empress Median, Priestly Crown. Two regal Crowns, no models of which are to be found in any illustrated biblical dictionary, all seen at Kiyoto Exhibition.

The table, which runs down the alphabet as far as the letter Y., is closed with the words "Yoke for oxen." We submit that stronger argument than this is demanded to support so startling a position as that assumed by Mr. McLeod. There is an M. in Macedon and at least one in Monmouth, there is a river in each, and, as Fluellen tells us, "there be salmons in

* We retain Mr. McLeod's orthography, punctuation &c.

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

both." Yet cannot the identity of the two town be established.

Another of the curious delusions under which Mr. McLeod labours and which seems to haunt him throughout his entire book, is that Japan is the special play-ground of the Devil. Now we are very well aware that we here approach dangerous ground, for it is not three months ago that an English clergyman became involved in a suit with a parishioner because the latter had expressed dome doubts about the personality of Satan. "Tell him," said the angry priest, "that if he will say he believes in the Devil, I will admit him to communion." (There was not a better man in the parish.) Now, in this matter Mr. McLeod's orthodoxy shines like the unclouded sun, and he might defy the whole clergy list, for he has an abounding sense and conviction of this great and comforting doctrine. Error is not to him "truth in the making," as Milton beautifully taught, nor is evil the negation of good—the shadow and eclipse dependent upon light itself. They are bound up with a personal Devil in Mr. McLeod's mind, and so heavily does he belabour him, that, from pure pity, we feel inclined to see what can be said on the other side. But this opens up too wide a question. Perhaps, we may recommend to Mr. McLeod's notice Albert Réville's work entitled *Histoire du Diable, Ses Origines, sa Grandeur, et sa Decadence*, or Miss Cobbe's excellent essay on the same subject. Until this horrible doctrine has been exorcised out of the mind of humanity, we shall and can have no clear views whatever of what Good is. But we must refer our readers to Mr. McLeod's book, which, in many respects, is entertaining, suggestive and instructive in a high degree. He was unfortunately prevented by illness from correcting the proof sheets of the greater part of the work while it was passing through the press, and thus it presents an appearance which must be a source of abundant pain to him. But his meaning may be generally inferred from his writing, and, if he will permit us to say so, there is some little congruity between the vagaries of his printer and the curious medley of thought which his work reveals.

Among the items of last week's intelligence, we omitted to notice the removal of the Russian Legation from Yokohama to Tokio—an omission the less excusable that, during its occupancy by M. and Madame de Struve, it has been the scene of unfailing hospitality, dispensed with equal bounty and courtesy to the members of all nationalities.

Mr. Carson has given two performances in the course of the closing week, in which his entertainment was varied by the introduction of the Cabinet trick of the Davenport Brothers. This performance, said on its introduction to be indebted to spiritual co-operation, has been avowedly brought within the range of the conjuror's art by Maskelyne and Cooke and other performers in London, from whom Mr. Carson has obtained the secret of the illusion, since illusion it is claimed to be. Mr. Carson performs his trick with considerable dexterity and neatness, nor can the most acute observer detect the secret of his *modus operandi*. His stock in trade, a large wooden trunk and a wooden press or wardrobe, was fairly submitted to the inspection of his audience. A carpeted floor permitted no suspicion of escape downwards, and, so far as could be observed, the wardrobe itself offered no sufficient means of concealment. Mr. Carson, however, when locked up, succeeded in removing his rope and the handcuffs, with which a police constable invested him, with marvellous quickness, and Mr. Henri escaped from the trunk in which the audience saw him safely packed, with even greater ease. The trick was cleverly executed—on the second occasion in the presence of two members of the audience who minutely inspected the apparatus, preparations and its execution—and imposed upon the spectators.—Mr. Carson repeated his excellent illustration of the "Bengalee Baboo" on Thursday evening. The type was one recognisable by but a slender minority of his audience, but the intelligent rendering of its details produces the same belief in the truthfulness of his delineation as a well-drawn picture disposes us to trust to the fidelity of its portraiture. The usual "nigger minstrelsy" was performed on both occasions.

A preliminary enquiry into the case of Heinrich Willemsen, charged with complicity in the robbery of three bales of China silk from the P. M. S. S. *Golden Age*, was held before the German Consul on Monday last and resulted in the issue of a warrant for his arrest.

From the "Japan Mail Daily Advertiser."

A number of military officers were entertained at dinner on Friday last at the Imperial Palace. The dinner was served in the European fashion.

The *Hochi Shimbun* mentions that at Kanazawa, in Kaga, the breeding of gold fish obtains considerable attention from the inhabitants. In some recent cases fish have been sold for as high a price as twenty-five dollars.

The *Choya Shimbun* says that it has been determined to despatch troops to the Loo-Choo Islands, and that in this intention barracks will shortly be constructed there for their accommodation.

Ninety members of the nobility (*Kuadzoku*) and twenty military officers were honoured by His Majesty with an interview at the Kunaisho on Saturday.

The Editor of the *Nisshin Shinjisshi* was summoned to appear at his divisional police office on Sunday last, to answer, it is to be presumed, a charge of offence against the press regulations.

We learn from the *Nisshin Shinjisshi* that Arisugawa no Miya had an interview with the Mikado on Sunday morning which lasted from 10 a.m. until the afternoon.

Four batteries of the Imperial Artillery passed down the Tokaido on Monday at noon. Their presence has given rise some conjectures as to their destination.

The *Nichi Nichi Shimbun* refers to a report that the Silkworm-egg dealers had resolved to consign their unsold stock of cards to the European markets for sale on their account. It would not however seem, it adds, that the report has any trustworthy foundation.

We read the following in the last issue of the Nagasaki *Rising Sun*:—

A rumour, which seems to be well authenticated, is current among the native population, that a great insurrection has broken out in Okayama, Bizen, and that the Governor has been compelled to leave his post, to save himself from the violence of the infuriated mob. No definite cause is assigned for such a sudden outburst; but we may be sure that the present Corean difficulty has had something to do in fanning the flames of discontent.

Mr. Mori Arinori, who starts for Peking on the 22nd inst., was honoured with a farewell interview by His Majesty on Tuesday last.

Prince Arisugawa no Miya proceeded to Narashino and Shimoshidzhara in the province of Shimosa to witness a review of the Imperial troops. It had been previously arranged to hold this review in the presence of the Mikado.

The *Nisshin Shinjisshi* has heard that, in consequence of the success which has attended the preaching of the Shintô priesthood during the present month, it has been resolved to continue the addresses at the temple in Uraku chô, Yedo on the 15th, 16th and 17th of each month.

At the late reception of *kuadzoku* at the Palace (says the *Akebono Shimbun,*) His Majesty availed himself of the opportunity to say a few words to each of the noblemen presented to him. A former *daimiô* named Naito, while walking in the grounds of the Palace, was seized with sudden sickness during which he fainted twice. He was sent to his house in charge of a Court physician in one of His Majesty's carriages.

We read in the *Choya Shimbun:* The Shinshu sect of Buddhists, with a view to the diffusion of the principles of their faith, has decided to open a school for the purpose in Yedo.

Original from UNIVERSITY OF CALIFORNIA

Monsieur Vertelli gave a performance in the manner of Blondin on the high rope at the Chinese Theatre last evening, which, notwithstanding the intimation that a "well-known resident" would be carried on the *artiste's* back at some dizzy height, attracted an audience much smaller than the performance really merited.

M. Vertelli's dexterity in the execution of his difficult feats was very considerable, exhibiting coolness, confidence and self-possession. He realised all that he claimed to realise, and satisfied and amused his audience by these as well as by some ordinary *leger-de-main* tricks which succeeded.

We may add that although a gentleman of the requisite nerve to perform a secondary *role* on the rope was ultimately obtained it was not without difficulty. He was not, however, it seems the "well-known resident" to whom the finger of rumour had pointed.

Some messengers despatched by the Loochoans were received at the *Sei-In* on the 17th instant.

H. M. S. *Curlew* will proceed on a cruise southward in the course of the next few days.

A Government Commissioner to the Bonin Islands will be despatched by the Lighthouse steamer *Meiji Maru* on the 21st instant. Negotiations having been set on foot with regard to making one of these islands a station for the projected Americo-China sub-marine telegraph cable, it is intended, a native newspaper states, to hold some preliminary survey for the purpose. With this view the *Meiji Maru* proceeds thither. She will be absent probably for some six weeks.

In its issue of last night the *Japan Gazette* deliberately accuses us of a theft from its columns, on the ground that a report which itself published in regard to the object of a steamer now being despatched to the Bonin Islands, appears also in our own issue of yesterday. The fact is accounted for in two words. The information probably came in both cases from one source. Our own was taken from one of the native papers, and was confirmed in part by intelligence received through private sources.

Once for all, we recommend the *Japan Gazette* to confine its imputations of theft to the classes from which it draws its inspirations. Experience, for aught we know, may have familiarised them with the charge, in which case neither reputations nor sensibilities are likely to be injured. It may also rely that under no conceiveable circumstances shall we think of seeking information in its columns or of extracting it from such a source.

The Agent of the Messageries Maritimes Company informs us that a telegram has been received from Hongkong, announcing that the *Tanais* will be despatched for Yokohama at four o'clock this afternoon with European mails from Marseilles to the 10th October.

We read in the *Nisshin Shinjisshi* a report of the intention of the Government to establish another silk *filature* on the Nakasendô road, to which officers from the *Kangiorio* will shortly be despatched.

The *Nisshin Shinjisshi* gives a report from Sendai to the effect that in consequence of the abundance of the grain crop rice has fallen to four *yen* per *koku*. Notwithstanding the moderation of the price there are no purchasers.

A novel newspaper enterprise, the *Onna Shimbun*, (or Women's Journal), intended to supply the softer sex with the current gossip printed in a legible character, was published yesterday in Yedo for the first time.

The whale recently captured would seem to have created some little excitement among the sight-seers in the capital. Large numbers flock to see it, and its proprietors are said to net $40 daily.

Certain reforms in the administration and functions of the *Kuaigisho* (or Town Hall) in Yedo are about to be introduced. Messrs Shibusawa, Masuda, and Fukuchi—the latter gentleman the editor-in-chief of the *Nichi Nichi* newspaper—will, we gather from the *Hochi Shimbun*, preside over these.

THE SILK TRADE OF JAPAN.*

IN a former article we passed in review the letter of Mr. TETSUNOSKE TOMITA and the observations with which he accompanied the samples he had given to the Silk Association of America. We now come to the remarks of the Association itself on Mr. TETSUNOSKE TOMITA's letter and on the samples which had been submitted to it. With regard to the latter, we regret we have not had an opportunity of seeing them, as we should have been able to form our own opinion of their value and of the silk they are supposed to represent. But, by the way, we may as well state that, in the course of a very long experience of the native silkmen, we have hardly ever known, in one instance out of ten, samples to represent faithfully the whole bulk, in which assertion we are sure of being unanimously borne out. It is not our fault if the Japanese dealers have earned so unenviable a reputation for themselves. But we consider it our duty to put intended buyers on their guard in the hope that the mistrust we express here will act as an incentive to the native merchants to improve, not only the quality of their products, but also the character of their dealings.

As we have said before, some of the filatures lately erected in this country on the European system turn out silk which reflects great credit on their managers. We are therefore well pleased to see that the Silk Association of America have found in the samples submitted to them an evidence of general ability, and even instances of exceptional merit. The fault with which the American consumers reproach Japanese filature silk is that it is generally of so fine a size as to be unsuited to their requirements. European consumers have just the same complaint to make on the subject, and have made it from the very moment that the first samples of Japanese filature silk were put on the market. Japan silk is all right enough when reeled to what may be called a medium size, viz. 12/14 to 14/16 and even 16/18 deniers. Within these limits it is well adapted to most of the needs of the European consumers, and can compete with the current descriptions of France and Italy; but such sizes as 9/10 10/11 or 11/12 deniers are considered too fine. Owing to the gradual deterioration of cocoons, there is at present in Japan silk, even in a great portion of the medium sizes a want of tenacity and nerve, as compared with European produce, which considerably diminishes its fitness for the purposes to which fine silk is usually adapted. Besides that, the difficulty of winding and throwing fine Japan silk is another serious obstacle, to which must be superadded the foulness by which it is now so generally characterised. The above remarks apply to silk reeled off annual cocoons, and apply therefore much more forcibly to that which is produced from *bivoltinis*.

It is not amiss to observe here that, with few exceptions, Japanese filature silk is reeled fine, say 10/11 to 11/12 deniers. This arises probably from the fact that at one time the European buyers were very clamorous in their demands for fine silk which was then scarce in Europe owing to the deficiency of the crops of that Continent. The writer of these lines remembers that in the first two or three years after the opening of Japan, the great bulk of Sinshiu or Joshiu silk was of 14/16 to 16/18 deniers. Oshius were a little fuller, and have remained much at the same point. So great was at that time in Europe, the want of silk of 9/10, 10/11 to 11/12 deniers that the

* It is obvious that in treating subjects of this special nature, involving personal experiences, we are in the hands of those who can one deal with them competently, viz, those engaged in the silk trade, for whose cooperation in our work we are very grateful.

Digitized by Google
UNIVERSITY OF CALIFORNIA

foreign buyers were continuously urging the native dealers to reel their produce finer, so as to bring it within the scope of their wants; they were at the same time offering prices so much higher for fine, than for medium or full-sized silk, that the reelers soon found their advantage in complying with the requests of the European consumers, the more so as the difference in the cost of labor was infinitesimal as compared with the increase of the market value. Things then continued on that footing; they went even so far that the natives fell into the other extreme, and turned out silk so fine that it could not be wound and remained unsold for many months and even years in London. After a time, thanks to the export of the silk-worms eggs from here, and a gradual diminution of the disease of the worms, more silk was again produced in France and Italy; and as the great bulk of the silk there is fine, the necessity for a supply of that class from Japan became gradually less, and the demand for medium sizes again got uppermost.

So deeply rooted, however, in the minds of the Japanese is the conviction that fine silk is a *sine quâ non* desideratum in Europe, and so retentive is their memory of the high prices once obtained in the years of scarcity and want, that they continue to reel 10-11 to 11-12 deniers, when those sizes enjoy scarcely any demand, whereas those of 12-16, 14-18 and even 16-20 deniers, more sought for at present, ought to be more plentiful. By a curious variation of fashion, whilst the best classes of French and Italian filature silk, as well as fine sizes, have lately fallen into neglect, consumption runs mostly on medium and current qualities of all kinds and on medium and full sizes. We are therefore not surprised that the American manufacturers, who use in a great measure Tsatlee silk of from 18 to 25 deniers, do not feel much inclined to take fine-reeled Japans. If the Japanese filature owners wish to show themselves intelligent men, they will renounce the vain glory of trying to vie with the European filatures in the production of fine-sized silk, which they are unable to equal yet, and concentrate their efforts to turn out the grades adapted to the purposes of the consumers whose custom they seek to obtain. By paying attention to the sensible remarks of the Silk Association of America, they are pretty sure of soon securing for themselves the preference which cannot fail to declare itself for good filature silk of 14/16, 16/20 to 20/24 deniers over re-reeled China Tsatlees. Let it be observed that for "raws" of the last two sizes if proper attention be paid to twist (*gallicé* tors) and cleanness, bivoltini cocoons will answer as well as annuals. Bivoltini cocoons are now cultivated to such an extent in Japan, that it becomes of vital importance to utilize them in the best possible way, and the reelers cannot do better than to make 16/20 to 20/24 deniers raws of them; finer sizes are decidedly objectionable.

In reviewing as we have done the Report of the Silk Association of America, we must be pardoned if we have so far extended our remarks, that they appear even to us, in the light of a lecture we have been reading to the Japanese reelers and silkmen. We take so keen an interest in the prosperity of the silk trade of the country, that we would spare neither our voice nor our pains in putting it upon a proper footing. But in doing so we are obliged to repeat frequently the advice and the recommendations we have offered over and over again. There is in the minds of the Japanese an unfounded mistrust which induces them not unfrequently to consider inopportune, or uncalled for, remarks actuated only by the most sincere desire for their welfare. Let them be assured that, being all labourers in the same field, we shall sincerely rejoice at the progress they will make, and that nothing will please us better than to see their prosperity and advancement.

SPIRIT OF THE JAPANESE PRESS.

The Kagoshima *Ken*.

("Chôya Shimbun," of November 14, 1875.)

Can street rumours be credited? It is now reported that a few days ago one thousand *samurai* of the Kagoshima *Ken* came up in a body to Yedo. The reason why they have come is stated by some to be the desire of putting pressure upon the Government with turbulent voice in consequence of the retirement from office of the Sadaijin; others say that by directions from Mr. Saigô they are desirous of at once planning a Corean expedition; while others, again, declare that the loyal party intend, by their united powers, to clear away the corrupt officials at their lord's side. These noisy reports are well-nigh likely to deafen the ears and disturb the minds of the public. We, however, are convinced that these rumours are all unfounded and that what is stated therein is positively incorrect.

The *samurai* of the Kagoshima *Ken* are the *samurai* of the former Satsuma *Han*. The Satsuma *Han* stood in the forefront of the loyal retainers at the time of the Revolution, and are therefore regarded with respect by the whole nation and are the trust of the Sovereign. How much more have such men as the Sadaijin and Saigô performed meritorious action on behalf of their Sovereign! Then supposing that the *samurai* of the *Ken* in question were unsettled in mind and boisterous in action, these two men would at once serve the court by pacifying them. How would they, then, sit quietly by and placidly looked on when a thousand men come up in a body and assemble round the Emperor's chariot? How many there have been amongst the *samurai* of that *Ken* who, advancing on before the population of the whole country, have crossed over to the civilized nations and have exerted themselves in the study of literature! We are therefore convinced that the street rumours are incorrect and unfounded. Upon a diligent and careful consideration of the affairs of the country however, it does not do to leave unexplained the sources from which incorrect statements and unfounded reports arise. We are unlearned and as it were enveloped by a wide-spreading mist in regard to the affairs of the country, but we will here hazard an observation as to our feeble vision. The source from which the present incorrect statements and unfounded rumours have arisen is none other than this,—that the *Ken* in question is, as generally allowed by all men, very different to the other *Ken*. For the sake of instance we will mention one or two points. In it we find no instance of men from other *Ken* coming thither as *Rei* or *Sanji*,—a point which has already been brought to notice by Mr. Mori Arinori. It would appear that in it alone is the opinion held that it would not be well to establish a People's Assembly,—according to the observations of the Kenrei Ôyama. It is impossible clearly to ascertain the fixed amount of the income of the former *Han* Chiji of that *Ken*,—as shown by the "List of nobles." We know not whether these differences are caused by the distance of the locality in question and by the difference in the people's customs, but from the fact that it is dissimilar to the other *Ken* many of the public do not look upon it as being of the same formation as those *Ken*. And it is in consequence of this idea that, when any affair arises in the country or any change takes place in the Government, the ears and eyes of the public invariably are turned towards this *Ken*. How much the more, then, when the Sadaijin has again retired and when the Corean affair is yet unsettled, are the common people likely to circulate reports to the effect that even in the Court of the Cabinet there exist factions. And thus it is that by incorrect statements and unfounded rumours the *samurai* of that *Ken* are, though really innocent, made out to be guilty. Is not this a lamentable matter?

Our earnest desire is that as the soil of our land is the public property of the thirty odd millions of the people, and

Digitized by Google UNIVERSITY OF CALIFORNIA

as our Government again is an object of respect to the whole of those thirty odd millions of people, there may be followed out one regular line of action in both the extreme east and west, and one single style of writing adopted, that without prejudice and wilfulness, without pride in one's merit and without arrogance as to one's strength, we may, by united forces and kindred ideas, bring about tranquillity in our land. In such case, even though there should arise a hundred incorrect statements or a thousand unfounded rumours, they will eventually be dispelled like smoke and vanish as a mist, and there will not be shown any disobedience to the will of the Emperor nor will there be any deception practised upon the teeming myriads of the lower classes. None but persons who delight in disturbances and love tumult in the country will treat our words as being devoid of reflection or unsuitable.

The Treaty for the Exchange of Sagalin and the Kuriles.

("*Nichi Nichi Shimbun*," *of November* 16, 1875.)

It is hereby notified that an agreement has been drawn up with Russia, as shown in the annexed document, for the exchange of the island of Sagalin and the Kurile islands.

(Signed) Sanjô Saneyoshi,
Prime Minister.

November 10, 1875.

By these presents We, by the favour of Heaven, Emperor of Japan, succeeding to one unbroken line of Sovereigns, do make it known that We, by mutual consent with His Majesty the Emperor of all the Russias, have agreed that We will cede to His Majesty the Emperor of all the Russias that portion of the island of Karafuto or Sagalin that belongs to us, and that H. M. the Emperor of all the Russias shall cede to us the whole of the Chi-jima Group or Kurile Islands belonging to him. The High officials charged with full powers on both sides met at St. Petersburgh on the 7th day of May 1875 and drew up and signed the agreement for the same. The provisions of that agreement are as follows.

Agreement for the exchange of Karafuto and the Kurile Islands.

His Majesty the Emperor of Great Japan and His Majesty the Emperor of all the Russias, with the desire of removing the source of the complications that frequently have been occasioned in consequence of the joint occupation hitherto by both countries of the Island of Karafuto or Saghalin, and in order to strengthen the friendly relations at present existing between their two lands, being desirous of concluding an agreement for the mutual exchange of the right of possession held by H. M. the Emperor of Great Japan over the Island of Karafuto or Sagalin for the right of possession held by H. M. the Emperor of all the Russias over the Kurile Group, have named as their Plenipotentiaries, that is to say;

His Majesty the Emperor of Great Japan, Enomoto Takétaka, Junior 4th Rank, *Chiujô* of the Marine Department and Envoy Extraordinary and Minister Plenipotentiary to the Court of Russia;

And His Majesty the Emperor of all the Russias, Prince Alexander Gortchakoff, Prime Minister, Holder of the Portrait of the Emperor of Russia set in diamonds, Decorated with the Russian order of Saint Andreas set in diamonds, of St. Vladimir of the 1st class, of Alexander Newski, of the White Eagle, of St. Anna of the 1st class, and of St. Stanislaus of the 1st class, French order of Grand Cross of the Legion of Honour, the Spanish order of Grand Cross of the Golden Fleece, the Austrian order of Grand Cross of St. Stephen set in diamonds, the Prussian order of the Black Eagle, and various other decorations of other countries.

The above Plenipotentiaries have discussed and settled the following article.

Article I.

H. M. The Emperor of Great Japan and his successors cede to H. M. The Emperor of all the Russians their present rights of possession over a portion of the Island of Karafuto or Sagalin together with all their rights of Sovereignty thereto. The whole of the Island of Karafuto now and from henceforth is annexed to the Empire of Russia, the Strait of La Peyrouse being made the boundary between the two countries.

Article II.

H. M. The Emperor of all the Russias, and his successors, in exchange for the receipt of the rights over the Island of Karafuto or Sagalin as mentioned in Article I., cede to H. M. The Emperor of Great Japan their right to and all their rights of Sovereignty over the Islands of the Kurile Group now belonging to them, namely, 1st, the Island of Shiumushiu; 2nd, that of Araido; 3rd, that of Baramushiru; 4th, that of Makanrushi; 5th, that of Onekotan; 6th, that of Harimukotan; 7th, that of Ekaruma; 8th, that of Shiyasukotan; 9th, that of Mushiru; 10th, that of Raikoké; that of Matsua; 12th, that of Rasutsua; 13th, those of Suredonéwa and Ushishiru; 14th, that of Ketai; 15th, that of Shimushiru; 16th, Buroton; 17th, those of Chiyerupoi and Bratt Chiyerupoef; and 18th, that of Urup,—18 islands in all. The whole of the Kurile Islands now and from henceforth are annexed to the Empire of Japan, the strait between the promontory of Ropatsuka in the territory of Kamschatka and the island of Shiurmushiu being made the boundary between the two countries.

Article III.

The localities mentioned in the foregoing Articles, together with their products shall at once be annexed under their new Sovereignty from the date of the exchange of the Ratification of this Agreement. The form of receipt and delivery of the places in question will, however, be effected on the spot by one or more officials chosen by each party as commissioners to take over (the islands), subsequent to the Ratification.

Article IV.

In the lands to be exchanged, as above-mentioned, there shall also exist right of possession over public land therein, untenanted spots, all public edifices, stockades, guard-houses, and buildings of like description that are not private property.

The whole of the buildings and chattels now belonging to the two Governments shall be examined by the commissioners appointed by both parties to take possession as laid down in Article III, and then be appraised, and the price shall be handed over by the Government under whose fresh jurisdiction the land has come.

Article V.

With regard to the people, both Japanese and Russian, dwelling within the territories to be exchanged, the following regulations shall be observed by both Governments.

The people shall in either case retain their original nationality.

Those desirous of returning to their own country may at any time do so.

Those, however, who petition for leave to remain in the exchanged territories shall retain all their rights of fully carrying on their occupations, their right to their effects, and their rights as to choice of religious tenets. They shall receive from the new Sovereign protection in like manner to his own subjects, whether Japanese or Russian. The people are nevertheles to be, in either case, under the jurisdiction of Government according protection to them.

Article VI.

H. M. The Emperor of all the Russians, in return for the gain accruing to him by the cession of the Island of Karafuto or Sagalin, hereby sanctions the following clauses.

Clause 1.—On behalf of Japanese vessels coming to the Port of Gorusakof, i.e. Kushinkotan, the Harbour dues and customs duties shall be remitted for the space of ten years from the date of the exchange of the Ratification of this agreement. Upon the expiration of that period it shall be optional for His Majesty the Emperor of all the Russias to extend it for a further term or else to levy dues. His Majesty the Emperor of all the Russias grants to the Japanese Government the right of stationing at Port Gorusakof a Consul or an official also charged with Consular duties.

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

Clause 2.—Japanese vessels and subjects shall have the same rights and privileges as the subjects of the nation most favoured by Russia, of coming for the purpose of trade or navigation to all the ports in the Sea of Ohotsk or the seaports of Kamtschatka, and also of fishing in those seas or along the coasts.

ARTICLE VII.

Although Full Powers for the *Chiujô* of the Marine Department, Énomoto Takétaka, have not as yet arrived, still, as it has been determined by telegram that such are being sent, he has without waiting for their arrival affixed his signature to this agreement. Their coming shall be awaited in order to carry out the form of communicating the respective Full Powers, in token whereof this is specially laid down.

ARTICLE VIII.

This agreement shall be sanctioned by both His Majesty the Emperor of Great Japan and His Majesty the Emperor of all the Russias, and then ratified by them. The exchange of the Ratifications by their Majesties shall be effected at Yedo within six months from the date of the signature by their respective Plenipotentiaries.

In order to give force to this agreement the respective Plenipotentiaries have hereto signed their names and affixed their seals.

Done at St. Petersburgh on the 7th day of the 5th month of the 8th year of Meiji, corresponding to April 25th (May 7th) 1875.

(Signed) ÉNOMOTO TAKETAKA.
(Signed) GORTCHAKOFF.

We have ourselves perused the foregoing agreement and approve thereof, and consequently do hereby fully confirm and ratify the same, and agree faithfully to observe all the articles laid down therein for as long as Heaven and Earth shall endure. In proof whereof we have hereunto signed Our own name and have caused to be affixed the National Seal.

22nd day of the 8th month of the 8th year of Meiji, and the year from the accession of Jimmu Tennô 2535. (August 22th 1875.)

Emperor's Signature,
National Seal.

By Command,
(Signed) TERASHIMA MUNENORI.

THE BONIN ISLANDS.

(*Nishin Shinjisshi.*)

The *Nichi Nichi Shimbun* of the 8th instant stated that some officials were to be sent to the Bonin Islands. Although this is not actually certain, for the Government has made no such announcement, still we are desirous of expressing our views on the subject. The same newspaper states that the foreigners living on the Islands are always at strife among themselves and that murders are sometimes committed there. Some of the Foreign Representatives therefore have enquired of our Government whether the islands belong to us or not, and have been told that they do so belong to us. Our Government was then informed that if they were part of our dominions, it was wrong that we should have no officials there to preserve order on the Islands, and thus it is that the rumour has now got abroad that we are about to send some officials there.

We have heard that when the English Minister asked Midzno Chikugo-no-kami of the old Tokugawa Government, in 1861, whether these islands belonged to us, and was told that they did, he said that they could not be left in the state they were then in, and Midzno Chikugo-no-kami went thither accompanied by other officials. So that officials were first sent there on account of the questions put by a foreign minister, and it would seem that, in order to protect the honour of our Government, the same thing is about to happen now. But it seems to us that in view of the altered circumstances of the times, there is no necessity for pursuing our old policy in regard to these islands.

The Bonin Islands are situated betereen the 27th and 28th degrees of north latitude and on about the 140th meridian of longitude, and lie directly south of the provinces of Hitachi and Shimôsa. A notable personage named Ogasawa first discovered them in earlier times. During the period *Tempo*, (about forty years ago) a Dr. Takano, who had acquired some of the learning of the west, desired to set out on an expedition to the group, but in those days the Government discouraged such adventures, and he was not permitted to do so. He afterward wrote a work called Yume-monogatari, for which he was thrown into prison, where he ultimately committed suicide. Thus no one at that date had any real knowledge about the Islands.

When Commodore Perry first came to Japan, he passed the group, and one of the officers of his squadron noted some particulars regarding them in his diary, praising them and the harbour of Roid highly. Under these circumstances, our Government, for the sole reason that the question was asked by a foreign minister, and in spite of its poverty, sent Midzuno Chikugo-no-Kami thither in 1861, at very considerable expense, in a vessel called *Kanriu Maru*.

There are two main islands and many rocky islets, and the area of the whole is a little larger than that of the Hachijo island. The two main islands alone are inhabited or habitable. The northern island is called the Chichi Shima, (or the father island); the southern one Haha Shima (mother island), and the united population is under a hundred. The only productions are potatoes and turtle, and the inhabitants consist of a few Caucasians and some fugitives from the Ladrone Islands. There are now many persons who have visited the Islands and made themselves acquainted with their productions. It is said that the Guaimusho has compiled a little work on the group, and as there can be no omissions in any work produced by the Guaimusho, it is unnecessary for us to go further into this part of the subject. But we may add that the officials who were sent there, at great expense and trouble, were soon in much distress, as their provisions gave out, and no further supplies reached them from home. So leaving a few officers to govern the Japanese who had gone over there from Hachijo island, the remainder returned home in a few months, and vessels were occasionally sent over with provisions to those who remained. In the year 1863, however, the cry of *Joi* (expulsion of foreigners) ran through the country, and all communication with the Islands was given up. But the Government felt that it would be unjustifiable to leave its subjects to perish in those lonely islands, and a vessel was therefore sent over to bring them home. Thus the officials returned and the people who belonged to Hachijo resumed their old abodes there. But by this time about $200,000 had been spent on the Islands, without a fraction of advantage accruing from them—except the history compiled by the Guaimusho and and the present article; and the $200,000 of those days is equal to $700,000 or $1,000,000 now. This was all lost in an effort to maintain our useless honour, and these facts tend to show that things which can hardly be called serious were formerly done by our Government.

PART II.

Such is the history of our connection with these Islands. Those who discuss the subject are very apt to say that as everything has undergone a change of late years, it is useless to compare the present condition of affairs with that of the Tokugawa period. Now-a-days if a neighbouring country insults us, we must go and attack it, and if the inhabitants of islands in our vicinity assault and kill each other, we must go and punish the guilty and protect the innocent. In reply we aver that the people living on these Islands are not our subjects. Because our Government formerly desired to enjoy a useless honour, and sent officials there, this is no reason why, after we have withdrawn those officials and left the Islands to their fate, that we should be called on to protect them, as if the people there could in any way be called our subjects. Those who disagree with us will probably say that it is true these people are not our subjects and the Islands were undoubtedly left to their fate by own former Government, yet, if we look to their position, they are unmistakeably in our dominions. The range of mountains in the province of Idzu runs into the sea at Cape Nogatzro, and the Niijima and Miyaki Islands are a continuation of it extending itself further to Hach

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

Island, and then again still further to the Bonin Islands. Thus have not these Islands their true origin in this country? And, if so, how can we disclaim the possession and the responsibitities attaching to it? If we hold the head, the tail aleo belongs to us. We reply, however, that we quite understand about this extension of the land, but if we were to argue on these principles Japan itself would not be ours, but would belong to China as of geographical right. Again, China is but part of Asia and this is connected with other continents. To whom does China, then, of right belong? Is it not too absurd to be wasting time on such frivolous discussion?

But in imitation of those who argue thus, we will take up the ground of the situation of these Islands, and we say that nothing but a narrow strip of water separates Saghalin from Yezo and the Kurile Islands again from this. Their distance from us is nothing like so great as that what separates us from Hachijo and the Bonin Islands. Thus, if our opponents are right, these islands, Saghalin and the Kuriles, are of course ours, and any argument with Russia about them would have been absurd. But the boundaries of a country are really questions of its power. Had the former Government kept up the communication with these Islands, promoted their industries, and made a firm settlement there, there would of course be no question about our rights and responsibilities. We have heard it said that while we were disputing about the 50th parallel of latitude as our boundary in Saghalin, and arguing the matter on theory, the Russians were steadily advancing with their colonization, promoting trade, and settling people as they went southward. Thus, although it was said that we had a right to everything under the 50th parallel, we held in real fact but a half or a quarter of a degree, and the Russians had established themselves at Aniwa. Now had we held Saghalin as far as the 50th parallel, and given up our rights in it for the Kurile Islands, there is no one who would not have thought this strange. Is the area and value of these two possessions the same? Can as much fur or other productions be obtained from the Kuriles as from Sahgalin? A number of scattered little islands cannot be compared with one large one, and no child even would be deceived on such a matter. But there are no real grounds for the Japanese Government or people finding fault with the late exchange, for the real truth is that our holding Saghalin as far as the 50th parallel was a merely nominal thing, and the area and value of the Kurile Islands is quite as great as what we really surrendered. And what caused all this? Is it not clear that the settlement of boundaries is at bottom a question of the actual strength of a country?

If we are to be led into taking any steps about these Islands because a foreign Minister asks questions about them, or because they appear in our charts and thus seem to belong to us, and if, with small minds, we fret ourselves with the idea that it is our duty and belongs to our honour to protect them, even at considerable expense, as we have before stated, this is like the policy of our former Government, and we fail to understand the reason of it. We should remember that we are now placed in a different position from our former one, and those whose duty it is to administer the Government must consider well before they commit us to the policy of reoccupying these Islands or leaving them alone. They lie due south of us and are quite unnecessary as a station in either going to China or America, and are only useful to vessels disabled in typhoons or the like. We deem the rumours put forward by the *Nichi Nichi Shimbun* as without foundation, as any large expenditure by the Government on a few white and black people, numbering in all not over a hundred, would be a very losing business. When we have made greater advances in navigation and have a good surplus in the Treasury, it will be time to think about governing and spending money on these Islands for the convenience of our whaling vessels, for this is their only use to us. Meanwhile we had better leave them alone. We do not believe that any of the foreign powers will take possession of them.

The Press Laws.—A Mystery.

(Akebono Shimbun.)

Does the Government think our laws so perfect that they require no change? Does it intend that no one should express a desire for any such change, and to punish every one who does so, so that none shall be left to speak against these laws? Or does it propose to change them according to the changing spirit of the times, thus protecting the people and promoting their happiness? As the Emperor and his high officials are wise and virtuous, we do not believe that these laws will remain for ever as they now are without regard to the prosperity of the nation. But a judgment recently passed upon our Editor Sakai on the 31st ulto. is as follows: "An article appeared in your paper No. 65 which states that you are desirous to see certain changes in the Press-laws and the laws of libel. This being a violation of the 14th clause of the Press-laws, you are hereby ordered to serve a term of one month's imprisonment." The only inference from this is that the Government thinks the laws perfect as they stand, and has decided to punish any one for speaking against them or seeking to change them. It seems contrary to the sense of our wise Government to think that our laws are perfect and therefore unchangeable. Why then are those who discuss them immediately punished? Looking at the Government we see wise and just officials, while on our writing desk lies the sentence to which we have before referred, and our mind is bewildered. Have we read it wrongly? Nay, that cannot be so. The perplexity may be caused by our ignorance, and without an appeal to the learned men of the world we cannot tell what it means. When we think that the imputation lies upon us of being decryers of the law, because we are desirous of its modification, our doubts and perplexities harden into a stronger consistency. To illustrate this, look at the newspapers. Articles appear in them expressing a desire for the alteration of certain laws. Some say that torture ought to be abolished; others that the responsibility of decisions should rest upon the official who pronounces them; others that the power of the Ruler should be limited, that of the people increased, and that representative institutions ought to be established. Such questions as the responsibility of officials and the institution of public assemblies are discussed in order that changes in the laws may be brought about, and because those who think thus are dissatisfied with the present state of affairs. The same with the abolition of torture, which is now condemned by public opinion, and which it is sought to abolish by the arguments directed in it, so that other laws may be made instead. Are not the arguments urged against the present press and libel laws of the same nature as these? All that we have urged is that the present laws are not perfect and therefore we should have been glad to have them modified; and this is urged in the same manner against the other laws alluded to. But we have not heard that any have been punished for arguing against the present irresponsibility of the officials, the use of torture, or for the institution of representative assemblies. Why then is any one punished for saying that he desires changes to be made in any of the laws? If both Ruler and officials are wise, how is it that there can be any partiality or exceptions in these punishments? Puzzle ourselves as we may, we cannot divine the reason why any one who urges a change in the laws should be punished. Some say that punishment is awarded because the arguments in favour of a change of laws are urged unbecomingly; and this may sound reasonable enough. But it does not dispel our doubts.

What is meant by decrying these laws? It means misrepresenting them. But we do not misrepresent them by pointing to their objectionable features. It would be impossible to argue rationally for the change without showing what is wrong in them as they now stand. It is first of all necessary to point out what is amiss in such laws, but the object of this is to prove that reforms are necessary and to point out what these reforms should be. If we spoke with malice, we should rightly indeed be punished. But we wholly fail to understand why we should be punished for expressing a desire that a law should be amended. We lament to think that we cannot comprehend the doings and intentions of our wise Go-

vernment without resorting to learned men for explanations.

Everything done on right principles is comprehensible by simple reason, but that which is not so done on right principles cannot be understood even by learned men. As what we have narrated above is done by the Government, we are to presume that it is done on right principles, and therefore submit it to the judgment of wise and learned men and trust they will give us some explanation of it. Who among you can dispel our doubts?

SUMMARY OF OFFICIAL NEWS.

OCTOBER.

(From the Government Gazette.)

Oct. 4th.—From the 1st day of the 1st month, 9th year of Meiji (1st January 1876), taxes shall be imposed upon Tobacco according to a tariff accompanying this notification. (Omitted here)

All the *Fu* and *Ken* (Tokei-*fu* excepted), have been notified that, as the budget, to be allocated for the local police expenses, from the 7th month of this year until the end of the 6th month of next year (9th of Meiji) had been regulated, the amount of money previously supplied shall be withdrawn. Expenses incurred for the board and lodging previously paid by the *Okurasho* to the local policemen shall be supported by each *Fu* and *Ken* (Tokei-*fu* excepted) and collected from their local taxes.

5th.—The offices of *Daitoneri* and *Gondaitoneri*, in the *Sei-in*, have been abolished, being replaced by the appointment of twenty *Daitoneri* of the 14th rank.

25th.—A Post-station has been established at Onishika in Rurumoyetsu, Province of Teshio, Hokkaido (Yesso.)

The distances between Rorumoyetsu and Tomamaye are as follows:

From Rurumoyetsu to Onishika, ... 6 *Ris* 1 *chô* 50 *kens.*
„ Onishika to Tomamaye ..... 5 „

The following offices have been established in the *Fu* and *Ken* (local government) and their number shall be fixed according to the circumstances and state of the local government:

Itto Keibu	...(1st Commissary Officer of Police)	9th rank.
Nito „	...(2nd „ „ „ „)	10th „
Santo „	...(3rd „ „ „ „)	11th „
Shito „	...(4th „ „ „ „)	12th „
Goto „	...(5th „ „ „ „)	13th „
Rokuto „	...(6th „ „ „ „)	14th „

The *Fu* and *Ken* (except Tokei-*fu*) have been notified that the following Regulations with regard to the duties of the "*Keibu*" have been established:

REGULATIONS.

All the duties of *Keibu* shall be discharged under the direction of *Chiji* and *Rei*, or *Fu* and *Ken*, who shall also superintend the *Junsa* (Policemen), allotting them to their respective stations for the discharge of their duties.

The *Fu* and *Ken* (except Tokei-*fu*) have been notified that the term of *Rasotsu* hitherto applied to the police have been changed into that of *Junsa*, their rank and salaries to be as follows:

Itto Junsa	(1st class Police men)	1st rank	(below ordinary official class.)
Nito „	(2nd „ „ „)	2nd „	„
Santo „	(3rd „ „ „)	3rd „	„
Shito „	(4th „ „ „)	4th „	„

The *Shi*, *Fu* and *Ken* have been notified that any private person, who may have died or been wounded in the execution of special police duty, under unavoidable circumstances, regardless of his life being endangered, will be supplied with an allowance for medical attendance and cost of interment, in accordance with the notification No. 3 of this year.

29th.—In rectifying the boundary between Tachibana *Gôri* and Tama *Gôri* in the Province of Musashi, under jurisdiction of the Kanagawa *Ken*, the Nakanoshima-Mura, a village in the Tama *Gôri*, has been attached to the Tachibana *Gôri*.

The *In*, *Sho*, *Shi*, *Cho*, *Fu*, and *Ken*, have been notified that, until now, the yearly expenses of legations or consulates in foreign countries, or purchase money due to foreigners or the travelling expense of officers despatched to foreign countries, or allowances to students in foreign countries etc. have been paid or remitted by the different departments, but hereafter all above-mentioned money shall be paid or remitted by the *Okurasho* (Financial Department) in accordance with the accompanying rules. (The rules omitted.)

27th.—The resignations of Shimadzu Hisamitsu, *Sadaijin*, and Itagaki Taisuke, *Sangi*, have been accepted in compliance with their requests.

TOKIO LIBRARY.

We have been requested to give publicity to the following regulations of this Institution, founded by the Educational department in the year 1872.

1.—The library has been founded for the public benefit, and the privilege of using it is extended to all who comply with the established regulations.

2.—It will be open every day, (except the days specified in the following section,) from 9 A. M. to 5 P. M. or until sunset, whenever that occurs before 5 P. M.

3.—It will be closed on New Year's day, the day of the accession of the First Emperor to the throne (11th Feb.), and the Birthday of H. M. the Emperor, and from the 15th to the 21st of April and August, and from the 22nd to the 31st of December.

4.—No book shall be borrowed and taken away from the library building except by special order of the Mombukio. (Minister of Education.)

5.—Books classed as "books of reference," and the two last received numbers of any periodical shall not in any case be borrowed and taken away from the library.

6.—Not more than three volumes of European books, or ten of Japanese or Chinese books shall be loaned to any person at the same time, and no volume shall be retained more than ten days.

7.—No book shall be removed from the shelves or replaced except by the officers of the library.

8.—When persons desire to obtain volumes for immediate perusal or to borrow them from the library, they shall write their names and residences, together with the titles of the books they desire on cards, and then they will be allowed to obtain the books from the librarian.

9.—Damages done to the library by the loss of books, or by making, defacing or mutilating them, must be made good, by replacing the books or paying for the injuries; and the privileges of the library will be withdrawn from the persons concerned, until such damages are paid for.

10.—In order that those using the library may be undisturbed, no loud talking or reading, and no smoking will be allowed in the rooms occupied for reading.

APPENDIX.

Professors and instructors in all the educational institutions under the government, government officials generally, and those who are recognized by Mombukio as exercising an influence in the promotion of education, making application to Mombukio, may obtain his permission to borrow books from the library for their own special use.

FORM OF PERMIT.

Mombusho. (Educational Department.)
Tokio,.....(Date.)

To the Librarian,
Tokio Library.

The bearer of this, M..... is permitted to borrow books from the library, subject to the established regulations of the institution.

Signature,
Mombukio.

Law & Police

IN H. B. M.'S CONSULAR COURT.

Before R. ROBERTSON, Esq.

Saturday, November 13th, 1875.

George Clark a late quarter master of the steamer *Golden Age*, was charged with stealing from that vessel in September last three bales of Silk.

Prisoner, who was undefended by Counsel, pleaded not guilty.

Mr. F. V. Dickins prosecuted for the Pacific Mail S. S. Co. He would first call

Alex. Center, sworn :—He was agent of the P. M. S. S. Co. here. The *Golden Age* at the time of the robbery was the property of the P. M. S. S. Co. She was the lying in the harbour here. On the morning of the 10th September, it was reported to him that three bales of silk could not be found on board. They formed part of a shipment of 69 bales from Shanghai, to the United States. They were shipped by Messrs. Russell & Co. of Shanghai, and consigned to a firm in New York. The silk was to be trans-shipped to the O. & O. S. S. *Oceanic* at Yokohama. At the time of trans-shipment it was found that three bales were missing. The freight clerk of the *Golden Age* reported it to him. He informed Capt. Coy of the *Golden Age*, and asked him to make an examination. The ship was searched, but no silk found.

Prisoner had no questions to ask.

Capt. C. S. Coy, sworn :—He was in command of the *Golden Age*. On the morning of the 10th September, last the silk was transhipped to the steamer *Oceanic*. It was the same lot of silk as mentioned by Mr Center. He knew by the ship's papers that all the silk was put on board at Shanghai. After the silk was put into the lighter from the *Golden Age*, for the purpose of being taken on board the *Oceanic*, it was found that three bales were short. The Purser reported the matter to him. He thought a mistake had been made with the bamboo tallies, and he ordered that the bales should be counted again, when they got to the *Oceanic*. On the bales being taken to the *Oceanic*, it was found that three bales were missing. During the trans-shipment Mr Brown of the P. M. S. S. Co. had charge of the silk. After this by order of Mr Center, he had the *Golden Age* searched. No silk was found. but it was discovered that the fastenings of the room, in which the silk had been, were tampered with. The screws of the door appeared as if they had been drawn; the point was scratched about. The chief officer had charge of the key of the room. He knew the prisoner, he (prisoner) served as a quarter master on board the *Golden Age*. He was quarter master at the time of the robbery. Prisoner left the ship at his own request; on the 11th Sept., he thought. Prisoner said he wanted to leave because a shipmate had left. This other man was shipped at prisoner's request. He saw the prisoner, and the other man once go in a sampan to the S. S *Augusta*, belonging to Walsh, Hall & Co. This happened just after he had been informed by his chief officer, that the other man had been suspected of a robbery in the Yang-tsze river.

Prisoner had no questions to ask.

L. Petersen, sworn:—He was the second officer on board the *Golden Age*, between the 5th and 10th September. At the time of transhipping the cargo from the *Golden Age*, to the *Oceanic* two bales of silk were missing. Could not say out of what parcel the two bales were missing. The screws of the hinges of the store room had been tampered with, the paint was scratched about, and the screws looked as if they had been drawn. I could not say for certain, if there were three bales missing.

The Prisoner was remanded till 2 p.m.

Court re-assembled at 2 P.M.

Heinrich Wilhelmsen sworn —I was in charge of the S.S. *Augusta* in September. I know the prisoner. I know a man named Sallantine, who was known by the name of Barney. On the 8th or 9th September I was on board the *Augusta*. I remember Sallantine coming to me, I was in liquor on that night. Sallantine called me and asked me about taking silk out of the *Golden Age*. I do not know if it was his own silk. He wanted my boat and wanted me to help him. I lowered the boat and went to the *Golden Age*. It was about 12 o'clock at night. Sallantine went on board the *Golden Age* and afterwards a port was opened and three bales of silk were shoved out by prisoner. One bale fell overboard and we picked it up again, the other two fell into the boat. It seemed to me that Clark was in liquor at the time. We took the bales on board the *Augusta*, and took off the packing and found about sixteen bundles of silk in each bale. We put them in two clothes bags and a box, and put them in my [illegible] boat and landed them in the creek. It was about the 8th or 9th of September. Sallantine did not go ashore with me. I was to get an even part of the proceeds of the sale after deductiug expenses. I was to get equal parts with Sallantine and Clark. Both agreed to this. The silk was landed near Cook's yard about 6 or 7 o'clock a.m. Directly we landed we put the silk into four jinrikishas, and took it down to No. 68. We took it there to see if Mr Eyton would sell on commission. Mr Eyton had his office at No. 68. I know Mr Eyton but have no acquaintance with him. He was not there at the time, but I saw him about 10 30 a.m. He said that he would try to sell it. I showed him the silk. I told him he would have a good commission if he could sell it. The silk stopped on board the *Augusta* one day, and whilst it was on board I spoke to Mr Eyton about it. I told him I had some silk if he would sell it, but I did not want him to tell anybody as it was on the sly. He said he thought he could sell it, so I took it ashore next day as I was afraid that some one would find out that it was on board the *Augusta* when I had no right to take it there. When I got to Mr. Eyton's office with the silk he was not there and the boy could not open the godown, so it was put in a room. When Eyton came he ordered it to be put in the godown. It was put in by the Japanese and myself. I think that Mr. Eyton then sent for Mr. Mitchell, for he came and ordered it to be sent to the Auction Room. About 4 o'clock I went to see Mr. Eyton to ask about the silk, but he said that it was not settled yet, he had not seen Mr. Mitchell. The silk was taken to Mr. Mitchell's godown. It was taken out of the pack and put into fresh boxes and taken round. I saw Mr. Eyton the next morning and he showed me a note from Mr. Mitchell saying that the silk had been stolen, and he (Eyton) said that he would have nothing more to do with it, and I must settle with Mr. Mitchell myself. Prisoner was about Yokohama but did not go with me to Mr. Eyton's. I could not see Mr Mitchell in the morning, but went again in the afternoon and saw him and he said he could do nothing with it, and told me to take it away. I saw Sallantine and Clarke and told them this and Clarke said we would take it away. Mr Mitchell did not give me any reason for telling me to take it away. I went with Clarke to get it but Mr Mitchell seeing he was in liquor would not give it and told us to come on Monday. I went on Monday by myself, as the other two men told me to do the best I could, and agreed with Mr Mitchell that he should buy the silk for $250 and he told me to come back at 11·30 for the money. I went then, and he talked to me and made several objections and said he could not sell the silk, so that I agreed to give him a receipt that I had received the silk back and take $150 for it. I gave him a receipt that I had received the silk back and he gave me a cheque on the Oriental Bank for $150 payable to myself but I was not to present it until after 2 o'clock. I told the others this and they agreed to it. In the afternoon I got the cheque cashed and gave $45 each to Sallantine and Clarke and kept $60 for myself because I had incurred $15 expenses. Although I gave Mr. Mitchell a receipt for the silk back I never received any portion of it back. When I last saw it, it was in Mr Mitchell's godown. I had no interview with any one else besides Messrs Mitchell and Eyton about it. I know Mr Mitchell by sight, but I have had no dealings with him since. I did not show him a sample of the silk. When Mr Mitchell came to Mr Eyton's he took a bundle of the silk away with him. When Sallantine came to ask for the boat, he told me that it was between himself, George (prisoner) and myself. He told me to make haste as it was all ready. I knew that the silk was not their own property. Sallantine gave me to understand that they were going to "make" it.

After hearing the evidence read over Prisoner declined to say anything in answer to the charge.

His Honour committed him for trial.

Wednesday, 17th Nov., 1875.

REGINA *vs.* R. F. LIVINGSTONE.

Charge :—Robbing $50 from the person of Peter Cumming, late cook of the British ship *Shalimar*.

Accused pleaded that he was paid off from the *Shalimar*, and received $50. After receiving the money, he went in a jinrikisha with the boatswain to accused's place (the "British Queen" public house). He asked the boatswain if he intended to stay at accused's house? He said, "No; I want to speak to Samuel Livingstone for a few moments." He asked the boatswain to have a drink, and they had a glass of gin each; accused had one also. He paid for the drinks with a silver dollar. [After relating some conversation between accused and the boatswain.] He called for another drink, and said to the boatswain, "Let us go and have some dinner." They had dinner at the back of the bar, in a room. He called for

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

beer, and they had it. He and the boatswain came out into the bar again, and he said to accussed, "I will pay for the dinner." Accused replied that he would not charge for it. He said to accused, "If you won't take the money, let us have the drinks." He had gin, and so had the boatswain. Then he went into the other room, and lay down and went to sleep. Afterwards he woke up, and felt accused going to his pockets. He looked round and saw Mr. Johnson leaning over him. He said to Mr Livingtone. "Don't take that." Accused gave him back the dollar and some cents, and said to him, "I have not taken your money." He said, "All right; bring the drinks in for the three of us," Accused brought in two decanters and three tumblers; one was gin, and the other brandy. Accused and Johnson drank brandy; he did not drink any. They then left him (plaintiff) in the room. He then felt in his pockets to see if he had any money and found he had none. He went out to accused and said he had been robbed. "Of what?" asked accused. He replied, "Of $50; and it is between you and Johnson." Johnson said he knew nothing about it. He (prosecutor) said to Johnson that he believed he (Johnson) was a scounded. He said to accused that it was too bad if he was to lose his money. Accused denied all knowledge of his money. He said, "You do know of it." Accused then butted at him with his head, struck him, and loosened three of his front teeth. One of his shipmates was there. and asked him to come away. Went together to the Sailors' Home.

To Accused: He drank in his (accused's) house. He paid with a silver dollar. Came out of the dining room as soon as he had had his dinner. Had a glass of beer. Did not go away from the house then. He did not recollect saying anything to Johnson when he saw him. It was between half-past 4 and 5 o'clock when he left. He could not say what he paid for the drinks with. He remembered changing a ten dollar bill before he went away. He did not think he came in again that evening. Did not come in between 9 and 10 o'clock. He did not recollect accused putting him out. He remembered going on Saturday to his (accused's) place. He did not ask him to give him $5 or $10. He did not say he would make him pay $20. He (accused) did not say to him, "You cannot extort money from me; there's the door; go out."

To His Honour: It was about half-past 1 or 2 o'clock when he went to lie down. Did not think he was asleep above an hour. When he went to accused's he had $51. Had some change out of the silver dollar. He then changed the $10. He thought he had $9.30. Five dollars were in a $5 note. When he woke up he saw Johnson and accused standing over him. What awoke him was accused having his hand in his (complainant's) pocket. He then saw a silver dollar in accused's hand. About 10 minutes elapsed before he felt in his pocket for his money. He found it all gone. The first he saw of Johnson was his standing over him.

Alexander Johnson, sworn: He was chief officer of the *Parmenio*. He was at accused's on the 9th. Accused called him in into his room. This was between one and two o'clock. Complainant was lying on the couch, or the sofa. Accused drew attention to complainant, and asked him to witness what money he had on him. Accused shook complainant up, and awoke him. Accused asked the complainant to give him his money. Complainant seemed to be stupid, and accused put his hand into complainant's trousers pocket. Accused handed out a silver dollar and some small pieces. Complainant took the money back. [Witness here told a long story about what was done afterwards, but it did not bear on the charge]

To complainant: You told the boatswain you had been robbed of $50 in the house.

Accused did not ask any questions.

Henry Campton, sworn: He lived at the Sailors' Home. He was at the "British Queen" on the night of the 9th. He saw accused with a revolver up to Johnson's face. He said, "You——, if you blow on me I'll blow your brains out." Johnson was drunk. Accused was tearing up Johnson's coat, and flinging it in his face.

To accused: He did not see the complainant in the bar.

To Court: He saw complainant standing at the gate of the Sailor's Home on the 9th, at 4 o'clock. He was crying. He told a shipmate he had lost his money at accused's. He said accused had given him a glass of beer, and he thought there was something in it, for it made for him feel curious and dizzy. He had laid down, and accused had put his hand in his pocket and had taken his money.

Edward Baker, sworn: He saw Johnson and accused quarrelling in the "British Queen" on the night of the 9th. They were both half drunk. [Witness here corroborated what the last witness said about accused threatening Johnson with a revolver.]

Witness answered a few unimportant questions put by accused.

Court adjourned till to-morrow at 10 a.m.

THE case Regina *vs.* R. F. Livingston was farther adjourned until Monday, the 22nd inst., at 10 a.m.

W. Allen, a seaman, was charged with assaulting a servant at 168, and using threatening language to Mrs. Mills.

Charge dismissed, and prisoner cautioned.

IN H. B. M's PROVINCIAL COURT.

Before C. W. GOODWIN, Esq., Assistant Judge.

Wednesday, 17th November, 1875.

JOHN MIDDLETON & Co. *vs.* E FISHER & Co.

His Honour delivered judgment in this case this morning, as follows:—

The various points which arose in this case have been settled by mutual arrangement, with the exception of one, which alone remains for me to decide.

This is the claim of the $2,067.14 for commission upon the sale of the cargo of rags.

It is stated by Mr Irwin and Mr Smith that in a conversation between themselves and the plaintiff (Mr Middleton) in February or March, upon the arrival of a telegram from New York announcing the sale of rags, and showing a serious loss, the latter expressed a willingness to waive commission on this sale, adding that they could or would do in future some business together, or words to that effect. No further reference was made by Messrs Irwin or Smith to this proposition, beyond some general expression of thanks. They allege no promise of giving any business in return, though in fact some was afterwards given. When the accounts were sent, about the month of July, in which the commission appeared charged, no exception was taken to this item at the time, although in acknowledging the receipt of the accounts it was intimated, by the words "will be referred to again," that they were not definitely accepted. The plaintiff's recollection of the interview between himself and Messrs. Smith and Irwin differs from theirs materially. He says that he voluntarily said, in reference to the loss sustained, that when the account was received he would endeavour to make some concession in the commission, and he says (as the other side also says) that they did not on that occasion promise to give any future business. Upon this state of the evidence it appears that some kind of promise was made, but what it was is open to doubt. It seems to me that a misunderstanding took place as to what the plaintiff intimated. The onus of proving ther view of the promise lies upon the defendants, and they omitted in the commencement to take means for putting the matter of it beyond doubt. In the face of the plaintiff's strong denial, I cannot assume their view to be correct. The promise as alleged by him is one too indefinite to be enforced. I must therefore decide this point in the plaintiff's favour.

U. S. CONSULAR COURT.

Before Gen VAN BUREN, U. S. Consul-General;

And

F. R. WETMORE and C. DRAKE, assessors.

ITO HACHIBEI *vs.* WALSH, HALL & Co.

Thursdny, 18th Nov., 1875.

Mr Dickins contiuned his cross-examination of Kumagai Iske.

Witness: My son is an honest man. I do not think he would receive money and not acknowledge it. The seal you show me is mine. The writing on the seal is "American No. 1 Yokohama, Walsh Company." That seal was made for my individual use. Defendants knew I used it for my own purposes. I have my private seal. Defendants permitted me to use it for my own business. I never used it falsely or fraudulently. I know the paper you show me. I wrote it, and sealed it. (Witness read it) I am not ready to pay the $5,000 mentioned in it till I make an examination of it. It is payable on demand. (Paper handed in, and marked "D D.") Walsh, Hall & Co. owe it, unless they have paid it. I have seen that sum credited to Ito Hachibei. It is in an account that passed between the parties, I have asked Benzo to return that document. It was not returned. I never asked Benzo to give any document showing that the $5,000 had been credited. The seal bearing "Walsh Co., &c." was only used in business transactions of Walsh, Hall & Co. Defendants never objected to my using it. I am an honest and careful *banto*. Saito Kaske never wrote any documents for me; Kaske is Benzo's servant. It is possible that Saito Kaske wrote

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

some for me. I cannot write well. I don't know if he has written documents for Shoske. I do not know if Kaske wrote a divorce paper for Shoske. I do not remember a large quantity of *niboos* being brought in in carts at the conclusion of Sobae's transaction. I do not remember the *Machigaisho* interfering. In 1870, Benzo had an excellent reputation, and was a merchant of high standing. He held a second rank in the *Shosha*. Benzo was a *todori*. Doubtless Benzo and Zenjiro had charge of defendants' interest in the rice transactions. I know $75,000 were lent, after many requests for it had been made. Irwin was told the money was to be exchanged or converted. It was only taken to show at the *Shosha*. Iwaya Kahei is a money changer; he is not particularly truthful. He borrowed money from me, and never returned it, and that is why I say he is dishonest. I never heard of a $40,000 transaction between Ito and Kahei. I know Kahei; he comes from the same province as I do.

Court adjourned till 2 p m.

On re-assembling, Mr. Dickins continued his cross-examination of Kumagai Iske.

Witness: The whole items put together bring out a balance of $12,000. This was when the partnership came to an end. I did not keep a run of all the documents. There may be other receipts like the $5,000 one produced this morning. I do not think there are any other ones in existence. (Books C and F shown to witness). I believe there are other exchange transactions besides those in these books for which Ito is responsible. Ito borrowed money for exchange transactions after these books were closed. I think the securities, now in the hands of defendants, were deposited in the beginning of the 5th Meiji. Ito borrowed $25,000. It has been repaid. Ito also borrowed 10,000 *rios*, $10,000, and $5,000, for all of which sums these securities still remain in defendant's hands. The 10,000 *rios* have been repaid by Ito. There was a verbal agreement by which these were to be security for the $15,000 Ito borrowed from defendants. Ito told me that he had lent $24,000 to the Hanabusa Han. This was in the beginning of 5th Meiji, or the end of 4th Meiji: I am not quite sure which. Ito showed me a document from the Hanabusa Han. It was a receipt for money. At the request of Ito, it was made out in the name of defendants. I do not know if in the 2nd or 3rd month, 5th year Meiji, Ito paid 40,000 *rios* in *niboo kin* to Mr. Thomas Walsh. I never heard from any officer of the Hanabusa or Mito Han that any money was due to Ito; but I heard that those Hans owed money to defendants. I have been in prison. I lent 12,000 piculs of Chinese rice to Uke Han. There was a deficit in the amount of money paid to the defendants as the price of the rice. I was abused, and put into prison. The officers lied about the affair. Two of the parties died in prison, and defendants lost the money. I was examined, and imprisoned during it. I was found innocent, and discharged. The officer who lied made off.

Re-examined by Mr. Ness.

Witness: Mr. Irwin demanded that if there was a charge against me it should be enquired into. The affair was finished in the Tokio Saibansho. Walsh, Hall & Co. are quite satisfied that I am innocent. I was only in prison one night.

The question of Ito Hachibei, the plaintiff, depositing further security for costs was then gone into, and the matter was left for future arrangement.

The Court then adjourned till 10 o'clock on Monday morning next.

JUDICIAL COURT OF KANAGAWA KEN.

Before Mr. YATS SHUNZO, Acting Judge.

Monday, 15th Nov., 1875.

Capt. ROPER *vs.* MITSU BISHI MAIL S. S. Co.

This was a claim for $5,320 for alleged breach of agreement and wrongful dismissal.

Defendants in their answer pleaded breach of agreement on part of plaintiff, and disobedience of orders, as justifying them in dismissing him.

Mr Dickins appeared for the plaintiff, and Mr Ness for defendants.

Mr G. W. Hill announced that he would occupy a seat on the Bench, to assist His Honor if necessary.

Mr Dickins, before commencing his case, would call the attention of His Honor to the answer. It did not state any particular acts of disobedience or any particulars.

His Honor said the answer had been returned to defendants to be amended.

Mr Ness said he had prepared an amended answer.

Mr Dickins said he had not received it.

Mr Motz, interpreter to the Court, said it had not been filed.

Mr Ness said he would furnish Mr Dickins with a copy of it. He would now make an application, as soon as Mr Dickins had finished with his witnesses for plaintiff, for a commission to take evidence in Shanghai.

His Honor said the trial would now be commenced, as Mr Ness had not made his application before. The witnesses for both sides would be examined. In Mr Dickins' petition, nothing was mentioned about witnesses at Shanghai.

Mr Ness agreed to go on with the case.

Mr Dickins would first call

Thomas Bell: I am the chief engineer of the *Kanagawa Maru*. I am in the employment of the M. B. M. S. S. Co. I remember being on board the *Kanagawa Maru* about May 20th last. The ship was then on a voyage to Shanghai. Capt. Roper commanded the steamer on that voyage. I remember on the 22nd May entering the Shanghai river. I remember passing the light ship. I was on deck at the time. We passed a very short distance from it. I think this was about 8 o'clock at night. I remember the time by my recollection only. I have not my log-book here. The time might be in it. When we passed we saw other lights besides the ordinary lights. I saw a lantern at the side of the lightship. It was a very bright light. I do not know if it was anything besides a ship's lantern. On a lightship it is usual to have a masthead light, but no light at the sides. Even if there was an awning up there would only be a masthead light. I was *supœnaed* by Capt. Roper. I went to Mr. Ness' office this morning. I had orders to go there from Mr. Krebs. Mr. Krebs did not order me to do what Mr. Ness should order; I was only told to go there. I will only speak the truth in this case. (Letter from witness to plaintiff dated 12th November read, in which he said he was very sorry that plaintiff had called upon him to give evidence at the trial.) At the time of passing the lightship the whistle of the *Kanagawa Maru* was blowing. I suppose it was for the pilot. I cannot say I heard any cries or shouting from the lightship. Do not remember the state of the tide. Just about this point the river and sea water meet. It sometimes has an effect on the engines and boilers. It sometimes makes scum. At times it tends to slacken the speed; at times it does not. It does not tend to increase the speed. In the *Kanagawa Maru*, it sometimes caused priming. The *Kanagawa Maru* is pretty old. I have been in the ship since the M. B. M. S. S. Co. bought her. I was in her in 1856. She was then a new ship. I have had no trouble with the engines. I could not say positively at what time we crossed the Woosung bar. It would be in my log-book. The tide was not failing. It was about the turn of the tide. The draft of *Kanagawa Maru* varies between 15 feet to 17 feet, according to the cargo. At 2.30 a.m., after passing the lightship I was on deck. About that time I saw lights like those of a steamer. There was a red, a green, and a white light. I first saw a green light on the port side of the *Kanagawa Maru*. The steamer was coming towards us. The steamer was on our starboard bow when I went below. I do not know if the river has bends at that place.

Mr Dickins desired to hand in an affidavit made by the witness before the British Consul on the 2nd August last, to show that the witness was hostile to him, and contradicting himself.

Mr Ness objected to its being received, but finally agreed to its being put in.

Witness: I remember Capt. Roper calling out, "Hard a-port," or something of that sort, to the man at the wheel when the steamer passed us. I was just then going below. The steamer was not then quite up to us. When the Captain called out "Hard a-port," the steamer was about a quarter of a mile off. I had been below about two minutes when I received the order, "Ease her—stop her."

Cross-examined by Mr Ness: Capt. Roper prepared the affidavit I signed. Capt. Roper came to the ship with a copy of it, and asked me to sign it. I signed it without looking closely into it. I will produce the copy this afternoon. The only reason why I said in the letter to Capt. Roper that I did not want to attend as a witness, was because I could not do him any good. The *Kanagawa Maru* did not stop off the lightship; she went right on. It was quite possible for the vessel to stop where the river and sea water meet. The other steamer was about a quarter of a mile off when I received the order to stop the engines. The vessel was aground before she got to the Woosung Bar. She ran aground on two occasions. There was no pilot on board. Nobody has asked me to say anything that is untrue in this case.

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

Re-examined by Mr Dickins. Before we reached the lightship did not see the other steamer approaching. The lightship may have been rolling. I can't say if we had foggy weather from Nagasaki to Shanghai. We were not rather late when we arrived off the lightship. When the ship first ran on shore she did not do herself any harm that I know of. On the second occasion she did not do herself any injury. The river is very narrow in some places. Do not know if it was foggy. I have been up and down the Shanghai river several times, but do not know much about it. It is not uncommon for steamers to touch the bottom in the Shanghai river.

Court adjourned till 1 p.m.

On re-assembling,

Mr Ness announced that he had brought the engineer's log-book.

Mr Dickins called

Sylvino Milino: I am a Manilaman. I was a quartermaster on board the *Kanagawa Maru*. I left the ship at my own request. I remember the night of the 22nd May last; the ship was then going from Nagasaki to Shanghai. About 9 o'clock on that night the captain ordered me to stand by to heave the lead. This was in the Shanghai river. I went on the bridge and got the lead ready, and about a quarter to 10 got the order to heave the lead from the captain. I was on the starboard side when I hove the lead. I could then see the lightship. She was about five or six miles off. We passed the lightship about a ship's length off. I heard whistling two or three times. This was the steam whistle. It was loud. Did not hear any answer from the lightship. I saw the mastlight of the lightship. I saw other lights beside. I saw a small light on the quarter-deck of the lightship. Did not see anybody waving a light. Saw nobody on board the lightship. I stopped on the bridge till about 12 o'clock, then I went and took the wheel. Another quartermaster took my place on the bridge. I remained at the wheel till about 3 o'clock. About 10 minutes after I went to the wheel the ship would not steer; she had touched the bottom. When the ship touched we went astern, and in about ten minutes we got off, and went on again. It was fine weather, and a clear night, but sometimes dark on the shore. It was clear above, and dark below. There was fog over the land. Before I left the wheel, I saw a steamer coming in the opposite direction. I saw a green light on the steamer. She was on our starboard bow. I continued to see the green light all the time. The steamer passed the *Kanagawa Maru* on the starboard side. Our captain sang out, "Hard a starboard." I put it so. A Japanese sailor and Mr. Jones assisted me. When the steamer was passed, and our helm was put hard a-port, land was right ahead. I was ordered to put my helm hard a-port. Another quartermaster assisted me to put the helm hard a-port. At this time the engines were going astern.

Cross-examined by Mr. Ness: Capt. Roper has spoken to me two or three times about this affair. I can't read English. I am living on shore. I was employed by Capt Roper, and not by the M. B. M. S. S. Co. I told Capt. Roper if he left I would and did so. I have been playing music in grogshops since I left the *Kanagawa Maru*. I am waiting till Capt. Roper gets another ship, and then I shall go to sea with him. I do not know what wages I shall get, more or less. I am living at No. 138. Three or four times Capt. Roper has given me $2 for my board. About five days ago he gave me $2. He has not paid for me every week since I left the *Kanayawa Maru*. I have met Capt. Roper in the house in which I stay, to talk about this matter, two or three times. What I said Capt. Roper wrote down. He asked me about the lightship, and the steamer going aground. He asked me if I saw at that time a steamer passing. He did not first tell me his story, and ask if I agreed with him. The steamer passed about 3 o'clock. Mr Jones, the 3rd officer, was beside me at the wheel. The steamer was about three miles ahead. The river has bends in it. We had not gone on shore before the other steamer passed us. The other steamer passed us within a ship's length. I mean the length of the *Kanagawa Maru* when I say a ship's length. The *Kanagawa Maru* was not in the mud when the other steamer passed. About ten minutes after the other steamer passed us we stopped. As soon as she touched the ground she did not move. I did not see how many masts the other vessel had. The *Kanagawa Maru* would take about five minutes to go a mile. We stopped opposite to the lightship and blew the whistle. We did not lower a boat. We stopped to get a pilot. I do not know how long we stopped. I was then heaving the lead. The captain and 3rd officer were on the bridge at this time. I am quite sure the *Kanagawa Maru* stopped opposite to the light ship. I did not see a light moving on. I can't remember what time it was. The *Kanagawa Maru* ran ashore on the starboard side. We struck twice. Both times a steamer was in our way. We were only aground the first time about ten minutes. The first time we ran ashore it was on the right side going up the river.

Re-examined by Mr Dickins: When we ran ashore the first time the steamer passed us on the starboard side. I think it was on the port side that we first ran ashore. It took us about five or ten minutes to pass the lightship. We did not anchor near the lightship. The engines stopped about five minutes. When I asked Capt. Roper for $2 I told him I was destitute, and that the Spanish Consul would give me a passage to Hongkong.

Court adjourned till Friday morning next at 9 o'clock.

Friday, 19th November, 1875.

Mr Dickins called the plaintiff

Alfred Roper: I was lately in command of the *Kanagawa Maru*. I am a duly certificated master mariner. I have been so considerably more than 20 years, on the coasts of China and Japan. (Certificates of competency handed in.) There is no harbour on the coast of China that I cannot go into without a pilot. I know the coast and rivers of China thoroughly. I have had a large experience of Shanghai river; I have been up and down it since 1853. I have been captain of a Tientsin stamer running up and down the river three times a month. (Contract with the C. M. S. N. Co. handed. in.)

Mr. Ness objected to its reception; it had nothing to do with this case, and was not evidence.

Mr, Dickins said his object was to show that plaintiff was competent, and had acted as pilot in the Shanghai river.

Mr. Ness still pressed his objection.

His Honour said it was in his power to take any evidence, and he would take it for what it was worth.

[A long discussion took place about the amended answer of defendants not having been received by the Court. Mr Ness stated positively that he had sent it, addressed to Mr Motz, and that it must have gone astray in the Saibansho. Mr Motz and His Honour denied receiving it, and Mr. Ness said he would bring a copy of the original this afternoon.]

The Court here adjourned till 1 p.m.

On re-assembling the president said the answer had been duly received.

Mr Dickins continued his examination of Alfred Roper.

Witness:—I have never lost a vessel in my life time. I damaged one once in the Tientsin river. It was nothing of importance. I have never had cargo damaged, so as to cost any Insurance Co., any money. I have not been in the habit of using pilots on the China coast. It was always understood between me and my employers that I was to act as pilot myself. In May 1874 I was employed as pilot in the service of the Japanese Government. I was to act as pilot to men-of-war or other vessels as far as Singapore. I have certificates of competency as a pilot. (Two produced and handed in). I have testimonials of competency as a master mariner and pilot for the coast of China (handed in).

Mr Ness objected to their reception.

His Honour said that in Japanese courts all papers were received and their value determined afterwards.

Wituess:—My engagement with the Japanese Government terminated at the end of last year. I received from the Government a testimonial (produced) and 450 *yen*, together with about $300 worth of silk and porcelain. My salary whilst employed by the Government was 550 *yen* a month and everything found. I think I was appointed to the command of the *Kanagawa Maru* on the 5th February this year. [Agreement between defendant and plaintiff produced, and admitted by Mr Ness and put in by Mr Dickins.] I received this from Mr Krebs the foreign manager of the defendants. On the last voyage I made in the *Kanagawa Maru*, I left Nagasaki on the 21st May at about daylight. Pilots are employed by the defendants for the Shanghai river. There are two of them. One was stationed at Shanghai, and one at Nagasaki [the arrangements about pilots explained.] On this voyage I had no pilot on board, because the agent at Nagasaki gave me instructions to the effect that the pilots at Nagasaki would not go in my ship any more. I believed it was because the voyage before the pilot had mis-conducted himself and was ashamed of himself. On the second voyage the shaft was broken and I took the ship up the Shanghai river myself; the pilot refused and after this did not want to go in my ship again. I had a conversation with the agent at Nagasaki about this. Off the Amherst rocks the shaft broke, we sailed some time, and then anchored,

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

We saw a pilot boat and the pilot on board said to me, You had better send the pilot boat to the agent at Shanghai and get him to send two steam tugs to tow the ship up to Shanghai. I asked the pilots on board my ship how much it would cost altogether and he said 1,100 *taels*. I told the pilot that was too much, and refused, and he was very angry and refused to take the ship up in her disabled state. I waited for the company's steamer to come out and at last she came out and I made signals. The *Niigata Maru* heard the signals and towed us up the river a part of the way. The hawser broke and there was too much sea to make fast again. I told the captain of the other steamer to go on his way to Nagasaki, and as the wind was fair, I would sail up the river. Sailed 15 or 20 miles and then anchored because the tide turned against us. At 11 o'clock the tide turned again and the wind being fair I asked the pilot to take the ship up, but he refused and I took her up myself. I arrived safely at Shanghai, when I told all this to the agent there. The passengers were so pleased that they gave me a letter of thanks (read). It was signed by all the first-class passengers. On my return to Yokohama I gave that letter to the directors who returned it to me with a letter of thanks for my conduct in the affair. (Letter of thanks read, and put in, together with the letter from the passengers). I left Nagasaki in my ship on the 21st May when I received instructions that I would get a pilot at the lightship. After leaving Nagasaki, we had fine weather, but the night before we came to the lightship, there was a very heavy fog, and the speed had to be reduced from 9 to 3 or 4 knots. We arrived late at the lightship on account of the fog. I took steps to find out if there was a pilot on board, I blew the steam whistle about three times. When off the lightship, about 30 or 40 yards, I blew it loud and long. The usual signal made by pilots is called a "flare up." I only saw a common lantern hanging on the quarter-deck of the lightship. I did not hear any sounds or see any body moving on board the lightship. I never had any intention of disobeying any order in regard to pilots. I saw nothing whatever to lead me to suppose that there was a pilot on board the lightship. At that time I had not met the steamer from Shanghai and she was to bring the pilot. It would have been foolish to have lowered a boat and sent to the lightship. If I had stayed humbugging about the lightship I should not have had enough water to cross the bar. The tide was running up the river to Shanghai at the rate of 3 or 4 knots. By lowering a boat I should have lost nearly an hour. The river water has an effect on the boilers, and makes them prime. The speed of a ship cannot be depended upon; (log book referred to). The boilers were priming at this time. Priming reduces the speed. The distance from the lightship to Woosung is about 33 miles. I think I passed the lightship at about 9.45 The depth of an ordinary high tide on Woosung bar is 18 feet. The *Kanagawa Maru* was then drawing about 17 feet 6 inches. When I crossed it was spring tide which gives about 3 feet more water on the bar. If you lose the tide you lose 12 hours. After passing the Woosung bar off Block Point, I saw another steamer coming down the river in an opposite direction. When I first saw this steamer it was three-quarters of a mile off. She was on my port bow. I called out, Hard a starboard, to the man at the wheel. The other steamer was on the wrong side of the river for coming down the river. I starboarded my helm so as to show the other steamer my green light. Had I obeyed the rule of the road and ported my helm so as to show red to red I should have grounded. The deep channel at this place is 400 yards wide. I stopped the engines before going on the mud. The head of the vessel ran into a rice field, but there were 3½ fathoms astern. If I had not acted as I did there would probably have been a collision. After that I tried to get the ship off but could not. I then communicated with the agent to get lighters to lighten the ship. The agent sent lighters and steam tugs. Five or six hours after running aground I went up to Shanghai. No injury was done to the ship or cargo.

The Court here adjourned until 1 o'clock on Wednesday afternoon next.

THE SPEAKER'S COMMENTARY; ISAIAH AND JEREMIAH.*

(The Spectator.)

Nelson, in reporting the rout of a Neapolitan army, said, "They lost little honour in the battle, for though they lost all they had, that was very little." And the story recurs to us on reading the Commentary on Isaiah in this volume; for we might say that small as have been the merits of the previous volumes, the demerit of the first half of this one is greater than could have been expected even in the *Speaker's Commentary*. Whatever the promises in the original prospectus, every real student of the Bible knows that he need not look to that Commentary for any thoroughly honest criticism, such as is available in all good commentaries on the classical literatures. Orthodoxy, not truth, is, we might say avowedly,† the first object of the editors and contributors. In as far as orthodoxy coincides with truth, as it does in the main, these commentators uphold the truth with more or less, but generally considerable, learning and ability, though, being clergymen, it is mostly the homiletic side of the truth, with but indifferent appreciation of the great historical characteristics of Jehovah's chosen nation; but wherever modern science has shown that the old orthodox notions and pharases are not true in their literal, and still popular, acceptation—as in reference to the Creation, the Deluge, the longevity of the Antediluvians, and many other unverified traditions—these orthodox errors are dressed up in language made to look as like as possible to that of honest criticism within the lines of modern thought and knowledge, but really meaning nothing, after all. Henry VIII. complained to his Parliament of "the fathers and teachers of the spiritualty, who were either too stiff in their old *mumpsimus* or too busy and curious in their now *sumpsimus*;" and our "bishops and clergy of the Anglican Church" stand stiffly to the old *mumpsimus*, while at the same time they employ all their resources to enable them to utter it with a sound so like the new *sumpsimus*, that the ear shall not easily detect the trick. But the present Commentary on Isaiah is bad, even within the narrowest limits of orthodoxy. Even Mr. Birks' Commentary, which we once thought to have been rightly refused a place in this work, is so much better, that we cannot conceive why it should have been rejected in favour of such a substitute.

It would not have been unreasonable to expect that, in a commentary on the Bible, the writings of the prophet whose name stands first in the Canon, and is that of the greatest of the prophets, should be so explained as to throw light on the question what order of men the prophets were, and what part they took in the guidance of their nation and its rulers, while claiming to be sent by Jehovah himself, and by him "set over the nations, and over the kingdoms, to root out and to pull down, and to destroy, and to throw down, and to build, and to plant." It might have been expected that when the commentators had to deal with the actually recorded discourses of the greatest of these religious and political advisers of their sovereigns and their countrymen, delivered during fifty years most eventful in the history not only of his own nation but of the world, he would have shown in some clear and coherent manner how these discourses do illustrate and fill out with life and meaning the scanty and dry abstracts of the history which now alone remain to us, whether in the Hebrew or the Assyrian and Egyptian records. It might have been expected that when the book under examination presents a question of criticism—as to the authorship of certain portions of it—which is far more interesting for its practical no less than its literary results than the like questions as to Homer and Plato, the reader should have had the whole case stated fully, and the arguments to which the critic was replying given fairly. That such things are possible, even to an orthodox commentator, we see in Dr. Payne Smith's Commentary on Jeremiah, which forms the latter half of this volume, and in which he does handle his subject with some tolerable interest in, and recogni-

* *The Holy Bible, &c., with an Explanatory and Critical Commentary by Bishops and other Clergy of the Anglican Church.* Edited by F. C. Cook, M. A., Canon of Exeter, &c. Vol. V. Isaiah, Jeremiah, Lamentations. London: John Murray. 1875.

† We might say "avowedly," because when the *Commentary* was quoted in the House of Commons in a debate on Marriage with a Deceased Wife's Sister, Canon Cook wrote to the *Times*:—"I should not have felt justified in interfering with liberty of a contributor who has studied the subject profoundly, and gives the result on his personal authority, unless, indeed, the conclusion to which he might be led were opposed to *the law or doctrine of the Christian Church*." How far this can be reconciled with the 20th Article of the Church of England we will not decide, but it certainly limits orthodoxy, not truth, the final interpreter of Scripture.

tion of, that which is, in truth, *the* characteristic of Hebrew prophecy. But though Dr. Kay gives us some paragraphs in his Introduction which sound like "the new *sumpsimus*," yet, when we come to the Commentary itself, we find that if he has any conception at all of Isaiah as an actual man, and not merely as a vehicle for conveying religious instruction, it seems to be that he was—while possessing the power of making specific predictions which now take rank with miracles as evidences of the Christian Revelation—in other respects little better than a pious revivalist, "uttering the message of salvation in wondrous richness" to the people around him, and speaking in allegories the discovery of which by Dr. Kay we will not criticise further than by giving an example or two:—

"These verses [16-24 of chap. iii, denouncing the fashions of the Jewish ladies] were, no doubt applicable, in a literal sense, to the ladies of Jerusalem. The worldiness of the people was reflected in the luxury of the females, and the costly variety of their robes and ornaments, some of them, it would seem, imitated from the sacerdotal vestments, and others certainly borrowed from idolatry. But that a deeper meaning lay beneath the literal may be inferred from the relation in which these verses stand to verses 25, 26. The sudden transition from 'the daughters of Zion' to Zion herself is very unnatural, unless we observe that, under the description of the female attire, there was an allegory aimed at the Levitical Church as a whole. The grounds for thinking this to be the case are very strong: 1. The phrase 'daughters of Zion' occurs only in iii. 16, 17, iv. 4, and Song of Solomon iii. 2, where the 'daughters of Zion' are invited to see the coronation of King Solomon," &c.

Again, chapter vii. 18:—

"The Assyrian armies [compared by Isaiah to bees] also were providential agents employed to carry off from the hills of Canaan sweet honey, which should 'enlighten the eyes' (1 Sam. xiv. 29) of fainting humanity."

And again, in chap. xxii. 15, where other commentators see the prophet's denunciation of the leader of the worldly party which had so long controlled Hezekiah, and his declaration that the crisis of its overthrow by the God-fearing men reprented by Eliakim was at hand, Dr. Kay finds only an allegory:—

"Whatever may have been the history of the actual Shebna and Eliakin of Hezekiah's time (of which we are ignorant), the names must here be looked upon as symbolising the two Dispensations."

This "allegorical view" of Shebna and Eliakin is proved by eight "observations," which we leave our leaders to refer to or to imagine. We have said that this commentator has no sense of the historical importance of the times of Isaiah, but not to be unjust, we must give the following passage, only premising that two of the dates are imposible to be verified, and a third is at least very doubtful:—

"A few words may be added respecting the time at which this great prophet was raised up. The following facts show that it was a remarkable epoch, whether as regards Israel or the world at large. 1. The historical event which stands in the centre of the book—the destruction of Sennacherib's army—took place in 710 B C. Now this year is exactly midway between Israel's complete occupation of Canaan (1445 B.C.) and John the Baptist's announcement that the Kingdom of Heaven was at hand (A.D. 25). And again, if we bisect the interval between the first erection of the Tabernacle at Sinai (1490 B C) and the burning of the Temple in A D. 70, which was the end of the Levitical dispensation, the middle point will fall in the same year. 2. This same year, 710, is also the starting-point of a great movement in the Gentile world. In that year, so far as can be ascertained," &c.

All—we believe we may now say all—philologists, English, French, Italian, German, are agreed that the Assyrian inscriptions can be deciphered, and that, in fact, their main contents are actually known; but here we read:—

"After a minute examination of some of the works of the best Assyriologists (as M. Oppert, M. Menant, Mr. Norris, and Mr. Smith), the present writer is satisfied that the whole process of decipherment has not yet got beyond the *tentative* stage. In particular, as regards the names of Assyrian kings, they have not been, properly speaking, *discovered in* the inscriptions, but rather *read into* them. They were found, because it was *assumed* that they occurred there; 'parce qu'on avait des raisons de croire qu'ils se retrouvaient dans un groupe donné.' Results so obtained must undergo much patient verification, before they cease to be hypothetical. For the present, then (and probably for a long time to come), the decipherments cannot be held to furnish materials of authentic history."

It must have been a "*minute*" examination indeed on which this wise and modest judgment rests. We are reminded of Dr. Schrader's observation, on this very point of the kings' names, that we must not comptain if the layman shakes his head; yet that if he would take the trouble to look a little deeper into the matter he might find that the Assyriologists know more than he supposes. And we are glad to say that Dr. Payne Smith, in his introduction to Jeremiah, shows that he can appreciate the value of the Inscriptions as "materials of authentic history," while we may add that they throw still more light on the history of Isaiah's times than on those of Jeremiah.

On the disputed question of the authorship of the latter and some of the earlier chapters of the book, Dr. Kay shows both Hebrew scholarship and literary ability in his examination of the "literary evidence" in favour of the Isaiah authorship. But he entirely overlooks all the real and weighty arguments for supposing those portions of the book to have been written by some other prophet in the time of the Captivity. As has been said more than once in the *Spectator*, the question is one of great obscurity and difficulty, so much is there to be said on both sides; nor has it yet been thoroughly sifted out by the opposing critics. But no approach is made to such a settlement by those who are content, like the commentator before us, to state their own side, and misstate, or leave unstated, and therefore unanswered, that of their opponents. It is not true that "undoubtedly the main reason [for questioning the authorship] was the *a priori* assumption" that "it is inconceivable that God should communicate to man any foreknowledge or prevision of future events." The *a priori* assumption (if so it is to be called) is, that with this one exception, all Hebrew prophecy, not excluding that of the books of Daniel and the Apocalypse, takes its standing-points in the prophet's own times, and rests its predictions of the future on the basis of the present; and while this would be true no less of the latter chapters of Isaiah than of all other prophecy, if those chapters were written at the time of the Captivity, it is necessary, in order to vindicate their earlier date, to frame a special and exceptional hypothesis as to the nature of prophecy, which is applicable to them only,—the hypothesis, namely (in the words of the Dean of Westminister), of "the ecstatic transportation of the earlier prophet out of his own time into the middle of the next century." The question is not whether God could give, but whether the prophet Isaiah did possess this exceptional power; and it can only be decided on the evidence, which, as we have said, is very conflicting, and not by abusing your opponents as "unbelievers," and calling their investigations "naturalistic."

It is with some hesitation that we have inflicted on our readers so long an account of a book to a large portion of which the epithet of "silly" is more suitable than any other. But it seems right to protest against such a Commentary being offered to the laity by "bishops and clergy of the Anglican Church," with the understanding that they may expect it to be—in the words of the original prospectus—"more complete and accurate than any now accessible to English readers." We venture to say that it is less explanatory, and altogether of less worth, than any other modern English commentary of Isaiah,—even if we limit ourselves to the strictly orthodox Henderson, Alexander, Birks, and the translation of Delitzsch.

ARGUMENT AND CONVICTION.

(Pall Mall Gazette.)

It is a truth practically known and acted upon, but seldom admitted in terms, that the chief use of argument is not to produce conviction, at least not as between the parties to the discussion. By the time a question is ripe for the kind of discussion which leads up to a decision the persons immediately concerned, even if they are the most reasonable and open-minded of mankind, are generally committed to their own opinions beyond the possibility of conversion. Nor do they really expect that anything they say will have any immediate influence on each other's opinions or even on the opinions of interested bystanders, although the conventions of controversy reqnire them to speak as if they did. Why then, it may naturally be asked, discuss the matter at all? Any one will readily answer that the real object is to produce a general effect on the larger circle of moderately interested bystanders who are not yet committed to either side, not calculable at the time, but such that in the result materials will be found ready to work upon on future occasions. The fact is familiar: the manner and reason of the process deserve a little closer consideration.

The reasons why direct conviction is out of the question are generally to be found not only in the education, circumstances, and present state of mind of the disputants, but in the nature of the case itself. Outside the range of pure science there is hardly any question of practical importance which is capable of being effectually handled in the way of straight-forward demonstration. Politics, history, philosophy, and, we may add, the outlying branches of political economy, are for the present in the semi-scientific stage where analogies more or less probable, more or less conjectural, must be largely called in to fill the place of proof. One or

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

more of these or similar subjects always comes into the mind when one tries to form a general notion of controversial discussion; and it is just this unsettled condition which makes them apt for controversy, and makes the controversies interesting to the world in general. The questions of the settled sciences are worked out with instruments whose use and whose very names are known only to experts, and by the rules of a game which outsiders do not understand. In the other cases we do not say that there are no real experts and no proper instruments; on the contrary, we believe that there are such. But for the time being it is not known which they are; that is an ordinary reasonable man cannot assume that the special knowledge of certain persons may be trusted, but must himself go into disputed questions and make his own choice between conflicting pretensions. The outcome of a particular discussion, if it has any definite outcome, is to rescue some portion of a subject from this chaotic state and win it for the field of real science. The study of language, for example, is now scientific; in the last century it was not. Many persons, even educated persons, are unaware of this and gravely put forward criticisms and conjectures which a century or so earlier would have been harmless or even laudable, in so far as they stimulated men's interest in the matter, but which are now merely absurd. So it is with political economy; so with certain departments of history. This work is done for the most part, if not altogether, as we have said, by the effect of the discussion upon third persons. And as regards them also this effect, for the reasons we have just given, is seldom, if ever, in the way of direct proof. The phrase "manière de voir" is sometimes used in a tone of disparagement to describe a state of merely prejudiced or casual opinion as opposed to reasoned conviction. But the truth is, that a "way of seeing things" is in all subjects ultimately, and in controvertible subjects proximately, the only thing to be had. The difference is whether it is or is not a reasonable way and reasonably arrived at. The right way of looking at any particular class of questions does not admit of being determined by any fixed rule, but is determined in the long run by the consensus of competent observers which is sooner or later established. When we say that in all subjects we come ultimately to a "way of seeing" we mean that even the grave sciences rest on assumptions wholly incapable of proof. How do we know the sun will rise to-morrow? At first sight one might think this question was to be answered by giving an account of the earth's diurnal revolution out of any book of astronomy. But this would be nowise to the purpose, and the only real answer is that we do not know at all; we only expect it. No formal reason can be given why the sun and planets should go on behaving at they have hitherto done, or why matter should go on gravitating. But we assume that the nature of things will go on being what it has been, because it is the only possible working rule, and has hitherto been justified by its fruits. Here we have a "manière de voir" common to all mankind, and indispensable to man's life.

The general aim of discussion, then, is to make it appear to the world, or to that part of it whose attention you can command, that your way of seeing the matter is the right and reasonable one, or at any rate more right and reasonable than your opponent's. This can never be done by the exhibition of detached arguments, however formal and conclusive on particular points. The topic must be shown up as a whole under different lights and aspects, so as to bring out the merits of your view and the defects of the other in their various applications. The object is to make other people see with your eyes and perceive, as you came to perceive, that your way, taken all round, gives more congruous and satisfactory results, and is a better guide to action, than the adversary's way. This is more than half the battle, and when it is done you may with great equanimity leave the adversary to protest that this objection has never been disposed of, and that palmary argument has never been refuted. Such matters may give him a partial dialectic triumph, but will hardly better his general position. Conviction depends on a certain general intuition which is obtained, indeed, by striking a balance among many considerations of detail (though the process is as a rule not consciously performed), but when obtained is not referable to any one of them. It may be objected that there are well-known instances of eminent persons having professed to be convinced by particular arguments on questions of great importance. This is certainly worthy of observation, but it is also to be noted that the particular arguments chosen to bear such honours are not such as to be really capable of the effects attributed to them. The convictions no doubt were sincere, but then, by a natural illusion of the mind's eye, the result of an attentive consideration of the whole case was set down to some one conspicuous, and perhaps superficial, part of the case. One celebrated single argument of this is the argument against transubstantiation from the witness of a majority of the senses. This, at least in its usual form, is absolutely irrelevant, for the simple reason that the "substance" of the scholastic philosophy and Roman theology is, by its very definition, a thing about which the senses can give no information whatever. And the reader who thinks fit to amuse himself by examining other celebrated arguments will probably find them equally inconclusive in one way or another. Generally they are, from the opposite point of view, halting or sophistical. From their own point of view they are rather maxims than arguments. In fact, they are compendious reminders of the "manière de voir" which they really presuppose.

All this is well known to the masters of dialectic and accordingly they give comparatively little of their work to making direct attacks, and still less to answering the direct attacks of others. They know better than to accept battle on the enemy's ground. They master his case, but in order to deal with it in their own way and hold up the wrong side of it. Thus it is that from the days of Plato downwards banter and ridicule have been acknowledged and efficient weapons of controversy. Those who cannot use them vainly cry out, and will vainly cry out to the end of time, that epigrams are not syllogisms, and ridicule is not argument. The syllogisms are forgotten and the epigrams live. Voltaire's writings may, perhaps, be taken as the most brilliant modern example of the indirect methods of dialectic. His sustained argument, when he commits himself to such a thing, is little or not at all better than that of other people; but his power of exposing absurdities by accumulating unexpected comparisons and consequences is unrivalled. The same thing may be observed—of course in a widely different form—in a conversation of another great man of the last century, in all other respects as different from Voltaire as possible. Voltaire sets any given subject with unerring felicity in the light of the French philosophy of the eighteenth century. So far as that point of view is appropriate, he always says the right thing, and so that the reader must feel it to be the right thing if he is at all capable of responding to that mood. Dr. Johnson says to any given thing exactly what the instinct of English common sense has to say to it; and, as far as that instinct is trustworthy for the particular matter in hand, one feels that is just what ought to have been said. Both are frequently wrong, and the errors of both are pretty sure to be instructive. Both are often enough right to have deserved the thanks of mankind apart from purely literary merit, and there can be no doubt that the work of both was far more effectually done than it could have been by any amount of formal dissertation.

"Berkeley, Sept 1869.—Gentlemen, I feel it a duty I owe to you to express my gratitude for the great benefit I have derived by taking 'Norton's Camomile Pills.' I applied to your agent, Mr. Bell, Berkeley for the abovenamed Pills, for wind in the stomach, from which I, suffered excruciating pain for a length of time, having tried nearly every remedy prescribed, but without deriving any benefit at all. After taking two bottles of your valuable pills I was quite restored to my usual state of health. Please give this publicity for the benefit of those who may thus be afflicted.—I am, Sir, yours truly, Henry Allpass.—To the Proprietors of Norton's Camomile Pills."

August 1st, 1875. 26 alt.

THE GREATEST

WONDER OF MODERN TIMES!

HOLLOWAY'S PILLS.

Persons suffering from weak or debilitated constitutions will discover that by the use of this wonderful medicine there is "Health for all." The blood is the fountain of life, and its purity can be maintained by the use of these Pills.

Sir SAMUEL BAKER,

in his work entitled "The Nile Tributaries in Abyssinia," says, "I "ordered the dragoman Mahomet to inform the Fakey that I was a "Doctor, and that I had the best medicines at the service of the "sick, with advice gratis. In a short time I had many applicants, "to whom I served out a quantity of Holloway's Pills. These are "most useful to an explorer, as possessing unmistakable purgative "properties they create an undeniable effect upon the patient, which "satisfies him of their value."

SIMPLE, SAFE AND CERTAIN!

HOLLOWAY'S OINTMENT

Is a certain remedy for bad legs, bad breasts, and ulcerations of all kinds. It acts miraculously in healing ulcerations, curing skin diseases, and in arresting and subduing all inflammations.

Mr. J. T. COOPER,

in his account of his extraordinary travels in China, published in 1871, says—"I had with me a quantity of Holloway's Ointment. I "gave some to the people, and nothing could exceed their gratitude; "and, in consequence, milk, fowls, butter, and horse-feed poured "in upon us, until at last a tea-spoonful of Ointment was worth a "fowl and any quantity of peas, and the demand became so great "that I was obliged to lock up the small remaining stock"

Sold by all Chemists and Medicine Vendors throughout the World.

COMMERCIAL INTELLIGENCE.

IMPORTS.

Cotton.—At the beginning of the week a moderate demand for *Shirting* and *Yarns* was perceptible, but large supplies having since arrived the requirements of the trade have been promptly satisfied. Prices in general are but little changed.

Grey Shirtings:—				White Shirtings:—			
7 lbs.	38½ yds.	39 in.	per pce.... $1.95 to $2.05	60 to 64 reed	40 yds.	35 in.	nom. per pce ... 2.20 to 2.40
8 lbs.	38½ yds.	44 in.	„ nom. 2.30 to 2.55	Turkey Reds	24 yds.	30 in.	2¼—3 lb. per lb... 0.75 to 1.02½
8 lbs. 4 to 8 lbs.	38½ „	39 in.	„ „ 2.25 to 2.60	Black Velvets			Nominal ... 8.50 to 10.00
9 lbs.	38½ „	44 in.	„ ... 2.60 to 3.00	English Drills 15 lb.	40 yds,	30 in....	3.30 to 3.40
				Taffachelas	12 yds,	43 in....	2.55 to 2.70

Yarns.

„ No. 4 Kook-fah... ... ... „ ...	5.20 to 5 70	Kerosine Oil... ... ...per case ...	2.60

EXPORTS.

Silk.—Since the 11th instant, arrivals are 740 bales, and settlements about 500 bales. Prices are receding and a decline of $5 to $15 may be reported to have taken place during the past week.

Silk-worm's Eggs.—Total arrivals are 820,000 and total settlements amount to 670,000 cards. Holders are realising their stocks at any price, good annual green selling at $0.05.

Tea.—Business has been unimportant during the past week, settlements amounting only to 1,600 piculs. "Finest" and Choice" goods have been more freely offered and a marked decline is perceptible in these classes.

The *Fleetwing* is expected here from Kobe to fill up for New York.

Common	$16.00 to 20 00	Fine	$33.00 to 35.00
Good Common	21.00 to 23 00	Finest	$36.00 to 39 00
Medium	24.00 to 27.00	Choice	$41.00 to 44.00
Good Medium	29.00 to 31.00		

EXCHANGE AND BULLION.

Exchange.—Business during the past week has been exceptionally dull and sterling-rates close weaker both for Bank Bills and Private Paper.

Rates close as follows:—

INK.

PRINTING INKS.

PARSONS, FLETCHER, & Co.,

PRINTING INK MAKERS,

LONDON.

From the lengthened experience Messrs. PARSONS, FLETCHER, & Co. have had in the Export Trade (of which they have made a speciality), and from the fact that their Inks are to be found in all parts of the world, they are enabled to adapt their goods to the requirements of all climates, and to every description of work. This is of the greatest, importance to those who may confide their orders to this house.

GENERAL LIST OF PRICES.

Job Ink, for Machine or Press, 8d., 10d., 1s., 1s., 1s 3d., & 1s. 6d. per lb.
News Ink, 8d., 10., 1s., 1s. 3d, and 1s. 6d. per lb.
Bookwork Ink, 1s., 1s. 6d., 2s., and 2. 6d. per lb.
Superior Bookwork Ink, 3s., and 4s. per lb.
Woodcut Ink, 5s. and 7s. 6d. per lb.
Red, Blue, Green and other colours, 2s., 3s., 4s, 5s., 7s. 6d., and 10s. per lb.
Varnish, 12s, 15s., and 20s. per gallon.
LITHOGRAPHIC INKS in every in shade of colour and variety of price.

PARSONS, FLETCHER, & Co. supply the cheaper descriptions of Newspaper Ink, but they recommend for warm climates the better class of Printing Inks, which in *all cases* are really the most economical.

All orders must be accompanied with a draft for the amount, or may be forwarded through any London House, or

STREET'S COLONIAL NEWSPAPER AGENCY,

PROTECTED BY ROYAL LETTERS PATENT,

Dated October 11th, 1869.

Under Distinguished Patronage

DR. BRIGHT'S PHOSPHODYNE.

(OZONIC OXYGEN)

A CHEMICAL PREPARATION OF PHOSPHORUS, WITH THE VEGETABLE ALKALOIDS QUINIA, CYPRIPEDEN, XANTHOXYLIN, &c.

This Phosphatic combination is pronounced by the most eminent members of the Medical Profession to be unequalled for its power in replenishing the vitality of the body, by its supplying all the essential constituents of the blood and nerve substance, and for developing all the powers and functions of the system to the highest degree.

It is agreeable to the palate, and innocent in its action, while retaining all its extraordinary properties; and as a specific, surpassing all the known therapeutic agents of the present day for the speedy and permanent cure of—

Nervous Prostration	Lassitude
Liver Complaints	Shortness of Breath
Palpitation of the Heart	Trembling of the hands and limbs
Dizziness	Impaired Nutrition
Noises in the Head and Ears	Mental and Physical Depression
Loss of Energy and Appetite	Consumption (in its first stages only)
Hypochondria	Timidity
Female Complaints	Eruptions of the Skin
General Debility	Impaired Sight and Memory
Indigestion	Nervous Fancies
Flatulence	Impoverished Blood
Incapacity for Study or Business	Nervous Debility in all its Stages
Sick Headache	Premature Decline

and all morbid conditions of the system arising from whatever cause. The action of the Phosphodyne is twofold—on the one hand increasing the principle which constitutes nervous energy, and on the other the most powerful blood and flesh generating agent known; therefore, a marvellous medicine for renovating impaired and broken-down constitutions. It quickly improves the functions of assimilation to such a degree, that where for years an emaciated, anxious, cadaverous, and semi-vital condition has existed, the flesh will rapidly increase in quantity and firmness, and the whole system return to a state of robust health. The Phosphodyne acts electrically upon the organisation; for instance, it assists nature to generate that human electricity which renews and rebuilds the osseous, muscular, nervous, membranous, and organic systems. It operates on the system without exciting care or thought upon the individual as to the process. It moves the lungs, liver, heart, kidneys, stomach, and intestines, with a harmony, vigour, yet mildness unparalleled in medicine.

The Phosphodyne gives back to the human structure, in a suitable form, the phosphoric or animating element of life, which has been wasted, and exerts an important influence directly on the spinal marrow and nervous system, of a nutritive, tonic, and invigorating character, maintaining that buoyant energy of the brain and muscular system which renders the mind cheerful, brilliant, and energetic, entirely overcoming that dull, inactive, and sluggish disposition which many persons experience in all their actions.

The beneficial effects of the Phosphodyne are frequently shown from the first day of its administration, by a remarkable increase of nervous power, with a feeling of vigour and comfort, to which the patient has long been unaccustomed. Digestion is improved; the appetite increases wonderfully; the bowels become regular; the eyes brighter; the skin clear and healthy; and the hair acquires strength, showing the importance of the action of the Phosphodyne on the organs of nutrition.

Finally, the Phosphodyne maintains a certain degree of activity in the previously debilitated nervous system; its use enables all debilitated organs to return to their sound state and perform their natural functions. Persons suffering from Nervous Debility, or any of the hundred symptoms which this distressing disease assumes, may rest assured of an effectual and even speedy cure by the judicious use of this most invaluable remedy.

DR. BRIGHT'S PHOSPHODYNE

IS SOLD ONLY

In CASES at 10s. 6d. by all Chemists and Patent Medicine Vendors throughout the Globe.

Full Directions for Use, in the English, French, German, Italian and Dutch Languages, accompany each Case.

☞ *CAUTION.—The large and increasing demand for Dr. Bright's Phosphodyne has led to several imitations under somewhat similar names; purchasers of this medicine should therefore be careful to observe that each case bears the Government Stamp, with the words Dr. Bright's Phosphodyne engraved thereon, and that the same words are also blown in the bottle.*

THE

Japan Weekly Mail.

A POLITICAL, COMMERCIAL, AND LITERARY JOURNAL.

VOL. VI.—No. 48.] YOKOHAMA, SATURDAY, NOVEMBER, 27, 1875. [PRICE $24 PER ANNUM.

TO SUBSCRIBERS.

SUBSCRIBERS at a distance whose period of subscription may have elapsed, are informed that their papers will be addressed and charged to them *until countermanded.* This rule has been found necessary in order to avoid the inconvenience of an abrupt stoppage of the paper which might result from an omission to renew.

It is requested that notice of the intention to discontinue a subscription be so given as to reach Yokohama *before* the date of its effluxion.

NOTICE.

ON and after the 1st of July, Notices of Births, Marriages and Deaths will be charged $1 each insertion.

Such Notices cannot be inserted in this journal unless endorsed with the name and address of the person by whom they are sent.

Yokohama, 25th June, 1874.

MARRIAGE.

On the 20th November, at Her Britannic Majesty's Legation, Tokei, by the Rev. W. B. Wright, M.A., the Rev. ALEX. CROFT SHAW, M.A., to MARY ANN, daughter of the late James Cattell, Esq., of London.

DEATHS.

On the 23rd November, at No. 134 Yokohama, MARIE-HERCULE-PAUL CARREY, Chevalier de la Légion d'Honneur, in his 51st year.

At the Imperial College of Engineering, Yedo, on the 26th inst., JOHN DUNCAN FERGUSON, the beloved son of Henry and Marie Dyer, aged 4 months and 14 days.

The funeral will leave the College for Yokohama, at 2 P.M. on Sabbath.

Notes of the Week.

While it is obvious that the progress of Russia in Asia should be carefully watched, and most of all by England, and while, in our opinion, no reliance whatever should be placed in any assurances made in St. Petersburg on this question, we cannot but look upon the idea that she cherishes any hope or expectation of becoming mistress of Japan as in the highest degree improbable. That she would gladly possess Yezo is probable enough. Sagalin has no harbours, and the ports in eastern Siberia and Kamschatka are miserable places as winter quarters for her squadron, and though the exchange of the Kuriles for Sagalin has been greatly to her advantage, it is impossible to say that the possession of such rights as Japan enjoyed in Sagalin was of any real advantage to her. But Yezo is undoubtedly an integral part of the Empire, and could not be torn from it except after a contest which laid Tokio at the feet of the Russians, and this could not be done by the mere bombardment of the city from the bay. Tokio might be laid in ashes and the nation itself wholly unaffected by the disaster, except perhaps being made more defiant in resistance. It might indeed be beyond the power of Japan to retaliate such an injury, but assuredly the Japanese Empire is not to be seized and could not be held on this account. The subjugation of this Empire would require a very large army in at least three divisions, and considering the enormous distance Russia lies from her base of action, the transportation of any such army there is wholly out of the question. If people imagine that these Russian settlements on the east coast of Asia are places of any strength or importance, except as marking the extent of the Russian grasp, they are entirely mistaken. They contain small garrisons, convict establishments, and the necessary civil and military officers to control the two. But beyond this they are nothing. They have no trade. Life in them is rude, inhospitable and isolated in the highest degree, and there is no population at the back of them from whence to draw men or supplies. The extension of Russian territory in Central Asia has been very much what that of England has been in India, the result of the force of circumstances, and, unlike our own, it seems to us to constitute at least as much danger as advantage to her. Besides, look at her own internal condition. There are forces at work in Russia which give grave anxiety to her rulers, and if she had a free Press for one week—for one day only—there would come from it such a burst of discontent and destructive forces as many of the high Russian officials themselves have no conception of, for no Russian dare speak of such matters to a civil or military officer, and no word is uttered by the Press which has not first had the approval of the censor's eye.

But be all this as it may, Japan is safe enough from external aggression unless she breaks up from internal weakness, and of this we see not the slightest danger. The national and patriotic feeling is strong, the army is year by year becoming more efficient and better equipped, and the same may be said of the navy. Education is doing much, trade not as much as might be hoped, but still something, and the whole nation is in forward motion. Reforms which could not have been attempted ten years ago can now be carried with ease, on account of the strong and universal feeling that a new path has been entered upon and must be persevered in. There are some bad features in the present condition of affairs, and they should be looked well in the face and reformed. The production of the country does not increase as it ought; such accumulated wealth as it possesses,—and it is not much—does little in fertilising commerce. The banking system is miserable, and private credit in a most wretched state from the absence of all honest principle among the traders. Much of the money appropriated for public purposes of all kinds disappears, instead of being applied to those purposes, and many improvements might be made were there less jealousy and more unanimity among the heads of the great civil and military departments. All these points, however, through of great importance, are capable of being dealt with gradually by able men, and will doubtless be thus dealt with. But, meanwhile, the signs of advance cannot be gainsaid, and looking to the poverty of the country—in comparison, that is, with the state it should have been in had its social condition during the past two hundred years been more satisfactory—we must not expect a rapid rise in material prosperity. Neither, however, need we fear any decay or disintegration, and from these alone is anything to be apprehended as the precursor of foreign aggression

---

Dr. Hoffmann, who has for four years held the post of principal of the Medical College of Tokio, and during part of this time has acted as the physician to the Imperial family, left Japan on Wednesday last for Europe viâ China. The assiduity with which he discharged the important duties devolving on him, the skill, experience and insight he displayed in the practice of his profession, his unassuming yet assuring manner, and the unpurchased readiness with which he dispensed his assistance among all classes in Tokio, combined to procure for him a reputation and an amount of personal regard which have probably had no parallels in the history of the intercourse of foreigners with this country. It

Original from UNIVERSITY OF CALIFORNIA

is the special privilege of the trusted physician to enlist in a more ample degree than any other professional adviser, the feeling of confidence and friendship of those who consult him habitually, and the intimate personal intercourse of Dr. Hoffman with the leading members of the Government and the highest circles of Japanese society, has not only given him an unequalled opportunity of studying the private life of the Japanese, but has done that which is more important for foreigners identified with Japan, viz, promoted a feeling of trust and confidence in them which is far less general than we would gladly see it. In this sense, Dr. Hoffmann has been a power in this country for unmixed good. There may be men of his profession in Japan as able, conscientious, liberal and assiduous as himself. But it has been the happy accident of his position and his personal qualities that he has thrown round the name of the foreigner a halo of confidence and regard, if not affection, which cannot be without its good effects in our intercourse with this people. To those who are ignorant of the less known history of Dr. Hoffmann's career in this country, these words may seem to convey overstrained praise or even somewhat of flattering compliment. Those, however, who are more intimate with it will hardly thus accuse us, and it affords us sincere gratification to pay this just tribute to one who has done excellent service here, and has thrown an enviable lustre on the German name in Japan.

Nor must we omit to mention the departure of Dr. Müller, with whom Dr. Hoffmann has been associated in the Medical College at Tokio, and who has also returned to Europe. More purely a surgeon, we believe, than a physician, he has not, if we are rightly informed, had the same opportunities as his colleague of acquiring that personal influence among the Japanese of which we have spoken above. But he has employed his undoubted abilities with success, and his social qualities brought him many adherents who witnessed his departure with sincere regret. As President of the German Asiatic Society—a post to which he was elected after the retirement from of it Mr. Von Brandt,—he worked zealously to further the interests and promote the usefulness of the institution, and the last volume of its transactions contains a valuable contribution from his pen on the subject of music, an art to which he was warmly devoted. The contribution, which we purpose translating on an early occasion, forms the sequel to a previous paper on the same subject, a translation of which we laid before our readers in October, last year.

We have had the pleasure of inspecting a large and elaborate survey map of the European settlement of Yokohama, prepared for two English Insurance Companies by Mr. Samuel Parry, Architect and Surveyor. The map, which is on the scale of 100 feet to one inch, exhibits with much minuteness and exactitude the various lots and the buildings which occupy them, corrected to the month of September last. It comprises also a general map of the native town of Benten, and embraces the railway terminus in its plan, forming thus a scheme of unusually large proportions. The execution of this work has, we are assured, occupied considerable time. It bears, indeed, the impress of the conscientious labour and fidelity in detail which its compiler brought to his intricate task and does him much credit.

The death of Mons. Paul Carrey, under perplexing and lamentable circumstances, has caused much gloom among the French residents and those who had the pleasure of the deceased gentleman's acquaintance. He had spent about a year in this country and made many friends whom his intelligence had attracted and his pleasant manners retained about him. He had taken his passage, we understand, for the early stage at least of his homeward voyage, when he met his death by the discharge of his gun under circumstances which it is impossible to explain with any certainty. He had served with distinction in the French army, and his family is one of high respectability. His funeral was very numerously attended.

We have received from Messrs. Mallory, Wheeler & Co. of Connecticut, with the request that we would take some notice of it, a book which seems to us one of the most beautiful specimens of typographical and illustrative art, of its kind, which has ever been issued from the press, and some idea of the care and expense bestowed on it may be formed when we say that the edition which it represents has cost upwards of $80,000 in its preparation. The firm of Mallory, Wheeler & Co. is engaged in the manufacture of locks of every description, apparently on a very large scale, and the book in question contains illustrations of the various specimens of their work, of which it forms a very costly and sumptuous advertisement. In Europe sums of this kind are rarely spent upon a book except by some crowned head or munificent noble, for some antiquarian, archeological or other purpose connected with the higher departments of art; and viewing the matter from something of an European stand-point, we are somewhat embarrassed in noticing the expenditure of a sum of money which would have given us a splendid illustrated monograph of the ruined temples or theatres of Asia Minor or Greece, upon a collection of locks, ingenious and valuable as these articles of manufacture may be. It is impossible to go into raptures over an engraving of any lock, however ingenious, intricate and defiant, and the bestowal of a sumptuous typography upon the description and price of it—a typography fit alone for some imperial or national edition of the Bible, or one of the world's five greatest poets—only excites in our mind regret at the disparity of the means used and the nobility of the end sought to be attained. We greatly value the compliment implied by the sending of the work to us, and the flattering letter which accompanies it, and we are quite ready to acknowledge that the book itself forms a monument of the enterprise and prodigality of the firm of whose productions it gives so many and such beautiful illustrations. But we must not be considered ungracious for not sharing in an enthusiasm which seems to us but poorly bestowed on such objects, or for regretting that so vast an expenditure has been lavished on a work of such a character.

An exhibition of flowers and plants, which brought together a large number of visitors native and foreign, has been held during the past two days in the large room of the Machigaisho. The collection comprised the few flowers in season and a large variety of dwarfed and other shrubs. The exhibition will be continued this evening and will close to-morrow, Sunday.

From the "Japan Mail Daily Advertiser."

A pedestrian race took place yesterday morning, the start being made from the the Eastern Club, Yokohama, at an early hour. The course selected was the road viâ Kanazawa and Kamakura to Katase, returning thence by the Tokaido and through Totska home. We give the names of the four competitors first to return, their hours of starting and arrival, and may add that the winner, Mr. Snow, has subjected himself to disqualification by the umpires for having thoughtlessly placed his hand upon a *jinrikisha* whose driver he had hired to guide him.

	Time of Starting.	*Time allowed.*	*Arrive.*
		h. m.	
Mr. Ford	6.05 a.m.	1 05	2.25
„ Thorpe	6.34 „	47	3.05
„ Eyton	7.10 „	33	3.28
„ Snow	7.45 „	Scratch.	3.16

We observe in the *Japan Herald* a contradiction of the untruthful statement of a local newspaper that, in the collision between the Police and some men of the *Hertha* on Sunday last, a foreign policeman had been robbed by one of the latter of $1.50. The statement has occasioned much annoyance and its contradiction should receive the utmost publicity.

A pleasant evening's entertainment was given on Saturday evening at the German Club, under whose auspices two little vaudevilles were performed by some of its members. The following synopsis of the pieces rendered may be of interest.

LIST UND PHLEGMA.

By the will of a deceased aunt, who has constituted her heiress to her estate, *Adolphine*, a girl of lively and impressionable character, finds herself left subject to the control of her elder brother, *von Ruhleben*, a wealthy landed proprietor of stoical and imperturbable temper. Separated by circumstances from his sister since her childhood, and ignorant that she has pledged her affections to a lover, *Baron Palm*, he has deemed it prudent to forbid her marriage until she shall have attained her twenty-fifth year. To obtain a reversal of this decision *Palm* gains the friendship of *Ruhleben*, with whom he wagers, that should the latter during the subsequent forty-eight hours lose his temper, *Adolphine's* hand shall reward her lover; should he, on the contrary, preserve his imperturbability the Baron shall forfeit his country-seat. The confederates introduce *Ruhleben*, who visits the provincial capital to prosecute a law suit, to a private residence which they represent to him as an inn, and here expose him to the annoying visits of a scolding hostess, a drunken landlord, a *prima donna* who mistakes him for the director of the opera-house and the lawyer whom he intends to consult, characters personated by *Adolphine* and her lover. With admirable fortitude he preserves his temper undisturbed until news is brought to him that his wife and child are dead, when at length his philosophy forsakes him and he rates the *soi-disante* hostess with a violent outburst of anger. But he is speedily undeceived by the Baron, and being reassured of the safety of his wife, *Louise*, who presents herself before him, he admits at once the loss of his wager, and rewards the happy stratagem of the lovers by consenting to their immediate union.

To this succeeded

WERR ISST MIT.

Guste, the honest and faithful *factotum* of *Duval*, a retired tradesman living on his rents, is to celebrate her master's birthday by dining with him, an event to which she has long looked forward, and an honour the prospect of which somewhat overpowers her. Just before dinner *Appel*, an old friend of *Duval's*, arrives from the country and proposes to stay to dinner, a course which, as it would displace *Guste*, she is determined to prevent. She succeeds in getting *Appel* out of the way at the customary hour of dinner, but he returns just as her master and she have sat down to table, and she has to rise to give up her place. She is sent to the cellar to fetch some wine, but, under the pretence that she cannot find it, prevails on *Duval* to go for it, and takes the opportunity afforded by his absence to frighten *Appel* into the belief that he is mad, and liable to commit all manner of atrocities during his paroxysms, one of which she expects will seize him immediately. *Appel* wishes to rush away, but *Duval* returns before he can do so, and forces him to sit down to table. The conversation at dinner, which is suggested by the dishes, makes *Appel* think that *Duval* will cut off his ears, and he rushes off without his hat and with a silver spoon in his hand. *Duval* and *Guste* again sit down. *Appel* is brought in by the police and accuses *Duval* of the intention to murder him, and *Guste*, fearful of the consequences, confesses that she laid the plot in revenge for having her place taken from her. The explanation is accepted, and *Duval*, *Appel* and herself all sit down to table in restored harmony.

The band of H.I.M.S. *Hertha* was in attendance, and performed a selection of music in the course of the evening, and a dance brought the entertainment to a close.

Dr. Hoffmann was honoured yesterday with a farewell audience of their Majesties the Mikado and the Empress, previous to his departure for Europe by the mail of this morning. The Mikado is understood to have expressed his appreciation of the services Dr. Hoffman had rendered in the Medical Department of Education at Tokio, and his own sense of personal obligation for the services rendered to himself and family by Dr. Hoffmann in his capacity as Court-Physician, in which latter acknowledgement he was graciously joined by the Empress. Dr. Hoffmann was further presented with some valuable objects of Japanese art and manufacture in honour of the occasion.

That the robbery of the American Consulate on Sunday night should have been safely effected is less surprising than that the thieves managed to escape with their booty unobserved. The entrance to the premises could not have been difficult from the nature of its position, and the slight fastening of the safe allowed of easy access to its contents. With the exception of the money and stamps taken, which amounted to over $200, the rest of the property seems to be of small intrinsic value and hardly worth removing. It is difficult to understand that the thieves should have embarrassed themselves with such impediments to their flight as Consular seals or drawers, and their escape under the circumstances reflects seriously upon the Municipal Police.

We were not aware that any attempt to propagate the gum tree of Australia had been made in Yedo. We read, however, in the *Akebono Shimbun* that a large number of these trees which had been planted round the castle moat were rooted up or broken on the night of the 20th instant, from reasons and by persons unknown. We believe the trees in question to be the common acacia, of which a quantity of seed was furnished to the *Kaitakushi* some short time since.

The unwonted and picturesque spectacle of a torchlight procession lent a little temporarylife and gaiety on Tuesday night to the usually gloomy and torpid thoroughfares of the settlement.

At half-past seven o'clock the numerous friends of Dr. Müller, late of the Imperial Medical Department, assembled at the Oriental Hotel to join in a farewell barquet in his honour, to which some hundred members of the German and kindred communities sat down. The excellent repast was followed by speeches which must have assured the object of the feast of the warm regard in which he was held by his compatriots, and of the regret with which they contemplated his coming departure, to which he, on his part, feelingly responded. Shortly after ten o'clock the company left the house and, each bearing a torch, formed into rank and preceded by the band of the Russian frigate accompanied Dr. Müller to the German Club, taking the route of the Bund. On arriving at the Club Dr. Hilgendorf made a short speech, conveying to their departing guest their best wishes for his happiness and for a fortunate and safe return to the Fatherland. Lusty cheers were then given by the company, who after singing a national song retired to the German Club to renew their leave-taking with the genial friend whom they were so soon to lose.

We learn that it is not improbable that General Saigo will shortly be entrusted with a private mission to Corea.

There are some rather ingenious but clumsily executed forgeries about, at least in the island of Yezo, of the Frankfort 10 *sen* note. The Chinese character for 10, which becomes 20 by the addition of another stroke above the parallel necessary to the formation of the character, is thus transformed, the second parallel being neatly gummed on over the first. The forgery is noticeable directly attention is called to it, but might otherwise easily escape detection. The Government has doubtless been made aware of the fraud.

A temporary suspension of traffic on the Great Northern Company's Vladiwostock cable has occurred. It is hoped to resume communication in a few days.

A box, containing the five seals stolen from the U. S. Consulate, was yesterday morning found by some coolies on Mr. Stephen's compound No. 88, on the creek. The seals have been returned to the U. S. Consulate.

The celebration of the Harvest Festival on the 23rd instant, by the Japanese was accompanied by the usual display of flags in the native town. The houses were gaily illuminated in the evening.

The brother of the King of Loochoo had an interview with the Mikado at the Imperial Palace on the 23th instant.

The remains of the late M. Carrey were committed to the earth on Wednesday afternoon in the presence of the Belgian Minister, the French and American Consuls and the Colonel and Officers of the French Military Mission.

Mr. Dave Carson gave another performance on Wednesday, and promises, in a final entertainment, to be given this evening, to explain the mode in which the cabinet trick is effected.

The Editor of the *Hioron Shimbun*, having again brought himself within the grasp of the law, has been placed under police *surveillance*.

The S.S. *Bombay* with the English Mails of the 15th October, left Hongkong at 9 A.M. on the 23rd instant.

It would be difficult at the moment to regard with any seriousness the project of a new newspaper enterprise, even if we were not sufficiently warned off such a conclusion by the terms of the following manifesto of the promised *Kobe Chronicle*. The author of the *jeu d'esprit* may, we imagine, be easily guessed.

"The absence of a Newspaper being apparent in the settlement, it is proposed to establish *The Kobe Chronicle*.

"Imperfect shipping intelligence and delusive auction advertisements are the appropriate journalistic *pabulum* of a new-born community; but the appetite of maturity craves a nourishment more suitable to its advanced development, and this food *The Kobe Chronicle* is prepared to furnish.

"The growing proportions of this—the outport of the great commercial emporium of Osaka; its advantageous position as the agricultural centre of the empire; and the political *status* it derives from its proximity to the ancient Capital of the Mikado alike designate Kobe as the focus of the wealth, worth, and wisdom of Japan.

"In addition to the solid advantages enumerated above, the salubrity of its climate and the beauty of its scenery constitute attractions which cannot fail, shortly, to make Kobé the *sanatorium* of the East. Hither will flock in search of health or enjoyment, from India, Australia, China, and the countless isles of the great Pacific Sea, the hepatic hypochondriac, the sufferer from zymotic disease, and the peripatetic pilgrim of pleasure. To announce its existence to such a valuable constituency will be part of the mission of *The Kobe Chronicle*.

"To furnish full and *reliable* commercial intelligence and statistics to the morcantile communities of Japan will, of course, be the first object of the proprietors of the new journal. Most liberal arrangements with the various Telegraph companies are in contemplation, for the supply of early and exclusive information, by wire, from all the great money markets of the world; whilst the assistance of the heads of the leading financial and mercantile establishments of the port will enable *The Kobe Chronicle* to ensure completeness and accuracy in the compilation of its local Market Reports.

"Already many local institutions, of both a private and municipal character, have been founded in Kobé; and these require a representative organ, which, regardless alike of personal *pique* and vulgar clamour, will fearlessly foster every project that tends to add to the well-being of the world, and to confirm the supremacy of the Anglo-Saxon Race. This position *The Kobe Chronicle* aspires to fill.

"The political creed of the new journal will be of a strictly conservative complexion. Advocating the establishment and maintenance, upon a firm basis, of the legitimate government of the country, and supporting an enlightened foreign policy, suitable to the peculiar requirements of the age,—it will oppose *an uncompromising front* to all that savours of corruption or dishonesty, no matter under what patronage it appears, or what the nationality it disgraces with its stain.

"As an advertising medium, *The Kobe Chronicle* presents more than the customary peculiar and unusual advantages. The extensive support in this direction, already promised, will enable its directory to adopt a tariff wh.ch, for liberality, will compare most favourably with any journal in the East.

"Shakespeare has wisely said:—

"Be checked for silence: but never taxed for speech;"

and a prospectus should rather be meagre than diffuse. Enough has probably been written to indicate the scope and aim of *The Kobe Chronicle*. To advance the general interests humanity; to guide the tottering footsteps of this, the latest addition to the family of nations: and to increase, in a praiseworthy manner, their private revenues;—these are the lofty inspirations and legitimate objects of its projectors; and without further preface, they launch their venture upon the sea of Public Opinion."

It is intended, we understand, to despatch a small party of Japanese artificers to the United States with the view of erecting some buildings there. The *Hochi Shimbun* does not mention the locality, but we may presume that they proceed to Philadelphia.

The *Nichi Nichi* mentions that the *Kuadzoku* of the capital have intimated their intention to build a schoolhouse in each ward in Tokio at their individual expense.

The *Hochi Shimbun* intimates that Shimadzu Saburô has received an invitation to attend at the Jakônoma, a place of consultation in which questions which are brought before the Cabinet or the Mikado are previously discussed.

It is said that some trouble is brewing in the North and that disturbances have occurred in the Awamori *ken*.

The *Japan Herald* mentions the appointment of Colonel Dunn, who has for some time past been connected with a native Kerosene Company, as Secretary to the Japanese Commissioners to the Exhibition at Philadelphia.

A large party of German naval officers of H. I. M.'s ship [illegible] visited the castle garden in Yedo yesterday.

The proposed entertainment at Hamagoten in honour of the brother of the King of the Loochoo was postponed on account of his illness.

A native newspaper observes that the people of some of the country districts are so impressed with the probability of a coming war with Corea that they are making preparations for its out-break.

The French Consular Offices will be temporarily removed to the premises 74, Main Street, which have been rented for the purpose.

The *Akebono Shimbun* writes as follows on the subject of the dulness of trade: We had reason to hope that with an abundant harvest and a resulting low price of food we might fairly look forward to more prosperous times. Trade, however, continues stagnant, and, if may believe current report, the amount of business transactions scarcely exceeds one-third of the average of ordinary times.

This unprecedented condition of business we are told to ascribe to the fact of the numerous dismissals of officials, and to the uncertainty and apprehension which the Corean embroglio has occasioned in mens' minds.

A large and apparently important meeting which took place a few days since at the Kofuku Anzen sha Hall in Yedo, would seem to have given some food for conversation to the *quid nuncs* of the capital. It is supposed to have been a meeting of the *Kuadzoku*, gathered together for the purpose of consulting on the subject of their pensions.

Kato a member of the *Genro-In* is said to have sent in his resignation.

IMPERIAL GOVERNMENT RAILWAYS.

Yokohama Station.

Statement of Traffic Receipts, for the week ending Sunday, 21st November, 1875.

We hear that a prospecting party will shortly sink a shaft between here and Takashima, for the purpose of ascertaining whether a payable lode is to be found. There is every possibility of the prospectors being successful, for it is generally believed that large deposits of coal are embedded in the bowels of the earth in the immediate neighbourhood of Nagasaki. Should this new venture turn out to be a success, it will add materially to the importance and prosperity of Nagasaki.—*Rising Sun.*

Of late business seems to have slightly improved at this port though the sudden rise of freights between China and Yokohama caused a little embarrassment, which, in a measure, has been overcome. In some imported goods a tolerable amount of activity has been displayed between holders and buyers, and prices have advanced. The various qualities of sugar have found ready purchasers, but transactions in cotton have been limited. For some export articles there has been enquiry. Tobacco for instance has been in demand and also wax: but teas have not sold well, and prices have declined.—*Rising Sun.*

THE POLICE.

A LATE rather serious *fracas* between the police and some men-of-war's men from the *Hertha* suggests a few remarks upon the very difficult duties the police have to discharge, and the attitude which the foreign Residents, who are deeply interested in the peace and security of the settlement, should, as it seems to us, endeavour to take and maintain in regard to them. Into the particulars of the special affray referred to, it is wholly unnecessary to enter, though one or two incidents of it seem to betray an entire absence among the sailors of those principles which are implied in the expression "a fair fight." For instance, it is in evidence that one of the men seized a stout pole and brought it to bear as a kind of battering ram on the police, while others broke up a neighbouring railing apparently with the same end in view. Clasp knives seem to have been used with vigour, and nothing but thick winter clothing appears to have protected one of the constables from attempts at stabbing which might easily have proved fatal in milder weather.

But what is the problem these policemen have to solve? They are called on to preserve order in this settlement, and to prevent its peace and security being disturbed or threatened. Unfortunately, however, they are men inferior in size and physical power to the men of the western races, and their duties are precisely those in which this inferiority tells most. Apart, too, from his superior muscular force, the foreigner is excited to unusual passion by any attempt of an oriental to lay hands on him, and an arrest to which he would patiently submit in Europe makes his blood boil in Asia with a fury which doubles his strength, even if it somewhat detracts from the skill with which greater coolness would enable him to employ it. Must not an arrest under these circumstances involve a greater amount of struggle than is usual among ourselves, and is it reasonable that when it has to be made under circumstances in which violence in the offenders is met with violence by the police, all the outcry against the alleged brutality is directed against the latter? It was our fortune a very few weeks back to witness one of these struggles which we do not misrepresent in the following words. A half-drunken sailor from a man-of-war in port, who had been disturbing a quiet street by roaring a stave to the glorification of his native land and jostling every one who came in his way, and whose proper destination was, of course, the station-house, found that he was attracting the attentions of the police. Finding two large stones, each about the size of a man's fist, he seized and showed that he intended to use them if any attempt were made to arrest him. The police contrived to get hold of him, however, and a furious struggle ensued, the sailor lying sometimes on his face, sometimes on his back, and exerting every muscle he possessed to defeat his captors. Of course, a struggle of this kind involves very rough, if not revolting, features. The police are four or five to one, and the sympathy of the by-standers is at once enlisted in favour of the drunken hero who is defying his persecutors, in entire forgetfulness of the fact that the initiative in all this brutality is taken by the one man, and the others are only using the necessary force to secure and detain him until he is fit to be trusted at large again.

Doubtless there have been cases where the police have been somewhat more severe in the use of their truncheons than was absolutely necessary, and they should be cautioned against any tendency in this direction. But so long as passion on the one side has to be met with brute force on the other, and neither the wills nor the muscles of men can be adjusted by nicely graduated machinery to the exact necessities of every special case, so long will there be some danger in this direction. But the support and sympathy of the Residents should be reserved for the police, not for the drunken men with whom they have to deal. In the late affair with the *Hertha's* men this certainly was the case, some by-standers having given very efficient aid to the constables. But there is notoriously a disposition to take part with the offenders as against the preservers of the peace, and the feeling of race or nationality rises to disturb, even if not to overthrow, that sense of justice which should be the true dictator and dispenser of our sympathies. The difficult task which devolves on the Japanese of dealing with cases of violence and assault is largely increased by the outcry almost invariably made after an affray of this kind on the score of 'brutality.' We frankly confess we have no such tenderness; nor, so far as we have had opportunities of judging, do the police use more violence to effect their purpose that is fairly demanded by the necessities of the case. We are profoundly indifferent to the nationality of a roaring savage who disturbs a peaceful street and threatens every one who traverses it, and if it becomes the task of four or five little men to secure him—four or five because they *are* little men—we are utterly with the Lilliputians, and while we should always recommend as much tenderness as is compatible with getting the frog on the hook—doing it, as old Izaak Walton says, as if we loved him—on the hook he should go by more or less severe measures as the case might seem to demand. It seems to us preposterous that the black eyes, broken heads, and open wounds should be reserved for the police, and regarded as the natural and inevitable accidents of their duty, while those who are the real initiators of the brutality are to be treated with a loving-kindness, admirable after repentance, but ridiculous during a paroxysm of violence which threatens if not the very lives, certainly the limbs and organs of those whose duty it is to protect us from outrage. We are all very much interested, as it seems to us, in showing the Japanese that whether they are just or not, we can be inflexibly so, independently of all questions of race, nationality and distinctions of class. This is not only our duty, but it is manifestly to our interest, for with this consciousness we can insist all the more strongly upon their doing us justice. Say what we may, we are somewhat given to alloying our feelings of right and wrong with the baser metal which is current around us. Our sense of justice is often too much a thing of latitude and longitude, of race, complexion and relative strength.

In treating the question of what regulations and observances it is necessary for the Representatives of the Treaty Powers to enforce upon their subjects or citizens, and to assist the authorities of the oriental nations to carry out, the various Governments of the west have differed somewhat. The Americans, for instance, seem, in regulating their relations with this country, to have gone too far in insisting, in Mr. FISH'S words, that "citizens of the United States are expected and required "to observe and obey such laws in the same extent that "the like obligations rest upon the subjects of that "Empire." It would seem manifestly impossible to carry out these directions to their full extent in this settlement, for the regulation of which the Japanese are responsible, although foreigners must be arraigned before their own authorities. But, without touching on the niceties involved in our relations with the Japanese, so far

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

they are involved in the municipal government of the settlement, it is well that we should estimate fairly the difficulties involved in its control by native policemen, and bestow our support and sympathy rather on those who are the guardians of its peace than on those whose conduct tends to disturb it.

THE KAISEI-GAKKO.

THE publication by the DIRECTOR of the Kaisei-Gakko of the first Calendar ever issued by that institution, marks another stage in the educational progress of this country, and demands a few words on a subject which has been one of unceasing interest to us, and on which in former years we enlarged from time to time in no careless spirit. We have ever regarded the efforts made by this Government in the cause of education as its greatest claim on the gratitude of the nation and on the favourable countenance of foreigners. No Government ever threw itself with greater determination upon a cause of first-rate national importance, or more persistently adhered to it, than the Japanese Government has upon this. As clearly us the founders of the American Republic saw that the ultimate success of their vast experiment depended upon a great system of national education, so the Japanese have seen that the fruition of all their hopes and aspirations could only be attained by the same means. Hence have sprung up all over this Empire during the past five years thousands of schools, the course of study pursued in which has involved a vast extension of the course consecrated by hundreds of years of custom and prescription. Unlike the Chinese in this respect, the Japanese have sought to enlarge the horizon of knowledge to their whole people, and the manner in which they have done this affords the surest guarantee that they will cope successfully with those destructive forces which, in the encounter between what we must regard as the lower and higher races of mankind, produce the subjugation and ultimate disappearance of the latter. A nation less energetic and intelligent might easily have trembled before the prodigious task of recasting the whole of a time-honoured political, social and intellectual system, nor, we are persuaded, is there anything in history to be compared, for its truly wonderful nature, to the manner in which the Japanese have sought to adapt themselves to the new relations with the western world forced upon them by the events of the past fifteen years. Other nations have made efforts and sacrifices fully as great, if not far greater, to preserve their independence or their faith, to secure themselves against aggression, or to maintain certain principles which they identified with existence and all that makes it valuable or tolerable. But in these they have been supported by faith in time-honoured institutions or beliefs, bound up with their history and incorporated into their very organization. The sayings of their sages, the example of their heroes, the authority of their monarchs, have each and all been adduced to fortify their resolution, kindle their spirit, and keep alive their devotion in the face of discouragement, reverse or disaster. The case of Japan has been, so far as we can recollect, unique. It is the case of a nation sagacious enough to discover that all its old ways must be abandoned, all its old lessons unlearned, all its cherished ideals discarded. A proud nation had to acknowledge that those whom its former instructors had taught it to regard as barbarians were almost Gods come amongst them in the likeness of men. A vain nation had to experience all the bitterness of feeling that those on whom they had tried to impose this asserted superiority smiled alike at their ignorance and their pretensions. This is truly a tremendous ordeal to go through, and one of the nature of which we Europeans have no conception. Tell an Englishman that he would rise in the scale of humanity were he to mould himself on the Frenchman's ideal, tell the Frenchman that he would be a higher order of man were he to conform to the English standard, or a German that his race would be improved by moulding the future generations of it upon the Frenchtype, and each would laugh or be sorely indignant. The Japanese, however, was called upon to believe something like this and to act upon it. He had the wisdom to do both, and the fact will redound to his credit so long as history is written or read.

The little work before us is much what such a Calendar must necessarily be. It contains a list of the officers and scholars of the institution, a short historical summary of it, a list of its regulations and properties, schedules of its studies and the examination questions for the examination of 1874-75, each and all of which have their special interest. There are courses of study in English, French and German, some, though not all, of which may be pursued in either of these languages. We must pass voer these examination questions for want of time and space to do justice to them but it may be said generally that they deal with the main leading departments of useful knowledge. The Law Class examination demands some familiarity with general jurisprudence, constitutional and international law: Mental Science, with the various branches of moral philosoply in the widest application of the term: Latin, which is and ought to be only taught in as far as it may be indispensable for the pursuit of other studies, with the easier books of the tongue, going as far as Cicero's Orations: Chemical Technology, with Botanical Physiology, Metallurgy and Mineralogy: the Engineering Section, with Mechanics and questions on the strength of materials, land-surveying and such branches of the calculus as are necessary in moderately easy engineering work. Geology, mechanics and thermotics also come into this section of study. There is a course of study in the English language and literature, in Rhetoric, in Geometry, Astronomy, Physics and Political Economy, Zoology, Botany, Arithmetic, Algebra, &c., &c., nor can any one of these, or other studies which we may have omitted from our list, be deemed superfluous, though, of course, each student's course does not embrace the whole of them.

We must confess we should like to have seen some preliminary sketch in this Calendar of what ends were sought to be attained by all this education, what type of mind is sought to be produced by it, what moral and intellectual ideal is to be raised up under its application to the youth of Japan. We have little doubt that all this has been the subject of discussion or discourse between the Japanese and the Foreign Director of the University—for such it is. Not the less, however, are we curious to know what are the leading features of the class of mind and character which is the looked-for outcome of this institution, how far the all-important questions relating to morality and religion have been dealt with, and, if the latter is, as probably it is and should be, left untouched, how the former, which is of absolutely vital importance, is dealt with. Do not let the Japanese err in this matter. The future welfare of this nation depends not more upon its intellectual, than its moral, progress, and, without a firm moral basis, the weight of the superincumbent intellectual structure will never be properly carried. The regeneration of this Empire is not a mere question of political economy, of public works, of a

Digitized by Google UNIVERSITY OF CALIFORNIA

gradually extending freedom of the press, of intellectual progress, of an improved coinage, an extended commerce, or a compact and efficient army and navy. We may improve the administrative machinery as we will, we may raise the general average intellectual level of the nation as high as we can, and have as many fine maxims as we like in favour of order and advance and enlightenment. But all these will break down one after the other unless the whole standard of the national morality is raised co-extensively with this reform in other matters. Build up what you may on the present foundations, and it will totter and ultimately fall. That the Will may be made the dominant power in man, whether to act or to resist, is a doctrine which must be incorporated into the Japanese nature before we see more than intellectual, or even superficial, results, from the new education. Higher views of duty, as such, and this not as a speculative question of moral philosophy, but as an active principle in each man's mind, are assuredly necessary to the stability of this people, and unless they are provided for in some way in the new system of education in Japan, it will bear no sound fruit. Public and official life will not improve. The morality of trade, now so bad that the whole commercial system of the country is paralysed by it, will remain as it is. Social life, with its open, and its far worse concealed vices, will not improve, and these youths now in the institution which suggests these words, will go out into the world to do little more good in it than their fathers. If the idea arrived at by the DIRECTOR of the Kaisei-Gakko is to make the rising generation of Japanese free and honourable men—that is, men living in honour, and fit for freedom—an ideal which would fully content us—by what other methods than those of which we have any record in this Calendar, does he propose to attain it? And unless this should be the aim of education we know of none, neither do we know any of the agencies by which society may be built up which are not required to effect this object.

Self-reverence, self knowledge, self-control,
These three alone lead life to sovereign power,
Yet not for power, (power of herself
Would come uncalled for), but to live by law,
Acting the law we live by without fear;
And, because right is right, to follow right
Were wisdom in the scorn of consequence.

SPIRIT OF THE JAPANESE PRESS.

Loo Choo.

(*Hochi Shimbun.*)

For our part we must confess that we witness with regret the expenditure of money on Loo-Choo. Our government is no doubt composed of sagacious counsellors, who would also view with little satisfaction the maintenance of an imprudent outlay which exhausts our treasury without reflecting any honour upon us, the gift to these people of a steam-ship to encourage the art of navigation and the despatch of troops for their protection. But there are many who look upon this question from a different point of view, and who allege that, provided Loo-Choo remains subject and tributary to Japan, it matters little how much we spend upon it, and it is to them that we address the following remarks.

Were Loo Choo to belong wholly to Japan what benefit would its possession confer upon us? Might we reasonably look forward to any diminution of our present taxes? Would it enable us to discharge any portion of our public debt? Would our influence and reputation be thereby extended in civilised countries? Would England, Russia, France or Prussia fear us the more for it?

Before taking the initiative in proceedings of this nature it is our duty to calculate alike the cost which they involve and the advantage which such cost is likely to realise to us in the result. When we learned that our Government projected the outlay of certain money in Loochoo we commented strongly on the utter fruitlessness and imprudence of such a course; but, whether from the fact of the Government having already carried out its intentions, or from the unskilfulness of our reasoning, our representations were devoid of effect. Since then we have narrowly watched the course of events, expecting, as was natural, some good result from our beneficence to these islanders. And what, in effect, has been the result? A terrible disease fell upon the Loo Chooan swine in the month of July last, which carried off the pigs in great numbers. But the disaster was not without its profit, for these enterprising people turned it to account, salted the porkers, and exported the diseased meat to Japan! Matsuda, a *Daijo* of the *Naimusho*, who visited the islands, carrying instructions from our government, was slighted and his orders insultingly disobeyed. Can it be doubted then that we are unwisely spending our scanty resources upon a people who can neither appreciate nor reciprocate our manifold kindnesses?

It is not impossible that our Government has entered upon this expenditure in the hope and with the intention of recouping itself at some future period, and, it may be, of applying the future revenue from this source to payment of interest upon our foreign debt. But it is somewhat hopeless to expect a reproductive outlay from a country whose highest ambition is to export diseased navy pork, from which doubtless some of our people have died. Again, the inhabitants of these islands are weak, ignorant and vacillatiug, and, unable to appreciate the kind intentions of our Government with regard to them, show an auxiety to cultivate friendly relations with our powerful neighbour China while still tributary to Japan.

We are told that the Loo-Chooans profess a desire to be looked upon as an independent people. Should this be true, and should we give them the means of rendering us effective aid in the event of our being engaged in war, we should merely foster their inclination to throw off their subjection to us, while if we do not provide them with this means they will be unable to help us. Now it requires a large and serious expenditure on our part to preserve the subjection of a country desirous of emancipating itself. Thus we should spend much money in strengthening the power of Loo Choo and still more if subsequently we desire to keep it within our grasp.

As to the assumed honour of keeping this group it is scarcely necessary to say that it will bring us neither *prestige* nor good will. But those who are desirous of useless honours say that it is impossible to reckon the sums we have expended upon Loochoo in past years. The Formosan Expedition, and the trouble in which it involved us with China, all arose out of the murder of a few Loochooans. While we have spent such enormous sums upon them, they show a desire to remain under the joint protection of China and Japan, and what interest would that give us for these enormous sums? The Government must make these Loo Chooans our subjects and ours alone.

To this we may reply that this very course will involve us in still further expenditure, and were the country wholly ours it would never repay us what we have spent upon it. It seems to us, therefore, idle to plead that because we have had a certain connection with it, we should maintain that connection in spite of its expensive nature. It would be better to regard all our past proceedings as so many mistakes, change our policy and leave the place alone. We do not mean by this that we should relinquish our connection with it altogether, and refuse their tribute when they bring it over. But we would resume our old simple connection with the Islands, and not endeavour to sever them from China, sending steamers and troops for this purpose.

Others say that as Japan has made a fair advance in civilization, she should instruct these Loo Chooans, and this necessitates the reform of their mode of government and the expense attending it. This is an excellent argument for the maintenance of vain and costly honours, but we do not think this is the duty of a country like Japan. Look at the present condition of the country! There is no surplus in the treasury, and there is a multitude of reforms which we ought first to make in this country

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

before seeking other places in which to begin them. We therefore say to the Government and our countrymen that useful and precious treasure ought not to be lavished to maintain showy but useless honours.

Loo-Choo.

(Hioron Shimbun.)

The following is the verbal petition made by the Brother of the King of Loo Choo to the Prime Minister Sanjio.

Although Loo Choo has up to this date sent tribute every year to China, and despatched envoys to congratulate each fresh successor to the throne, and though whenever a new king succeeds in Loo Choo we ask the assent of the Emperor of China, we were ordered by Matsuda, the Daijo of the Naimusho, when he visited us, to discontinue these practices. We replied however, that we were anxious to preserve them. Still Mr. Matsuda would not give his consent, and, having been ordered to Tokio, we make the following representation.

It is now some five hundred years that we have enjoyed the kindly protection of China, and were we now to discontinue our connection with that Empire, it would be at once unjust and ungrateful. It is known to all the nations that we pay tribute alike to China and Japan, and if we continued our tribute to China it would not involve us in any new tributary relation. Now, if His Majesty the Mikado would graciously permit the continuance of our connection with China it would reflect lustre on the virtues of His Majesty, and the world will not say that this is unreasonable. Being but a small territory and dependent as tributaries on two empires, we have enjoyed protection and quiet for five hundred years. But if we now suddenly discontinued our connection with China, without a sufficient reason, it would cause us great incovenience and seriously affect our trade with China. To act thus would be to fail in our duty, and any such course would disturb the tranquil flow of the spirits of our countrymen.

It is true we have heard that all the differences between China and Japan which arose out of the Formosan affair, have been composed. But we have not seen the convention which records this, nor have we heard anything of it from China. The Envoy whom we despatched with tribute to China last autumn (1874) arrived at Pekin in March, and China accepted both our tribute and our message. The Envoy, too, had an announcement made to him of the death of the late Emperor written on white paper and of the accession of the present Emperor on red paper, both of which were conveyed back to Loo Choo. The treatment of our Envoy differed in nothing from that which our envoys have always enjoyed.

As our islands are but small, we entreat that you will not sever our connection with China, but permit us to remain as we are. And if this cannot be, we still desire that you will negotiate with China on the question. But if our entreaties cannot be entertained, we, being but a small people, cannot oppose the will of China. Our mode of Government exactly suits our people, and were its forms to be now changed, it would lead to trouble, as we told Mr. Matsuda. He replied, however, that as we had been constituted a *Han*, we must observe the laws made for this purpose.

Since our very origin and our tributaryship to China and Japan we have always been acknowledged as a kingdom, and the Government was administered according to the ideas of our people, and now Japan has told us to remain a *Han* (while all the other *Han* were abolished). The year before last your Minister for Foreign Affairs decided that it was not necessary either that our nationality or the form of our administration should be changed, and last year when the supervision of our affairs was transferred from the Gnaimusho to the Naimusho, we received a verbal order from Mr. Hayashi Gako that no change in our form of administration was necessary. But now that our *Han* is to be made the same as the other parts of your Empire, our people cannot but experience anxiety. For these reasons it was that we begged Mr. Matsuda to leave us as we formerly were; but he would not. Our people began to be perplexed and met in large numbers, but we instructed them to wait until we had laid our request before the Government.

We earnestly entreat that our prayer may be granted.

The Corean Affair.

(Akebono Shimbun.)

There has been much discussion upon the Corean question since it first arose, and, although desirous to do so, we have never been able to discover what are the views upon it entertained by the members of the Government. We have now, however, learned that the opinions of Messrs. Yamagata, Saigo, and Oyama on the question are much as follows.

It is said that the younger Saigo holds that we should first send an envoy to China and ascertain what connection, if any, exists between it and Corea. If China disclaims all such connection, we should send another envoy to Corea and enquire into the cause of the late occurrence, and, if the replies are unsatisfactory, we should declare war. Yamagata and Oyama are said to think that a sudden attack should be made upon Corea without any notice being given to China of such intention. We have been weighing these two courses, with a view of deciding which is the more desirable, and we have come to the conclusion that Saigo's is the better of the two. The Corean question is one of great weight to Japan, and it is necessary that we should proceed in it with all caution, in order that no fresh troubles may arise out of it, as might easily be the case were we to treat it unadvisedly. In our late Formosa affair we fell into embarrassments with China, and although we ultimately received satisfaction from her, we cannot tell what her feelings are towards us, and are not certain that she is not waiting for an opportunity to revenge herself. Under these circumstances should we attack Corea without first sending an envoy to China, she might think it a fine opportunity for retaliation, and demand of us by what right we made war upon Corea without first asking her permission? What could the Japanese say in reply? Thus it is that we think an envoy should first be sent to China.

Prior to the despatch of the late Formosa Expedition, Soyeshima was sent to China to enquire whether Formosa was or was not part of the Chinese territory, and he was told that the Chinese jurisdiction did not extend so far. After the despatch of the expedition, however, China claimed jurisdiction over the whole island, and trouble immediately arose between her and ourselves, Ultimately it came out that upwards of five millions of *yen* had been spent to obtain five hundred thousand taels, and all this was caused by our being satisfied with a verbal answer from China that Formosa did not belong to her, and to our having nothing in writing to go upon. Now as Corea is not in the same barbarous state as Formosa, too much caution cannot be exercised prior to a declaration of war, and all our proceedings in this matter must be entirely above reproach.

Emblem-Worship.

(Hochi Shimbun.)

The protestants prohibit the worshipping of idols and deride the Buddhists for their adoration of the works of men's hands. I had an opportunity lately of asking one of them whether the Europeans and Americans were not fond of pictures, and he replied that they were, and sometimes paid thousands of dollars for the work of a good artist, without in the least begrudging such a sum. Then I said that these pictures were but painted representations of things, that the men and women and animals so portrayed could neither move nor speak nor utter any sound, that the painted grass and trees did not grow nor die, neither did the streams run, and I asked why the owners of these pictures loved them. I was told it was because there is no apparent difference between the real objects and the representations of them, whether men or animals, mountains, streams or trees.

Then I said, This reminds me of what was said by one of the sages of old, that if you love a person, you love even the bird that perches on his roof; while, if you hate him, you hate even his shadow. Now, if we love our father or our master, we desire to preserve his likeness or his writings. But this is merely for the purpose of keeping up the remembrance of him, and of showing the love in which we

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

hold him. The reason why we make resemblances of the fathers of our religion is simply because we experience a feeling of love towards them. Thus there is no difference between this feeling and that of those who appreciate landscape painting, and who know that while they are looking at such works, their eyes do not rest on real valleys and mountains, but their mind recalls the pleasures associated with these objects of nature.

This being the case, the orientals do not believe that what are called their idols are true gods. These figures are only made to enliven faith and to prevent the thoughts from straying, and thus it appears to us unreasonable to call those who employ these images fools and savages.

HARA.

THE SAME.

(Hoshi Sodan)

There exists among the Buddhists, as every one knows, a custom of worshipping pictures and images representing gods. It must not, however, be believed that anyone imagines these pictures or images are true gods. Their object is to remind the people of the true God and thus make them watchful over their actions. Now the Christians laugh at this, and say that it is only savages who worship wood and stone and animals. But we should beware of finding fault with forms of religion without knowing the doctrines which they contain or cover. The Christians observe a ceremony called the Holy Supper, and, on this occasion, eat bread and drink wine, which they call the body and blood of Christ, and the ceremony is one instituted by the New Testament. But both the bread and wine are made by men, and God has no part in the preparation of them, and none among the Christians believe that they are the real body and blood of Christ, nor is it so. We can see no difference between this and the practice of the Buddhists making pictures and images to represent gods.

ISHIKAWA.

A HIT AT THE PRESS-LAWS.

(Akebono Shimbun.)

If we were asked what branch of learning our Government proposes to itself specially to protect, we should apply that it is science, because the Naimusho Notification No. 20, dated the 28th October, 1875, issued by Okubo, who holds the offices of *Sanghi* and Minister of the interior, states that now that the new Press-laws have been issued, all obscene publications and those which violate articles XII to XIV of the Press-laws will neither be permitted to be bought nor sold after the 31st August 1876. We infer from this notification that nothing but scientific books will be permitted to circulate among the people, for all books outside the circle of science treat of questions involving differences of opinion. There are many works, for instance, which teach that the people have a right to abolish a government which oppresses them and replace it with another, and doctrines of a similar nature. It is impossible to say that such doctrines may not incite the people against the Government, and thus they clearly contravene the Press-Laws. Thus it would appear that our booksellers will be restricted to the sale of scientific works. Still, we may not be entirely deprived of all our advantages, for although such books cannot be bought and sold, they may be borrowed. But, in spite of even this advantage, we shall not be able to gather all the new ideas contained in the new works published in Europe and America, because we are unable to purchase them, and thus all branches of knowledge, except science, may be expected to decay in Japan.

As our officials are wise, the presumption is that they have decided that the people are fit only to study scientific books. If this view be correct, we should recommend all students to set about studying books on geography, astronomy, physiology, natural philosophy and the like—in fact anything which does not excite their minds. At the same time we should be very grateful to any one who would recommend to persons like ourselves, who have no particular desire for an exact knowledge of the sciences, what books we might lawfully read.

THE USE OF THE CIRCLE. A COMPLAINT AGAINST PRESS-LAWS.*

(Choya Shimbun.)

The readers of newspapers may have observed of late the frequency with which circles (○) are employed in the place of characters and we ourselves also, much against our inclination, have been compelled to use them. We fear, indeed, that their frequent occurrence may render the true drift of our argument obscure to our readers, for we may admit that on reperusal, even we ourselves often experience a difficulty in remembering if we intended them to represent the name of an individual, an office, or a particular locality. In reflecting upon this subject we cannot avoid the conclusion that inasmuch as we are compelled to the use of these rings by our disability to pour out our thoughts freely, they form a great obstruction to our advance in civilisation. Freedom of conscience is the foundation of national happiness, and in the press laws of civilised nations we find no such impediment to the full and unobstructed outflow of mens' thoughts as the use of these symbols marks in the case of the literature of our country. Elsewhere men may freely and openly unburden their minds; there are no officials empowered to punish them, no legal enactments to repress the liberty of thought, and we shall seek in vain in the press of more advanced countries for such evidence as our newpapers and books afford that their writers are composing with their pens in fetters.†

So general, however, has the use of this sign become that one might conclude that we Japanese writers had ceased to regard as honourable the open expression of our opinions, and that we thought it admirable to convey them to the public in the form of an enigma. But being unable to give conscientious utterance to our thoughts we are compelled to adopt some means of showing this.

Ignorant though we may be, we desire to have the privilege of free discussion. We cannot avoid feeling that the necessity of suppressing a portion of a sentence subjects our country and ourselves to shame and reproach; but, imperfect though such writing may be, we prefer to place our ideas before our readers in their curtailed form rather than refrain altogether from giving them shape and expression. Were it possible to us to speak openly all that we feel how much better would our duty to the public be performed!

Are we indebted to the gods or to men for this position? If to heaven, there can be nothing available but supplication to the gods. But if it be the result of human authority, and that it be within the province of another and a superior being to reverse our cruel fate, we should not endeavour to designate his name with a sign, but would publish it in full in order that our countrymen should know and acknowledge their benefactor.

* The circle (○) is employed by Japanese writers in the same manner as we use the asterisk (*) viz.: to indicate either the omission of certain matter or a suspension in the sentence. The hiatus in much that is now written may no doubt be accounted for by the severity of the press regulations. [ED. *J. W. M.*]

† This is emphatically not the case. There are only two countries in the world which enjoy this freedom.

Harvest operations are now over in this neighbourhood. The rice crop has been safely garnered, and the harvest has been a good one. During the excitement which prevailed on account of the difficulty with Corea, native speculators were on the lookout for a "haul," and the price of rice fluctuated considerably. Now, however, the price of this article of consumption is on the decline, which is not only a manifestation of a good harvest, but shows that the antipathy exhibited by the Japanese towards Corea, has abated considerably and the probabilities of war are far more remote than they were some weeks ago. Rice is now worth $2.00 per picul, and wheat about $1.65.—*Rising Sun.*

Law Report.

IN H. B. M.'s CONSULAR COURT.

Before R. ROBERTSON, Esq.

REGINA *vs.* R. F. LIVINGSTONE.

Monday, Nov. 22, 1875.

Charge:—Robbing $50 from the person of Peter Cumming, late cook of the British ship *Shalimar*.

Accused pleaded not guilty.

Alex. Johnson, late chief officer of the *Parmenio*, sworn.

The evidence this witness gave on the 17th Nov. was read over to him, and acknowledged.

To Court: On the evening in question he had no dispute with accused that he remembered of. He had his coat torn on that night. He did not remember seeing a pistol that night.

To Accused: It was a young fellow named Ford who tore his coat. Accused never presented a pistol at him that night. He left the house shortly after 11 o'clock.

Peter Canning, re-called and re-sworn.

To Court: It was not after the trouble, but before it, that he changed the $10 bill. He drank with accused, and paid with a $10 bill.

Accused had no questions to ask.

F. E. White, Consulate Constable, sworn: He remembered prosecutor being paid off from the *Shalimar* on the 9th of this month. He received $85.25, of which $35 were paid to Mr. Mills, of the Sailors' Home, and $50 to himself.

Accused had no questions to ask.

Henry Compton, recalled and re-sworn.

To Court: He saw the revolver. Baker, Johnston, Wallace, and a coloured man were present.

To accused, witness answered he was sure he had a revolver.

Edward Baker, recalled and re-sworn.

To Court: He was positively sure he saw the revolver in accused's hands.

To Accused: He saw him in the dining room, he (accused) brought out the revolver from the dining room, and said "if you say another word about that, I'll blow your brains out." He was not paid for coming here. The man who brought him here had no money.

William Wallace, a seaman, sworn: On the night of the 9th instant Peter Cumming (the prosecutor) was standing at the door of the Sailor's home crying. He said he had been robbed of $50.00 at accused's. He went with some others to accused. He saw accused holding Johnson by both shoulders. Accused said to Johnson "if you blow on me about this I'll blow you your brains out." He then saw Baker look in and ask what they were doing. Accused tore the coat off Johnson's back, and drew the revolver again and said he would blow Johnson's brains out. He left for the "Old Britannia," and as he was going he heard two shots fired in the "British Queen," went back and looked in, and he saw accused and Johnson leaning over the bar. Accused put his hand in his pockets, and gave some paper money to Johnson. He then left.

He Accused: He heard him say to say to Johnson, that he (accused) would blow his (Johnson's) brains out, if he blowed on him. Accused had a hold of Johnson by the throat. He had a revolver in his hand. He saw accused hand some paper money to Johnson.

Moses Roberts, a seaman, sworn: He went with prosecutor to accused's house, on the 9th inst. He went to find out what had happened. Johnson was there. Johnson said that accused laid the money on the floor, and accused said that he did not lay it on the floor, but that Johnson came and took it out of his hand again. On being questioned accused admitted, that he had taken a dollar and some cents out of prosecutor's pockets. Accused assaulted prosecutor.

To Acussed: Prosecutor said when he first came in that you had stolen his money.

The usual warning having been given the accused made a long statement denying the charge *in toto*.

His Honour committed him for trial.

IN H. B. M.'s Consular Court, before H. S. Wilkinson, Esq., this morning, P. Barucca sued E. Lewis for a sum of $67, being a debt in connection with a lottery in which a Frenchman named Albert Cousseau and the plaintiff played a prominent *rôle*. His Honor gave judgment for the full amount claimed and costs, to be paid by instalments.

U. S. CONSULAR COURT.

Before Gen. VAN BUREN, U. S. Consul-General;

and

F. R. WETMORE and C. DRAKE, assessors.

Monday, Nov. 22, 1875.

ITO HACHIBEI *vs.* WALSH, HALL & Co.

In this case plaintiff claims a sum of $108 715.42, balance of account and interest connected with certain trading transactions he had had with defendants.

Defendants deny that they are indebted in the above amount, and claim that he (plaintiff) is indebted to them in the sums of $16,222.55, and $16,483.61, being balance of accounts between them and the plaintiff.

Mr. F. V. Dickins appeared as counsel for the plaintiff; Mr. G. P. Ness for defendants.

Iske's re-examination continued by Mr Ness: When I said that Benzo and Zenjiro looked after the interests both parties, I meant that they effected transactions for both Ito and defendants; but Sin Coy was also used by defendants in the exchange transactions. Sin Coy did not look after the business of both parties; he received his orders from Irwin only. Benzo and Zenjiro were Ito's men, and were employed by him; at times they came to ask for instructions from Mr. Irwin. The transactions done by Sin Coy were, doubtless, partnership ones. The purchases and sales were made by Ito and his agents, but I believe some were also made by Irwin. I know this. I never heard of any partnership between plaintiff and defendants in rice transactions. When I said that Benzo and Zenjiro doubtlessly acted for Irwin's interest in the rice transactions as in the exchange ones, I meant that they had charge of the rice transactsons the same as the exchange ones; but it was for Ito's account; Mr. Irwin had not any interest in them. (Exhibit 19 produced). This is Kaiske's writing. He did not write it at my request. When the $10,000 loan was made, the securities remained in defendants' hands having continued on from the first loan. Before these advances were made, a balance was due from plaintiff to defendants. Defendants did not hold any securities for that balance, but there were securities remaining in their hands for previous loans. (Exhibits T & D D produced). I find the entry of this $5,000 in the accounts, as the English and Japanese dates correspond.

Cross-examined by Mr. Dickins: The dates are not the same.

Kumagai Shoski, examined by Mr. Ness: I am employed by defendants under my father Iske. I was in their employ in 1871, and previous to that. I recollect the *niboo* transactions in that year between Ito and the defendants. There was a partnership between the two, by which the defendants were to have two-thirds, and Ito one-third. The partnership was arranged by my father. It commenced on the first of the 7th month, and came to an end in the middle of the eighth month. The business was conducted by Irwin and Ito, through Benzo and Sin Coy, and at this time it was discovered that losses had been sustained, and Mr. Irwin said the partnership must cease. I told this to Benzo. He said that losses had been sustained through Irwin's fault, and it would be very inconvenient if it came to an end at once. I saw him at his house and at defendants' office. There were only myself and Benzo present at his house. He said that he would tell Ito. A day or two after I went to Benzo's house, Benzo and Zenjiro came to defendants' and they saw Mr Irwin in Mr Lothrop's room. I was present. Benzo stated he had told Ito that the partnership must come to an end, and Ito had agreed to this, but said that he would suffer great inconvenience after the transactions were closed. A discussion here took place between counsel as to the admissability of evidence of conversations during which Ito was was not present, plaintiff's counsel contending that Benzo was Ito's agent only for exchange transactions, and that nothing he said outside of those could be received as binding on Ito. The Court ruled that the evidence was admissible, but noted the objection of plaintiff's counsel.

Examination continued: Benzo said that Ito would take over and make good all the losses already sustained, if defendants would continue to make advances as heretofore, and that if they would do as Mr. Ito desired, he would make good any further losses that might be sustained in future exchange transactions. This conversation had reference to the dissolution of the partnership, and it was decided that it should be dissolved. Benzo's request was made in Ito's name. They stated that they came from him. I heard almost daily conversations from that time about the termination of the partnership. Benzo came several times about it. Some time after, the buying and selling of *niboos* continuing, Benzo and Zenjiro came to defendants' office in the evening. Mr. Ito came every day

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

to receive dollars from defendants on his own account; it was not on partnership account. When Benzo and Zenjiro came, Mr. Irwin asked them whether they had made any profits; They answered that they could not tell, and Mr. Irwin regretted that they had to take over the losses. [Exhibit D shown to witness.] I have seen these entries before. I first saw them on the 11th day of the 10th month, 1871. One night Benzo, Irwin, Sa, and myself went through the accounts, and after comparisons and references we arrived at these balances. The accounts were written out by Benzo and copied by myself. It took us from dark till past nine o'clock to go through the accounts. These figures represent the amount of money paid to and received from Ito. This statement is a correct one of the accounts at that date. These balances were arrived at on the 10th, and were written at Benzo's house, and he brought the book to defendants'. The accounts were made up from Mr Irwin's books and papers, and from a copy of accounts brought by Benzo.

Adjourned to 2 p.m.

On the re-assembling of the Court Mr Ness continued his examination of Shoski.

Witness: I wrote to Ito requesting the payment of the $12,000, in the spring of last year in consequence of the illness of my father. I wrote this letter after repeated orders from Mr John Walsh. I received no reply. I saw Ito about it. He requested that the matter might be allowed to stand till my father was better, when he said that he had several favours to ask. Ito asked me to take this request to Mr Walsh, and I did so. I have seen Ito since, but the balance was not referred to on these occasions. [Exhibit No. 14 shown.] I have seen this letter. I first saw it about the 7th month of last year. I was with Futami in the office when he received it, and when he made a translation of it for Mr J. Walsh. I know he made the translation, but I was not present when he gave it. It came through the post office, and was sent on by a friend.

Cross-examined by Mr. Dickins: I do not know the contents thoroughly. I recognise it because I have often seen it before. There is no particular mark on it to distinguish it from others. Any one who has seen this letter four or five times could not fail to recognise it. This letter was in the ink-box drawer in the office. [Exhibit D shown.] I first saw these entries after the 10th day, 10th month. This page was the same then as now, but I do not think the English writing was on it. That was put on when the book was left with Mr. Irwin by Benzo, otherwise it is in exactly the same condition as when I first saw it. The sum of 200,271 rios was not paid to Walsh, Hall & Co. on that day, nor was the other amount of dollars paid away on that day. They represent the amount of the business to that time. These are the balances of the debits and credits in accounts between two parties. I have never heard of any account having the balances before. I know that they are correct. One of these accounts is the sum to be paid by, and the other to be received by defendants. The difference between these two sums does not represent the balance due by plaintiff to defendants on that date, because there is another item on the next page. That item should not come into those amounts, because it was loaned on another account. Those two amounts refer to the exchange transactions only. These items represent the true state of the exchange accounts up to that date, 10th day 10th month. They represent the balances of receipts and payments of all exchange transactions up to that date. I have not personally gone through the vouchers by which these amounts were brought out. I do not know the exact date of the termination of the exchange partnership, I cannot say the exact date that I heard of it, but it was about the middle of the eighth month. I was present at the meeting in Mr Lothrop's room when it terminated. It was settled at that meeting; Mr. Irwin said that it was settled. Benzo had come several times about it. I went to Benzo's place. The first time he heard it, he did not come. Benzo did not agree to it at once, but went to see Ito, and came back two or three days after, bringing a message from him about it. He did not bring any authority or seal from Ito to settle it. I have never seen any written authority from Ito to Benzo, nor have I ever seen Benzo in possession of Ito's seal. I never heard Benzo tell Ito of the cessation of the partnership. In the middle of the eighth month it was Mr. Irwin who found out that a loss had been sustained. I do not know the amount. I only know from Mr Irwin, and the little I could observe in the transactions, that losses had been sustained. Without the information which I got from Mr Irwin, I know that these accounts are correct, as I helped to make them up. I know that these accounts are correct, because I know the accounts from which they were made up are correct, as I made many of the entries; and I know that those which I did not make were also correct. I do not remember the amount of the losses. There were not any vouchers with respect to the item of the loss on the $80,000 bought and sold. I do not know whether that transaction was made by Irwin or Ito. It was made during the partnership in the seventh or eight month, I do not know which. It was Sin Coy or Irwin who made the $50,000 transaction. I do not remember in which month it was made. It was during the partnership. After that terminated Sin Coy and myself had orders not to make any more transactions. The item 3,235 *rios*, was paid to Sin Coy by Irwin on account of sake-mono transaction to the Shosha. Doubtless there was an amount of 5,000 *rios* paid to Sin Coy, but I do not remember. I do not know if 19,000 odd *rios* were paid to Ito. If I had my books I could tell directly. I recognise the debit item of 4,453 *rios*. I know that it is the partial balance of an account consisting of various items. It is the sum total of the item on one side or the other. Among the items of that account, I do not remember a sum of 19,000 odd *rios* paid to Ito. I have not gone through the vouchers bringing out that balance of 4,453 *rios*. At the interview in Mr Lothrop's room it was distinctly stated that the partnership was to end on that day. I think the date was about the 20th of the eighth month. I think that it was nearer the 20th than the 10th, possibly it was later than the 20th. I recollect the conversation, but it is difficult the remember an exact date. I recollect the majority of conversations I had with Ito and others about business four years ago. The exact amount of losses was written down and given by Irwin to Benzo at the interview in Lothrop's room. The whole amount of the loss was somewhere between $10,000 and $20,000 on the general partnership account. Had there been no agreement between the parties, each would have had to pay half of this. I have never seen any account bringing out the total amount of the loss. Apart from hearing Mr. Irwin state the amount I have no means of knowing the amount of the loss. Up to the date 10th day of the 10th month the business relations between Ito and Walsh, Hall & Co. were not interrupted. Up to nearly the end of fourth Meiji, Ito came frequently to the office of defendants about exchange transactions. The money used by Ito for these was advanced principally by defendants. Benzo was present when these amounts were arrived at. I consider Benzo as Ito's accountant and representative. I do not know if Saito kept the accounts of all these transactions. Saito was not called to assist in making up these accounts at defendants' office. I wrote several letters to Ito in the spring of 1874 about the balance. I wrote directly Mr J. Walsh told me. I wrote two or three. I have no copies of these letters. They did not contain copies of an account bringing out the balance. There was one in a letter which Futami wrote. I do not remember a conference between Mr. Irwin, Ito, Benzo and Zengiro, at which Mr. Irwin asked that the settlement of accounts should be postponed. I do not remember on the 27th of the 12th month fourth Meiji that Ito, Benzo and Zengiro coming to Mr. Irwin about the losses on exchange, I was busy making preparations to go to my country. I did not go after all. I remember several persons coming to demand a $40,000 receipt that Ito had deposited. The excuse for not returning it was that it could not be found. I know Chojiro. In the ninth month of the fourth Meiji Chojiro did business with me about rice transactions. He came frequently to me in defendant's office about the rice. I do not know if the amount of rice purchased in these transactions was about 24,000 *kokus*. At Benzo's request I took charge of the business and made arrangements with Chojiro. Walsh, Hall & Co. had no interest in the transactions. Walsh, Hall & Co. did not make all the advances for these transactions, but sometimes when rice tickets were brought Mr. Irwin would lend money on them. Ito obtained an amount of above $10,000 carrying on these transactions for defendants without interest or commission.

Court adjourned to this morning at 10 A.M.

Tuesday, 23rd Nov., 1875.

Mr Dickins continued his cross-examination of Kumagai Shoski.

Witness: A *dainin* is not always entrusted with the seal of his principal. I know the seal on the paper shown me. It has "W. H." on it. Defendants knew nothing about this seal. I had it made for the purpose of sealing packages of *niboos*. I used it on my own responsibility. I used the seal in the office business. My father knew I had it. I have never done business at Shosha. I have been for 9 years in Yokohama. (Paper produced, handed in, and

Digitized by Google Original from UNIVERSITY OF PRINCETON

marked exhibit "E. E.") Kaske has not written a single document for me. Kaske sometimes came to defendants. I was friendly with Kaske. He used to come to my father's house. He came about different business. He came about exchange business because Benzo was the agent of Ito. Kaske was agent for Benzo, and had no authority in the exchange transactions. Kaske came about the Yoshida Shinden lands. I requested Benzo to write out a divorce letter. Kaske did not write a petition for me when I was put in prison. I do not write a good hand. I signed a paper as agent for defendants. (Document put in and marked exhibit "F. F." Receipt for 144,000 *rios*). It is in this amount in some way, but not as a separate item. I cannot point out the item in this amount. It does appear as a separate item in the Sobae account. I cannot remember positively receiving from Ito 3,000 *rios* on the 29th day, 10th month, 4th Meiji. The next day I probably received 10,000 *rios* from Ito. I cannot be positive about these sums without referring to my books. I have a daily cash-book. I have never put my seal falsely or fraudulently on any document. Some documents I have sealed do not refer to Walsh, Hall & Co.'s business. I can't tell as to what is the largest sum of money I received at one time. Doubtless I have given a receipt for 30,000 or 40,000 *rios* in the last ten years, but I do not think in my own business. I dare say I have given such a receipt in my father's business. I should know by referring to my own books and my father's books. A great many receipts for large sums were given by me and my father in Meiji 4th. There may be an account-book containing all these items.

Mr Dickins called for its production.

Mr Ness objected to private books of the witness being ordered to be produced.

Witness: I should be very sorry to produce my books; they are my private accounts.

His Honor refused to order their production.

Witness: Some items would be entered in the books. I can't say positively if I ever received a sum of $30,000 or $40,000 that I did not enter.

Court adjourned till 2 p. m.

Mr Dickins continued his cross-examination of Kumagai Shoski.

Witness: Saito Kaske wrote the paper you show me. I do not know if Kaske wrote the documents mentioned in the list just shown me. If he did write them, it was not at my request. The document shown me is in my handwriting. (Read.) That receipt appears, I have no doubt, in the accounts. It is only a temporary receipt. There are numbers of them. I do not know if this sum has been credited to Ito in any account. (Document handed in, and marked "G. G.") It is only a temporary receipt, and is not credited to Ito in any account. Some items for which temporary receipts were given were credited to Ito. This temporary receipt refers to defendants' business; it refers to some coal business. The coal transaction took place in the 4th year Meiji. This is my handwriting. (Document read, put in, and marked "H. H.") The 100,000 *rios* mentioned in that document refers to W. H. & Co.'s business. It was given in the absence of Mr Irwin. It is a temporary receipt. It refers to the exchange business. (Another document shown to witness.) This is in my handwriting. (Put in and marked "I I") This refers to defendants' business, but what in particular I do not know. It is a temporary receipt. The absence of an address on that paper is suspicious. A great many receipts were given at that time. The date is not my handwriting. It looks as if it had been put on since the paper was written. The date is wrong. I will produce my book to show that the date is wrong. I looked in my books at the beginning of this case. (Book "F" shown to witness.) The entry is in that book. My mind was troubled about this item of 33,400 *rios*, so I looked it up in my books. This sum was brought in two sums on the same day,—one of 30,000, and one of 3,400. I gave a temporary receipt for 30,000, and in the evening one for 33,400 *rios*. Koske promised to return the receipt for 30,000 *rios*, but did not do so, and I was anxious about it, and looked into my book about the affair. I am in the habit of dating my receipts. The two receipts were dated on the same day, but the date on exhibit "I I" has been cut off, and another date written on it. I know Futami's handwriting. This letter is in his handwring. (Letter read and put in, marked "K K.")

Re-examined by Mr. Ness (Book "D" shown to witness). I referred only to page "D 1" when I said the entries had been altered in this book. Kaske wrote the paper you show me. I saw him write it. People of Ito's came frequently for the $40,000 receipt. It could not be found, and that paper was written. The receipt, if it could have been found, would have been given up at once. This paper was proof that that the $15,000 and $12,000 only were due to defendants, and that the $40,000 was not. It was the custom to give temporary receipts when the book was not at hand.

The Court adjourned until to day at 10 a.m.

Wednesday, 24th Nov., 1875.

Mr Ness called

Taketami Hanjiro, cautioned: In 1871 I bore the same name, and was in defendants' employment. I left their employment in the spring of 1873. In 1871 the defendants and Ito had joint exchange transactions. I recollect in the end of March, 1872, Benzo came to defendants about $3,000 he had borrowed; he requested it might be put to Ito's account. (Book "D" shown to witness.) It is entered in that book. The entries were made at the time. There is a balance of $12,902 in this book due to defendants by Ito. I acted as interpreter at the time. Benzo came about the balance of account of Mr Ito. Benzo and Irwin agreed to this balance of $12,902. I recollect a subsequent interview in Mr Smith's room. I don't recollect the time. Mr Irwin, Smith, Iske, myself and Ito, were present. Mr Ito asked time to pay the balance of $12,902. Mr Irwin proposed that if Ito would arrange with his son-in-law to get the Government to purchase the Yoshinda land, he would forgive Ito the balance of $12,902. Ito's son-in-law was the Governor of Kanagawa.

Cross-examined by Mr Dickins: I asked for my discharge from defendants. In 1871, 1873, and 1873 I acted as interpreter on many occasions. I remember what was said on nearly every occasion that I acted as interpreter. The interview in Mr Smith's room was in the spring, 1872. I do not recollect the month. I think it was after June. I think it was after the accounts were settled. I think only Ito was present on the either side. I am not quite sure about it. Mr Irwin spoke and Mr Smith heard. Mr Smith conversed with Ito through me. I do not know if Mr Smith conversed with Ito at this interview. I do not think he did. Mr Smith has had conversations with Ito through me. I have interpreted about coal business for Mr Smith to Mr Ito. I think it was in the 4th year Meiji; possibly also in the third year Meiji. I do not remember what the conversrtion was. It was about coal. I cannot give you particulars. I do not know if Ito ever admitted that it was right to debit him with the $3,000 paid to Benzo. I only recollect that one item, and the balance of $9,902. I have not had many conversations lately about the item of $3,000. I have never gone into the accounts of Ito and Walsh, Hall & Co. I only know the balance of $12,902 was correct because Mr Irwin made it out. I can't remember if the interview in Mr Smith's office took place in the morning or afternoon. I do not remember what I did for the rest of the day. So far as I know, Benzo was not asked to sign a paper that the balance of $12,902 was correct. Ito represented to Irwin that he was willing the payment of the balance should be postponed.

Re-examined by Mr. Ness: Benzo did not make any objections to this balance of $12,902 being written in the book; he requested it to be written.

Court adjourned till Friday morning, at ten o'clock.

Friday, 26th Nov., 1875.

Mr Ness said he would like to recall Shoske for a short time.

Mr Dickins handed in 300 *yen* for costs, as promised.

Shoske: I have seen Koske lately. Koske was formerly in Benzo's employment. On the 28th or 29th last month I was in defendants' office, and a friend came in and requested I would see Koske. In the evening I went to my friend's house, and I saw Koske there. (Documents shown to witness.) I have seen those before; they came from Koske. He wrote them.

Mr Ness wanted to put the documents in as evidence.

Mr Dickins objected to their reception.

Witness: I saw Koske against my will, as he was one of Ito's witnesses. Koske requested these papers to be made, and to appear as coming from defendants. Koske said he would explain all about that letter now in court. (Exhibit 14 shown to witness.) Koske said he knew perfectly well who wrote the letter (exhibit 14), but he did not want to spoil his evidence by giving particulars unless those other two documents were prepared and appeared as coming from defendants. He said it (exhibit 14) was written by Ito's people, at his (Ito's) order. He said there could be no mistake about it. I told him I could not prepare a paper naming a reward; then Koske prepared another paper. (Both handed in, and marked

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

"defendants' exhibits, 20 and 21.") Koske came next morning to defendants' office; he came into my room, and asked to have a reply to what he had said last night. He asked me the night before to see Futami and see if he would agree to it. Koske wanted copies in Japanese and English. I told him I had seen Futami; that he was ill; that the case was adjourned, and there was no hurry. Koske came again to see if Futami had got well. I went into the office and Futami came in. My father and Sobae came in accidentally on other business. After my father and Sobae went out, Koske again requested the papers to be made out, and Futami declined to do it. Koske said he ought to have something for his trouble; he did not mention any sum. Koske said, "If I was to give evidence about that letter it would settle the case."

Cross-examined by Mr. Dickins: Tanoki Senski is the name of the friend who requested me to send for Koske. He was formerly in Benzo's employment He was discharged. I first saw Koske about this matter on the 29th last month. The last conversation about this matter took place three or four days ago. I do not remember telling Koske that $3,000 would be paid to him if he would deny his former statement that $3,000 was paid to defendants by Ito. I did not promise that 2,000 rios more would be given to him if he would give evidence generally against Ito.

To Court: Koske demanded those sums if he gave such evidence. I did not propose to do any such thing. My friend heard the conversation.

To Mr Dickins. I did not tell Mr Walsh or Mr Irwin of these conversations. Futami may have done so.

Futami recalled and examined by Mr Ness: I recollect a conversation with Shoske lately about this case. I met him at No. 2 on the 18th of this month. Koske said he had come to make some business about this case, about the letter addressed to me by Ito. Iske said to Koske, "Futami is anxious to know the writer of that letter." Koske said he knew who the writer was, and that it was one of Ito's party. Koske said he had come to make some business out of it, and said, "I cannot say anything without getting payment." He said he could give very valuable information about it (the letter), and that it was written by the orders of Ito. He said he would tell all about it if he received $600. He said Ito had agreed to pay that sum. I said that we conld not pay such a large sum of money. Koske then went away. I saw him again last Monday. He came into my room at defendants' and repeated what he said before. Koske said he wanted to make some money, because Kaske was the only one on Ito's side "who was making a good thing out of it.' He said Ito was very troubled about Kaske, and had had to give Kaske a house in Yokohama. Kaske said he would take $50 to give information about that letter. I refused. I told Mr. Walsh about this.

Cross-examined by Mr Dickins: I have $50. I do not know how much the information was worth. It would have been worth something. Koske referred to the letter as soon as he came. Koske showed me a copy of that letter. I did not hear of this copy being shown to Shoske. I first heard about this letter in the beginning of this month. I first spoke to Mr Walsh about it.

J. M. Smith, sworn: In 1871 I was in the house of Walsh, Hall & Co. I recollect some *niboo* transaction during that year between plaintiff and defendants. Mr Irwin had charge of them. In the end of 1871 there was a meeting held at No. 2. Several were present: Mr Irwin, Lothrop, Ito, a banto of Ito's, Benzo, Sobae, myself, and Iske. The subject of that interview was an application by Ito and Sobae for a loan of about $480,000. They said they wanted the money advanced, as they had made some loss at the Shosha. Mr Irwin agreed to make the loan. The substance of what I heard was, that there had been previous transactions in *niboos* with Ito and Sobae, which had been closed. It had been agreed that when the account was closed they (Sobae and Ito) were to take over all losses, and that in consideration of their doing so that they were to receive future advances; they came to ask for this advance in virtue of this agreement. I think we were to waive interest on the amount due, —the balance that was due to the defendants. We were to collect the Mito loan free of charge. The advances required, about $481,000, were made by defendants to Ito and Sobae. I recollect an interview between Benzo, Ito, Irwin, myself, and I think Iske. Ito had been asked for the balance of his account, I think it was about $12,000. He requested that he might not be pressed. Irwin said he would not press him for it, if he would aid defendants in recovering advances and interest made on the Yoshida shinden land. Irwin further promised that he would waive the claim and give $10,000 besides if he (Ito) was successful in the matter. Ito agreed to this, and I believe took steps in the matter through the governor of Kanagawa, to whom he is related by marriage. Ito failed in the project. I think Taketani interpreted. I do not remember the date of this last conversation, it was after the other one. This conversation took place in my office at No. 2. I saw Ito occasionally during 1871. I saw him in 1872 and 1873. I never heard he had a claim against us till the end of last year, when he came to No. 14. He came into the office and brought an interpreter with him. Namekawa was the interpreter. Irwin, Ito, I and Namekawa were present. Ito said he had an account against Walsh, Hall & Co., and asked Irwin to assist him in enforcing his claim. He said if Irwin assisted him he would give him 30 per cent. of what was recovered, and would hold him personally harmless. Mr. Irwin indignantly rejected the proposition, and said he was an honest man. Ito said he had better render him the assistance asked for, and make him his friend; for if he made him his enemy, he would be a devil. Irwin called my attention to Ito's proposition to bribe him. Irwin got up, opened the door, and showed Ito out Irwin repudiated Ito's claim; I did not. Irwin repudiated the claim after the proposition to bribe him was made.

The Court here adjourned till 2 p.m.

Court adjourned till 2 p.m.

On re-assembling,

Mr Dickins commenced his cross-examination of J. M. Smith.

Witness: I do not think I am an interested person in this action. In 1871 and 1872 I was a salaried partner in defendants.' There was no agreement that I did not incur liability. I have been a long time in the East—more than thirty years. I took no active part in the conversations. They were all reported and translated to me and the others present when they took place. One conversation was specially reported to me. It was that in which Ito asked not to be pressed for the payment of the balance. I was in charge of the house at that time. I do not know any special reason why this conversation was specially reported to me. The conversatiou in 1871 took place in the evening. It was an important business and I was asked to be present. I took no notes of what was said. I have only my memory to trust. It was important and so I remember it. I cannot remember all important conversations that have been taken place. The statement made by Ito that I was never present at any interview is incorrect. I do not remember when the acounts were closed. They were interpreted to me as "niboo accounts." I was told by three parties at the time that that was the final settlement of accounts. They admitted that the niboo transactions were closed and that Ito was to take the loss over and that no interest was to be charged. Something was said about the loss, but I did not hear the amount named. I do not remember having seen a profit and loss account. I do not know if defendants have any written statement showing when the partnership ceased. I did not have charge of the books. I knew from Mr. Irwin that Ito owed a balance. I knew Ito asked for time to pay the balance. I was present. I heard it from the interpreter. When Japanese came on important business. I suspended what I was doing to hear what they said. Defendants had a claim against the government. We wanted to be repaid what we had advanced with interest, and for the government to take over the Yoshinden land. I heard nothing of this claim of Ito's till the end of 1874. I must have seen an account bringing ont a balance against Ito. I probably have seen one. I do not remember the date of the termination of the partnership. Mr. Irwin told me when the partnership terminated. At the same time he told me the accounts had been agreed to, probably he told me the amount that was due from Ito.

Re-examined by Mr. Ness.

Witness: I do not remember on what date the accounts were settled. I heard that the partnership had terminated before the meeting about the $481,000. I mean by accounts *niboo* accounts, I have seen book "D" before. I never heard of any rice partnership between Ito and Walsh, Hall & Co. I should certainly have heard of it if there had been one.

Cross-examined by Mr. Dickins: The firm had business. I had charge of the general business of the house. I think some money was lent to Ito on rice *tegatas*. I do not remember an advance of $75,000 to Ito on account of rice, or smaller sums for the same purpose.

Mr. Ness then called.

Lino de Sa, sworn: In 1871 I was book-keeper at Walsh, Hall & Co.'s. I know of large transactions in *niboos* in that year between Ito and Walsh, Hall & Co. (Book "D" shown.) I have seen this book before. I have seen the entries on page 1 before. These figures were arrived at when we all went over the accounts of

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

Ito and Walsh, Hall & Co. Irwin, Benzo, Shoske and I were present. I think this was in the month of November, 1871. Before this I was told by Irwin to draw out a statement of accounts from the ledger. This was the day before we met. The meeting took place in the book-office of defendants. Benzo when he came brought what he called Ito's book. Irwin and Benzo began to examined the ledger, and these books of Ito. They compared them together. Shoske took notes of details. The result of this was that they arrived at balances of 200,000 *rios* and $239,000. These figures represent the actual state of accounts between Ito and Walsh, Hall & Co. (Book "D" shown.) These entries were made a day or two after the settlement of accounts. I saw them at that time. Nothing was said about these balances being fictitious. I could bring out the same balances again from the ledger. I do not know when exactly the partnership terminated. In November, 1871 Irwin told me it had ceased. Sin Coy made some purchases in the exchange transactions. Two of the banks also made purchases. All these transactions were referred to when the accounts were made out. All these transactions appeared in Irwin's memorandum and the ledger.

Cross-examined by Mr Dickins: The balances in D include all transactions up to that date. There were only niboo transactions. The items in the ledger were read over to Benzo. The memoranda contained all the details of each transaction. They were all put down by Mr Irwin, who heard from other people. My entries were made from cheques and compradore orders. The entries in book D were made long after the termination of the partnership.

The Court here adjourned till 10 o'clock on Monday.

JUDICIAL COURT OF KANAGAWA KEN.

Before Mr. KITABATAKE HARAFUSA, President.

Wednesday, 24th Nov. 1875.

Alfred ROPER *vs.* MITSU BISHI MAIL S. S. Co.

This was a claim for $5,320 for alleged breach of agreement and wrongful dismissal.

Defendants in their answer pleaded breach of agreement on part of plaintiff, and disobedience of orders, as justifying them in dismissing him.

Mr Dickins appeared for the plaintiff, and Mr Ness for defendants.

Mr Dickins continued his examination of Alfred Roper.

Witness: I did not write any report to the agent at Shanghai. By command of the agent at Shanghai, I wrote a report of the grounding to the Japanese Consul at Shanghai. I have got a copy. (Produced.) The ship was then afloat and ready to go back to Yokohama. We continued to take in cargo. Capt. Corning was acting as the agent then, but he told me he had resigned. I brought Mr Grosser from Yokohama as a passenger to Shanghai. He was to be chief clerk, and he wrote a detailed account of the whole affair to Mr Krebs, the foreign superintendent at Yedo. Mr Grosser read the account to me before he sent it.

Mr Dickins called for its production.

Mr Ness said he had not seen it or heard of it.

Witness: Mr Grosser sent it by the *Oregonian*, as she was the faster ship.

Mr Ness said that he would produce the letter if it was in existence.

Witness: The contents of the letter were favourable to me. It said that my ship was properly conducted. I arrived at Yokohama on the return voyage on Sunday, 6th of June. I was dismissed on the 8th June. On the 7th June I went to the head office at Tokio. I saw Mr Krebs and Mr Iwasaki. I was asked how the accident happened in the Shanghai river. I said I could give no more information than I had given to the Japanese Consul at Shanghai. Mr Iwasaki said that I appeared to be a very unfortunate man. Mr Krebs asked me to draw a diagram. Did so. I promised to sent from the ship a better one. Both gentlemen shook hands with me, and we parted. I do not remember anything being said about a pilot. I then returned to my ship. On the 8th, about 3 o'clock in the afternoon, I was in my cabin, drawing the diagram now in Court, when I received a letter from the M. B. M. S. S. Co. I opened it, and saw it contained my discharge. Captain Brown of the *Thabor*, was in my cabin at the time. [Discharge produced.] A quarter of an hour after I received my discharge I complied with it under protest. [Produced.] I then received another letter on same day saying my successor would be on board that same day or the next. His name was Capt. Allen Moore. About nine o'clock that night, as I was at dinner on board with some friends, a Japanese brought me a letter and over 3,000 yen to pay the crew off for the previous month. This was six hours after my discharge. All my friends advised me to put the money in the Hongkong Bank, take a receipt for it, and give it to the English Consul. My friends said that then the Mitsu Bishi would have to sue me in the English Court instead of me suing in this Court. I did not do this. I locked it up in the safe. Next day Capt. Moore came and took charge. I gave the money to the English friends clerk, and he paid all the men and officers. Capt. Moore took possession of my cabin, and asked me what the diagram was; I told him. I said I was going to send it to Yedo to the Company. The second mate refused to initial the diagram. Before I left the *Kanagawa Muru* Mr Krebs came on board, and I represented to him how hard it was I should be discharged, after he had been so satisfied the day before. He took hold of my arm, and said, "Oh, the grounding is nothing. It is your dispatch to the Japanese Consul that offended the directors." Three chief officers were sent on board; I was to choose one. I took one, and he turned out to be a drunkard. I took him before the Consul at Shanghai and had him discharged. I received a letter expressing displeasure about it from the Company. [Produced.] [Mitsu Bishi Company's instructions produced.] I have had several conversations with Mr Krebs and Japanese of the M. B. M. S. S. Co. on the subject of my dismissal. They told me that I was more of a Government man than a Mitsu Bishi man. They meant that I thought more of the Government than of the Mitsu Bishi Company. It is not compulsory to take pilots for the Shanghai river. My agreement is silent about pilots. By the sixth clause of my agreement I have full discretionay power over the navigation of my ship (Read.) I did not think it advisable to lower a boat at the lightship. If the pilot had been on board the lightship I would have taken him. I did not think it wise to send a boat to the lightship simply to inquire if there was a pilot on board it. I only saw a common lantern on board it. A "flare up" is the proper pilot signal. During the time I commanded the *Kanagawa Maru* I had trouble with the engines several times. The chief engineer often asked me to stop, or the engines would break down, he said I did not receive instructions always to engage pilots for the Shanghai river. The Company was to find them. Out of disobedience to the Company I never refused to take a pilot. I never intentionally disobeyd the orders of the company. When the *Kanagawa Maru* ran ashore near Black Point, she did not injure herself. Expense was incurred for lighters. The tugs cost 950 taels. It cost the Company more than if the cargo had been discharged in the usual way. I can't say the amount of loss; the accounts did not pass through my hands. I have never acted negligently in the navigation of the *Kanagawa Maru*.

Court adjourned till 9 a.m. on the 29th inst.

THE LIFE OF BUDDHA.*

(*The Saturday Review.*)

Mr. Beal is an ardent student of Chinese Buddhism. Up to the time of the appearance of his work on the travels of Fa-hien, European scholars had studied the doctrines of Sâkya Muni almost entirely through the medium of the Sanskrit or Pali works on the subject. It was reserved for Mr. Beal to disclose from Chinese sources much that has proved to be of great interest, and to furnish a key to difficulties which would probably otherwise long have remained unexplained. Many of the Buddhist sculptures at Sanchi, for instance, were unintelligible until Mr. Beal discovered in Chinese books the descriptions of the scenes which they are intended to portray, and the reader of the early Christian legend of Barlaam and Josephat has, in his work before us, an additional proof of the fact that the incidents in the narrative which are there told as relating to Josephat are no other than events in the life of Buddha.

There are, however, other points in the present work which, as Mr. Beal says in his preface, "naturally arouse curiosity and require examination"; and these are the resemblances which are to be traced between many of the incidents recorded and the events narrated in the Gospels. For example, "the previous existence of Buddhisatwa in heaven, his miraculous incarnation, the songs of the Suddhrasa Devas (angels) at his birth, the events of his early childhood, his temptation in the desert, and his life of continual labour and travel," are all points of agreement with the Gospel narrative; and, were we to trace out further resemblances ob-

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

servable to parts of the apocryphal gospels, we might add very considerably to this list. These similarities are too numerous and too striking to allow us to look upon them as accidental. The question then arises as to the date of the original Sanskrit work from the Chinese version of which Mr. Beal has translated. Of this work, the *Abhinishkramana Sutra*, Mr. Beal considers that several versions have appeared in Chinese, the earliest of which is said by the author of a well-known Chinese Encyclopædia to have been made in the eleventh year of the reign of the Emperor Ming-to of the Han Dynasty (A. D, 69), by the priest Dhu-fa-lan. If this statement could be shown to be correct, a date considerably earlier must be assigned to the Sanskrit original. But the Chinese text of Chu-fa-lan's book has been lost and the only ground therefore on which Mr. Beal founds his belief here expressed is that the work referred to in the Encyclopædia bears the same Chinese title as the version of the *Abhinishkramana Sûtra* made five hundred years later, of which the volume before us is a translation. Of course this is evidence in favour of the theory that Chu-af-lan's work was a translation of the same original, but it does not amount to positive proof. It should, however, be taken in conjunction with the testimony afforded by the supposed date of the Buddhist ruins recently discovered in India.

The narrative begins, like a monkish book of the middle ages, at the beginning of all things, and Buddha is represented as recounting in detail to his faithful disciple, Ananda, the different names of his predecessors. The scene then shifts to the Tusita heaven, where, amid the lamentations of the Devas, it is announced that Bôdhisatwa is about to descend from heaven to be born on earth, "not for the purpose of gaining wealth, or enjoying the pleasures of sense; but . . . simply to give peace and rest to all flesh; and to remove all sorrow and grief from the world," and "to preach the incomparable truth." After due consideration, the family of King Suddhôdana was chosen as that into which Buddha should be born; and thus it came to pass that Queen Mâya, as she slept, dreamed that she saw "a six-tusked white elephant, his head coloured like a ruby, descend through space and enter her right side," and at the same instant Buddha descended from heaven and rested in perfect peace in the side of the Queen. As the time drew near that she should be delivered, she returned to her father's house, and beneath the shadow of a tree in the garden she brought forth her son. Instantly there shone around a marvellous light, while the Devas chaunted in exultation, "All joy be to you, Queen Mâya! rejoice and be glad! for this child you have born is holy," The babe then "forthwith walked seven steps towards each quarter of the horizon; and as he walked at each step there sprang from beneath the earth a lotus flower; and as he looked stedfastly in each direction his mouth uttered these words; first looking towards the East, he said in no childish accents, but, according to the words of the Gâtha, plainly pronounced, 'In all the world I am the very chief; from this day forth my births are finished.'"

Now at this time there dwelt at place above the thirty-three heavens an aged Rishi, called Ashita, who, having heard of the appearance of Bôdhisatwa, went to pay his respects to the babe. Having seen and admired the wondrous child, he addressed the King in these words:—

> Alas, I am old, and stricken in years;
> My time of departure is close at hand;
> Reflecting on this strange meeting at his birth
> I rejoice and yet I am sad!
> Maharaja! greatly shall this redound to the glory of your race!
> What happiness from the birth of this child shall ensue!
> The misery—the wretchedness of men, shall disappear;
> And at this bidding peace and joy shall everywhere flourish.

And he added the prophecy that, if the babe became a recluse, he would be a supreme Buddha. These words ever remained in the recollection of the King, and when Bôhhisatwa grew up to be nineteen years of age he consulted with his ministers as to the best means to prevent the prince from assuming a religious life. Following their advice, he established three separate palaces, where "the prince passed his time in the midst of a hundred thousand most beautiful and accomplished women, enjoying every species of delight, and receiving every service and attention at their hands, whilst these, adorned with every kind of ornament of gold, silver, and precious stones, conspired to amuse and gratify him with music and dancing." Thus the King hoped to banish from his mind all knowledge of sorrow and suffering, and he might have been successful had not the prince's good genius, the Devaputra T'so Ping, exerted himself to snatch him from the vices which were darkening his mind and deluding his senses. With this object T'so Ping miraculously caused the songs of the ladies of the hareem to encourage in the prince thoughts of Nirvana instead of fostering in him lustful desires, and to suggest to him the idea of passing beyond the garden walls into the outer world. The enchantment soon worked its end, and the prince ordered his charioteer to make ready his chariot. The King in the meantime heard of his son's intention, and straightway gave orders that the city should be thoroughly swept and garnished, and that everything offensive either to sight or smell should be banished from view, as well as any object that could suggest to the prince the idea of old age, disease, or death. But here again T'so Ping interfered to defeat the scheme of the King. As the prince drove through the streets of the city his eyes rested upon the form of an old man, whose shrivelled skin, bald head, empty jaws, and bent body excited his suprise and compassion. "What human form is this," he cried, "so miserable and so shocking to behold?" "Great prince," replied the charioteer, "this man is what is called 'old,'" and he then went on to explain that old age with its infirmities is the lot of all those who live out life's span. The incident at first shocked the prince, who returned to the palace saddened and dismayed, but the increased means of indulgences and objects of desire which the King threw in his way soon destroyed the effect of his adventure, and he again gave himself up to the enjoyment of carnal pleasures and pursuits.

Again T'so Ping caused the prince to drive abroad, and though strict directions were repeated by the King for the cleansing and purifying of the city, yet it so happened that a sick man, pale and miserable, "with cramped limbs and swollen body," obtruded himself on the notice of the prince. Again the prince had recourse to his charioteer for information as to this new experience, and when he learnt that sickness and ill-health were common to all living creatures, he returned to the palace and "sat pensively and sadly reflecting on the truth which he had learnt." After a while he again mounted his chariot and drove into the city. This time he met a corpse being carried to the grave, while weeping women, tearing their hair and beating their breasts, followed on either side of the bier. At first he wondered with amazement why the man should "lie there on his bed, covered with strange-coloured garments," but when the light dawned upon him, and when, in reply to the question, "Must I also die?" he was told that his "sacred body must come to this, and die," he returned to his palace and sad down silently to ponder on death and the impermanency of all things. It was necessary now that, having had experience of the miseries flesh is heir to, he should learn how to overcome them; and so, on his next excursion into the city, he met a Shaman, or begging priest, who expatiated to him on the virtue of regarding all objects of sense as transitory, of thinking no evil and of doing none, of doing good to all, and of thus finding deliverance for himself and of giving life to all mankind. The prince was so impressed with these lofty aims that he descended from his chariot and bowed himself to the ground before the Shaman, and then, returning to the palace, he announced to the King his intention to become a mendicant and to seek Nirvana. This only made the King redouble his efforts to keep his son within the palace walls. The ladies of the hareem were urged to use every wile to engross the prince in pleasure. But vain were their endeavours; the prince sat amongst them unmoved, and that very night, while all save himself slept, he rose, and, quietly mounting his favourite steed Kantaka, passed out of the city. As he rode through the streets, Mara Râja, the cruel and malignant, fearing the consequence of his becoming a recluse, caused by his spiritual power all sorts of strange shrieks and cries to be heard in the air, and all kinds of weird and horrible sights to meet him in the way. But the prince was not to be daunted, and when arrived at a safe distance from the palace, he got off his horse, and having cast from him his jewels and ornaments and exchanged his princely robe for the garment of a passing hunter, he assumed the life of a recluse.

But his onward path towards a perfect state of enlightenment was strewen with difficulties. He had to overcome the entreaties of his father to return to the palace; he had to match himself in wordy disputes against trained casuists belonging to other and corrupt forms of faith; he had to endure fasting accompanied by temptations "to the commission of some small sin," he had to withstand the enticements to sensual vice held out to him in tempting array by Mara Râja, the cruel and malignant. Out of all these various grades of perfect self-abstraction, and so having put away for ever all remnants of selfishness and evil desire, he attained to supreme wisdom. His lustful heart was destroyed, and with it all sources of sorrow. From henceforth his life became that of a teacher, and with many parables, not a few of which appear in disguised forms in the story books of Eastern and Western lands, he expounded his doctrines to his followers and disciples.

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

The Romantic Legend of Sakya Buddha appeals to a large class of readers. Archæologists, ethnologists, mythologists, and the ordinary readers of books will find in its pages much interesting matter and much valuable information. Of the accuracy of Mr. Beal's translation we are unable to speak from personal knowledge, since we are not acquainted with the original; but having compared for review other translations of Mr. Beal from the Chinese, we may fairly apply the doctline *ex uno disce omnes* to this one, and so doing we have no hesitation in proclaiming this to be a faithful version of a very interesting book.

THE RECENT GOETHE CELEBRATION.

(The Nation.)

The twenty-eighth of August last merits more than a passing notice, for on that day was celebrated the anniversary of Goethe's birth. The proceedings were conducted under the auspices of the Goethe Club, and culminated in Mr. Bryant's address and Bayard Taylor's ode. Serious exceptions must be taken to some of Mr. Bryant's judgments. While occasional slips in dealing with second-rate characters are venial, any decided error, whether of fact or judgment, in the discussion of a mastermind calls for prompt correction. Whoever undertakes to speak of a Shakspere, a Dante, or a Goethe, must be held to the strictest account.

In Mr. Bryant's address occurs the following passage:

"In this country of free institutions we cannot make Goethe our model in politics. It is urged against him, with too much show of reason, that, possessing a power over public opinion which would have given effect to his slightest remonstrance against absolute government, he yet acquiesced in its wrongs and consented to become one of those who profited by them. Those who take an unfriendly view of his character, complain that he did not care to make men happier, so long as his own condition was fortunate and agreeable; nor better, so long as their moral condition, whatever it might be, ministered to his convenience. He did not admit the truth of this accusation, but claimed that he had labored during a long life in overcoming pernicious prejudices and narrow views among his countrymen, in elevating and purifying the taste of the community, and that his real offence was that he would have nothing to do with party politics. I do not care on this occasion to discuss the question whether this was a satisfactory answer, and willingly draw a veil over the circumstances which might lead to an unfavorable conclusion."

We quote the passage *in extenso*, because it bears upon a sore point in German literary history. With all due respect to Mr. Bryant, it must be said that such views are *saugrenu*, and have little foundation. They were exploded long ago; they are now to be found only in school-books written by men who continue to look upon Gervinus as the model of an historian and literary critic. They sprang from a radical misunderstanding of the course of German history, and were prepetuated by the so-called German democrats, who could find no good in anything that did not fall in directly with their own narrow views. They have been belied by the recent sudden rise of Prussia to power and by the unification of Germany under a monarchical government. It is to be observed, in the first place, that Goethe *never* possessed that supreme influence over Public opinion which has been ascribed to him by those whom Mr. Bryant has followed. He was merely the personal friend and privy councillor of the ruler of an insignificant duchy. His endeavors to influence merely the personal conduct of Carl August were not always successful. The duke, as the student of German history knows, had a decided will of his own. As to influencing him in political measures, Goethe felt that such was not his vocation. His field was plainly marked out for him: it was that of art, science, and letters. All that he could hope to accomplish outside of this was to keep alive in the mind of Carl August a love of humanity, a desire to be the beneficent ruler of his subjects. Herein he succeeded admirably. Many of the reforms introduced by the duke were suggested by Goethe, and especially the humane spirit which marked the Weimar government was due to the example and the silent, indirect teachings of Goethe and his associates. If we go beyond the limits of the duchy, we shall find that Goethe's influence upon the political action of Germany at large was null. It would have been null whatever course he might have adoped. Will it be necessary to remind the student that in those days there was no press in Germany, no organ of public opinion, no people even? If we turn to Treitschke's Leipzig oration of 1863, we may read: "When Scharnhorst (Goethe's contemporary) was young, a German king had to forbid his peasants kneeling and kissing the coatsleeves of the officials." One may see almost as much, even at the present day, in the rural districts of Austria. The sober-minded historian shows us the German peasantry of the eighteenth and the beginning of the nineteenth century as a degraded, servile, ignorant herd. Yet democratic doctrinaires of '48 would have us pronounce Goethe's life a failure, because he could not bring himself to look upon popular sovereignty as rightful, or even expedient. Goethe has left on record his opinion in the second part of 'Wilhelm Meister': "We need in our tongue a word which, like the correlative terms *Kindheit* and *Kind*, shall express the relation between *Volkheit* and *Volk*. The educator must listen to the *Kindheit* not to the *Kind*. The lawgiver and ruler must listen to the *Volkheit* not the *Volk*. For the former, the *Volkheit*, is always the same—is reasonable, constant, pure, and true. The latter, the *Volk*, for sheer wishing, knows not what it wishes. And in this sense the law can and should be the general expression of the will of the *Volkheit*, a will which the crowd never expresses but which the sensible man perceives, which the reasonable man knows how to gratify, and the good man takes pleasure in gratifying." Does the entire body of German political literature contain a passage more applicable to the state of affairs prior to 1866 and 1871? All Germany—that is, the *Volkheit*—desired unity at home and dignity abroad; but the German *Volk*, to give Goethe's words in the original *wusste nicht vor lauter Wollen was es wollte*, until its great political teacher arose and gave it a bitter but wholesome lesson.

In estimating Goethe, we must bear in mind that we have to do with a German and with German affairs, and that there is no analogy between the American Revolution and the German revival. The former was the natural process whereby an insect shakes off its effete shell, the latter has been the tardy resuscitation of a patient dragged from the depths of the waters of bitterness. On the one hand, we have the uprising of a hardy, self-reliant, shrewd, and enlightened set of communities long accustomed to self-government; on the other, the regeneration of a people from above downwards. The lower classes in Germany are now possessed of freedom and security, and have a direct voice in the government; but the impulse to the change did not come from themselves, it came from the upper or the educated classes. In Goethe's day, at least until he had passed his prime, the change would have been a chimera. It was first necessary to create a certain community of interest and sentiment among the various German states, a something around which the Bavarians, Swabians, Hessians, Saxons, and Prussians might rally as their common property, and in so doing recognize one another as brethren. This bond of union was German culture, German literature and science. Goethe was not to blame that culture had to come first and unity and freedom afterwards. This order of national development resulted from causes which had operated long before Goethe's birth: we mean, of course, the Reformation, and especially the Thirty Years' War. Mr. Bryant, it is true, cites Goethe's reply to to the unjust attacks of his contemporaries, but does not commit himself to an opinion. The best thinkers in Germany are, however, now ready to admit that Goethe's course in political matters was not only right, but the only right, the only possible one for him under the circumstances. Once for all, we repeat it, politics was not his vocation, and had he entered upon it, he would have wasted his time. The life of Stein elucidates this point. Stein was a born statesman, endowed by nature with every gift for administering the affairs of a great nation. Yet Stein failed, although he had an influence over political opinion such as Goethe never possessed; he failed signally, because the circumstances were against him. Some of his legislative reforms still subsist as the basis of municipal organization in Prussia to this day, but his brightest dreams, his most ardent hopes were scattered to the winds. Would Goethe, without Stein's talents, have succeeded better? Would he have made any head at all against such men as Metternich, Nesselrode, Talleyrand, and Wellington? It is puerile to speculate upon the rôle that a poet-philosopher must have played amid the international jugglery of the Napoleonic era.

DINNER PARTIES.

(The Saturday Review.)

In an age of scientific advance it is curious to note how each branch of knowledge has been developed from the earliest efforts of study. It is a pity that the science of dining, upon which it has been held by many that the success of all other sciences depends, does not in the act of progression leave a record of the various steps in its onward career, and that we are therefore reduced to speculation concerning its most remote forms and their course of improvement. In untutored races the idea of courtesy is knit closely with that of eating, and the friendship of one man for another is measured

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

by the quantity of food transferred from his fingers to the other's mouth. In lonely places where food is hard to come at, its bestowal might be the best possible form that courtesy could assume, and quantity would be a more important consideration than quality. As civilivation grew, and the conditions of life became more assured, one would expect that the ancient method of expressing regard for one's fellow-men would become modified according to the altered circumstances of living. Friendship would still be implied by giving food and drink to one's neighbours, but that would cease to be the highest form of social intercourse, and would become a pleasant adjunct of meeting, instead of being its main object. When it was no longer difficult to provide a sufficient quantity for his guests, a host would devote his attention to an artistic view of his entertainment, and arrange it so as to lend a touch of poetry to the material processes of eating and drinking.

The first great step in this direction may be taken to have been the introduction of servants, plates and knives and forks, as middle terms between host and guest. In the present day the spread of wealth, and the consequent conversion of what were luxuries into things of daily use, have opened an almost boundless field to the possibilities of dining—a field, however, which has hardly been cultivated to the utmost. No doubt a great deal has been done in the last few years; the introduction, for instance of the Russian dinner has lifted a vast burden from the shoulders of hosts in allowing them to mix in conversation with their guests without having to devote their attention at the same time to the troublesome task of carving. And, in spite of the good old-fashioned people who like to see their dinner before them, and like that dinner to be a heavy joint, it will be generally conceded that the improvement in this respect is considerable. But the advance of excellence in other matters has hardly kept pace with the advance of knowledge. Dinners are still disfigured by a useless profusion, an absurd piling together of dishes out of which by skilful arrangement an admirable dinner might be constructed, and an oppressive length, that come from vanity and leads to vexation of spirit. That the barbarous magnificence of private English dinners is not caused, as was that of Roman dinners, by greediness may be fairly assumed from the fact that no single guest ever makes acquaintance with more than half the dishes offered him. It may no doubt be urged on the other side that it is well to provide a variety from which judicious selection may be made, but amid an excessive variety the will is puzzled and the judgment confused.

Superfluous variety causes the inordinate duration which is ruinous to the well-being of dinners. If one is fortunate enough to have a pleasant companion during dinner the edge of even the brightest conversation is liable to be dulled by being employed too long. The torment experienced under the same circumstances in the case of ungenial companionship most people have probably experienced. It is bad enough if, having opened up subject after subject and produced nothing better than monosyllabic answers, you are forced to subside into a dreary silence, and to concentrate your faculties upon making the best combination possible out of the heterogeneous materials for dinner set before you. A yet worse thing than this, however, may befall you. It may be that the lady whom you are privileged to take into dinner imagines herself to be charged with a mission, and has cut short all endeavours on your part at conversation, not from shyness or ignorance, but with a deliberate purpose. If this be so, she will follow the course which has been seen to be adopted by a distributor of tracts in a railway-carriage, who, observing a nervous-looking boy occupied in reading a novel, begged for permission to glance at his book for a moment, and immediately filled its place with a selection from his own provision of literature. In like manner the woman with a mission will carefully exhaust all her neighbour's resources, and, when he is completely defenceless, will attack him with all her eloquence. It is useless for him to hint at the outset that his opinions upon the subject which engrosses her have been formed long ago, and are not likely to be altered. Herein she will only discern a greater possible glory to be gained by bringing him over to her views. In this case the constant handing round of endless dishes which breaks in disagreeably upon a pleasant conversation may become a blessing by giving the victim at least a temporary escape. But he may not be able to avail himself of any such chance, and then he will be in a parlous state. He will be compelled not only to listen, which is bad, but to answer, which is worse, either until the company is broken up, or until he is driven by sheer despair and weariness to give such kind of assent to the propositions offered as will satisfy their suggestor. If he is so far overmastered by fatigue as to take this step, to the sufferings alrady inflicted upon him will be added the self-inflicted one of an uneasy conscience.

For the ill-advised assortment of guests which leads to such miseries as these the rules of etiquette and precedence are partly responsible, as it may be impossible without outraging these to place together the persons among the company whose thoughts and speech would harmonize most happily. And it is to be observed that in the matter of assorting guests we have made an advance upon the habits of our forefathers, who considered that if the dinner was sufficient it mattered little in whose immediate company each guest should eat it. A little more attention, however, paid to making each person acquainted with his fellow's tastes or specialities would make a great difference in general comfort. It would be easy, for instance, to take such precautions that one sitting next to a zealous Roman Catholic should avoid discussion of the Vatican decrees, and that the neighbour of an unsuccessful author should make no comment upon the indiscriminate habit of writing. It would of course involve endless trouble if a descriptive catalogue of the other invited guests were sent out with each invitation. But, considering that the extent of modern dinner-tables renders anything like general conversation impossible, it might be worth while to consider a suggestion made in Walker's *Original*—a book, or rather a collection of papers, which, in spite of a new edition, is too little known in the present day. The writer of that work, who devoted not a little consideration and skill to his essays "On the Art of Dining," suggested that at dinners where there were so many guests that they were unable to mix in common talk, and conversed in knots of three or four, the practice which was then beginning, and has since become common, at ball suppers of providing a quantity of small tables, in place of a single long one, should be turned to account. If this were done, and if the people destined to come in contact at each table were carefully assorted, it would be no great trouble to inform each one of what companions he might expect; and then the meaningless phrase "To meet So-and-So" appended to evening invitations might acquire a special value with reference to dinners. The privilege of meeting distinguished personages conveyed by this phrase usually amounts to a gracious extension from the host to the guest of the common rights of humanity. For, unless the guest also is a distinguished personage, he will probably gain no more by the favour thus accorded to him than he might get for himself any day with no more pains in a public thoroughfare. The person who is the central point of the party is certain to be beset by a crowd of people composed, in the first place, of those who like and admire him; in the second, of those who like and admire the fashion of the day which makes an idol of him. And there will be great difficulties in the way of piercing this complicated crowd so as to obtain any better acquaintance with its object than might be got by watching him as he passed in the street, or even studying his photograph in the shop windows. To a man of a sensitive temperament, besides the physical obstacles presented by such a state of things, the fear of appearing forward or pushing will arise; while watching for an opportunity of doing that which he is invited to do, he will weary of things which he is forced to watch; and having gone with a strong desire to become acquainted with the person whom he is asked to meet he may go away with a determination never to make such an attempt again. And, further, his gradual conversion from pleasant expectation to disappointed ill humour will very likely take the shape of unjust rancour against the former object of his devotion, who is probably fully as much the victim of circumstances as himself. To avoid the occurrence of such mishaps as this, at least at dinners, by some modification of Walker's idea seems, if not easy, at any rate possible. It is true that telling off two or three favoured people to be the companions during dinner of one person with whom all desire to be in company would give rise to great difficulties in the direction of jealousy and other evil passions; but that is equally true of all innovations. There is also this to be said in favour of the present system, that, if one really good talker is secured, he may carry upon his shoulders the whole weight of any dinner of ordinary size and of ordinary want of arrangement. But if that one good talker fails at the last momont, what becomes of the other components of the feast, whose province it is to listen, and who are left without anything to listen to? The important part of the performance cannot well be understudied in case of a hitch, and the affair has to run its course without even the resource of some one kindly volunteering to read the part. Disappointment and discontent will set in at the first news of failure, and, unless the manager of the entertainment is gifted with unusual resources, will overshadow the whole night. A sullen gloom will prevail, expressed

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

in a drooping half-hearted attempt at talk which is far more depressing than the deepest silence, until every one will long for some such accident as the fall of the hangings at Nasidienus' dinner to break the terrible monotony.

Besides the inherent defects in a typical modern dinner, some of which have been here touched upon, it may be observed that the late hour at which dinners take place is likely to be prejudicial to their success. People should come to a feast with minds and bodies in such a state that they require only a slight stimulant of cheerfulness and refreshment to arouse them into full life. But when one considers the amount of social hard work got through in the course of a day in the season by women, one cannot think it probable that they at least should arrive at their hardly-earned dinner in this desirable condition. Every hour in the day has its appointed task, and there is probably more of duty than pleasure in leaving the coolness of the park to make one item in a crowd around a dinnertable. As far as men are concerned, the fashion of entertaining at breakfast may possibly give to some extent the opportunity for social intercourse which dinner seldom affords. But while there are some happy men who are invariably fresh and unwearied at breakfast, there are others to whom it is the most trying time of the day, who feel unfitted to cope with society at that early time, and who find it as difficult to talk as players do to act in broad daylight. Also men's business and desires are apt to spare them little time to devote to society in any form during the morning. Thus, unless the French method of getting one's morning work over by eleven or twelve, and then having an interval, could be adopted, there must always be considerable difficulties in the way of breakfast parties. But there is in them this advantage at least, that a man who sets himself to collect a party at breakfast is less under the influence of convention than one who gives a dinner, and is therefore likely to invite his guests more for their individual qualities than to complete the furniture of his table.

Shipping Intelligence.

ARRIVALS.

Nov. 21, *Ukraine*, American barque, Melcher, 682, from Nagasaki, Nov. 13, Coal, to P. M. S. S. Co.

Nov. 22, *Nevada*, American steamer, Williams, 2,145, from Shanghai and ports, Nov. 15, Mails and General, to P. M. S. S. Co.

THE FOLLOWING

IS AN

EXTRACT FROM A LETTER

dated 15th May, 1872, from an old inhabitant of Horningsham, near Warminster, Wilts:—

"I must also beg to say that your Pills are an excellent medicine for me, and I certainly do enjoy good health, sound sleep and a good appetite; this is owing to taking your Pills. I am 78 years old.

"Remaining, Gentlemen, yours very respectfully,

To the Proprietors of L. S.

NORTON'S CAMOMILE PILLS, London.

FRAUD.

On the 27th June, 1866, MOTEEWALLAH, a Printer, was convicted at the Supreme Court, Calcutta, of counterfeiting the

LABELS

Of Messrs. Crosse & Blackwell,

London, and was sentenced by Mr. Justice Phear to

TWO YEARS RIGOROUS IMPRISONMENT:

And on the 30th of the same month, for

SELLING SPURIOUS ARTICLES

bearing Labels in imitation of Messrs. CROSSE & BLACKWELL'S SHAIK BACHOO was sentenced, by the Suburban Magistrate at Sealdah, to

TWO YEARS RIGOROUS IMPRISONMENT.

CAUTION.—Any one *selling spurious oilmen's stores*, under Crosse & Blackwell's name, will be liable to the same punishment, and will be vigorously prosecuted. Purchasers are recommended to examine all goods carefully upon taking delivery of them, and to destroy all bottles and jars when emptied. The GENUINE Manufactures, the corks of which are all branded with Crosse & Blackwell's name, may be had from EVERY RESPECTABLE DEALER in India.

COMMERCIAL INTELLIGENCE.

(The following report appeared in our mail issue of the 25th inst. The few changes of importance in quotations which have occurred in the interval are noted below.)

IMPORTS.

Cotton.—During the earlier portion of the past fortnight a moderate demand existed for *Grey Shirtings* and *Yarns*; latterly however a very dull tone prevails in the market and prices are generally lower. The only exceptions are 28/32 good Water Twist and good makes of 7 lb. Shirtings, which are readily saleable at a slight advance.

Grey Shirtings:—				White Shirtings:—			
7 lbs.	38½ yds. 39 in. per pce....	$1.97½	to $2.20	60 to 64 reed 40 yds. 35 in. nom. per pce....	2.20	to	2.40

,, No. 4 Kook-fah... ... ... ,, ...	5.20	to	5 70	Kerosine Oil... ... ...per case...	2.60		

EXPORTS.

Silk.—Under the pressure of unfavorable tidings from the European markets, prices which we reported on the 11th inst. as tending downwards have receded $10 to $20 since that date. Settlements are 750 bales of Hanks and 150 of Oshiu leaving a stock of 1,400 bales.

The shipments of the fortnight are 929 bales making the total export since 1st July 8,005 bales against 5,878 last year for the corresponding period.

Silk-worm's eggs.—Total arrivals since the beginning of the season are 812,000 cards, and total settlements about 700,000 cards against 1,300,000 last year at the same date. Prices have been falling steadily; annual Greens are now offered at $0.05.

		At Exchange 4s. 1¼ in London.	*At Exchange 5.22 at 6 m.s. in Lyons.*		*At Exchange 4s. 1¼ in London.*	*At Exchange 5.22 at 6 m.s. in Lyons.*

Inferior	No. 4 & 5	$360 to 380	13s. 10d. to 14s. 6d. frs. 38 to 40			

Tea.—For the past fortnight business in this produce has been dull and spiritless; operations being chiefly confined to two or three buyers. Prices have ruled very irregularly, "good medium" ranging from $27 to $30 per picul, but no really desirable standard parcels are obtainable under $29. Fine grades have also shewn weakness and "Finest" and "Choice" are also lower, and it is likely that fuller supplies of these latter grades will be forced on the market in the ensuing month.

Settlements for the fortnight amount to 3,500 piculs and arrivals to about 4,700 piculs. Stocks here are tolerably ample and likely soon to be further augmented.

Our report for the season from this and Kobe, including the cargo of the *Jessie Jamieson*, (ready for sea) amounts to 19,200,000 lbs. to which the cargo of the Mail strs. *Alaska*, and the *Fleetwing*, expected from Kobe to fill up here, will add at least 800,000 lbs. so that by an early date in December, we shall have at least 20,000,000 lbs. Tea afloat for the United States.

Freight for New York is nominally £1.15.

Common	$16.00	to	19.00	Fine	$31.00	to	34.00
Good Common	20.00	to	23 00	Finest	$36.00	to	38.00
Medium	24.00	to	26.00	Choice	$40 .00	upwards	
Good Medium	27.00	to	30.00			[nominal.	

EXCHANGE AND BULLION.

Exchange.—The business of the past fortnight has been again dull with drooping rates and ready buyers for the few Private Bills offering; the demand for Bank Paper has also been smaller than usual.

Gold Yen have remained pretty firm at about par.

Rates close as follows:—

STERLING—Bank 6 months' sight.....	4s. 1d.	ON HONGKONG—Bank sight.....	par.

THE GREATEST

WONDER OF MODERN TIMES!

HOLLOWAY'S PILLS.

PERSONS suffering from weak or debilitated constitutions will discover that by the use of this wonderful medicine there is "Health for all." The blood is the fountain of life, and its purity can be maintained by the use of these Pills.

SIR SAMUEL BAKER,

in his work entitled "The Nile Tributaries in Abyssinia," says, "I "ordered the dragoman Mahomet to inform the Fakey that I was a "Doctor, and that I had the best medicines at the service of the "sick, with advice gratis. In a short time I had many applicants, "to whom I served out a quantity of Holloway's Pills. These are "most useful to an explorer, as possessing unmistakable purgative "properties they create an undeniable effect upon the patient, which "satisfies him of their value."

SIMPLE, SAFE AND CERTAIN!

HOLLOWAY'S OINTMENT

Is a certain remedy for bad legs, bad breasts, and ulcerations of all kinds. It acts miraculously in healing ulcerations, curing skin diseases, and in arresting and subduing all inflammations.

MR. J. T. COOPER,

in his account of his extraordinary travels in China, published in 1871, says—"I had with me a quantity of Holloway's Ointment. I "gave some to the people, and nothing could exceed their gratitude; "and, in consequence, milk, fowls, butter, and horse-feed poured "in upon us, until at last a tea-spoonful of Ointment was worth a "fowl and any quantity of peas, and the demand became so great "that I was obliged to lock up the small remaining stock"

Sold by all Chemists and Medicine Vendors throughout the World.

May 17th, 1873. 6m.

ASTHMA AND

CHRONIC BRONCHITIS.

The most effectual remedy will be found to be

DATURA TATULA,

prepared in all forms, for smoking and inhalation, by SAVORY & MOORE, 143, New Bond-street, London, and sold by them, and all Chemists and Storekeepers throughout the World.

June 12, 1875. 1f. 26ins.

THE

Japan Weekly Mail.

A POLITICAL, COMMERCIAL, AND LITERARY JOURNAL.

VOL. VI.—No. 49.] YOKOHAMA, SATURDAY, DECEMBER, 4, 1875. [PRICE $24 PER ANNUM.

TO SUBSCRIBERS.

SUBSCRIBERS at a distance whose period of subscription may have elapsed, are informed that their papers will be addressed and charged to them *until countermanded.* This rule has been found necessary in order to avoid the inconvenience of an abrupt stoppage of the paper which might result from an omission to renew.

It is requested that notice of the intention to discontinue a subscription be so given as to reach Yokohama *before* the date of its effluxion.

NOTICE.

ON and after the 1st of July, Notices of Births, Marriages and Deaths will be charged $1 each insertion.

Such Notices cannot be inserted in this journal unless endorsed with the name and address of the person by whom they are sent.

Yokohama, 25th June, 1874.

DEATHS.

At the Imperial College of Engineering, Yedo, on the 26th inst., JOHN DUNCAN FERGUSON, the beloved son of Henry and Marie Dyer, aged 4 months and 14 days.

Notes of the Week.

There are some rather disturbing rumours abroad, of which, however, it is very difficult to estimate the true value. One of our translations hints somewhat darkly at disaffection in the interior, and speaks more definitely of numerously attended meetings of the *kadzoku* to discuss the policy of the Government—doubtless that part of it which affects their incomes. Of course this is the real question of the day, nor can its gravity possibly be overrated. The expenditure of the country has for some years gone on at a greater rate than the national strength can bear, and a determined effort is being made to reduce it in every direction. The aggregate of the small economies is something, but not very much—it is astonishing in how many directions reductions must be made before a million of dollars can be saved—and it is obvious that some great organic measure must be passed which will cut off at one stroke many millions of expenditure. Everything points towards the incomes of the *samurai* as the spot on which the blow will fall, and it is not unnatural that they should be extremely anxious, if not discontented, at the prospect. But they have had a long innings, and nothing can be more clear than that the immense burden they have been to the country has made and kept it miserably poor. Of course there are certain claims which cannot possibly be repudiated, and the obligations to those who surrendered their lands at the time of the Restoration, on the faith of promises that a certain proportion of the revenues arising from those lands should be reserved for them, are of a very binding and sacred nature. But there is a vast idle class whose claims are of a far more equivocal nature, and whose support, if transferred from the labour of others to their own labour, would have the effect of converting so much *minus* into so much *plus* quantity and putting it on to the other side of the equation. No foreigner can touch this question without a strong feeling of diffidence, or seeing that there is here a divided duty; on the one hand, the recognition of claims possessing some undoubtedly solid foundation, and, on the other, a conviction that the welfare of the whole country is more or less involved in placing those claims on an altogether new footing, or even denying some of them *in toto*, on the general ground of *salus populi suprema lex.* Other nations have at times been forced into measures of this nature, and the Japanese must prepare themselves to encounter individual sacrifices which the preservation of the country may render necessary. Few foreigners, meanwhile, are aware of the vast number of the sons of the gentry of this country who are now earning their livelihood by menial employments, and this is an extremely hard fate, both for parents and children. Nothing, too, is more remarkable than the cheerfulness with which, as a general rule, these severe trials are borne. Poverty is hard enough to those who have been accustomed to ease, if not to superfluity. But it is far harder to face a decline in social status, to peddle for small wares behind a very humble counter of their own or another's, to brush the foreigner's coat or black his boots. Yet much of all this has been borne, and is still being borne, by thousands, from a conviction that the revolution which necessitated it was for the good of the country, and there is much of true heroism in the spirit with which the trial has been faced. Nor can it be doubted that an ardent, unquenchable desire for knowledge, if not always for its own sake, still for the sake of the power which it brings, lies at the root of many of the sacrifices now being made by Japanese youths. To be with the foreigner, to learn his language and his ways, to read his books, and to extract the secrets of that power which he wields, is the ambition of many a youth and the cause of his present position, whose father ten years ago would almost sooner have killed his boy than seen him so circumstanced.

It is but last week that we drew attention to the recently issued first calendar of the Tokio University, and it is now our pleasing duty to record another event, even more interesting, connected with the educational movement in the country. On Monday last the Empress, attended by the Minister of the Interior and various members of the Household, presided over the opening of the Tokiô Normal School for girls. An account of the ceremony will be found elsewhere in our columns, translated from one of the native papers, as well as one from a foreign hand, and we venture to think that though there may have been occasions during the present reign characterized by more imposing ceremonial, nothing of happier augury or of greater interest has occurred since the Restoration. Most admirable in its language and spirit is the congratulatory address of the Superintendent of the School, Mr. Nakamura Masanawo. It alludes to the past condition of women in this country in terms equally free from unnecessary depreciation and unwarranted satisfaction, and concludes with an expression of hope so earnest and excellent that we cannot refrain from transcribing the terms in which it is couched.

"Our earnest desire," he said, "is that those who may in after time complete their education here may become virtuous women, and so assist their husbands; virtuous mothers, and so instruct their children; and that by giving birth to and rearing up a worthy population our country may become a prosperous and tranquil land."

And if, leaving our accustomed office of censors, we turn courtiers for once, the occasion may surely be pleaded to justify us. We bow with all due respect to the illustrious lady who has made this important work specially her own—last year by her munificence, this year by her presence. The Empress may be assured that the account of the simple and unostentatious, yet impressive, ceremony of last Monday will be read with singular interest both in Europe and America, and that her gracious words will find an echo in

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

the hearts of many who must ever remain strangers to herself and her people, yet who regard the progress of this Empire with an interest as unceasing as it is friendly. We trust that as Her Majesty has constituted herself the Patroness and moving spirit of this institution, she will be long preserved to maintain a lively and watchful interest in its welfare, and may have the gratification of seeing it send out both teachers and pupils worthy of this inauguratory effort to give new and higher life to the women of Japan.

We seem to have been strangely misunderstood by the writer in the *Herald* on whose article, speculating upon the probability of Russia swallowing up Japan, we made a note in our issue of last week. There really is no trace in our note of the probability in Russia of any such revolution as he imagines we hope for or apprehend. We certainly said that were the Rusian Press freed for a single day, a burst of discontent and other destructive forces would issue from it which would surprise many Russians, and we still have no doubt whatever of the truth of this. But we are perfectly well aware of the strength of the vessel which contains these forces, and are certain that they are wholly inedequate to produce revolution in the Empire. If the writer who forces so strangely upon our words a meaning which never existed in our mind while writing them, will turn to the *Pall Mall Gazette* of the 15th October, which came into our hands after our note of last week had appeared in print, he will see, in an article entitled The Social Condition of Russia, this whole question shortly but very ably treated, and full reasons given why the communistic principles to which we chiefly referred as destructive agencies, are so common in Russia, springing, as they have done, from the terms on which the former serfs held their lands. They were actually peasant proprietors massed in villages, their holdings being owned and cultivated in common by large bodies of men, no one of whom could become much richer than the others because his farm was part of a tract which was periodically re-divided. It is no wonder that communistic principles should be very strong among men brought up on customs of this nature. They are now, too, largely emancipated from the control of the aristocracy, and some time back they were allowed a large amount of liberty to express themselves freely through the press. But, as in other countries we could name, the Government has been forced to restrict this liberty, not because it had anything to fear for its own safety, but because the licence of the Press complicated the relations of Russia with other Governments, and even forced it unwillingly into severe measures, as regards part of its own dominions, which but for this licence would have been unnecessary. The nihilistic doctrines, too, of so many of the educated or half educated Russian middle classes are disintegrating forces, especially to the foundations of an arbitrary form of government. Whatever may be their origin or nature, the tendency of these doctrines is certainly to loosen the cement of authority, and it is unquestionable that the governing class in Russia regards them with anxiety and displeasure. We are also persuaded that Russia is more or less in danger from such an immense diffusion of her forces of government as these Central Asian conquests demand, and all these things seem to us to combine with other causes to render Japan perfectly safe from any danger of absorption by Russia. But we never dreamed of Russian revolution, and quite grant that it is about as probable as that the Fenians should dethrone the Queen and take possession of the Houses of Parliament. We shall frankly acknowledge, however, that we write without any strong convictions upon the whole subject. It is one on which Englishmen generally are more ignorant than they ought to be, and we do not profess to know more of it than our neighbours.

The Corean question seems to have revived in Tokio, and there is not so much assurance in the public mind as there was a fortnight back that some steps of a serious nature are not contemplated in that direction. One of the native papers says rather mysteriously that "one of the *Sanghi* towards whom public attention has been but little directed of late," is to be chosen as an Envoy to Corea, and leaves its readers to guess who this may be. It is easy to name the men who obviously cannot be spared at this moment, so that the field of enquiry is narrowed down to two or three at the outside available for the mission. One of our translations this week deals with the whole question, though in a somewhat unsatisfactory manner, and what with the writer's emotions of one kind or the other, it is not easy to gather much from his words, except, indeed, that he is a somewhat impulsive character who hops alternately on the two legs of his regrets and his fears.

On Thursday last Mr. Dickins, Counsel for the Prosecutor, intimated his intention to retire from the case of Ito Hachibei *versus* Walsh Hall & Co., now *sub judice* in the United States Consular Court. The impossibility of compelling the attendance of an essential witness had, Mr. Dickins said, decided him to take this step with which his client had been made duly acquainted. On the representation of the Consul-General that his retirement at the present advanced stage of the suit would greatly inconvenience all who were concerned, Mr. Dickins consented to reconsider his decision and to make his intention known to the Court on Monday morning next.

We learn that a large importation of cartridges on Government account was made by the last Pacific Mail steamer.

The *Hochi Shimbun* of this day revives the rumour of the intended purchase of the Yokohama and Yedo Railway by a number of noblemen. Uwajima, Inshu and seventeen or eighteen others are named by report, and the sum to be paid is stated at three millions of *yen*. How the Railway can be sold so long as its revenues are pledged to the foreign bond-holders we are not informed.

Just as we go to press we hear, on the authority of the *Nichi Nichi Shimbun*, that Mr. Hirotz, who has several times been to Corea, is again to be despatched thither. It is said that the object of his mission is to announce that a Special Envoy will be shortly sent to make a treaty of amity and commerce in order to avoid all causes of future disturbance. It is also said that a high official will start for Corea in the middle of this month, accompanied by two or three vessels of war, a certain number of Imperial guards, and the troops now stationed at Kumamoto.

From the "Japan Mail Daily Advertiser."

On Saturday evening, and at the close of an entertainment which presented the usual features, Mr. Dave Carson explained the mysteries of the cabinet and box trick to a very full house. As Mr. Carson requested that in his interest the secret should remain with the initiated we abstain from comment or explanation.

We are indebted to the courtesy of the Agent of the P. & O. Company for the following information regarding the *Sunda* which returned to Hongkong under steam on the 16th instant at noon and went into dock.

Her injuries prove on examination to be more extensive than were anticipated, the lower part of her fore compartment having been carried away, while several of the plates on her starboard side and underneath are more or less injured. It is obvious, indeed, that had her construction been less solid, especially in her water-tight compartments, she could not have been saved.

As all the wood work will require renewal, and a considerable number of new iron plates must be inserted in her bottom, some three months must elapse before she can be expected to resume running.

Since the past summer the *Genro-In* has remained closed, with the view, it is said, of introducing various reforms necessary to its smoother working. It is now rumoured, the *Hochi Shimbun* informs us, that it will be shortly reopened.

The proprietors of the *Hiogo News* have received a letter from Mr. A. Duncan, barrister-at-law, in Kobe, requesting

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

them to offer a full apology for having published libellous matter reflecting upon his character as a barrister, in the letter inserted in its columns and signed "Frank Fisher." Mr. Duncan's request has been at once complied with.

The following casualties are reported by the *Hochi Shimbun*:—

On the 26th instant, a severe fire at Yejiri on the Tokaido which commenced at 10 p.m., and consumed two hundred houses before its course could be stayed.

On the 27th instant, a slight fire at Senji, Yedo.

On the 26th instant, six persons committed suicide by drowning, and two by hanging themselves.

The *Choya Shimbun* notices the punishment by a fine of 3 *yen* of a police official in Yedo who had subjected an innocent person to torture.

A telegram has been received stating that a naval attack upon three stockades at Perak has been entirely successful, all three being captured without the loss of a man. Rocket-boats were, we believe, chiefly employed to clear the way for the landing party.

We learn that Captain Innes, R. E., was not killed at Perak, as at first reported. Fortunately he was only wounded: Captain Elliot of the 10th was unfortunately the officer killed.

The *Japan Herald* publishes the following statistics :—

EXPORTS OF TREASURE FROM YOKOHAMA.

	Value in Gold Yen—Sen.
1872	3,606,309.97
1873	2,680,370.84
1874	9,147,991.40
1875—up to date, Nov. 26	12,690,643.93
OTHER PORTS.	
1873	601,702.20
1874	4,180,800.20
1875—up to 1st day of July	1,706,173.99
Total	34,617,993.23

The above returns, it adds, include all kinds of native coin, viz., gold and silver *yen*, *nibu kin*, *ichibu-gin*, *ishiu-gin*, &c., as well as uncoined gold and silver. The exports of treasure from Yokohama previous to 1872, from other ports previous to 1873, and subsequent to 1st July, 1875, cannot be given with certainty, but the latter will be given when procurable.

Referring to a paragraph in our yesterday's issue on the subject of the telegraphic lines, the Agent of the Great Northern Telegraph Company writes to us as follows:

"As the intimation may be and has been misunderstood I beg you to state that although the Penang-Madras cable and the Wladiwostock lines are interrupted, the other lines (viz. to Shanghai, Amoy, Hongkong, Saigon, Singapore, Penang, Java, Australia, &c.) are working and have been working all the time. The s.s. *H. C. Orsted*, our repairing steamer, is at work and was this afternoon in communication with Nagasaki; if the weather continues favorable the line viâ Wladiswostock will soon be working."

The European heads of Japanese Government Offices have been requested to intimate to their subordinates the emphatic wish of the Government that they should abstain from the pursuit of game pending the settlement of the question with their respective representatives.

According to the *Globe* the Admiralty has granted authority to an officer of the Imperial Japanese Navy to serve on board H. M. S. *Audacious* now in these waters.

If we may rely upon a statement in the *Nichi Nichi Shimbun* the proprietors of the cremation grounds of Yedo show a considerable share of enterprise in pushing business. They distribute attractive circulars throughout the metropolis, which contain full information as to the details and charges of their dismal trade, and conclude with the sterotyped though, in this case, somewhat inappropriate terms, that they "hope they may secure many customers." Their *clientèle* may be excused for not sharing their aspiration.

The *Hochi Shimbun* comments on a new mania which the people of Kiôto appear to be attacked with. Forgetting the severe lessons taught them by the former pig and rabbit bubbles they are now investing large sums in choice roses.

The *Choya Shimbun* has reason to believe that the augmentation of the fares by the Mitsu Bishi Company has had the effect of increasing the number of passengers on the Tôkaido.

The *Nichi Nichi* gives the report that a canal to connect the Biwako Lake with Kiôto is in contemplation.

Mr. Carson's final appearance on Tuesday night was made before a crowded house. He was assisted by several amateurs, more or less experienced in the mysteries which burnt cork and black wigs are held to cover and excuse, and his entertainment passed off with unusually good effect.

A party of native Roman Catholics, some 30 or 40 in number, living in Tsukidji, Yedo, purpose to petition the Government to remove all impediments to the free and open exercise of Christianity in this country.

The *Choya Shimbun* relates a bold and successful robbery effected in the port of Yedo. Two masked robbers, armed with swords and dressed in the fashion of the *samurai* in former times, boarded a junk that was lying off Hamagoten and demanded a sum of money for the purpose, they alleged, of enabling them to go to Corea. Either disinclined to dispute with them, or from patriotic motives, the people of the junk gave them forty dollars with which they escaped.

The native newspapers report that the Editor of the *Hioron Shimbun* is in trouble. On the other hand, the Editor of the *Nisshin Shinjisshi*, who for some time past has been viewed with suspicion, if not absolutely under *surveillance*, has been dismissed without punishment.

At a Meeting of Scotsmen, held in the Rooms of the Chamber of Commerce yesterday afternoon, steps were taken to lay the foundation of a charitable organisation for the assistance of distressed members of that nationality. While it is questionable whether it is altogether wise to consider the limitations of nationality in extending aid to the needy, and to our mind still more doubtful as to its special necessity in the case of the thriftiest and most industrious branch of the British family, as was suggested by Mr. Macpherson, we wish the newly launched charity a long and useful career.

Yamagata, Minister of War, has paid a preparatory visit to the new Military College at Toyama, in view of the approaching inspection of the Institution by H.M. the Mikado.

The *Hochi Shimbun* reports the following cases of fire: On the night of the 30th instant three at Osaka and one at Hiroshima.

The *Chôya Shimbun* writes; On the 28th of November the Senators *(gi-ku'an)* Mutsu Munémitsu and Kono Toshikama, *Shô-go-i*, were appointed *kanji* of the *Genrôin* and the Senator Katô Hiroyuki was relieved of his office, upon his petition. On the 3rd of September, Fusen Oyakata was appointed *San-shi-ku'an* of the Liukiu *Han*. On the 28th of November the Senator Katsu Awa was, upon his petition, relieved of his office.

A rumour was current yesterday evening among the Japanese that Kiôto had been burnt down by incendiaries and that Shimadzu Saburô had fallen by the hand of an assassin. The rumour, which so far as we can learn rests upon no foundation, expresses the exaggerated fear inspired by apprehensions of an out-break of *samurai*.

The Messageries Maritimes s.s. *Volga* will be despatched from Hongkong to-day, the 4th instant, at 4 o'clock P.M., with the English Mails viâ Marseilles of the 22nd October.

Messrs Bourne & Co. sold the Swamp Lot 190B and buildings by auction yesterday for $2,000.

The *Hochi Shimbun* notices the arrival in Yedo of Mr. Mori Arinori who recently set out for Peking. The steamer on which he had embarked broke down off Akashi, and he has been compelled to return to the capital.

Sanjô and Iwakura inspected the *Okurasho* yesterday.

Another fire is reported from Ôsaka, in which seven houses perished.

A fire which broke out in Nakanomura in Yedo on the 2nd instant destroyed seventeen dwellings.

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

An accident which might have met with more serious consequences is reported by the *Choya Shimbun*. A person named Tsuda, residing in the 7th Ward in Yedo, was engaged in the manufacture of gunpowder, when, through some unexplained carelessness in the process, the material ignited and a serious explosion followed. The roof was blown off and the house greatly shattered, but though one of the assistants was severely wounded no one was killed.

The Editor of the *Hioron Shimbun*, and a correspondent of that journal were invited to attend at their *Saibansho* on the 2nd instant.

IMPERIAL GOVERNMENT RAILWAYS.

Yokohama Station.

Statement of Traffic Receipts, for the week ending Sunday, 28th November, 1875.

Passengers, Parcels, &c.	$7,255.94
Merchandise, &c.	$ 538.26

E. Massais, D.M.P.,
Surgeon in Charge.

We learn from Manila that the excitement consequent on the suspension of Messrs. Russell and Sturgis is subsiding, though all business is at a standstill. Their actual liabilities are not stated at over Two millions, nearly all of them being due in the Philippines. Hopes are entertained that they will shortly resume.—*China Mail.*

A correspondent of the *North China Daily News* proposes in the columns of that journal the formation of an Association in England, to be styled the "China and Japan Association" for the purpose of representing at home the far eastern settlements. The project, which is not new, failed to attract support formerly. The larger and growing interests of English trade in these countries may now perhaps obtain for it a greater share of attention.

A Marine Court of Enquiry was held at the Harbour Master's Office at Hongkong on the 23rd ultimo to investigate the cause of the loss of the P. & O. Company's steamer *Sunda*. The evidence of Captain Edmonds and Mr. Scott, chief officer, was taken and the Court adjourned until the 25th instant when the enquiry will be resumed.

THE ST. ANDREW'S DINNER.

THE St. Andrew's Dinner went off very well, and if we use this plain language in speaking of it, we do so from a desire to treat the occasion from as realistic a point of view as possible. Men have a strong tendency when they meet in unaccustomed numbers to whip themselves up into a kind of artificial excitement, and under the influence of this they say a great many things which if spoken in the atmosphere of every day life and thought, would be justly deemed very absurd. We do not say that this is without either justification or usefulness. It is perhaps well that the ideal side of all institutions or countries, and the best qualities of individual men, should be held up at times for our admiration, as correctives to the destructive kind of criticism in which they are discussed in smaller or less partial circles or under ordinary circumstances. It is well perhaps that only the best side of things should be sometimes rubbed up and powdered and polished and shewn as giving a true representation of them, however little it may present the whole truth concerning them. The Platonic idea, as it were, should sometimes be shewn as the thing itself which is the concrete embodiment of that idea, or which is, at all events, the best thing we have achieved in trying to realize it. If, in this mood, we speak of our Monarchy, to which we are all very loyal because, on the whole, we are persuaded that it works very well, and because we are intensely devoted to the person of our Queen, we do not tell humorous anecdotes tending to place kings in a ludicrous light. The majority of kings, indeed, are no wiser or better than average men, and any reader of the Greville Memoirs or Thackeray's Four Georges who has cherished any illusions on this subject, must have found them seriously damaged after the perusal of these entertaining volumes. It is, for instance, infinitely amusing to read that at William the Fourth's first Council, almost the only words he uttered had a sailor-like bluntness in them sadly disturbing to our idea of the divinity which doth hedge a king. "This is a —— bad pen you have given me," he exclaimed, when called upon to sign the Council records, as the instrument sputtered the ink over the page. But this anecdote, though legitimate enough elsewhere, would be sadly out of place in the mouth of a chairman proposing the health of a reigning monarch. Similarly, when the Church is toasted, we should deem any allusions to the average sermon as highly unbecoming, and prefer that the orator should rather dilate upon the learning, virtue and piety of which the Church in no age has been without examples and witnesses. When the Bench and the Bar come in for their turn of compliment, we do not wish to hear of Lord Braxfield's "Checkmated you at last, Jamie"—though he was a Scotchman, by the way—or the anecdote of the counsel who made an eloquent speech on the opposite side to that for which he was retained, and, being nudged by his junior and informed that he was on the other side, said, "These, my Lord, are the base and baseless arguments which might be, doubtless will be, adduced in support of the monstrous pretensions of the defendant." While we have never heard that the Scotch are a particularly virtuous, it is certain that they are a very religious, people, and they thus very prudently pardon Burns for "The Holy Fair" or "Holy Willie's Prayer" in consideration of the "Cotter's Saturday Night";—at all events they keep the two former poems well in the back-ground, and expatiate with a just pride upon the genius, if not upon the piety, of their greatest poet. Coming to an institution in which—

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

for our sins—we ourselves are more immediately interested, and of the importance and value of which, regarded in its quiddity, we have as lofty an idea as any one, the Press, we should consider any allusions to the baser manifestations of it as highly out of place. It is naturally preferable that the proposer of the toast should dilate—as indeed he did—upon its ability, its high conscientiousness, its power and importance as a factor in constitutional government. It was well, too, that, in reply to these flattering tributes, some plea should be urged for its occasional, if not habitual, local barrenness, and that proper stress should be laid upon its vast usefulness and the obligations it imposes on all sections of society. And this was done.

In this very important point of view, the dinner of Tuesday evening was a great success, and though wit is not generally supposed to be among the endowments of the Scotch race, there was one instance of it which, though it has escaped the reporters, we think should not be lost to the world, and which therefore we will endeavour to embalm, for such period at least as our spices may have any preservative power. In returning thanks for the Bench and Bar, Mr. NESS, representing the latter, was singularly happy. The proposer of the toast dwelt in gracious terms upon the fact that their efforts to secure justice not only entitled barristers to the prospect of elevation to the Bench, but afforded them legitimate hopes and expectation of some subsequent promotion, after shuffling off their mortal coil, which almost provokes us to enquire whether their shoulder-blades have not some anatomical evidence of rudimentary wings. Now, among the consolations of the unwigged and ungowned portion of humanity, there is perhaps none more cherished than the conviction that, enviable as are the material blessings showered on lawyers in this world, neither hope nor charity can, or need, blink their inevitable fate in the next. As King David says of the wicked, "They come not into misfortune, neither are they plagued like other men." Where all is barren, they alone spread their sumptuous table. Their wine is mixed with no water; their gold is debased by no dross. They feast on quails which remind them of no wrath, and though they gather their manna on the very sabbath, it does not turn sour. They have their portion in this life, and must remember by and by that they received their good things here. It was doubtless, therefore, with a sense of exquisite enjoyment, such as really few men ever experience, that Mr. NESS playfully and with great neatness replied to Mr. KESWICK'S remarks. He said that it was indeed grateful to him and his brethren to find that their efforts to procure justice for their fellow-men were recognized. Their object in this country could be one and only one, viz, to assist others in obtaining this inestimable blessing of justice, and they found their highest and only reward—and here he smiled—in the consciousness that they effected this object and that the world appreciated their efforts in this direction. If this is not humour, we are ignorant of the meaning of the word. Mr. NESS has overcome SYDNEY SMITH. There must be no more talk about surgical operations, and "wut" must be evermore ranked as among the endowments of the Scotch, however little mankind may alter its views upon the ultimate destinies of lawyers. The first Lord MINTO endured the Great Frederick's insults for years, but paid him off at last so well in a celebrated retort that he always afterwards regarded the moment of its delivery as the most exquisite of his life, and as affording ample amends for the too patiently borne annoyances of years. Mr. NESS must have felt something of the same pleasure in delievering this excellent sally.

To turn, however, from all this to a practical matter which originated with the Dinner, we find that a suggestion, which dropped from one of the guests, seems to have fallen on good ground, though something of the same kind met with a less fortunate fate at the Dinner of last year. It was proposed that a St. Andrews Society should be formed for the relief of distressed Scotchmen in this port, and a meeting of Scotchmen was actually held on Thursday last to organize it. All doubts regarding the necessity for some such institution were set at rest by Mr. HENDERSON, than whom there is no better authority, and who said that many of the applicants for the bounty of the Temperance Hall were Scotchmen. We somewhat doubt the wisdom of these societies which have their origin in the artificial excitement of public dinners. If it be well to have a fund for the relief of distressed Scotchmen, a similar fund should exist for Englishman, Irishmen, Americans and Germans, and all the nationalities who are numerously represented here. Is each nationality to raise and dispense such a fund? The Scotch may say "Do as you like, gentlemen, we have our fund for our own people. Raise one, if you like, for yours." Is this wise? Would not the same machinery do more work? Would it not and should it not embrace at least the Englishmen and Irishmen, and is it desirable to make these distinctions of nationality so far away from home and where a charitable organization is concerned? We fear that it would be impossible to bring the Englishmen and Irishmen into a St. Andrew's Society, nor would it be right that an institution supported by members of the three nationalities should bear a distinctively Scottish name. What then will the exclusive nature of the name and the effort do? It will exclude the larger part of the community from joining in what, if a duty, should be done by all, and will limit the range of the Society's sphere of action to one nationality. We must be pardoned for thinking the whole thing a mistake, and a bad mistake, originating in impulses which should always be brought down to a normal temperature before being acted upon. A benevolent fund, however small, is a good thing, though a man's charities should be confined as much as possible to his own almonry, and the idea of getting together a machinery to dispense a few hundreds of dollars yearly seems to us ridiculous. These small machineries are a mistake, diminishing rather than increasing the bounties of individuals, and inducing the belief that an annual payment to a Society squares demands which should rather be met as they arise than trimmed to suit the proportions of an exclusive and narrow fund. Nor do its promoters appear to have duly weighed the difficulties which surround the dispensation of their bounty, the impostures which they have not the skill to detect and which the administration of inexperienced officers will but encourage and increase. There are many other obvious objections to the scheme, which we venture to oppose, not because it has not a good purpose, but because that purpose might be served on a far wider scale by an organization based on larger foundations. The question "Who is my neighbour?" was answered by a parable, the most striking feature of which is, that the nationality of the relieved sufferer was not that of his benefactor.

CHRIST CHURCH.

WE feel that we should be omitting to discharge a serious duty, and shirking a somewhat unpleasant one, if we failed to say a few words at this moment upon our local Church affairs. Whether of set purpose, or for better or worse reasons, these affairs have rarely been made the subject of public comment, and we are a little disposed to fear that this is attributable to a want of general interest in them. There are many reasons why this should be so, nor does the search for them demand much labour or ingenuity. We fear, too, that this want of interest, although capable of some correction by congenial personal influence, is a condition inseparable from eastern settlements, composed, as they are, of persons of many different nationalities, between whom there is a mental interaction somewhat unfavourable to the maintenance of that circle of ideas which confines men of one faith, one nationality and one localized habit of thought as at home. Those who are accustomed to assemble in a church which they have attended from childhood, where perhaps their fathers worshipped before them, where they were themselves initiated into the rites of religion, where, in later years, their children have been baptized, or the neighbourhood of which has been sorrowfully consecrated in their minds by events which are not the less mourned that they belong to the common fate of man, become attached to that church and moved by all the associations inseparable from it, as men never can be who come to an eastern settlement in the hope that their stay in it will be as short as possible. There is not in such a settlement that homogeneity of thought and conviction which characterises the ordinary parish of England, and, though less so perhaps, of America. Wide as is the intellectual range of the English mind, or indeed the mind of any European nation, as measured by its literature, or those written manifestations of it which can hardly aspire to be ranked as literature, this range belongs to it collectively rather than locally. No one who has passed many years in the East can fail to be struck, on his return home, with the extreme narrowness of view which characterises what may be called the mind of his old parish. While he has been familiarizing himself with the manifestations of strange forms of faith, possibly with their tenets and their comparative history, and while his experiences have brought him into contact both with thoughts and phenomena, with musings of heart and mysteries of life and mind of which he had previously dreamed nothing, those whom he left behind him have continued in their old routine of daily thought as of daily work, and it is in vain that he seeks a congenial or even intelligent reception of his views, or of those guesses at truth, possibly those glimpses of it, which have replaced in his mind some of the chimeras which constituted a part of his most certain and most cherished convictions. He finds his old stand-point still occupied by those whom he has rejoined after years of separation; but though he sees the same sun and the same heavens as they, it is with eyes opening on to a transformed mind, and though he opens the same books, and his heart warms over the passages he had been taught and has ever continued to love, he interprets them from the truer cosmical stand-point to which his larger excursions of thought and experience have carried him. Much that he held in virtue of hereditary transmission, he still holds in all calm faith, persuaded of instead of merely endowed with it. But many a lovely vision has dissolved with the daylight, and the strains of an imagined music have died away before sounds, of greater reality indeed, yet incapable of ever being combined into the simpler harmonies of other days. In vain, however, did the Ptolemaists anathematize or burn the Copernicans. The helioocentric theory was true, and the fate of "Galileo with his starry woes" will illustrate for ever the folly of that presumption which seeks to pass off man's ignorance as GOD's truth, and to close the ample page of knowledge to him who would study it.

But apart from those intellectual difficulties which pursue the path of the teacher of religion here, there are many of other kinds which he must solve if he would be successful in the discharge of his duty,—if he would win men to and hold them by his doctrine. Perhaps no good purpose will be served by enumerating these, and they may appear and prove more or less formidable according to the class of mind to which they present themselves. There is a story told in one of the apocryphal gospels of a man who was found digging on the Sabbath day, and to whom CHRIST said, "Blessed art thou, O man, if thou knowest what thou dost, but cursed art thou if thou knowest not;" and though the Russian archimandrite was probably right in saying to one who asked him whether it was true, "No, the LORD cursed no man," still there is a profound lesson in the narrative. It teaches this at least, that before we presume to judge of actions not in themselves unlawful, we must make ourselves acquainted with the antecedent conditions of mind which dictated or permitted them. And if this be true of actions, much more must it be so of men's thoughts. We shall not dwell therefore on difficulties which each man will find and must grapple with for himself. Rather let us turn to such sources of assistance as a young clergyman may expect here, and to the surroundings amid which he must pursue his labour. He will find a condition of society presenting many of the features to which he has been accustomed at home,—at least as much intelligence, relatively to its size, at least as much liberality and generosity of disposition, presenting perhaps more varied types than he has been accustomed to, though visibly moulded by certain special dominant conditions which, so far as our experience goes, give a peculiar and different shape and colour to all the European settlements in the East. He will find a community instinctively ready to pay him the respect due to his office, to appreciate very highly a hearty discharge of its duties, and to overlook errors which only betray unfamiliarity with the special conditions of life and thought which he comes here to preserve, or to improve and elevate, as the case may be. If the bent of his disposition is to be all things to all men, it must be with the same object as that of the Apostle who set the example. Whatever may be the value of popularity—and a sensible person will as little underrate as overrate it—there is only one legitimate means by which a clergyman can attain it and still preserve the respect of his people, viz, by an enlightened and faithful discharge of his duty. But it must really be the one as well as the other. Personally we cannot sympathize with the elder MILL, who, as his son tells us, would not allow a good motive to be pleaded as a set-off to an indiscreet and erroneous course of action. Human reason seems to us too fallible and liable to too much perplexity, arising out of the very nature of things, to warrant very harsh judgments upon mistaken courses conscientiously pursued. But not the less does it behove men to be quite certain that they do not mistake their prejudices and antipathies for impulses of duty, and even their malevolence for the promptings of virtue. History shows us plainly enough that the ferocity with which zealots have persecuted those who differed from them in theological opinion has always had its rise in ignorance and in a wholly unchristian temper and spirit. This bad spirit has fully

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

as much life in it as ever, though it is now chained, and, in spite of occasional outbreaks, kept in its place by the vigour and more humane nature of civil and secular thought. Allowance will always be made for the sturdy expression of opinion; but the pulpit, above all places, has its proprieties and obligations, and he who violates them not only does so at grievous expense to himself and his office, but, by the very act, proclaims himself unworthy to occupy it.

A young clergyman coming to this place, too, cannot be too careful to avoid controversial divinity or theology, at least until he knows the mind of his congregation well and all those various confluent circumstances which have moulded it. On ninety-nine persons out of a hundred such sermons are utterly thrown away. Those who side with the preacher do not require them. Those who hold other views have probably considered the points at issue with a carefulness and fulness which no single sermon can embody, and have arrived at their conclusions as the only tenable ones after years of anxious thought and study. The former conclusions will not be greatly confirmed, and the latter certainly can never be disposed of, by a discourse of twenty minutes or half an hour's duration, and all religious controversy is objectionable as such. The great truths taught by the Bible carry with them their own recommendation both to man's heart and his intellect. We have no sacred apostrophe for the excellence of vehemence and anger in the cause of religion, but there is an eternal grace and sweetness about the words, "How beautiful "upon the mountains are the feet of them that preach the "gospel of peace, and bring glad tidings of good things." No sermons are so acceptable at the time of their delivery, or so enduring in their effects, as those which embody the spirit of CHRIST'S teaching, which enforce his doctrines and example, and which illustrate his life and work. Men here are not to be frightened or bribed into virtue or scolded into belief, and it is well to know the idiosyncracy of a patient before making any attempt to treat him. In theology there is no beauty; men cannot be won by it, and the chances of their being brought to study it are incalculably small, even if the study should avail them anything. But their affections may be warmed, their lives purified and elevated, and their minds roused and stimulated, by those simple admonitions which flow so easily from the lessons of the Old and New Testament, and if a clergyman is intent on doing good, and not on enforcing a mere set of opinions, he will make these lessons the staple of his teaching and illustrate them by his life and work.

The above few words have been written in the sincere hope that they may be of service to the coming incumbent of Christ Church, and are published now instead of a fortnight later for reasons which others as well as himself, we trust, may find obvious and sufficient. He will find himself in a new and strange sphere, the exact measure of which it will take him some time to arrive at. If he is wise and industrious he will form his own opinions of men and things, and, if hearing, will still heed not what may be said against any one. His course will not be an easy one, but its difficulties will be seriously increased by unnecessary indiscretions at starting, while, on the other hand they may be wonderfully lessened by an exhibition of prudence and a hearty desire to identify himself thoroughly with the interests of his people. The extent of his pastoral work and influence will only find limits in the benevolence, earnestness and acceptability of his disposition and manner. There is a large class here which will at once attract his attention, and which requires his assistance all the more that they will never think of claiming it, and we are sure that if he will take his parishioners, both English and American, into his confidence, he will always find a generous and liberal spirit to appeal to, warm-hearted and sensible men to confer with him, and experienced men to guide him. The condition of the parish, if we may venture to call it so, has suffered much of late for many reasons, and its recovery from this condition cannot be achieved in a day or a month. But it may be wonderfully improved by care and by the infusion of a new spirit into it, and we trust that this desirable result may be brought about through the instrumentality of the new incumbent.

THE OPENING OF THE TOKIO NORMAL SCHOOL FOR GIRLS AT YEDO.

On Monday, the 30th instant, Her Majesty the Empress, attended by Okubo, Minister for Home Affairs, Madénokôji Vice-Minister of the Household, and Sugi, Assistant Vice-Minister of the Household, went at 9 a.m. to be present at the ceremony of opening the Tôkiô Normal School for girls. At the outer gate were displayed foreign decorations, with the chrysanthemum flower; at the front entrance a purple curtain was hung and the national flag displayed, while the Principal of the School, the teachers and scholars, the Vice-Minister for Education and others went out to meet Her Majesty. In the waiting room the Empress took her seat upon a throne divided off by screens, on which were portrayed maple trees and deer, and snow-laden pinetrees with bears, and adorned with two flower vases containing chrysanthemums and Landinas. The Superintendent of the School, Nakamura Masanawo, together with the teachers, educational officials, and Foreign Representatives then paid their respects, after which the Empress went out into the large hall, all the company attending her. Here the Superintendent of the School, read a congratulatory address upon the ceremony of opening the school, as follows:—

"We humbly venture to think that the enlightenment "of a country depends upon the excellence of its Govern- "ment and that the excellence of its Government "depends upon the perfect nature of the regulations "of families. Now the perfect nature of household regu- "lations depends upon the integrity of thought, advance "of intelligence, and chaste and upright action of women. "Our land affords from olden days down to the present "time numberless instances of virtuous women, but still "if we regard the matter in respect to the whole of our "country, it must be allowed that the regulations for the "education of women are exceedingly defective. At the "present moment reform in enlightenment has gradually "progressed, and it is a source of rejoicing to the myriads "of our people that the Tôkiô Normal School for girls "has been established, and that by Her Majesty's attend- "ance to-day the ceremony of opening the school is favor- "ably carried out. Our earnest desire is that those who "may in after time complete their education here may "become virtuous women, and so assist their husbands; "virtuous mothers, and so instruct their children; and "that by their giving birth to and rearing up a worthy "population our country may become a prosperous and "tranquil land."

After this the Lists and the keys were deliverd by the Vice Minister for Education to the Principal, who then presented the School Regulations.

Her Majesty the Empress replied:—

"Upon hearing last year that this School was about to "be established in order to foster the growth of educa- "tion for girls, I was unable to contain my joy. Its con- "struction has now been completed, and the ceremony of "its opening has been performed. My earnest desire is "that this School may henceforth be prosperous, and that "I may eventually see the beautiful fruit of female educa- "tion appear in profusion throughout the whole of the "land."

Digitized by Google Digitized from UNIVERSITY OF CALIFORNIA

The Vice-Minister for Education next offered a congratulatory address ;—

"The construction of the Tôkiô Normal School for "girls having been completed we have now come to the "time for the commencement of its operations. We can- "not but rejoice and offer congratulations with respect to "this. How much the more, then, when our good and "gracious Empress has been pleased to attend here, should "we rejoice over and over again at the brilliant glory of "this school! If we consider well the words of the "western proverb, that 'girls are the mothers of educa- "tion,' we sum up in a few words the reason why female "education is so weighty a matter, and leave nought "unsaid. From these words the idea is clearly apparent, "and easy of perception. Why should we attempt any "superfluous explanation thereof? I content myself "with merely making this one observation."

Nomura *Chiu-toku-gaku,** Hatakéyama *Chiu-toku-gaku,** and the 4th class *Kundô** Tanahashi Aya delivered congratulatory speeches. The 5th class *Kiyôyu* Asaöka Hajimé and three of the pupils delivered addresses, while Aöyama Chiyo, Yoshikawa Wakana, Furu'chi Raku and others composed verses. Amongst these were the following :—

"The place of learning to-day founded shall, like the "young pine-tree, flourish and exist for a thousand "years." And again "My father and mother will bedew "their sleeves with tears on hearing of the joyful fact of "my appearance to-day before the Empress."

After this Her Majesty inspected the school-rooms, visiting first the Philosophical Room ; then the Arithmetical Room ;—and lastly, the writing room, and then going over the whole of the premises. Returning to her former throne she bestowed upon each of the three pupils who had given addresses an instrument for ruling lines, and offered tea and sweetmeats to all the company. She returned to the Imperial Palace at about 12 o'clock. The general public were then admitted to view the school, and a very large number availed themselves of the opportunity to inspect it minutely.—*Hochi Shimbun.*

Another Account.

(Communicated.)

On Monday, November 29th, a very interesting ceremony took place in a remarkably unostentatious manner, considering that the event was the opening of the First Normal School for Girls, and that the presiding personage was the Empress herself.

It is understood that some months since, after visiting several of the Female Schools already established, Her Majesty was so much interested that she gave 5,000 *rios* for the furtherance of the cause of education ; and this sum has been applied, by the Mombusho, to the erection of the new building, which occupies an admirable site on the road running past the old Confucian Temple, not far from *Megami Bashi.*

One cannot fail to be struck with the neatness of this building and all its appointments, and it was indeed a pleasant sight to witness the arrival of the Empress, in a carriage and pair with a suitable mounted escort, her four maids-of-honour following in another carriage.

They were received by about one hundred of the pupils, ranged in line by the carriage-way, and soon proceeded to the large room where Her Majesty took the raised seat, and listened to the several addresses which were read successively by the Minister of Education, the Director of the Imperial University and the Superintendent of the School. The brief reply which the Empress made was read by her in a very clear and pleasant voice, and a copy handed to the Minister of Education. It is to be hoped that all the addresses will be translated, for they cannot fail to be interesting, considering the peculiarity of the occasion and the momentous subject to which they refer, that of female education in Japan.

One of the native female teachers also read a rather long address, and a discourse (much too protracted) was delivered by a Japanese gentleman who was very fluent and self-possessed.

Three of the female scholars read from their school books and made translations.

The Prime Minister was present as also the Minister of the Home Department and several others, including many foreign ladies and gentlemen ; but it was evidently intended that the occasion should be made as simple and unceremonious as the circumstances would permit. Nothing could exceed the patience and affability with which the Empress performed her part—not only giving close attention to the numerous addresses, but afterwards proceeding from room to room and hearing the the several classes go through their ordinary exercises. Unlike as the circumstances were in many respects, one could not help thinking of Henry the Seventh's mother—that "Lady Margaret" who did so much for the cause of sound education, founding among other things the very first Professorship in the University of Oxford.

SPIRIT OF THE JAPANESE PRESS.

Corea.

(Nichi Nichi Shimbun of Nov. 24. 1875.)

Street rumours are statements which though unworthy of absolute credence still contain truth, and, though worthy of belief still cannot be trusted. There are at present rumours to the effect that it would appear as if the Government were gradually deciding upon measures regarding a Corean expedition. That the fact of our sending to China at this unseasonable time of year an envoy, in a vessel of the Naval Department, to break through the solid ice at Tientsin, is, although he be styled outwardly a minister proceeding to his post, a subject of doubt to all persons of learning, who think that at no distant period there may be sent an official to visit Corea. And though this should bear the outward appellation of a "mission to investigate offences," our loyal gentlemen would still set their teeth in expectation thereat. Can it be a fact that in a short while an ill-omened cloud will throw into darkness the bright beams of the sun of the Eastern Ocean?—Can these reports be worthy of belief? We can then do nothing else than gaze up towards the skies and make to Heaven our tearful protest. Are these reports, however, unworthy of credence?—If so, it will cause us, with our country's flag in the right hand and a large winecup in the left, to wish our land and our homes years and years of prosperity. Are these rumours, then, to be credited or distrusted?

Upon carefully considering at the present moment the origin of the question of a Corean expedition, we find that the evils caused to our land and our homes by such an expedition are exceedingly great. May it not have been on account of their adherence to this question that the high officials Saigô Takamori, Soyéjima, Itagaki, Gotô, and Étô, who were the mainstays of our public and private policy, suddenly left the Cabinet at the end of 1873? It was after this that the disturbances at Saga took place, that two illustrious *samurai* who had once held the honorable post of *Sangi* and another high appointment were killed, that punishments were awarded to men of genius who might have been useful in after time—for Yamanaka, Asakura, and others of the Saga faction were tolerably intelligent men,—and that the innocent population of that neighbourhood endured the miseries of fire and sword. Hardly had the Saga disturbance been quieted, before there came to pass the Formosa expedition, whereby several millions of our national money were expended, and hitherto unknown evils were occasioned to our soldiery in the midst of noxious vapours and rain, while many of them also met their death. Next to this there arose the complications in the North of China, in consequence of which relations between the two countries were well-nigh broken off. Were not all these things brought about by the force of the question at issue? If, then, we consider the matter in view of the above, we find that the question of a Corean expedition is the knotted root and gnarled trunk from which spring evils to our country and our homes, and that thus our Government, in their endeavours to avoid those evils, are continually falling into unforeseen difficulties. In our opinion, whenever we reflect upon these several events that have actually taken place, our enlightened Government has

* Different titles of educational rank.

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

always adhered to the view that Corea should not be attacked. For, if it were not so, would the five high officials who advocated the expedition have been dismissed from office at the end of 1873? If it were not so, would the Government, after the Saga disturbances, have turned in the direction of Formosa the agitation regarding a Corean expedition, in order to quiet that agitation? We are ourselves perfectly convinced of this, and, reposing trust in our exceedingly wise and intelligent Government, we are positive that the question of a Corean expedition will not be carried into execution by the present Government. But should the street rumours now current be really worthy of credence, then we cannot but feel intense regret and shame at having placed too much belief in our present Government.

Should the matter really stand as the rumours have it, it would appear as if our Government were gradually deciding upon the measure of a Corean expedition. And even though the intentions of the Government be not fixed directly upon the expedition, still upon a careful consideration of their apparent design not to allow Corea's offences to pass unquestioned, the public will yet have some right on their side when asserting that the measure of a Corean expedition is determined. And should the Government have already determined upon such a measure, they will certainly not adopt views in opposition to the expedition. Alas! when we reflect that already, on account of the Corean question, five high officials have been dismissed from office, a former *Sangi* put to death, suffering caused to our troops in a foreign land, and tens of thousands of our money squandered in a distant locality, we cannot even look back at our own shadow without feeling shame. Some persons, again, observe;—"If as stated in the rumours our Government despatches an "official to investigate the matter, and is compelled by the "terms of Corea's reply to send forth an expedition against "her, such a state of affairs will indeed be 'unavoid-"able'." This remark is certainly correct, but nevertheless we cannot upon hearing this at once display a white flag from the summit of our argumentative citadel. Our reason is as follows:—

With regard to the question of the profit or loss, advantage or injury, in case of a Corean expedition taking place, a great deal of discussion has been published already in the editorials of our own *Nichi Nichi Shimbun* and those of the two other journals the *Ilochi* and the *Chôya*, and it has been carefully argued that a Corean expedition "*is* avoidable." We will now advance a step further, and discuss the source from which arises the assertion that it is "unavoidable." Did the affair derive its first origin from Japan, or did it arise spontaneously? Should it be a fact that it was first started by Japan, then no matter how cunning the men who may endeavour by the expression "unavoidable circumstances" to deceive a later age, there cannot but arrive in length of time and during the change of affairs and seasons a day when their vulpine nature will be brought to light.

At this point our pen is carried away by irresistible force, and we cannot refrain from publishing, contrary to our usual custom, a street rumour, and soliciting the public to set right the unfounded nature of that rumour. The report is to the effect that by the affair at Kôk'wa Corea cast an insult on our national flag, which is the reason that the people now talk of a Corean expedition; but that nevertheless it cannot be taken for granted that the public do not entertain some slight doubts as to the circumstances which brought about that affair &c. &c., although it is certain that such a report as the above is but an empty assertion and vague rumour fabricated by lovers of hoaxing.

We have also heard the following rumour,—that when ———gave permission for the two men of war, the "*Unyôkan*" and the "*Teibôkan*," to cruize in the western seas, a former———violently opposed this, saying that if the vessels were sent to Corea it was certain that some unforeseen occurrence would take place, and asking whether in such case there existed sufficient power (in Japan) to make war in consequence thereof. We are fully convinced that this assertion, too, is utterly devoid of foundation, but upon regarding it from different points of observation we think that the fact of the public not rejecting at once these rumours, even when such are fabricated by lovers of a hoax, is but in conformity with the spirit of the times.

Alas! from what did the affair at Kok'wa derive its origin? We cannot bear to state the reason in plain language. We cannot, nay, are utterly unable, to do otherwise than forbear. Should the origin of that affair at Kôk'wa ever come to light, then the question of whether Corea should or should not be attacked will easily be reduced to its actual worth, and we should be enabled to decide whether it be avoidable or unavoidable. We are filled with anxiety lest in a coming age there may appear a day when regret shall be felt for the Saga rebel Etô Shimpei.

(Signed) HIRAZUMI.

THE PRESS.

(Akebono Shimbun.)

There are at this moment many causes for anxiety in the country, such as the Corean affair, the question whether or not Loochoo is to remain tributary to us, whether the pensions of the *Kuadzoku* and *Shidzoku* are to continue or to cease, the change of the land-tax, and whether the revenue is sufficient to meet the expenditure, the means by which the foreign debt should be defrayed, the continual drain of gold from the country, the excess of the imports over the exports. These are among the sources of anxiety to those who reflect upon the condition of the country. It is difficult to say which is most important of these, but we rather think that the Corean question is, and for this reason, the public have expressed their views upon it and have discussed it fully in the newspapers, so that it now only remains for the Government to pronounce a decision in accordance with the mind of the people and to act upon this.

The question, however, which takes precedence over all others in our mind is, whether the newspaper and book-press laws as they now stand are or are not good for the country. When the new Press-laws were issued, the Editors and men of learning brought forward examples and arguments to prove that a free press was beneficial for the country, and the newspapers were filled with illustrations of these points. But none of these writers have ever shewn the injuries produced by repressive laws, and these can only be appreciated after due reflection.

It is obvious that the press has enormous power. In Europe the inventions of gunpowder and printing were nearly contemporaneous, and both created revolutions in human affairs. The power of gunpowder may be seen by simply firing it, but the power of the press is upon the minds of men and is not appreciable by the senses. But if attempts are made to oppress it, something of good or evil will assuredly arise out of them. The newspapers form a section of the Press, and the Japanese Government has made very severe laws to control them, what the result of these may be, I know not, and would beg for enlightenment on the question from some learned man. At the same time, as the question cannot be left alone I will here state my views. A knowledge of the past enables as to some extent to make a forecast of the future, and I will therefore shortly sketch the history of newspapers in this country.

Before the outbreak of the late civil war there existed such newspapers as the *Chugai Shimbun* the *Moshiqasa* and others. But they merely contained items of local news, and occasionally, perhaps, intelligence from abroad. There were, however, no discussions in them, and as the period at which they were issued was by no means a quiet one, they were far from regular in the dates of their issue, and were published very intermittently. They also neither increased in numbers nor in circulation, and this period may be termed the Local-News Period. When the civil war was ended and quiet was restored, the Shintô priests came into power, and they established newspapers with a view of diffusing Shintô doctrines and promulgating the decrees of the Kiobusho (Department of Public Worship) and the like. This may be called the Second or Shintô Period.

Then evidences of external civilization began to make their appearance, and discussions appeared in the newspapers about steamers on the seas and railways on the

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

land, coaches, *jinrikishas*, telegraphs and iron bridges, and whenever any one wrote in the papers the words "civilization" and "enlightenment" dropped from his pen. This may be called the Third or Period of External Civilization.

At the beginning of last year certain ex-Sanghi and other prominent men presented a memorial to the Throne urging that representative institutions should be established, and at the same time the people began to plead for their rights, and these questions became the subject of lively debate. Before a year had elapsed a visible change had come over the minds of the people, who began to turn their attention to political affairs. Some expressed a desire for the establishment of a limited monarchy while others expressed a wish for a republic. They pleaded that at all events the people ought to have a share in the management of their affairs, and in the autumn of last year one of the Editors, Tachibana by name, argued strongly to this effect, and many people expressed their agreement with his views. The consequence was that the people ceased to view the Government in the light of a god, and began to feel that they were not obliged to act precisely in any manner which might be prescribed by it. Their view was that both the country and the Government belonged to the people, and that whenever a law was issued by the Government which was not in accordance with the will of the people they should begin to work against it, and that whenever the officials did what they ought not to do, they were to be rebuked by the people, This was the Fourth Period.

Then the newspapers began to criticize the foreign Residents in Japan, and this very nearly constituted a Fifth Period. But in June last a new newspaper law was issued which was vehemently opposed by many writers, who were punished by fines and imprisonment, and the discussions in the newspapers lost force and consistency and became such stuff as dreams are made of, though all who are endowed with common sense can understand them, and thus they continue at the present time.

From this brief sketch it will be seen that when the minds of men are allowed to move freely, they discuss question after question in succession, and these discussions form periods, so to speak.

As we previously stated, the Press and gunpowder may fairly be compared together and are very similar in their power and effects, and we can well see that a hundred pounds of powder thrown into a five would produce a startling disturbance. Now if the newspapers are oppressed, we are led to suppose that something of the same kind may happen. But whether this would produce an effect causing grief or demanding congratulation, I am wholly unable to predict.

Asiatic Politics.

(*Choya Shimbun.*)

Asia is the grand division of the world in which Japan is situate, and any movement which takes place in it cannot be without importance for this country. Now, two great powers have commenced a competition in Asia which we do not think will cease until one of them yields to the other.

Both England and Russia are trying to extend their influence in Central Asia. It is a long time since Russia commenced this eastern movement. But it was merely one from West to due East, and this was finally completed by her acquisition of Saghalin. She now seeks to extend it towards the South-east. She has already overthrown Khiva with the intention of taking hold on Turkestan, and in conjunction with Persia, she will make a railway thither which is ostensibly for the purpose of extending commercial intercourse. But this may be doubted, Our own belief is that she wishes to send troops to the East of Turkey, to Affghanistan, or to the Western side of the English dominions in India. Now this dominion is a very rich one, on account of its great trade and its varied productions, so much so that it is called the Treasury of the British Government, and thus England is compelled to maintain a great force there in order to hold it. But latterly England has become anxious in view of the extension of the Russian Power eastward, and it may prove that a war with Russia is ultimately inevitable. When the Russians sent an Expedition to Khiva, the English feared that it might cause disturbances in Northern India; Envoys were sent to and fro, and it seemed as if war would break out between England and Russia. But the late English Premier Gladstone laboured hard for peace, and preserved it. Now the making of the railway referred to would embarrass and perplex England more than the Khivan Expedition, and as it is said that Mr. Disraeli, the present Premier, is a man of bolder disposition than his predecessor, the rivalry between the two nations promises now to be more formidable than formerly. It is also said that as Kashgar cannot withstand the power of China, she has nominally submitted herself to the yoke of Turkey for the purpose of ultimately making war upon the Chinese. The Russian Expedition to Khokand is not yet terminated and Russia is now making the old attacks on her caravans an excuse for forcing her way into China. The Yunnan affair between England and China will probably be peaceably settled, but, apart from this, the causes of trouble in Central Asia are as we have stated them.

Although Japan is separated by the sea from the mainland, we must keep a careful watch upon what takes place on the continent. If the Russians extend their territory we may have trouble in the North, and were China to awake from the foolish dream of her pride, she might be a source of embarrassment to us.

Disquiet.

(Akebono Shimbun.)

There are rumours abroad that in the middle of last month about fifty robbers entered the Arsenal at Yokosuka, and that although one of them was shot down by the guard, the rest succeeded in escaping and carried off fifteen cases of gunpowder and some shot, nor have they been discovered up to this moment. Previously to this, some thieves had stolen a quantity of similar material from the Government powder-depot at Sendagaya, Tokio, and had even carried off cannon from the Tokio arsenal and from Tempousan at Osaka. We are ignorant of the cause of such proceedings, but think they must be due to those who intend to take a part in any disturbance which may arise. Again, we have heard that a body of a thousand *samurai* are assembled at a temple called Honganji in Ikegami. Whether these men are kept there in anticipation of any disturbance which may arise—the world not being over quiet at this moment—or whether they belong to a party which is desirous of making trouble, it is impossible to say. But, in either case, the fact that there is such a body of men about in the country, has a dangerous aspect, and, this being the case, the Government should pay good heed to the direction in which minds of the people are turned at this moment, and try to convert them from an excited to a more peaceful condition, as, in default of this, unimaginable troubles may befall the country. Should the Government use its almost endeavours to preserve tranquillity, no disturbance could arise, even though there may be many discontented persons about. The people are apt to say just now that there are many proceedings which they wholly fail to understand, and in this we agree with them. For instance, some cannon have been secretly conveyed to a police station at Fujisawa on the Tokaidô. Whether this has been done in apprehension of some trouble at or near Fujisawa, or whether troops are to be massed there and sent in to Tokio in case of necessity, we cannot very well understand.

There is one thing which we are desirous of saying to the officials, viz, that whenever disturbances have arisen here, they have originated in the failure of the Government to understand the mind of the people, who thus have been further excited instead of pacified by the action of the Government, and this action has been handed down to the scorn of future ages. This has occurred because the disturbance alone was regarded and not the origin of it. The enquiry ought to be directed to the origin, which, before all other matters, must be discovered first. We vainly flatter ourselves if we imagine that it suffices to have an iron gate and brave guards. The safety of our bodies is less a thing to be solicitous about than the origin of disquiet.

A Choice of Evils.

(Choya Shimbun.)

The maintenance of standing armies is not only necessitated by the defence of a country against foreign enemies, but by the possibility of insurrection. But nothing involves a greater expense than keeping up a large standing army, and the money spent on guns and ships of war can only be called a vain expense, seeing that it tends rather to impoverish than enrich a country. It costs a hundred *yen* a year to keep one soldier, and therefore ten thousand *yen* for each hundred men, not including the pay of officers. This being the case, a standing army should be decreased when neither foreign invasions nor civil war are to be dreaded, so that the people may prosper and the country may be enriched. It is with this view that nations increase their armies in time of war and decrease them in times of peace.

The present Government, fully appreciating this, has abolished the *samurai* as a fighting class, and now draws its soldiers from all ranks and all quarters. Six localities were chosen as principal military stations, and the standing army, including cavalry, infantry and artillery, was fixed at thirty thousand men. Now the present annual cost of this army is over eight millions of *yen*, and the people are almost unable to bear so heavy a burden. The most severe economists say that the size of the army is out of proportion to the wealth of the country, and that it ought therefore to be reduced, and the money so saved spent on more useful purposes. But if we look to the actual condition of affairs in this country, it is impossible to say that there is no foreign power which regards us with a watchful eye, (though we do not think it has any immediate intention of invading us), and there are certainly some discontented *samurai* in the interior who might give us trouble. But the Government would really have no difficulty in dealing with these men, and meanwhile there seems no necessity for the continued purchase of guns and gunpowder. The people suffer more from the depletion of the treasury than they would from civil war or foreign invasion, and thus they plead that the army should be decreased.

We have heard a rumour that the Government, fearing that there are many persons in the interior who bear it no good will, are about to place more men under arms, nominally on account of the Corean question, but in reality to enable it to deal more easily with disaffection, nor can it be said that there have not been large assemblies of the *kuadzoku* for the purpose of discussing the policy of the Government. Thus it is not unnatural that the Government should be anxious. But if its policy is not in harmony with the national mind, even this increased force could not be depended on, and it would be impossible to calm the whole country by troops thus rendered disaffected. Although the East might be tranquillized, an outbreak might occur in the West, and finally both the people and the Government would become exhausted, and the country would lie at the mercy of some foreign power. History tells us that Governments acting in opposition to the mind of a nation and then attempting to tranquillize it with blood and troops, have been overthrown in consequence, and thus we believe that these rumours are false.

The Return of Mr. Mori.

("Nichi Nichi Shimbun," of December 4, 1875.)

We learn that Mr. Mori Arinori went on board the *Takaö-Maru* on the 24th ultimo, and set sail from the Shinagawa Roads at 1.30 on that day. That night there was a heavy storm of wind and rain, which caused them much inconvenience. The weather became a good deal calmer from noon next day, the 25th, and they arrived at Kôbé at 9 a.m. on the day after, the 26th. Mr. Mori here went ashore, while on board the ship coal was taken in and repairs of machinery executed until 12 o'clock on the night of the 28th. This being finished, she at once set sail, but at about 1.30, while in the Akashi Straits, a piece of machinery attached to the axle of the paddle wheels broke in consequence of which the vessel could not make way ahead or astern. There fortunately was not any wind or sea at the time, and the vessel anchored for the night. On the following day, the 29th, a man was put ashore at Akashi Straits and sent on to Kobe to fetch the *Teibôkan* which was then in port there. Being taken in tow by this vessel, they came into Kobe the same evening, just after which there suddenly arose a heavy storm of wind and rain. At 4 p.m. on the 30th Mr. Mori went on board the Mitsu-bishi boat *Hiroshima-maru*, and arrived at Yokohama at 5 a.m. on the day before yesterday, the 2nd instant. It was on account of the fact that some time would elapse even were he to exchange to another vessel, that he first returned to Yedo. We hear that he will proceed to Hiogo overland at about 12 o'clock to-day, the 4th, and on arrival there go on board of and set sail in the "*Gommu-maru*" of the *Kaitakushi*, which vessel is lying in that port.

A DAY AT A COUNTRY THEATRE.

One calm evening in the autumn now fast on the wane we found ourselves trudging up the long main street of Dorohashi. Dusty we were and shabby 'tis true, but our 'traps', always an evidence of respectability, had preceded us to the "Little Pine Tree," whither a youth, who might be the "boots," leads us from the outskirts of the town. Mine host, a sleek apple-cheeked old man, and his consort, a lady-like woman, are all smiles and sympathy, and we soon find ourselves housed for the night in a snug upper-chamber of a snug hostelry.

It is an annoying fact, but nevertheless true, that one must be business-like even in the country, and a well-earned meal disposed of we are deep in itineraries with our trusty couriers Gombei and Saisuke. Ha! ha! we've done a good stretch to-day, though;—11 *ri*, not a *chô* less, by the rood! Well, we've come out to walk, and walk we will, wet or dry, hot or cold. We have been cooped up time out of mind in a coast port, and have sighed for the fresh breezes of heaven any time these twelve months. What is the next decent halting-place? Yukiyama: distance 15 *ri!* Come, come, though; this is not quite what we meant when we started; hilly country too; and what's that fifty *chô* to the *ri*? Now we are moderately able-bodied and active, and ready to walk with any one, but we are out for amusement, and 15 *ri* of 50 *chô* in a day is, to say the least, a doubtful undertaking. Gombei doubts; Saisuke doubts; we doubt.

This is the situation for which Ofuku, our smart little maid in attendance, has been waiting. She attacks us in a trice. Surely the honorable guests did not think of starting the very next day. No one ever went on without giving a day at least to Dorohashi. Any thing to see? Why, of course there is! There's the water-fall at the other end of the village, the tea-gardens, and the two Buddhist temples where the bells alone are worth a visit. And then there's the castle, a *ri* off, from which one can return by boat down the stream. We waver, and here we are aware of another presence. It is the apple-cheeked host, who has made a noiseless flank movement, covering Ofuku's advance, and escape is impossible. Gombei and Saisuke are both half-hearted, in fact are evidently with the enemy; it wanted but one coup to complete our defeat, and Mine Host knew it.

There was a theatrical performance on the morrow.

Now from our pantomime days upwards, we must avow an inordinate weakness for that 'guilty sitting at the play' so much condemned by Mrs. Grundy, and, be it the "Gaiety," the "Français" or "Shimabara," give us but the time and money and we are there. So after a few more weak objections we are fairly bound over to stay the next night.

Next morning we are astir betimes. Breakfast once over no time is lost. The whole town is going to turn out to-day, so those who want good seats must not lie abed. Ah, truly a lovely morning! The past night's dew is fast disappearing before the still lusty rays of the sun, and the shop-boys are already busy, pail and ladle in hand, watering each their respective shop fronts—just as if any business were going to be done to-day! Dorohashi is already on the move, dressed in its best of course. New sun-shades, here and there a foreign silk umbrella, and none so poor but that he can produce a smart new kerchief wherewith to grace his freshly-shaven crown; while the sun glints, now on the lacquered clogs, and now on

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

the head dress of Ojôsan as she trips along, her toes turned in, (let us be fashionable or die), a fashion about as excusable as the "Grecian Bend."

We turn off suddenly to the right, past the school-house and neighbouring temple whence comes that bee-like humming tone peculiar to the priests of the *Hokke* sect, then on through a grove of thick bamboos and we are at the ferry. We are across in what Mr. Jingle would call a "pig's whisper," and can now descry the roof of the theatre and hear the vigorous rataplan of the 'first drum.' There are no *Hikitejaya* (tea-houses where they take charge of one for the day) as in the capital, so we elbow our way in at the door like the rest.

The building is a large one, constructed entirely of boards and matting, but not uncomfortable withal. Dear me! tis wonderfully like the Yedo theatre. There is the pit, and the two tiers of boxes round about, and there the gallery with a place set apart with chairs for those members of "the force" who will doubtless make their appearance anon. We are soon boxed up in our stall—or pen shall we say—and now for a look about us. Ah! 'tis lucky we came so soon; this is the favourite quarter and we are already being hedged in on every side by whole families at a time. We have had the luck to get an attendant from our inn who is communicative, and we are evidently going to hear all about everybody.—There is the family of that large dry-goods shop we passed on the way, all in silks and satins, and that old man and woman are the local apothecaries. Oh, of course, the shop we saw with the 'Apothecary of Dorohashi' written over the door (good name for a tragedy that, by the way). That fat boy two seats in front of us—Gracious, yes, how corpulent!—is the son of Denzoyemon who used to be Mayor in the olden time.—Here there is a sudden arrival of a group of some six or seven singing girls who crowd into a couple of side boxes, making quite a sensation with their smart toilettes and chattering like a young rookery, while the patient Hakoya, their male attendant, answers half-a-dozen requests at a time. Who is that pleasant-looking old gentleman with the silvery locks, taking his seat on the carpeted receptacle which has been awaiting him? Oh that is the *Reisan* (a familiar country word for the more dignified *Kenrei*), and here come his wife and children, all smiling and happy. "Luck comes to the laughing house"—indeed a true saying.

But while we are looking about us the fresh arrivals are becoming confusingly numerous. The pit is packed like the hold of a slaver, with only just enough room for tobacco boxes, and the "deaf gallery," as they call it in Yedo, positively groans with the mass of school children who have monopolised that quarter. Books are tossed aside for to-day and there is the schoolmaster himself in a side box. Why, there are actually two priests in that end box over the way! Oh yes; those are Dôrakuji, whom we passed on the way, and that fat one is Mampukuji from the next post-town.

Click, click. There, they are waking-up on the stage now. There goes the signal for action and every body settles himself as comfortably as may be. Two members of the force seat themselves, there is silence in the pit and an expectant hush among the school children. The fat boy has left off munching biscuits, the priests have replenished their pipes, and the young miss who has been perched above every one else so long to be admired, has been put down by a surly man with a fur cap—one Kiusuke, a pawnbroker. Meanwhile the *Samba*, whom nobody notices, has withdrawn. Click go the two sticks again and a faint thrumming of guitars is audible. There goes the signal again, click—now at shorter intervals,—there is a gathering up of the folds of the curtain, and, away it runs while a hum of satisfaction is heard throughout the audience.

The contents of the playbills have 'ere this been carefully scanned and we have a treat in store. The play is a favourite one—"Umegawa Chiubei," one of the best of its kind and always a success.

To give a short sketch of the plot, which in its moral somewhat resembles "George Barnwell."—The hero,—if we may so call him, inasmuch [illegible] sympathy in his career is deeply excited throughout,—Chiubei, is the son of a well-to-do farmer called Dengoyemon living in Ni-no-kuchi mura, a small village in the province of Yamato. Though a fine young fellow he is inclined to be wild, so that at length his father parts with him and sends him to a friend of the family, a *réligieuse* of the name of Miyôkan living in Osaka, who adopts him as her son. Here unfortunately temptation again besets him. His business is that of postal agent to the government, and large sums of money—remittances to *daimios* resident in Ôsaka from their estates—constantly pass through his hands and he has bid fair to do well. But, sad to say, he still frequents tea-houses and the many haunts of vice in Naka no cho, and in an evil hour meets with Umegawa, the belle of Aburaya—a tea-house in that neighbourhood. Aware of his danger and that his means do not allow of his redeeming her from bondage and making her his wife, he struggles with his passion successfully for a time, until one evening he is tempted in passing to look through the bars of the door. He perceives the girl with the mistress of the house, dropping a hair pin on the mat and counting the straws from point to point—"he comes—he comes not—he comes." At that moment he holds in his possession a sum of 300 *riôs*, the property of a certain *Daimio* and bearing his seal (to break which was death) on each packet; this fact alone has restrained him until now from entering, but his vanity conquers his conscience and he goes in. Shortly after him comes another aspirant for Umegawa, a certain Hachiyemon, a merchant of some means. He enters the room with an ill-bred, savage air, and tossing a bag of coin to the master of the house intimates that it is the balance of the girl's ransom and that he has come to take her away. Now some time previous to this Chiubei, fearful that his heart's desire was about to be wrested from him, had, by hook or crook, contrived to pay an advance of 50 *rios* towards the same object, and it being a matter of rivalry as to who should first complete the purchase, Chiubei, backed by the entreaties of Umegawa, had prevailed upon Jizayemon to give the preference to him. And thus the new arrival is received with but scant civility and is invited to withdraw. Being, however, an ill-conditioned knave, he proceeds to descant upon Chiubei's poverty in terms which bring out our hero, in a perfect storm of indignation, from the back room where he has heard everything. Hachiyemon not believing for a moment that Chiubei has money on his person goads him on till he produces a packet of gold, and in his frantic excitement unwittingly breaks the seal. The situation is here highly dramatic and requires powerful acting. An ominous silence follows; then in a fit of despair and rage he dashes down packet after packet, scattering the golden contents broadcast on the floor. His rival, discomfited, takes his departure, but not without first securing a piece of the paper which has enveloped the money. From this he gathers the true state of the case and informs the authorities. The unhappy Chiubei flies with Umegawa to his home, Yamato, where he has an affecting interview with his father, and being hotly pressed by the officers of the law the hapless lovers throw themselves into the river and perish.

This is perhaps one of the most effective dramas played on the Japanese stage. The characters are not too numerous, there is nothing offensive from beginning to end, and a strong interest is maintained throughout. It is often given in the capital, and we recommend those who are interested in such entertainments to take the first opportunity they can obtain to witness its performance.

About sunset we return to the "Little Pine Tree," and, early next morning, bid an unwilling adieu to Dorohashi and its simple inhabitants.

A telegram, which has caused a little sensation, was received this morning from Shanghai. It states that a traveller from Yunnan reports having met Grosvenor's Expedition, and warned them that large bodies of troops were there ready to resist the investigation. The telegram does not state who the traveller is—whether Chinese or Foreign—and many people are inclined to think that the message amounts to nothing. Others again view it as pointing to a fulfilment of their prediction that Mr. Grosvenor would be turned back. We rather incline to the latter belief. But if so, what becomes of the "satisfactory arrangement?"—Original from

ST. ANDREW'S DINNER.

The celebration of the festival of St. Andrew brought together a goodly band of Scotchmen and many guests who had responded to their hospitable invitation, in the dining-hall of the Grand Hotel on Tuesday evening, to do honour to the occasion. Mr. Cargill took the Chair, and about seventy gentlemen sat down to dinner.

After doing ample justice to the repast, which embraced many Scotch dishes, the Chairman called on the company to drink the health of the Queen, which they did with all the loyal warmth of feeling invariable on such occasions. This toast was followed by that of the Prince of Wales as Duke of Rothsay, in giving which the Chairman alluded to the popularity of His Royal Highness, and the many advantages he had enjoyed in making himself acquainted with foreign lands. The toast of the "Army and Navy" which followed was coupled with the "Civil Service," for which Mr. H. Wilkinson returned thanks. "The pious memory of St. Andrew" was then called for by the Chairman and drunk in respectful and solemn silence. Mr. Keswick then proposed "The Land of Cakes" in language of loyal devotion to Scotland, and the toast was received and honoured with enthusiasm. Mr. Ness gave subsequently "The Bards and Authors of Scotland," many of whom he enumerated in rapid succession, glancing at their special gifts and characteristics. Mr. Thomson proposed the toast of "The Ladies" in terms which, however glowing, were fully warranted by the occasion, and Mr. Evan Fraser responded with equal ingenuity. This was followed by "The Bench and the Bar," given by Mr. Keswick and acknowledged with excellent humour by Mr. Ness. "Prosperity to Yokohama" was proposed by Mr. Macdonald and drunk by the whole assembled company with mingled feelings of desire, hope and despair. Mr. Hay proposed "The Press," to which Mr. Brooke responded in a good speech, setting forth the vast debt of gratitude the world is now under to newspapers and the pride with which the English race legitimately regard their periodical press. He also alluded to the Press-laws of Japan, which he thought calculated to do more harm than good. Mr. Leckie proposed the health of "The Guests," to which Mr. Howell responded.

Several songs were sung during the course of the evening—some of them by a bard whose performances—greatly missed at the last dinner—have very often lent a peculiar charm to occasions of this kind in Yokohama. In responding to the health of those who had enlivened and graced the evening by their music, Mr. Black took the opportunity of proposing the formation of a St. Andrew's Society, for the relief of poor Scotchmen who might require assistance in this country, and steps were accordingly taken to inaugurate such an institution. Mr. Wylie then proposed the health of the Committee and the Chairman, in a speech enlivened by his customary humour and anecdote, and an evening of good fellowship and kindly feeling was brought to a close with the time-honoured "Auld Lang Syne."

Law Report.

U. S. CONSULAR COURT.

Before Gen. VAN BUREN, U. S. Consul-General;
and
F. R. WETMORE and C. DRAKE assessors.
Monday, 29th November, 1875.

ITO HACHIBEI *vs.* WALSH HALL & Co.

In this case the plaintiff claims a sum of $108,715.42, balance of account and interest connected with certain trading transactions he had had with defendants.

Defendants deny that they are indebted in the above amount, and claim that he (plaintiff) is indebted to them in the sums of $16,222.55, and $16,183.61, being balance of accounts between them and the plaintiff.

Mr. F. V. Dickins appeared as counsel for the plaintiff; Mr. G. P. Ness for defendants.

On re-assembling this morning, Mr. Ness called

W. C. Korthals, sworn: I am the representative of the Netherlands Trading Society in Japan at the present time. I produce the day books of the Society for 1871, showing [illegible] Netherlands Trading Society received two cheques on the 13th November, 1871, from Foo Kee. (Cheques 6 A and C produced.) I can trace the cheque 6 C. We received it on the 13th November, 1871, from Foo Kee. I can't say if we received cheque 6 A. on the 13th November; I could tell by examining the slip of the Oriental Bank Corporation. On this same day we received a sum of over $10,000 from the Fukaoka *Ken* which was paid into the Oriental Bank Corporation. (Slip of the Chartered Mercantile Bank put in, and marked 6 D.)

Cross-examined by Mr. Dickins: I was not here when these entries were made.

Lino de Sa, re-examined by Mr. Ness.

Witness: These entries in book D, dated Nov. 22nd, 1871, represent the balance of all the accounts between Ito and defendants up to date.

To Mr. Dickins: In bringing out these balances some profit and loss items were entered. There was no paper written at that time containing simply the profits and losses.

Sin Coy, cautioned: In 1871 I was defendants' compradore. In that year I had to do with purchases and sales of *niboos* and dollars. I do not know who had an interest in the transactions. From August till middle of October I made purchases. I did not make purchases after that date. I remember the French and Chartered Mercantile Banks made purchases for defendants. I found by the books that the French Bank's compradore had bought *niboos*. The *niboos* were brought to the office of defendants. I also remember the shroff of the Chartered Mercantile Bank bringing *niboos* to the office.

Mr. Dickins did not cross-examine.

Mr. Ness then called

J. G. Walsh, sworn: I am one of the defendants. I am a partner of Walsh, Hall & Co. I was a partner in 1871. I arrived from Europe about the 20th December, 1871. On my arrival I informed myself generally of the business that had been done in my absence. I acquainted myself of the relations between Ito and Walsh, Hall & Co. I ascertained that there had been a large business between Ito and Walsh, Hall & Co. in exchange, and that the business had been closed. I saw Ito shortly after my arrival, and again in 1872. Ito came to me about some trouble he was in at the Shosha about some rice transactions. He wanted to borrow $75,000, to make good his purchases at the Shosha: He came with Benzo, and told me of the trouble he was in, and that he wanted very much to have this money. He offered to pay any interest or commission that was demanded. He said that if he did not get it that it would cause him great trouble and loss. At first I declined to lend it, but at last agreed to lend it. Ito agreed to take our cheques in a sealed envelope, and leave them under the control of Iske. In case he was obliged to take delivery of the rice, he was to deliver it to us as security. The cheques were returned unused in the sealed envelope. Ito and Benzo expressed their thanks for the favour shown to them. We had no interest in the transaction whatever. It was done merely as a matter of friendship to save Ito from bankruptcy, loss, and disgrace. I had many other interviews with Ito and Benzo that year. I remember that Ito was trying to help us about the Yoshinden land. Ito spoke about it in a general way; he took a good deal of interest in it. I remember in the fall of 1872 that Ito applied to me for a loan of $25,000. Ito wanted this loan for some speculation. After some discussion I lent him the money; he was to pay interest and commission. On all the occasions when Ito applied for a loan, I asked him about getting the old accounts settled, and out of the way. I recollect in 1873 Ito's application for a loan of $10,000. I think he came with Benzo, Iske, and an interpreter. I know the old balance against Ito at this time was over $12,000. Ito knew it too. Early in 1874 Ito applied for a loan of $5,000. I asked Ito to settle the old balance he owed. I made a memorandum of the conversation at the time. The memorandum you show me I made at the time.

Mr. Ness offered to put it in.

Mr. Dickins objected.

His Honour ruled that it could not be put in.

Witness: I have often caused letters to be sent to Ito about the payment of this balance. I generally asked Futami from the beginning of 1873. Futami obtained replies several times. Futami showed me a letter purporting to come from Ito. It was an answer to a letter I sent to Ito, with accounts in it. It was sent in the summer of last year. I recollect the letter shown me. It is the longest one I ever received from him. It is the only letter in which Ito refers to his services in the land matter. I recognise book D. I first saw the book in the summer of last year. Futami came to me and asked if it could be given to Ito, who wanted it. I think he gave as a reason that

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

he wanted it for the purpose of settling accounts with others who were interested in this business. I think Benzo came with him (Ito) on this occasion. I said to Futami, "Let Ito have book D." The thought that our accounts with him were unsettled never entered my mind. There was no dispute or discussion at that time. I think I put my initials on the cover of book D when I gave it to Ito, but I think the cover has been changed. (Exhibit 3 shown.) I have seen a translation of this before, or something very like it. That was last year. Ito and his agents were at that time talking about the $40,000 note they wanted returned. I finally declined to sign exhibit 3. I was told it came from Ito. On my examination of the business of our firm with Ito, I never discovered any rice transactions in which we were interested. This was on my return. We have had no joint rice transactions together since my return. Transactions in rice with Walsh, Hall & Co, since my return could not have existed without my knowledge. I first heard of this rice claim from Mr. Dickins in the spring of this year. Mr Dickins did not think much of it. Mr Dickins came to speak about the differences between Ito and Walsh, Hall & Co. From all Mr Dickins said, I did not think the rice claim serious. Mr Dickins at first proposed to leave it out. Part of the securities mentioned in the petition were deposited in 1872, and part in 1873, which were the proceeds of securities deposited in 1872. No securities were deposited in 1871, as stated in the petition. When Ito came to borrow money on the Hanabusa *Han* claim in October 1872, he deposited *Han* notes for over 100,000 *yen*. We also had the the Hanabusa *Han* note. It had been deposited with us for collection. We loaned Ito $25,000 on these securities, having first ascertained from the Finance Department in Yedo that we could safely accept them. Ito and Benzo came about this loan to me. Iske was also present. I told them we would have to get the money from the Bank, that they would have to pay the interest and commission. I made a full memorandum at the time.

The Court here adjourned till 2 p.m.

On re-assembling Mr Ness continued his examination of Mr J. G. Walsh.

Witness:—The securities were to be held at the disposition of the Bank. (List of securities shown). This list was made in 1873 from the securities themselves by Irwin's instructions. The money was obtained from the Deutsche Bank. The correspondence already put in passed between us and the Bank. We told Ito we had to demand strong security because the Bank demanded it. This loan to Ito was paid off about a year afterwards. An account was made up at the time of the collection of the Hanabusa *Han* claim. A small sum was put to his credit. The $104,425 worth of securities remained in our possession by Ito's knowledge and consent; I held them as security for the old balance. I made the next loan to Ito towards the end of 1873. It was an advance of $10,000. Ito applied for the advance, Benzo may have come first. I made this advance against the securities now in the Hongkong Bank. I made a memo. of this at the time. I think that money was obtained from the Hongkong Bank and the securities were deposited with the Bank. The securities were deposited at this time. I received them and there is no question that they were not deposited at this time. Ito knew that they were deposited with the Bank. It was part of the arrangement.

Ito was to pay us the same interest as we paid the Bank. He was also to pay us a commission (Letter from defendants to Hong Kong Bank produced and put in, marked "L. L."). There were several subsequent loans. At the time this $10,000 loan was made the $104,425 securities remained with the Deutsche Bank as security for the $25 000 loan which had not yet been repaid. Another sum of $10,000 was loaned to Ito soon afterwards; this was on December 10th 1873. Ito was to pay ¾ per cent per month and a commission of ½ %. This loan was made on bonds we had in our possession (list of bonds read). I got this money from the Deutsche Bank. (Letter to the Deutche Bank from Defendants put in and marked 'N') The next loan was made in the same month (Dec.) It was for 18,000 rios. I made the memo. you show me at that time. I lent Ito the 18,000 rios on the security of thesteamer *Hoan-Maru*, interect to be 2% per month. The loan was made for a month only and if not paid when due the steamer to be forfeited. Ito obtained the money for other parties. Out of this Ito paid off the $10,000 lent him in October. The $18,000 loan was paid by our taking over the steamer *Hoan-Maru*. Accounts were rendered showing this transaction to Ito.

We were paid by commissions on these loans (accounts of 18,000 rio loan given to Ito, produced, put in and marked N.N.) The letter you show me is a copy of a letter we sent to the Hongkong Bank in December, 1873, (put in and marked "O.O.") I made memoranda at the time of the $18,000 loan being made. No change was made by Ito at this time in the securities and they remained pledged to the banks. They remained so with Ito's knowledge and consent. The last loan was made to Ito about the end of 1874. It was made on the securities we then held. The value of all the securities was less than $60,000 I think. Ito wanted to leave the settlement of his accounts till Iske got out again. Iske was sick. No subsequent advances were made. Ito owes us some $33,000 or $34.000. First, the old balance of nearly $13,000; second, the two loans $5,000 and $10,00 making $15,000; third, accumulated interest on the three. This makes up the $33,000 or $34,000 due us. The Hongkong Bank's lien on the securities is about $17,000. The interest on the $15,000 is $3,000 or $4,000. Ito often asked to see the securities. They were shown to him. We used to get them from the Bank. Ito waited in Iske's or Benzo's house, and he knew we always sent to the Bank for them. The 104,425 securities had been sent to Yedo and exchanged for 500 New Government Bonds. This exchange was made with Ito's consent. His son went with our interpreter to make it. All the securities are still in possession of the Bank. Ito has never denied his liability for the balance. He has frequently admitted it. I have not used his securities for my own purposes. I am ready and willing to hand them over upon payment of the balances named in my answer. I ascertained on my return from Europe that there had been joint business in niboos between Ito and Sobae. I never heard of a partnership in which we and Ito were on one side and Sobae on the other. I first heard it in this case. I enquired about the termination of business with Sobae and my firm just as I enquired about the business done with Ito. I found both had been terminated. Sobae paid us what he owed us about July this year.

Cross-examined by Mr Dickins:—When these securities were deposited with the Hong Kong Bank nothing was said about restricting the Bank from having a general lien on them. My firm is heavily indebted to the Hong Kong Bank at the present moment.

Question:—If the judgment goes against you in this cause as per petition will you be able to pay it?

Mr Ness objected to this question being answered.

His Honour said he would sustain the objection.

Mr Dickins took exception to this ruling and a note was made of it.

Witness: I do not remember any special agreement by which Irwin is to render me every assistance in this case. I had several interviews with Ito about the $75,000 advance in 1872. I think Ito wanted the money to complete some time purchases of rice. I do not know if the rice was delivered to Ito. I went to Kobe and Nagasaki a few days afterwards. We had no interest whatever in the matter. We lent Ito the money purely as a matter of friendship. The money was returned, and was not used. The cheques were put into a sealed envelope. Iske had charge of them. Ito merely wanted to show that he had the money. Ito borrowed $25,000 to speculate in dollars with. Ito told me himself what he wanted the money for. He was to pay interest and commission.

The Court here adjourned till 10 a.m. this morning.

Tuesday, 30th November, 1875.

Mr Dickins continued his cross-examination of Mr J. G. Walsh.

Witness: There was no special agreement in words that the lien of the bank upon the securities should be restricted to the loan upon them. The bank knew that the securities were the property of a third party. It was an understood thing. Immediately upon my arrival, or about that time, I was informed of the agreement between Ito and defendants. I was also told of the agreement with Sobae. I considered the agreement about Ito taking over the loss a fair one. The loss at that time was small,—from $5,000 to $10,000, I cannot remember the exact figures. Without any special circumstances, $7,000 is too much to charge for collecting $60,000. For collecting the Mito *Han* loan I would have charged more. Ito, if he had collected it, would have had to take bonds payable in fifty years. There was a good deal of trouble in collecting it. I think our house lost fully $13,000 in not charging interest on the advances to Ito. I calculated it a long time ago. I have not got the memo. now. The majority of the advances were made by cheques. When the Hanabusa *Han* note was made it was made in our name. We did not advance the money to the Hanabusa *Han*. Ito wanted us to collect the note. If he had collected the note he would have had to take 50 year bonds. The Hanabusa *Han* note was made several months before we lent Ito the $25,000. I never examined the note. It was a security. It was payable to us. I think Ito gave us his promissory note for $25,000 when we lent

Digitized by Google UNIVERSITY OF CALIFORNIA

the $25,000. I know of instances in which other firms have collected money due from one Japanese to another. I first knew Ito was indebted to us in the sum of $12,000 odd in May, 1872. I remember seeing an account bringing out that balance in 1872. I sent memo. accounts to Ito many times containing the balance. I had no reason to do it; he never asked me for it. Ito always spoke of this balance as being due by him. Ito has many times admitted that he was responsible for the loss on the old business, and that he had taken it over. I have no reason to remember in what way he said it. Ito in a letter to us refers to his old indebtedness. Ito admits in the two letters now in Court that he is liable for the whole of the losses. About August or September last year, Ito threatened legal proceedings. I heard of the interview in which Ito asked for a loan of $1,000,000. The firm never had any rice transactions with Ito. I never took much notice of the accounts Ito sent to Futami. I did not notice if there was anything about rice in them. I came across nothing about rice transactions with Ito in our books. Irwin did not tell me there had been transactions in rice with Ito. I have not gone into the details of the accounts. [Exhibit "P" shown.] This was written in our office. Futami sent it to Ito by my orders. If a man came and asked for his account, it would be made up from the books and given to him. I have very little doubt that account "P" is in substance correct. All the entries in that account were taken in one form or another from our books. At the time of demanding the $40,000 note, they said they had repaid it. Altogether, the amount of securities deposited with us amounted to over $150,000. The Bank is willing to release the bonds that are deposited with it for the sum of $17,000. If we lose this case we can pay this sum. I did not say in conversation with you that the sum of $40,000 had been paid, but that I intended to hold the promissory note till everything was settled. You told me you had written proof of a partnership between us and Ito, both about rice and *niboos*. The paper you show me is in Arthur Brent's handwriting. (Put in, and marked "P P") (A Japanese document put in by Mr Dickins from Mito *Han* officers to Iske and Benzo, marked "Q Q." Another document, a receipt for interest, put in, and marked "R R").

The Court here adjourned till 10 a.m. this morning.

Wednesday, 1st Dec., 1875.

On re-assembling, Mr. Ness continued his re-examination of Mr. J. G. Walsh.

Witness: There is no agreement between me and Mr. Irwin that he shall help me in this case. Mr. Irwin only appeared as a partner to assist in the case. I know no interest was charged on the advances made to Ito in 1871.

Mr. Ness said this closed his case for defendants. He would afterwards call one witness in regard to the value of native seals.

Mr. Dickins then said he would call

Namekawa Ichiro, cautioned: About the end of last year, I was in the service of Mr. Ito. In December last year, I was in the service of Mr. Ito. In December last year, I remember going to No. 14 with Mr. Ito. At that interview Mr. Irwin, Ito and myself were only present. Ito went to request a correct account instead of the incorrect one that had been received from defendants. The reply made by Mr Irwin to this was that Mr. Lothrop and Mr. Sa had had charge in making those accounts; that they were absent in Kobe, and that they should be furnished on their return. I did not hear Ito offer to Irwin that he would give 30 per cent., &c., &c., of anything that he recovered. I did not hear an offer of any such kind. I did not hear Ito say he would be a "devil," &c., if Irwin did not help him, and made him his enemy. Irwin and Ito conversed in Japanese. At the end of the meeting I saw nothing that would signify that they were quarrelling. I do not know Mr Smith. I can't remember the conversation in Japanese. I was with Ito in the room at the time. I did not interpret at all. I can't remember all that was said in English. I had only been in Ito's service a short time, and I knew nothing about the business in question. I did not interpret any such offer as it is alleged that Ito made to Irwin. I have been to your office. I made a translation of Ito's case for you.

Mr Dickins wanted to produce this paper.

Mr Ness objected to this being allowed.

His Honor ruled that it could not be put in.

Witness, cross-examined by Mr Ness: I was at No. 14 on two occasions. I do not recollect very well what persons were in the room. At the first interview Mr Futami was there; he interpreted. I do not recollect how the desks are arranged in the room at No. 14.

Tanaka Zenski: I live in Yokohama. I know a man named Koske: he came with Shoski a short time since to my house. Koske came to my house, and said he wanted to see Shoski. I went for Shoski; he came. Koske and Shoski had a talk. (Conversation related.) Koske went to Walsh, Hall & Co. Two or three days afterwards I met Shoski, and asked him what Koske had said. Shoski replied that he came about the $40,000 matter. I said I had told Mr Walsh, and he had said that as the $40,000 had been once repaid, he had no use for Koske's services.

Mr Ness did not cross-examine.

Saito Koske called by Mr. Dickins.

Witness: I have made many writings for Iske. I made a memo. in my books of the writings I made. (Books offered to be produced, but ruled out by His Honour.) Exhibit 19 is one of the papers I wrote for Shoske. It is something about payments and receipts of dollars. (Witness reads documents, and some items translated by interpreter.) There is nothing in this document to show that I composed it. In 1871 Benzo was nothing to Ito. I was an employé of Benzo. Benzo was a high official of the *Shosha*, and "wore his 'little' sword." Benzo lent his name to both sides, for the transaction of business. Benzo's services were used by both parties. Benzo had no authority to settle accounts for Ito. Rikichi had Ito's seal.

Cross-examined by Mr Ness: Benzo was not agent for both parties. Benzo acted for one party as much as he did for the other. Benzo acted as director in the rice and exchange business. I had nothing to do with the Mito loan. I am in Benzo's employment. Benzo would not settle an account unless all the parties were present, and he had received proper instructions in the affair. I wrote the paper (exhibit 19) at Shoski's dictation.

Mr Ness then put in two bank pass-books.

Witness: (Exhibit "I I" shown.) I put the date on this receipt. Shoski asked me to do it. It is a genuine document.

Cross-examined by Mr Ness: I did not cut a piece off this receipt.

The Court here adjourned till 2 p.m.

On re-assembling, Mr. Dickins recalled Ito Hachibei.

Witness: I never agreed with Mr. Irwin to close the partnership about the middle of October, 1871. I never heard of it. I never told Benzo I had made such an agreement. I never gave Benzo any such order, or instructed him to do so. Benzo was only a buyer employed by both parties. At the time I had not made up my accounts last year, I acknowledge that I owed the sum of over $12,000 to defendants. I first heard of this claim of $12,000 and odd in the 7th month. Futami sent me an account. I never gave Benzo any authority to settle the accounts. I never heard from Benzo that he had agreed to the balance of $12,000 odd. In the latter part of the 4th year of Meiji I permitted the settlement of accounts to be put off. I helped Irwin in the Yoshinden land matter, because we were on friendly terms. I never heard defendants deny their liability for the losses incurred in the partnership; they requested that the settlement of accounts might be postponed. I never offered Irwin 30 per cent. of what I might recover to assist me in this question. At the interview at No. 14, in December last year, I, Irwin, and Namekawa only were present. I think I must have instructed somebody to write exhibit "14" because it bears my name.

Mr Ness did not cross-examine.

The Court here adjourned till this morning at 10 o'clock.

Thursday, 2nd December, 1875.

On re-assembling this morning.

Mr Dickins announced his intention of withdrawing from the case as counsel for the plaintiff. He addressed the Court for about half an hour, and gave as his principal reasons for his withdrawal—First, That Ito apparently admitted the letter (exhibit "14." This letter is signed by Ito Hachibei, but strenuously denied by him, and admits the balance claimed by[defendants); though really he (Ito) intended to admit that it was in his name, and was *prima facie* to be taken as authorised by him. In order fully to explain the letter and its attendant circumstances, he (Mr Dickins) thought it necessary to have a certain witness produced, who was under the influence of Benzo, whom he believed had acted as a traitor to Ito in the case. Benzo, he was informed, declined to let him appear, and Ito, for some reason or other; could not influence Benzo so as to ensure his (the witness') production. That, secondly, without the explanation of the letter (exhibit "14") in question, to be afforded by this witness, he (Mr Dickins) could not usefully carry on the case for Ito; and, therefore, he had told Ito he must withdraw from it. Other witnesses that ought to have been forthcoming had not,

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

and throughout the case he had had great difficulty to contend with in this respect. Mr Dickins further said that he hoped his withdrawal from the case would not in any way prejudice the plaintiff's case. Ito requested that time might be allowed him to find the means to explain the letter.

Mr Ness said a few words about Mr Dickins having exercised his undoubted right to withdraw from the case; but he objected to Mr. his having commented in any way on the evidence and the case generally, as Mr. Dickins had done, in giving the Court notice of his intention to withdraw.

His Honor asked Mr. Dickins why the Saibansho could not be applied to to order the witness under Benzo's influence to appear?

Mr. Dickins said he could not do it without the consent of his client.

His Honor asked Mr. Dickins what Ito intended to do about his case, as his counsel had withdrawn from it?

Mr. Dickins said he did not know.

His Honour said Mr. that Dickins would greatly embarrass the Court by withdrawing from the case at the present time. If a new counsel took up the case for Ito he would be strange to it and its facts, and would probably pursue a different mode of conducting it, and it might lead to the case being all gone over again, which would be most undesirable. He said Mr Dickins would greatly oblige the Court by continuing the case, and he (His Honour) would adjourn till Monday next, in order that time might be afforded him to learn whether Ito could not sufficiently influence Benzo to produce the witness, whose non-production was in great part the cause of his determination to withdraw.

Mr Dickins said he should be very sorry to place the Court in any difficulty. He would, on Monday morning next, announce whether he had given up the idea of withdrawing from the case, or whether he would continue it. Of course his action would almost entirely depend on his being able to get Ito to have the witness he wanted produced.

The Court adjourned till Monday morning next, at 10 o'clock.

Before Gen. VAN BUREN, U. S. Consul-General.
Tuesday, Nov. 30th, 1875.

William Gannon was charged by E. Greensward with assault and battery.

Prisoner pleaded not guilty.

Prosecutor (sworn) said he kept a drinking saloon called the "Rose and Crown" at No. 170. He refused on Sunday afternoon last to supply prisoner and another man named Davis with drinks, because prisoner had not paid for some he had had previously. On his refusing, prisoner used abusive language, and struck him across the mouth with his fist. He then closed with prisoner, and they fell. While down, Davis said to prisoner, "Kill him, — —, kill him." Davis then struck and kicked him. He then went out to get a policeman. No policeman could be found. He sent to the station for one. Prisoner and Davis locked themselves up in the house. Police Constable Mansbridge arrested prisoner and the man Davis.

F. W. Young, sworn: He saw prisoner and prosecutor clinch together, and lie fighting on the floor. Davis, who had a gun, said he would shoot prosecutor: He pushed away the gun that Davis had, and Davis struck him in the eye.

Police Constable Mansbridge, sworn, stated that he went to the house where the fight took place, and arrested the prisoner and Davis.

Prisoner, sworn, said he went into the saloon. Prosecutor struck Davis. Davis then thrashed him. Prosecutor caught hold of him (prisoner), and threw him, and they fought together.

Police Constable Mansbridge, re-called, said that the four men (prosecutor, prisoner, Davis, and Young) were all drunk.

His Honour dismissed the charge, saying it had been a drunken row. If all the parties concerned in it had been Americans he would have locked them all up. He cautioned the prisoner that if he went to the house again, and there should be any more trouble, he would punish him severely.

IN H. B. M.'s CONSULAR COURT.
Before H. S. WILKINSON, Esq., Acting Consul.
Thursday, 2nd Dec., 1875.

Alexander Johnson, late chief officer of the *Parmenio*, was charged with stealing $50 from the person of Peter Cumming, late cook of the *Shalimar*, on the 9th November last.

Accused pleaded "not guilty" to the charge.

Peter Cumming, sworn: I am a seaman, late cook of the *Shalimar*. (Witness here gave the same testimony as in the preliminary hearing of the same charge against Livingstone.)

To Accused: You were leaning over me, in the dining room, when Livingstone had his hand in my pocket. I told Livingstone in the other room that I had been robbed.

A seaman of the *Oscar Vidal* gave the same evidence as he had given in the charge against Livingstone.

To accused: Livingstone said he would blow your brains out between 9 and 10 o'clock that evening.

—Wallace, a seaman, repeated the evidence he gave in the charge against Livingstone.

To accused: It was between 9 and 10 o'clock when Livingstone threatened to shoot you. It was shortly after this that Livingstone tore your coat.

A seaman of the *Shalimar* gave similar evidence as before in the charge against Livingstone.

To Accused: It was a long time after dinner when Cumming left.

— Wallace, re-called: I saw Livingstone give accused some money. I saw this through the window of the "British Queen." I looked in because, after I had left, I heard two shots fired in the "British Queen."

To Accused: I only heard the shots. This was between 9 and 10 o'clock.

William Davis, seaman, sworn: My last ship was the *Cremona*. I was in the "British Queen" on the 9th, in the forenoon. I saw complainant come into the house with the boatswain and Livingstone. I had a drink with them. After that we went in and had some dinner. I do not remember if Johnson was there then. After dinner we went into the other room, and had some drinks. I went for a walk with the boatswain, and when we returned, at 4 o'clock, complainant told us he had been robbed of his money in the house. Johnson was there then. Complainant accused Johnson and Livingstone of stealing his money. Livingstone then swore at complainant. After the row was settled, I went into the other room, and Johnson came in. He was drunk. We all had drinks again. I asked Johnson if Livingstone had taken complainant's money. Johnson said, "shut up." I went and got dinner about 6 o'clock, and then went back to the "British Queen." I remained there till the shop was about to be shut up. About 10 o'clock I saw Livingstone and Johnson getting into a quarrel outside the bar. I was a little the worse for drink, and did not interfere till I saw Livingstone tearing Johnson's coat. I succeeded in separating them. Johnson took off his coat and slung it across the bar; he said, "That is no use to me now." Livingstone threw it back to him, and said, "D—n you, take it; I don't want it." Next morning I saw Johnson and asked him about his coat, and he showed me a new coat he had got from Livingstone. I asked Johnson if Livingstone had taken complainant's money, and he said, "Yes; but don't let on, as I owe Livingstone about $20 for drinks and cash." Johnson said he got a few dollars out of what Livingstone had stolen, and that Livingstone called it "square" about the $20.

To Accused; You have the coat on now. I saw you next morning with the coat on. You said you got it from Livingstone. You told me you got a few dollars from Livingstone and your account squared out of this.

Accused, having been duly cautioned in the usual form, said:—"I have nothing to say just now."

His Honor then committed the prisoner for trial.

IN THE JUDICIAL COURT, KANAGAWA KEN.
Before ASAINO KANSUI, Vice President.
November 30, 1875.
COCKING & Co. *vs.* YATO SABURO.

This was an action for $125.67 for balance of account for goods sold and delivered.

Defendant denied his indebtedness, and claimed that plaintiffs were in his debt on a copper transaction, and that he had applied very often to be allowed to see plaintiffs' books.

The Court adjourned till the 5th December, when the books of both parties are to be examined.

NETHERLANDS TRADING SOCIETY *vs.* YENOMOTO SEISKE.

This was a claim for $1,253.97, being balance due of a loan made by plaintiffs to defendant.

The Court adjourned *sine die*.

Original from UNIVERSITY OF CALIFORNIA

A PARADOXICAL VIEW OF "PROGRESS."

(The Spectator.)

Mr. Forster, in his very interesting speech last week at Leeds, on the subject of University extension, said he supposed that a much higher amount of education would make Leeds richer, though he was not sure of this; that it would certainly make Leeds happier, since knowledge confers new enjoyments and new means of avoiding pain; but that it was quite uncertain, again, whether high education would make Leeds better or not, since knowledge, though it gives power over nature, does not at all necessarily imply increased power of self-denial and self-government. It is, to us, very satisfactory to hear from a popular statesman this sort of warning that the world's idea of progress is not a very sound one, and is quite consistent, at all events, with a certain amount of serious moral retrogression. Indeed, we think it might be safely said that the higher the intellectual culture of any mind becomes, so much the greater becomes also the complexity of the moral problems set it, and that therefore it is a proportionally much more difficult thing for such a mind to keep up even the same relative standard of self-forgetfulness and self-denial as that of a nature furnished with but a few simple elements of moral and intellectual experience. Of course, education may very much soften and, in a sense, civilise the type of selfishness. It may cause the brutal type of selfishness to be exchanged for a silkier type of selfishness, but it is quite certain that a thoroughly selfish man of the highest education is in a less hopeful moral condition, is less likely to be made ashamed and converted by any of the ordinary moral agencies of human society than a thoroughly selfish man who is totally illiterate. The mere fact that it is so much easier to plant the seed of all goodness, moral humility, in a mind which *must* feel one way or another the profound inferiority of its resources to those of other men, than it is in one which has tried all things, and found them 'all vanity and vexation of spirit,' suggests how many opportunities of surprise and shame, and how many motives for new endeavours there may be available to the ignorant bad man, which are not available to the accomplished bad man. We go further than Mr. Forster, and though we maintain that a fair degree of culture is a most valuble thing, which every good society ought to covet for *all* its members, we not only believe that such culture does not necessarily bring any moral advance with it,—except the mere advance out of coarse and brutal tastes,—but that it probably introduces more new motives and opportunities for self-seeking and moral epicureanism, than it does for self-denial and devotion to the interests of others. Education has not reached that point yet in the most educated of States; for there can hardly be anything but good in educating human beings out of the tastes and passions of brutes, even if we replace them by human tastes and passions still more susceptible of moral perversion than those in the circle of which they were imprisoned before. But the stage of decency once reached,—and education, no doubt, does good against which there is no set-off, in substituting the steady preference for decent modes of life for the preference for indecent and brutal modes of life,—the further progress of culture is not necessarily a moral progress at all, and may be an advance into the region of much greater moral dangers.

But Mr Forster's remark suggests a much wider criticism. "Progress" has for a long time meant the process of introducing men to a vastly greater range of experiences, and a larger number of spheres of experience, than were before open to them; and it has meant this quite rightly, since it is pretty clear that human nature, as we now know it, is, in the case of the great majority of all nations, confined to a sphere of experience far too narrow for its real capacities. But it does not at all follow that men may not make the mistake of supposing that there is no constant relation between the power of the average mind and the quantity and number of its interests; and that those interests, intellectual though they be, may not be so far multiplied as to be too numerous for the mind which has to deal with them, so that instead of being elevated and strengthened, it may be lowered and weakened by the effort to grasp them. This is, no doubt, what, in a very small way, people are already discerning to be the danger of too widely and thinly spread an education. It makes children, and the men who grow out of the children, 'smatterers' in their intellectual life, iustead of giving them firm and solid acquirements of a limited range. But what we refer to goes far beyond the range of what is called education. The whole idea of "progress" and "civilisation" is at present inextricably mixed up with the notion of crowding a much larger number of experiences into a shorter time than ever before. Now, is it not quite possible that that process may be so overdone,—in relation of course to the capacities of man,—that progress may come to future generations to mean the very opposite of this,—*i. e.*, may represent the effort steadily to limit the number of available human interests and enjoyments, so that they may not be too numerous and too disturbing for the character of the being who has to undergo them? At present, we think a great deal, and no doubt quite rightly, of any invention which enables men to live through in a day what it would have taken them a week or a month to live through in times gone by. The telegraph enables us to send fifty brief messages and get replies to them in a few minutes, where a few years ago none could have been obtained under many days, or even weeks. The railway enables us to travel from twenty to forty miles, work for many hours in a city, and then travel home again, when a few years ago it would have been simply impossible to combine the work done with the country enjoyments gained. So far there may be, perhaps, nothing but gain. But how about the future developments of this tendency? Is it not easily possible for men to be tempted to attack more work than they can do, and to be tempted to taste more pleasures than they can enjoy? And if so, could the remedy be really left simply to individual discretion? Would it not take a good deal of social co-operation to prevent the mischief spreading? May we not come to regard with as much concern and fear the access of new temptations to multiply the number of human tasks and pleasures, as we now regard it with satisfaction and hope? Railways have no doubt hitherto added infinitely to the real enjoyment and the real education of the great majority of mankind, though doubtless a few volatile persons have been injured instead of benefitted by the new facilities for change. But imagine a discovery which should enable human beings to travel safely with the rapidity of electricity, and a trifling cost. Would such a discovery, considering what human nature is, really improve or injure the average quality of human character? We suspect the latter. The temptation to see many things would come into such dangerous conflict with the resolve to understand adequately what you see, that the world might very well have, in a few generations, a poorer type of average human character as the result of such a discovery. And if it had, would not a conception of progress and civilisation spring up just the opposite of that which we now have? Would it not mean the organised effort of nations to keep their experience within the range at which that experience could be so far digested as to be useful? Would it not mean a steady attempt to confine instead of to multiply the accessible spheres of individual experience, to retard the pace of life, to devise artificial means of limiting the fields of study and enjoyment, so as to make them more microscopic, instead of more desultory?—a constant effort to stamp with disapproval what we now regard with admiration,—we mean the courage which attempts great feats of labour, and which is greedy of all kinds of experience?

It is clear that, in one sphere at least, the operation of the new distractions of life has already worked a greater change than men are at all aware of and that these distractions are capable of working very much greater changes yet. All moral and religious teaching assumes that an amount and a degree of attention is paid to the inward moral life, which it is hardly possible for anybody who is accessible to the full tide of modern interests, intellectual, social, and political, to pay at all. A great part of the growth of what is called "secularism" is not the growth of an opinion, but the inroad of a variety of distracting influences. The greatest sayings of all religions assume *time* for a brooding conscience. Mutltiply indefinitely the small vibrations of social and intellectual interest, and that time disappears. Look at the enormous drain on human time which the new sciences alone cause. They fill the mind with great and profitable speculations which, whether inconsistent with theological beliefs or not, are at all events in a totally different plane from those beliefs, and which yet absorb the vital force, the powers of reflection and reverie and imagination, which used to be available for the religious sphere. And yet the new sciences constitute but a department, and a very small department, of the new demands on men's curiosity and effort. It seems to us that the force which is almost as likely as any other to bring about the extinction of the human race, is the exhausting claim of the new intellectual interests placed, or likely soon to be placed within our reach. These may very easily become instruments too powerful for man, as he is, to wield; or rather too numerous to wield with that adequate grasp at which he is certain to aim when he sees how much depends on his pushing his partial knowledge in different directions. At all events, it is quite conceivable that "progress" may one day come to mean almost the opposite of what we now mean by it,—*i. e.*, not new opportunities of various experience, but new devices for economising

and accumulating the reserve-force of human character, till it is equal to the task of mastering such experience as, whether men will or no, they *must* undergo.

THE MOLTKE NARRATIVE OF METZ AND STRASBURG.*

(The Saturday Review.)

When it was announced, not many months since, by the Berlin press that the first volume of the great History of the General Staff might be considered as closed with the capitulation of Sedan, the finishing stroke of the Second Empire, of fully treated in the Eighth Part, the remark was naturally made that, to complete this section of the war thoroughly, there should have been chapters added, bringing down to the same date events that occurred in other parts of the theatre of war. At Metz especially, there were forces brought into action twenty-four hours before the crowning conflict began round Sedan, numbered, had all of them been really used, by hundreds of thousands. And at Strasburg a struggle was begun some days previously, in which the old and the new types of siege, so strongly opposed in their characters, were for once to be brought together in the same series of operations. The new Part now published, the Ninth Section of the great volume which it extends to fifteen hundred pages, supplies the very gaps thus pointed out, and thoroughly completes the fall of Napoleon III. as a military narrative.

Just one-third of its contents are devoted to the details of the hard fighting before Metz on the 31st August, continued through the morning of the 1st September, and known as the battle of Noisseville. For hard fighting it was, whatever theory of Bazaine's conduct be adopted; being made necessarily so by the vast superiority of numbers which the French used against the point of the investing lines they attacked, and the determination with which their adversaries resisted the attempt to break through. Yet we are not at all disposed to admit that those who study these details closely will concur in the conclusions drawn by the Berlin writer (p.1482) in his judgment of this action, which, though guarded in tone, is not the less decided. According to his view, "the arrangements of the French Commander-in-Chief, and the conduct of his troops on the 31st of August, put it beyond all doubt that on the side of the enemy the firm determination prevailed, on this day at least, to break through the lines of the German army." The very wording of this paragraph seems to us to be rather begging the famous question of Bazaine's conduct, and in fact construing this in the sense most pleasant to German warlike pride. For if the theory which absolutely condemns the Marshal be true, he would still have fought this, his one important action after being inclosed, with just sufficient vigour to cover the ultimate object of staying at Metz under the apparent force of circumstances. His troops when thrown upon the 1st Corps of Steinmetz's army, at first but slenderly supported, could have had no insight into any such concealed design; and their conduct, which at the opening of the action was brave enough, cannot possibly affect the question of Bazaine's honesty of purpose, unless the historian succeeds in showing that the ex-Marshal left no possible effort afterwards untried to carry out the purpose of breaking through. Now the battle was kept up until noon of the 1st of September; and so the very caution expressed in the words already quoted, "on this day at least," seems to contradict a belief in Bazaine's thoroughness of purpose, or at the best to condemn his want of tenacity. And the paragraph above translated, which professes to decide the question of his honesty, is followed by one the opening of which, to most people reading it, throws the gravest suspicion on the whole proceeding, and marks the defeat of the French in their attempt seem but a part of the foregone conclusion in their leader's mind. Referring to the French Council of War held five days before, the Berlin writer goes on to observe (the italics being our own):—

> Marshal Bazaine had previously in his arrangements *given assent to the reasons urged by some of the generals for keeping the Army of the Rhine still at Metz.* But in the meantime, sooner or later, the consideration must have forced itself on him, whether it would not have been far more advantageous to leave at the great fortress of the Moselle nothing more than the garrison proper for its extent and the means of subsistence available, and with the mass of the army to gain the open field, in order once more to take a direct share in the defence of the country. The news received on the 26th August of the [intended] approach of the Army of Châlons pressed him imperiously to the last resolve.

So far, indeed, the argument, though a dubious one, apparently runs at its close in favour of Bazaine's having acted honestly, and may be taken by disinterested critics for what it is worth. But then follow words which take off much from the effect that these lines were evidently designed to produce:—

> Notwithstanding this the Marshal could not reckon, even if he succeeded in breaking through, on being able to unite with the army without any further trouble, and effecting by the superiority of the forces thus united an immediate and decisive change in the course of the war. Such a result was only to be thought of on the assumption, which it would be very difficult to justify, that the armies of the two German Crown Princes [those which were then actually uniting to enclose that of Châlons] were to allow the advance of Marshal MacMahon to the east a perfectly free course

Possibly the historian is here conscious that he has already counteracted the effect of what he has just before said in Bazaine's favour; for he takes pains to add the rather obvious reflection, that in any case the approach of the French forces intended to extricate him would, by dividing the attention of the investing army, profit that of Metz in its endeavour. But all the force of the argument as to a possible junction with the Army of Chalons is disposed of if we make the simple supposition that Bazaine did not choose (and indeed in this his judgment would have been perfectly right) to believe in MacMahon's approach to the Moselle until he should know something about it more tangible and trustworthy than the vague promises received from a comparatively distant part of France. If this were so indeed, which is most natural, and if Bazaine on the 31st of August still felt that he must decide for himself one way or the other independently, and with direct reference only to the forces which had been for some days investing him, then we are brought back to the simple test of the course of the action itself for any proof of the reality of his design.

And here we may at once say that the German account of what the Germans themselves did in the battle of Noisseville cannot help the judgment of the critic in the least. Attacked, as there is no question that they were, by a vastly superior force of French, the officers and men of which were animated with the hope of getting out of what all the more clear-sighted saw to be a very perilous and ignominious position, how could that part of the 1st Corps on which the brunt of the fighting fell on the 31st August possibly know the inner counsel which the enemy's commander kept in his own breast? It may readily be granted that, if the Germans had been so surprised, or in any way so demoralized as to have given way decidedly at the chief points of contact, the success of the French would no doubt have carried Bazaine forward with it, and the attempt to move on Thionville have become as real an operation as the Berlin history would make it. But this did not happen, and so the question still remains; Did Bazaine in this, which is now admitted to have been the only genuine sortie during the investment, use, or intend to use, the whole force at his command, and only fail either from want of means, or want of judgment as to the part which he selected? On this particular head we confess that we must prefer French evidence, notwithstanding its natural tendency to partisanship, to German, which though more critical in itself, is hardly less biassed, and is certainly based on a much more remote view of the French movements. And French evidence, as is well known, happens to be overwhelmingly on the side of those who insist that, although their commander at first threw a considerable part of his forces boldly forward on the enemy's lines, he did not follow up this step with the energetic action of one who felt the weight of the stake, which was in truth no less than the honour of his whole army, and the staying of the investment of Paris. Into the particulars which so many writers offer it is impossible to enter here. But it is hardly going too far to assert that Bazaine himself, of all the chief French writers on the scenes of the battle of Noisseville, is almost alone in pretending that the advantage obtained at the outset was sufficiently followed up. And when we take from the pages before us the clear statement (p. 1486) that "the arrangements of Marshal Bazaine which preluded the battle seem to show a certain hesitation in his resolve," and again, that in a later paragraph which distinctly ascribes the failure of the advance of the 31st August solely to "the energetic resistance of the 1st Infantry Division and the overpowering effect of the German artillery, which stopped in the decisive direction" the whole force that led the movement, it seems really necessary to add little more. The fact is that Court Wartensleben, or whoever here holds the pen for the Moltke bureau, has assumed for the time, unconsciously very possibly, but not less fatally to his historical duty, the character of an advocate. His countrymen, and above all his comrades, have always treated it as a sort of point of honour to believe that the vast capture which rewarded their endurance round Metz could not have been even indirectly owing to

* *Der deutsch-französische Krieg* 1870-71. Von der kriegsgeschichtlichen Abtheilung des Grossen Generalstabes. 1ter Theil, Heft 9. Mittler; Berlin. 1875.

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

the disturbed state of French politics, but was a purely military achievement, unparalleled of its kind for magnitude in the world's history. It is a very natural view no doubt, but, if admitted into the judgment beforehand, it makes a fair weighing of the whole circumstances almost impossible; and in adopting it the Moltke writer has, as it seems to us, only added a new example of the dangers that beset those who write history in a merely national spirit. For this historian, who has such faith in the ex-Marshal's intentions on the 31st, is the same whom we have quoted as showing that he had five days earlier assented to the fatal view urged on him that to keep the army round the walls of Metz was to do the best service to the country; a view (as Bazaine's own work discloses) put forward with special force by the unhappy General against whom the country already had such heavy charges to lay, the ex-Minister of War, now commander of the IIIrd Corps, Marshal LeBœuf.

It is but too naturally in accordance with this lenient view that the narrative before us, interesting and accurate as the details individually are, is hardly trustworthy when the question arises of the number of troops that actually opposed Bazaine on the two days of Noisseville. The calculation is that the French Commander-in-Chief, all deductions made, disposed of 120,000 for his attack on the German lines; and, after details of the various troops brought up to check it, it is said "there were available on the German side, towards the end of the battle, over 69,000 men, with 290 guns." But, looking a little closely at these figures, and the hours of arrival, it seems that this total represents rather the mass of men disposable long after the action was over than those that really fought. Twenty thousand appears to be rather above the strength of the Ist Corps, which was actually in occupation of the part of the lines on which Bazaine moved; and half that number represents the effective force of the 1st Division of the corps, on which the real strain fell. In short, however well the French at first came on, and whatever the alleged design of Bazaine, the fact that their effort was decisively checked by a force of not more than one-twelfth their strength speaks for itself as an argument which no mere belief in any one's honest intentions can refute.

There is yet one more practical test of the two theories as to Bazaine's conduct. In applying this we are compelled to correct the assertion with which the Berlin writer prefaces his "Considerations" on the battle of Noisseville. "Whilst the Germans," he says, "in all the previous battles of this war had come forward as the assailants, they had now for the first time the opportunity of making the advantages of well-trained infantry and the superiority of their artillery tell in a defensive action." Surely he who wrote thus has forgotten the admirable account in his own pages, which we not long since reviewed, of the battle of Mars-la-Tour, and of the memorable defence there made by Prince Frederick Charles' IIIrd Corps against the superior force attempting to drive it from the all-important ground it had seized. Though Bazaine, owing to a tactical blunder, kept back much of his army from joining in, there is no question that, on that day at any rate, two of his corps did their very best to force their way through the line occupied by the Germans. And what was the cost of the effort heroically sustained by the latter? Sixteen thousand of their number were left upon the ground; the French, on their part, hardly suffering less. Now at Noisseville again we find one German corps bearing the brunt, and again the losses nearly equal. But this action, on the fierceness of which the narrative rests Bazaine's reputation for energy, cost the Germans just three thousand men in all, and the French a few hundreds more. Here are figures taken from the writer's own pages, and it is only necessary to state them as sufficient reason for contesting the opinion with which he has prefaced them.

We have dwelt purposely on this one episode of the action of the 31st August, because it seems from this volume that Bazaine's defence is ultimately to rest solely upon it; and, after all, the motives and action of the fallen Marshal must form for all time to come the most important historical element in the story of the defence of Metz. It is for this reason that we have challenged the version adopted at Berlin, and deliberately set forth in this new Part of the narrative. There are other portions of great interest; as that, above all, which surveys the strategical opportunities which remained to the French when first shut in. But it would be impossible to do them justice now, and we leave them, for the present, with the study offered us of the peculiarities of that siege of Strasburg, the conduct of which did so much to exhibit for Alsace against the Empire of which it now forms part.

Yarns.

No. 16 to 24	per picul	$30.50 to 34.25	No. 38 to 42 ... per picul	$42.00 to 45.00
No. 28 to 32	per picul	$36.00 to 40.50	Reverse Twist 16-24 „	—

Woollens.—No material change has taken place in the position of this staple. Plain *Black Orleans*, as well as all fancy articles, are difficult to move even at low rates, but in *Cloth* there has been a more active demand, and fair transactions have resulted, holders meeting the market freely even at ruinous rates.

Plain Orleans	40—42 yds.	32 in.	6.25 to 7.80	Figured Mousseline de Laine	30 yds.	30 in.	0.25 to 0.28
Figured Orleans	29—30 yds.	31 in.	4.75 to 5.25	Multicolored „	20 yds.	30 in.	0.35 to 0.40
Chimagoro	30 yds.	30 in.	5.25 to 5.75	Cloth, all wool plain or fancy	48 in. to 52 in.		0.80 to 1.20
Italian Cloth	—30 yds.	32 in.	0.25 to 0.33	Presidents	54 in. to 56 in.		0.65 to 0.75
Camlet Cords	29—30 yds.	32 in.	6.25 to 7.25	Pilots	54 in. to 56 in.		0.42½ to 0.50
Camlets Asstd.	56—58 yds.	31 in.	18.50 to 19.00	Union	54 in. to 56 in.		0.60 to 0.70
Lastings, Japan	22—30 yds.	32 in.	13.00 to 14.50	Blankets, scarlet & green	7 to 8 lbs.	per lb.	0.40 to 0.42½
Plain Mousseline de Laine	—30 yds.	30 in.	0.18½ to 0.20				

Sugar.—The market continues exceedingly dull. In Formosa there has been a slight decline, but China descriptions are without alteration.

Sugar:—Formosa in bag	per picul		3.60 to 3.80	China No. 5 Kong-fun	per picul		4.40 to 4.90
in Basket	„		3.50 to 3.60	„ No. 6 E-pak	„		4.00 to 4.10
China No. 1 Ping fah	„		7.90 to 8.00	Swatow	„		3.00 to 3.10
„ No. 2 Ching-pak	„		6.80 to 7.20	Daitong	„		3.20 to 3.30
„ No. 3 Ke-pak	„		6.00 to 6.50	Japan Rice	„		3.25 to 3.30
„ No. 4 Kook-fah	„		5.20 to 5.70	Kerosine Oil	per case		2.45 to 2.55

EXPORTS.

Silk.—Since the 15th ulto., business has been comparatively quiet, a state of things which has to a great extent to be ascribed to the interruption of telegraphic communication with Europe. As far as can be judged by the latest correspondence the prospects of prices at home were not cheering, but the endeavours of buyers here to bring the market down have been only partially successful. Some of the holders are withdrawing their silk from the market and prices are rather unsettled. We quote:

Hanks best No. 1 and 2, $430 to $460; No. 2½, $400 to $420; Common and Inferior, $360 to $390. Oshiu best, $500 to $520 nominal; Good, $470 to $490. Hamatski Medium to Common, $410 to $430. Native filatures $480 to $550. Arrivals are 420 bales, and deliveries 550 piculs, 50 only of which are Oshiu sorts.

Silk-worm's eggs.—We will give in our next the final result of the season.

Tea.—Business has been rather brisker, settlements for the closing week amounting to 3,400 piculs. The grades most in favor have been "Good Medium" at $26 to $29, and rather better parcels of "Fine to Fine" at $30 to $33.

Stocks are reported heavy, say, 11,000 to 12,000 piculs in this place and an equal if not greater amount in Yedo; the bulk of this consists of "Medium" to "Low Fine," the high grades seeming to be in very limited supply.

The market closes with a little firmer feeling, operations being confined to four or five purchasers.

To-day's rates rule as under.

Common	$16.00 to 20.00	Fine	$30.00 to 33.00
Good Common	21.00 to 22.00	Finest	$35.00 to 38.00
Medium	23.00 to 25.00	Choice	$40.00 upwards.
Good Medium	27.00 to 29.00		

The *Fleetwing*, is expected daily from Kobe to fill up for New York.

EXCHANGE AND BULLION.

Exchange.—Rates have remained very steady throughout the week with scarcely anything doing.

Rates close as follows:—					
Sterling—Bank 6 months' sight	4s. 1d.	On Hongkong—Bank sight	par.
„ Bank Bills on demand	4s. 0d.	„ Private 10 days' sight	¼ per cent dect.
„ Private 6 months' sight	4s. 1⅛d. to ⅝	On San Francisco—Bank Bills on demand	98
On Paris—Bank 6 months' sight	5.18	„ 30d. sight Private	par.
„ Private 6 ms. sight	5.22 to 23	On New York—Bank Bills on demand	97½
On Shanghai—Bank sight	72½	„ 30 days sight Private	par.
„ Private 10 days sight	72¾	Gold Yen	par.

THE GREATEST

WONDER OF MODERN TIMES!

HOLLOWAY'S PILLS.

PERSONS suffering from weak or debilitated constitutions will discover that by the use of this wonderful medicine there is "Health for all." The blood is the fountain of life, and its purity can be maintained by the use of these Pills.

SIR SAMUEL BAKER,

in his work entitled "The Nile Tributaries in Abyssinia," says, "I "ordered the dragoman Mahomet to inform the Fakey that I was a "Doctor, and that I had the best medicines at the service of the "sick, with advice gratis. In a short time I had many applicants, "to whom I served out a quantity of Holloway's Pills. These are "most useful to an explorer, as possessing unmistakable purgative "properties they create an undeniable effect upon the patient, which "satisfies him of their value."

SIMPLE, SAFE AND CERTAIN!

HOLLOWAY'S OINTMENT

Is a certain remedy for bad legs, bad breasts, and ulcerations of all kinds. It acts miraculously in healing ulcerations, curing skin diseases, and in arresting and subduing all inflammations.

MR. J. T. COOPER,

in his account of his extraordinary travels in China, published in 1871, says—"I had with me a quantity of Holloway's Ointment. I "gave some to the people, and nothing could exceed their gratitude; "and, in consequence, milk, fowls, butter, and horse-feed poured "in upon us, until at last a tea-spoonful of Ointment was worth a "fowl and any quantity of peas, and the demand became so great "that I was obliged to lock up the small remaining stock"

Sold by all Chemists and Medicine Vendors throughout the World.

May 17th, 1873. 6m.

PROTECTED BY ROYAL LETTERS PATENT,

Dated October 11th, 1869.

Under Distinguished Patronage

DR. BRIGHT'S PHOSPHODYNE.

(OZONIC OXYGEN)

A CHEMICAL PREPARATION OF PHOSPHORUS, WITH THE VEGETABLE ALKALOIDS QUINIA, CYPRIPEDEN, XANTHOXYLIN, &c.

This Phosphatic combination is pronounced by the most eminent members of the Medical Profession to be unequalled for its power in replenishing the vitality of the body, by its supplying all the essential constituents of the blood and nerve substance, and for developing all the powers and functions of the system to the highest degree.

It is agreeable to the palate, and innocent in its action, while retaining all its extraordinary properties; and as a specific, surpassing all the known therapeutic agents of the present day for the speedy and permanent cure of—

Nervous Prostration	Lassitude
Liver Complaints	Shortness of Breath
Palpitation of the Heart	Trembling of the hands and limbs
Dizziness	Impaired Nutrition
Noises in the Head and Ears	Mental and Physical Depression
Loss of Energy and Appetite	Consumption (in its first stages only)
Hypochondria	Timidity
Female Complaints	Eruptions of the Skin
General Debility	Impaired Sight and Memory
Indigestion	Nervous Fancies
Flatulence	Impoverished Blood
Incapacity for Study or Business	Nervous Debility in all its Stages
Sick Headache	Premature Decline

and all morbid conditions of the system arising from whatever cause. The action of the Phosphodyne is twofold—on the one hand increasing the principle which constitutes nervous energy, and on the other the most powerful blood and flesh generating agent known; therefore, a marvellous medicine for renovating impaired and broken-down constitutions. It quickly improves the functions of assimilation to such a degree, that where for years an emaciated, anxious, cadaverous, and semi-vital condition has existed, the flesh will rapidly increase in quantity and firmness, and the whole system return to a state of robust health. The Phosphodyne acts electrically upon the organisation; for instance, it assists nature to generate that human electricity which renews and rebuilds the osseous, muscular, nervous, membranous, and organic systems. It operates on the system without exciting care or thought upon the individual as to the process. It moves the lungs, liver, heart, kidneys, stomach, and intestines, with a harmony, vigour, yet mildness unparalleled in medicine.

The Phosphodyne gives back to the human structure, in a suitable form, the phosphoric or animating element of life, which has been wasted, and exerts an important influence directly on the spinal marrow and nervous system, of a nutritive, tonic, and invigorating character, maintaining that buoyant energy of the brain and muscular system which renders the mind cheerful, brilliant, and energetic, entirely overcoming that dull, inactive, and sluggish disposition which many persons experience in all their actions.

The beneficial effects of the Phosphodyne are frequently shown from the first day of its administration, by a remarkable increase of nervous power, with a feeling of vigour and comfort, to which the patient has long been unaccustomed. Digestion is improved; the appetite increases wonderfully; the bowels become regular; the eyes brighter; the skin clear and healthy; and the hair acquires strength, showing the importance of the action of the Phosphodyne on the organs of nutrition.

Finally, the Phosphodyne maintains a certain degree of activity in the previously debilitated nervous system; its use enables all debilitated organs to return to their sound state and perform their natural functions. Persons suffering from Nervous Debility, or any of the hundred symptoms which this distressing disease assumes, may rest assured of an effectual and even speedy cure by the judicious use of this most invaluable remedy.

DR. BRIGHT'S PHOSPHODYNE

IS SOLD ONLY

In CASES at 10s. 6d. by all Chemists and Patent Medicine Vendors throughout the Globe.

Full Directions for Use, in the English, French, German, Italian and Dutch Languages, accompany each Case.

☞ *CAUTION.—The large and increasing demand for Dr. Bright's Phosphodyne has led to several imitations under somewhat similar names; purchasers of this medicine should therefore be careful to observe that each case bears the Government Stamp, with the words Dr. Bright's Phosphodyne engraved thereon, and that the same words are also blown in the bottle.*

THE

Japan Weekly Mail.

A POLITICAL, COMMERCIAL, AND LITERARY JOURNAL.

VOL. VI.—No. 50.] YOKOHAMA, SATURDAY, DECEMBER, 11, 1875. [PRICE $24 PER ANNUM.

TO SUBSCRIBERS.

SUBSCRIBERS at a distance whose period of subscription may have elapsed, are informed that their papers will be addressed and charged to them *until countermanded.* This rule has been found necessary in order to avoid the inconvenience of an abrupt stoppage of the paper which might result from an omission to renew.

It is requested that notice of the intention to discontinue a subscription be so given as to reach Yokohama *before* the date of its effluxion.

NOTICE.

ON and after the 1st of July, Notices of Births, Marriages and Deaths will be charged $1 each insertion.

Such Notices cannot be inserted in this journal unless endorsed with the name and address of the person by whom they are sent.

Yokohama, 25th June, 1874.

Notes of the Week.

The rumours to which we made reference last week touching the Corean question have taken a more definite shape during the past few days, and it is more than probable that unless the Coreans make some reparation for their late conduct an expedition will be directed to the country to extort it. Apart from the financial considerations, Japan is in a better position than it was two years ago to make such an expedition, as it has the command of larger means o transport, the army is more efficient and there is enough war material at hand at least to make a fair beginning. Not the less, however, do we deplore the necessity for the expedition. The only thing which would reconcile us to it would be the union with the Japanese of the Foreign Powers interested in the question. From whatever causes their repugnance to such union might spring, three of them have grave cause of dissatisfaction against Corea, which has insulted and practically repelled them. We have grave doubts, however, whether they will take any joint action on the point, though there are at least as many arguments for doing as for not doing so. Meanwhile it is well to protest before starting against the vapouring, of which we have already had some symptoms, about justice being done to Japan by the foreign Powers and the foreign Press, neither of which, so far as we know have any desire to withhold entire justice from her. There is a ridiculous little knot of men here and in the neighbouring capital every one of whom is interested in some more or less direct manner in throwing dirt upon all who do not exactly side with their foolish and extravagant laudation of this country and its acts, and this settlement —for its sins—is cursed with a journal which is made the organ of their anthems. We utterly protest against this practice, which has of late become too common. Every column of this balderdash might be assessed at so much a line, and if the Government pays for it the humble copper with which efforts of this nature are rewarded at home, the writers are overpaid. It is monstrous to say in this unblushing way that justice cannot be expected from the Foreign powers and Press towards this Government. We call our readers to witness—we must speak for ourselves—that during the past six years the scales have been held as fairly by this journal as our knowledge permitted. A strong desire for the success of the experiment now being made in this country has always animated us, and we have fifty times urged patience and forbearance when many others have held different language. When we have thought the Government wrong, we have spoken in a manner as unequivocal as when we thought it was right. What do these men feel about justice more than we feel? Call it interested partisanship, and we know where we are, but the very name of justice is brought into ridicule by these people and their silly clamour.

The failure of the Foreign Ministers to come to an agreement with the Japanese Minister for Foreign Affairs about the Shooting Regulations has led to a small mishap. An accident of a trifling nature occurred in the covers on Sunday last and led to the arrest of a gentleman, but as it will be made the subject of investigation next week, we shall say no more about it now thanthat the account of it which appeared in the *Hochi Shimbun* is most ridiculously exaggerated and untrue. But it is most undesirable in every way that the present condition of things should continue—most undesirable that foreigners should appear here as defying the authorities of the country in matters external to our settlements. Now we have got at last a wounded policeman—wounded, that is, to the extent of having three scattered and spent pellets under his epidermis, but who was so unconscious of the injury that at the only time at which it could have occurred he was unaware of it. Now don't let us "waste him." If we can't "kill a fiddler wid him," as was proposed on a memorable occasion too well known to justify further reference, let us make him the occasion of a sacrifice. Let the Foreign Ministers cut the whole knot by giving up the fines to the Japanese. The concession is not without argument in its favour. The offences contemplated in the Regulations are offences not against any Japanese subject, but against the Mikado as Lord Paramount of the soil, and it may thus be pleaded that the fines which represent the punishment and expiation of such offences should go to him as such. The point is really not greatly worth a contest, and the present condition of the question is intolerable. On no account should this policeman be "wasted."

The defendant in the case of Asada Koske *versus* F. Beato got off more cheaply than quite tallies with our own view of justice, be it worth more or less. The luxury of breaking a cook's head is one which may be compared to that of eating a calve's head, and it is rather hard on the cook that the one should cost less than the other. The assault was of rather an aggravated character, though of course the monarch of the kitchen made the most of his grievance. It is pretty clear, however, that he swooned away and was some time coming back to culinary consciousness. Now we shall not hesitate to express our deep sympathy with the defendant. The cook who sends up the same dish for dinner as for breakfast, and that dish not the one ordered by his master, must be a villain of the deepest dye. And we have always thought that, while dinner is being served, a cook should stand with a rope round his neck, like the proposer of a new law in one of the states of ancient Greece. Cases sometimes occur when immediate execution without shrift or benefit of clergy is the only proper penalty. Why should a man who sends up two truffled dishes running be allowed to survive the crime? What plea can be urged for the monster who takes the trail out of a woodcock, scallops oysters without cream, or over-roasts the coffee? What too bad can be done to the man who sends up a snipe like a chip, or your splendid sirloin purple?

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

What is the use of anger if not for occasions of this kind? Of course you must not harbour a vindictive feeling against the cook; but the only way to avoid this is obviously by executing him on the spot. This at once allays all irritation, and makes malice—a very wrong thing—impossible.

In his defence of the Comic Dramatists of the Restoration, Charles Lamb pleads that they must not be tried by the standard of morality which exists, and ought to exist, in real life. Their world is a conventional world. Of right or wrong, of family ties, of paternity, sonship, gratitude, claim or duty, their characters know nothing, and Lamb urges that it would be absurd to try them by any such standards. We fear our own views of the equities of the kitchen could only be justified by something of the same argument, and, lest we should be misunderstood, we will at once frankly admit that we should not advance it. The cook has as good a right to an undislocated vertebra and a whole skin, as his master, and much as it may cost to acknowledge this, we fear there is no way out of it. We have admitted the exasperation, our sympathy with the defendant's anger—not with his act—, we feel deeply with and for him, and we trust we may never be so tempted. But had we been Sir John Fielding, or even Walker himself, who has said more good things about dining and cookery than all the Brillat-Savarins who ever wrote, the defendant, so sure as his name is what it is, should not have gone out of our Court without a twenty dollar fine. The heavens would have fallen, there would have been great joy in every kitchen in the settlement, great grief in every parlour. But our magisterial bosom's lord would have sat more lightly on his throne, and the gods themselves, seeing us over a bad dinner, the consequence of our inflexibility, would have greatly joyed. Mr. Beato got off too cheaply.

The arrival here of Miss Jenny Claus has been announced. The reputation of this lady as a violinist has long preceded her, and both the published and private accounts of her playing which we have received justify us in expecting that it will afford a great treat to all lovers of music. We say all lovers of music, and not of instrumental music, or of violin playing, merely because the great composers, certainly those who lived after the time when violin-playing had been carried to the pitch it has attained during the last hundred years, have lavished their finest thoughts upon their compositions for this instrument. Beethoven wrote two—or was it three?—*concertos* for the piano-forte, but only one for the violin, and Mendelssohn in the same way. Both works stand out as among the great masterpieces of creative art produced by the human mind. Into their quartets and quintets for stringed instruments Mozart, Haydn, Beethoven, Mendelssohn, Spohr, and many other writers only inferior to these, threw their choicest and profoundest thoughts, and before any approach can be made by a student of music to a just estimate of the genius of these great men, he must give ample attention to their works for the violin—an instrument perhaps more justificatory of wonder than any which has proceeded from the hands of man. In a very interesting and instructive lecture delivered some two years ago by Mr Gladstone, he contrasted the relative position, in the scale of the benefactors of humanity, of the man who had perfected the violin and him who had perfected the steam-engine, nor was he at all inclined to give precedence to the latter. He argued—and rightly, we venture to think—that the material progress to which the one conduces is but a poor thing if unadorned by the graces of art and unrefined by the surroundings it now derives from the thoughts and feelings of those higher types of mankind, which, in moods of a discontented, and, perhaps, unlawful, pessimism, it seems the only justification of our race to produce. By the side of these beautiful influences, how little do the luxuries of sense really count! Of course they are very agreeable. It is pleasant to move noiselessly on velvet carpets, to drink exquisite wine from as exquisite glass, to enjoy delicate cookery—(several turtles have just arrived from the Bonin Islands)—to dress well, to rest luxuriously, to drive at ease to [illegible] with all that this means. But what [illegible] on the library door, locks the [illegible] burns the idolized Stradivarius or Amati, your pencils, palette and brushes? No more Shakespeare, Göthe or Molière, to say nothing of the less familiar ancients, no more Händel, Beethoven, Mozart and Mendelssohn, no more Raffaelle and Titian, no more songs, no more pictures, no more poetry, history, philosophy or romance. Which would we sooner give up? Should we hesitate the smallest decimal of a second? We may rely on it that Mr. Gladstone was right, and, taking the violin as the representative for the time being of these higher influences, we must go and listen to Madlle. Claus, and see what new beauties and attractions we can find in this lovely art, how much deeper we can see into Nature and the human mind, how much in ourselves is yet unawakened, and how much more we can learn of what these heaven-born musicians have thought and felt. You think all this is nonsense? Think so in welcome; but remember what the greatest man that ever lived said:—

> Such harmony is in immortal souls,

and let us try at least whether we cannot hear something of it, even though

> This muddy vesture of decay
> Doth grossly close us in.

We do not know that it would be quite just to find fault with Mr. Morton because he took all the materials for his lecture on Sokratês from Grote. He could not go to a better authority, though he should certainly have acknowledged the fact that he had done so. Lectures are a more common form of evening entertainment in America than elsewhere, and the manufacture of them there has doubtless its own code of ethics. With ourselves, a lecturer is supposed to have made himself familiar with his subject by reading or personal experience, and to reduce this to writing or to the form of an extempore address. But he is not supposed to cut or carry his materials in blocks from other authors, and say nothing of the quarry or building whence they came. There are obvious reasons for this, but the only one to which we care at present to refer is the great injustice which such a practice does to the subject under demonstration. Grote devoted a whole chapter—some hundred pages of small print—to the subject of Sokratês, and it is evident that if a page of this is taken here and there, and thrown together in the disjointed form which cannot but result from such a process, there is not only an entire want of intellectual perspective in the result, but there is no clearness of definition in the principal object portrayed. If a lecturer wishes to do justice to a subject of this nature he should first make himself thoroughly acquainted with it and all its surroundings, and then throw them into a form which is the result of his own mental operations. He is [illegible]rectly right to go for his materials to the best sources, and these may be so numerous that the mention of them would only appear pedantic. But he should—if we may venture on a metaphor so vulgar in connection with such a subject—boil them down and afterwards present them in this reduced form to his audience, so that something at least of all the materials should be among the ingredients of his dish. It is not enough for him to take a subject which he likes, he must take one with which he is familiar, and had Mr. Morton been thus familiar with the subject he chose and its surroundings, he would certainly have spared us the first quarter of an hour of his address, which was as little Greek in its form and character as can possibly be imagined. During a pestilence of locusts the mandarins in China offer so much a bushel for and burn them, and if Mr. Morton had done something of this kind with his adjectives, he would have vastly improved his lecture.

We wish Mr. Morton had made more clear to his audience, by an illustration, the process adopted by Sokratês—not to teach men, indeed, for he always disclaimed this as his office—but to persuade them of their ignorance. There are many such illustrations extant, and a very instructive one would have been that in which he confuted the atheist Aristodemus the Little—or, as Macaulay calls him, the little atheist Aristodemus. As a dialectical process, that of Sokratês was as perfect as anything could be, and considering that he employed it for many years from the time, the [illegible] left his father's sculpture

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

shop to the day of his trial,—it is no wonder that, except to his disciples, who regarded his wisdom, his virtues and his character as something almost divine, he was the most magnificently hated man in Athens. For there must have been thousands of men there whom he had made to feel, in the midst of a public which was surpassingly quick and humorous, that the knowledge they believed themselves to possess, and on which they most prided themselves, had no real foundation whatever, either objective or subjective; that is, that the order of their ideas had no true correspondence with the order of phenomena—the movement of their thought did not follow the movement of things—; and that even granting that their false premisses of fact were true, their inferences were untrue, and the processes by which they arrived at them were so incoherent and illogical that they had not a particle of justification for holding them. He wandered about the streets of Athens, or loitered on the market-place talking to every one who would enter into conversation with him, and at the time of his death there could hardly have been a considerable man in the city, possibly in the state and even the neighbouring states, who had not come into contact with him, and been made to feel the effects of his astonishing skill. He was, as Grote says, a religious missionary doing the work of philosophy, and, with an enthusiasm in his cause which has characterized all the greatest men of his type, he was utterly regardless of all but the barest necessaries of existence, and lived but for the object to which he devoted his whole life and his wonderful powers. He went bare-foot, his clothes and food were of the coarsest kind, and his house was of the humblest But he has left behind him an imperishable name, and is justly regarded as one of the truest, the bravest and wisest of the sons of men.

Mr. Morton did very well in insisting upon the claims of Sokratês as a religious teacher, conscious of a great mission, and inflexible in his discharge of it. There is sometimes a tendency in writers treating this subject, to underrate this special side of it. Had the religious antecedents of the Greeks been other than they were, it is impossible to say what honours might not have been paid to Sokratês after his death, or what myths might not have clustered round his name—as, indeed, to some extent they subsequently did round that of Plato. It must be remembered, however, that the purification of the intellect, as an indispensable preliminary to acquiring true knowledge, whether of religion, ethics or things, was the great object of his life, and in pursuing this as Grote says, "no man even combined in like manner the enthusiasm of a missionary, with the acuteness, the originality, the inventive resource, and the generalising comprehension of a philosopher."

A curious and deeply interesting subject of speculation would be opened up by the enquiry, What would have been the present condition of the European mind had the Sokratic method and teaching, pursued by means of his Elenchus, continued to this day? But this would lead us much further than it is now possible to go, even did we possess the requisite knowledge and ability to pursue the enquiry. In regard to physics, of which Sokratês thought man *could* know nothing—and no one can wonder at the view who remembers the unverified conclusions, deeply interesting and singularly acute as many of them are, of the philosophers of his age who dealt with these questions—it is certain that his followers would soon have used his method for investigating the processes of external nature. It is impossible that a method which was animated by "the truest spirit of positive science and formed an indispensable precursor to its attainment," should have confined itself long to the mere sphere of human relations and duties, though the former of these extended to the unseen world. The clearer views of real knowledge which were obtained by the Sokratic method would have gradually swept away the unverified conclusions of the Greek physicists, and supplanted them by the results of a true induction; and Europe might have been saved part at least of that long night of fifteen centuries through which she had to pass—a night during which the only lamp of science was held by the Moors and Arabians, while even this was in perpetual danger of being extinguished by the Church.

We wish Mr. Morton had given us a better, because truer, description of the Sophists, instead of following the common error of coupling them with the phrase "making the worse appear the better reason." Both Grote and Lewis would have given him ample materials for doing this, and his omission of all which is said on the subject by the former is the less excusable that he has taken so much from him. The omission, however, serves to illustrate one of our earlier observations. The simple truth, shortly stated, is that the much-abused Sophists taught an art, which, far from corrupting society, which it certainly would have done were Mr. Morton's account of them correct, was, again in Grote's own words, "an indispensable auxiliary to a just administration of law." They taught the art practised by every barrister at this day, that, namely, which places, or attempts to place, a client's case before a judge in the best possible manner. The moderns should long ere this have ceased—most writers indeed have already done so—to take the bitter caricatures of the Sophists by the Greeks as true pictures. Mr. Morton would also have done well to show how by insisting upon true definitions, Sokratês laid the foundation of an inductive system of reasoning—not precisely that of Bacon, the object and exact method of whose search differ from those of Sokratês—but one which made it a conscious method, and must have been a striking novelty. And why did Mr. Morton almost play into the hands of the spiritualists, and recall poor Dale Owen's fate and all the nauseous impostures of spiritualism by associating—though he did it only by very vague and distant inference—what the intense subjectivity of Sokratês and his profound trust in God, induced him to call the *dæmonic something, the sign, the voice, the divine sign, the divine voice,* with the idiotic gabble of a parcel of hysterical women, or designing and ignorant men? What would Sokratês have said to the idea of getting his deep monitions of right or duty out of the legs of a ricketty table, or from a *planchette* under the hand of a woman paid a guinea for astonishing a crowd of gaping fools! And why were we not given the speech—it is as grand and impressive as it is short—delivered by Sokratês at his trial? This is among the things which men remember all their lives, while it will be the object of some of the lecturer's audience to forget his peroration.

But we must pause. We have criticised Mr. Morton, though we hope, in no unbecoming spirit, but do not the less thank him for his lecture, if only because it has attracted our attention afresh to a subject of such surpassing importance and boundless interest.

H. M. S. *Curlew* returned on Tuesday last from a cruise to the Bonin Islands, having spent a week at the anchorage of Peel Island, the most considerable, or, at all events, most populated, of the group. The cruise was one of curious and remarkable interest, and introduced the visitors, among whom was Mr. Russell Robertson, H. M. Consul at Yokohama, to a condition of life and society remarkable alike for its positive and negative features. The whole population of these Islands amounts to sixty-four souls, some of the elders of whom are men of pure white blood, their wives being Kanaka women. The history of these people, the particulars of their life, their social, mental, and moral condition, are highly curious, and we have reason to hope that further information on the whole subject will before long be given to the public through the channel of the Asiatic Society.

A party of nine convicts effected their escape from the Japanese gaol at Nogeyama on Tuesday night with the connivance, it is thought, of a warder of the prison. Five of them have since been recaptured, and the police are said to be on the tracks of the others.

It is gratifying to see that The Young Men's Christian Association has announced a programme of lectures, which are to be delivered during the winter in aid of the objects for which the Society exists. The syllabus is devoted to subjects

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

which are either strictly religious or have a religious bearing. Mr. Parson will deliver a lecture on Honest Scepticism; Mr. Cochran on An unchallenged evidence of the truth of Christianity; Dr. Faulds upon Darwinism; and Mr. McLaren upon the Evidences of the Christian Religion drawn from the presence of God among men, a title we cannot entirely understand. But this is good solid matter, and, if treated soundly, cannot fail to have an instructive and beneficial effect upon the audience it may attract.

The judgment given by the court of enquiry called to investigate the circumstances attending the stranding of the *Sunda*, seems to call for no special remark, but every one will be pleased to find that no blame was imputed to Captain Edmunds, who indeed was complimented upon his behaviour after the accident. It will be remembered that the *Sunda* struck on a sunken rock near Turnabout Island not marked on the last Admiralty Chart of that part of the China Seas.

Attention may properly be drawn to a translation from the *Hochi Shimbun* which will be found elsewhere headed "The Government Purchases of Rice." To suppose that any good can be done by our protest against it as a most cruel measure towards the farmers is absurd. But it may show foreigners who refuse to listen to legitimate criticism upon the acts of Government, how rudimentary are its notions of justice towards the people.

We publish on a sheet accompanying our present issue, the first of a series of meteorological observations taken at the Imperial Observatory in Yedo. The observations are summarised on every fifth day, and we hope to present them in due course to our readers henceforth.

From the "Japan Mail Daily Advertiser."

The *Hochi Shimbun* referring to the despatch of an envoy to Corea, to prepare for the important embassy which will shortly follow, adds that Hirotzu left the capital on his mission on the 1st instant.

His Majesty the Mikado visited the Prime Minister, Sanjo, at his residence on Saturday last on his return from the *Daijokuan*.

China like Japan has the year been blessed with an abundant rice harvest. So heavy has the yield been in the former that a correspondent of a Japanese newspaper talks of an intended export to this country.

The *Nisshin Shinjisshi* notices the intention of despatching an officer of the Imperial Navy to Vladiwostock.

We have received an intimation from the business manager of the *Nisshin Shinjisshi* to the effect that although from unavoidable circumstances its publication is suspended it will appear again in a few days.

A serious explosion of fire-damp is reported to have occurred at the Takasima Mine on Saturday last, the 4th instant, by which fifteen lives have been lost and as many more dangerously wounded. We await more exact particulars.

The *Hioron Shimbun* says that for the last three days and nights the workmen at the naval depot at Idzumishinden have been occupied in shipping gunpowder, but its destination is unknown.

The next exhibition in Kiôto will open on the 15th March 1876 and will remain open for one hundred days.

A slight increase in the price of rice has taken place in the Capital.

Mr. Mori Arinori, we learn from the *Hochi Shimbun*, proceeded to Kobé by the *Toshima Maru* on Saturday evening last to resume his journey thence to Peking.

The *Choya Shimbun* reports that, during a gale of unusual severity in the beginning of November, about one hundred and twenty houses were destroyed in the island of Hachiyo.

It is understood that the arrangements for the transfer of the Yedo line to a party of *kuadzoku* are already far advanced. The proceeds of the sale will be in all probability applied to the extension of the railway system in the southern provinces.

It was currently reported in Yedo yesterday that definite orders had been issued to certain Regiments to hold themselves in readiness to embark for foreign service.

The *Nichi Nichi Shimbun* relates that certain *shidzoku* of Shirakawa have offered their services to the Government in event of an attack being made on Corea.

The same journal notices the acquital of the Editor of the *Hioron Shimbun* of a charge of violating the press regulations.

The *Hochi Shimbun* gives the following version of the recent shooting of a native constable. Three foreigners went out to shoot on the 5th instant at Ichi-nokura near Yedo, and by a mischance a policeman who happened to be at hand was wounded by one of the sportsmen. The wound was not fatal, but the foreigners ran away very fast to escape the consequences. They were, however, pursued, and were arrested at Shinagawa by the police constables stationed there.

We cannot allow this statement to pass without adding that it is absolutely at variance with that which is given by the foreigners in question.

A school, to be named Meitoku, which has been established at Matsukuracho in Yedo by certain *Kuadzoku*, will be formally opened to-day.

A Japanese newspaper gives a rumour that all the ships of war are to undergo examination, and if necessary repair, prior to the 1st January, 1876. This would seem to be preparatory to a demonstration which it is thought will take place during that month.

The *Hochi Shimbun* confirms the reported purchase by the Military Store Department of 30,000 stand of breech-loading rifles, together with the requisite ammunition.

The Peninsular and Oriental Steam-ship *Orissa*, with London mails *viâ* Brindisi to October 29th, left Hongkong for Yokohama at 5 A.M., on the 8th instant.

We hear that at Mikuni Togé, about 70 miles to the north of Yedo, snow has already fallen to a depth of six feet.

A Japanese newspaper hears that certain *Kadzoku* have entered largely of late into money-lending operations, tempted by the high interest obtainable at present for advances. It is to be hoped that they may not suffer from their inexperience. Another journal, the *Choya Shimbun*, tells us that in their distrust of present investments the nobility are hoarding their money, and that a rise in gold invariably occurs when their pensions, which they receive in paper, are paid.

IMPERIAL GOVERNMENT RAILWAYS.

YOKOHAMA STATION.

Statement of Traffic Receipts, for the week ending Sunday, 21st November, 1875.

Passengers, Parcels, &c.	$7,377.21
Merchandise, &c	$ 703.12
Total	$8,080.33

Miles Open 18.

Corresponding week last year.

Passengers, Parcels, &c.	$7,883.77
Marchandise, &c	$ 780.34
Total	$8,664.11

KOBE AND OSAKA STATION.

Statement of Passenger Traffic for the week ending 28th November, 1875.

Passengers, 17,550¾.	Amount	Yen 4,033·00
Luggage and Parcels	,,	118.385
Goods	,,	269.544
Total Amount		Yen 4,420·929
Corresponding period last year		Yen 4,025·547

THE CENSUS.

THE publication of a new Census, taken, it is said, by a new and improved method, tends to confirm the views we have from time to time expressed, at least during the last three years, of the population of this Empire. Before that time, the doubts thrown upon the ordinarily received figures and invariable Japanese assertions, seemed to us founded on such good grounds, that it was impossible not to be moved by them. European travellers had crossed the country in all directions, and had invariably been impressed with the sparseness of its population, except along certain great high-roads. The extent of uncultivated country, too, its mountainous and often barren character, the paucity of cities or even great towns, the known tendency to exaggeration which belongs to estimates of population, all combined to justify a very decided scepticism in regard to the correctness of the received figures, viz, thirty-five millions. Nothing can be more certain than that the old estimates made of the population of the great Chinese cities were enormously exaggerated. Huc says that Hankow, Hanyang and Woochang, which in reality form but one city, though the Yang Tze Kiang and one of its tributaries divide them, contained, at the time of his visit there, between seven and eight millions of souls. Canton was always set down at eighteen hundred thousand, Hang Chow for over two millions, and Soochow for a million and a-half. All these figures have been brought down to more reasonable limits—without reference, of course, to their prodigious diminution by the Taeping rebellion—and it was thought that the old estimates of the population of Japan demanded similar treatment. All the *à priori* argument was against the current estimates, and even in the face of the two last censuses, many very shrewd and sound judges will consider that the grounds for believing them to be incorrect are greater than those which can be urged for accepting them. They have formed their opinions after very careful thought and much experience of the country, and will refuse to make more than a trifling modification of them. This may seem very perverse to those who imagine that "figures cannot lie," as is sometimes said; but nothing is ever gained by deriding the opinions of intelligent men. Their conclusions are more likely to be true than those of the multitude; but whether false or true, the opinions on which they are grounded are always valuable.

Our own view is entirely in favour of the accuracy of the ordinary estimate, and the results of the census, within a moderate error, say five, or, at the outside, ten per cent. And our chief reason for this conclusion is the almost perfect machinery possessed by this Government for ascertaining the facts, the omnipresence of its eye and hand, and the strict record it keeps of the coming and going of its people. Within a very small error, it can ascertain the whereabouts of every soul in this Empire on any given day or night, and the fact is not altered by the inference that, if so, the Japanese are in no sense a race of free men. The minuteness with which these records are kept is astonishing, and the punishment for neglecting to give the Authorities such information as the requisite accuracy demands, is quite heavy enough to produce the intended results. This being the case, better grounds must be shewn than any we have ever yet heard advanced, for doubting the conclusions of the Census. Within an error, as we have said, of five or ten per cent—the probability being that this error is rather in the direction of under than over the figures given—the population of this Empire may be pretty safely stated as between thirty-three and thirty-four millions of people, or a trifle over that of the British Islands.

The last time we had occasion to write on this subject we pointed out the "undesigned coincidences" apparent in the table, which may be regarded as strong internal evidence of its general accuracy. Having only the summarised figures before us now, in place of the extended tables published in our issue of the 17th January, 1874 (*Japan Mail*, 23rd January), we cannot make any lengthened analysis of these figures to show how far they tally with laws of population known to European statisticians, but certainly unknown in this country to any such extent as could permit of their influencing the summary before us or the tables of last year. It is clear, however, that there are certain discrepancies in this summary which, though not invalidating the grounds for accepting it, still demand notice. For instance, the proportion between the total male and female inhabitants of the Empire, excluding nobles, bonzes and nuns—'the common people of Japan,' as they are called in the summary—is as 157 of the former to 153 of the latter. Now this only makes the excess of males over females 261 per cent. But the births in 1873 bore a relation of 290 males to 271 females or an excess of 4.32 per cent. Then if we take the increase of population in 1873, we find that 955 males were born to 942 females, or an excess of only 1.38 per cent. These figures certainly do not tally as they should. The variations in the proportion of male and female births during any two given years must be fractionally small, and it is impossible to suppose that there can be any such difference between the proportions of the sexes in their aggregate and those born in any given year, as is stated in this summary. Of course there should be an excess of males, for this is a law of population to which no exception has ever yet been discovered. The proportion varies in different nations, falling as low among some as two and a half per cent, and rising as high as fourteen and a half among the Jews of Southern Russia or Poland—the highest known. It is obvious that certain social conditions are calculated to affect these proportions, and, as a matter of fact, they do so to a certain extent. We are by no means satisfied that the Japanese cannot improve the method on which they take their census, and once suggested that they should apply to the European nations for some suggestions on this point. But they are so profoundly self-satisfied, and ignorant of the real position they occupy relatively to the European nations—a fact of which we should not remind them if they were a little more modest—that it is hopeless to expect any improvement in these matters. One of these days it may dawn upon them that, considering the admirable machinery they possess for taking a census, such discrepancies as we have pointed out are attributable solely to a method which must be faulty. When a foreign critic of their figures is forced to admit that an error, which ought to be no more than a decimal, amounts to five or ten per cent, the admission is somewhat discrediting to them, and yet with the figures before us we are compelled to make some such admission. Not the less, however, do we think that those who have contended stoutly for twenty-two or twenty-five millions as the total population of these islands, must admit that they are in error.

FOREIGN INFLUENCE.

AFTER all that has been said and written on this subject and of the benefits it has conferred upon Japan, it may be well to take a retrospective view of its action from the opening of the country up to the present time. This influence has been of a negative as well as of a positive character. It has broken up the crust of Feudal institutions, emancipating the mass of the people from physical and mental thraldom, and it has introduced knowledge and enlightenment as well as the other benefits of an advanced civilization and of intercourse with the rest of mankind—no small benefit to any people. In these respects Japan has from circumstances been more fortunate than any other Eastern State, and it must be admitted that her people have done their best to profit thereby. She has not been made the victim of Foreign conquest or military occupation. She has not been subjected to a prolonged civil strife. Little blood has been shed in the revolution which radically changed her form of government and released so many of her people from the condition of serfs to that of free men, and she has now before her every prospect of rapid improvement and of admission on equal terms to the comity of nations.

The first Treaties made with Japan, like those last made with China, introduced a new principle. Unlike the arrangement of old times for exclusive commercial rights towards the Foreign Powers demanding such rights, unrestricted freedom of trade was expressly conceded—a concession promptly availed of by all the nations of Europe, thus giving Japan every advantage of many councillors, and of relief from the evils of any possible foreign and commercial monopoly. From the several nations brought into direct communication with her, her people have sought for and obtained such advice as each has best been able to afford, according to their respective peculiarities. France, for example, has imparted instruction concerning the organization of the army, and with Italy has assisted to improve and develop sericulture. Germany has aided in the introduction of learned and scientific pursuits; Holland in hydrographical engineering; England in maritime and commercial advancement and in works of solid practical improvement, whilst Americans have taken chiefly to secular and religious teaching.

On the whole, although the Japanese after their long past sleep have perhaps been somewhat muddled by the diversity of their advisers, their natural quickness of perception and imitative aptitude have stood them in some stead, and they have made more real and apparent progress during the few years of their connection with foreign nations then the Chinese have made in half a century. It was not to be expected that this foreign intercourse could be free from occasional drawbacks. The Japanese have in many instances been brought into contact with individuals whose tendencies have not been calculated to raise their moral tone, and whose dealings and example have proved very injurious, but, notwithstanding this drawback, the general effect has been beneficial and bids fair in the course of time to raise the country to a higher level in the scale of nations. Education and knowledge make great strides. Private assassination, once so common, has almost ceased. Personal decency is more respected. Ships and steamers are fast displacing junks; better buildings, better roads, wheeled carriages, railroads, telegraphs and lighthouses are becoming familiar, and a foreign commerce to a large extent has sprung into existence. Doubts are sometimes expressed whether all these changes have not been too rapid, and it has been to some extent felt that over-confidence prevails among many of the officials, especially the younger members who have acquired a smattering of accomplishments. This has already led the country into more than one false position, and has lowered the prestige of the Government in more instances than one; but it is to be hoped that experience will cure this evil as its mischievous results become apparent.

We have alluded to the specialties of foreign influences. This leads to the consideration of the personal intercourse between Japanese and Foreigners, an intercourse which has been more intimate in proportion to the amount of commerce with each Foreign State, and to the numerous foreign improvements sought for by the Japanese. The great preponderance of English-speaking residents, arising from such causes, is thus accounted for, and the prevalence of the English language bids fair to become a marked feature among the educated classes throughout Japan. Allusion has also been made to an evil influence transmitted through persons of indifferent antecedents, who have from time to time found their way into familiar intercourse with the people. This is incidental to all occasions when races of a higher and a lower civilization are first brought into contact, and will in time cure itself. But there has been another phase of injurious influence, not under the same category, although none the less mischievous and affecting only the policy of the Government.

Finding a lack of practical knowledge in the Public Departments, a proposal was made that experienced foreign advisers should be attached to some of the leading branches of the administration. This idea seems to have been specially encouraged by the politicians of Washington and San Francisco, among whom the idea of influence in Japan has no higher meaning than the promotion of exclusively American interests. Used-up or disappointed minor office-holders needed appointments. Where could they do better than in serving the Japanese? There they could not only be comfortably provided for, but they could at the same time develop American ideas and urge the vast superiority of American produce over that of other countries. Much inconvenience has arisen from this system; false ideas have been inculcated and serious extravagance has ensued. But, on the other hand, America may exert and has exerted in a larger sense a most beneficial influence on the future of Japan, nor is this surprising when we consider such an influence must command the hearty support of all reasonable men, and it is to be hoped that the progress of the Japanese people will prove as rapid under its effect as their well-wishers could desire. Wealth, liberality of feeling, and the spirit of enterprise animate the American people, and the proximity of that great continent renders personal intercourse with Japan more easy than in the case of Europe, and no other external field for the spread of knowledge is so accessible to American philanthropists. The scientific bodies and those engaged in literary and philanthropic pursuit are rivalling those of the other civilized nations, and the spirit of Christianity is no less developed in all its branches. From these sources spring influences most humanizing, redounding to the honour of the country and to the benefit of those who are brought under them.

SPIRIT OF THE JAPANESE PRESS.

The Press.

(Hochi Shimbun.)

It is said that the higher officials and many of our learned men are greatly disturbed to find that the newspapers incessantly discuss matters connected with the administration of the Government, and rarely touch on questions of trade or science and there is no denying the fact, for eight out of ten articles in the papers are on the subject of the administration. But this could not be the case without some good reason for it, and if we investigate the causes of the fact, we find that the fault, if fault there be, does not lie at the doors of those who thus write, but in the condition of affairs which compels them to do so.

We will now place ourselves in the position of those who write thus, and try to explain why their criticisms are directed towards the administration.

From the ancient times downwards our Government has been an arbitrary one, not only withholding from the people all connection with public affairs, but even the right of criticising them. Moreover, the people were prohibited from reading any works on politics, and were only permitted to read books on medicine, astronomy, natural philosophy and the like. But all this has been reformed by the revolution, and although the people have as yet no actual part in the management of their affairs, they are permitted to criticize them, and they act like men who have escaped from chains by which they had been previously bound. Now it is in the nature of the human mind to pay great attention to anything which is new to it, and thus the administration of affairs attracts attention; nor will this cease until the people have a share in it, their ardour being such at this moment as to appear unquenchable and wholly beyond any power to diminish it.

It being but a short time since this Government was constituted, many changes have become necessary, both in connection with internal and external affairs, and so soon as one question is settled, another equally inconvenient arises, and thus the duties of the Government are indeed onerous. This being the case, whatever may be the wisdom of the officials, mistakes must occur, and, the mind of the people being now awake to political affairs and to the acts of the Government, they call attention to what seems to them amiss and to demand correction; and if there appears danger of detriment or trouble, they argue with all the more ardour against the steps out of which it seems likely to arise. These are the two reasons principally answerable for the fact that men turn so much of their attention upon the administration.

But in addition to these there is a cause which lies deep in the nature of the human mind, and that is, that what you are forbidden to say or do, the desire to say or do becomes strengthened; and if anything is hidden from you, you endeavour by all manner of contrivances to have a peep at it. This being the case, when the Government forbids the people to discuss the laws passed by the administration, the desire to do so becomes stronger than if they were permitted to discuss them freely, and as the Government does all it can to hide its doings from the people, so that it may act as it pleases, the desire of the people to pierce through this concealment becomes all the stronger. Now that the Government has prohibited the people from discussing laws which have been once enacted and the acts of the administration, the people appear all the more bent on discussing both. To illustrate this;—compare the newspapers of this very day with those issued previous to the passing of the late Press-laws. It may be true, indeed, that even previous to the passing of those laws, there were numerous discussions upon the acts of the Government, but it is equally certain that the minds of the public writers were turned in many other directions. As soon, however, as these laws were promulgated, a general change took place and all the newspapers argued against them. It is true that the manner in which they did this was covert and disguised in allegories, and to a superficial eye it might seem that the arguments were weaker than before. But the real fact is that they were strengthened, and as the custom of doing things in secret is still persevered in by the Government, the inquisitiveness of the people has increased, and they are never satisfied. When anything, therefore, becomes known, they say that they heard such and such a thing, or they gathered it in the railway, or from a foreigner, or that they dreamed it. But they never speak out openly. And this is the change that has taken place.

If we look at the newspapers of England or America, and then turn to those of France, all this becomes still clearer. We hear that the Press in England and and America is more free than in any other part of the world, and that the people of those countries have the most direct share in the management of their affairs and discuss them in the freest manner imaginable. Now three-fourths of the articles in the newspapers in those countries treat of affairs of trade or science, while the remaining quarter are devoted to general news of all sorts and criticisms on the administration, so that the latter really amount to but a small number. But, in a French newspaper nearly one half the matter consists in criticisms on the administration, and not a day passes with one of them in which there is not some sharp attack on the Government. It is possible indeed that the form of Government not being wholly settled may be to some extent the cause of this fact, but in our opinion it arises far more from the fact that the Press is not free.

Thus it appears to us that if the criticisms of the newspapers are irritating, there is nothing so calculated to improve this position as to permit them to express their views with entire freedom, and let them know whatever they may be desirous of finding out, rather than act in a manner directly contrary to this. It is said that the newspapers are a great impediment to the Government in the conduct of its business. But is not the Government itself, and not those who discuss its acts, the cause of such impediment? If the Government is so much disturbed by the criticisms of the people upon its acts, there is but one remedy for it in our opinion, and that is, freeing the Press.

The Government Purchases of Rice.

(Hochi Shimbun.)

On the 5th instant we published a rumour to the effect that the Government had sent orders to the Authorities of such of the *Ken* as had this year experienced an abundant harvest to purchase 30,000 *koku* of rice, since which orders the price of grain has sensibly augmented. Whether these orders really emanated from the Finance Department or not we are hardly in a position to say, but we can have no hesitation in declaring that their publication is owing to the intrigues of speculators for their own purposes.

Let us consider now whether the overt act of the Government or the secret machinations of officials in making purchases of this kind are the most likely to occasion misery. Let the government enter into business operations openly and we have not a word to say, but when these operations involve hardship and loss to the people it is far otherwise, and impossible for us to preserve silence.

During the hot summer months of July and August our hardy farmers toil in the grain fields, exposed either to the scorching rays of the sun or to torrents of rain. They tend their rice as we should watch by the couch of a sick parent or child, careless of wind, drought or deluge, and a crop so painfully wrung from the soil should not be the portion of the idle. Of so precious a grain a third part is used by those who have done nothing to produce it, and had the rice power of utterance it would surely weep for the farmers. But the farmers dare not say a word against their fate.

If the rumour that the *Ken* have received orders to purchase rice on Government account be trustworthy, a a grave misfortune to the farmers is indeed to be apprehended. The purchase is made, we may infer, either for the intended Corean expedition or for the purpose of re-sale when a more favourable moment shall have arrived. But in either case the farmers must suffer as we shall endeavour to show.

We have recently learnt that the agricultural taxation of the present year would be decided upon the average price of rice between the 1st and 15th days of the present month, from which it follows that a low average

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

price of rice would involve a low rate of taxation to the farmer. But should the Government order the purchase of 30,000 *koku* by thirty different *Ken*, each, the price would rise enormously and the Government would secure a much larger revenue from the tax. The farmers, however, would not be likely to participate in this advantage, seeing that the larger portion of them have already sold all the grain that they are in a position to take to market, but the Government, being enabled to hold it until a favourable moment for sale has arrived, will derive a double profit by the operation, while the unlucky farmer makes a double loss.

It may be alleged that the farmer is not obliged to sell but may keep his grain until its value has increased. But farmers are men of slender means, and at least eight-tenths of this class must endure the threatened misfortune.

We cannot vouch for the truth of this rumour, but if true a deplorable misfortune has indeed occurred to our agriculturists.

Education.

(Saifû Shimbun.)

One of the most important engines in promoting the growth of civilisation in a country is education, which education cannot be extended to its inhabitants without schools and other advanced institutions for the encouragement of learning. In our country schools, it is true, have been established to a certain extent, but they are inadequate to effect all the good that may be hoped for from them and very much therefore still remains to be done. With the view of giving what I consider cogent reasons for their increase I purpose to glance back retrospectively in the history of our country for a few years.

Since the regulations for schools were first promulgated by the *Mombusho* the officials of that Department have devoted considerable attention to the advancement of education in this country. But being, unfortunately, inexperienced in the organisation of these establishments, they strove rather to increase them in number than to improve the quality and plan of the instruction imparted to the pupils. Under this system, therefore, the schools grew in number to a noteworthy extent, and a goodly list of new institutions swelled the records of the *Mombusho*. But these schools had little vitality; they soon fell off in number, and, at the present moment, not one-half of them remain to attest the steadfastness of the movement or the judgment of its promoters.

Now this is altogether the result of bad management. The greater part of the schools which now remain are primary schools for the instruction of children of ages between six and thirteen, and, as it will be some time before their scholars emerge from childhood, it seems to me highly necessary to make provision for the education of a class of young men to whom the future care of these schools should be entrusted. Besides this, there are so few people in the provinces who are able to read the Government notifications that many of them are interpreted in a sense directly the opposite of that intended. This, in itself, proves the necessity of extending the advantages of education.

As many of the pupils of the proposed schools will be young men, I would suggest that they should be instructed in the Japanese vernacular, so that no time should be lost in the acquisition of foreign languages.

There are no such schools in the Interior, but there are many who would desire to avail themselves of instruction, and have not the means to allow of their going to the large cities to obtain it. And, independently of this, the country people allege that most of those who have left the Interior, to gain education in the schools of the large cities, have acquired extravagant habits and but little else. This, also, is to a large extent the experience of the writer of these reflections.

The necessity for increased Industry.

(Nishin Shinjishi.)

It must not be supposed that the wealth and strength of a nation depend solely upon the administration of its Government. They are dependent also upon the industry of the people. The Chinese Government adheres to its old form of administration, and does not reform it in any way. The people are apparently content with it, and therefore it is that whenever the Japanese speak of China, they always laugh at the conservatism of its Government and people. We should not however forget that we are behind the Chinese in industry and perseverance. They emigrate to foreign countries and after doing years of humble work there, they come with their pockets filled with money. The Chinese who are to be found among the finely dressed Americans on the other side of the Pacific, pay no heed to their own poor clothing, and fear neither rain nor wind, and their industry surprises even the Americans. We understand too that there are numbers of them in Australia not less industrious. When we hear that they are thus industrious in foreign countries, we can understand all their industry at home. Yet the Government perseveres in the vain courses of former times. The Emperor now on the throne is young and without wisdom, a number of women conduct the administration, and the officials seem as if they cared for nothing but bribes and paying as little attention as possible to their duties. The operation of the laws being uncertain, robberies and such like enormities are committed in great numbers, but as the people are unceasingly industrious, trade flourishes, and even Europeans extol their cleverness. But Japan presents an entire contrast to this. We have a wise Emperor on the throne and wise officials under him, and we are gradually advancing in civilization. But our productions and manufactures do not improve, trade seems to decrease, and money runs away from the country. What then is the cause of this? It is that we talk about civilization, but are not industrious. The Japanese who go abroad do so in order to gain knowledge, or to see foreign countries, and they spend a great deal of money there. But they bring no money home. Knowledge is an important and valuable thing, but not worth much without money. A true civilization is not to be acquired by sight-seeing, but by work. No civilization in this world ever sprung out of indolence. We hope therefore that both the Government and the people will spend less and work harder. If they do not, we may one of these days be laughed at by those at whom we are now laughing.

On Despotic Rule.

(Hôchi Shimbun.)

Being prevented by sleeplessness from taking my usual rest, I have devoted the hours of the night to the perusal of a book called the *Nihon Gaishi*. Having been struck with the writing I have selected for reproduction the paragraphs which follow, to which I have added a few observations which occur to me.

While the *Daijo Daijin* Kiyomori was yet living at Rokuhara, Kiôto, he held in his hand power of life and death throughout the Empire of Japan. He caused, it is said, a number of children to be dressed in an unusual manner and sent them to different parts of the Empire, instructing them to report to him all who censured his rule in their hearing. All such persons were afterwards condemned to death. Now if we analyse the character of this minister we shall discover that he was not possessed by a patriotic love of country in this policy, but that his motives for condemning so many to a severe punishment were simply those of personal ambition and desire of self-aggrandisement; since, had he loved his country, he would have reformed his conduct and thus given no cause for discontent or blame. He wished to shut the mouths of the people while conscious that he was doing wrong.

Now what was the result of this tyranny? The family of the Genji came with their forces from the east and destroyed Kiyomori and his family. This shows that the people could no longer endure the oppression they had been subjected to, and, like a stream dammed up, had at length gathered force to overthrow and destroy the obstacle to their freedom. And, more than this, it proves to us that not only was Kiyomori obnoxious to the Genji, since the large army of the former was conquered by the comparatively small force of his adversary, but that the whole nation joined in execrating his tyranny and had resolved to bring it to a term. So also with the Toku-

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

gawa. For years this family had tortured and oppressed, ruthlessly, throughout the land, all who ventured to oppose its policy, until at length, at the battle of Fushimi, its persecutions were ended by the victory of those whom it had made its enemies, and who destroyed its *prestige* for ever.

If we exercise pressure upon air or water these elements possess a power of rebound which is proportionate to the amount of pressure given, and if this be overstrained the vessel which contains them must burst. And so with men. Tyranny may be pushed too far, and the recoil, when it comes, will be as powerful as the oppression which it has exercised.

The Pensions of *Kadzoku* and *Shidzoku*.

(Choya Shimbun.)

Those who oppose the pensions of the *Kadzoku* and *Shidzoku* say that they are eating up the Treasury, and should be abolished, as they are nothing but an unnecessary burden on the country, while others say that these pensions are of the nature of personal property and should therefore be preserved. We will leave these two points untouched, and rather indicate one which seems to plead strongly for the abolition of these pensions, viz., the enormous impediment they offer to the circulation of money in the country. This is effected to a great extent by the few *Kadzoku*, and, to a smaller extent, by the numerous *Shidzoku* and even the lower *Kadzoku*, so that though the agents are not numerous the evil is very great and is felt throughout the whole country. The obstruction caused to the circulation of money makes business dull, and every merchant who opens his mouth to speak complains of the dull times. Anxious statesmen are compelled to own that if this continues the country must decay, while economists ask what is the cause of all this. And be these things as they may, we must point out the evil which these nobles are doing. The pensions of the lower ranks of *kadzoku* and *shidzoku* only enable them to purchase their daily food and necessary clothing, and they have then but little, if anything, over. But with the *kadzoku* and *shidzoku* of the higher ranks, although they may spend their money freely, they save much, and though they occasionally give sums of money towards schools and the like, these form but a very small percentage of their incomes. If they enter into business they invariably fail, and if they lend their money out at interest they rarely get it back again because there are so many bankruptcies now-a-days. It is therefore not often that they lend their money, preferring to keep it in their safes, and this it is which impedes the circulation of money. We are not acquainted with the wealth of the *kadzoku*, but we can easily prove that they do hoard money, for whenever they receive their pensions—which are paid to them in paper—gold immediately rises. Can it be regarded otherwise than a great evil that men should do nothing but sit and watch their money and prevent its healthy circulation throughout the country?

The Bonin Islands.

(Nichi Nichi Shimbun.)

The following letter was sent by Amano, one of the party despatched to the Bonin Islands on the 4th instant, from Port Roid to Kishida by the British man-of-war *Curlew*:—

We left Yokohama on the afternoon of the 19th of last month in the *Meiji Maru*, and after a voyage of moderate weather arrived at the Bonin Islands on the night of the 23rd. As it was dark we did not enter the harbour for fear of the reefs and rocks, but anchored in deep water. Early next morning we entered the harbour of the Father Island, called by foreigners Port Roid. The climate is mild, like our spring. The thermometer stood at about 75°. There are many precipitous cliffs, but no high mountains, and the vegetation is not striking. The largest of the trees is called by the islanders *Shi tsu mana*, but they do not make lumber, and the wood is unfit for building material. The island is covered with cocoa-nut trees, and in my walks I came upon many lemon-trees bearing fruit, which on tasting I found to be very sour. There are also *mikan* trees, which must have been taken over from Japan. These are the only trees which bear fruit. Vegetables are scarce, though most of the people raise potatoes. Their food principally consists of potatoes, beef, fowls and ducks. The huts in which they dwell are mostly rude and low, roofed with cocoa-nut leaves, the supports consisting of cocoa-nut trees and *shi tsu mana* wood. These houses resemble the habitations of savages, not only because the materials of which they are made are so inferior, but because there are no carpenters and blacksmiths. There are sixty people on the Islands, consisting of English, Americans, French, Spanish, Oceanic islanders, Negroes, Chinese half-breeds and Japanese, but only two of the latter, both of whom are women and very ignorant though one of them understands a few letters. The islanders are all very indolent, and only raise potatoes or or go out fishing in a strange kind of canoe. Whenever whalers appear, there is a grand rush on board for food and clothing, the latter of which is kept with excessive care. As they have no intercourse with the rest of the world they are indifferent about their appearance, and as they neither buy nor sell they appear not to understand the use of money. They have no care but for their daily food, and this explains their excessive indolence. They seem to resemble the *Sennin*.* The domestic animals consist of cattle, dogs, cats, fowls, pigs and ducks, but all these differ somewhat from our own. The climate being warm, the grass and trees were still green. The sugar-cane, sweet potatoe, pumpkin and water-melon grow wild. We may infer from this that the soil is rich and productive, but such trees as the pine, cedar and the bamboo are not seen here. Should the *kadzuoku*, Kaitakushi or some wealthy merchants form a company and colonise these islands, we think that a flourishing colony may soon be added to our country. There is some level ground near the shore, but during violent storms it would be devastated; so that it is comparatively of little use. There are some fields in the valleys, watered by rivulets, and these seem adapted for cultivation. The above is all that I have seen since my arrival. Matzuzaki is daily busy taking photographs, and on my return I will give you more minute particulars.

December 3, 1875.

A Dilemma.

(Hioron Shimbun.)

It is rumoured that a warm argument has been carried on between the *Sanghi* Kido and Okubo. Kido avers that the country is at this moment neither in a contented nor a tranquil state, that the people have no confidence in the Government, and that it is important to tranquillize them and inspire them with confidence. For these reasons the Press and Libel laws should be repealed.

Okubo, on the other hand, admitting the fact, urges that as the Government is not regarded with confidence, the repeal of these laws would place more strength in the hands of the people, and that this would be absurd. He urges the abolition of the *Gen-ro-in* as soon as possible, in order that all the power may be concentrated in the Cabinet, and that the only way to tranquillize the people is to make the Press-Laws still more strict.

The remainder of the argument is not known.

THE CENSUS.

The following is the summary of population referred to in our article on this subject.

DAI-JO-KUAN NOTIFICATION No. 205.

To the *Shi*, *Fu*, *and Ken*:

The Government gives notice that the census of the Empire, commenced on the 1st January of the 6th year of Meiji (1873), has been brought to a conclusion.

The bureau of official statistics, charged with this important work, has deposited at the *Dai-jo-kuan* the following papers.

2nd December, 8th year Meiji.

SANJO SANEYOSHI,
Daijo Daijin.

Preliminary Explanations.

The enumerntion of the population of the *Shi*, *Fu*, and *Ken* commenced on the 1st January, 1873, and of that of the Liou Kiou Islands in the month of February of the same year.

The necessary arrangements for the census of those who were living in other provinces or in foreign countries not being yet completed, the enumeration of those persons has been made, not in the province in which they are living, but in that in which they were born.

The increase of 189,850 inhabitants has been proved by means of the

* Angels (!)

Original from UNIVERSITY OF CALIFORNIA

registers of inscription, which are kept much more regularly than in the preceding years.

BUREAU OF OFFICIAL STATISTICS.

June, 8th year of Meiji.

STATISTICS AND ENUMERATION.

The five imperial palaces of Tokio are inhabited by the present Mikado, aged 20 years and two months; by Hayako, the Empress, Dowager, aged 39 years; and by Yosiko, the reigning Empress, aged 22 years and eight months.

The members of the Imperial family, that is to say, their relatives, amount to 28 persons, who reside in 17 palaces, which makes the entire Imperial family consist of 31 persons.

The total population of the Empire, including the Mikado and his family, amounts to 33,300,675 souls, of whom 16,891,729 are men, and 16,408,946 women.

Of the men, 4,754,931 are under 14 years of age; 2,029,520 above 15; 5,001,301 above 21; 3,663,290 above 40; 1,401,550 above 60; 71,184 above 80; of 768 the age could not be proved, and of the inhabitants of Saghalien, the age of 1,155 is unknown.

Of the women, 4,530,041 are under 14 years; 6,623,900 are above 15; 5,041,972 above 40; 110,870 above 80; and of 2,163 the age could not be ascertained.

During the 6th year of Meiji 290,836 men and 278,198 women were born, and during the same year the deaths of 108,292 men and 197,312 women took place.

Compared with the 5th Meiji (1872), there was an increase of 189,850 inhabitants, of whom 95,571 are men and 94,279 women.

The class of *kuadzoku* (nobles) is composed of 2,829 persons, of whom 1,387 are men, and 1,442 are women.

The *samurai* amount to 1,548,568 persons, of whom 777,171 are men, and 781,797 are women.

The class of *sotsu samurai* (*samurai* of the 2nd rank) consists of 343,881 persons, of whom 173,654 are men, and 170,227 women.

The class of *djishis* (*samurai* of the 3rd rank) consists of 3,380 persons, of whom 1,742 are men, and 1,638 are women.

Priests, including *bonzes* of the 2nd rank, amount to 207,669, of whom 148,807 are men, and 58,862 women.

The ancient Shinto priests amount to 76,119, of whom 38,720 are men, and 37,399 are women.

The number of priestesses is 9,326.

The common people of Japan number 31,106,514, of whom 15,758,479 are men, and 15,348,035 are women.

The inhabitants of Saghalien amount to 2,358 Persons, 1,155 being men, and 1,203 women.—*Japan Herald.*

Correspondence.

THE ST. ANDREW'S BENEVOLENT SOCIETY.

TO THE EDITOR OF THE "JAPAN WEEKLY MAIL."

Yokohama, 11th December, 1875.

SIR,—I notice that at the last St. Andrew's Dinner a proposition was made, which has resulted in the formation of a Society, called the St. Andrew's Society, the professed object of which is to afford succour to distressed Scotchmen in Japan, and since *expressum facit cessare tacitum* to none but Scotchmen. Surely, Sir, this is carrying what I may term sectarian nationalism to an absurd and harmful extent. The foreign residents in the treaty ports exclusive of Chinese and sailors, hardly number I believe a couple of thousand distributed among twelve or thirteen nationalities. It would, I venture to think, be better that for purposes of a charitable nature, in the carrying out of which we have all an equal interest, the principle of nationality should rather be lost sight of than fostered, that we should as far as possible consider ourselves as one people, for benevolent objects at all events, and husband our resources by affirming the principle of solidarity rather than waste them by promoting division in our action. As an Englishman I dare to doubt whether any useful purpose whatever is served by the annual swallowing of haggis and cockaleikie—dishes which I never once saw on a Scotch table though I have a pretty wide familiarity with the inexhaustible hospitality of the Land o' Cakes—in honour of St. Andrew, who was a Jew, and to the glorification of our long-headed brethren who rejoice to dub themselves with the national name of their former enemies just as the Chinese take pride in the tail imposed upon them by their Tartar masters. The student of history who should stand by the Chair at one of these prandial sacrifices would be strongly stirred to whisper into the ear of his neighbour what Punch supposes the great Conservative leader to breathe in a stage undertone to his terribly-in-earnest rival. He would know that probably three-fourths of the votaries present were endeavouring to obtain the intercession of the Saint upon false pretences. For three-fourths of the population of Scotland are resident South of the Friths of Clyde and Forth, and are the descendants of the brethren of the forefathers of the present English with less Norman and Danish blood probably in their veins than the latter themselves possess. And although it is true that the western half of Scotland south of the Clyde was some twelve centuries since peopled by Celts, these were British, not Scot or Pictish, Celts and were at a comparatively early period expelled by their more firm-fronted and persevering neighbours.

In the 6th century the North and East of Scotland North of the Forth was peopled by the Picts, about whom we hardly know more than that they were in all probability a branch of the British Celts. Argyllshire and the Isles were in the possession of the Scots, an Irish tribe that had lately conquered that district and expelled the original inhabitants; and to this day the careful observer will not fail to perceive notable differences between the Gaels of the Western and those of the Eastern Highlands while Celtic scholars know that the languages they spoke were distinguished by more than mere dialectic differences.

South of the Forth, the Eastern half of Scotland, the district of Lothian, was peopled by Angles, or to use the name these people commonly called themselves by, by Englisc while the Western half South of the Clyde formed part of the British Kingdom of Strathclyde which included Cumberland, Westmorland, Lancashire, Wales and part of the midland counties. Lothian with Northumberland Durham and great part of Yorkshire formed a separate Kingdom of the Englisc, the northern half of which, north of the Tweed was termed Bernicia and the Southern half Deira. This latter Kingdom was in all probability on anything but friendly terms with the Scots (in which name that of the Picts became soon merged for reasons which still remain obscure to the historian) and the interests of the people of Lothian were in the 6th century and for many centuries after identical with those of their English brethren of the South.

Between A.D. 922-924, the English King Edward the Elder was recognised as lord of all Britain and the "Princes of Wales, Northumberland, Strathclyde and Scotland all submitted to him by a voluntary act—they chose him to father and to lord" (Freeman.) This act is commonly known as the commendation of Scotland and although its real nature has been much disputed, the views of Freeman seem most in accordance with the undoubted facts. The Scotland so commended, it must be recollected, was the Scotland North of the Forth, and that Scotland had long previously recognised the supremacy of Bernicia and Deira as well as that of the great Frank Emperor as the successor of the Imperators of Rome.

At this time Edinburgh (Eadwinesburh) was the frontier fortress not of any Scottish King but of the Northumbrian Bretwalda against the Scottish King at Dunfermline.

During the 10th century the Scots began to cross the Forth and occupy Lothian, peacefully it would seem and without opposition on the part of the King of the Englisc.

In A.D. 954 Edred appears to have granted Edinburgh to the Scots with whom he was on friendly terms and who cheerfully acknowledged him as overlord. The gift was probably a reward for the assistance Edred had received from the Scots in his wars with his rebellious Northumbrian vassals.

Towards the close of the 10th century Lothian, probably little valued as an outlying portion of the Northumbrian kingdom, was granted in fief by Edgar with the consent of the Witan to his faithful vassal Kenneth, King of Scots, who went to London to do homage for it. The grant was made upon the condition that the English language, laws and customs should be retained, a condition which the history of Scotland shows to have been faithfully observed. The tenure was that each year "on the great feasts when the King (of the Englisc) wore his crown the King of Scots should come to his court with the other princes of his realm" (Freeman). Mansions were assigned to the Scottish King as resting places on his journey South for this purpose, which were so used down to the time of Henry the Second.

There is no doubt an opposite theory, that of Mr. Robertson (Scotland under Early Kings) namely, that the cession of Lothian was a forced one obtained by Malcolm after the battle of Carham A.D. 1018. The whole matter is thoroughly gone into by Freeman who, to my mind, has decidedly the best of the argument.

The Kingdom of Cumberland including Southwestern Scotland had previously been granted in fief to Malcolm

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

by Edmund in A.D. 945 as a reward for his faithful service in the wars against the Strathclyde British.

Thus by the close of the 10th century all Scotland (with the exception of a portion of Caithness and the Isles then in the hands of the Norwegians), and part of the present England, were ruled by the King of Scots, but as to Lothian and Cumberland (including Southwestern Scotland) only as vassal of the English King who was also overlord of the Scots King in respect of the country north of the Forth. The overlordship and claim of feudal superiority were never entirely abandoned by the English Kings, and there can be little doubt that as a matter of strict right the English Edwards were justified in their pretensions to regulate the affairs of Scotland,

From all this it is clear that the Scotland of the present day is an artificial not a natural division. It is equally clear that the vast majority of Scotchmen of the present day are the descendants not of Scots nor even of Picts, but simply of the English inhabitants of Bernicia and that they are, if Lowland Scotch be any test, even more purely English in descent than the English themselves. Of pure Scots, indeed, there can be but very few, the majority of the existing Celts of Scotland being descended from Pictish ancestors who, as I have shown, were identical or nearly so with the British Celts of the 6th century.

In fine, therefore, taking into consideration the English and Celtic elements in the populations South of the Tweed and between the Tweed and the Clyde and Forth, our northern neighbours are nearer in blood to the inhabitants of South Britain from the 6th to the 11th centuries than we ourselves are, the Norman, Jute, Saxon and Danish elements in us existing to a much less extent north of the Tweed.

Three Scotchmen then out of every four at least are by race and history neither more nor less than northern Englishmen, more purely English than their southern brethren, and it would be more proper to institute an Isle of Thanet Society for the relief of distressed Thanetmen upon the ground of Thanetmen being distinct in race and nationality from ordinary Englishmen (which, in truth, they are in a far greater degree than Scotchmen) than a Scotch Society for the relief of persons who in three cases out of four have no title to the term Scot other than what may be implied in the fact that their forefathers were ruled by Scotch Kings, descendants of the chiefs of an Irish conquering tribe that landed in Argyllshire somewhere about the fifth or sixth century.

I am &c.

TADA YEIJIN.

Yokohama, Dec., 10th 1875.

Law & Police

IN H. B. M.'S PROVINCIAL COURT.

Before C. W. GOODWIN, Esq., Assistant Judge.

Wednesday, 9th December, 1876.

Felix Beato was charged with assaulting, on the 11th October past one, Asada Kôske. Defendant pleaded not guilty.

Asada Kôske:—I am Mr Beato's cook. I had been a month and four days in his employ when this occurred. On the 11th October about 7 p.m. I had prepared the dishes for dinner and sent them up in the usual way, but some mistake was made in the name of one of the dishes. Mr Beato was very irate at this and sent for me into the dining room. He spoke angrily to me, and struck me twice on the neck and kicked me twice on the loin. Then he said "piggy" and I withdrew, when Mr Beato followed me out of the dining room and smashed a plate over my head, and flung the fragments at me, one of which struck me in the back.

It made no mark but hurt me severely and I fainted when I returned to the cook's room, and have never been the same man since. There were witnesses to the assault. Mr Beato sent orders for me to be put out of the house at once. I was not able to leave, and remained three days in the room, unable to move in consequence of the assault. Two foreign doctors who live at Noge yama came to see me. I do not know their names. A Japanese doctor saw me afterwards on the 12th, the day after the assault. Another foreign doctor saw me afterwards at Mr Beato's request, but did not give me any medicine. I have not yet paid the Japanese doctor's fees, nor for the medicine he gave me. I have continually purchased medicine since, but I have not calculated the expense.

To the Court: I think I have bought about 10 *yen's* worth of medicine, but I have not as yet paid either doctor's fees nor medicines. The medicines were brought by my friends. I had to take opiates. I do not smoke opium.

To defendants:—A Japanese friend of mine brought the two foreign doctors from Noge yama; I do not remember the Japanese friend's name as I had lost my senses. I was only told that these two doctors saw me.

Okuba Tamaro:—I was Mr. Beato's boy at 7 p.m. on the 11th October, when the dishes were put on the table. One was put on as rolled beef. Mr. Beato said "this is not rolled beef" and told me to call the cook. I did so and he came. Mr. Beato said that it was not rolled beef and struck him twice, and told him to get away as he was no good and could not cook. As he was going away Mr. Beato kicked him. I no not know whether he kicked him again outside the room. Then Mr. Beato took up the large dish in which the beef had been and chased the cook with it and I saw him fling it at the cook. I do not know whether it struck him or or not. That was all I saw. For a day or two afterwards the cook was very sick. A pupil of Dr Simmons was sent for but could do no good and the following morning Dr Simmons came himself. Another doctor, who is now present, also came and saw him about eleven o'clock. The cook was very ill while he remained at the house, and then the offlcial doctor of the Kanagawa Ken was called in. The cook was confined to his bed for about a week.

To defendant: I left Mr Beato's employ on the 30th. of last month.

Mura.—I am the cook's wife. The cook was called out from the kitchen; I heard a great noise and followed. I heard a noise inside the room. The cook came rushing out of the room with his head bleeding, and immediately he reached the kitchen fell down and swooned. He fell on the door step of the kitchen. His head was bleeding; there was blood upon his shirt. He was all dirty from falling.

Defendant then called

Mr. E. Wallace, sworn:—I was dining with Mr. Beato on the 11th October when a certain dish came on the table; Mr. Beato complained as to this dish being brought on, having told his cook he did not like it. He sent for the cook, and while he was standing in the doorway Mr. Beato said that he had told him not to bring this dish. The cook said that it was not rolled beef. After some other words Mr. Beato told him to come and see it and subsequently slapped him on the face. The cook then went to the door and said something which seemed impertinent. Mr. Beato seized the dish in question and ran after the cook who ran away, that was all I saw. The blow given was not a serious one. Mr. Beato did not kick him in the room. I cannot tell whether he threw the dish at the cook. I do not remember whether he came back without it. I heard a sound as of a man falling. I think the man must have fallen in running away. I do not think that Mr Beato could have struck him.

Dr. E. Buckle sworn:—I am a physician. On Oct. 12th I went to Mr Beato's house to see the cook. I went on account of Mr Beato. I found the cook lying on the bed. I examined him and found a slight incised wound on the head. I could find no other injury. He also complained of feeling sore about the chest, but I could find no perceptible injury. He did not call attention to any other part of his body. He also seemed to be suffering from a nervous shock, but I was unable to say how much was real for it seemed to me that he was making the most of his case. I visited him again on the 14th and was confirmed in that opinion. The wound on his head would produce blood. It was produced by a blow from the back. It was a slight wound. He was sensible when I saw him. I have a fair experience of Japanese. They are very susceptible to any little injury, and a wound with them would be more serious than with Europeans. I heard that Dr. Simmons was attending him and had prescribed a lotion. I went to see the cook at the request of Mr Beato. I did not prescribe for him because Dr. Simmons had already done so, but I told Mr Woollett he might have some stimulant. The cook is an elderly man.

Okubo, re-called: I saw the dish a minute or two afterwards: one half of it was smashed into small fragments.

To defendant: It was in fragments after I came out from the dining room and I saw you in the act of flinging it and I heard the clatter and the cook's screams. I was standing near the door when you followed the cook.

Defendant said that the cook served up a beefsteak which had been sent away from tiffin as rolled beef. When he sent for him about it, he gave him great "cheek" and said it was rolled beef. I took

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

the dish and followed him to the pantry to put it to his nose to show him that it was not rolled beef, when he gave it a blow with his hands and the dish fell down and broke. The cook then ran away, and I heard him fall down. Next morning I told the boy to send the cook away, but he said that he was ill. I then sent for Doctor Buckle to see if he was really sick.

His Honour said that he thought the assault had been proved, as defendant's own witness had testified to it, and Dr. Buckle proved that there was a wound on his head. It was no doubt exasperating to have the same dishes served up both for dinner and breakfast, but allowance should be made for an old man like this. He must condemn defendant to pay the sum claimed as damages by the plaintiff viz, 88 *sen* and he would be further fined $1.

George Becker was charged with assaulting the chief officer of the *Cathaya*.

Francis Leet, sworn.—I am chief officer of the *Cathaya*. Yesterday, this man, the cook, was drunk and I told him to go away and not interupt the work. He would not do so. Afterwards a gentleman came on board with a message from the Captain, and prisoner came on the quarter-deck and threw down his apron and jumped on it, cursing and swearing before the gentleman. Afterwards when I was discharging cargo he caught hold of me by my whiskers and dragged me on the deck, and I had to get some of the men to take him away. Shortly afterwards when I was in the cabin he followed me down there and I had to send for a Japanese policeman to take him out of the ship. He was drunk, but knew what he was doing.

W. H. Collis, an apprentice, sworn: I saw prisoner pulling the chief-officer out and afterwards I saw them on the deck together. Prisoner was drunk. He followed the chief officer round the deck annoying him. There was no provocation given for the assult. I found the capsules of some beer bottles in the galley this morning.

G. Jenkins, apprentice sworn. I saw prisoner taking hold of the chief officer by his coat. The chief officer asked him several times to let go; he would not do so but caught him by the hair and whiskers and threw him down on the deck. After a struggle the chief officer sung out for some hands to assist him and some seamen came and took the cook away. I afterwards saw prisoner go aft on the poop with his coat off, and he went down into the cabin, and when the chief officer told him to go on deck, he refused to go. After leaving Anjer defendant had acted as cook and steward.

Defendant, in reply, said that as cook of the ship it was his business to go sometimes to the cabin for stores. He had nothing to say about the assault.

His Honour sentenced the prisoner to one week's imprisonment.

IN H. B. M.'s CONSULAR COURT.

Before H. S. WILKINSON, Esq., Acting Consul.

Monday, 6th December, 1875.

Naomi Daisuke sued Messrs. Cobb & Co., livery stable keepers, for an alleged balance of account of $262. The defendants disputed the amount claimed. The claim was for horse feed supplied. From the evidence, the dispute appeared to be as to the amount of horse feed supplied, and the prices charged for it at different times during 1874 and this year.

His Honour finally ordered that an account should be taken between the parties, to be ready by Thursday next.

U. S. CONSULAR COURT.

Before Gen. VAN BUREN, U. S. Consul-General;

and

F. R. WETMORE and C. DRAKE assessors.

Monday, 6th December, 1875.

ITO HACHIBEI *vs.* WALSH, HALL & Co.

In this case the plaintiff claims a sum of $108,715.42, balance of account and interest connected with certain trading transactions he had had with defendants.

Defendants deny that they are indebted in the above amount, and claim that he (plaintiff) is indebted to them in the sums of $16,222.55, and $16,483.61, being balance of accounts between them and the plaintiff.

Mr. F. V. Dickins appeared as counsel for the plaintiff; Mr. G. P. Ness for defendants.

On the re-assembling of the Court, Mr Dickins announced that he would continue the case for the plaintiff; he had got the witnesses he required.

Oseki Yaichimon, cautioned: In the 3rd year Meiji I was financial governor of the Mito *Han*. In the 3rd year Meiji I remember a borrowing transaction with defendants to the amount of $56,000. Two sums were borrowed—one of $30,000 and one of $26,000. A bond was given to defendants, and the money borrowed upon it. A bond was given for each sum that was borrowed. These bonds are in the possession of Mr Walsh. The paper you show me is a copy of the $30,000 bond.

Question: What seals were upon the bonds?

Mr Ness objected to this being put, and was sustained by the Court. A note was made of Mr Dickins' exception to this ruling.

Witness: I received the $56,000. I made arrangements with Iske about the loan. I handed in the bonds, and received the money from Mr Walsh. It was Mr T. Walsh, not Mr Walsh now in court. I borrowed the money from Mr Walsh, These two sums were not borrowed from Ito.

Cross-examined by Mr Ness: Benzo and Iske actually secured the loan. Ito said he would get Benzo and Iske to ask for the loan. This was all Ito had to do with it. We first applied to Ito, and he referred us to Benzo. Benzo was not Ito's agent. Benzo and Ito were friendly together. Previous to this the Mito *Han* had no transactions with Ito. I was financial agent of the Mito *Han*.

Re-examined by Mr Dickins: The seal on exhibit "q q" is mine.

Shojiro Shu, cautioned: In the 3rd Meiji I was a financial officer of the Mito *Han*. I remember these two loans. The bonds were dated on the 10th and 20th of the first month of that year. The moneys were received on those dates. The money was borrowed from Mr. Walsh. I was present when the money was received. No sum of 26,000 rios was borrowed from Ito. The money was borrowed to make improvements in the Island of Yesso. Defendants could not fail to know this, because it was contained in the bound.

Okamura Tada Oki, cautioned: That letter (exhibit 14) was written by me. In the 7th month last year I was in the employ of Benzo. That letter was written during the middle of the 7th month last year. I wrote that letter in Benzo's office. I wrote it in the afternoon of the day it is dated. A messenger came from Ito, and on his arrival the letter was made out. The messenger came in the afternoon. A man named Kobayashi Motojiro was the messenger who came. He said that Ito had intented to go to the defendants, but his business prevented him, and he said Ito told him to come down and get a letter written to that effect. There had been repeated demands from the defendants to plaintiff for the $15,000, and that was to form one of the topics in the letter. There were several reasons for the demands for the $15,000. Ito had seen Irwin, and talked the matter over with him. Losses had been sustained in a coal transaction by Ito. Ito had used great exertions in the Yoshida land matter; therefore Ito requested that favour would be shown to him in the $15,000 matter. Ito wanted to arrange the matter by discovering a profitable business, and paying out of the profits. These were some of the topics that were to be put in the letter. Certain accounts had to be made up which was impossible till Rikichi had returned. I did not show Ito this letter; he was in Yedo. I never told Ito I wrote this letter.

Mr Ness objected to a question, and was overruled.

Witness: I read the letter to Kobaishi. He read it also.

Mr Dickins said the translation of No. 14 was very incorrect.

Mr Ness objected to witness explaining any portion of the letter, and was overruled. A note was made of his objection.

Witness explained some sentences of the letter.

Cross-examined by Mr Ness: I have been in Benzo's employ from the 9th month 5th Meiji. I know nothing about the accounts between Ito and Walsh, Hall & Co. In writing that letter, I merely wrote what the messenger said. The messenger was to go to Walsh, Hall & Co.'s, but had other business to do, so asked me to write that letter. I have written letters for Ito. Wrote letters in Benzo's office. I don't know if Ito knows my writing. I came here to explain this letter. I came though the agency of Ito. I never refused to come and give evidence. Ito, Kobaiashi and I talked this matter over. I did not know this letter had been produced here. I said it was my duty to come and explain the letter. It was arranged that I should come on the 6th. Ito requested me to come. I was not to receive a fee for coming as witness. I never saw a promissory note given by Ito to Benzo for giving evidence in this case. I do not know that Benzo has received $2,000 from Ito since this case commenced. I do not know if Rikichi has had his salary increased $25 to $100 per month since this case commenced, and has had a house given to him. Benzo has seen me write frequently. I do not recollect if I kept

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

Ito's accounts for three months last year. Benzo at present is a general broker.

To Court: I have talked with Benzo about this letter.

The Court here adjourned till 2 p.m.

The Court re-assembled at 2 p.m.

Mr Dickins recalled Rimbei.

Witness: I remember paying back to defendants, in the 4th Meiji, the sum of $90,000. This was in connection with the Sobae transaction. I received the $481,000 in the names of Sobae and Ito in one day.

Mr Ness did not cross-examine.

Kobaiashi Motojiro, cautioned: I am a rice merchant at present. I know Ito Hachibei. I have lived in the house of a relative of Ito for the past eleven years. I know the letter you show me. I requested Okamura to write it. I should have gone to defendants about the matters in the letter but I was too busy, so I asked Okamura to write it, and I returned to Yedo. Ito asked me to go to defendants; I said I would. Ito said defendants were pressing to pay $15,000 that he (Ito) had borrowed. Ito said the accounts were still open, and could not be settled till Rikichi returned from Joshiu. Ito requested me to explain this to Walsh, Hall & Co. Ito told me he had lost 100,000 yen, and that was one reason why he wanted to get the settlement of accounts put off. Ito told me he had spoken to Irwin about all these matters, and that he hoped I would go to Walsh, Hall & Co. and get the $15,000 matter made easy.

Cross-examined by Mr Ness: I did not know anything about this business before Ito got me to go to defendants. I did not tell Ito I had had this letter written to defendants.

To Court: I did not tell Ito anything about what I had done. I did not speak to anybody about this letter till a few days ago when Ito sent for me. The letter was all right as far as it went. The letter contains all the items, but they are not in order.

Ito Hachibei, recalled: I sent for Kobaiashi to see him about the letter No. 14. I thought he might have made some mistake in delivering the message I gave him in the 7th month last year.

Cross-examined by Mr. Ness: I do not know Okamura's handwriting. He did not make my accounts out for three months.

Mr. Dickins announced that this closed his case.

The Court then adjourned till 10 a.m. to-day.

Tuesday, December 7, 1875.

On the re-assembling of the Court this morning, Mr. Ness commenced his summing up for the defendants. He said plaintiff had clearly failed to prove that defendants owed him the sum he claimed in the petition. The story of the plaintiff and his witnesses was utterly incredible. That a man, a money lender, whose whole stock-in-trade consisted of his money, should go on for years borrowing small sums from defendants, if they really owed him over $100,000, was monstrous. The defendants came into Court with clean hands, and plaintiff did not. Ito had attempted to purchase evidence at any price. He considered the whole of plaintiff's evidence worthless. There could be no doubt but that the settlement of accounts, which plaintiff denied, really did take place on the 22nd November, 1871, and that the balances then arrived at were correct ones. There could not be any doubt but that Benzo on that occasion, and on many others, acted as the agent of Ito. Benzo agreed to the balances then arrived at, and he had said in his evidence that he never exceeded the authority given to him by Ito. The plea of fraud that had been raised by Ito in regard to these balances, which had been called false ones by Ito, was an Eastern idea. Ito could not be allowed to come into Court and plead fraud on his own side. Mr Ness then went into the question of the seals on the books that had been produced, at great length. The plaintiff's ideas and statements regarding the seals were simple nonsense, as well as false, as he had ascertained from the Saibansho the value that was placed on half and whole seals in cases before the Japanese Court. The settlement of accounts that took placed in Nov., 1871, which had been fully proved by defendants' witnesses, could not be upset by the monstrous plea of fraud raised by plaintiff. It was nonsensee to think that one partner (Mr Irwin) should have got false entries made in these Japanese account books to deceive the other partners, when the whole thing must very soon have been discovered; or that Benzo, acting as he did for Ito, should have allowed them to be made in his presence, and stamped as being correct. The partnership between plaintiff and defendants in regard to exchange business terminated by mutual consent on the 5th October, 1871, when it was agreed that Ito was to bear all losses up to the date,—about $10,000. In consideration ofthis defendants were not to charge him interest on the above sum; they were to make him advances of money without charging interest, as he (Ito) still desired to continue the speculation in dollars and niboos, and furthermore, defendants were to collect, free of charge, a certain loan that Ito had made. It was in consideration of all this that Ito agreed to take over the whole loss that had been sustained during the partnership, which amounted to the sum of about $10,000, which had already been mentioned. He thought the evidence was on this point as clear as it could possibly be, and that there not the slightest doubt that this arrangement had been agreed to by both parties. In fact, the subsequent transactions that took place showed also that this arrangement must have been made. As to the rice partnership which Ito alleged and wanted to prove between himself and defendants, there was no evidence of any kind, either documentary or oral, to prove it, on the part of Ito; whilst defendants had given the strongest possible testimony that the so-called rice partnership never existed in any shape or form, and had offered their books, papers, and vouchers to show that no such transactions as were alleged by plaintiff had taken place.

The Court here adjourned till 2 p.m.

On the re-assembling of the Court

Mr Ness continued his summing up. He said that the letter (exhibit "14") admitted the balance claimed by his clients. This letter had evidently been written by Ito, or by his orders, and the explanation afterwards concocted and given of it was false. This letter ("14") was one that was written in answer to a letter written by Futami (an interpreter of defendants), asking Ito to pay the balance. He alluded to Mr Dickins' withdrawal, and again taking up the case for plaintiff; that this drove Ito to make the explanation he did of the letter. The explanation was a false one. He strongly commented on the character of plaintiff's witnesses and their evidence, and the bribery, he said, that had been committed in some instances, and attempted in other instances, by plaintiff. In conclusion, he thought that the Court could only come to a decision favourable to his clients.

December 8, 1875.

On the re-assembling of the Court this morning, Mr Dickins commenced his summing up for the plaintiff. He went over the whole of the plaintiff's story, and denied that any bribery had been done or attempted by Ito. He thought Ito had a very good case. He narrated defendants' version of the case, and compared it with Ito's, and pointed out many things that he said were highly improbable on the part of defendants. He went over every interview, comparing the evidence of all the witnesses, and pointing out the probabilities and improbabilities of everything that was said to have been said and done. He said there was very strong written evidence for Ito as to the partnership between him and defendants. This evidence consisted of books "F and C," especially "F." There was not a mark or entry in this book to show when the partnership terminated. He went very fully into the evidence about the partnership, as to when it terminated, etc. Mr Dickins compared many of the accounts, and reviewed the evidence given in the trial at great length.

On the Court re-assembling, in the afternoon Mr Dickins continued his arguments, summing up for plaintiff, reviewing the whole of the evidence at great length, and commenting on it. At quarter past 4 o'clock the Court rose, and will re-assemble to-morrow morning at 9 o'clock, when Mr Dickins will conclude his speech.

Thursday, 9th Dec., 1875.

Mr Dickins this morning concluded his summing up for the plaintiff.

His Honour congratulated the Counsel who had conducted the case upon the termination of their labours. His labours were only about to commence; he would have to go over the very voluminous evidence, which, with his other duties, would take a considerable time. He would adjourn the Court, and notice would be given to the parties concerned when the judgment would be rendered.

Tuesday, 7th Dec, 1875.

George Miller, seaman of the U. S. S. *Saco* was charged with assaulting Police Constable Mansbridge, resisting whilst being arrested, and with violent conduct in the jail.

Prisoner said he had no doubt the charge was correct, but that he was drunk, and did not know what he was doing. He had never

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

assaulted an officer before, and had nothing against the Constable or the jailer.

It appeared from the evidence that the police on the 2nd inst. had a warrant to arrest the man, that he assaulted them violently, and resisted greatly being taken to the Consular gaol, and had to be put in a cell by force by the police. After being put in the cell he was very violent, and broke a bucket all to pieces. The deputy marshall had to get policemen to assist him with the prisoner, and he (prisoner) again assaulted the police with part of the iron work of the bucket.

His Honour sentenced prisoner to 30 days' confinement (one week to be on bread and water), and to pay a fine of $10. If the fine of $10 was not paid prisoner was to be incarcerated for a further term of 30 days.

SCRUTIN DE LISTE AND SCRUTIN D'ARRONDISSEMENT.

(Saturday Review.)

Some of the Republican journals in Paris have lately asserted that M. Buffet has persuaded his colleagues to treat the adoption of the *scrutin d'arrondissement* as a question of confidence, and further from Marshal MacMahon an assurance that, if the *scrutin de liste* is retained, and the Ministry resigns, he will not favour an immediate dissolution. The rumour has been denied by other newspapers, though not by any which are supposed to be specially in the secrets of the Government, and it is rendered improbable by the fact that the Ministers have of late been scattered over the country, and that so important a decision would hardly be taken except when all of them were in Paris. Still, the hostility of M. Buffet to the *scrutin de liste* is well known, and the contents of the electoral law can hardly be left an open question in the Cabinet. M. Dufaure was formerly a partisan of the *scrutin d'arrondissement*, and though M. Thiers and the Left Centre have since changed their minds on the point, the Ministers who are supposed to represent this section of the Assembly have been more under Conservative influences, and may not have followed the movement of their former companions. The aspect in which the subject will present itself is one under which they have already had to make more than one decision. The present Cabinet is understood to be the most Liberal that the PRESIDENT will consent to work with. If M. BUFFET resigns, Marshal MACMAHON will disregard Parliamentary conventionalities, and govern by Ministers who do not pretend to command a majority in the Assembly. Is it not better therefore to keep the present Ministry together at any sacrifice until after the dissolution, rather than suffer the elections to be held under the reactionary guidance of the Duke of BROGLIE? There was a time when this argument might have convinced the entire Left Centre; but now, if it convinces Mr. Dufaure and M. Léon Say, it will probably be all that it will do. The experience that the Left Centre has had of M. Buffet may naturally have suggested a doubt whether, after all, he is so much more liberal than the Duke of Broglie as to make him worth retaining at any very high price. It is true that he has taken an active part in the establishment of the Republican Constitution, but then the Duke of Broglie now seems to have abandoned all thoughts of a Restoration, and to be as loyal a servant of the Republic as M. Buffet himself. If there has ceased to be much difference between the principles of the two politicians, there never has been any in their administration. The Duke of Broglie filled the Civil Service with Bonapartists, and M. Buffet has kept them all in their place. The *satte* of siege has been everywhere maintained. The same discriminating favour has been shown to Bonapartist journals. The same undiscriminating severity has been dealt out to Republican journals which thought that they might presume on the impunity accorded to the avowed enemies of the Constitution. Reflections of this kind would greatly soften the blow of M. Buffet's resignation; and when it is remembered that the cause of the Prime Minister's dislike to the *scrutin de liste* is supposed to be his belief that it would give too much strength to the Republican party, it is not strange if the Left Centre think that M. Buffet armed with the *scrutin d' arrondissement* may prove a more formidable adversary than the Duke of Broglie armed with no better weapon than the *scrutin de liste*.

If the choice between the two methods of framing the constituencies had to be made simply on the merits of the case, a great deal might unquestionably be said for the *scrutin d' arrondissement*. There is something exceedingly unsatisfactory in the idea of the electors of a whole department voting for a long string of candidates supplied to them by a Committee sitting in Paris, and securing the entire representation of all the *arrondissements* by virtue perhaps of a bare majority in two or three of them. There are two objections, however, to the substitution of the *scrutin d'arrondissement* under the particular circumstances in which it is proposed to effect it. One is, that it is not pretended that the change is to be made in order to represent the electors more thoroughly. The avowed motive for it is that it would give the anti-Republican party more power in the next Legislature. The expiring Assembly is to employ its closing hours in so cooking the constituencies as to ensure that the policy which it can no longer promote itself shall, if possible, be promoted by its successor. The success of such a measure would certainly be only temporary, while it would serve as a standing invitation to the opposite party to resort to the same tactics as soon as they found themselves in a position to do so. Few prospects can be more melancholy than that of a series of Reform Bills, each aiming at disfranchising as many as possible of the opposite party. The second objection is that, in so far as the *scrutin d' arrondissement* answers the purpose of its authors, it will tend to keep France in a condion of political uncertainty from which it is of the utmost moment that she should escape. It is generally believed that, under the present distribution of voting power, the Republicans will have a decisive majority in the new Chamber of Deputies. The result of the proposed change in the present distribution of voting power could scarcely be so marked as to give a decisive majority to any other party. The most that M. Buffet hopes from the *scrutin d' arrondissement* is, probably, that it will leave parties almost equally balanced. Most persons who look at French political contests from the outside will admit that, under present circumstances, France needs more than anything else to have an unmistakable check given to the intrigues of all who desire the overthrow of the existing Government. Before such a check can be effectually administered, the country must give an unmistakable assent to a Government of some kind. If under the *scrutin de liste* this assent will be secured for the Republic, whereas under the *scrutin d' arrondissement* only a doubtful or wavering judgment will be pronounced, that constitutes an excellent reason for the maintenance of the *scrutin de liste*. If it seemed likely that, under the *scrutin d'arrondissment*, an assent of the same kind would be secured for some other form of government, whereas under the *scrutin de liste* only a doubtful or wavering judgment would be pronounced, that would constitute an excellent reason for the adoption of the *scrutin d'arrondissement*. Supposing that by some change in the distribution of seats in England it had been possible at the last election to balance parties so equally that the transfer of two or three votes would at any time leave Ministers in a minority no reasonable Liberal would have preferred such a result to the result which was actually obtained. If permanent political uncertainty is bad even for a country in which political differences are almost imperceptible, how much worse must it not be for a country in which political differences extend to the whole fabric of the Government.

Among the first newspapers to give circulation to the report about the intentions of the Cabinet was M. Gambetta's organ, the *République Française*, but no shadow of coming events seems to sadden M. Gambetta himself. He has been interviewed at Vienna by a newspaper Correspondents, and has again asserted his conviction that everything is going on well, that Marshal MacMahon is entirely above party interests, that M. Buffet is not nearly so Bonapartist as he is painted, that the divisions of the Republican party are of no importance, that there is no need to be excited about the elections, since they are not likely to happen before the spring, and that in the interval France will probably be like a woman who must be left quiet when she desires it. Utterances of this kind have not, and are not intended to have, any real political significance. If M. Gambetta had said nothing to the Correspondent of the *Press*, every newspaper in France would have set to work to put an interpretation on his silence. One set of meanings would probably have pretty well cancelled another, but M. Gambetta is no doubt aware of the use to which ingenious persons can turn the absence of a contradiction, and he wisely preferred to give his critics harmless employment in the shape of a string of commonplaces. The dissolution cannot be delayed very much longer, even if it should be true that Marshal MacMahon will try to make it dependent on the substitution of small constituencies for large ones; and, until the dissolution comes, the least said either in or out of the Assembly will probably prove to be the soonest mended on the hustings.

GERMANY.

(Saurday Review.)

The German Government has just issued a warning to the effect that the opinions lately offered by the German press on the Eastern Question were not in any way inspired, and did not represent the secret thoughts of the Government itself. It was not so much that these opinions or suggestions were ill conceived as that there was no opening for them at all. The official mind of Germany, it appears, is a perfect blank as to all that concerns Turkey. It is interested not in Turks or Slavs, but in the preservation of the great alliance of the Three Powers; and to think at all about Turkey, except in unison with Russia and Austria, seems quite unofficial and wrong. As it is difficult even for German editors to treat the only subject of present political interest day after day without saying a word about it, the press was kindly allowed for a short time to trespass beyond the limits of sheer vacuity; but it has had its little holiday, and must now settle down to sober work, and say nothing about everything with its accustomed expertness and docility. Some of the papers to which this warning was addressed used to be considered as not only semi-official, but as having a still more sacred character, and being as nearly official as possible. But now they too are treated as outsiders, and their utterances are proclaimed to be as worthless as those of the rest of the world. Under the system of journalism which used to prevail under the Second Empire and which is now triumphant in Germany, no one can pretend to say for a moment what the Government means by allowing any opinion or set of opinions to be expressed. What is written may be meant to stimulate Germany or to terrify Europe, but it can always be disavowed at the last moment. When, last May, the German papers began to thunder against France, it was difficult to believe that the real JUPITER was not the great Prince BISMARCK himself. At any rate these shifts of the German press, its sudden animations and its sudden collapses, are quite in keeping with the character of Prince BISMARCK, as it is being gradually revealed to his contemporaries. Keenly conscious of the greatness of his ability, and of the eminence he has won, violent by nature, a bitter hater, indifferent to the claims of friends or dependents, contemptuous of the rules by which ordinary people restrain mind and body, and haunted by the thought that assassination or disease may cut short an astonishing career, he leads, and loves to lead, a tempestuous life. He has always a thousand schemes on hand, a thousand irons in the fire. He longs to use for great purposes the enormous machinery at his disposal, and finds in the quiet routine of German politics insufficient room for its action. Like ALEXANDER, he does not feel quite himself unless he has a new world to conquer. On the other hand, he has a singular width of political grasp. He sees European politics as a whole, and forbears from ruining great combinations in order to gratify temporary and trivial freaks. He has also a curious readiness to accept compromises, and is perfectly willing to get what he can rather than get nothing. When he is beaten, he does not trouble himself. He merely sets himself to work at something else. He has only taken one of his thousand irons out of the fire and found it colder than he expected. Last May he thought the iron of a new French war was hot; but he found he was mistaken, and put it back again. He has too much confidence in himself not to believe that the next time he tries an iron he may be more lucky. It is not surprising that a press which has to reflect the changing sentiments and projects of such a mind should be a somewhat hazy, speckled, and uncomfortable sort of mirror.

Since the close of the French war Germany has been going on in some respects well, and in some respects not so well. Its military power has been much increased and consolidated. Its strength, as compared with that of Austria or France, is far greater than in 1866 or 1870. It has done what its former rivals merely propose to do. Enormous sums and unrivalled military skill have been freely expended on the perfecting of fortresses. Metz, Strasburg, and Ulm bristle with new works on the most magnificent and extensive scale. The German artillery is now as much superior to the German artillery of 1870 as the German artillery of that date was superior to the artillery of France. The reserves of the army have been largely augmented and made more easily available, and the army is really popular with the people. The army and the people are said to be one, and the men present at the Silesian manœuvres have been treated as the guests, not the encumbrances, of those on whom they were quartered. Great progress, too, has been made in the extinction of separatist feeling. An election in Wurtemburg in the last few days has shown that, there at least, a candidate to be successful must be national. Even in Bavaria, which of all parts of Germany is least within the national fold, there is a growing feeling that it is no use to think of resisting Germany and BISMARCK, and that the lot which has fallen to Bavaria must be accepted. In Alsace itself time and despair are working for Germany. The population is rapidly getting over the pang of separation from France. It is acquiescing in the necessity of being German, and to retain French sympathies is beginning to be regarded by the mass of the people as one of the luxurious fancies of the rich. Lastly, the Church question has not produced so much internal discord as might have been expected. It has, no doubt, excited much painful feeling. In some districts the power of the priests is unbroken; and many Germans who approve of the general tenor of the ecclesiastical laws think that they have been shaped and executed with needless and imprudent rigour. But, on the whole, the German notion of the State, and the passion for a united Germany, have stronger control over the general mind than ecclesiastical sympathies. The Germans of the present day have not, indeed, many of the qualities which make ecclesiastical martyrs. They think it as unnatural to resist the State as a Red Indian would think it to wear evening clothes. They have been tutored into acquiescence from their cradles, and what the law orders and the police enforce, that they accept.

On the other hand, there are points as to which it may be said that Germany has not been going on lately very happily. The complaint is general that the country of the milliards is poorer now than it was before it had its money from France. Everything costs more; rent and food are dearer; workmen want more wages and do less work. The sudden influx of money led to over-speculation, and over-speculation led to collapse; and the introduction of a specie currency has, either necessarily or through bad management, caused some financial difficulties. But there is perhaps too great a disposition among some Germans who feel pinched at present to think that it was the war and the milliards that made them poor. Of course a nation which loses two hundred thousand men in a short war, and permanently takes away hundreds of thousands of men from industrial occupations to make soldiers of them, diminishes its power of producing wealth. But what has happened in Germany has been going on all over Europe. Exactly the same complaints of the impossibility of making two ends meet are heard in Vienna, and the Austrians, of all people, have in recent days been safest from having their arrangements interfered with by the influx of the spoils of conquest. All that can be said is that, whether from causes special to Germany or from causes operating through Europe, many Germans with small fixed incomes—and there are very many Germans with very small fixed incomes—are having at present an unpleasant time. A much more serious matter is the deterioration of the national character which is generally recognized as observable. Very great allowance, indeed, ought to be made for a people which has found itself raised to greatness very quickly; and some of the imperfections of Germans which strike critics now are not so much new as brought newly into prominence by the national success, just as many of the faults of the French are now non-existent to the eyes of those who sympathize with France in her misfortunes. Still the testimonies of many accordant observers cannot be wholly at fault, and there is a general concurrence of opinion that since the war there has been not only a great increase of arrogance and of what is expressed in French by chauvinism, but a general lowering of the tone of feeling, a coarser way of regarding and treating women, more of brutality and cynicism in the search for material enjoyment. Certainly, if literature is to be taken as a test, the creative intellect of Germany may be said to be fast asleep. Fertile and exhaustive as ever in research, the German mind is now creating nothing of the slightest value, with the one exception, perhaps, of the operas of Wagner. In one respect the deterioration of Germany is indisputable, and can be distinctly traced to the war and to the influence of Prussia. All freedom and life have been stamped out of the press, and the tyranny of espionage has been pushed to an extreme which is almost incredible to Englishmen. Everybody in Germany is occupied in watching everybody. Everything is thought worthy of being noted, booked, and transcribed. Servants furnish the police with journals of the lives of their employers, and the confidences of a dinner-table are passed on by those who win confidence by smiles and bows. Naturally most of the information thus collected is wholly useless. The entire population cannot be taken up and imprisoned by itself. But the tyranny of the system makes itself felt, and corruption goes necessarily with tyranny. The friends of Germany, those who know and admire the many great qualities of the nation, and have a due sense of the debt of Europe to the

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

German intellect, may hope that the present state of things will pass away, and that Germans, when their political safety is secured, will listen to the voices of liberty and self-respect But, as things are now, there are many things in Germany which the truest friends of Germany will be the most ready to deplore.

ARRIVALS.

Dec. 7, *Curlew*, British gun-boat, Captain Church, 660, from Bonin Islands, Dec 7.

Dec. 8, *Oceanic*, British steamer, Parsell, 2,349, from Hongkong, Dec. 1, Mails and General, to O. & O. Co.

Dec. 9. *Genkai Maru*, Japanese steamer, Connor, 1,917, from Shanghai and ports, Dec. 1, Mails and General, to M. B. M. Co.

Dec. 9, *Sylvia*, British gun-boat, Captain St. John, 694, from Kobe.

Dec. 11, *Fleetwing*, American ship, Guest, 829, from Kobe, Dec. 5, Tea, to Smith, Baker & Co.

Dec. 11, *Wm. Mudgett*, American barque, Dickey, 885, from Nasaki, Dec. 1, Coal, to Order.

DEPARTURES.

Dec. 7, *Tanais*, French steamer, Reynier, 1,010, for Hongkong, Mails and General, despatched by M. M. Co.

Dec. 8, *Hiroshima Maru*, Japanese steamer, Furber, 1,870, for Shanghai and ports. Mails and General, despatched by M B. Co.

Dec. 9. *Robert Kelly*, American barque, Kingman, 823, for Nagasaki, Ballast, despatched by China and Japan Trading Company.

Dec. 10, *Oceanic*, British steamer, Parsell, 3,650, for San Francisco, Mail and General, despatched by O. & O. Co.

PASSENGERS.

Per *Genkai Maru*, from Shanghai and ports.—For Yokohama: Baron R. Rosen, J. Reckel, W. Reikara, F. dos Remedios, C. J. Melhuish, R. S. Russell, O. Benecke, Miss Jenny Claus, and Miss S. Turner. For American: C. A. Gibson, Mrs. Reid, S. S. Hinkly, S. Brown, C. H. Farrell, A. Homason, W. H E. Mosser, U.S.N, E. A. Merriman, U.S.N., W. H. Nostrand, U.S.N. and Wm. Lee.

Per *Oceanic* for San Francisco.—Baron von Holleben, Mr. and Mrs. Gill, Mrs. Reed, Mrs. Martin, Messrs. Mosser, E. H. Burkett, Gillon, S. Brown, S S. Hinkley, Leon Metchnikoff, R. H. Richard, E. A. Merriman, W. H. Nostrand, J. A. Lindo, E. S. Seed, O. Bennecke and P. Donaghue.

CARGOES.

Per S. S. *Nagoya Maru*, for Shanghai and ports:—

Treasure	$1,500.00

Per M. M. str. *Tanais*, for Hongkong.—

Silk for Marseilles	337 Bales.
for London	225 ,,
Total	562 Bales.

Per *Hiroshima Maru* for Shanghai and ports.—

Treasure	$12,000.

Per *Genkai Maru* from Shanghai and ports.—Treasure $720.88.

REPORTS.

H. B. M. gun-vessel *Curlew* reports having left Yokohama on Monday, the 22nd November, and after a rough passage of 96 hours arriving at Port Lloyd, Peel Island, Bonin Islands. The Japanese Government steamer *Meiji Maru* was here, having left Yokohama on November 28th with several Japanese officials to take notes on the group of islands. Consul Robertson took a passage and was engaged in investigations of an official nature.

The *Curlew* left again on Friday, 3rd December, and experiencing North Westerly winds and a heavy sea arrived in Yokohama after a successful passage, considering the time of the year, in 98 hours. Turtle abound in the Bonin Islands and a large number were brought here by the officers.

COMMERCIAL INTELLIGENCE.

(The following report was printed in the "Japan Mail" of December 10th. We reprint it with such corrections in market rates as may be necessary.)

IMPORTS.

Cotton Fabrics and Yarns.—The market for these goods has been exceedingly quiet during the past fortnight, the demand for certain classes of *Shirtings* and *Yarns*, which existed more or less on the publication of our last report, having since subsided. A general dulness now prevails, and we have to quote a lower range of prices which still tend downwards.

Grey Shirtings:—				White Shirtings:—	
7 lbs.	38½ yds. 39 in. per pce.	$1.95 to $2.20		60 to 64 reed 40 yds. 35 in. nom. per pce.	2.20 to 2.40
8 lbs.	38½ yds. 44 in. ,,	2.20 to 2.55		Turkey Reds 24 yds. 30 in. 2¼—3 lb. per lb.	0.75 to 1.05
8 lbs. 4 to 8 lbs.	38½ ,, 39 in. ,,	2.25 to 2.55		Black Velvets	8.50 to 9.50
9 lbs.	38½ ,, 44 in. ,,	2.60 to 3.00		English Drills 15 lb. 40 yds, 30 in.	3.25 to 3.35
				Taffachelass 12 yds, 43 in.	2.50 to 2.60

Yarns.

No. 16 to 24	per picul	$30.50 to 34.25	No. 38 to 42 per picul $42.00 to 45.00
No. 28 to 32	per picul	$35 50 to 40.50	Reverse Twist 16-24 ,, —

Woollens.—No material change has taken place in the position of this staple. Plain *Black Orleans*, as well as all fancy articles, are difficult to move even at low rates, but in *Cloth* there has been a more active demand, and fair transactions have resulted, holders meeting the market freely even at ruinous rates.

Plain Orleans	40—42 yds. 32 in.	6.25 to 7.80		Figured Mousseline de Laine.. 30 yds. 30 in.	0.25 to 0.28
Figured Orleans	29—30 yds. 31 in.	4.75 to 5.25		Multicolored ,, 30 yds. 30 in.	0.35 to 0.40
Chimagoro	30 yds. 30 in.	5.25 to 5.75		Cloth, all wool plain or fancy.. 48 in. to 52 in.	0.80 to 1.20
Italian Cloth	—30 yds. 32 in.	0.25 to 0.33		Presidents 54 in. to 56 in.	0.65 to 0.75
Camlet Cords	29—30 yds. 32 in.	6.25 to 7 25		Pilots 54 in. to 56 in.	0.42½ to 0.50
Camlets Asstd.	56—58 yds. 31 in	18 50 to 19.00		Union 54 in. to 56 in.	0.60 to 0.70
Lastings, Japan	22—30 yds. 32 in.	13.00 to 14.50		Blankets, scarlet & green 7 to 8 lbs. per lb.	0.40 to 0.42½
Plain Mousseline de Laine	—30 yds. 30 in,	0.18½ to 0.20			

Iron and Metals.—Heavy arrivals of assorted iron have occurred since the publication of our last report and a decline in *Nail-rod* may be noted. Business has been small.

Iron flat and round	per picul	$3.50 to $4.00		Iron hoop	per picul	$4.10 to 4.50
,, nail rod assorted	,,	3 75		,, pig	,,	1.50 to 2.00
,, small size	,,	3.80 to 4.35				

Sugar.—During the past fortnight the Sugar market has been dull with prices declining, and transactions have only been for immediate wants. We make no change in quotations. The new Formosa crop is believed to be larger than ever hitherto known and may be expected to come to market early.

Sugar:—Formosa in bag	per picul	3.60 to 3.80		China No. 5 Kong-fun	per picul	4.40 to 4.90
in Basket	,,	3.50 to 3.60		,, No. 6 E-pak	,,	4.00 to 4.10
China No. 1 Ping fah	,,	7.90 to 8 00		Swatow	,,	3.00 to 3.10
,, No. 2 Ching-pak	,,	6.80 to 7.20		Daitong	,,	3.20 to 3.30
,, No. 3 Ke-pak	,,	6.00 to 6 50		Japan Rice	,,	3.25 to 3.30
,, No. 4 Kook-fah	,,	5.20 to 5 70		Kerosine Oil	per case	2.45 to 2.55

EXPORTS.

Silk.—Our fortnightly report dated 10th inst., was to the following effect :

In the absence of telegraphic communication with Europe during the past fortnight buyers, guided by mail advices which were any thing but cheering, have been cautious, and we have to report a further decline in prices of about $10 all round.

Settlements since the 25th ulto., are 775 bales of Hanks and 75 of Oshiu, leaving a stock of 1,200 bales.

The shipments of the fortnight have been 859 bales, making the total export since 1st July 8,864 bales against 5,936 last year for the corresponding period.

		At Exchange 4s. 1¼ in London.	*At Exchange 5.22 at 6 m.s. in Lyons.*
Steam filatures

Hanks—			
Best No. 1 to 2	$440 to 460	16s. 7d. to 17s. 4d.	frs. 46 to 48
Good No. 2	$420 to 430	15s. 11d. to 16s. 3d	frs. 44 to 45
Medium No. 2½	$400 to 415	15s. 2d. to 15s. 8d.	frs. 42 to 43

		At Exchange 4s. 1¼ in London.	*At Exchange 5.22 at 6 m.s. in Lyons.*
Common No. 3	$380 to 390	14s. 6d. to 14s. 10d.	frs. 40 to 41
Inferior No. 4 & 5	$350 to 370	13s. 6d. to 14s. 2d.	frs. 37 to 39
Oshiu—Best	$510 to 530	19s. 1d. to 19s. 9d.	frs. 53 to 55
,, Good	$480 to 500	18s. 0d. to 18s. 8d.	frs. 50 to 52
H'matski, Best to Com.	$415 to 460	15s. 8d. to 17s. 4d.	frs. 43 to 48
Kakeda, Good to Extra	$530 to 600	19s. 9d. to 22s. 2d.	frs. 55 to 62

Since the above was written, arrivals have been 105 bales, and deliveries 294 piculs. Telegraphic correspondence has been resumed, advising a further fall in prices at home.—The Japanese, however, are unwilling to submit to lower rates ; many withdraw their Silk from the market altogether and every thing seems to point to a limited business till after the New Year's festivities are over.

A sale is reported of a few bales of "steam filature" at $600.

Silk-worm's eggs.—The total export of this season has been 727,000 cards against 1,300,000 in 1874 and 1,425,000 in 1873.

Shipments viâ Suez are 552,000 cards and 175,000 viâ San Francisco. According to the returns of the Custom House they have been declared as follows :

For Italy	501,000
,, France	170,000
,, United States and Other Countries	56,000
Total cards	727,000

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

Tea.—A more active business has been done during the fortnight elapsed. Since the departure of the last American Mail, holders of "Good Medium" and lower grades, having in a measure met the ideas of houses now purchasing, a decline of $1 to $1.50 has been established in these classes, and settlements for the period amount to 6,300 piculs, comprising mostly teas classing "Good Medium."

"Finest" and "Choice" parcels are rather firmer, and great difficulty exists in obtaining a really desirable line. The supply of these classes has been very light this season, and either they have not been prepared in any great quantity or are only dribbled on the market: we incline to the first supposition.

Our export goes on steadily both from this and Kobe, and from present data we expect to see an export from Yokohama for the current season to 31st December of at least sixteen millions of pounds, while Kobe may fairly be credited with five million pounds for a like period.

The *Fleetwing* is daily expected here from Kobe to complete her loading for New York. At present there is no other sailing craft on the berth.

Common	$15.00 to 18.00	Fine	$31.00 to 34.00
Good Common	19.00 to 21.00	Finest	$35.00 to 38.00
Medium	23.00 to 25.00	Choice	$40.00 upwards.
Good Medium	26.00 to 29.00

THE GREATEST

WONDER OF MODERN TIMES!

HOLLOWAY'S PILLS.

PERSONS suffering from weak or debilitated constitutions will discover that by the use of this wonderful medicine there is "Health for all." The blood is the fountain of life, and its purity can be maintained by the use of these Pills.

SIR SAMUEL BAKER,

in his work entitled "The Nile Tributaries in Abyssinia," says, "I "ordered the dragoman Mahomet to inform the Fakey that I was a "Doctor, and that I had the best medicines at the service of the "sick, with advice gratis. In a short time I had many applicants, "to whom I served out a quantity of Holloway's Pills. These are "most useful to an explorer, as possessing unmistakable purgative "properties they create an undeniable effect upon the patient, which "satisfies him of their value."

SIMPLE, SAFE AND CERTAIN!

HOLLOWAY'S OINTMENT

Is a certain remedy for bad legs, bad breasts, and ulcerations of all kinds. It acts miraculously in healing ulcerations, curing skin diseases, and in arresting and subduing all inflammations.

MR. J. T. COOPER,

in his account of his extraordinary travels in China, published in 1871, says—"I had with me a quantity of Holloway's Ointment. I "gave some to the people, and nothing could exceed their gratitude; "and, in consequence, milk, fowls, butter, and horse-feed poured "in upon us, until at last a tea-spoonful of Ointment was worth a "fowl and any quantity of peas, and the demand became so great "that I was obliged to lock up the small remaining stock"

Sold by all Chemists and Medicine Vendors throughout the World.

THE FOLLOWING

IS AN

EXTRACT FROM A LETTER

dated 15th May, 1872, from an old inhabitant of Horningsham, near Warminster, Wilts:—

"I must also beg to say that your Pills are an excellent medicine for me, and I certainly do enjoy good health, sound sleep and a good appetite; this is owing to taking your Pills. I am 78 years old.

"Remaining, Gentlemen, yours very respectfully,
To the Proprietors of L. S.

NORTON'S CAMOMILE PILLS, London.

CONSUMPTION,

INDIGESTION AND WASTING DISEASES.
The most approved REMEDIES are
PANCREATIC EMULSION & PANCREATINE.
The Original and Genuine prepared only by SAVORY & MOORE, 143, New Bond-street, London.
Sold by them, and all Chemists and Storekeepers throughout the World.

June 5, 1875. 1f. 26ins.

FRAUD.

On the 27th June, 1866, MOTEEWALLAH, a Printer, was convicted at the Supreme Court, Calcutta, of counterfeiting the

LABELS

Of Messrs. Crosse & Blackwell,

London, and was sentenced by Mr. Justice Phear to

TWO YEARS RIGOROUS IMPRISONMENT:

And on the 30th of the same month, for

SELLING SPURIOUS ARTICLES

bearing Labels in imitation of Messrs. CROSSE & BLACKWELL'S SHAIK BACHOO was sentenced, by the Suburban Magistrate at Sealdah, to

TWO YEARS RIGOROUS IMPRISONMENT.

CAUTION.—Any one *selling spurious oilmen's stores*, under Crosse & Blackwell's name, will be liable to the same punishment, and will be vigorously prosecuted. Purchasers are recommended to examine all goods carefully upon taking delivery of them, and to destroy all bottles and jars when emptied. The GENUINE Manufactures, the corks of which are all branded with Crosse & Blackwell's name, may be had from EVERY RESPECTABLE DEALER in India.

THE

Japan Weekly Mail.

A POLITICAL, COMMERCIAL, AND LITERARY JOURNAL.

VOL. VI.—No. 51.] YOKOHAMA, SATURDAY, DECEMBER, 18, 1875. [PRICE $24 PER ANNUM.

TO SUBSCRIBERS.

SUBSCRIBERS at a distance whose period of subscription may have elapsed, are informed that their papers will be addressed and charged to them *until countermanded*. This rule has been found necessary in order to avoid the inconvenience of an abrupt stoppage of the paper which might result from an omission to renew.

It is requested that notice of the intention to discontinue a subscription be so given as to reach Yokohama *before* the date of its effluxion.

NOTICE.

ON and after the 1st of July, Notices of Births, Marriages and Deaths will be charged $1 each insertion.

Such Notices cannot be inserted in this journal unless endorsed with the name and address of the person by whom they are sent.

Yokohama, 25th June, 1874.

DEATH.

Suddenly, on the 16th instant, at the residence of Capt. J. C. Hubbard, No. 237, Bluff, J. C. HAWES, Esq., U. S. Consul at Hakodate.

Notes of the Week.

The rumours which have for some time been rife regarding the sale of the section of railway between Tokio and Yokohama to certain of the nobles, have taken the form of a definite announcement to that effect. The measure, it can hardly be doubted, had its rise in financial considerations on the side of the Government, who, we imagine, will pay so much less annually to the purchasers by way of pensions, crediting them with the amount thus unpaid as so much towards the purchase of the line, which will not be wholly transferred to them for seven years. The administration of the railway meantime remains in the hands of the Government, and, for all practical purposes, the bondholders in Europe, who hold the scrip of the first loan, are in the same position as before the arrangements now referred to were completed. The amount of the purchase money is said to be £600,000, but we have no certainty regarding these figures.

The Yoshiwara of Yedo was completely destroyed by fire on Sunday last, 12th instant. At about 11.30 a.m., one of the tea-houses took fire, and so rapidly did the flames extend that at 3 in the afternoon only a few buildings remained unconsumed, about one-half of the fire-proof godowns escaping. The area of closely packed buildings may be estimated at nearly twenty-five acres. This conflagration points to the necessity for a more efficient machinery for the extinction of fire, the untrained natives being not alone unable to deal with it, but needlessly destroying in their ignorance buildings which are not threatened. The only plea for the continuance of the latter system is that it creates 'work' at a season when work is frequently scarce.

We would call the attention of those who disagreed with us on the subject of the Press-Laws to the following letter which appears in one of the issues of the *Times* received by last mail. It will be said that two blacks do not make a white. Of course not. But what we have always maintained is, that entire freedom cannot be given at once to a people in one department of the national life when it does not exist in other departments at all. To inaugurate the dawn of freedom with a wholly uncontrolled press seems to us sheer madness.

THE GERMAN PRESS LAWS.

(TO THE EDITOR OF THE *Times*.)

Sir,—I received a letter from my friend the Rev. Carl Büddinghause, proprietor of a newspaper called the *Westphalian Mercury*, published at Münster, in Prussia, from which I make the following extract, and beg you will so far aid the cause of the freedom of the Press as to give insertion in your columns to this note and my friend's remarks:—

"Münster, Oct. 15, 1875.

"My dear——,—I write to you again from prison. Yesterday, at noon, they suddenly took me off to prison, as you perhaps saw in the *Mercury*. They wanted to know the name of the author or authors of three articles, and as I refused to mention his or their name, they imprisoned me without first imposing a fine, which the law requires, and which they did the last time I was imprisoned. For how long I am imprisoned I know not, but apparently till I reveal the names."

I need add nothing to this statement but that I pledge my word for its accuracy, and that my friend will most certainly not betray the trust reposed in him, but, as before, endure the suffering and annoyance of a protracted imprisonment rather than do so.

I am, Sir, your obedient servant, J. L. P.

October 20.

A dinner is to be given to-morrow by his friends to Herr Zappe, the German Consul, previous to his intended early departure for Europe—a compliment to which his just popularity, not only among his nationals, but among all who have had the pleasure of his acquaintance, justly entitles him.

Among the passengers by the last English mail we observe the name of the Revd. W. F. Garratt, who has come out to undertake the duties of what was formerly the Consular Chaplaincy, but is now the disestablished, or perhaps rather, disendowed Episcopal Church of this settlement. We shall hardly do wrong in bidding him cordially welcome in the collective name of those among whom he has been called to minister, and in wishing him a happy residence and a useful and successful course of duty in Yokohama.

The age of Chivalry is indeed past: the customs of Feudalism have lost their flavour! A member of the highest Japanese class, well known to foreigners by his speculative enterprise, finding himself recently in financial perplexity, bethought him of the compromise offered by an old custom—

(What Cato did, and Addison approved, cannot be wrong.)

—but having some unsatisfied business engagements in this world he proposed that the long journey to the next should be undertaken vicariously by a near and attached friend. Fifty years since and how greedily would that friend have disregarded any "canon 'gainst self murther" and rushed into eternal honour and reputation to save the character of his fellow! But now? Well, *now*, it must be admitted, "civilization" claims him, and, with many excuses to his friend, he declined the proffered sacrifice and "concluded" ——to live.

Original from UNIVERSITY OF CALIFORNIA

A Concert was given on Wednesday evening last in the large room of the Machigaisho, courteously placed at her disposal for the purpose by the Governor of Kanagawa, by Miss Jenny Claus, a violinist who has abready gained high distinction in Europe.

Miss Claus opened the concert with the Kreutzer Sonata —the greatest work of the kind ever written. Its title has a curious history. Beethoven wrote the work with the intention of dedicating it to a young Englishman named Bridgetower, with whom he was then living in Vienna. But a quarrel arose between the two friends—there was, of course, a lady in the case—they parted, and the composer dedicated the Sonata instead to Kreutzer, a great violinist of his day, the auther of the Violin Studies which bear his name, and much other excellent, though now forgotten, music. Spohr also dedicated a set of violin duets —three of the celebrated twelve—to the same artist.

The first movement of the Sonata was omitted, perhaps wisely, in view of the great length of the entire work. It must also be confessed that the vast scale on which the movement is planned, the weight and bulk of the materials of which it is constructed, the various phases of emotion or thought whence it springs and to which appeals, unfit it for the reception of a miscellaneous audience. It demands careful study and repeated hearing before its merits can be appreciated, or even its plan understood. It occupies a wide area, like a vast temple, and its style of architecture is so original and peculiar, that, impressive as is the whole structure, none but a student can do justice to the design or the designer. The *Andante con variazione*, however, with which Miss Claus opened the concert, demands no such previous preparation. It consists of a melody of extreme simplicity and beauty, the variations upon which embellish and enrich, but never obscure, its outline. In the first, the air is given to the piano with a triplet accompaniment, the treble part of which is ornamented with the most graceful fancy, the violin merely throwing in a few notes here and there, as if in contented sympathy with the admiration which the beauties of its partner cannot but extort. In the second variation, however, the solo instrument springs at once into prominence, and the accompaniment, resigning all claim to do more than reciprocate the homage previously done to itself, is content in its turn merely to support its associate. The melody is perfectly heard though the shower of bright rapid drops in which it falls. The beauty of the form is made more attractive by the apparel in which it is clothed, and lovely as is the outline of the unadorned melody itself, its graces are enhanced by the art which covers, but does not conceal, it—an art worthy of the form and subordinated to it by a master hand. The third variation, which is thrown into the minor key, the two instruments going through it hand in hand from the opening to the close, makes a beautiful shadow, as it were, to the previous movement, and prepares the way for the fourth, which is decorated with a luxuriant fancy far surpassing even that employed on the second. This again is followed by an *adagio*, in which the melody disappears gradually, like the retreat of a picture in a dissolving view, and then the *presto finale* begins—a movement full of fun and frolic, a dance of fairies—not the fairies of Mendelssohn or Weber, or even those of Shakspeare, but those of Fuseli, whose illustrations of A Midsumme Night's Dream are vividly recalled by this wonderfulr outpouring of high animal spirits and exuberant fancy. The melody is tossed from key to key and from instrument to instrument, with a rapidity, audacity and brilliant effect which are truly dazzling, and which the retarded and *adagio* bars, skilfully placed here and there, serve only to throw into greater prominence. Miss Claus did well to open her concert with these movements of this great work, which demand the possession and exhibition of powers only attained by those who have mastered the difficulties of an instrument as intractable as it is beautiful. Of course there is no finality in violin-playing, which has its hierarchy above hierarchy *ad infinitum*. But Miss Claus has won a position which only very few achieve, and she moved and breathed as easily on the lofty heights of the Kreutzer as less gifted mortals do at the level of the simplest music. Something of the more rapid passages in which the piano-forte has the melody of the *presto*, while the violin takes the accompaniment, were lost owing to the acoustical defects of the room. But by her opening performance Miss Claus at once proved herself an artist of rare powers, and left no doubt in the mind of any one of her audience of her right to the position which is claimed for her.

This rich treat was followed by a song from one of Händel's operas, *Si trai Ceppi*, which was so admirably sung by a gentleman amateur as well known to all here for his accomplishments as for the generous use he makes of them in the service of the public, that we venture to think he does himself more justice in this great school of music than in any other. Often as we have had the advantage of hearing him, he took all by surprise on Wednesday evening and revealed powers which he was hardly suspected of possessing. This was followed by Beethoven's Sonata for piano-forte in F major, (No. 2 of Op. 10, and VI of Moscheles' Stuttgart Edition) played by M. Reckel in the broad and solid manner which marks the piano-forte player of the best European schools. It is a fine work, though we can afford no time to give an analysis of it. The first part of the concert was closed by Miss Claus's performance of a Gavotte of Bach's as a violin solo. Those who are accustomed to associate musical performances of a high class with the idea of instruc tion, will have found an enjoyment in this work which it may not have afforded to every one. It is a specimen of a school the study of which cannot be omitted by any one who desires to gain an acquaintance with the history of the development of musical art, and of which Bach, the Michael Angelo of music, was the true founder. It was played with great precision by Miss Claus, but those only who know the difficulties of execution which it involves can appreciate the fact that all traces of them disappeared under her hand. But, like all Bach's music, it is the music of the Reason, in which the emotions play no part, and is as incapable of touching the heart as a problem of Euclid.

The second part opened with Vieuxtemps' Grand Fantasia on airs from Gounod's Faust. We cannot side with those who place music of this class below the position it claims to hold. It certainly serves to exhibit the wonderful resources of the violin, and the mastery over the instrument which may be attained by toil and study. If it dazzles rather than arouses the deeper emotions, it is still always the work of great writers for the instrument, and has solid claims on our attention. We shall not affect to compare it with the music of the great masters, specially written to express their thoughts and feelings, and to reflect these, or arouse something corresponding to them, in the minds or emotions of their listeners. But not the less is such music to be regarded as valuable for certain purposes, and these were fulfilled by Miss Claus's performance of a work which none but a player of a very high order dare attempt. Nor should we be indisposed to have the reminiscences and associations of such an opera as Gounod's Faust awakened by a process extremely beautiful in itself, and calculated to display at once the powers of a wonderful instrument and the talent requisite to exhibit them. It is easy to be so severe in taste that nothing which does not come up to a certain standard is regarded as tolerable. But so long as there is nothing degrading, vulgar or meretricious in the class of writing of which we speak, a large catholicity of feeling will accept it with pleasure and gratitude. Why reproach a garland because it is not an oak? There is nothing for which we may be more grateful than the wonderful diversity of the mind of man. Let us enjoy this as we enjoy the like variety in Nature, who displays her boundless resources in infinite forms of beauty.

M. Reckel then performed a very cleverly written Tarantelle of his own compostion, which Miss Claus followed up with a "Transcription" of Auld Robin Gray--very touching, and played with admirable pathos. A song followed this, and the concert was brought to a close with Joachim's version

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

of one of the Ungarische Tänze of Brahms, played by Miss Claus with so much power and spirit that it was encored.

We have tresspassed unduly on the patience of our readers. But the performances of a true artist, such as is Miss Claus, must awaken strong feelings in all who give to art its proper place in the economy of life, and if we sometimes strain the proportions of what we may write on this subject, it is in the hope of awakening in others a sense from which all who have cultivated it derive pleasures of the highest order. The passion for art is perhaps the purest known to our nature, as it is the only one the pursuit of which is threatened with no punishment; and such poor offerings as any of us can bestow on those who, like Miss Claus, place its fruit before us, return to us a thousand fold in choicest forms, the attractions of which it is our purpose to exhibit.

Miss Claus proposes to give a Second Concert on the evening of Thursday next (not Wednesday, as erroneously stated in the *Daily Advertiser* of this morning). If we have any credit on these subjects with our readers, they will hardly, for their own sakes, miss the last opportunity they will have of listening to so fine a performance as that which is promised on this occasion.

We cannot leave this subject without a few words upon one cognate with it, which is really not without importance from an educational and social point of view. How is it that the education of young girls so rarely comprises the playing upon stringed instruments? They are all taught the piano, and in virtue of one of the most singular superstitions which ever dominated and pained society, English girls are all taught to sing without the slightest reference to the question whether or not they possess voices. And as, of course, nineteen out of twenty have no such endowment, drawing-room music in England is, for the most part, a social calamity of serious magnitude. Here we have the spectacle of a world so full of misery that we are compelled to resort, as Dean Mansel was, to some hypothesis in order to explain it, which strikes at the root of theological morality, and yet we deliberately set to work to make matters worse by teaching all our young girls to sing! Can anything be more inscrutable? We do not construct ships or fire-places out of paper, we do not make cannon out of wood, or write with milk, or build houses with straw. And why? Solely because such materials are obviously unsuited to the required purposes. Then why, in the name of all that is rational, teach girls to sing who have no voices, and thus help to swell this wave of social calamity? Does it give them any insight into good music? Certainly not. Does it make them more agreeable to society? Wholly the reverse. Does it aid their prospects in life? We greatly doubt it, as not many men can be found who, like Sokratês, marry for the very purpose of being tried. Is there any value in singing lessons as educational instruments by means of which the mental faculties can be developed in harmonious relation to each other? None, surely, which could not be attained by other means reflecting less painfully upon others. Why, then, is the superstition kept alive? There is but one reply: Because it is a superstition. But cannot this Baal-worship be overthrown? We believe that it can, and this with the most delightful and beneficial results. Our cure for it is the placing of stringed instruments in the hands of a certain proportion at least of the daughters of every family. First, what would be the effect of this? It would stop the unvoiced songstresses, and therefore an immense deal of the bad singing. Next, it would enable the members of a family to combine for the purposes of concerted music, and thus open up to them a source of pleasure of which few men and far fewer women have now any conception. There is far more reason for every girl being taught to play than being taught to sing. In the former case the instrument, being made by man, can be ensured as good. There are no pianos or violins evolved by natural or supernatural processes upon which men and women are bound to play, whether good or bad. But as many, most, indeed, voices are bad, if every one is taught to sing, a vast number of bad instruments are set in motion, and this can only result in much bad music. No trouble of this kind is to be feared when good instruments, as in the case we advocate, are within every one's reach. How many girls or women know anything about good music, about the great works of the great masters? How many know even what a quartett is? We do not mean to say men usually know more; but men are not usually taught music. All girls are. Do they, as a matter of fact know much about it or care much about it? Most emphatically, no. The great works are practically unknown to them—the great works of an art over which they spend a very large proportion of the time devoted to their education, and, subsequently, of their lives. What should we say if any one learned painting and had no idea that there was such a picture as Raffaelle's Transfiguration, or Rubens' Descent from the Cross, or Titian's Assumption, or the Madonna di San Sisto or the Soult Murillo—or a thousand fine works which we all know, even though a picture, unlike music, can only be in one place at one time? Yet thus it is with most women. Surely there must be something wrong about a method which produces such results. And we English are the very people who ought to lead the reform. There never was a nation which contained so many large families, and when we reflect that the members of these immense households are divided after dinner into two sections, the one—we speak with all respect—singing badly in the drawing-room, the other playing at billiards with about equal skill in some neighbouring or more distant haunt, there surely is some food for reflection. How vastly is the pleasure derived from the contemplation of works of art increased by acquaintance with them and their authors, and who does not enjoy Hamlet, the Messiah or the Elijah better for knowing Shakspeare, Händel and Mendelssohn well? If girls were taught stringed instruments, they would acquire this knowledge.

Next, why should not girls play stringed instruments? It cannot be said so much that there is a prejudice against it, as that it has been little thought of. Those who say that it is ungraceful can have no idea of what beauty in motion is. The position of the hand on the bow is one of singular beauty, the movement of the bow arm may be as full of grace as any movement of which we have any knowledge, nor is there a single posture involved in the holding of the instrument which need be otherwise than entirely graceful. The attitude of a woman playing the violin is far more picturesque than of one playing the piano, where the hands appear at right angles to the body. Considerations of this nature are not altogether to be neglected, but women may be assured that if they appear ungraceful in playing the violin, it is not the fault of the instrument. We could easily illustrate this by an appeal which which would entirely bear us out, but we might hardly be forgiven for trespassing beyond the conventional limits of criticism. Persons urging this argument of alleged ungracefulness in ordinary conversation think it funny to put their head on one side and saw with their shoulders, arms and elbows in a manner which no more represents a well taught violin player than the antics of a clown represent the graces of a finished dancer. If we look all the commonplaces on this subject well in the face, they disappear. They are all more or less "idols of the market-place." The movements and attitude of the violin player may be made in the highest degree graceful, while the delicate organization of women, the predominance in them of the emotions, instead of the reason, as in ourselves, and the superior delicacy of their hands, combine to render them far more fitted than men for becoming fine stringed-instrument players. How can lads who row, and play at fives, and cricket, and fifty other games which tend to make the hand coarse, expect to retain that exquisite nervous sensibility in it which violin playing demands? People are apt to forget, too, that the form of the violin is one of extraordinary beauty. The human body itself—that consummation of all beautiful forms—hardly presents a greater number of lines of beauty than the violin. The convolutions of the scroll, the fall of the neck, the graceful swell of the shoulders, the elegance of the curves in the waist, and the rich rounded outline of the lower part of the instrument, are marvels of beauty to those who have learned how to appreciate such lines—we are speaking, of course, of the finest models. And a beautiful line is a very beautiful

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

object. Some of our readers may recollect a story which has come down to us from the Greeks, telling how a great Athenian sculptor, visiting a fellow artist and finding him absent, chalked a line on his wall—one of the lines of the human form—in token of his visit. On his return, the absent man knew that there was but one hand in Athens which could produce such a line, and he, in his turn, visiting his friend, whom he also found absent, drew the line which naturally follows that previously drawn, and each recognized the other by a touch which, in all arts, marks the master hand.

This subject is one which it is obviously impossible to treat otherwise than most superficially within the space—already too large, we fear, for the patience of our readers—we can afford for it, even were it not far more suitable for the columns of a magazine than for those of a newspaper. But it is one in which we are all more or less directly interested, and upon which many of us may be called on to take some action one of these days in the education of others.

The subject treated by Mr. Parson in his lecture of Friday evening at the Temperance Hall, viz., Honest Scepticism, opens such a wide field for reflection that we can only glance at one or two of the points to which he referred. As our remarks will presuppose the presence of the reader at the lecture, they will not be followed by very many, for the audience was small, and it is wholly impossible for us at this period of the week to give a perfect epitome of the lecturer's arguments or reflections.

In speaking of J. S. Mill's views on Nature or Natural Theology, it would have been well had Mr. Parson given the whole of them—or, perhaps rather, the complement to the side of them which he exhibited. This side, taken by itself, would have justified Mr. Parson in speaking of the "malevolent" character of the power or machinery—call it as we may—which he said Mill saw in nature. He quoted, if we remember rightly, from two of Mill's posthumous essays, from one entitled Nature, and from one entitled Attributes which constitutes Part II of the essays on Theism. The passage from the first, the truth of which he did not dispute, exhibits what Mill calls "the perfect and absolute recklessness" of the cosmic forces in their relation to man. The second, upon which he expressed no opinion, deals with the difficulty, in view of the results which we see under our own eyes, of believing that the happiness of sentient beings was the motive of the Deity in creating them. But, had Mr. Parson turned over the page which contains this last passage he would have found the following: —"These, then, are the net results of Natural Theology on the question of the divine attributes. A Being of great but limited power, how or by what limited we cannot even conjecture; of great, and perhaps unlimited intelligence, but perhaps also, more narrowly limited than his power: *who desires and pays some regard to, the happiness of his creatures*, but who seems to have other motives of action which he cares more for, and who can hardly be supposed to have created the universe for that purpose alone. Such is the Deity which Natural Religion points to, and any idea of God more captivating than this comes only from human wishes, or from the teaching of either real or imaginary Revelation." In his preface to the fourth Edition of his Limits of Religious Thought, Dean Mansel has a passage which is a near parallel to this as regards the facts, (though a still nearer parallel to the passage from Mill's essay on Nature quoted by Mr. Parson) but which deals with the nature of that morality in the Deity which the facts reveal. To save the trouble of reference we will give the passage.

"It is a fact which experience forces upon us, and which it is useless, were it possible, to disguise, that the representation of God after the model of the highest human morality which we are capable of conceiving, is not sufficient to account for all the phenomena exhibited by the course of his natural Providence. The infliction of physical suffering, the permission of moral evil, the adversity of the good, the prosperity of the wicked, the crimes of the guilty involving the misery of the innocent, the tardy appearance and partial distribution of moral and religious knowledge in the world—these are facts which no doubt are reconcilable, we know not how, with the Infinite Goodness of God, but which certainly are not to be explained on the supposition that its sole and sufficient type is to be found in the finite goodness of man."

Now, as Mansel says, the fundamental property of our knowledge of God, however we may be assisted by revelation, is, that, owing to the constitution of our minds, we do not and cannot know him as he is in himself. It is obvious, therefore, that we must try to discover him as much as possible in his works. Mill made this attempt, and summed up his conclusions in the passage we have given. But the passage which Mr. Parson gave was only the summation of the figures on one side. Mill, however, struck the balance of the two sides, and pronounced his decision, in the passage which *we* have quoted. Why did not Mr. Parson give this passage? It is on the very next page to an extract which he read aloud, so that he must have known of its existence. Now, we shall not say one word with regard to his motive for suppressing this passage, because we are entirely convinced from his manner yesterday evening, and from much that he said, that he is wholly incapable of any *conscious* dishonesty in argument. We would simply ask him why he did so.

After reading these passages, and admitting the truth of the first, Mr. Parson said that Christianity was in no way chargeable with these mysterious and dreadful facts. Most assuredly it is not. The difficulty, so great to earnest-minded men, is to reconcile this cold, cruel, inexorable Nature with the beautiful character of a loving father. This is the real trial of faith. This it is which makes strong men cry out like children. But Mr. Parson entirely missed or passed it by.

When Mr. Parson came to Descartes, he did him far less than justice. Instead of representing him as a man so justly dissatisfied with the then general condition of knowledge, or what men esteemed such, that he set himself to work to extirpate from his mind every thing he could not verify, in order to raise a structure of true knowledge, he represented him as a man who did this almost in wanton scepticism. Did Mr. Parson reflect on the age in which Descartes lived? Bacon is a kind of intellectual contemporary of Descartes, making due allowance for the fact that the great intellectual tidal wave which swept over Europe in the 17th century, visited England and produced its effects there fully thirty years earlier than it affected France. And in what frame of mind did Bacon return from Cambridge, even at sixteen years of age, after a residence there of three years? He brought with him "a profound contempt for the course of study pursued there, a fixed conviction that the system of academic education in England was radically vicious, a just scorn for the trifles on which the followers of Aristotle had wasted their powers, and no great reverence for Aristotle himself." If Descartes was the 'prince of sceptics,' he not only had every right to be so in such an age, but ought to be held in highest reverence as such. He fell into great errors, but it would be as just to blame him for them as to blame Columbus for thinking that he had arrived in India when he made the West Indies. Yet what impression about Descartes is left on the mind of Mr. Parson's listeners?

Mr. Parson was not a whit more really just to Darwin than to the two great men to whom we have referred. We do not say he did not wish to be so. He could not withhold homage from the man,—for Darwin is the Newton of Natural History—but he put the whole question between Darwin and the school which he has displaced, upon a very insufficient issue. That issue is one between the theory of special creation and that of evolution:—the question of the descent of man is a mere corollary of the main proposition, enormous as are the results which flow from it. Mr. Parson showed himself far above any desire to raise the stupid conventional laugh by the equally stupid conventional process of referring to man's humble ancestry with the profound ignorance of Darwin's reasoning, or even conclusions, which ordinarily attends it. But he was manifestly unable to look Darwin's position fairly in the face, and left on the mind of those of his audience who did not know better, a kind of warning against accepting Darwin's views, rather than an encouragement to enlarge the sphere of their knowledge by at all events mastering them. Thousands of people take Darwin's name in their mouth

the greater part to abuse him and show their ignorance of his works. But very few have mastered them, and of course there is meanwhile the same outcry about them as there was against the Copernican and Newtonian philosophy. The cases are precisely similar, as are the reasons for the outcry.

We have made these few remarks upon Mr. Parson's lecture, because there was much of excellent matter in it, and his sincerity and earnestness of purpose were manifest throughout every line of it. If we were to refer to all in which we agreed with him, we should have troubled our readers to twice the extent.

We find the following in an American newspaper.

Washington society is stirred to its depths because the Japanese Minister's wife has a little margin of exquisite native embroidary about one of her dresses that cannot be duplicated for money. She cannot understand the bitter words spoken by the other ladies, but she sees their envy in their looks, and is made just as happy.

From the "Japan Mail Daily Advertiser."

The *Akebono Shimbun* has heard that the engagements of foreigners connected with the Railway Department will not be renewed at their termination.

Kuroda, *sangi* and Lieutenant-General in the Imperial Army, was appointed Ambassador-Plenipotentiary to Corea on the 9th instant.

A walking match took place yesterday morning on the Tokaido for a prize of $55 which created some little excitement in the locality selected. Some fifteen athletes competed, the start being made from Yedo (Railway Station) at 11 a.m. under most favourable circumstances. We are unable to distinguish the winner at this moment as victory is claimed by the friends of Messrs. Hohnholz and C. Esdale, who arrived at the "Railway House" Yokohama, almost simultaneously, in 2 h. 55½ m. It is probable, we learn, that the match will be repeated. (Mr. Esdale has since been declared winner.)

The *Hôchi Shimbun* publishes a translation of a paragraph having reference to the recent case of shooting a policeman, which appeared in the *Herald* on the 9th untant and adds a translation of the following letter from one of the gentlemen indicated by it. "The reference in the columns "of your paper to the occurrence of last Sunday contains so "many mis-statements that I write to tell you they are "untrue, and send you with my letter a Japanese translation. "I trust you will see the propriety of retracting your false "report; but, if you should decline to do so, I shall feel com- "pelled to bring an action against you for the vindication of "my character."

The *Hôchi Shimbun* promises to publish a more minute description of the incident in its next issue.

Coarsely executed photographs of their Imperial Majesties are now on sale in Yokohama and Yedo at a low price, the business being carried on, ostensibly at least, by a Chinaman. The likeness is reasonably good in that of the Mikado, but the pleasing features of his graceful consort have met with, but scant justice at the hands of the artist. There may be State reasons for withholding from a people the portrait of their Sovereign, but as curiosity on this point is peremptory something will surely be attempted to satisfy it. The photographer has in this case taken his revenge.

Arrangements for renewing mining at Takashima have been made, and we believe that the gangs were set to work on Friday morning last.

The Riogoku Bridge, says the *Choya Shimbun*, having been repaired was opened on Saturday for traffic. The cost of its rebuilding is said to be 5,300 *yen*.

The *Hochi Shimbun* tells us that Kuroda, the special envoy to Corea, will leave the Capital on his mission on or about the 18th instant. Another newspaper says he has already left.

The *Nichi Nichi Shimbun* expresses its surprise at learning that fifty of the officials of the *Genro-in* should have received their *congé* although the buildings for this Assembly so closely approach completion.

We learn from a Japanese newspaper that it is intended to extend the telegraph lines to each *Kencho* in Japan. This is to be done with all possible despatch.

A meeting of the nobility is reported by the *Hochi Shimbun* to have taken place at their Club (the "*Kuadzoku Kuaikuan*") on Saturday morning. It is presumed that the expediency of a Corean expedition formed the subject of their discussion.

A telegram from London received on Tuesday announces the death of Mr. Charles Stewart, whose long association with the Oriental Bank, latterly as its Managing Director, is a fact familiarly known to all residents in the East of the last and present generation. Mr. Stewart died at Bahia, whither he had gone to avoid the severity of the winter months in England.

An entertainment was given on Monday night at the Gaiety Theatre by Mr. J. R. Black, part of the proceeds of which will be devoted to the newly formed St. Andrew's Society of Japan. It consisted of a narrative of the adventures of "Bonnie Prince Charlie" in the Rising of 1745, illustrated by Jacobite songs. This entertainment is new to the greater part of the present generation of the residents of this place, and derives its chief charm from the admirable manner in which Mr. Black enters into the spirit of the Stuart cause and times, and in which he declaims and sings the Scotch music associated with them. Nor can it be doubted that this music has great merit. It came from and went to the hearts of the Scotch people, and added to the romantic interest of a cause not the less attractive to its partisans that it was a cause of rebellion and unconstitutional government.

The house was not so well filled as must have been desired, but this had no effect upon the spirit with which Mr. Black approached and discharged his task. His singing retains much of the charm which it has always possessed, and to which we have often paid warm and sincere tributes, and he stirred many varied emotions in his audience as he passed from the songs inspired by the early hopes of the Stuart partisans to those which record the abandonment of those hopes. The narrative part of the entertainment might perhaps be lightened with some advantage, but those who found it somewhat heavy may fairly be reminded that the enterprise which Mr. Black undertakes in this musical lecture is intended to be, and certainly is, instructive as well as entertaining. Viewed in either light it cannot but possess attractions for all who are fond of romantic history, and those beautiful efforts of the imagination by which its movement is illustrated.

It is rumoured that Kuroda *Sanghi*, who has been appointed envoy to Corea, will start thither about the 20th inst.—(*Hochi Shimbun.*)

Great activity, we hear, is exhibited in the sail and rigging departments of the *Kaigunsho*, in making preparations for the fitting-out of ships for sea.

Yamagata, Ôyama, Migoshi and a few others were entertained at dinner by His Majesty at the Kunaisho on the 12th instant.

The *Hochi Shimbun* of Wednesday gives its promised version of the shooting incident. The party of sportsmen, it relates, was accosted on the day in question by a police constable, who demanded their shooting permit. Obtaining no reply from them he concluded that they did not possess one, and warned them against shooting. They appeared to understand him, and were, as he thought, about to return when one of them fired. Three policemen then interposed and intimated that at the risk of their lives they would prevent further shots. The sportsmen proceeded to Shimasa hara in the neighbourhood, where a shot, discharged in the direction of the constables, struck one of them, wounding him in two places. The sportsmen then essayed to escape, but being followed by a large body of police were overtaken at the Shinagawa Station,

Digitized by Google
UNIVERSITY OF CALIFORNIA

Here they admitted their offence and the circumstance was communicated to the higher officials. The written statement of the foreigners alleges that they possessed authority to shoot from Kido and Itagaki. But their attempt to do so is clearly a violation of our laws, and we are informed that if the Government permits it to pass without punishment the police-officers will resign their office.

The foregoing is a relation of the incident by our correspondent. If it be true—and it is corroborated by the report printed in the *Nichi Nichi Shimbun* on the 10th instant—we cannot be deemed guilty of slander. The slander rests with others.

The fires in Yedo on Sunday night were, we are told by the *Hôchi Shimbun*, unusually numerous,. The number of houses burnt in the Yoshiwarra district is now known to be about 600. Several policemen and firemen were wounded, but none, happily, are reported missing. A slight fire occurred in the residence of a foreign lady in the Kobusho but was soon extinguished.

At the yearly assemblage of poets to be held on the 18th January next year, the subject chosen for treatment is "The View of a Mountain in the New Year." The prize poem will be presented the Emperor.

The *Akebono Shimbun* says that its Assistant-editor was summoned for examination to the Saibansho on the 14th instant.

It is rumoured that the officials who are to accompany Kuroda to Corea were nominated on the 13th instant.

The hearing of the case of Captain Roper against the Mitsu Bishi Company, has been again postponed. It will be resumed on Wednesday next, 22nd, instant.

The *Nichi Nichi Shimbun* says that a "Free Speech Society" has been organised in Yedo by a Dr. Ford, the first meeting of which was fixed to take place yesterday evening at Tzukiji. The meeting was to have been held under the presidency of the Honourable Mr. Bingham, American Minister. Future meetings will be held on each Thursday.

We announce with regret the decease of Mr. J. C. Hawes, late Consul for the United States at Hakodate, of chest disease. Mr. Hawes (who leaves behind him many friends to deplore his loss), arrived in Yokohama a few weeks since in the hope of escaping the consequences of the extreme winter climate of Yeso.

A building which belonged to the Army Department at Honjo, Yedo was destroyed by fire on the 15th instant.

The following Notification has been issued by the Minister of the Interior.

To *Kuchô* and *Kochô*, of the various Divisions (of this *Fu*) both in town and country.

An order having been received from the Office of the Imperial Household to the effect that in the matter of admission to the Gardens of Fukiagé and Hamagoten, these gardens will be closed to the public on the 23rd and 25th instant, and during the whole of the 1st month of the ensuing year, you will notify this without exception to all Government officials and nobles in the various Divisions.

(Signed) Ôkubô Ichiwô,
Chiji of Tôkiô Fu.

December 14th, 1875.

The brother of the King of the Loo-choo Islands and several of his *suite* were entertained at dinner by His Majesty the Mikado at the garden of Fukiage on the 16th instant.

The *Akebono Shimbun* tells us that Shimadzu Saburô had the honour of taking wine with the Mikado on the 15th instant.

By the fire which occurred at Honjio, Yedo, on Thursday night, one hundred and thirty dwelling houses and shops were burnt to the ground.—*Hochi Shimbun.*

Six large breech-loading guns have been recently purchased on Government account and arrived simultaneously with the 30,000 stand of arms already referred to. They are understood to be of Krupp's manufacture.

COREA.

IT may be doubted whether the Japanese Government, in sending a small squadron to Corea, is animated exclusively by the idea of exacting reparation for the late outrage perpetrated by the Coreans upon the *Unyokan*. Of course, this is the proximate cause of the expedition, though the outrage was promptly purnished, and the insult avenged upon those who offered it. The gibes, too, of the Coreans, which seem to have been blown across the water from time to time during the past four years, have produced a strong feeling of irritation among the Satsuma men, who, though practical enough to see that no substantial advantage can be gained by a Corean war, are yet impatient of insults which they have hitherto been accustomed to chastize with their swords. Their loyalty to the Empire has always been proverbial, the part they took in bringing about the Restoration has always been gratefully acknowledged, and they are in no humour to pass over impertinencies offered to their Imperial Master by a people whose civilization, pretensions and prowess they regard with something of disdain. The rumoured, if not notorious, discontent among the *samurai* may also have its share in a project which will occupy their attention and perhaps demand their services. Their menaced pensions or hereditary allowances, the difficulty of finding congenial, or, indeed, any employment in the ranks of the middle classes, the poverty of the country and the dulness of trade, all combine to make them restless and anxious, and prompt them to seek in foreign service, possibly in the occupation of foreign territory, a subsistence which is threatened from so many quarters.

Yet, behind these various motives for sending an expedition to Corea, the Government is said to be impelled by one which, though possibly mixed in its character, has a side to it calculated to enlist the sympathy of foreigners. It is said that Japan desires to represent to Corea the vast advantages she herself has derived from foreign intercourse, and to warn her of the dangers attaching to a policy which will eventually be disastrous in exact proportion to the length of time it is persevered in. Nor are the Japanese unfitting missionaries of such a cause. They have vividly in their minds the troubles and misfortunes which came upon them in consequence of doing very much what the Coreans are now doing. It is perhaps no cause of fair reproach to them that they did not see the inevitable and meet it in time. But they are excellent representatives of the misfortunes which attend a short-sighted policy at a time when great changes are at hand, and of the long protraction of troubles which sound statesmanship at the critical time might have greatly reduced both in extent and duration. They may fairly claim, too, to have derived great benefits from foreign intercourse. True, it has brought upon them perplexities which certainly do not diminish as their connexion with us becomes more intimate, and dark as matters have looked any time during the past three years, they look darker now. Trade is in a terrible condition, the treasury is low, the *samurai* are discontented, the farmers and peasants grievously overtaxed, and the very enterprise itself which is to carry these warnings to Corea promises to lead the Government into certain expense and to possible dangers more formidable still. Yet the Japanese have surely been benefited on the whole by their foreign intercourse. They have assumed a position in the world, and if it is more humble relatively to the European nations than they would gladly have found it, it is far more real than the visionary one in which they were taught to exult in former days. They

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

no longer consist of fragments of population easily stirred against each other, absorbed by local interests, dominated by local tyrants, and animated by local ambitions. They form a united and fairly compact people, interested in everything done by the Central Government, and even in what transpires in the larger world external to the Empire. The horizon of their knowledge has been greatly extended. In one capacity or another their children, at all events those of the middle classes, have far more prospect of advancement than formerly. The superior education given to them will, whatever its immediate drawbacks—and these are greater than is commonly imagined—force them into prominence some time hence. As civil engineers, secretaries or consuls abroad, officers of the navy or army, authors or translators, the whole scope and potentiality of their careers has been enlarged. Whatever may have been the cost of the contact with foreign nations—and it has been heavy—the balance is greatly in favour of Japan, and she knows it.

It is said that she desires to make representations to this effect to Corea, and to warn her of the danger of trying to maintain her old attitude towards the rest of the world. Of course, this, if effectual, would place her in the position of a new missionary of progress, bent on introducing the faith to which she herself has only been recently converted. It would indeed be a curious incident in the world's history should the attempt prove successful—the last made convert becoming the leading propagandist. But the experience of Japan is fresh and real on these points, no bashfulness will stand in her way, and it is far from impossible that her representations may have some effect in the desired direction. The Government, which ought be fairly informed through its agents at Tsushima, is said to be confident that there will be no war, though the movement in the arsenals seems to show that preparations are being made for any demonstration of force which may unexpectedly be necessary. It is possible that the Coreans will listen to Japan where they would not listen to Europeans, and that they may accept assurances, both with regard to the nature of European intercourse and the benefits derivable from it, which they would not for a moment regard as sincere from those whom they think too much interested to tell the truth. The position is a curious one. No safe forecast can be made of its issue, but we have good reasons for thinking that the Japanese at least have no apprehension whatever that the steps they are taking will lead them into war.

PATENT LAW IN JAPAN.

WE casually learn from a home-letter, that an attempt is about to be made by an association of inventors and patentees to establish the principle of International Patent Law throughout the world, and that in one of its privately-circulated prospectuses, Japan is specially indicated as a country whence danger to the manufacturing interests of Europe is to be apprehended. The inventors and patentees complain that, not content with the preparation of factitious drugs and articles of daily consumption, its natives unscrupulously appropriate the pet offspring of more ingenious brains, and imitate them more or less successfully to such a degree as to exclude the real article from all chance of sale; but also that by reason of the cheapness of material in this country, the low price of labour, the absence of any royalty, and the cheapness of freight to other markets, it is not only possible, but extremely probable that such wares may compete disastrously with the genuine in China and elsewhere. The same arguments have been instanced frequently in the cases of Belgium and Frankfort wares, and although as yet the vast resources and machinery of British manufacturers have maintained their position both on the European continent and in trans-oceanic markets so far as to show moderately fair returns, yet, day by day, as continental competition increases, and the home struggle between the relative claims of imperilled Capital and exacting Labour waxes fiercer, very trivial circumstances will so influence the commercial equation as to convert its *plus* into *minus*—especially where manufacturers have expended fortunes in acquiring patent rights, and subsequently discover the anticipated profit which was to have reimbursed the payment to the inventor to have utterly vanished, in consequence of infringement or piracy by others.

From her peculiar position with regard to the mercantile world, which had indulged fond but delusive hope of remunerative traffic with her inhabitants, Japan has become a moderately important unit in its calculations, and the serious losses of exporting firms naturally cause them to look with distrust and disquiet on aspects which seem to threaten further absorption of floating capital and possible sacrifices of speculative ventures. Tardy as Japan has been in her concessions, and unyielding as is the dead weight her officials oppose to the endeavours of Foreign Ministers to obtain what are only reasonable requirements by their countrymen, it may be well to state the question from a native stand-point.

The position taken by the Japanese to whom we have put the matter appears to be this:—"Our government "should take care of the interests of its own subjects, grant- "ing to them sundry privileges and protection, and receiv- "ing of them in return their services or various direct or "indirect contributions towards its support. Foreigners "resident in its Treaty Ports contribute neither, and but "grudgingly pay the duties and rents agreed on by their "Ministers. Why should we grant them privileges when "doing so entails disadvantages on our people, for whose "benefit and not for that of foreigners, we aim to legis- "late? If we can compete with foreigners, so much "the better for our country. If there is moral dishonesty "in doing so, how is it that Englishmen superintend our "engineering works at the 'Kogakurio,' and teach our "people what is worth imitating in Europe and America "and how to imitate it?"

The same arguments will apply to every country in the world; but the number of Western Powers which has refused to grant reasonable rights to inventors has become small and is rapidly becoming less. It is reasonable that there should be limitations of time in which an inventor shall enjoy the fruits of his thought and labour, so that he shall not aggrandize himself at the cost of national prosperity; but is it reasonable or just that his skill and genius shall go unrewarded and unhonoured? Mr. MacFie and others of the capitalists have sought in vain to establish this absurdity in England: and in countries where Brain-Slave-trade is legalised by the absence of Patent Law, the spirit of improvement appears to die out slowly; for those who can best develop the riches of their native soil, or add to the wealth and comfort of their countrymen, seek other shores wherein they may obtain the rewards they earn, but which at home are ungratefully refused to them. In England, only recently, a patent has been obtained for an article of Japanese invention, from which its originator will receive a fractional profit from the English manufacturer. Under present circumstances, no foreigner whose skill is pirated by Japanese can obtain a cent; and hence, more than one idea of the greatest utility to the people of this nation, is suffered to lie dormant by its possessor. If, at the revision of the treaties, His Majesty's Government provides for the protection of foreign and domestic inventors by the enactment of some such law as that which ensures literary copyright, facile of attainment, liberal in principle and yet of such a nature as to hinder monopoly, the satisfaction of the foreign element might induce concessions of a nature extremely gratifying to Japan. In liberally dealing with this subject in advance of external representation, the Mikado's Government would gain respect for itself, whilst, under present circumstances, it would be, in no inconsiderable degree, the richer for the fees paid into its Treasury. If needs be, let it regulate the limit of time, and the limit of profit or amount of royalty to be paid for both native and foreign inventions, and it may depend that not only will it be

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

acting a wise part in the premises alone, but that such action will have the effect of attracting to this country far-sighted enterprising men, prepared with the capital she needs to develop her industrial resources, ready to employ profitably her redundant population, and, affording them increased happiness and comfort, spread contentment throughout this Empire, by means of the Arts of Peace. The foreign capitalist would find in this end of Earth good use for his wealth; and, bringing with him skilled artisans, lighten the home labour market. Knowledge creating demand, and demand requiring supply, constantly extended by use, the Ruler of this country may, if he so will, see attracted hither the class of men solicited, yet sought for in vain, by other young and enterprising lands. All that is required is judicious and reasonable concession to effect this.

"WEREID SPECIFICA."

(From a Yedo Correspondent.)

POPULAR as this sign appears to be with native druggists both in town and country, its recurrence irresistibly recalls to one's mind the story of the man who had acquired so strong a habit of lying as only to tell the truth by accident. Prone as more civilized nations are to quack themselves, the Japanese have long possessed ample opportunity to that end, in their Pill of Long Life, Golden Remedies, and the other choice preparations prescribed in their traditional Pharmacopœia, referred to in the dainty sketches of *Our Neighbourhood* which have graced these columns. But with the Deluge which succeeded the Shogun, came pouring on the land a fresh tide of charlatanry; one wave of which, under pretence of washing away false custom and bearing on the healing art, has inquestionably been the cause of harm and hurt to thousands. Deadly drugs, exhibited in pleasant vehicles, have been popularised; Aconite, mingled with chloroform and rose-water, sends people to their graves under the guise of "Neuraline," whilst the homely peppermint masks the prussic acid which constitutes the potency of "Chlorodyne." But as in every depth there is a lower depth still, so the danger already incurred by putting dangerous medicinal preparations in the hands of inexperienced persons, is frightfully enhanced when local imitations of those medicines are vamped up by unscrupulous imitators, and Forgery lends its aid to dupe the ignorant and aggrandize the thief.

The large sale of such patent medicines may fairly be regarded as indicating appreciation of the merits of the genuine preparations and the existence of a demand only to be legitimately satisfied under the conditions that they be properly and judiciously resorted to; and that their chief virtues, beneficial within certain limits, but pernicious and dangerous if taken in excess, be not tampered with. But in Tokio we find that they are; and that the Japanese authorities profess themselves powerless to stop the fraudulent practice, or to hinder the forgery of the very Government stamp which gives the fabricated compound its fictitious value. A pretty howl would go up from the native press if I chose to return the compliment and produce *Kinsats* and Postal Stamps on my own account. Mr. Rogers, who had trouble some time back at the U.S. Consulate anent some experiments in the former art, may reasonably complain of non-reciprocity, so long as the Tokei Engraving Company is allowed to forge English Revenue Stamps unpunished.

I recently have had certain specimens of drugs procured in Yedo examined, with the following result:—that out of twenty—one alone was genuine, and even that solitary instance was open to doubt. Of three samples of Creosote all were spurious; being coloured carbolic acid; laudanum was represented in one sample by Tincture of Cardamoms, and in six others by Tincture of Rhubarb —(I wonder whether for Rhei: Tinct: Co: the soporific could have been substituted—I shouldn't be surprised) —Santonine, was found to contain 17 per cent of lime— (nice stuff to put into a baby's stomach). Iodide of Potassium, wherewith the Japanese doctors have astonished themselves in virulent syphilitic cases, is represented by doctored Bromide, and as to the sheet anchor in fever cases —Quinine, so many wretched preparations of the Cinchona Bark crop up, that it is almost hopeless to attempt to obtain a pure article of a native vendor; and indeed, I learn that one Yedo physician has given up the attempt to get prescriptions made up in the capital. I have more than once called attention to this, especially upon the 14th August last, and now would again urge the government to take steps to repress this nefarious practice of using adulterated drugs, and refuse to sanction the appointment of Death as a Dispenser.

The commercial effects of this importation and preparation of spurious drugs cannot easily be described. "It is impossible to sell genuine articles," say merchants and chemists who have for years carried on honourably the business of importing them. Goods imported direct from such houses as Howard; Evans, Lescher and Evans; Burgoyne, Burbidges & Co.; G. Curling; Drew, and Barron; Morson; Davenport, of London, or Redington & Co. of San Francisco Coffin or Aspinwall of New York, cumber their godowns. The Japanese do not import such wares themselves; but as they don't buy them, and yet apparently possess them for sale, the only remaining inference is that they are either stolen—or manufactured. Four huge glass jars of Keating's Anthelmintic Bonbons decorate the shelves of a worthy near Mita Shinagawa, and similar medicinal confections with labels bearing the name of that noted cough-curer have actually been hawked round for sale to Yokohama chemists by enterprising aborigines. How did they come by them? It is hardly reasonable to suppose that the losses submitted to by druggists in the commercial centres of the country enable Japanese to resell to importers.

It thus happens that at present consumers in Japan possess no guarantee that goods bearing any well known British trade mark are the real productions of the maker from whom they purport to emanate. It matters very little to Europeans that the last vile alcoholic concoction produced for sale as Champagne bears a facsimile of the signature of T. J. Waters, in humble imitation of the Jules Mumm *etiquette*, that the choicest productions of the happily defunct Hongkong Distillery are now replaced by abominations of viler character bearing its name on smartly coloured labels; but it does affect them seriously when they are called upon to run the chance of being sickened by factitious quinine, bearing the name of Howard, but really consisting of preparations of salacine, cinchoidine, or in some cases compounded of unknown ingredients resembling it only in appearance, which, I regret to say, have been largely imported from various parts of the continent. The difference between eighteen pence and eight shillings a pound is considerable, so that the enterprising imitators who trade on suffering, and in a price list before me not only proffer Pickpurse and Cully's Imitation Quinine, but in a following page undertake to "furnish "labels and capsules to any required design" have doubtless been the means of affording good profits to their local correspondents, although Japanese admirers follow so closely on the track of their exemplars as to materially interfere with their gains of late.

Concerning quinine; an excellent article for illustration consists of a specimen which bears a medal having upon it the profile of Napoleon the Third, with a figure on the reverse showering garlands, professedly bestowed by a Société d'Encouragement. This is one of the Produits Chimiques, issuing from the Fabrication de Sulfate de Quinine, Paris. It is "fabricated," to all intents and purposes. Analytical examination shows it not to contain the faintest trace either of quinine, quinida, cinchonia, or cinchonidia. It is not salicine or caffein. What it is, baffles the analyst. It is a vegetable substance, which leaves on burning 12 per cent of siliceous ash insoluble in aqua regia. The identical substance also appears in bottles bearing the name of Howard and Sons, of Stratford, whose reputation affords the amplest opportunity for profitable rascality. Thus it happens, that now in Japan markets the genuine Howard Quinine is practically unsaleable, worthless wares having been palmed off under cover of the excellence of theirs, until a renowned brand has unjustly acquired an undeserved reputation for inferiority of quality, and the genuine article has positively been condemned by an ignorant inspector.

Another subject of adulteration, which I have noticed is Copaiba. This is eked out by adding nine parts Castor oil to one part of the genuine Balsam, for which a brisk demand

Digitized by Google UNIVERSITY OF CALIFORNIA

exists. I have no doubt that Messrs. Geo. Curling & Co. sold the articles separately, though the Japanese don't. Certainly, it is unlikely, too, that other firms mix bromide of potassium—value 2/ per lb.—with iodide—value 12/—before exporting it.

It is difficult to suggest what should be done under these circumstances. In view of the fact that Germany and France are adepts in the manufacture and exportation of such wares—the proposal of an association of German physicians, affiliated to a dispensary exclusively furnished with German drugs, which shall sedulously analyze all other wares except its own which may hereafter come to this market has rather too much about it of the air of Satan reproving sin. As for the appointment of analytical inspectors by Government:—since that body has been deaf as the adder to Mr. Consul Robertson's suggestion of Health Inspectors for the prevention of selling unwholesome food in the public markets, it is little to be hoped that they would incur the expense of appointing properly qualified men to fulfil the delicate duties of such posts. They have indeed so-called analysts; and if these were really honest, there would be a chance of livelihood for fair traders, instead of their having to mourn the presence of $30,000 or $40,000 worth of medicines in one godown—to say nothing of dyes and drugs used in the arts. But the working of the new system, which began in October, two months after our last article on this subject, is shewn by the answer of a Japanese chemist to the enquiry as to what he would do if the native examining official determined that his goods were bad, and he found he would suffer a loss—"I should give him a small fee, and it would be *all right*."

In the natural order of things Incompetency gets wedded to Rascality. It would be interesting to know in how many instances at the Custom House spurious articles have been declared genuine, and been taken over by the Japanese Government at one hundred times their value: whether Bromide of potassium, for instance, worth 3/ a pound, was impounded at 25/; whether any fictitious quinine has been purchased in like manner, with a few dozens of (cider) champagne to wash it down with: how the Custom House unloaded itself of these articles, and if, after their sale, an ukase appeared forbidding the unfortunate purchasers to retail them? It would also be desirable to know if so-called analysis is compulsory at the *Seisha*, and a nice little levy of two per cent on the value of the goods purchased then made upon the purchaser; to know how often ignorant and arbitrary decisions have condemned perfectly pure articles, and thus entailed needless and aggravating law-suits? Knowing these things thoroughly, one would be able to estimate accurately the worth of native analytical research.

If it be determined to employ foreign chemical aid, let it not be sought from any person connected with the business—ostensibly or secretly—who shall have a power of condemning other's goods, to the exclusion of drugs not imported by his firm. If Adulteration's artful aid is to detected by a Government analyst of foreign birth and education, let care be taken that he be sworn to discharge his duty faithfully, according to the shining example of Letheby & Hassall, and that confiscation not only fall upon the importer of worthless drugs, but punishment on the mercenary wretches who instigate their importation and imperil their countrymen's health and life for the sake a little extra gain. It is they who are to blame: and also the astute native chemists, who, lowering and admixing standard drugs, in accordance with their newly learned Alligation, pit their cunning against popular ignorance—and win.

SPIRIT OF THE JAPANESE PRESS.

(THE COREAN EXPEDITION.)

(Hochi Shimbun.)

We do not deem it necessary to discuss further the *pros* and *cons* of a Corean expedition. Our business is now to watch the proceedings of the Government, and Mr. Kuroda who has been appointed Envoy Extraordinary to Corea. The Japanese have been led astray for a long time by a devil in the form of a Corean expedition, so much so that they cannot detect his likeness in the mirror of Economy,* and therefore it behoves us to look well to the future. But some will say that it does not follow that we shall make war upon Corea simply because Kuroda is appointed Envoy Extraordinary. This may be true, but Moriyama's mission would have done all that could be done by an Enyoy, and unless there is some special virtue in the words Envoy Extraordinary, we really cannot see the necessity for sending one.

We must confess that we have long expected that our imcomparable Government was about to do some incomparable thing in Corea. As regards the attack on our gun-boat at Kokua, we cannot pretend to distinguish, at this distance of some hundreds of miles, and with our dim eyes, whether we first fired on the Coreans or they on us, and we can neither tell what machinery is setting things in motion behind the curtain, what actors are to come forward, nor what kind of dance they will perform.

Now that our incomparable Government is about to send an incomparable Envoy to Corea, we are wholly unable to foretell whether, it will perform on this incomparable stage the piece entitled Jungo Koga's † Corean Expedition, or the Expedition of Toyotomi Taiko. All we know is that the incomparable Japanese Government is going to send an incomparable hostile expedition to a foreign country with the incomparable money of an incomparable treasury; that by means of it our nation will be weakened and our treasury exhausted, that all the gold of Sado will be turned into Corean smoke, and the only thing that will remain will be the paper of Yetchizen‡ Yet, no! We mean the paper of Frankfort, which will be piled up as high as Fusiyama. We only hope that nothing like the prætorians of Rome, or Boishiru (? Robespierre) who appeared during the French Revolution and wrote a poem entitled Mad People, and who was afterwards beheaded, will appear in this country to disturb the public peace, or bring upon Japan any such scenes as were witnessed in past times in Europe.

Both the Saga insurrection and the Formosan expedition had their origin in the Corean question. The only Corean expedition urged by the Saga men proved to be the insurrection of Saga in which Eto Shimpei perished and acquired a dishonoured name. The Corean expedition which was urged by * * * * turned out to be a Formosan expedition, and brought unmeasured glory on the head of Okubo. But the objections brought by a powerless people against the Corean expedition have had no effect. The powerful clamour *for* a Corean expedition has had abundant effect, such as sending to Corea an Envoy Extraordinary and such like. The difference between the powerful and the powerless is indeed great.

Hot though the climate of Formosa is, we began our campaign against it in the hot season, we finished it in the cool season, and returned with five hundred thousand taels. Kuroda will start in the cold season, every thing will be settled by the hot season, he will return with millions of compensation with which we shall be able to defray all the expenses of the expedition, and it is as clear as day that our glory will resound throughout all lands. Then will the name of Kuroda shine like as though the sun should appear at midnight, though the glory will not be solely his own, as he is a Satsuma man, and the glory of the Satsuma troops will be such as to illuminate the whole of Japan.

As the Government has not enough money to enter

* A Chinese allusion.

† A famous Empress who went over to Corea about A.D. 200, conquered it, and made it tributary to Japan.

‡ The province where the bulk of the paper money was formerly made.

upon war at once, it has decided to send an envoy to make a claim first. Between such an envoy and a Commander-in-chief there is a very close relationship, and time alone will prove whether Kuroda will be the one or the other. We cannot tell whether all this will bring happiness or misery on the people. Yet it is not alone this Corean affair which causes anxiety to the national mind. Even though we beat the Coreans this time, and bring back ample indemnity to defray all the cost of the expedition, yet will the cause which may cost us hundreds of Saga insurrections and Formosa expeditions still remain, and drive away the happiness of the Japanese nation into the sea. And should any one ask us by what means all this could be averted, we reply, "*By an Assembly of the People.*"

The "Genro-in."

(Akebono Shimbun.)

The nation has now long and anxiously awaited the expected reforms of the regulations of the *Genro-in* and its return to the discharge of its supposed functions. But recent rumours have made us somewhat apprehensive. We are told that officials of the same rank and with similar functions are to receive salaries of different amount, and that in place of the laws of the Empire being framed by a majority of the Assembly, this office will be performed by the Cabinet who will afterwards acquaint the *Genro-in* with their decision. We learn with some surprise that officers of equal rank and duties are to be remunerated differently and find no precedent for this course in France. But we are not bound to follow the example of foreigners in all things.

The Emperor confided to the *Genro-in* one of the three great powers, that of enacting and reforming the laws. Now we cannot believe that the Cabinet intends to strengthen itself by acting in opposition to the Imperial will, and feel therefore that the alteration proposed in the regulations of the Assembly are only for the purpose of adding what is necessary for their completeness, and dispensing with such as may appear to be unnecessary.

The rumour which prevailed in July last has doubtless caused much suspicion. It is said, that at the instigation of His Majesty, Sanjio privately despatched Yanigiwara to Shimadzu Saburo to offer him the presidency of the *Genro-in*. The latter replied—so runs the rumour—that he would prefer the office of Vice-President, suggesting further that the higher office should be offered to the Prince Arisugawa. Yanigiwara, we are told, deprecated this proposal, and added that he presumed Shimadzu would not refuse the Presidency if it were His Majesty's wish that he should accept it, to which Sanjio returned that this was of course true. Yanigiwara made known the result of his conference to Sanjio, who then apprised him that His Majesty indeed desired to make Shimadzu President, and charged him to carry him this message. Subsequently, at Yanigiwara's suggestion, the message was put in writing and conveyed to him and he consented to serve. But when on the following day he repaired to his office he discovered, much to his surprise, that the intention had been already abandoned!

Such is the rumour. The people believe that the Cabinet feared Shimadzu's influence too much to entrust him with the presidency of the *Genro-in*, which, they foresaw, might thus become more powerful.

Now as we cannot see any just reasons for the popular notion that the Cabinet is desirous of curtailing the powers of the *Genro-in*, we have—although, we confess, unfortified by any powerful argument to the contrary—taken up our pen since we are bound to confide in the patriotic intentions of our Ministers.

The *Genro-in* having received its legislative powers by an Imperial decree, cannot be constitutionally deprived of those powers so long as the decree remains unrepealed. Its regulations may, as alleged, have been in some respects modified, but it is incredible that the Cabinet should assume to itself the exclusive right to legislate upon all questions of moment, while it leaves to the *Genro-in* the discussion only of unimportant trifles, putting its members on a par with the old fogies of the *Yoroin*.* It is incredible, we say, that our Government can contemplate this course of action, and we suspend our judgment on the subject for the present. Some will tell us, What matter the rules of the *Genro-in* so long as our country is governed by a Cabinet composed of wise and honourable men? But how shall we know what men shall succeed these honourable men? They may be bad men, who, finding the *Genro-in* weak, will seize the power of legislating and act as it may please them. Nor can we understand this: Two most eloquent and intelligent *Gikuan*, Kono and Mutz, have been recently appointed to the office of *Kanji*, and people say 'We cannot comprehend the motives of the Government in making this appointment.' It is absurd, it seems to us, to doubt the wisdom of the selection. But there are some among us who, like the ancient Greek, find only pleasure in holding up their Government to scorn.

* An asylum for aged and indigent men.

Fashion.

(Choya Shimbun.)

The black, white, red or spotted things which the people called good, and paid a thousand dollars for when they were rabbits or pigs; and the crimson or yellow things for which they paid a hundred dollars were roses when in *their* turn they came into fashion. Such fashions change in this country with surprising rapidity. The article which was very precious yesterday, and for which large sums of money were paid, is to-day cast aside as worthless. Truly, the fashion of the world is a curious thing, when that which was of no value yesterday is precious to-day, and worthless again to-morrow! For it is not the thing itself which changes, but the minds of men.

When, after the Revolution, the Government made appointments to official positions almost exclusively from among those who knew something of western science, the people thought that the acquisition of this was a bounden necessity, and would not even cast a glance upon their old Chinese works which they once thought so precious. When they caught any one reading a Chinese book, they called him fool, and said that the Chinese sages and their saws were valueless. Chinese books were accounted as but waste paper, and men would part with a hundred volumes of Chinese prose or poetry for a small foreign vocabulary. This was not only the feeling in the large towns, but in the country, and finally it was proposed to abolish the Chinese characters entirely. This mood lasted for about four years, say from 1871 to 1875. But, from the beginning of this year, the ardour for foreign learning has sensibly cooled. Once on a time, men who could master a foreign treatise of history or philosophy could command a hundred dollars a month, but now they cannot get half that sum,* and the sales of foreign books have fallen to about one or two-tenths of what they were formerly. Translators are now unable to get the sums they once received, and those who were pursuing foreign studies are taking up again with Chinese books. The newspapers have begun to adopt more of the Chinese style of writing, while the teachers of western knowledge have begun to study Chinese, as indeed all students have, fearing that without a knowledge of Chinese, they cannot get their living or become officials. If we look back at the past and try to forecast the future, we must acknowledge that the condition of affairs is very lamentable. Why does fashion change in this manner? Science and literature are honourable pursuits, and the absence of them is incompatible with an advance of civilization. Ought they to go into and come out of fashion like roses and rabbits? The people have made a sudden change from European to Chinese learning. But without a knowledge of western science and learning there can be no advance for us in wealth and strength, and to abandon the pursuit of these is most absurd. Chinese literature has prevailed for many years in this country, is much used in daily life, the memorials to the Government are written in it, and all serious writing is composed in the same character. We hope, however, that the people will show more earnestness of purpose in their studies, and not suddenly commence

* May this not be that there are more of them?—[Ed. *J.W.M.*]

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

the pursuit of something because it is in fashion, and abandon it when it ceases to be so. We advise them to pursue both European and Chinese literature, for both are necessary, besides which they will have the laugh against the rose and rabbit fanciers.

Modes of Writing.

(Choya Shimbun.)

The mode of writing adopted by men and by women in this country has differed for many centuries, but I have recently discovered a mode which will unite the two.

On the 29th of last month the opening of the Normal School for Girls took place in the presence of Her Majesty the Empress. The address presented on that occasion, which has already been published in several of the newspapers, I find to be mostly composed of Chinese characters, the grammar being that of our own language. It is the same mode as that in which the Imperial decrees, the Government proclamations, and the articles in the newspapers are written, and it may be called the high language of us Japanese. Both their Majesties, the Emperor and Empress, write in this style, and this seems to prove, without any need of our saying so, that it is well for men and women to write in one style. Now as it is in the habit of the Japanese to imitate what is done by the higher classes of their countrymen, doubtless many will adopt this style of writing, and if the two modes, now different, are united into one, great benefits will flow from the change. Still we should bear in mind that this style has come to us from China, and that the difference between this and the pure Chinese style simply consists in the insertion of a few *katakana* characters and the transposition of some of the Chinese characters. Should any one attempt to write in this style without having previously acquired a thorough knowledge of Chinese literature, his writing may resemble that of the artist whose canvass displayed a cat when he would fain have depicted a tiger. In dread of this many arguments have been urged for abolishing the Chinese characters altogether. But appearances are rather in favour of supposing that the Chinese mode will again prevail, and that the address of the Empress will add a stimulus to this tendency. We therefore advise all who have children to bring them up in the study of the same style as that used by the Empress.

ON THE WINDS AND CURRENTS OF JAPAN.

By Captain Scott.

Read before the Asiatic Society of Japan, on the 15th December, 1875.

The following remarks on the weather on the coast of Japan being noted from memory, an allowance must be made for any inaccuracies which may be observed, as it is rather difficult to remember such things sufficiently well to be altogether positive, but I think they will be on the whole pretty correct.

I may state that my experience extends from 1860 to 1870; in the autumn of which year my vessel was lost in Odawara Bay during a typhoon that passed over here October 13th of that year.

In the Japan Sea, from the Straits of Korea to the head of the Gulf of Tartary, the winds prevail, from July until April from West to N. E., blowing the hardest between West and N.W. and easing always after it veers to the Northward. N.E. winds generally bringing fine weather, the wind often blows steadily from that quarter for a week or more on a stretch, after which a change is likely to come on, by the wind hauling to the East and S. E. with rain, the breeze freshening as it inclines to the South, and often blowing very heavily between S.S.E. and S.W. although not often lasting more than twenty-four hours. The wind after hauling beyond S.W. brings clear weather and sets in for a gale from the W.N.W., which may continue for a day or two, then to follow the same course as before. I give this as the general run of winds for the nine months before noted, although there are occasional exceptions—when heavy squalls will come on (suddenly at times) from East and S.E. to S.W. and West—so rapidly as not to give a vessel time to shorten sail then. It is advisable to keep away before it, provided there is sufficient room to allow of that being done, otherwise sails are likely to be blown away as has often happened to short-handed vessels.

During the months of April, May and June Southerly and Southwesterly winds prevail, with generally fine pleasant weather, the strength of the wind seldom exceeding 5, and averaging 2 to 3, reckoning 10 a severe gale; but even in those months sudden squalls are met with, causing the wind to shift suddenly to the westward, although sufficient warning is generally given to prepare for their approach from the appearance of the sky during the day; or, if at night, by lightning in the quarter from which the wind is likely to come, and by the barometer, if closely watched. Southerly winds, as a rule, blow very light during the aforesaid three months, whereas in the other nine months of the year it often blows with extreme violence, and in April, May and June may be considered as a faint ending of the S. W. monsoon of the China Sea.

Local causes. however, sufficiently exist to make a great difference in the strength and direction of the wind, and in the kind of weather met with on the coast, as for instance all along from the Gotto Islands to Cape Chichakoff, a severe gale from the North will continue to blow for several days on a stretch, while it is blowing from W. N. W. in the Japan Sea and the Straits of Korea; and I have had rainy weather for two days coming along the West Coast, with the wind between N. N. W. and N. N. E. while it is almost certain that at the same time it was blowing from E. S. E. on the Eastern Coast.

From my own experience, rainy winds are from East to S. W. and clear weather sets in with the wind from West to N. E.; heavy gales often blowing at the same time and fine weather with the wind between North and East.

In the vicinity of Yokohama, when a typhoon comes on, the heaviest part of it is generally with the wind at South, but on the west coast the same will be found nearly harmless, probably owing to the mountains which intervene having shaken its strength. I have not at any time, felt any very severe storm in the Japan Sea, although I have felt the storm wave inside of the Straits of Korea, when a typhoon has been passing along the China Sea.

In the straits of Tsugar, which divide Nipon and Yesso, strong winds invariably blow right through in either direction, that is to say from W. N. W. or E. S. E., the land winds from either North or South, being in general light and baffling, and never to be depended on. Through these straits the current runs very strongly, sometimes at a rate little short of five miles an hour.

On the Pacific side of the Japan islands the wind takes pretty much the same course as it does in the Japan Sea, but squalls are more frequent and of greater violence, more especially in the vicinity of ports where the currents curve or meet; such as off Cape King, where the current striking the land, sets out to the E. S. E.; on the Nambu coast where the cold Arctic current meets the warm stream from the South; and between the Loo-choo islands, and Cape Idsu, where the direct flow of the current is interfered with by a cold stream off the land, and sometimes by winds from the S. E. during the summer months.

The quarter from which the squalls commence is not always the same, but I generally found them commencing to blow from E. S. E. to South, after a track of fine weather, although I have occasionally, met them coming out from N. W. on the northern coast, and in the Japan Sea; but warning of their approach is generally given by lightning, in that quarter from which the wind may be expected.

Fogs prevail in the Spring months during the season, in which the winds are light, say April, May and June, but the Japan coast being pretty free of danger no great inconvenience is caused, as the fogs never last for any great length of time.

The rainy season may be said to extend from May till the end of July, but is earlier or later in different years.

Currents.

The "Kuro Siwo" or Japan stream, whether having its origin in the Gulf of Tonquin or in the Gulf of Siam

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

keeps on its course as far North as the Straits of La Pérouse in the Gulf of Tartary, and on the Pacific side of Japan up to 41° North latitude in the summer, and to 38° in the depth of winter.

This stream is generally strongest between the Southern end of Formosa, and the East coast of Japan as far as the islands at the entrance of the Gulf of Yedo, but its strength varies according as the S.W. or N.E. monsoon prevails.

During the S.W. monsoon, extending from May to September, the current has been known to run at the rate of nearly three miles per hour in the open sea, along the eastern coast of Japan, and sometimes at four miles per hour through the Straits of Tsugar, where I believe it runs stronger than in any part of its course.

My experience leads me to think that the current has its origin in the Gulf of Siam, because I have felt it running strongly to the northward along the coast of Luzon during the N.E. monsoon, whilst in the open sea a strong counter-current was setting to the southward, and it is never felt in the Formosa Channel.

The general run of this current is to the N.E. and premising that it commences at the South end of Formosa (the main stream) running through the Bashees, to the North of the Miacosima group, and thence through the the Loo Choo islands towards the entrance of the gulf of Yedo, it strikes the coast of Japan about Cape King where it converges to the eastward, that is to say the strength of it runs off to the E.S.E. while a portion keeps on along the coast to the northward as far as the Nambu shore where it is met by a cold current from the North, and is turned off to the Eastward, and finally loses itself in the Pacific.

This is the main portion of the warm stream; but after leaving the coast of Formosa, a portion of it runs more to the northward towards the Straits of Korea, through which it flows with considerable rapidity, (and generally stronger on the north side of the island of Quelpart than it does on its southern side) and keeping on its course to the northward through the Japan Sea, one portion of it passes through the Straits of Tsugar by Hakodadi, the other through the Strait sof La Pérouse, and is finally lost in the Arctic Current which it meets—on entering the Pacific in the one instance, and amongst the Kurile islands in the other.

As regards the individuality of the Japanese stream, I think it is as closely defined as the Gulf Stream in the Atlantic, and having been in the habit of trying the temperature of it whilst at sea, five times during the twenty-four hours for several years, I may state that if I had not lost my memoranda a good chart of the stream could have been made with their assistance.

I am also of opinion that it is of a higher temperature than the Gulf Stream; having found it as high as 87° in the strait of Korea, in July, the (surface water I mean), and I think, it is also of a more regular temperature; the above temperature being nearly as high as it is generally found in the southern part of the China Sea.

In the Straits of Tsugar I have noted the temperature as high as 72° in the summer months, and in La Pérouse Straits at 56°, and the difference between the cold water close to the shore and the warm is often as much as 12°

In the Japan Sea on getting to the northward towards the Coast of Manchuria, I have known the thermometer to drop 12° to 14° in less than an hour; and have experienced the same thing off the Coast of Sendai, when it meets the Arctic stream from the North; and it is here that sudden squalls may be expected as I noted in my remarks about the winds.

I am aware that some persons think that the cold Arctic Current forces its way into the Japan Sea through the Straits of Tsugar and La Pérouse, but I am inclined to differ from them. In the La Pérouse Straits there is a regular tide close to the shore, and I found the temperature of the water much the same with both ebb and flood. In the Straits of Tsugar the tides are scarcely perceptible unless in still weather, and with strong westerly winds the current extends from shore to shore between Cape Blount and O-o sima and invariably runs to the eastward.

I am inclined to think, that the Arctic Current on approaching the Nambu shore runs off to the eastward and is lost by mingling with the warm stream in the Pacific.

I certainly never felt the temperature to fall enough while near the Coast of Japan to cause me to think that the Arctic current was forcing itself through into the Japan Sea, and, as I have before said, being in the habit of testing the temperature of the surface water five times during each twenty-four hours, am pretty certain I should have detected any decrease in the temperature such as would have been shown between the warm and the cold stream.

In the Japan Sea, the influence of the warm stream is not so decided as it is on the Pacific side of the island, probably owing to its being confined by land on both sides, whereas it has the open sea on the Pacific Coast on one side.

It is certain that the weather on the Pacific Coast of Japan is much more variable than it is on the other side of the Island; and I am inclined to think that the difference is caused by the current alone, it not having so much to impede its course on the one side as it has on the other.

Finally, I think the warm stream has a great effect on the temperature of Yokohama, as residents can verify by noticing the difference between a northerly and a southerly wind, this being at least 15°; and I am of opinion that the climate of the western coast is much more regular than that of Yokohama.

AMATEUR ATHLETIC ASSOCIATION.

The Annual meeting of the Amateur Athletic Association took place on Thursday afternoon at the Grand Hotel. Mr. Dodds was voted to the chair. The following statement of accounts was then presented to the meeting:—

THE AMATEUR ATHLETIC ASSOCIATION OF YOKOHAMA IN ACCOUNT WITH THE HONORARY TREASURER.

1875.			Dr.
To Prizes given by the Association:—			
Spring Meeting	$265.61		
Autumn do.	251.02		
			$516.62
To Stop-watch	$35.00		
,, Cricket Balls	3.00		
,, Vaulting Pole and Fittings	3.00		
,, Set of Single Stick Gear	20.00		
			61.00
,, Printing and Advertising			201.00
,, Cumshaw, Refreshments, and Jinrikisha Hire for Band, Autumn and Spring Meeting			69.45
,, Gatekeeper, ditto			16.00
,, Momban's wages, cinders, coolie hire, rolling path, and incidental expenses			172.35
			$1,036.42
,, Balance brought down			21.43
Dependency to debit:—			
Ground Rent for 1874 and 1875.			$95.00
1875.			Cr.
By Balance from 1874			$110.49
,, Members' Subscriptions, viz.:—			
9, at $10.00	$ 90.00		
2, ,, 7.00	14 00

E. & O. E.

JOHN P. REID,
Hon. Treasurer.

Yokohama, 16th Dec., 1875.

On the motion of Mr. Kilby, seconded by Mr. J. J. Dare, the accounts were passed.

The election of a committee for the ensuing year then took place, when the following gentlemen were elected:—Messrs. Dodds, Hamilton, A. H. Dare, F. Walker and E. F. Kilby.

Mr. J. J. Dare was elected but declined to accept office.

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

A vote of thanks to Mr. J. P. Reid, for his services as Hon. Treasurer during the past two years, was carried unanimously.

A long discussion then took place as to the insufficiency of Rule 13, and a suggestion was made that any member rendering himself generally obnoxious should be liable to expulsion by a vote of a majority of three-quarters of the members present at a general meeting called for that purpose. No notice having however been given of the proposed change, the amendment fell through.

The question of increasing the annual subscription in view of the want of funds, as shown by the accounts submitted to the meeting, was also ventilated, but was referred to the incoming committee for consideration. Mr. Walker proposed and Mr. Cook seconded a vote of thanks to Mr. Tripp, for his long and able services both on the general and handicapping committees, that gentleman being obliged to dissolve his connection with the Association in consequence of his approaching departure for Europe. This was passed unanimously.

The usual vote of thanks to the chairman closed the proceedings.

Correspondence.

ILL-TIMED APPLAUSE.

TO THE EDITOR OF THE "JAPAN WEEKLY MAIL."

December 16, 1875.

SIR,—Permit me to draw attention through the medium of your columns to the grievous effect produced by the well-meant, but ill-timed applause which too often destroyed the current of Miss Claus's playing on Wednesday evening—or certainly the enjoyment of those who were listening to it. I submit that applause—which is the legitimate meed of the artist, and the natural expression of the sense of pleasure derived by an audience from his or her performances—should never interfere with the impressions music is calculated and intended to produce. If reserved until the end of a great movement, or, still better, of a work in its entirety, applause is grateful and encouraging to the performer, and perfectly irreproachable as from the audience. But when it is thrown in at a mere pause in the music, it is unfair to the performer and to those who desire to listen to it in undisturbed enjoyment.

I cannot doubt your agreement with me in this view.

I am, Sir
Your obedient Servant,
A.

[We are entirely with our correspondent, though we cannot insert his letter without the admission of occasional guilt in the matter in question.—ED. *J. W. M.*]

"STANDS SCOTLAND WHERE IT DID?"

TO THE EDITOR OF THE "JAPAN WEEKLY MAIL."

SIR.—Your Correspondent "Tada Yeijin" alludes very briefly to the Scots as an aboriginal Irish tribe, but tells us little as to their characteristics prior to emigration. Let me supplement his remarks. They were obviously a very hungry race and satisfied their natural appetites in primitive times by asking themselves out to dinner, on mutton, and carrying off the sheepskins in memory of the giver of the feast. They are also said to have been "long-armed," and it is possible, on Darwin's theory, that their well-known habit of trying to get to the bottom of each others' pockets (and you had to travel pretty deep then as now to find anything in an Irish pocket), may have developed these members abnormally. They were as poor as a dis-established church mouse and as proud as Peter Paul McSwiney when he repudiates "Home Rule." As we had no National Schools in those days their education was slightly neglected, and they made so many mistakes in "construing" *meum* and *tuum* that the other tribes near them resolved to get rid of them. So one fine morning they raised the "Faugh a Ballagh" and drove them to the sea. I am glad to find from your correspondent's letter that they were doing so well when last heard of.

I have no wish to be unfriendly; but I shall feel obliged to him if, having proved that there are no Scotchmen because they are all Irish, he will abstain from showing that there are no Irishmen because we emigrated from Carthage in disgust with Queen Dido's *faux pas* ages ago. (You may prove anything by etymology: the Good Templars complain that "Sligo" shows that we are addicted to contraband nips of whisky, while the Band of Hope points triumphantly to "Cork" as evidence that we have stopped the bottle.) It would not be wise to go too closely into each other's origin—nor good manners either, for a breach of good manners in Ireland often means a consultation of surgeons over an interesting gun-shot wound, or heavy mourning in a respectable family.

Yours faithfully,
DONNYBROOK.

P.S.—I am truly sorry for the Scotch. But surely a nation that can make itself at home in every other country under the sun does not want an island all to itself? They make migration a fine art there, I believe. One great institution, they tell me, has a nursery for its young men in one of the shires and a home for the old ones in a better world.

YOKOHAMA, December 13th 1875.

Law & Police.

IN H. B. M.'S CONSULAR COURT, YEDO.

Before M. DOHMEN, ESQ., *Vice-Consul.*

W. H. DOYLE *v.* THOS. BOTTOMLEY.

This was an action for breach of contract. Damages were laid at $2,000.

Mr M. Kirkwood appeared for the plaintiff: Mr G. P. Ness defended.

Mr Kirkwood enquired if the Vice-Consul had power to hear the case without assessors. He did not object to His Honour's doing so; but asked for information.

His Honour replied that he had been unable to obtain assessors, those whom he had asked having refused to attend, and being in the employ of the Japanese Government, he had no power to compel them to do so. Under those circumstances he had power to hear the case.

Mr Kirkwood in opening the proceedings stated that in 1873 Mr W H. Doyle arrived here from America having previously engaged the services of defendant to assist him in the manufacture of pulp for paper for a company in Yedo. Defendants' term of service expired in April 1874. Subsequently, and after several conversations with respect to renewing the contract, a rough draft of a renewed contract was submitted to defendant on behalf of the paper-mill, and after he had kept it two or three days he returned it with his signature. The only point was, if this was an agreement. He contended it was a perfect one, and that being the case, the only question for His Honour would be that of specific damages. It might be objected that the contract might be defeasible, and non-mutuality might be alleged, but no parole evidence could be admitted as was clearly laid down by "Taylor on Evidence."

Plaintiff deposed that he resided in Tokio, in which he arrived in April, 1873. Defendant was engaged by him for one year from the date of his arrival in Japan. This expired in April 1874. He was paid his wages in full,—a large part to his wife. After that date negotiations went on for a re-engagement. Witness offered him one in writing; he read it though cursorily and retained it in his possession for about three days. It was then in the form produced with the exception of one addition, made at defendant's suggestion. It offered to retain him for three years as foreman and instructor in the art of papermaking from the 1st June, at the salary of $2500 yen for the first; 3000 yen for the second, and 3500 yen for the third year, subject to be cancelled at six month's notice by defendant, or payment of three months' wages by the plaintiff, or in the event o continued absence. Defendant returned the agreement to plaintiff and said he consented to the terms of the contract. Plaintiff was busy; and defendant, at his request, accepted the substance of the contract in writing. He never entered into plaintiff's service subsequently; but into that of others. Witness obtained a substitute from America.

Cross-examined by Mr Ness: The further conversation which took place at the time was—

Mr Kirkwood objected to parole evidence.

Mr Ness argued that he could give it. He did not design to alter the terms of the agreement but to shew that none even existed. That document was never intended to be an agreement.

Mr Kirkwood replied that to do so there would be evidence of a

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

condition which was to vary the agreement; such would be parole evidence. To be of value it must be in writing.

Mr Ness quoted a rule, in which it was laid down by Erle, C. J. that it was open to the defendant to prove circumstances under which the signature was affixed. He had six other cases in support of this point,—that defendant does not agree as alleged.

Mr Kirkwood stated that the case referred to was not a case within the scope of the Statute of Frauds, under which the agreement between the parties in the present case came. Parole testimony could not be received to add, to alter, or subtract from its provisions.

Mr Ness returned that these cases did come under the Statute, and instanced one of a sale of land as well as the above quoted case, which related to a transfer of share certificates.

"It was reasonably to be supposed that in a written instrument "all the conditions had been introduced, and the written evidence "was to be preferred to the testimony of a slippery memory," had been distinctly laid down, and the rejection of parole evidence was strongly insisted upon.

Mr Ness admitted this; but insisted that evidence was admissible to show at the time a written paper was signed by the parties there was a statement it was not to take place except on certain conditions, and that the written paper did not contain the whole of an intended contract.

Mr Kirkwood: Yes, but a written paper may not be a contract within the Statute of Frauds. It may be a letter engaging a labourer for a week. If you admit any parole evidence whatever, you do exactly what the statute tells you not to.

Mr Ness repeated that there was an agreement that this should not be an agreement.

Mr Kirkwood: Then that ought to be put in writing.

His Honour ruled that he would accept the parole evidence, and noted Mr Kirkwood's objection to evidence of conversations which took place at the time of signing the agreement.

Cross-examination continued: (Mr Kirkwood objected to the question "tell me all the conversation which took place atl the time this agreement was handed to you?" on the ground that it tended to add a condition to the agreement.) Mr Bottomley remarked in a smiling, off-hand way that he thought the contract should date from the first of May, not from the first of June. I answered that the best terms we could offer had been agreed upon between my Japanese partners and myself, and it was not in my power to alter them; neither would I do so. There was something remarked by me as to referring to my Japanese partners about ascertaining the date of the month, but not in those words exactly. My remark to them was not to the effect I should refer to them before altering it. It was this:—Afterwards if the thing goes along satisfactorily, the Japanese will probably make this intervening month good to you, and I will use my personal influence with them to do so. There were other conversations and some passages in writing about his taking a certain percentage and setting aside this agreement altogether. An arrangement was made that he and I should go together to Yokohama on a subsequent day, to attest that contract in duplicate before the American Consul for his protection.

Mr Ness here called for the production of this fair contract.

Mr Kirkwood objected to the whole of this evidence.

Witness: A triplicate of this was forwarded by me to New York.

Mr Ness: Does Document B differ from Document A?

Mr Kirkwood objected.

Mr Ness stated he was going to base a series of questions on the difference between the two Documents.

Witness: I do know the documents differ as to the date of acknowledgment of attestation, otherwise I believe that they are similar. I do not know if they differ in other respects. There was a clause inserted as to the mode of payment of salary in the body of document B, which is inserted at the foot of Exhibit A. It is a question of difference of phraseology and geography of the clause.

Q: Do you call payment of wages to be monthly in arrear a clause and does it occur in document A? Is it not a fact it is only noted in one; whilst in the other it is inserted in the body—a mere memorandum in one and a final clause in the other?—A. That is so. It appears at the bottom in my handwriting over the signature of the defendant It was agreed upon by us at the time. He wanted his salary in advance and I refused it.

Q.—Was it written before or after the signature? A. It was written before—one in pencil and one in ink.

Q.—Will you swear that signature was made in your office? A. I will, by the defendant in person, on my desk.

Q.—At that time was it agreed these agreements should be prepared? A. I proposed after he had signed Exhibit A. I proposed the agreement B. should be written out and taken down to the American Consulate for attestation. Defendant said he was a British subject, and I informed him I wanted the attestation for his protection. No duplicate of the original agreement was ever signed by me or by any of my partners. Duplicates were placed in his hands at the Consulate, and he read them over carefully. He has no copy of it in his possession, that I am aware of, of Exhibit A. When we were in the U. S. Consulate Mr Bottomley read over the copies (B) I gave him. Each was to retain a copy. I did not consider it necessary for my own sake. It was the usual form, I considered; when he read them he said they were all right and he assented to them. We waited there the whole morning till tiffin for the Consul to return, and nothing more was said that morning. When we came back after tiffin he objected to the agreement, unless I paid him for the month he had lost. On the first occasion, he wanted it inserted in the contract by dating it from the 1st of May. At the Consulate, he requested I should pay the wages for the month of May. In the forenoon he assented to the contract, we retired to tiffin and all that time he did not make a word of objection; then, in the afternoon he asked for some compromise for the month he had lost, saying, he did not think he should bear all the loss. I refused to accede to his request and he refused to sign the agreement. We retired from the Consulate, and I consulted with H. B. M.'s Consul to try to settle the matter amicably, and asked his advice. Mr Robertson told me to send Mr Bottomley to him if possible. I took steps to discover what had become of Mr Bottomley, and I found out that he had engaged himself to a Japanese Company and that his engagement dated from the very day on which we were at the U. S. Consulate. I took steps to inform the parties that I had a contract with him. I took no legal steps to compel his performance of my contract till four months ago or so—thirteen months afterwards. I never paid him any wages during the interval; I have seen him on two occasions between May 1874, and August 1875; but did not speak to him. One was at a public auction where I was a bidder, and the other in a *jinrikisha*. I have not written to him on the subject of his breach of contract, as he was employed, and working for, another Company. No authority has been filed in this Court or authority from my Japanese partners shewing I have power to bring this action. I can do so. They are aware of this action and partially paid the money here. I am still a partner, so far as I can be by Japanese law, with them. The agreement in New York was signed, sealed and attested in duplicate. In my experience some such course is usually adopted as to endorse a rough informal document somewhat in this way—

"I accept the substance of the above"

"T. BOTTOMLEY."

His doing this, instead of simply signing it, was at my request, till clean copies of the same agreement were signed in duplicate, and because I was too busy at that time to prepare another copy. No facsimile of exhibit A. was ever presented for his signature, but one as nearly exact as possible. I do not refuse to admit that no exact copy of the wording of the first agreement was ever presented him for his signature.

Re-examined: Copy B was the only one I afterwards asked the defendant to sign in duplicate.

The Court here adjourned.

At the afternoon session of the Court, Mr. Doyle's re-examination was resumed by Mr Kirkwood.

Witness.—When defendant brought back Exhibit A: he simply smilingly suggested that the money for the last month should be paid him. I said, as I have already testified, that I thought the terms sufficiently liberal, and could offer him no others unless things went on satisfactorily when I would exert my influence on his behalf. He never, except as I have said, asked me to alter the date. He saw me make the addendum that payment of wages was to be monthly in arrear. It was immaterial to us how the wages were to be paid. I said in arrear was our regular course. He asked me where he should sign it. I said "Right down here," and he took my pen and signed it. At that time I had not mentioned any further agreement—except subject to the signing of the fairly written contract. I told him we would make the copies, and he would have one. It was my suggestion. We went to Yokohama together, and I paid his fare. We were at the Consulate from about half-past ten till past twelve,—about one hour and a-half. I handed both copies to defendant immediately on getting to the Consulate and he read them carefully inside and said it was "all right" and signed them with the marshal's gold pen. He did not express any dissent to the terms. We went away to tiffin, when he promised to return. When he did so, we had not waited long,

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

before he suggested he ought not to lose the whole of the time for that month—he ought to have some compensation for it. He did not think it was altogether right. He had done no work whatever in that month. I took no legal steps sooner for several reasons. His action had greatly embarrassed me. I could get no skilled help at that time. I mean by "embarrassed" that it caused misunderstanding and suspicion between my partners towards myself, as to my ability to go on with the work without his assistance. I volunteered to do his work as well as my own till a substitute could be obtained from America. I did so to their satisfaction, and it occupied my whole time, which was the reason I could not come here before. Another reason was the lack of ready funds at that time. I have never intimated in any way that I considered defendant justified in not entering into my service.

This concluded Plaintiff's case.

For the defence

Thomas Bottomley testified:—(examined by Mr Ness) I am defendant in this action. I first saw Exhibit A. about the 20th. May 1874. When my first year's contract was nearly expired, at Mr Doyle's request I considered over arrangements for a new contract. Mr Doyle gave me this document in the office about the 27th April, saying. "We made out a rough sketch of an agreement here, and I "wish you to take it home and consider it over as we wish to come "to some agreement as to a new contract." I looked it over, and as far as I remember, I signed it in my own room at the Yedo Hotel. I then took it back to the office, and handed it to Mr Doyle, telling him I should expect the agreement to date from the first of May. He replied "Well I will see my Japanese partners about it, and will try to arrange it with them." The day was then arranged on which we should go to Yokohama, and it was two on three after, when I should go to the office and go with Mr Doyle to Yokohama. Nothing more was said except copies were to be made and we were to go to Yokohama. This document was to last till we went to Yokohama and signed the other. That was made out as a copy for me to look over, then we were to go to Yokohama and sign the proper contract before the Consul. This was a rough agreement made out for me to look over. I said "This is not what I want, Mr Doyle; It must commence from the first of May; otherwise I shall not sign any other document." Nothing more was said at the time that I recollect, except that he would see his Japanese partners and arrange to go to Yokohama. The document that was to be produced at the U.S. Consulate was to be the final document. This was stated and understood. Exhibit A. was not to be an agreement till the other was signed. I never agreed to enter into a contract in which I was to receive wages only from the first of June. I did not sign my name, but simply said "accept the substance of the above" to indicate I would not accept it unless the date was altered from June to May. This was clearly and unequivocally stated at the time. I never entered into the agreement at all; because that clause was not altered. We went to the Consulate together. Mr. Doyle handed me the papers. I said "This is not what I requested of you Mr Doyle," as soon as I had glanced over them; and, after waiting some time, we went to tiffin in the hope of being able to arrange it. When we came back, the Consul was in, and on being handed the papers again, looking them over more carefully, I refused to sign them, unless the alteration were made from 1st June to the 1st May. He replied,—"You won't?" I said "No I won't!" He said "We can't afford to pay you a month's wages for nothing; I said "I can't afford to lose a month." We stood talking whether he should pay me something or not. He peremptorily refused and I left him there. I never heard more of the matter, till I got a lawyer's letter fourteen months afterwards. It was distinctly stated that the document to be signed at the Consulate was to be the agreement between me and Mr Doyle. So that really there was none.

Cross-examined by Mr Kirkwood: I was not in Mr Doyle's service when he gave me this agreement to look at. I was staying at the Yedo Hotel. I went there on 29th April, and left there 1st June when I went to Kama Bashi where the First National Bank is. I was in their employ, assisting to find a site for a paper mill. I did not give any notice, till probably a day or two before, to Mrs Thompson that I was going to leave. I don't recollect the day of the week—it was Saturday—Sunday was the 31st. I kept document A at the Yedo Hotel perhaps two days: I don't think more. I read it over so that I understood the meaning of it. I think I signed it the second day I did not read it before I took it away. The paper now is not as it was when I signed it. I think he wrote upon it after I signed it. I believe he wrote that as far as I remember when I took it up to the office. When I sign a document of that kind perhaps I sign an inch below the last line. Perhaps I signed my name in the place you show me because it was at the bottom of the page. There was something said about payment of wages, but I do not remember that I did or did not ask for them in advance. I believe he wrote the paragraph about wages in arrear in my presence. I don't remember if there was any pencil writing upon the paper when it was given me. When I came into the office, I think, I gave the paper to Mr Doyle. He mentioned about going to the Consulate at the time this paper was first given to me. He mentioned it. I adhere to my statement that the agreement to be produced at the U. S. Consulate was to be *the* agreement. I did not see Mr Doyle at the time I signed the agreement. There was a clause in the agreement when I signed it that my wages should begin from the first of June, so I told him I should want that altered. I am certain I went from the Yedo station that morning. I did not go to visit a friend in Mito that morning. I did not meet Mr Doyle in a jinriksha that morning and get in another and go with him to Shinagawa station. I went from Shinbashi and he got into the carriage I was in at Shinagawa. I did not see Mr Doyle that day. I don't know if I had any tiffin at all or not that day. It is as probable I did not as otherwise. I probably had a glass of beer at the Brooklyn Hotel or some of those places. I don't recollect. I went to Walsh, Hall & Co., that day. I went to see Mr Thos. Walsh. I talked to him about an engagement with other people. This was after I left the Consulate in the afternoon. I swear I did n't go there during tiffin time. There was a heavy thundershower at the time when I left the Consulate for good. We went twice to the Consulate in the morning, if I recollect, the last time just before the Consul went to tiffin—not at all in the afternoon. We were away but a very short time. I think I left Shinbashi at 10 o'clock; but I won't be sure. Both times I was at the Consulate, Mr Doyle gave me the paper to read. We were away from the Consulate from half to three-quarters of an hour. I had seen Mr Walsh before; two or three days after I left Mr Doyle. Our conversation was with regard to the engagement which I have at the present time. I engaged the same day I left Mr Doyle—not before. He refused to come to my terms and I refused to sign an agreement. I think I returned to Yedo by the three o'clock train. I am prepared to swear I had not engaged myself in any way to my present employers until after one o'clock on that day. I swear that it was not between the times that I went from and came back to the Consulate I made the engagement I now hold.

Re-examined: I was prepared to enter into the agreement at the American Consulate if Mr Doyle had adhered to the terms agreed on at our first interview.

Mr Ness argued that the real point was this:—that no agreement ever existed; for that the first document exhibited no mutuality—no reciprocity between the parties. Mr Doyle owned that it was a mere sketch of a proposed agreement—a statement fully borne out by its absence of one party's signature and its imperfect form. Was this document a final agreement or not? He asserted it was not, and that the defendants approval of it in substance, clearly showed that this was so. If there was any agreement—there it was: that there was none, was proved by the amplification and rearrangment of the original draft. The evidence of both parties shewed there was no assent, no reciprocity, on the disputed point of the months' wages, that there was no mutual assent, and that the very expression "agreeing to the substance" proved its absence. Hence it became worthless, and confirmed the statement of Mr Bottomley in the most ample manner.

In reply, Mr Kirkwood commented on the fact that the endorsement on the draft A was in the same ink, and apparently with the same pen, as the signature of the plaintiff was written with, which proved the statement of the plaintiff that it was signed in his office after he had endorsed the condition upon the agreement; so that it was very improbable plaintiff could have signed it at the Yedo Hotel. If the agreement was to be conditional on one month's wages, there was not a single case which allowed the terms of an agreement to be varied, and if there was a condition, it should have been set forth in writing. The statute did not require a formal agreement, but only one to be signed by the party to be charged, that is, the defendant in the present action. Confusion had been set up between mutuality of agreement, and individuality of claim. He argued that there could be no doubt in His Honour's mind that between the two interviews at the Consulate, the defendant had made his bargain with the Oji paper mills, and that he had been carrying on negotiations for that purpose from the beginning of the month. He asked His Honour to decide that Exhibit A was a valid agreement, and if so would be prepared to argue the question of damages.

The Court reserved it decision.

GERMAN CONSULAR COURT.

Before E. ZAPPE, Esq., President, and Messrs. J. MAMMELSDORF and H. FRANCKE, Assessors.

December 17, 1875.

Heinrich Willemsen was brought before the court, charged with complicity in a robbery of three bales of silk from the P.M.S.S. Co's steamer *Golden Age* on the 3rd or 4th day of September of this year.

The Clerk of the Court having read the bill of indictment, the President proceeded with the examination of the prisoner.

The prisoner stated: My name is Heinrich Willemsen. I am 33 years of age. I am a seaman, and at present in charge of the Japanese steamer *Augusta*. I am a Protestant, and have never yet incurred the displeasure of the law. It was, I think, on the night of the 10th September, that a man named Salantine, known as Barney, came on board of the *Augusta*, bringing a chest and two bags, and asked me to land them for him. He said they contained silk to be smuggled through the Custom House and asked me to take them and dispose of them for him, telling me, that he would reward me for my assistance. I did not ask how he became possessed of the silk. I knew it must have been stolen from the steamer *Golden Age*, and undertook to land and sell it. Salantine promised me one-third of the proceeds, and said he would keep one-third for himself, reserving the remainder for a person named George Clark, who was then quarter-master of the *Golden Age*. I think the latter was to receive one-third, for having assisted Salantine to steal the silk. [The accused here gave another version of the business, and with the permission of the Court amended his evidence as follows.] Salantine came on board on or about the 10th September. I was at the time asleep and in my bunk. He asked me to lend him a boat, from the *Augusta* and to join him in taking from the *Golden Age*, and subsequently landing, three bales of silk which he and Clark intended to steal. I was then intoxicated. I accepted his proposal, rose from my bed, dressed, and got into my boat, accompanied by Salantine. We rowed to the *Golden Age*. The hour was about midnight. On arriving at the steamer we boarded her on the starboard side, where a ladder had been placed. Salantine went on board, but I remained in the boat. After waiting about a quarter of an hour a port was opened, and Salantine came through it into my boat. I recognized Clark; he was engaged in rolling three bales of silk into the boat. One of them fell short and into the water, but was at once picked up. The port hole was then closed, and Salantine and I removed the covers from the bales, threw them overboard, and repacked the silk (there were, I think, 16 bundles in each bale) in two bags and one chest which I had brought with me from my ship. The packing was done on board. When it was finished Salantine left me, and I hired a Japanese boat to take the bales on shore. I landed with them in the Ikugawa Canal between 5 and 6 o'clock a.m. the next day, and, putting them into jinrikishas, had them conveyed to No. 68, where an Englishman named Eyton, with whom I am acquainted, resides. I wanted to see Mr Eyton, who came at 11 o'clock. I asked him if he would sell the silk for me. He told me to leave it, and he would see what could be done with it. He instructed his Japanese servant to take the chest and two bags into the godown, where the silk was inspected and put in two boxes. These Mr Eyton at once sent with a note, to Messrs Mitchell, Cope & Co.'s auction rooms. On leaving Mr Eyton, he requested me to return the same evening, when he would tell me what were the prospects of sale: but on seeing him again, I learned that he had then received no reply from Mitchell & Co. On my calling on him the following day I was shown a note from that firm to the effect that the silk had been stolen, and that he (Eyton) could have no more to do with matter. He told me that I should go to Mitchell & Co. to get back the goods. I went at once to the auctioneers, being joined by quartermaster Clark, who had waited in the street during my interview with Mr Eyton. We went to Mitchell & Co.'s where I saw Mr Mitchell and requested him to deliver the silk to Clark, as I was indisposed to concern myself further about it. He declined to give it up to Clark, who was drunk, and we left the auction room. I was afterwards pressed and menaced by Salantine and Clark to close the sale of the silk. I now call to mind that it was on Thursday, 9th September, that the silk was landed. On the Friday and Saturday following I tried to sell it to Mitchell & Co. On calling upon Mr Mitchell on the Monday morning following, he offered me $250 for it, and told me to return at noon for payment. On my return he informed me that he could not pay me $250, but would give me a cheque for $150 on the O. B. C., enjoining me, however, not to cash it before 2 p.m. on that day. He also asked me to give him an acknowledgment in writing that he had returned the silk to me. Being hard pressed, I accepted his offer and conditions. He gave me a cheque for $150, payable to my order, and I gave him an acknowledgment of the return of the bales of silk to me by Mitchell & Co. Having cashed the cheque, I deducted $15 for charges, and divided the balance into three equal shares, one each for Salantine, Clark and myself.

The president read a letter from Captain Coy of the steamer *Golden Age*, conveying a report of the robbery and addressed to Mr. Center, General Agent of the P. M. S. S. Co. in Yokohama. He enquired from the accused, if he had any observations to offer upon this letter and on being answered in the negative proceeded with the examination.

Mr John L. Eyton then deposed as follows: I formerly resided at No. 68, Yokohama, but now live at No. 87. A person unknown came and offered to sell me silk. I told him that it was not in my line of business. He said he had about 800 lbs. to dispose of. He left me a small bundle as muster. I asked him to return in the afternoon, and took the muster to Messrs. Mitchell, Cope & Co., and asked them if they could buy the silk, leaving the specimen bundle with them. On the following day Mr Mitchell told me that the silk inspector desired to see a larger muster. I communicated this to Willemsen when I saw him. On the following morning he told me that the required silk was at No. 68. I then obtained a muster from Willemsen, and instructed a boy to leave it in the godown at No. 68. I took it from thence to Messrs. Mitchell, Cope & Co. and left it in their hands. During the day I had a note from Mitchell, requesting that I would forward the bulk parcel to his store, as he had found a person who desired to buy it. I told Willemsen to take the silk to Mitchell & Co at No. 95, which he did. I think this was on Friday. On the following morning Mitchell wrote to inform me that Messrs. Kingdon & Co's. silk inspector pronounced the silk to be Chinese, and had expressed wonder at meeting with it here. He (Mitchell) thought it would be well to return it to Willemsen. I showed the latter Mitchell's note, and asked him to give me a guarantee. He declined to do so, alleging that it would give him too much trouble. I then told him that I washed my hands of the business, and recommended him to go to Mr Mitchell and claim the return of the silk. He left me, and I did not see him again. In the afternoon I heard from Mitchell, whom I met, that Willemsen had been with him, and that he (Mitchell) had given his Japanese office boy orders to return the silk. That is all I have to say upon the subject.

In reply to the President, who enquired if he had any questions to ask, the accused stated that on the day he took the silk to Mr. Eyton's godown he observed Mr Mitchell to enter it in company with the latter. They then inspected the silk, and Mr Mitchell took away a sample with him. Mr Mitchell did not on that occasion see the accused.

Mr Eyton: That is not true. Mr Mitchell was not there.

Alexander Center deposed: I am agent of the P. M. S. S. Co. The silk was stolen from the steamer *Golden Age*, the steamer being at that time the property of the P. M. S. S. Co. The silk was shipped by Russell & Co., Shanghai, and consigned to a firm in New York. It was to be transhipped to the steamer *Oceanic*. The freight clerk informed me of the robbery. The ship was searched, and nothing found. (A letter produced.) This report is the written one received from Captain Coy. From inquiries made by me, it was ascertained afterwards that the prisoner had landed a quantity of silk early one morning in the Okugawa Canal, and that this silk had been traced to the premises of Mr Eyton, of No. 68, and from there to Mitchell, Cope & Co.'s. Upon this I gave information to the U. S. Consulate, and to this Consulate. This is all I know about it.

In reply to the usual inquiry, defendant stated that he had no objections to the deposition of this witness.

William P. Mitchell, examined: I am in business in Yokohama as auctioneer and commission agent. I have seen this man before. Mr Eyton brought a bundle of silk to my store between the 12th and 13th of September, and asked if I would buy silk, or if I could sell it. I took the silk to ask the inspector of Kingdon, Schwabe & Co. Mr Kingdon requested me to bring a larger sample, and said that he wished to look at the silk. I made this request to Mr Eyton. I went to Mr Eyton's office for this purpose. I never went into Mr Eyton's godown. I came back to my office, and shortly afterwards this man brought the larger sample. He brought about 200 or 300 lbs. I asked him if this was the silk he wished to sell; he said it was, and I told him to leave it and call again on the next day. I sent the silk down to Kingdon, Schwabe & Co.'s, and next morning I went down to them, and saw Mr Scheidt and Mr Kingdon inspect the silk; they told me

Digitized by Google UNIVERSITY OF CALIFORNIA

that it was Chinese silk, and remarked that it was very curious that it should be brought to this market. I told them that I did not know how it got into the market. Mr. Kingdon said that he required a guarantee. Upon this I wrote to Mr. Eyton to let me know the circumstances. Mr. Eyton told me that he could not get a guarantee, and that I had better have nothing to do with it. I wrote to Mr. Kingdon to return the silk, which he did. On the following day, Saturday, at 3 o'clock, I met Willemsen at the door of my compound, and told him that I could not sell the silk. I gave orders to my boy to return it. That is all I know of the matter.

In reply to the customary inquiry, the accused stated that this witness' deposition was untrue. He said that he had taken no muster to Mr. Mitchell.

Mr Mitchell: My *banto* purchased the silk for $150, and I gave him a cheque for that amount.

The accused adhered to the evidence given in this and in the former enquiry. He said that Mr Mitchell was the person who purchased the silk from him, and paid him $150 for it. He had never spoken to the *banto* on the subject.

The President then proceeded to read the evidence given by W. Parker at the preliminary enquiry. The facts elicited not being of much importance, he had not been summoned to attend. He then announced that the examination was closed. [To Accused:] Have you any statement to make to the Court?

Defendant: I have nothing more to say.

The Court here adjourned.

On resuming its sitting,

The President proceeded to pronounce its verdict. He said: Heinrich Willemsen, of Emmerich, you have been found guilty, under clauses 49 and 242 of the Penal Code of the German Empire, of having aided and abetted in the theft of three bales of silk from the steamer *Golden Age*. For this offence you are hereby condemned to imprisonment for three months, and also to pay the costs of the present proceedings.

M. THIERS' SPEECH.

(The Times.)

The accident which gave France on Sunday last a speech of M. Thiers and a speech of M. Rouher did no more than lend point to an antithesis which vibrates through all the fibres of French life M. Thiers had hardly the local advantages of M. Rouher, though he spoke in the Department of the Gironde, one of the strongholds since the days of Brissot and Vergniaud of French Republicanism. But among the scented pine-woods of Arcachon M. Thiers could scarcely have felt himself surrounded by associations as potent as those which supported and stimulated M. Rouher at Ajaccio. The Corsican capital has few interests and fewer traditions that are not bound up with what Republican France in our day calls, half scornfully, half credulously, "the Napoleonic legend." It would be idle to attempt to prove to a Corsican that the Bonapartes were Italians or Greeks; to the people of the little island which one of Hugo's Frenchmen says "made France great," history is filled with the brief and splendid tale of the two Empires. Is it astonishing that the islanders, who have much both of the simplicity and of the cunning of semi-civilized races, who were not only flattered but enriched by the profusion of the Great Napoleon and of his nephew, should be eager for a return of the golden age? But, setting aside the local and personal characteristics of Mr. Rouher's reception in Corsica, what do we gather from it to be the attitude of the Imperialist Party towards the popular will in France? This is the question which is thrown into prominence by the accidental contrast—if it were indeed accidental—of M. Thiers' political position as disclosed at Arcachon. As for M. Rouher, he makes no mystery about either his aims or his methods. He holds steadily by his faith in an "appeal to the people," and he argues that, in spite of an unnatural and evanescent alliance between Orleanists and Republicans, the new Constitution leaves a door open for the admission of the principle to which he anchors his hopes in the "revisionary clause." Whatever may be the technical significance of that clause, no one doubts that the will of France must ultimately determine her form of Government, unless military coercion, which cannot be permanently imposed, should interfere. Frenchmen, therefore, are brought to make a deliberate choice between the systems of Government which M. Thiers and M. Rouher lay before them. The issue to be decided is not a novel one; yet France has never since 1789 been able to make up her mind upon it, and, notwithstanding the evidence of all recent elections and Parliamentary proceedings, we cannot confidently affirm that M. Thiers is right in his forecast of the national judgment and that M. Rouher is wrong. M. Thiers' ideas naturally commend themselves to Englishmen, for they touch us with the sincerest flattery, the flattery of imitation; but for that reason the more we should be cautious in accepting the belief that those ideas will prevail in France. It is permissible to hope that they will, but, on the other hand, the ambitions to which M. Rouher gives a voice have a solid body of historical evidence in their favour.

The speech of M Thiers, as our Correspondent justly observes, "will be for some days the great event of France, and perhaps "even of other countries." It is in many respects, a remarkable oratorical effort. In the first place, it is an admirable defence of what is not attacked, of what even the ungenerous enemies of M. Thiers have ventured only to slur over with the feigned contempt of silence—his administration of the Executive Power in the years following the Peace, That Power, as M. Thiers says, he accepted "neither as Monarchy nor as Republic;" the trust he had recieved he was determined to keep until its surrender should be demanded, and then to give it back as it had been placed in his hands. To re-establish order, to reform the finances of the country, to reconstruct the Army, and, finally, to get rid of the German occupation by paying off the Indemnity—such M. Thiers understood to be the elements of his arduous task. He did not conceive that it was his business to "found" either the Republic or the Monarchy, to content either fanatical Republicans like M. Lonis Blanc or fanatical Monarchists like M. De Franclieu, at all events until the urgent problems enumerated above had been solved. The Commune he beat down with the relics of the armies which had been defeated or captured by the Germans; but M. Thiers affirms that with the forces then at his disposal he could not have held in subjection the great towns of France if he had been bold enough to assure them that France was fighting against the Republic. Pacification he saw was to be attained only by tranquillizing men's minds, and such tranquillity would have been impossible if the Chief of the Executive Power had identified himself with Monarchical propagandism. The attitude of neutrality which M. Thiers preserved quickly bore fruit; "a calm arose that astonished Europe," and with reviving order national prosperity lifted its head. M. Thiers was amazed at his own work. To liberate the territory, to restore France to herself, M. Thiers needed six milliards, he tells us; he asked for them, and the nation thrust forty upon him. While this task was in hand the Restoration was impossible; to have attempted it at Bordeaux would have been, M. Thiers says, nothing short of "criminal;" at Paris, even, "a 'sovereign imprudence;" for every such attempt would have been inconsistent with the policy of pacification which the President steadily pursued. To leave the determination of the form of Government to the country or its representatives was the only safe and honest course. Yet M. Thiers did not think it right to disguise his personal opinion that it had become impracticable to satisfy conflicting Parties, each of whom desired what the others detested. This view led M. Thiers to the conclusion that the Republic was the form of Government which "divided" France "the least," and, as the need of popular enlightenment on the impossibility of Monarchy was urgent, M. Thiers sacrificed his power, with this educational purpose, before the indocile "majority of the 24th of May." Such is M. Thiers' account of the events which led to his resignation two years and a half ago. He is satisfied, he affirms, with the fruits of his abnegation. His retirement, he is convinced, got rid of misinterpretations and threw "a bright and irresistible light" on the relations of Parties and the possibilities of politics.

The past, however, has not much abiding interest for French politicians, unless it illuminates the future. M. Thiers endeavours to apply the moral of his own career. His retirement, he says, left the scene open for the Monarchical Parties, and they hastened to demonstrate their impotence. Whether the blame be attributable to the inflexibility of the Comte de Chambord, or to the flexibiliy of his cousins of the House of Orleans, or to the intrigues of the Bonapartists, or to the indomitable factiousness of the Republicans, the fact remains that the Assembly, "preferring Monarchy, "but admitting its impossibility," reversed on the 25th of February last the vote by which it had overthrown M. Thiers nearly two years earlier. The Republic being thus voted, the plain duty of Frenchmen, M. Thiers urges, is to make it a success. Loyal co-operation is needed to give the experiment fair play, and any active movement of the opponents of the Republic would not now render Monarchy more feasible, but would make chaos possible. "The Republic is no longer a question of principle, but a question

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

of application;" and the "men of the 24th of May," in whose hands the Government has been left—wisely, M. Thiers asserts, for thus an established pretext for disquietude has been got rid of—are bound loyally to apply the principle forced on them by the logic of events and the voice of France. M. Thiers' argument, it must be allowed, is complete and conclusive against all Parties except the only Party which is now formidable to the Republic. It does not take any ground from under M. Rouher's argument but confronts it squarely on the field of fact. M. Thiers throughout assumes, as Englishmen are in the habit of assuming, that France not only knows what form of Government she desires, but that when she has gained this she will labour to make her will felt in guiding and shaping the acts of her nominal rulers. M. Rouher's assumption is directly opposed to this; he argues as if France were only eager to throw off once for all the load of political responsibility. If he is right, there is much to be said for the Imperialist theory of Government. It is easier for a nation which does not choose to undergo the hardships of stumbling to sound conclusions through devious and obstructed paths to delegate its political functions to a single competent person than to an Assembly. But the fatal flaw of the Napoleonic idea has been laid bare to the French people by the disasters of recent years; it supplies no principle of continuity; the peculiar capacities of Emperor or Vice-Emperor—the strength of Napoleon, or the subtlety of Talleyrand—are certain to grow effete or to disappear. There is no permanent spring of new blood as in the Constitutional State. The question which, in all probability weighed most heavily on M. Thiers' mind, though he glided by it with confidence in his speech at Arcachon, is whether, after all, the French people do not hanker after the pleasant torpor of a system which relieves then of the labour and responsibility of thought and action in political affairs We cannot doubt that M. Thiers' energetic exhortation to the present Government and to its functionaries was inspired by the conviction that while the Government dares hardly pronounce its own name, "the Empire" clamours in the popular ear. "An uncertain, "harassed enigmatical Government" can scarcely hope to succeed in competition with an active intriguing Party like the Imperialists, whose central doctrine is a plain one which the simplest peasant can understand. M. Thiers has a right to impress upon the men in office who have accepted the Republic because they have been forced to acknowledge the impossibility of Monarchy that they must put their acceptance into a more intelligible form and abandon their inopportune tremors at the advance of Radicalism—which is not advancing—if they are to vanquish the Empire in the coming Elections. Of course, M. Thiers does not admit that the victory of the Empire is within the bounds of possibility; but his apprehensions are visible through his sharp admonitions to a Government which persistently looks in the wrong direction, and fixes its gaze on imaginary dangers while disregarding what are real and imminent. Such mistakes waste time, if nothing else, and, as M. Thiers warns his countrymen, no modern nation in the urgent competition of organized energies can afford to lose time.

THE MOLTKE NARRATIVE OF METZ AND STRASBURG.*

(Saturday Review. Second Notice.)

It has been already pointed out that if this Ninth Part of the Berlin Narrative be accepted for what it really is—namely, the final judgment of German critics on Marshal Bazaine—the proof of his honesty in the whole affair of Metz is thrown by them on his conduct of the first day's fighting of the battle of Noisseville; and reasons have been offered, in the interest of historical truth, for refusing absolutely to follow in this matter the view adopted in the bureau of Count Moltke. This view of the German Staff is not here first heard of. It was propounded publicly, and in an almost official tone, at the unveiling of a memorial a year since to those who fell before Metz, by Marshal Manteuffel, who personally commanded the Germans at Noisseville. But it has been shown that there are facts sufficient to contradict any such opinion founded on a view of the action as seen solely from his side; and as we then declined to admit this version to be more than such a salving over of the broken reputation of his opponent as would enhance the victory, so now we part from the subject with a stronger conviction than ever that a defence of Bazaine, whether by friend or enemy, is a hopeless task.

But all that has yet been said refers solely to the French commander's honesty and tenacity of purpose; for in order to prove him guiltless, the two must hang together. It would be a very different matter to condemn him for want of ability. However minded Bazaine might have been after the defeat of Mars-la-Tour or of Gravelotte, it is certain that no general in command of so large a force was ever in so difficult and painful a position. If he had only chosen the wrong point for issue when he attacked the Germans before Noisseville, small indeed would have been the discredit attaching to his name. Of course, on the Berlin supposition that he did his best, at any rate for a few hours, on the 31st August, to get out of the meshes of the investment, it might become an interesting inquiry whether the measures which he took, and the plan which he declares in his published narrative to have been in his mind, were well suited for the supposed object. To us, who have no such belief in his intentions, they seem not to be worth serious examination; and we content ourselves with quoting the cold observation of this lenient Berlin writer, who, after repeating what Bazaine has himself said of his design, adds:—"Apart from these partly contradictory reasons, it cannot possibly be questioned that the direction taken by the French commander offered manifold advantages." Perhaps it might have done so; but the Berlin writer has very definite notions of his own, differing widely from those he attributes to Bazaine, as to where the attempt should have been made. And when he quits the subject of Bazaine's personal conduct for that of the strategy at large, his language returns to its natural clearness; his views are expressed with the masterly force of one who has thoroughly weighed the question, after approaching it armed with the highest professional skill; and, having no purpose to serve but that of setting forth the true solution of a military problem of the very highest order, his arguments as to what should have been done by the invested army will carry weight with every disinterested reader. To us in this country, where the controversies as to Metz have excited hardly less interest than among the two nations directly concerned, this deliberate opinion, set forth to the world under Count Moltke's sanction, and showing that there were possibilities of escape open to the French had they been properly used, could not but win attention. But there is another reason why the English reader should make a special study of them. And this alone, when presently mentioned, will be seen to be more than sufficient justification for our quoting the following passage at full length:—

Far less were the difficulties which circumstances offered on the south of Metz. An advance directed on this side would have found in the ground that lay there, as it did on the north-east, a broad front for deploying on the two banks of Seille, along the three great roads towards Sologne, Nomény, and Cheminet. If the bulk of the Army of the Rhine had advanced along these roads with the clerity amounting to a surprise, whilst a flanking detachment of the left had been directed on Courcelles-Nied, and another, protected by the fire of the guns of the fortress, had taken up a position in the country about Frascaty, fronting towards Ars and Jouy, in order to keep the VII[th] and VIII[th] Prussian Corps from crossing the Moselle, the success of attempt to break through would have stood, having regard to the then position of the investing army, tolerably assured, and that without too severe a fight for it. No doubt the French leaders [here the personality of Bazaine, be it observed, is suddenly dropped for an imaginary plural] must, under the circumstances, have given up the possibility of carrying their trains with them, and even with this sacrifice would have been, sooner or later, threatened by corps from the investing army pressing after them in flank and rear. Nevertheless, Marshal Bazaine might here have hoped at least to find the line of march directly in his front open (at the most, he could but have had a part of the corps of investment at Strasburg to anticipate him) to break up in his passage across them the weakly held communications of the Germans, and, although not without serious difficulties of supply, to escape to the south with a large part of his army.

Now many English readers, and some abroad who study our military literature, have heard all this before. It was thought a bold thing when Colonel Hamley, in the last edition of his work on the Operations of War, undertook to treat this particular problem of the possibilities left to the French when apparently shut into Metz. Here was a mere theorist, it was said, a man who at the most knew war only in its Crimean aspect, laying down *ex cathedrâ* what ought to have been done under certain circumstances by an experienced Marshal at the head of an army led by tried generals, and declaring in no uncertain words, not merely that the attempt should have been made to break through, but that, if made at an early date in the investment, and in a given direction, it might have been not merely successful, but "a brilliant and decisive manœuvre." It should have been begun, he writes on the 17th of August, when the result of the battle of Mars-la-Tour "made the interception of the French complete, and they could only clear a road to Verdun by becoming

** Der deutsch-französische Krieg* 1870-71. Von der kriegsgeschichtlichen Abtheilung des Grossen Generalstabes. IIter Theil. Heft 9 Mittler: Berlin 1875.

Original from UNIVERSITY OF CALIFORNIA

the assailants." The French were that day absolutely free to execute such a design. as is shown by the Germans marching even on the 18th in a wrong direction, in ignorance of what their enemy was doing. "In such cases," says Colonel Hamley, "the boldest course is the most likely to succeed"; and he goes on to examine in detail "what would have been the chances of an effort to break through by traversing the communications of the enemy." The considerations that follow are given in full detail, and cannot here be repeated; but the state of things on the afternoon of the 18th is shown to be that the French might easily have repassed the Moselle, and held its bridges, without the possiblity of interruption; and then—

Resuming the march, they would have found themselves at the close of it with their right on the Seille at Cheminot, their left at Hans-sur-Nied, having entirely traversed the German communications. On the 19th, Bazaine's cavalry would have been on the Nancy-Strasburg railway, his army near Château Salins, heading for Saarburg. Enormous captures of trains would have been made, the roads broken up between the Moselle and the Nied on the communications of the First and Second German Armies, and the railway on which the the Third Army relied damaged. Besides the supplies captured, the French on crossing the railway would obtain others by requisition in an untouched district. Directing their march on Strasburg, they would, by raising the siege, have inparted a victorious aspect to the movement; while the effect on the German armies may be inagined by students of military operations.

We may add that it may also be imagined by all readers of the vast newspaper military literature which has grown up of late with the growth of Germany in her repeated wars. It may safely be concluded, is Colonel Hamley's final observation, that "the Germans would have been much more solicitous to restore their communications than to follow Bazaine." That this view is not an over-bold one will surely not now be contested by any one who reads the curiously parallel passage previously quoted from the work of the Berlin bureau. The English writer must have the credit, however, of one who made these reflections not only first, but from means of study less complete. What he wrote in 1872, the German General Staff, aided by all the rich material gathered in their own archives, and the mass of publications connected with the Bazaine trial, now give as their deliberate opinion. The very words of Colonel Hamley seem almost to be reproduced by those whose study of the theatre of action and its conditions is the most complete and scientific possible. In fact, there is absolutely no difference discernible between the judgment of the British and that of the Prussian critic, save that our countryman is more definite as to the time for the march, and shows that that wasted on the Gravelotte heights should have been far differently spent in carrying the French back across the Moselle. English readers may dwell on this remarkable coincidence of opinion with the more satisfaction, not merely as evidence that military science of the highest order had its exponents in this country, but as proof beyond dispute that it is not absolutely necessary that a soldier should take a personal share in Continental campaigns in order to deliver a sound and decisive judgment on them.

The final siege of Strasburg, as begun on the 27th August, is reserved for a later part of this narrative. This, however, was, like most great sieges, a somewhat tedious business, and cannot under any treatment prove so interesting a subject as the bombardment that preceded it. There are two questions here which have long been discussed, one of them with much passion, and the volume before us would be of great value if it helped finally to settle them. Why did the severe measure which was so successful elsewhere fail to reduce the capital of Alsace? And, as it failed, who is to bear the grave responsibility of attempting a mode of warfare embittering in any case, since it confounds armed defenders and harmless citizens in a common fate, and is unwise in this particular instance, supposing it admitted that the Germans intended from the very first, if completely victorious in the war, to punish and weaken their hereditary foe by the loss of Alsace and the capital thus treated?

The bombardment was begun on the 23rd August, as we are told, under the pressure of instructions from General Moltke that the corps ordered to invest Strasburg was to get possession of the fortress as speedily as possible. Of some two hundred siege guns brought up, fifty-four were speedily distributed in thirteen batteries, and were aided in the work of destruction by more than a hundred field-guns. Three separate times the mass of projectiles was poured into the city unceasingly for many hours; but the garrison of General Uhrich, though made of poor stuff enough, as all the world knows, never lost heart, and were replying more briskly than at first when the attempt to reduce the city by this means was stayed early on the 26th by General Werder's orders. The cause of the cessation is thus simply stated:—

At the headquarters at Mundolsheim, the conviction had in the meantime been arrived at, from the course of the bombardment up to this point, that this mode of attack would lead to no result. Moreover, the Chief of Artillery, Lieutenant-General Decker, who had arrived a few days before, declared that the ammunition in hand, which it was impossible to reckon on having fully kept up to the demand within the necessary time, would, if thus continued to be vigorously expended, cease to be sufficient for a regular siege. Under these circumstances General Werder resolved to pass to a siege in form, keeping up only a moderate fire until the first parallel was opened. By this means he thought to preserve the advanced positions of his infantry, to prevent the garrison from repairing their damaged works, and to keep up the excitement of the population of the city.

In short, there is no special cause assigned for the failure but inadequate means; and consequently we may assume the imperfection of the original design as proved by its result. Those who carefully examined the interior of Strasburg after its surrender, where of course great additional damage had been done by the fire maintained from the actual siege batteries, not to mention that dropping shower of shells thoughtfully ordered by Werder "to keep up the excitement of the population," were one and all surprised at the moderate extent of suffering caused by the bombardment. The only sufficient explanation of this is the simplest—namely, the extent of the area covered by the city, which divided the action of the projectiles thrown in. Strasburg refused to yield to bombardment just for the same reason that Paris was unmoved by the milder one she subsequently endured. In fact, to put this form of pressure on a besieged place to advantage, it must be done in so complete and overpowering a manner as to bring the consequences of prolonged resistance home to every weak heart among those invested; and it follows that the greater the extent of the ground enclosed the larger must be the means employed. What was perfectly applicable to small crowded fortresses like Mezières and Thionville was altogether useless, and therefore objectionable, when employed at Strasburg. The only effect was a painful embitterment of feeling in the population, which suffered in this last case without being brought by the success of their opponents to the conviction that they were justified in what they did in a professional point of view. And this causes us naturally to ask the second question. Who is responsible for what was manifestly a blunder?

Perhaps this could hardly be distinctly answered in an official German account printed in the lifetime of the actors. It certainly is not so answered here. But, so far as the Narrative is precise, it fixes the responsibility of the commencement, as of the close, of the bombardment on General Werder himself; though this is covered by the statement that the course was decided on by him immediately after a discussion (or informal council of war) held on the arrival of Major-General Mertens, his Chief Engineer. The instructions of Court Moltke, like all his instructions to subordinates at a distance, if somewhat pressing, yet left a full local discretion; and he cannot be fairly charged, even indirectly, with the mistake. The most that can be said with certainty is that such a bombardment was then a novel experiment, and that it proved on this, its first trial, a very unfortunate one. And finally this work affords, it must be added in justice, no ground for the charge loosely made against the Prussian artillery, that the bombardment was the direct result of their anxiety to test the power of their new rifled siege guns.

Shipping Intelligence.

ARRIVALS.

Dec. 11, *Volga*, French steamer, Nondedeu, 960, from Hongkong, Dec. 4, Mails and General, to M. M. Co.

Dec. 12, *Hi go Maru*, Japanese steamer, Froome, 685, from Hakodate, Dec 10, General, to M. B. Co.

Dec. 13, *Charybdis*, British corvette, Captain Smith, 1,506, from Kobe, Dec. 11.

Dec. 14, *Montgomeryshire*, British steamer, Sturwell, from London via Hongkong, Dec. 6. General, to E Fischer & Co.

Dec. 15, *Courier*, Russian steamer, Lemascheffsky, 496, from Kobe, Dec. 13, General, to Japanese.

Dec. 16, *Nagoya Maru*, Japanese steamer, Eckstrand, from Shanghai and ports, Dec. 9, Mails and General, to M. B. Co.

Dec. 16, *Orissa*, British steamer, Reeves, 1,119, from Hongkong, Dec. 8, Mails and General, to P. & O. Co.

Dec. 16, *Belgic*, British steamer, Metcalfe, 2,650, from San Francisco, Nov. 16, Mails and General to O. & O. Co.

Dec 16, *Flying Spur*, British barque, Croot, 735, from London, July 7, General, to Wilkin, & Robison.

DEPARTURES.

Dec. 12, *Venice*, British steamer, Watson, 1,270, for Kobe, General, despatched by Van Oord & Co.

Digitized by Google UNIVERSITY OF CALIFORNIA

Dec. 14, *Bombay*, British steamer, Davis, 1,325, for Hongkong, Mails and General, despatched by P. & O. Co.

Dec. 15, *Genkai Maru*, Japanese steamer, Connor, 1,917, for Shanghai and ports, Mails and General, despatched by M. B. Co.

Dec. 17, *Belgic*, British steamer, Metcalfe, 2,650, for Hongkong, Mails and General, despatched by O. & O. Co.

Dec. 17, *Hiogo Maru*, Japanese steamer, Vroom, 680, for Hakodate, General, despatched by M. B. Co.

Dec. 18, *Hertha*, German frigate, Captain Knoor, for the Caroline island.

PASSENGERS.

Per *Volga* from Hongkong.—Messrs. Nakashuya, Watanabe, and Kangmann.

Per *Bombay* for Hongkong.—Mrs. Korthals.

Per *Montgomeryshire* from London via Hongkong.—Mr. and Mrs. Brindley and family.

Per *Courier* from Kobe.—75 Japanese and 2 Europeans.

Per *Genkai Maru*, for Shanghai and ports.—Mrs. de Ojeda, Messrs. J. R. McClatchie, E. C. Kirby, Gorman, Kusai, Iwakari, Tsunoda, Geekie and 1 Foreigner, 2 Chinise, and 53 Japanese in the steerage.

Per *Nagoya Maru* from Shanghai and ports.—Lady Parkes, Lady Avery, Baron de Overbeck, Dr. Riggs, U.S.N.; Mr. and Mrs. Cartman and family, Messrs. Scott, Smith, Hardie, Vale, Gubbins, Whittall, Kunst, Shimamura, Rapphard, and Winstanley, and 2 Europeans, 9 Chinese, and 117 Japanese in the steerage. For San Francisco.—Lieut. Lyons, U.S.N.

Per *Orissa* from Hongkong.—Revd. W. F. Garratt, Mr. Brandee, and 3 Chinese.

Per O. & O. Steamer *Belgic*, from San Francisco. For Yokohama,—Dr. H. B. Lesley, Col. E. D. Judd. For Shanghai—J. Morrison and Wife, R. F. Rennie, Fred. J. Jones. For Hongkong—Mrs Gibson, Dr. C. Wharry and Wife. Steerage, 1 Japanese for Yokohama, and 908 Chinese for Hongkong.

CARGOES.

Per *Bombay* for Hongkong.—

Silk for England	105 bales.
„ France	57 „
Total...	162 bales.

REPORTS.

The *Montgomeryshire* experienced moderate and favourable winds from Singapore to Hongkong, thence along the coast of China, a strong steady monsoon, and strong breeze from the N.W. up to this port.

The O. & O. Steamer *Belgic* left San Francisco November 16th at noon with strong S. to S.W. gales and high sea, 17th to 22nd occasional dirty weather. Nov. 23rd to December 5th hard gales in succession and very high seas. 6th to 9th, moderate fine weather. 9th to this port, strong gales from N.W. to W. with high confused seas. Passed Cape King, at 8 a.m, December 16th anchored Yokohama at 1 p.m.

The *Flying Spur* reports: Left St. Helens Roads July 13th. Crossed the Equator August 11th, and had to beat along the coast of Brazil. Passed Cape of Good Hope, September 11th, came round east of Australia, sighting New York Island, 24th of October. Had very light S E. and N.E. winds in the Pacific. Dec. 7th made Sagami light bearing North 12 miles, when the wind came out from the N. N. E. and blew a furious gale with heavy rain, the vessel driving down to Cape King, weather threatening and barometer very low and a mountainous sea from the S S. E. Kept ship away to get more sea room, had several gales from N.N.W. to W.N.W. off Fatzizen. Anchored in Kanida Bay on the evening of the 15th and in Yokohama evening of the 16th.

VESSELS EXPECTED.

COMMERCIAL INTELLIGENCE.

IMPORTS.

Cotton Fabrics and Yarns.—The general dulness continues and we have scarcely any transactions to report during the past week. Prices are wholly nominal.

Grey Shirtings:—						
7 lbs.	38½ yds.	39 in.	per pce....	$1.95	to	$2.20
8 lbs.	38½ yds.	44 in.	,, ...	2.20	to	2 55
8 lbs. 4 to 8 lbs.	38½ ,,	39 in.	,, ...	2.25	to	2.55
9 lbs.	38½ ,,	44 in.	,, ...	2.60	to	3 00

White Shirtings:—					
60 to 64 reed 40 yds. 35 in. nom.	per pce....	2.20	to	2.40	
Turkey Reds 24 yds. 30 in. 2¼—3 lb.	per lb...	0.75	to	1.05	
Black Velvets		8.50	to	9.50	
English Drills 15 lb. 40 yds, 30 in....		3.25	to	3.35	
Taffachelaes , 12 yds, 43 in....		2.50	to	2.60	

Yarns.

No. 16 to 24	per picul...	$30.50	to	34.25	
No. 28 to 32	per picul...	$35.50	to	40.50	
No. 38 to 42...	per picul...	$42.00	to	45.00	
Reverse Twist ... 16-24 ... ,, ...		—			

Woollens.—The demand for *common Cloth*, noticed in our past issue, has been to some extent maintained; some fair transactions have also taken place in *Blankets* at rates from 40 to 42½ per lb. for 8lbs. quality in anticipation of an eventual expedition to Corea. All other kinds of Woollens, including *Mousselines de laine*, are as inactive as before, and there seems no hope of an improvement during the present season.

Plain Orleans	40—42 yds. 32 in....	6.25	to	7.80	
Figured Orleans	29—30 yds. 31 in....	4 75	to	5.25	
Chimagoro	30 yds. 30 in....	5.25	to	5.75	
Italian Cloth	—30 yds. 32 in....	0 25	to	0.33	
Camlet Cords	29—30 yds. 32 in....	6.25	to	7 25	
Camlets Asstd.	56—58 yds. 31 in ...	18 50	to	19.00	
Lastings, Japan...	22—30 yds. 32 in....	13.00	to	14.50	
Plain Mousseline de Laine	—30 yds. 30 in,...	0.18½	to	0.20	

Figured Mousseline de Laine...	30 yds. 30 in...	0.25	to	0.28	
Multicolored ,,	...30 yds. 30 in...	0.35	to	0.40	
Cloth, all wool plain or fancy..	48 in. to 52 in...	0.80	to	1 20	
Presidents	...54 in. to 56 in...	0.65	to	0.75	
Pilots	...54 in. to 56 in...	0.42½	to	0.50	
Union	...54 in. to 56 in...	0.60	to	0.70	
Blankets, scarlet & green 7 to 8 lbs....	per lb...	0.40	to	0.42½	

Sugar.—The market has been very inactive during the closing week, but there have been small sales at the rates which we quote below.

Sugar:—Formosa in bag	...per picul....	3.60	to	3.85	
in Basket	,, ...	3.55	to	3.65	
China No. 1 Ping fah	,, ...	7.60	to	7 70	
,, No. 2 Ching-pak	,, ...	6.70	to	7.20	
,, No. 3 Ke-pak	,, ...	5.90	to	6 40	
,, No. 4 Kook-fah...	,, ...	5.10	to	5 60	

China No. 5 Kong-fun ...	...per picul....	4.30	to	4 80	
,, No. 6 E-pak	,, ...	4.00	to	4.10	
Swatow...	,, ...	2.70	to	3.20	
Daitong...	,, ...	3 00	to	3.20	
Japan Rice	,, ...	3.25	to	3.30	
Kerosine Oil.....	... per case...	2.45			

EXPORTS.

Silk.—The extremely unfavorable advices received from the home markets since the reopening of the telegraphic lines, and the unwillingness of most holders to submit, except in a few cases, to further reductions in price, have restricted the transactions of the past week to 170 piculs.

Since the 7th inst., arrivals are 393 bales, and settlements about 500 bales.

Tea.—Our market continues fairly active, wire advices from the United States reporting a better feeling on the Home market, added to which are premonitory symptoms of another "Ring Duty Excitement" being likely to afford another chance to enable the heavy operators of the season to come off with flying colors.

It is much to be deplored that this, as we may say "systematic scheme of rigging the Home market at the close of each season," is allowed to continue year after year. Better for all interests, say of shippers, jobbers, and consumers, that a moderate duty of 10 cents per lb. be at once levied and not repealed without at least one year's notice; this would tend greatly to steady prices in the east, and enforce a reasonable scale of opening rates early in the season.

Settlements for the week amount to 3,400 piculs, principally lower grades, and prices shew, if anything, rather an upward tendency. Arrivals are fairly average for the period of the season and stocks in first hands about 9,000 piculs.

The *Ukraine* has been laid on for New York at £1.15/ per ton of 40 cubic feet.

Common	...$15.00	to	18.00		
Good Common	... 19.00	to	22 00		
Medium	... 23.00	to	26.00		
Good Medium	... 27.00				

Fine	...$31.00	to	34.00		
Finest	...$35.00	to	38.00.		
Choice	...$40.00 upwards				

EXCHANGE AND BULLION.

Exchange.—Sterling rates remain steady, with a very small business both in Bank Bills and Private Paper.

Rates close as follows:—

STERLING—Bank 6 months' sight.....	4s. 1d.	
,, Bank Bills on demand.....	4s. 0d.	
,, Private 6 months' sight.....	4s. 1⅛d.	to⅜
ON PARIS—Bank 6 months' sight.....	5.17	
,, Private 6 ms. sight.....	5.22	
On SHANGHAI—Bank sight.....	72½	
,, Private 10 days sight	72¾	

ON HONGKONG—Bank sight.....	par.	
,, Private 10 days' sight.....	1	per cent disct.
ON San Francisco—Bank Bills on demand.....	98	
,, 30d. sight Private	par.	
On New York—Bank Bills on demand	97½	
,, 30 days sight Private	par.	
Gold Yen.....	par. to ¼	° ₀ pm.
Kinsatz.....	405

THE GREATEST

WONDER OF MODERN TIMES!

HOLLOWAY'S PILLS.

PERSONS suffering from weak or debilitated constitutions will discover that by the use of this wonderful medicine there is "Health for all." The blood is the fountain of life, and its purity can be maintained by the use of these Pills.

SIR SAMUEL BAKER,

in his work entitled "The Nile Tributaries in Abyssinia," says, "I "ordered the dragoman Mahomet to inform the Fakey that I was a "Doctor, and that I had the best medicines at the service of the "sick, with advice gratis. In a short time I had many applicants, "to whom I served out a quantity of Holloway's Pills. These are "most useful to an explorer, as possessing unmistakable purgative "properties they create an undeniable effect upon the patient, which "satisfies him of their value."

SIMPLE, SAFE AND CERTAIN!

HOLLOWAY'S OINTMENT

Is a certain remedy for bad legs, bad breasts, and ulcerations of all kinds. It acts miraculously in healing ulcerations, curing skin diseases, and in arresting and subduing all inflammations.

MR. J. T. COOPER,

in his account of his extraordinary travels in China, published in 1871, says—"I had with me a quantity of Holloway's Ointment. I "gave some to the people, and nothing could exceed their gratitude; "and, in consequence, milk, fowls, butter, and horse-feed poured "in upon us, until at last a tea-spoonful of Ointment was worth a "fowl and any quantity of peas, and the demand became so great "that I was obliged to lock up the small remaining stock"

MISCELLANEOUS.

PROTECTED BY ROYAL LETTERS PATENT,

Dated October 11th, 1869.

Under Distinguished Patronage

DR. BRIGHT'S PHOSPHODYNE.

(OZONIC OXYGEN)

A CHEMICAL PREPARATION OF PHOSPHORUS, WITH THE VEGETABLE ALKALOIDS QUINIA, CYPRIPEDEN, XANTHOXYLIN, &c.

This Phosphatic combination is pronounced by the most eminent members of the Medical Profession to be unequalled for its power in replenishing the vitality of the body, by its supplying all the essential constituents of the blood and nerve substance, and for developing all the powers and functions of the system to the highest degree.

It is agreeable to the palate, and innocent in its action, while retaining all its extraordinary properties; and as a specific, surpassing all the known therapeutic agents of the present day for the speedy and permanent cure of—

Nervous Prostration	Lassitude
Liver Complaints	Shortness of Breath
Palpitation of the Heart	Trembling of the hands and limbs
Dizziness	Impaired Nutrition
Noises in the Head and Ears	Mental and Physical Depression
Loss of Energy and Appetite	Consumption (in its first stages only)
Hypochondria	Timidity
Female Complaints	Eruptions of the Skin
General Debility	Impaired Sight and Memory
Indigestion	Nervous Fancies
Flatulence	Impoverished Blood
Incapacity for Study or Business	Nervous Debility in all its Stages
Sick Headache	Premature Decline

and all morbid conditions of the system arising from whatever cause. The action of the Phosphodyne is twofold—on the one hand increasing the principle which constitutes nervous energy, and on the other the most powerful blood and flesh generating agent known; therefore, a marvellous medicine for renovating impaired and broken-down constitutions. It quickly improves the functions of assimilation to such a degree, that where for years an emaciated, anxious, cadaverous, and semi-vital condition has existed, the flesh will rapidly increase in quantity and firmness, and the whole system return to a state of robust health. The Phosphodyne acts electrically upon the organisation; for instance, it assists nature to generate that human electricity which renews and rebuilds the osseous, muscular, nervous, membranous, and organic systems. It operates on the system without exciting care or thought upon the individual as to the process. It moves the lungs, liver, heart, kidneys, stomach, and intestines, with a harmony, vigour, yet mildness unparalleled in medicine.

The Phosphodyne gives back to the human structure, in a suitable form, the phosphoric or animating element of life, which has been wasted, and exerts an important influence directly on the spinal marrow and nervous system, of a nutritive, tonic, and invigorating character, maintaining that buoyant energy of the brain and muscular system which renders the mind cheerful, brilliant, and energetic, entirely overcoming that dull, inactive, and sluggish disposition which many persons experience in all their actions.

The beneficial effects of the Phosphodyne are frequently shown from the first day of its administration, by a remarkable increase of nervous power, with a feeling of vigour and comfort, to which the patient has long been unaccustomed. Digestion is improved; the appetite increases wonderfully; the bowels become regular; the eyes brighter; the skin clear and healthy; and the hair acquires strength, showing the importance of the action of the Phosphodyne on the organs of nutrition.

Finally, the Phosphodyne maintains a certain degree of activity in the previously debilitated nervous system; its use enables all debilitated organs to return to their sound state and perform their natural functions. Persons suffering from Nervous Debility, or any of the hundred symptoms which this distressing disease assumes, may rest assured of an effectual and even speedy cure by the judicious use of this most invaluable remedy.

DR. BRIGHT'S PHOSPHODYNE

IS SOLD ONLY

In CASES at 10s. 6d. by all Chemists and Patent Medicine Vendors throughout the Globe.

Full Directions for Use, in the English, French, German, Italian and Dutch Languages, accompany each Case.

☞ *CAUTION.—The large and increasing demand for Dr. Bright's Phosphodyne has led to several imitations under somewhat similar names; purchasers of this medicine should therefore be careful to observe that each case bears the Government Stamp, with the words Dr. Bright's Phosphodyne engraved thereon, and that the same words are also blown in the bottle.*

THE

Japan Weekly Mail.

A POLITICAL, COMMERCIAL, AND LITERARY JOURNAL.

VOL. VI.—No. 52.] YOKOHAMA, SATURDAY, DECEMBER, 25, 1875. [PRICE $24 PER ANNUM.

TO SUBSCRIBERS.

SUBSCRIBERS at a distance whose period of subscription may have elapsed, are informed that their papers will be addressed and charged to them *until countermanded*. This rule has been found necessary in order to avoid the inconvenience of an abrupt stoppage of the paper which might result from an omission to renew.

It is requested that notice of the intention to discontinue a subscription be so given as to reach Yokohama *before* the date of its effluxion.

NOTICE.

ON and after the 1st of July, Notices of Births, Marriages and Deaths will be charged $1 each insertion.

Such Notices cannot be inserted in this journal unless endorsed with the name and address of the person by whom they are sent.

Yokohama, 25th June, 1874.

BIRTH.

At Yokohama, on the 24th December, 1875, the wife of C. V. MARTINHO MARQUES, of a Son.

Notes of the Week.

The telegram announcing the purchase by England of the Khedive's interest in the Suez canal is important and startling. It must mean that the condition of Turkey is looked upon as hopeless, and that at least England and France agree in this view. The former naturally turns her attention at once to Egypt, the undisputed passage through which is necessary to her as the mistress of India, while the latter will not be displeased to find an additional guarantee for the commercial success of a project for which she found the bulk of the money, and the credit of which is due to her genius and enterprise. But it is clear that the present movement bodes some organic change, and possibly some reconstruction on a large scale. The hope that these may be made without war is commonplace enough, but it is impossible to restrain the expression of it. If the great Powers can agree in regard to the condition of Turkey, and the necessity for taking some active steps in regard to this, these steps may be hewn out by discussion, and war avoided. England, Russia and Austria are the Powers most deeply concerned in the question, and their interests or ambitions are sufficiently well known to each other and the rest of the world.

The *Yang Woo*, which arrived in harbour yesterday from Foochow viâ Southern ports, is one of seventeen vessels built in that Arsenal for the service of the Government of the Province of Fuhkien. She is a steam corvette of some 1,400 tons, and 250—working up to 750—horse-power, equipped with an armament of nine guns and manned by a crew, including engineers and stokers, of 190 men. The *Yang Woo* had already been some years in commission, and in charge of Chinese officers, when the Provincial Government of Fuhkien determined upon fitting her out specially as a training ship for the purpose of exercising the young men, who had been under theoretical instruction in the Arsenal, in practical seamanship with the view to their ultimate appointment to commands. With this intention she was committed to the experienced hands of Captain Tracy, R.N., assisted by two other officers of the British Navy, under whose direction, and in whose charge, she is making her present cruise of instruction. Her Chinese executive comprises Commander Cheong Shing and another officer of the same rank, 8 Lieutenants, 11 Sub-Lieutenants and 8 Midshipmen, and by these officers the duties of the ship and its navigation are performed under the general supervision of their European instructors. They are all conversant with English—which is indeed their official language—and appear to possess both skill in the scientific branches of their profession, and the energy and application which, under the well-directed efforts of their instructors, may be expected to turn them to good account.

The armament of the *Yang Woo* consists of eight seventy-cwt. Whitworth guns, throwing seventy-pound shot, and one seven and a-half ton gun throwing 160 pound shot, both guns with a range of 5,000 yards. Of the former, six are broadside guns and two are respectively bow and stern-chasers. We may add that the muzzle-loading principle is preferred in practice to that of breach-loaders. The small arms are of the Remington pattern.

We understand that the *Yany Woo* may be expected to remain a week or ten days in harbour before resuming her experimental cruise.

It may be presumed that there is some necessity and excuse for the fictions of the law, and on this view the charge against Mr. Middleton at the instance of the Japanese Government of having "assaulted a Japanese policeman, with intent to kill him," is intelligible; though why a charge of this kind should be made, involving, as it does, a statement perfectly well known to be utterly false, we do not exactly know. These fictions should at least be reduced to a minimum in practice, otherwise contempt is brought upon the law itself. The report of the case speaks for itself, though how the policeman got the shot into him it is not easy to see. We cannot quite acquit the sportsmen of a little careless shooting, as they knew they were followed. But there was not only a manifest absence of all intent to assault, the difficulty still is in believing that a man who had been hit should have been so long before he said anything about it.

Not the less, however, does this case prove the necessity for a speedy accommodation of the question. It is highly undesirable that foreigners should appear in this country as breaking laws to which they should, under proper conditions, be made amenable by their own authorities, and so strongly does this view seem to press, that any obstructions which our own course of judicial proceedings or regulations oppose to an agreement being arrived at between the Japanese and ourselves on the question, should, in our opinion, be removed as speedily as possible,

---

It is impossible to refrain from expressing real satisfaction at the conviction of the men Livingstone and Johnstone on Tuesday last. Of their guilt no shadow of doubt could exist after the trial, and, of course, men of this class have pursued their trade for a long time. The chances are that they have drugged, robbed and threatened men by the score—indeed they largely keep themselves alive by manœuvres of this kind. They are among the worst curses of sea-port towns, and it is extremely gratifying to find them sometimes coming within the clutches of the law. We only hope the hard labour imposed is really such, because there is a very general impression abroad that this means very little more than what prisoners at home would call play. There is nothing which men of this class, who have been accustomed to get

Digitized by Google

Original from UNIVERSITY OF CALIFORNIA

their livelihood by the easy process of robbing others, detest so much as hard regular work, and this wholesome bitter added to their existence is calculated to be of infinite service to them and to society.

Our readers will find elsewhere in our columns this week a translation of Dr. Müller's second paper upon Japanese Music referred to a few weeks back. Taken in conjunction with his first paper, it forms the most exhaustive account of the subject which has yet been given to European enquirers. It cost the author the labour of many months, in which he was assisted by one or two of his countrymen who understood the Japanese language better that himself, and it should also be said that he possessed great advantages in pursuing the study. He was very thorough and indefatigable, and possessed an excellent theoretical knowledge of music, as well as a good acquaintance with the physics of the art. He had easy access to the Palace in virtue of his position, and could thus interrogate without difficulty the musicians of the Mikado's band, whose position is an ample guarantee for their knowledge of their art. We believe he left behind him for future publication another paper on the same subject, to which, indeed he refers in the paper before us, and that he purposes to publish a book embodying all his experiences on his return to Gernany. It will be long before any one approaches the subject with equal advantages, personal and local, so that the translations we have given should have a special interest for English readers.

We have received a letter from Mr. Parson on the subject of our notice of his lecture on Honest Scepticism. The letter was not written with a view to publication, but in as much as he thinks that we have not done entire justice to his views, it is due to him to correct our shortcomings—if it should be judged that we made any—and certainly to give him the opportunity of making any comments on our remarks which they may have suggested to him.

He says—

1st. In reference to Mill, "I have no idea that it would be making Mill's statement any stronger to add that any other idea of God more captivating that this comes only from human wishes, or from the teaching of either real or imaginary revelation."

Our reply is: "Certainly not. The part of the passage of Mill's of which we regretted the omission was that which we gave in italics, viz., '*who desires and pays some regard to the happiness of his creatures*'—a passage which distinctly cuts away all justification from Mr. Parson for saying that Mill's idea of the Deity was that of a "malevolent" Being.

Mr. Parson adds, "Further I was only setting forth in Mill's language the difficulty which *all men have* who think. If Mr. Mill had written, beside the dark picture he drew, one strong fact or argument to mitigate our woes, I should not have omitted *that*."

But we plead that the passage we have just quoted above *does* supply this. And, be it remarked, this passage does not reflect Mill's summation of the figures on one side, but his estimate of the result obtained by subtracting the figures on one side from those on the other. And this balance clearly indicates the belief in benevolent desire and intention. Nor should it be forgotten that Mill's protest is directed rather against the ordinary view of the attributes of the Deity, than against the single attribute of Ideal Goodness. His plea is that it is wholly impossible to reconcile the absolute recklessness of the cosmic forces in relation to man, with a Being possessed *both* of Infinite Goodness and Infinite Power, and as he sees evidence that the desire of the Deity is for the good of his creatures, he prefers to imagine that his power is, in some way utterly unknown to us, limited or conditioned. He faces the moral contradictions which beset every form of religion which aims at justifying in a moral point of view the whole government of the world, and, in his own words, he pleads that those who hold his view "are enabled to form a far truer and more consistent conception of Ideal Goodness, than is possible to any one who thinks it necessary to find ideal goodness in an *omnipotent* ruler of the world." He adds: "The power of the Creator once recognised as limited, there is nothing to disprove the supposition that his Goodness is complete, and that the ideally perfect character in whose likeness we should wish to form ourselves and to whose approbation we refer our actions, may have a real existence in a Being to whom we owe all such good as we enjoy." Now, if these passages convey the idea of a 'malevolent' Being, we are ignorant of the meaning of words. Our plea last week was that in using this word as reflecting Mill's view of the Deity, Mr. Parson was utterly wrong, and his error arose from quoting one passage from Mill's works without taking the other passages which are the necessary complements to it. Great thinkers are the world's true leaders. Mill was one of these, and the greatest possible care should always be taken to represent the views of such men with the most scrupulous accuracy.

Mr. Parson says—"I omitted to reconcile inexorable nature with the beautiful character of a loving father, because I know of no way of doing so." We did not reproach him for this, we only stated the contradiction as the perplexity of perplexities; and to our remark "This is the real trial of faith," he says "Certainly." There can be no doubt that it is so.

2nd.—In regard to Descartes, he thinks we misunderstood him. He pleads that in his opening sentences, (which we were just too late to hear) he went back to the original meaning of the word scepticism (*σκεπτομαι*) which he did not use in any offensive sense. Hence he intended his remarks about Descartes to be commendatory rather than reproachful, and closed his sentence with these words—"It would be well if all the disciples of the Cartesian school and all.....would walk after the same example." Certainly, this escaped us, or we should have conveyed a different impression of what Mr. Parson said.

3rd.—In regard to Darwin, Mr. Parson transcribes a passage from his lecture which runs as follows "We need not let any theories of his unsettle faith until science is agreed concerning his theories. Wallace, Mivart and others are not satisfied. The world is not yet certain of the true place of these facts, nor of the real value of these theories." "If Darwin is true my faith remains. My sympathies are all with him. I count him an honest sceptic in the good sense of the term. You intimate that he is the Newton of Natural History. I suggested that he might be the John the Baptist of the true explanation."

We acknowledge that Mr. Parson did not withhold his homage from Darwin, but said that he would not look the position fairly in the face. Mr. Parson may retain his faith in much even after he is convinced that Darwin is right, as do we. But the issue, as we said, is between evolution and special creation, and he must accept one or the other with the consequences of the choice. To suppose that it is possible to accept Darwinism, and retain the conventional view of man's origin, with its associations and the theological doctrines which adhere to them, is utterly idle. Either it is true that any two angles of a triangle are together greater than a right angle, or it is not true; and if it is the one it cannot be the other.

Miss Jenny Claus give her Second Concert on Thursday evening at the Machigaisho, as before. The attendance was larger than at her previous performance, a fact attributable alike to the excellent impression she made on that occasion, and to a programme which presented two or three specially attractive features. The first of these was the *Andante* and final *Allegro molto vivace* from Mendelssohn's great and only violin concerto, which he dedicated to his friend David of Leipzig, and with this Miss Claus opened the concert. The movement is connected with that which precedes it—and which cannot be played with effect apart from an orchestra—by a note held over from its last bar (by the oboe we rather think) and opens in this original manner with a harmonic progression leading into the natural key. A few bars serve to introduce the solo instrument, and then, from out all the storm and turmoil of the conclusion of the previous movement, rises a melody so calm, so pure and lofty, that it would not misbecome the lips of an angel with a message

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

from heaven. The whole range of music presents nothing finer than this melody—this is much to say, but it may be affirmed with confidence. The ambition of all great players is to interpret it worthily, though, to our mind, one alone has succeeded in doing so. To hear Joachim play this movement is to enjoy possibly the greatest pleasure which music, and we had well nigh said earth, affords, and when we state that Miss Claus has moulded her own playing of it on that of its greatest interpreter, and follows in his footsteps, we have said all that she, as a musician, and well knowing what she does know, will expect from us. This is ground upon which none of the shallow conventionalities of ordinary criticism or laudation may intrude. Here we must take our shoes from off our feet, and acknowledge the presence, it may be, of something of that spirit which "touched Isaiah's hallowed lips with fire." We do not know how near we may be in such music to some link between ourselves and the Author of all order and beauty. Who shall say that the fountain of inspiration has dried up, when, from some source, such thoughts still flow? It is no affectation of reverence which bends before these manifestations of man's powers, and seems, or hopes, to discover in them something of not altogether earthly beauty.

A short *Allegretto* links this movement again to the *Finale*, which is worthy of its predecessors, though, of course, of an altogether different character. Miss Claus played it with great vigour and fire, and entirely confirmed the favourable impression of her playing made at her first concert.

A song by Giordani followed this—a beautiful specimen of true Italian art, and admirably sung by the gentleman to whom we referred with so much satisfaction last week.

M. Rekel then played Beethoven's *Sonata Pathetique*, but, we must confess, not greatly to our mind. He gave the fine dramatic opening with excellent effect and power, but where was the pathos and tenderness, the gloom and deep emotion of the movement which succeeds this? Why did he take the *Adagio* so fast? It can hardly be played too slowly, and all its beauty vanished on this occasion. Yet, surely, it suggests, almost compels, its own time. At any other, it means little or nothing. The *Rondo* was better, yet divested of too much of the feeling which belongs to it. Music seems to us the most perfect language of the emotions, and if these are removed from it, it is mere empty and meaningless sound.—The first part of the concert was closed by Miss Claus with an admirable performance of one of Brahms' Ungarische Tänze, and an arrangement by Leotard of a Recitative and Romance from Tannhäuser, "Du, mein holder Abend-stern." The Recitative exhibits Waguer in what we cannot help calling an insolently defiant attitude towards the old forms of musical art nor, for our life, can we conceive what he would be at in this confused progression of sounds. But when his genius sweeps away his theories, as it does in the Romance, there is a stately nobility in his melody which it is impossible to admire too much. The repetition of the air is given by Leotard to the violin in octaves, and puts a great strain upon the powers of the player. But Miss Claus gave them with rare accuracy and that fine, rich, even tone, without which so broad a melody would have produced no effect.

The second part opened with the *adagio* and *presto finale* of Haydn's Quartett No. 45, in which Miss Claus was supported by amateurs. She led it in the true spirit of a musician, giving to the melody of the *adagio* that warmth of affection with which Haydn has inspired all his devotees, and to the *presto* the sparkling grace which it demands. This was followed by Gounod's 'Nazareth'—a fine song, but not one of those which never tire. Then came a piece of M. Rekel's, *Chant du Matelot*, and the concert was closed by Miss Claus with a Ballad and Polonaise of Vieuxtemps. In this Miss Claus made the great effect of the evening. She played it splendidly—nothing less—and dashed impetuously through all the prodigious difficulties of the Polonaise with a certainty which equally astonished and delighted her audience.

It is no disparagement to the courtesy of the Governor of Kanagawa to say that the room in which the Concert was held is about the worst in the world. Our first impression of i was more favourable, but we have since become convinced that for ugliness, ill proportion, bad ventilation and acoustical defect, it is as bad as bad can be. Unless the gas is kept low, the atmosphere becomes unbearable in half an hour, and the sounds produced by musical instruments, instead of floating in proper relation to each other through the room, become confused and turbid, and produce no pleasure. It is really lamentable to find that so good an opportunity for building a fine room has been muddled away so miserably.

We believe Miss Claus proposes giving a Concert in Yedo previous to her departure for America.

The *Hioron Shimbun* is informed that the Government is adding largely to the effective strength of the forces by fresh levies. This augmentation, although made ostensibly with the view of providing for an Expedition to Corea, is, it affirms, virtually intended to overawe the malcontents at home. It adds that as there is no general fitted to command the troops, Enomoto has been recalled from Russia for this purpose.

The same journal remarks that the newspapers which are presumed to be in the interest of the Government do not sell readily, while, on the other hand, those known to be in opposition to the Ministerial policy receive large support from the Public. It adds that the Minister for Public Works is acutely sensitive to the want of confidence shown in the present administration.

The *Hioron Shimbun* has heard that a Japanese resident in Shanghai is engaged upon a work on the subject of the Press Laws of this country, which he intends to publish under a foreigner's name.

According to the *Nichi Nichi Shimbun* the Government has received intelligence from the Special Commissioner in Corea to the effect that no foreign ambassador can be admitted to the capital. It is thought inexpedient that Kuroda should leave pending the preliminary negotiations of the Japanese envoy.

The *Akebono Shimbun* corrects its statement that Kuroda, the special envoy to Corea, would receive 30,000 *yen*. The sum allotted is 70,000.

The gardens of Fukiage and Hamagoten are now open to the Public.

We hear that communication is interrupted on the Shanghai and Nagasaki cable.

The case of Roper *versus* the Mitsu Bishi Mail Steam-ship Company was partly heard this morning in the Judicial Court of Kanagawa. The hearing will be resumed on Monday next, 29th instant.

Fifty houses were destroyed by a fire in Osaka yesterday.

From the "Japan Mail Daily Advertiser."

A Dinner was given yesterday evening at the Oriental Hotel by a number of the German Residents, to Mr. E. Zappe on the occasion of his approaching departure for Europe. Mr. Zappe's health was proposed by Mr. E. Schmid, and drunk with great cordiality by the assembled guests. A succession of toasts, the responses to them, and convivial or national songs enlivened the evening.

Yesterday afternoon, at 4. p.m., a fire broke out at Ota Machi, near the Basha Machi, in Benten. The Japanese engines were quickly on the spot, the "Vounteer" being the first of the foreign brigades' engines to arrive, and the fire, which was confined to three native dwelling-houses, was promptly extinguished by their assistance. The locality of the fire was nearly the same as that of the great conflagration some two years since. Attention may be directed to the absence of

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

fitting arrangements for ensuring the presence of the foreign engines at fires. A large one may have been observed yesterday, dragged toilfully on by two Europeans and a Japanese, while many who should have helped to draw it to its scene of action pressed onwards.

Another fire took place this morning at about 4 a.m. at Hagoromocho, Benten, in the vicinity of the Sanomatz Theatre, which destroyed ten houses, two or three of these tea houses. The fire which lasted about one hour, is attributed to incendiarism.

The Prime Minister has notified that the farewell presents to foreigners whose engagements have expired will henceforth be provided at the cost of the Departments in which they have served. It has hitherto been customary to furnish these at the charge of the Imperial privy-purse.

A diamond of seven pounds (!) weight has, if we may trust the *Saifu Shimbun*, been found in Kamaishi mura in Iwade *Ken*. If it be only black its presence with be all the more welcome, as it is there, we believe, that the Government purposes to work the large deposists of iron-stone.

The *Akebono Shimbun* in reference to a farewell dinner given to Kuroda, Ambassador to Corea, by the officials of the Kaitakushi, the department over which he has hitherto presided, adds that he has received 30,000 *yen* (? to provide for the expenses of outfit) and will leave on his mission on the 25th instant.

A Japanese newspaper says that Kiurinsha, a Corean who has recently become a Russsian subject, will accompany the Japanese envoy to Corea.

The *Hochi Shimbun* notices that the large assemblage of Satsuma *samurai*, present at Kiôtô some weeks since, has dispersed since the retirement from the Cabinet of Shimadzu Saburô.

The *Nichi Nichi Shimbun* publishes the following rules for the presentation of memorials, which have been instituted by the Genro-in.

1.—Memorials which do not bear upon questions of legislation will not received.

2.—All memorials must bear the name, age, place of birth, rank, occupation and residence of the writer, together with his seal. A *précis* of the document, which must be sent in duplicate, should be endorsed upon the cover.

3.—The common style of writing must be used, and the definitions of any foreign words employed must be given.

4.—The memorials being presented with a view to the national benefit, no acknowledgment will be made to the senders.

The *Hochi Shimbun* hears that orders have been sent to France for the purchase of thirty fire engines for use in Yedo. They are to be light in construction, and of small size, in order that they may be easy of draught. They will be placed in an accessible position in each of the divisional police stations of Yedo.

Mr. E. Zappe, Consul for the German Empire, and Mr. J Mammelsdorff, late Manager of the Deutsche Bank in this settlement, sailed for Europe in the M. M. steamer *Volga*, this morning.

The Mikado attended the Daijokuan on Sunday last, 19th instant, and on his return witnessed horse racing in the Fukiage Gardens of the Imperial Palace.

The Department of Agriculture has, according to the *Akebono Shimbun*, decided upon establishing a sheep farm at Koganegahara. This is, we presume, one of the experimental breeding farms with which Major Ap Jones has been recently charged.

Okubo Ichio, Governor of the Tokio *Fu*, has been appointed *Shoyû* of the Department of Public Worship.

We hear that Mitsui, the celebrated banker, has established an Institution in the Capital for the education and support of five hundred poor children.

The paper-hunt yesterday over a somewhat short and easy course was won by Mr. Mollison on *Crusader*. Mr. Jeyes, riding *Tim Whiffler*, was second. If the circumstances be favourable the next paper-hunt will take place on Christmas Day.

The hulk *Ellen Hood* was sold yesterday at auction by Messrs Fletcher & Co. The Mitsu Bishi Company is understood to be the purchaser.

We take the following account of a successful robbery at Mr. Brooke's house from the *Japan Herald*:—

One of the shutters of the dining room was opened, as was also the glass window by tampering with the fastenings, which were evidently raised from the outside by the insertion of some implement, as the paint on the wood-work was much scratched all over. The robbery was not discovered till about six o'clock when on a child attempting to enter the room, he found the door resisted his effort, but on using some force it opened, and it was then found that chairs had been placed against it on the inside in such a manner that had any member of the household been disturbed by the burglars' noise, and had gone to ascertain the cause, the thieves would have had ample time to have escaped by the open window before the door could have been opened. Altogether the robbery seems to have been well planned and executed. The following is a list of all that has been missed up to the present time: A large dining room clock in heavy marble stand; 7 large silver table spoons, 12 dessert electro-plated do, 18 large dinner forks electro-plated, 12 small do, 1 set of pickle castors in electro-plated stand a hearth rug, 1 table cloth. This last article was probably used to wrap up the other stolen property. From the appearance, of the room the thieves must have spent a considerable time in getting all together, and carrying off the articles above enumerated, as it was evident a thorough search for portable and valuable articles had been made by them. The floor was strewed with matches that had been ignited.

We learn from Peking correspondence that the Chinese Government shows a disposition to sustain the cause of Corea in the present situation with Japan. It is hoped, however, that Corea will be induced to offer a satisfactory *amende* and that hositilities may be avoided.

An arrangement which is likely to influence the Eastern Question very materially is announced by a telegram which reaches us viâ Shanghai this morning, to the effect that the British Government has purchased the interest in the Suez Canal of His Highness the Khedive for four millions sterling. This represents, we believe, the value of seven-sixteenths of the share capital of the Canal, worth, or presumed to be worth some 150 millions of francs.

The *Nichi Nichi Shimbun* publishes a telegram from San Francisco announcing the arrival there, on the 14th instant, of the Japanese man-of-war *Tsukuba ken* which sailed hence on the 6th November.

It is rumoured in Yedo, we are unable to say with what foundation, that the Prime Minister, Sanjo, and Kido have expressed a wish to be relieved from the cares of office.

Several serious fires are reported to have occurred in Yedo on Tuesday; one in Sakai chô by which 106 houses were burnt and another in Saruya chô which caused the destruction of thirty.

Intelligence has been received of some disturbances which have taken place in Shikoku, but no trustworthy particulars are as yet published in Japanese newspapers.

Shimadzu Saburô left yesterday for the South in the Mitsu Bishi Company's steamer *Nagoya Maru*.

IMPERIAL GOVERNMENT RAILWAYS.

YOKOHAMA STATION.

THE SITUATION.

THE best friends of the present government of this Empire are forced to admit that at the present moment it is somewhat under a cloud. In all the expressions of native opinion which we have impartially laid before our readers for months past there is perceptible a tone of disappointment, not to say of dissatisfaction, either with the doings of the administration, or with the existing state of the national affairs. It is as palpable in the memorials presented to the throne by the Princes of the Blood and the highest Ministers of State, as it is in the veiled sarcasms of the writers of the opposition press. As to the cause or causes to which the discontent is due, the widest difference of opinion prevails, but, that discontent does exist, no native politician for a moment attempts to deny. In spite of all the efforts made to confine state secrets to official circles, the fact that there are dissensions in the Cabinet is talked of in the streets.

The conflict in the administration, however, is not a cause, but, on the contrary, is for the most part a consequence of the conflicting interests at work within the nation. The cardinal problem of Japanese statesmanship is, and, for a long time yet to come must continue to be, the position, we had almost said the privileges, to be accorded to the *samurai*. There is the first and the widest division in the national corporeity—a privileged class numbering over three quarters of a million, brought up in feudal and separatist traditions, filled with a pride of birth so intense as to be scarcely distinguishable from the Hindoo feeling of caste, and heartily despising all industrial and productive pursuits, on the one side, and the thirty odd toiling millions, farmers, artificers and traders, on the first-fruits of whose labours the former have for generations subsisted, on the other. So long as Japan remained simply a geographical expression signifying a group of large Islands off the North-east coast of China, distributed amongst a number of separate and semi-independent chieftains, or, as the Jesuit writers were wont to style them, Kings, this division of classes might have continued for an indefinite reach of time. But as soon as it became necessary that a united Japanese Empire should take a place in the comity of nations, and play its part in the onward movement of the modern world, this vicious separation of classes was doomed to disappear and it is disappearing ; slowly, it is true, like all of Nature's great evolutionary processes, but surely and irreversibly as the march of time. It was scarcely in human nature that the *samurai* should be quick to perceive their coming extinction as a privileged caste, or that having perceived the approach of danger they should not try their utmost to avert it. The discussions now witnessed in the Cabinet are the premonitory spasms of the dissolution of a great social wrong.

For the cause of the people is bound to triumph in the end. A Formosan or a Corean expedition may stave off the inevitable for a little space, but the breathing time thus given to privilege will be short, and the difficulty will have to be grappled with again, under much less advantageous conditions to the nation than at present. Low as is the Exchequer now, it will be lower still at the close of even a victorious war. Heavy as is the burden being borne by the peasantry, it will be grievously augmented to meet the expense of a contest in the bringing on of which they have had neither voice nor interest. That warfare even with a semi-barbarous state is no cheap pastime now-a-days, let our own expedition to Abyssinia, with its cost of ten millions sterling, testify. What benefit material or moral, has the Japanese people, or even the Japanese Government, reaped from its raid on Formosa? Is the problem of the privileges of the *samurai* less difficult to deal with now than it was before that bootless enterprise was taken in hand? Have the tax-paying millions been reconciled to its unknown but not unfelt cost by the establishing of the glorious fact that a Japanese force, with the help of the advice of American adventurers, can put to the rout half its own number of naked cannibals? And are they so enamoured of that result as to be prepared cheerfully to defray the expense of a similar performance on the Corean peninsula? The threatened war with Corea, it is to be feared, will prove a sorry nostrum with which to attempt again the healing of a deep-seated internal sore.

On the top of the ailment we have thus indicated is supervened another, more strictly political in its nature, and admitting, probably, on that account, of an easier and speedier cure. The body politic is sick from the virus of local separatism. The spirit of narrow sectional jealousy is as rampant as of yore amongst the members of the more ancient feudal clans, and notably in the three great clans which took the leading part in the revolution which restored his constitutional powers to the Sovereign and structural unity to the state. But the clans of Satsuma, Choshiu and Tosa do not constitute the Japanese nation, and still less does the Satsuma clan alone. That they performed great national services in the van of the movement that overthrew the Shogunate, is admitted ; let it at the same time be admitted that they have enjoyed their full reward. The honours and emoluments of office have been dealt out to them with no niggard hand, and so long as their policy was in unison with the sentiments and the interests of the people they had to govern, it was not unreasonable that it should be so. But in the seven years that have elapsed since they grasped the reins of power, a great change has come over the spirit of the people's dream ; a new force has been introduced the working of which, however they may fight against it, they are powerless to curb. The new sense of national unity has spread and is daily further spreading, from the governing caste to the governed masses. Farmers, merchants, mechanics, who barely a decade ago, uttered the word Government with bated breath and crouched low in the dust whenever a petty dignitary passed, are now heard to descant on the duty of popular education, and to express new-fangled notions as to the co-ordination of representation with taxation.

And this last idea, which has taken fast hold on the popular mind, goes, we think, to the root of the matter. The liberal party in the Cabinet are being overborne by the reactionists, and to carry on the good work they have hitherto conducted, it is necessary that they should show more confidence in the people whose cause they are maintaining. We have always been opposed to the idea that this country was ripe for the introduction of a parliamentary regime, pure and simple. But events have forced on us the conviction that the time has come for allowing the tax-paying body to make known their wishes to the holders of power, through some recognized channel. Memorials to the throne from leading politicians are all very well in their way ; the unfortunate thing about them is that we never can tell how far they are embodiments of a really felt national want, and how far merely the expression of individual and possibly self-interested opinion. A vent for public argument is wanted somewhere. The cardinal article of the new constitution, the submission of Government measures to

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

general discussion, solemnly sworn to by the Emperor on his restoration to power, has been for some time a dead letter. The *Sa-in*, the consultative wing of the Council of State, is no more ; and its exotic counterfeit, the *Genrô-In*, is a still-born abortion. It would avail but little to unmuzzle the undisciplined and irresponsible forces of the Press. What is wanted is an assembly of some sort in which the voice of the people can be heard. This alone will give to the small band of liberal statesmen who are working for the common weal, the strength which at the present hour they need so much, to withstand the clamour of privilege and the faction of separatism. The solidarity of the nation is hardly yet an accomplished work ; and what still remains to be done towards it can, we are convinced, be effected solely by the further elevation of the people, and will only be temporarily, though deplorably, retarded, by rushing into an unnecessary war.

SPIRIT OF THE JAPANESE PRESS.

The Creation of New Provincial Courts.

(Nichi Nichi Shimbun.)

Those who do heroic deeds in time of war naturally acquire great influence, and thus the *samurai* of Satsuma, Choshiu and Joshiu became very powerful after the Revolution, and so great was their weight in the administration that there were no Japanese who did not know and fear them. But as a change gradually came over the spirit of affairs, and as the heroism so valuable in time of war is but of slight service in time of peace, the influence, though perhaps not the power, of these clans has somewhat diminished. If we assume the total power of Japan to be represented by one hundred pounds, fifty pounds would belong to Satsuma, twenty-three to Choshiu, and seventeen to Joshiu, while the remaining ten would be divided among the other clans throughout the Empire.

Now the Daijokwan has decided upon establishing a judicial court in each of the following *Ken*, Kagoshima (Satsuma), Yamaguchi, (Choshiu), and Kochi (Joshiu). Eto Shimpei, the former Minister of Justice, was the first who urged the establishment of a *Saibansho* in each of the *Fu* and *Ken*. But he was opposed by the Okurasho, probably on the ground of the great expense the step would entail, and, finally, only one or two of these courts were constituted. Since the establishment of the four *Saibansho* in different parts of the country, the Governors of those places also held the office of judges. It seems as if the project of creating a *Saibansho* in each province has been dropped, but now that it is said that one of these courts is to be established in each of these three famous *Ken*, people cannot refrain from talking on the subject.

Some imagine that the Choshiu *shidzoku* are not in a very contented state, that they maintain a haughty attitude towards the Government, and that they are inclined to give trouble. The Kochi *ken* is said to present the same appearance, while nothing certain can be inferred in regard to the state of feeling in the Kagoshima *ken*. It seems probable that *Saibansho* are to be established in those places with the object of sending some influential men thither as judges to ascertain the condition of public feeling there. Others say that the *shidzoku* of the Yamaguchi and Kochi *kens*, presuming on their heroice deeds during the war, behave without circumspection and create unnecessary trouble to the *Kencho* and the officials. Thus the courts are to be established in these places to secure a better observance of the laws and to diminish the power of the *Shidzoku*. It is not to be inferred from this that there are any impending disturbances. But as the Kogoshima *ken* has not altered in the least since it was a *Han*, the laws of the nation are not observed in it, and a *Saibansho* is to be created there in order that a perfect obedience to law may be secured and equal justice be dispensed to all men. Some again say that the authorities of the Yamaguchi and Kochi *kens* are thwarted by the *samurai*, and that the Kagoshima *ken* remains exactly as it was in the times of the *daimios*. It is rumoured that the *ken* pays nothing towards the Imperial revenues, and makes no return to the Government of its expenditures. This is something very hard to be understood, and as there is no reason why the Government should be the exclusive property of those *kens*, it is natural that a *Saibansho* should be created in them in order to secure a better observance of the laws and a more equal dispensation of justice to all men. There is still much partiality in the administration of affairs. We cannot speak for certain about Yamaguchi and Kochi. But in regard to Kagoshima, although the feudal system has been abolished, it remains almost like a separate nation. From the Governor downwards to the humblest messenger or gate-keeper, all the officials are Satsuma men, and people naturally talk about so anomalous a condition of affairs. With these facts in view, the Cabinet has decided on the establishment of a *Saibansho*—an office which will have no connection with the *ken*—to show the people that the Kagoshima *ken* is to be treated precisely like any other. It is impossible to give all the rumours and surmises which are afloat upon this subject. None among them seem to us very credible, so that we must wait and observe the actual course of proceedings.

This question may not seem to be one of very great importance. But, in reality, it is so. If the judges appointed to these *ken* are sound and able men, they may do a great deal of good, though, if they are weak, the *Saibansho* will be wholly useless. We should like to go a step further in the treatment of the question, but this might lead us within the range of the Press-laws, and would extend the limits of our article unduly. A little reflection however, on the part of our readers will doubtless enable them to discover our meaning.

We trust that good judges will be sent to fill these important posts, although we have heard it said that there are few, if any, able judges in the country. The Sakata *ken*, for instance, has always had bad judges, until Numa, of the *Genroin*, was despatched thither. There are, however, many judges now, and no doubt the Government will make appropriate appointments. We entreat those who may receive them to labour with all their energies, and if any credit is due to them we shall not fail to mention it in these columns. It is partiality which opposes the great bar to the administration of even justice in the East, and we may say at once that should the judges be of the same *ken* as that in which these *Saibansho* are to be established, these important offices, which have so many grave duties to perform, will prove mere ornaments. We do not, however, think this will prove the case.

The Drain of Specie.

(Choya Shimbun.)

We cannot avoid feeling that a process is at this moment in operation which in some three years time, will probably put an end to Japan as an independent nation. The impending danger is as if a weight of 3,000 pounds were suspended above our heads by a slight cord. Above us the blue sky and glorious sun are obscured from our view by black and murky clouds. The earth is, as it were, burnt up and devastated ; its flowers, meadows and pleasant waving fields are swept from off its surface and all is melancholy and despair. We feel profoundly miserable. We figure to ourselves our descendants enslaved by the blue-eyed and light-haired races, and our land—like Hindostan or Poland—partitioned among the European powers—The thought that our Empire—an Empire which has endured for 3,000 years of independence in the East—should be brought to its present cruel extremity has rendered me miserable and sleepless, and I can hardly refrain from shedding tears. There are many who are ignorant of the sad position of our country, but I am satisfied that when they have heard my story, they too will be unable to contain their grief.

Writers who have been in the habit of addressing themselves to the discussion of questions of financial administration have touched more or less frequently upon the drain of specie from Japan of late years, and, though we ourselves have occasionally referred to the subject, our ignorance of the finance operations of our Treasury has

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

prevented us from entering upon it with such information as would enable us to form a safe and accurate conclusion. But a letter which we received last night, without either the writer's name or address, furnishes us with many important details and acquaints us with the value of our past exports and of those which may in all probability be expected to take place in future years. In view of its great importance we propose to present this information to our readers succinctly :—

No particulars are available as to the first year of Meiji (1868). But in the second and third years (1869-1870) the value of our imports exceeded our exports by *Yen* 30,432,123. In these years 101 chests of bullion of unknown value were exported. In the 4th and 5th years (1870-1872) the imports exceeded the exports by *yen* 10,030,743 and 96 chests of bullion were exported. In the 6th year (1873) *yen* 8,036,154 and 36 chests of bullion were sent away, and in the 7th year (1874) the imports exceeded the exports by the sum of *yen* 12,952,741. In the eighth, the present year, from January to May, the export of bullion was *yen* 8,610,205 in excess of the imports, or an average of *yen* 1,722,041 per month. The value of the new coinage in this country in June last was 42,500,000 *yen*, and we may assume the existence also of 13,000,000 nominally of the old coinage, of an actual value of 15,624,700 *yen*, or, adding new and old together, an aggregate of 58,138,050 *yen*.

Now we will assume a monthly export from Japan of 1,722,041 *yen*. In this case one million *yen* is all that will remain in the country after the lapse of thirty-three months. Again assuming 204,940 *yen* to be coined monthly (that being the amount coined in the month of May) we shall possess a sum of 7,922,660 *yen* in March of the 11th year of Meiji (1878.) Now if we continue to export specie at the rate of 1,722,041 *yen* this would not last us until August of that year, while at the same time we have the interest of our foreign debts to defray.

According to this estimate we should have no specie left in three years time, nothing but a paper currency remaining. Now paper without a metallic basis would be worthless.

It behoves us to be very careful.

In a future issue we shall hope to explain a means of averting the danger with which we are at present threatened.

Corea.

(Choya Shinbun.)

One of the members of our staff went yesterday to a tea-house near Shimbashi, where he met several young men with the appearance of students, drinking *saké*, and carrying on a conversation which he overheard. One of the number said, "I see that Mr. Kuroda is going over to Corea with troops and ships of war, and it looks as if we should have war." He added that he would like to accompany the Expedition, and asked whether any of the party would not like to go also. "You do not seem to be acquainted with what is going on behind the scenes," said an intelligent looking member of the party. "These proceedings have been taken to quiet those who are clamorous for war. Mr. Kuroda is not going directly to Corea, but down to Nagasaki or thereabouts, until he who urged the women's rights question returns from his mission in China, after hearing the result of which Mr. Kuroda will proceed to Corea simply with a view to quiet people, and after making some agreement with the Coreans suitable to the exigency of the case, he will, in all probability, let the curtain drop. There is no money with which to make war on the Coreans, but it was felt that unless something was done it would be impossible to tranquillize a certain section of the people, and the plan I have referred to was arrived at by the whole Cabinet after putting their brains and energies into desperate action. The chiefs of the naval department, it is said, made no objection to the men-of-war being sent over, but utterly refused to allow the marines to go."

Our Associate did not know how far all this might be true, but the conversation was interrupted by the entrance of some *geishas* (singing girls), who bade the visitors good evening, and the strains of the *samisen* which followed immediately, put an end to the conversation.

Preparations for War—A False Scent.

(Choya Shimbun.)

From the fact of Kuroda's appointment to the special embassy to Corea the *Nichi Nichi* and *Hochi Shimbun* would seem to have concluded that war with that country is now imminent. The *Akebono* has hitherto acquiesced in the arguments of these newspapers, but of late, possibly from the fact of its frequent change of editor, it has adopted a new line of reasoning, by which it attempts to shew that as war is inevitable they do but mislead the nation who seek to avert it.

This declamation is very well, no doubt, but to me I confess it appears somewhat ridiculous, and convinces me that the newspapers see only the ostensible preparations of the Government, while its true motives are hid from them. It may be well, as the *Akebono* suggests, that the eyes and minds of the entire nation should be turned to Corea, but this we imagine would be in no small degree perplexing to the Government. Were the question simply this, that the Coreans may purchase peace by agreeing to our terms, or provoke us to war by their refusal to give us satisfaction, it might no doubt be easily determined. But the situation is otherwise. The Government has merely assumed the Corean expedition to mask its preparations for other purposes, and the part is one not easily played. Is it not therefore absurd that the *Nichi Nichi* and *Hochi Shimbun* should argue as though a war were closely imminent? As to the *Akebono Shimbun* I cannot help feeling that its animating tirades in favour of the forthcoming expedition must tend to embarass the action of the Ministry in no small degree, and probably render nugatory much that they have anxiously planned. I believe that the tea-house gossip related by one of your reporters is entirely trustworthy.

The Same.

(Akebono Shimbun.)

An expedition to Corea has for a long time been impressed upon the minds of the officials and prominent men of the country, and this is not to be effaced by mere words. It has now been decided that Mr. Kuroda is to be despatched to Corea as a special envoy, and should the Coreans not accede to our demands, we do not think that he could return without making some demonstration, even if indeed the Government should desire this. Moreover, should the Coreans act in an insulting manner, our Envoy could hardly do less than convert himself into a Commander-in-chief and commit an act of war. In this case, would those who oppose a war with Corea maintain their views and cause dissension between the Government and its people? Which would be the most patriotic course? It is unnecessary for us to say.

But there is one point on which we are desirous of asking information from the officials, viz.: If the Coreans do not accede to our demands and a war breaks out, what does the Government intend to do? Does it intend that our troops shall overrun the whole Corean territory and force its inhabitants to hoist a white flag, and, after spending five millions of *yen*, make the Coreans pay an indemnity of five hundred thousand taels? If so, we have no desire to see anything of the kind. If we beat Corea, we think that by all means it should be added to our dominions, and if we are unable to do this, those are in our opinion in the right who contend against war, for such a war can prove of no benefit to us. On the other hand, were Corea made a part of our dominions, we should have a great increase of our foreign intercourse. On the West we should be contiguous to the frontier of China, and on the North with that of Russia, and this would tend to make our officials more alert. For if they should not then remain vigilantly on their guard, but should consider their own interests and not those of their country, we should not only not be able to hold Corea, but should bring the Empire itself into danger. It were well then that the officials should abandon all mere self-seeking. During the eighteenth century France was involved both in external and internal dif-

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

ficulties, from which Napoleon extricated it by uniting the power of the people to his own, and if our Government acted in like manner, the same effect would be produced. Let us suppose for a moment that Corea is conquered and made part of our dominions, how could we best deal with it? Certainly we should send all the *shidzoku* there, and make Corea the country where they were forced to support themselves, and Corea would then form a Western barrier to us. But we must bear in mind that no ordinary man could carry this through. It demands the services of a Napoleon. Such a man there is in the South-west of Japan,* and without his aid we should be helpless.

NOTES UPON JAPANESE MUSIC.*

No. II.

The hope expressed by me in my first essay on this subject, that I might succeed in obtaining further information on Japanese-Chinese Music has, I am glad to say, been realised, although my knowledge is still very far from being complete. I have also formed the acquaintance of several musicians, possessing both a practical and theoretical knowledge of the modern Japanese and Chinese schools, and have moreover, in my position as Physician to His Majesty the Emperor, obtained an opportunity of studying the music performed and the instruments used by His Majesty's private band. Lastly I have availed myself of a short excursion to China to procure a complete collection of the musical instruments in use in that country.

Before proceeding further, however, I propose to offer a few observations with the view of rectifying some portions of my first article and of rendering them more complete. I have also to add that I have had an opportunity of examining another form of tuning-fork, resembling outwardly Fig. XXVII on Table VIII, but consisting of a tongued-pipe like Fig. XXV on Table IX. It corresponded in sound exactly with the latter, but was an octave deeper.

The original form of the tuning-fork is, however, that depicted in Fig. XXVII without tongues and the length of the tube corresponds mathematically with it in length and weight. It is named *ritzu-kwan* (sound-pipe). That depicted in table VII Fig. XXII is named *shi-kedzu* (four holes) and those shown on Table VII Fig. XXIV and Table IX Figs. XXV and XXVI are styled *tzio-shifuye* (or tuning flute). The *ritzu-kwan* preserved as the normal tuning fork for some 1,000 years in Kioto was made in the temple of Daitzudji. An exact description of it has been published. A still older specimen of the *ritzu-kwan* is in the possession of the *Gagaku*, or Mikado's private band, which is carefully preserved in silk and a small outer case. It is never used except as a standard of comparison for other tuning-forks, and is rather regarded as a relique. The faded condition of the silk strings which hold the pipes together alone exhibit the effects of time; the pipes themselves are well preserved having only been twice renewed in the course of many centuries. The fact that they have remained so long in the careful hands of the musicians of the band fully accounts for their excellent condition. I took the opportunity of comparing a tuning-fork in my possession, and which is more than 160 years old, with it, and as I withdrew mine from its cover, a musician present at once recognised it with evident pleasure as having been made by his ancestor Ohata Hirotame, whose name he still bore,† eight centuries ago. It was found to agree exactly with the normal tuning-fork, and on being, compared with a new French one its lowest note was *d*, the tone of the eighth pipe being *a* according to the normal tuning of the Mikado's band, although other tuning-forks used for secular purposes differ from it by a full tone.

The tones depicted on the diagram Fig XXI, Table VII, must be corrected in the manner shewn in Table X. The names of the months will be found to vary somewhat, as the Japanese Calendar differs essentially from ours.‡ I have further observed that the figure named in Table VII does not correspond with the expression "right and left around" in the text. In my original drawing the word "December" was placed underneath, while in the woodcut it is engraved above. This also has been rectified on Table X. In reading "right and left around" the point nearest to the reader must be taken as that of departure.

The mode of tuning the thirteen-stringed *koto* given on page 17 in the 6th volume is not customary in the Imperial band. They employ as fundamental tones December§ (*d*), February (*e*), May (*g*), July (*a*), and September (*h*). The two first are however the most common, and the principal note is always on the second string. In order to indicate the key the word *tsochi* (tuning) is placed behind it. The following is the order of the notes:—

	In *Koscho Tsochi* (December) d	In *Taisoku Tsochi* (February) e
1st String	... (December) *d'* ...	... September *h'*
2nd „	... December *d'* ...	... February *e'*
3rd „	... June *a* (lesser octave)	April *ges'* ¶
4th „	... August *h* „ „	... July *a'*
5th „	... December *d'* ...	... September *h'*
6th „	... February *e'*	... November *des''*
7th „	... April *ges'*	... February *e''*
8th „	... July *a'*	... April *ges''*
9th „	... October *c''*	... July *a''*
10th „	... December *d''* ...	... September *h''*
11th „	... February *e''* ...	... November *des'''*
12th „	... April *ges''*	... February *e'''*
13th „	... July *a''*	... April *ges'''*

I have substituted *des* and *ges* for *cis* and *fis* to facilitate comparison with the diagram.

The *wanggong*, or six-stringed Japanese *Koto*, is tuned as follows by the band:

Reckoning from the player

The 1st string=d″
2nd „ =a′
3rd „ =d′ This note is first tuned with the tuning fork and all others in accordance with it.
4th string=h′
5th „ =g′
6th „ =e′

If another fundamental note be substituted for the third string the note in the corresponding intervals must be tuned accordingly, and the key named after the principal note on the third string.

All the strings of the *wang-gong* were originally of like substance and formation as in the *sono-koto*.

There are other modes of tuning used, not however recognised by the Imperial band, which would appear to be for the most part arbitrary variations. The fundamental is always on the third string; the first is always tuned to an octave below, the second is the fifth, the sixth the second, the fourth the sixth or seventh, the fifth is the third or fourth. These modes of tuning are named in some cases after the provinces in which they originated, and in others from the purposes which the music served: for instance, *Kangura Tsōshi*, employed to accompany sacred dances.

Correct tuning is highly esteemed. After each string has been tuned in the prescribed order, generally in octaves or rising in fifths and falling in fourths, *(meist nach Octaven, oder aufsteigend nach Quinten, absteigend nach*

* Doubtless Saigo Kichinosuke, who, though undoubtedly an able man, appears singularly unlike the first Napoleon in character.

* By Dr. Müller. Translated by permission from the "Transactions of the German Asiatic Society."

† The Japanese mode of handing down an illustrious name by their system of adoption must be borne in mind. For instance, a musician will adopt as his son a young musician in whom he observes indications of promise, while his own child has been probably in turn adopted by a physician to continue his family name.

‡ The winter solstice is the point of departure. The eleventh month, which I have called December, begins with the new moon immediately preceding; this represents the lowest tone of the tuning instrument. Each succeeding lunar month is afterwards reckoned as a month, and an intercalary month is inserted between the tenth and eleventh once in every three years.

§ *Vide* Notes upon Music *Japan Weekly Mail* 20th February, 1875.

¶ We have here followed the nomenclature of the German gamut in which *es* affixed to the letter indicating a note, signifies its flat, and *is* its sharp. Thus with *G*, *ges* is *G* flat; with *D*, *dis* is *D* flat. *Fis* is *F* sharp, *Cis*, *C* sharp, and so on. *H* is our *B*, and *B* our *B* flat. The small marks (′) to the right of the letters indicating the notes, indicate the octave to which those notes belong. Thus *a*, *b*, *c*, without any mark, would be the *a*, *b*, *c*, of what is called the first octave, viz that between our bass *C* and tenor *C*. The same letters with one mark (′) would be in the octave above with two marks (″) in the octave above that; and with three marks (‴) in the octave again above that.

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

Quarten) the complete tuning is gone over (*netori*—taking the tone) in the following manner. The right hand, which is furnished with the *koto-sangi* (or tortoise-shell stick), is rapidly passed over the strings. This is prescribed in every case.

2.—Meanwhile the left hand is employed either

a: to strike two of the strings with the thumb and one of the other fingers, called *tsunne*, or

b: the note is sharply struck with the finger nail, called *oru*.

The instructions for tuning are very precise but possess no other special importance. The instrument is played in either of the following modes :—

1.—The *koto-sangi* is passed over all the strings close to the bridge, five of them being stopped with the five fingers so that one only resounds. The various methods of stopping in particular chords bear a special nomenclature and are prescribed by the notation. This mode of playing is only in use for indicating the correct movements. (See below).

2.—The string is struck with a single finger with the back as well as the front of the nail, using the left hand alone for the purpose. This mode is employed as a sort of *fioritura*.

The history of the *wanggong* is peculiarly interesting. Its mythical origin resembles that of the Greek harp, which, according to the legend, owed its discovery to Apollo, who observed the roundness and beauty of the sounds emitted by his sister Diana's bowstring upon being struck, and placed a number of these together for the purpose of producing melodious effects by their combination. And thus, we are told, one of Jimmu Tenno's warriors (665 B.C.), named Kanatomo Mikoto, placed six bows together and played upon them ; in what manner is not related. The earliest historical information upon the subject of the six bows dates from 205 A.D. and tells how a follower of the illustrious hero Takeno-Udchi-no-Sukune, by name Djingu Kongu, conversed with his leader and showed him how music could be played upon the six bows (which were handsomely decorated), producing by his skill considerable effect. The true origin of the *wanggong*, however, is, not exactly known. Shortly after the death of the Emperor Ing-kio (A.D. 453), we are told, the sovereign of Corea despatched eighty vessels laden with presents, and in each of these was a musician, to be present at the solemnities in honour of thedead. They proceeded from the island of Tsushima to Tsukushi in Tsusen, and going thence to Ôsaka and Kiôto first acquainted the Japanese with the laws of music. The Japanese at that period probably adapted their six bow-strings to the introduced *koto*, (then seven and thirteen-stringed), and named the six-stringed instrument *wanggong* or *Yamato-koto*.*

The rulers of this country showed favour to the newly imported music only, and the Emperor Ang-kang (A.D. 534) caused instruments to be made after the Corean model. Mimashité, a Corean, visited Japan in the reign of the Empress Tsuiko (A.D. 611) and gave lessons in Chinese music, and soon afterwards the study of the art began to be earnestly pursued in this country. Tenmu (A.D. 693) and Monmu (A.D. 699) favoured by their example the study of music, and under the latter a new form of flute was introduced ; but since that time no special attention has been accorded to the art by the rulers of the country and it has received but slender additions. A *wanggong* may be seen in Nara which was made in A.D. 738, and, with the exception of being somewhat narrower, is similar to the instruments now in use. An instrument of 200 years later date resembles in every respect that of the present day. The *wanggong* is now seldom used in the orchestra, although occasionally substituted for the thirteen-stringed *koto*. It is employed for the most part in the performance of old Japanese music, and then in combination with the *kangura fuye* and *shaku bioshi*. For the *wanggong* alone only one piece named "*Niwa-bino-kioku*" (or "garden fire,") remains, and this is always accompanied by the voice.

The seven-stringed *kino-koto* is at present rarely played, and, according to the information I have received from a very learned musician, there is but one person capable of performing on it in all the three large towns Yedo, Kioto and Ôsaka. In China it is played only in the highest families, and I gather from a very accomplished musician, one equally skilled in practical and theoretical music, but himself of a low social rank, that it was played only upon particular occasions ; as, for instance, when a man of high rank was depressed in spirit its music was resorted to to cheer and enliven him ; but it was unknown to persons of the lower class.

From Mr. Machida, the gentleman referred to in the foregoing paragraph, I have succeeded in learning the mode of employing this instrument.

The *kino koto* is 118 cts. in length, its strings being 111 cts. They are fastened below about two feet from narrowest end of the instrument, being carried through grooves cut for this purpose. At the head of the instrument a bridge is fixed obliquely at about 6cm. from the end over which the strings run. Directly above this are seven openings through which seven loops, formed of stout silken threads or cord, project, and to these the strings are fastened with a peculiar knot.

The two loose ends of these loops are then fastened on pegs in the lower side of the instrument, to which they are perpendicular, in the following manner. Each peg is four centimetres in length and resembles our nine-pin in shape. A deep incision runs round it, one centimetre above its flattened extremity, from which a groove is cut which terminates in its centre. In this opening the ends of the loops are placed, carried through the groove, and then fastened round the incision in the peg in such manner as to bring the groove into line with the openings in the bottom of the *koto* of which it forms the continuation. If the peg be now turned on its axis the sides of the loop are twisted round each other and the strings are more or less tightened. It is so arranged that the strings are drawn tighter by turning the peg to the right, and relaxed if turned in the contrary direction.

The *kino-koto* differs essentially from the instruments of the same name already mentioned by

1st. The absence of a moveable bridge, its strings being tuned by the movement of the pegs, or

2nd. The unequal thickness of the strings : the four lower strings being covered and the three upper plain. The mode of making covered strings is not understood by the Japanese.

In former times this instrument was furnished with five strings only, which were known by the names given in Vol. VI., page 15. When two strings, which are in the higher octave, were subsequently added, the names little *kiu* or *bung*, or little *shō* or *bu*, were given to them. These names are only applicable to this particular instrument.

In tuning, the fundamental note, which also depends upon the part, is now placed on the middle string and the tuning accomplished in the following manner. Assuming the fundamental note to be *d'*, this is the order of the notes :—

1st String	*a*	the lesser octave.
2nd „	*g*	„
3rd „	*c'*	
4th „	*d'*	
5th „	*a'*	
6th „	*g'*	
7th „	*c''*	

On the side nearest the player are thirteen flat mother o'pearl buttons. The instrument is divided in two exact halves by the seventh of these, which is thus 55½ centimetres distant from either bridge. The other buttons are arranged symmetrically at the following intervals :—

Number of the button.	Distance. From the centre button.	From each other.	From the nearest end.	From the furthest end.
6 and 8.....	11 cm.	22 cm.	40.5	66.5
5 „ 9.....	18.5	37	37	74
4 „ 10...	27.5	55	28	83
3 „ 11...	33.5	67	22	89
2 „ 21...	37	74	18.5	92.5
1 „ 13...	41.5	83	14	97

* More properly *wa-gong*, although pronounced as I have written it. *Wa* and *Yamato* are the ancient names of Japan, and *gong* (Chinese) signifies an instrument of sound. The two words together would seem to indicate an instrument of foreign origin, modified by the Japanese.

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

The distances are measured from the centre of each button, but as errors of a millemeter may occur by this mode of measurement, the Japanese, with a view to greater accuracy have adopted the following. From the first and thirteenth buttons the distance to the nearest end is one eighth of the instrument; from 5 to 9 is one-third; from 4 to 10 a quarter; from 3 to 11 one-fifth; from 2 to 12 one-sixth. From 1 to 7 is not given.

The exact observation of these proportions is necessary from the fact of the instrument being played in two ways.

1.—The finger is firmly pressed upon the button, and the string struck with the back of the nail outwards from the player, or

2.—One of the left-hand fingers is lightly laid upon the string which is then struck with the inner part of a right hand finger so as to produce harmonics.

In both cases the desired pitch may easily be arrived at. It is usual to strike one string only for the accompaniment of the voice in unison; should two strings, however, be struck they also should be in unison.

In cases where a different string is substituted for the third as fundamental note, the other notes are tuned in corresponding intervals, and the tuning designated by the note which is found to occur on the third string. Originally, as in the case of the *sōno koto*, the strings were of equal thickness and tension. The *biwa* used in His Majesty's band is not tuned in the manner of that of the Prince of Hota's described by me in Vol. VI. I found that the strings were tuned in the following order: First, Second, Fifth, Octave. Five different notes may be taken as First, in which case each mode of tuning has its special name.

According to the *Hiodsioh* December (*d*) is the fundamental note.
„ *Itsi kotsu* February (*e*) „ „
„ *Sodsioh* May (*g*) „ „
„ *Ohshiki* July (*a*) „ „
„ *Banshiki* September (*h*) „ „

There is still another mode (*Suidsioh*) of which July (*a*) is the fundamental, the second note being, however, somewhat lower.

The strings differ in substance, but are of one length. The oblique frets at the neck of the instrument are so arranged that by pressing the string upon them, the following variations from the original tone will be observed.

Full length	First.
First bridge	Second.
Second „	Lower third.
Third „	Third.
Fourth „	Fourth.

The position of these frets differs also from that represented in Fig 2 on Table II, which is the form of *biwa* used by blind performers. In all other respects, however, the shape is the same.

The end of each string is so fastened by a knot as to form an eye or loop, by which it is simply hung on the peg intended to receive it after being drawn through the corresponding hole in the face of the instrument.

I have now enumerated the most commonly used stringed instruments of this country. I purpose treating of those instruments of Chinese origin which are less frequently met with—and then only in the hands of special artists—in connection with Chinese musical instruments generally in a future paper.

Wind Instruments.

The *sho* is to the European ear the most interesting of all the Japanese wind instruments, and the more especially as it is employed as the fundamental instrument in tuning in their orchestras and produces occasionally highly melodious sounds. In this, as in all Japanese wind-instruments, the highest skill of the player is exhibited in holding a note for the longest possible space of time.

It consists of the following parts:—

1. The wind chest. This is drum-shaped, of wood, richly lacquered and decorated with the crest of the owner. On one side the mouth-piece, with a quadrangular orifice, mounted in metal, is let in: this in the better sort of instruments is silver. The mouth-piece is placed in front of but not within the mouth, and the air may either be drawn in or blown outwards through it, both of these methods being in common use.

The upper and flat side of the wind-chest is pierced with seventeen holes, arranged in the manner shown in the diagram. In these openings seventeen pipes of varying lengths are inserted. Each pipe appears to consist of a single length of wood, provided with a metal tongue; but the accidental breakage of one of these convinced me that they are in reality composed of two pieces, so skilfully joined, however, as to require very close observation to allow of their junction being perceptible. The various parts of each pipe are:

a. An oblong, quadrangular brass plate varying in dimensions with the size of the pipes. In the middle of this is a tongue of such extreme thinness that it has as free a play when the instrument is sounded as the tongue of a harmonica. The whole forms a single piece of metal, the tongue being cut out, not made separately. Should these tongues lose their quality of tone it is usual to load their free ends with a small ball of wax in which a piece of metal is enclosed.

b. The tongue is properly 5 cm. in length, shaped out of bamboo and lacquered. The upper part, which is outside, is lacquered with dead gold, that which is inserted in the wind-chest being covered with black lacquer which preserves the pipes from damp. The side in which the tongue plate is fixed is flattened below, and is so shaped that its lower end coincides with a knot in the wood. The upper and somewhat thinner end is now fitted in its place exactly.

c. The short pipes which consist of stained bamboo. These are round in all their visible parts, but are slightly bevilled at their points of contact so that they may be brought closely together. They are of various lengths

2	being of	45 centimetres.
4	„	36
4	„	28
4	„	21
3	„	16

This, however, is only their apparent length, the true length being otherwise determined as we shall see. Each of these short pipes has a hole of the size of a pin's head at somewhat more than one cm. from the upper half of its lower extremity, and immediately above the position of the inserted tongue-pipe. The pipes No. 11 and 12 have their openings about two centimetres higher, being intended for the use of the first and fourth fingers of the left hand. All these holes, with exception of 3 and 4, which are turned somewhat inwards, and 17 which is at the side, are outside.

In each of the short pipes and in their inner sides there is a second somewhat long opening by which the effective length of the pipe is determined, any additional length being merely for the purpose of show. The effective lengths of pipe are

No. 1	*ges‴*	5 centimetres.
2	*g″* 13	„
3	*ges″* 14.5	„
4	*e″* 15	„
5	*des″* 20	„
6	*as″* ... .11	„
7	blind.	
8	*h′* 6	„
9	*e‴* 8	„
10	blind.	
11	*des‴* 10	„
12	*h″* 11	„
13	*a″* 7	„
14	*d‴* 17.5	„
15	*d″* 26	„
16	*a′* 22	„
17	*c‴* 10*	„

To these the distance from the point of the tongue to the small pipe—about 2 centimetres—must be added. In cases where the opening is carried down too far the space is filled in with shellac. Pipes 9 and 10 are furnished on their outer side with two oblong silver-mounted openings, which are, however, only used for ornament, 9 being blind and 10 having an inner opening lower down. The silver mounting commonly fitted on pipes 9, 10 and 1, is merely for the sake of embellishment. Should the tongue-pipe be now placed in the mouth and blown, no note will be produced unless the small upper hole be closed with the

Digitized by Google
UNIVERSITY OF CALIFORNIA

finger. This being done, the volume of wind admitted is proportionate to the number of vibrations of the tongue and a sound is produced. This is also the case when the tongue is in the wind-chest.

When the pipes are arranged in symmetrical order, and with their lower ends in the wind chest so as to be perfectly air-tight, the ring is drawn down over them in such manner that their direction inwards corresponds exactly with the unpierced portion of the wind chest. The ring is pushed down with such force as to compress all the various parts of the instrument into one body. Through the space lying between 1 and 17 the pipes are all now visible and accessible to the fingers of the performer.

When not in use, and with the view of preventing warping, a silken cushion is inserted between the free ends of the pipes.

A cloth fastened to a small ball is used to clean the instrument. When in use the player has at his side a Japanese *hibachi* (or chafing-dish) and avails himself of every interval in the music to dry his instrument over the fire, turning it incessantly in order that the heat should be equally diffused and the small balls of wax alluded to preserved from melting. It is customary with musicians to keep a *sho* in reserve, so as in case of need to replace an instrument that may be unfit for further use.

In playing, the instrument is taken in both hands so that the pipes and fingers are directed upwards and the mouth piece shall lie between the two thumbs. The instrument will then repose upon the balls of the two thumbs, being held by the little fingers which rest one upon the other. The right first finger, being inserted between pipes 1 and 17, serves to close with its tip the openings of 3 and 4, which are turned inwards, and with the back of its first joint, that of No. 17. The player then presses the mouthpiece to the mouth and either blows or draws his breath; by doing this in turns he is able to hold the note for a considerable space of time without much exertion; but only those pipes emit a sound whose small holes are stopped with the points of the fingers. The manner of placing the fingers is explained in the plate, by which also may be observed the order of the notes and the reason that certain of them (7 and 9) are blind. By closing with the right hand thumb and first finger the openings nearest to them on the right, an octave is produced; by closing those nearest to the left a third; and by stopping No. 17 with the back of the first finger a chord of three notes. Four notes are assigned to the thumb. When it is placed close to the mouthpiece No. 5 is closed, and if the left first finger be used the octave is produced. If the thumb be placed at a distance from the mouthpiece No. 6 is closed; No. 7 being blind prevents the possibility of mistake, and Nos. 6 and 11 form a fourth. If the thumb is placed near 8 a mistake can hardly occur, as it will then be between two blind pipes. With the middle finger, 12, an octave is again produced, and if the thumb approaches 10, 10 and 12 again form a fourth. As the openings of 11 and 12 are much higher the thumb cannot be misplaced on this side. Neither can the ring-(fourth) finger be misplaced, as it lies on the two middle (14 and 15) as well as on the two outer, pipes (13 and 16), where it gives the octave. But if it closes 13, 14, 15 and 16 a fourth is produced. By this it will be observed that the position of the notes upon the pipes has been dictated by sound practical reasons.

I have described the *sho* as an instrument agreeable to the European ear. So much can hardly be said of the *hidschiriki*, the leading wind instrument of the Japanese orchestra. This is a description of hautbois, formed of bamboos, and eighteen centimetres in length. On its front are seven holes at intervals of two centimetres, the first being at a distance of four centimetres from its upper end, and at the back two others at a distance of five and eleven respectively. The mouthpiece is formed of a cylindrical reed six centimetres in length, covered with paper and fixed in the thicker end of the instrument. The free end of this is shaved down and pressed flat so as to form two tongues like those of an oboé or fagotto. These are then compressed and kept together by means of a bamboo ring, and when not in use are protected with a cover. When played, the instrument is taken in both hands and the holes stopped by the second, third and fourth fingers of the left, and the second, third, fourth and fifth of the right hand. The thumbs are placed upon the holes in the back. The notes are in the following order *a‴*, *ges‴*, *g‴*, *e″*, *des‴*, *c‴*, (not quite true), *h″*, *a″*, *g″*. They are all produced by stopping with the fingers, and it is only when the second is stopped that the thumb is raised. In earlier times the second hole in the back was used for modifying the *des‴*; at present it is always closed.

In playing the mouth-piece is first moistened with the tongue, then taken between the lips as far as the bamboo ring and blown with a vigorous effort. It emits a shrill, screeching sound the effect of which is all the more unpleasant from the fact of its first indistinctness, its clear notes being only brought out by slow degrees.

There are various descriptions of flute:—

a.—The *ohteki*, or Chinese flute, which is used in the Mikado's band.

b.—The *kangura fuye*, or Japanese flute.

c.—The *koma fuye*, or Corean flute.

Besides these, smaller flutes, as small in size as our piccolo, are employed both in China and Japan, not, however, in the higher musical performances, but in the streets and in the booths and theatres of jugglers and showmen. The number and position of the holes in these instruments differ considerably. The following may be named:

1.—The *kusabuye* (literally flute of reeds), for the name of which two etymological origins are assigned; one being that the instrument was originally cut out of reed, and the other that it is played by the herdsmen in driving their cattle to their pasturage (*kusa*).

2.—The *shinobuye* employed in the theatres and similar entertainments as accompaniment to the voice. In order to adapt this correctly to the voice of the singer, the player is provided with twelve flutes, varying by a semitone from each other.

The *ohteki* is 39½ centimetres in length, the *kangura fuye* 45, and the *koma fuye* somewhat shorter. Besides the hole for the mouth, the *ohteki* is pierced with seven holes on the same side; the two others have only six. The lower note of the *ohteki* is not pure and is not used. I may remark, indeed, that none of these notes are altogether pure, as they vary fully a semitone according to the strength of the player. The upper and lower octave of the notes is determined by the force of the player's breath, so that each may be given in three octaves. The performers tell me that the lowest note is produced with much difficulty.

The fingering is the same as that of the *hidchiriki*. The instrument is not held horizontally, but at an angle of nearly 45 degrees downwards. The mouth-hole is kept continually moist by the player.

Instruments of Percussion.

The most important of these is the *shaku bioshi* or wooden clapper, consisting of two somewhat long and flat boards of *biwa* ("Sophora Japonica") or *enjiu* ("Eriobotrya Japonica"). Its origin is attributed to the use of such boards for purposes of ornament and distinction by the *daimios* in early times: these were subsequently cut in two and beaten together in order to excite attention. At the present day they are used at theatres and other places of entertainment to bespeak silence, serving on the Japanese stage much the same purpose as the bell or whistle with us.

In playing, the boards are so held by the performer that the edge of the upper rests upon the middle of the flat surface of the lower one. They are held at an angle from his body and are briskly struck together.

The *shioko* is a bronze bowl-shaped instrument suspended by two handles in a handsome frame of wood. The bowl is hollow and richly decorated with coats-of-arms. It is beaten with two sticks in the middle only, the edges never being struck.

The *taiko* is also suspended in a richly-decorated frame, covered with two highly painted skins at a distance of about nine centimetres from each other, and partly glued, partly nailed, together. This, also, is beaten with drumsticks.

The *Kakko* is a description of large, hollow wooden jar, at either end of which a skin is tightly stretched by means of a hoop. These two hoops are held together by silken cords, like those of our drums, and a greater tension is given to the skin by twisting and drawing up a stout

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

silken cord—this being the custom in the late Prince of Hōta's band; or runners are placed round two silken cords, like the leathern runners in our drums, and drawn closer or relaxed according to the degree of tension required, as in the Mikado's band. By means of the first, a touch of the cord with the hand while the instrument is being played is sufficient to raise the pitch. The *kakko* when in use rests upon a stand and is beaten with two sticks. Both ends may be used simultaneously, as, for instance, in executing a roll.

The *Yoko* or *Sanno Tsudzumi*, differs only in size from the preceding.

ON THE TEMPERATURES OF THE JAPANESE WATERS.

By J. H. Dupen, H. M. S. *Ringdove.*

Read before the Asiatic Society of Japan, on the 15th December, 1875.

I quite agree with the statement and opinions of Captain Scott that the whole climate of Japan is regulated by the currents of the ocean. The warm stream from the South appears to run up the eastern shore and to turn off, somewhere about Nambu. On the western side I think the southern current is turned off in the direction of Shanghai by the northern stream, which appears to flow down the West coast, keeping it cooler in summer than the eastern side. The Island of Yesso seems to be entirely affected by the cold stream, which doubtless accounts for the rigour of its winters. I am under the impression that a line drawn from East to West, across the sea of Japan in the latitude of Nagasaki, will show the points where the two currents meet, and North of which the warm current loses its effect. My opinions are merely derived from the tables on the other side and a study of *daily* changes in temperatures as noted in the engine room register. With regard to force and direction of currents I can say nothing, it is not in my province and I have no means of ascertaining them.

The position of the ship daily may be judged approximately by the dates, and the fact that the average speed is about 6 knots during these cruises, except in the Inland Sea where we steamed 10. The temperature of the Inland Sea is very uniform throughout. At Nagasaki in winter, with deck thermometer at 34″, I have seen clouds of vapour from the water which was 56°, but for this I have no doubt that Nagasaki would be nearly as cold as Hakodate.

September 1874.

ON THE TEMPERATURE OF JAPANESE WATER.

From.	To or At.	Between.		Temp^{s}.	Remarks.
Shanghai.....	Nagasaki ...	Dec. 29th '73	Jany. 3rd, '74	50° to 62°	Waters of the Yangtze influenced by the weather, but sea outside not so affected; southern current takes effect.
Anchored.....	Nagasaki ...	Jany. 3rd	„ 20th	56°	Lower than the sea, due to cold surface water.
Nagasaki.....	Kobe	„ 20th	„ 26th	56° to 50°	Inland Sea lower in winter than the Japan Sea.
Anchored.....	Kobe	„ 26th	Feby. 18th	48° to 49°	Kobe colder than the Inland Sea water; generally surface water.
Kobe	Nagasaki ...	Feby. 18th	„ 21th	50°	Slight rise: showing that harbors feel the influence of climate, and are affected when seas are not.
Anchored.....	Nagasaki	„ 21st	March 8th	56° to 58°	Under the influence of spring weather.
Nagasaki.....	Kobe	March 8th	„ 10th	60° to 50°	Outside of Nagasaki, but falls directly we enter the Inland Sea.
Anchored.....	Kobe	„ 10th	April 5th	50° to 52°	Kobe is 4° higher than it was in Feby.
Kobe	Yokohama...	April 5th	„ 8th	58° to 60°	Showing the effect of the Southern current running up the E. shore.
At Yokohama.	& Yokoska ...	„ 6th	July 11th	54° to 78°	Arriving at Yoko. find water cooler than outside, but note the rise as the summer advances.
Yokohama ...	Kobe	July 11th	„ 14th	74° to 76°	At this season the eastern waters are cooler than the Gulf of Yeddo.
Anchored.....	Kobe	„ 14th	„ 17th	76°	Kobe at this season is as warm as the outer waters.
Kobe	Nagasaki ...	„ 17th	„ 20th	72° to 85°	Inland Sea rather lower than Kobe; temperature rises rapidly as we near Nagasaki.
Anchored ...	Nagasaki ...	„ 20th	Aug. 6th	85° to 80°	Harbour much heated by sun at this season.
Nagasaki.....	Vladivostock	Aug. 6th	„ 12th	80° to 68°	Steering towards China temp. falls rapidly to 68°, but rises to 75° as we enter the large bay in which Vladivostock is situated.
Anchored.....	Vladivostock	„ 12th	„ 20th	77°	Two degrees higher in harbour.
Vladivostock..	Hakodate ...	„ 20th	„ 24th	73° to 67°	As soon as we clear the bay the Northern current takes effect bringing temp. from 77° to 73°, and so on down to 67°, rising again to 74° as we near Hakodate.
Anchored.....	Hakodate ...	„ 24th	Sept. 8th	74°	Hakodate is not much higher than the outer waters.
Hakodate.....	Yokohama..	Sept. 8th	„ 12th	73° 68° 78°	Soon after leaving Hakodate we feel the effect of the North current and fall to 68°, which continues till we are abreast of Nambu, when in an hour, while running about 7 miles, the temperature rises to 78° and continues so until we reach Yokohama, where it is 80° at this season.

YOKOHAMA ROWING CLUB.

THE sixth annual general meeting of the Club was held at the Y. U. Club on the 17th instant; J. Rickett, Esq. in the chair; seventeen members were present.

The accounts for the year 1875 were submitted by the honorary Secretary and Treasurer, Mr. Tripp; and it was proposed by Mr. J. J. Dare, and seconded by Mr Kilby,—"That the accounts as presented be passed." Carried.

The following was the result of the ballot for a committee for the ensuing year, the captain and secretary being elected by show of hands:—Messrs. G. Hamilton, captain; C. P. Hall, Hon. Sec.; J. Dodds, A. Milsom, and J. Rickett.

The following proposition, to be brought before the next general meeting, was proposed by Mr Hamilton, and seconded by Mr Tripp:—"That in future the honorary secretaryship and treasurership be combined, and that the committee consist of captain, hon. secretary, and three committee men."

A vote of thanks to the retiring captain, Mr Melhuish, and hon. secretary, Mr Tripp, was carried unanimously, and a vote of thanks to the chairman closed the meeting.

Law & Police.

IN H.B.M.'s PROVINCIAL COURT,

Before C. W. GOODWIN, Esq., Assistant Judge.

Tuesday, 21st December, 1875.

George Clark, formerly a quartermaster of P. M. S. S. *Golden Age*, who was committed for trial on the 13th November last, on a charge of stealing three bales of silk from the P. M. S. S. *Golden Age*, on the 8th September, 1875, was this morning brought up for trial.

Mr. H. S. Wilkinson prosecuted for the Crown, and Mr. F. V. Dickins watched the case for the P. M. S. S. Co.

Prisoner, who was undefended by counsel, pleaded "guilty to having a hand in the robbery."

His Honour said this amounted to pleading guilty to the charge.

Prisoner asked for permission to make a statement in regard to the robbery.

His Honour said he would read the depositions made at the preliminary hearing, and would then hear what the prisoner might have to say in extenuation of the offence.

After his Honour had finished reading the depositions

The prisoner said that about 11 o'clock, on the night of the robbery, he was standing near the gangway of the *Golden Age*, drunk. Another quartermaster came up and wanted to take three of the bales of silk, and he consented. He did not see the stolen silk after that.

His Honour said that this statement was not consistent with the evidence given at the preliminary hearing. Prisoner had taken an active part in the robbery, and had agreed to accept a share of the proceeds. It was his duty now to pass sentence, which would be two years' imprisonment.

Prisoner asked if the sentence would commence from the date of his incarceration, and

His Honour said it would.

Jurors had been summoned, but owing to the prisoner pleading guilty to the charge (he pleaded "not guilty" at the preliminary hearing) their services were not required.

Wednesday. Dec. 22, 1875.

REGINA *vs.* R. F. LIVINGSTONE and ALEX. JOHNSTONE.

On the case being called, the prisoner Livingstone applied for an adjournment, as his counsel. Mr Ness, was not present. Mr Ness, however, made his appearance within a few minutes, and the case proceeded.

Mr Kirkwood prosecuted, and Mr Ness defended the prisoners.

After hearing the indictment read over, prisoners pleaded not guilty.

The following gentlemen were then sworn in as a jury:—Messrs. G. T. Blakeway, G. W. Thomson, G. A. Wake. H. Woollett, and J. B. Stevens.

Mr Kirkwood in opening the case, shortly stated the facts, which were that the prisoner Livingstone had stolen from the person of one Peter Cumming, late cook of the *Shotlimer*, whilst asleep in the "British Queen," a sum of fifty Mexican dollars, and that Johnstone had witnessed and assisted the theft.

Peter Cumming, sworn: I remember the 9th November. I was paid off on that day. I received $50 from Mr White. The money consisted of two $20 notes and one $10 note. After we were paid all the crew were going down to the Sailors' Home, when I met the boatswain. I said, "Where are you going?" He said, "I am going a small way down the road." I said, "What for?" He said he intended to go to Hongkong, and expected to get his passage cheap. I said, "Then, I'll go with you." We both got into a jinrikisha. The first place we stopped at was the "British Queen." I asked him if he was going to stop, and he, said "No; I want to speak to Livingstone a moment." We both went in and had a glass of gin with Livingstone and he and the boatswain had some conversation. While this was going on I called for more drink for the three. We had gin; and then I said to the boatswain, "Let us have some dinner." We had dinner, and remained about 20 minutes. Whilst there I called for three glases of beer for ourselves and another gentleman who was there. After dinner I came out into the bar-room, and said to Livingstone "Mr. Livingstone I will pay you for the dinner." He said, "I won't charge you." I said, "if you won't take payment, let us have a drink." The boatswain, Livingstone and myself had some gin. After a little conversation I went into the dining room, and laid down on the sofa. I judge I was there about an hour. The first thing that woke me up was Livingstone with his hand in my pocket. When I moved he pulled his hand out quickly. I caught sight of a silver dollar and some small paper money. I said, "Don't take that, it belongs to me." He said, "All right, but I've not taken your money." I said, "That's all right, bring the drinks in;"—that was for Johnstone, Livingstone, and myself. He brought two decanters and three tumblers; one was gin, the other brandy. Livingstone and Johnstone drank brandy; I did not drink any. They then left me after about five minutes had passed. I put my hands in my pockets to feel for my money, but it was all gone. I came out to the bar then, and I said to Mr Livingstone, "I have been robbed." He said, "Of what?" I said, "Of $50, and it is between you and Johnstone." Johnstone was in the dining-room at the time I was robbed; he was leaning over me. Johnstone said he did not know anything about the money. I said to Johnstone, "I believe you to be a scoundrel;" then I said, "It is too bad if I have to lose my money." We had a little talk about the matter, and they both said they knew nothing about it. I then went and sat down by the fire; there was a table in front of me. There were a few men in the house when I was speaking about the loss of my money, and Mr Livingstone came over, and leaning on the table, butted me with his head, loosening three of my front teeth. There was a ship-mate of mine there at the time, who got hold of me by the shoulder, and he said, "Come away, Peter; it is getting too hot for you." I went with him across to the Sailors' Home, and several young men came out and asked me what was the matter. I told them I had been robbed. They left me at the Sailors' Home after hearing my story and went over to Livingstone's.

To his Honour: I changed some of my money before we went into dinner at Livingstone's: It was a $10 note I changed. It was to pay for the last three drinks. I think I got $9.20 change. There was a $5 note, and the rest in paper money. I had a silver dollar besides.

Cross-examined by Mr Ness: I had $51 when I went into the British Queen. I looked at it when I paid for the last three drinks. I had no drink before going there. I had three drinks of gin and one of beer at the British Queen. I do not remember going out of the house immediately after dinner. My memory about it is good. I felt heavy and drowsy after dinner. I was not intoxicated. I saw the boatsswain go out of the house. I reported the affair the next morning to Mr. White at the British Consulate. I took the summons out a few days afterwards; I can't remember exactly. The boatswain went away five or six days afterwards. The boatswain was not in the house when the money was taken. He knew I had the money. I was not intoxicated that day. I was not intoxicated when I awoke.

To the jury: I was paid the money I received in the Shipping Office.

Henry Compton, sworn: I am living at the Sailors' Home. I recollect going to the British Queen between nine and ten o'clock at night on the 9th November. There was a disturbance of some kind there. I saw Livingstone put a revolver up to Johnstone's head. This was in front of the bar. He had hold of Johnstone by the shoulder. He said, "You——, if you blow on me, I'll blow your brains out." The next time I saw Livingstone he was standing behind the bar. He was then tearing up Johnstone's coat with his hands, and throwing the pieces in Johnstone's face. There were

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

a good few men in the bar. I saw Baker Wallace, an coloured man, and some others I did not know. I saw Cumming that day. He was standing up against the gate of the Sailors' Home; he was crying. This was about four or half-past four o'clock. Afterwards I saw him again in the evening about 7 o'clock.

Cross-examined by Mr Ness: I have been frequently in the British Queen, I have seen one or two disturbances there since this one. I can't say that I have heard similar expressions used there, to the ones used on this occasion.

Re examined by Mr Kirkwood: I have never seen a revolver in the British Queen excepting on this occasion.

To the Jury: I have no reason to bear a grudge against the prisoner.

Edward Baker, sworn:—I am living at the Sailors' Home. I remember going to the British Queen on the 9th November, about 9 o'clock in the evening. I went into the British Queen about 9 o'clock, and was drinking there. I got into the inside room. There was a man there I don't know. Johnstone and Livingstone were talking together. Johnstone was three-parts drunk, and Livingstone about half-drunk. They came to hot words, and Livingstone caught hold of Johnstone, and put a revolver to his face. He said, , Johnstone, if you say anything about that, I will blow your brains out." With that the stranger in the room caught me by the collar, and politely shoved me out of the room. Livingstone and Johnstone went out before me. I told Livingstone before that to put the revolver away. He said, "I have get two of them." After that Livingstone came out into the bar. We were all there then. I then left the public-house. About two or three minutes afterwards I heard a revolver fired off, and I went into the bar again. Livingstone had hold of Johnstone. Livingstone said to him, "If you blow on me, I will blow your brains out." I turned round. Livingstone then got hold of Johnstone's coat, and tore it up, and threw the pieces in Johnstone's face. Johnstone said, "It is no use now, you can keep it." I then left. There were about nine or eleven men in the bar

Cross-examinee by Mr Ness: It was about 9 o'cloek when I went to the British Queen. I was shoved out of the dining-room, but was not asked to leave the house. I have not had any conversation with Mr Mills about this.

Re-examined by Mr Kirkwood: I was not told what to say in Court. I bear no animosity to Mr Livingstone.

To the Jury: Johnstone made no answer to Livingstone when he was threatened with the revolver.

William Wallace, sworn: I recollect going to the British Queen on the 9th November last. I live at the Sailors' Home. I went to the British Queen with two other men; this was a little after 9 o'clock. I saw Livingstone with a revolver up to Johnstone's head. He threatened to blow his brains out. Livingstone kept putting it in his pocket and taking it out. I left, and soon after I heard a shot. I returned and saw Livingstone tear up Johnstone's coat. Johnstone said it was no good now, and that Livingstone must buy him a new one. I left the British Queen and went over towards the Sailors' Home. I heard another shot, and I went and looked through the window. Johnstone and Livingstone were in close conversation. Livingstone took some paper money out of his pocket and gave it to Johnstone. I saw Cumming that day standing at the gate of the Sailors' Home crying. I think it was about a quarter-past four.

Cross-examined by Mr Ness: I did not see what paper money it was that Livingstone gave to Johnstone.

Re-examined by Mr Kirkwood: I could see that it was paper money.

Wm. Davis, sworn: I am in the U.S. jail at present for an assault. I remember being in the British Queen on the 9th November. Cumming came in with the boatswain of the *Shalimar*. They and Livingstone had some drinks. I had a drink with them I do not remember seeing Johnstone in the forenoon. They went into dinner, and after coming out Cumming asked what he had to pay for the dinner. Livingstone said he would not charge anything for it. Cumming then called for the drinks again. I and the boatswain then left the British Queen and went for a walk. We returned about four o'clock and saw Cumming, who said he had been robbed. He accused Livingstone and Johnstone of having taken it [the money]. Livingstone swore at Cumming. We then went in to the inner room. There were eight or nine persons in the room. Johnstone was there. I asked him if Livingstone had taken Cumming's money He winked at me and said "Shut up." After that I went and had dinner at the Sailors' Home and returned again to the British Queen, where I stayed till about 10 o'clock. Livingstone and Johnstone got into a row. I interfered as soon as Johnstone's coat was torn. Johnstone threw the coat across the bar, and said it was no use. Livingstone tore it across and threw it to Johnstone, and said he did not want it. I left the British Queen when it was being closed abont 11 o'clock that night. The next day I saw Johnstone and asked him about the coat. He said, "It is all right, I have got a new one from Livingstone." I asked him if Livingstone had taken Cumming's money? He said "Yes; say nothing about it. I owed Livingstone for drinks and cash about $20; Livingstone has given me a few dollars out of the remainder, and called it square." Johnstone told me to be sure and say nothing about it.

Cross- examined by Mr Ness:—Cumming was not the worse for liquor when I saw him. I have only talked to Cumming once about my evidence. That was at John White's place, No. 136. I wrote it on a paper because I thought I was going to Shanghai. I gave this paper to Cumming. I was not turned out of the British Queen that I can remember. Livingstone once asked me to leave the house.

Court adjourned till 2 p.m.

On reassembling.

Mr Kirkwood called F. E. White, sworn:—I remember Cumming being paid off from the *Shalimar*. I paid him myself. I gave him $50. I paid off the other men of the ship. Most of the money was in $10 and $20 notes.

This finished the case for the prosecution. Mr Ness said he would reserve his remarks; he would first call

Charles Lester, sworn:—I play the piano at the British Queen. I was there on the 9th November, last. I saw Cumming there on that day. He came in about ½ to 12 in the morning. He called for several drinks for himself and others. I saw him take one drink before dinner. He had dinner at the house; about five sat down to dinner. It occupied about 20 minutes. He then went into the bar. Cumming left the British Queen about half-past three o'clock with the boatswain. Cumming went out immediately after dinner and returned about half-past one o'clock. He went out in company with the boatswain. When he returned he went into the dining room. He seemed to have had a glass. He was lively. Livingstone looked into the room to see who was there and then called Johnstone as he wanted to speak to him. He said "Johnstone I want you to come inside and see what money this man gives me." Livingstone is always in the habit of taking charge of people's money who are intoxicated and giving them a receipt for it. That is the custom in the house.

Cross-examined by Mr. Kirkwood:—I was there the whole day. I have seen seamen given receipts. I believe no money was taken from Cumming. In the evening the boatswain and Cumming came in; they were disputing about something. Between 9 and 10 Cumming in came and was ordered out by Livingstone. I saw no dispute between Livingstone and Johnstone that night. I did not see a revolver that night nor did I hear a shot. I did not see Johnstone's coat torn up. Livingstone and Johnstone were skylarking that night.

F. Young, sworn.—I am a steward. I was in the British Queen on the night of the 9th November last. I saw Cumming there. We had five drinks of beer at dinner. I saw Cumming have three drinks altogether. After dinner, I saw Cumming and the boatswain go out together.

Cross-examined by Mr Kirkwood,—I saw them come back between 4 and 5 o'clock in the afternoon. I returned in the evening and stayed there till 11 o'clock. In the evening I saw no disturbance whatever. Livingstone has not spoken to me about this case. He did not ask me to come here to-day.

Re-examined by Mr Ness:—There was skylarking going on that evening, but no disturbance. Cumming was ordered to leave the house by Livingstone that evening. If there was a disturbance between Livingstone and Johnstone I should have seen it.

To the Court:—I heard no shots.

To Mr Ness:—Five years ago Livingstone took charge of my money one night when I was drunk, and gave it back to me the next morning.

Shuzo, cautioned:—I am Livingstone's boy. I have a recollection of Cumming coming to the house on the 9th November last. Cumming had tiffin there that day with some other men. Cumming left the house about half an hour after the tiffin.

Cross-examined by Mr Kirkwood:—My master has not spoken to me to-day about this case at all. I attend in the bar and dining-room at my master's. The fight that occurred that day has impressed all the circumstances upon my memory. I keep a book of the guests who dine in the house. It is the 22nd to-day. I saw Cumming again about four o'clock that day.

James McManus, sworn:—On the 9th November last I was in the British Queen. I saw Cumming and the boatswain come in about four

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

o'clock and have a drink. They seemed to be quarelling about something. The boatswain raised his hand and said if Cumming used those words again he would have him arrested. I remained in the British Queen till about 9.30. I heard Cumming beg Livingstone's pardon and say that it was not he (Livingstone) who had taken his money, but another party.

Cross-examined by Mr Kirkwood:—I saw some of the witnesses in the British Queen on that day. I heard no quarrelling that day; I did not see Johnstone and Livingstone fighting. I heard no shots.

Robert Walker sworn:—I am an engineer. I was in the British Queen on the 9th Nov. at about 2 o'clock. I heard Livingstone call Johnstone and say "I wish you to be a witness to see what this man gives me." I followed them to the door and heard Livingstone again repeat what he had said to Johnstone. I saw Livingstone lean over a man on the couch and take some small money from him—like a dollar, and some ten cent bits of paper money.

To His Honour.—I could not swear that there were not some large notes. They might have been *rios*.

To the Jury.—I heard Cumming ask for his money back again, and Livingstone gave it to him.

Mr Ness desired to call Johnstone as a witness.

Mr Kirkwood objected, His Honour sustaining the objection.

Mr Ness then summed up for the prisoners and Mr Kirkwood replied.

His Honour then charged the Jury, who retired, and after an absence of about three-quarters of an hour, returned a verdict of guilty against both prisoners.

His Honour, after making a few remarks on the heinousness of the offence, sentenced R. F. Livingstone to two years' imprisonment with hard labour, and Alexander Johnstone to one year's imprisonment with hard labour. His Honour further ordered the the prisoner to pay Peter Cumming the sum of $48 of which he had been robbed, this being the balance of his money after paying for the drinks he had called for.

IN H. B. M.'s CONSULAR COURT AT TOKEI.

Before MARTIN DOHMEN, Esq., Vice Consul.

DOYLE *vs.* BOTTOMLEY.

In this suit for alleged breach of contract and consequential damages to the amount of $2,000, judgment was this morning dielivered. His Honour observed that he had carefully considered the arguments which had been adduced on behalf of the parties to the suit, and also the authorities to which his attention had been drected. It appeared to him that there was but one point in dispute, and the decision at which he had arrived concerning that point was one which might either be confirmed or rejected by a higher judicial authority. He would suggest, in order to avoid the cost of employing counsel on an appeal, that a case should be prepared and submitted to Sir Edmund Hornby, Judge of the Supreme Court of Shanghai, for his decision.

His Honour then proceeded to give judgment as follows:—

In this case the plaintiff sues the defendant for breach of contract, and claims $2,000 damages. The defendant denies the existence of the contract.

The facts of the case are to the following effect:

On the 21st of May, 1874, a memorandum (A), purporting to be a draft of an agreement, was submitted by the plaintiff to the defendant, by which the latter agreed, for a certain consideration, to enter the service of the plaintiff as foreman to a paper mill for a term of three years, commencing from the 1st of June of the same year.

At the foot of the document the defendant signed his name, with the addition of the words "I accept the substance of the above," and returned it after a day or two to the plaintiff, who did not sign it, but who arranged with the defendant that they should afterwards go to Yokohama and sign in duplicate, before the U. S. Consul, a formal agreement, of which each was to retain a copy.

This agreement (B), which in substance is identical with the memorandum (A), is dated the 27th of May, but is not signed by either party.

The evidence adduced at the hearing, though conflicting in minor points, is sufficiently conclusive to show—

1st, That the parties actually did go to Yokohama on the 27th of May for the purpose aforesaid, but the defendant refused to sign the agreement (B) because the plaintiff would not consent to its taking effect from the 1st of May instead of the 1st of June.

2ndly, That the defendant had raised a similar objection at the time he signed, or returned to the plaintiff the memorandum (A).

3rdly, That plaintiff, in order to meet defendant's objection on that point, held out to him a sort of promise that his wages for May should be made good to him if the business went on satisfactorily; and,

4thly, That the defendant, on the same day in which he refused to sign the agreement (B), entered the service of another company.

In deciding whether the memorandum "A" was binding or not upon the defendant, I have chiefly been guided by what I believe to have been the intentions of the parties at the time the papers were signed. The fact that the plaintiff himself suggested the words, "I accept the substance of the above," leads me to the conclusion that his object in doing so was to meet a certain hesitation on the part of defendant in accepting, as it stood, the clause relative to the commencement of his wages, and that, consequently, the defendant, by signing the document merely intended to express his intention or consent to enter into an agreement with the plaintiff.

Under these circumstances the memorandum (A) cannot be considered as an instrument of *final* agreement, as required by the statute, and accordingly an action does not lie upon it.

The verdict must be for the defendant, with costs.

Mr Montague Kirkwood appeared for the plaintiff; Mr Gavin P. Ness for the defendant.

Mr Kirkwood intimated his client's intention of appealing from the decision.

U. S. CONSULAR COURT.

Before General T. B. VAN BUREN, U. S. Consul-General.

G. L MONTGOMERY, }

Wednesday, Dec. 23, 1875.

JAPANESE GOVERNMENT *vs.* JOHN MIDDLETON.

In this case defendant was charged with having "assaulted a policeman with a deadly weapon, with the intention to kill him," on Sunday, 5th December, 1875.

Defendant pleaded "Not guilty."

Mr G W. Hill appeared for the Government; Mr M. Kirkwood for defendant.

Mr Kirkwood asked that all witnesses for the prosecution be called in one by to give their evidence.

Mr Hill objected to this being done

His Honor sustained the application of Mr Kirkwood.

Mr Hill then made an application that all the witnesses in the case be placed in charge of an officer of the Court, and not allowed to communicate with any one.

His Honor denied the application, but took a note of Mr Hill's exception to this ruling.

His Honor then ordered that the witnesses on both sides be excluded from the Court during the hearing of the case.

Mr G. W. Hill then read a long opening speech to the Court, in which the facts of the case were stated. He would first call

Arthur de Perpigna, sworn: On the 5th Dec., 1875, I was engaged in a sporting expedition with the accused. We met Mr Middleton at Shinagawa Station about half-past 9 o'clock. We went near a temple and began shooting. Towards noon we arrived at the temple, and ceasing to shoot we proceeded to take some refreshment in a tea-house. A policeman came up and asked us if we had been shooting? We told him we had. He then asked us if we intended to shoot again. We said "Yes." He said it was forbidden. We protested, and denied that any such notification had been made to foreigners. The man appearing friendly, we offered him a glass of wine and some refreshments, of which he partook. He then left us, saying "Good-by." On leaving the tea-house we found him waiting outside for us with two other policemen. They requested us to cease shooting, which we refused to do, telling them politely that we were not forbidden in any way to do so. We then went on shooting till about 3 o'clock. We then got down to the paddy fields, hoping to find some snipe. After walking a certain distance towards the centre of these fields, a snipe got up. Accused fired at this snipe. Finding it bitterly cold, after that we went in the direction of where our jinrikishas were waiting. They were in front of a public school. We looked into the building through the windows, which were open. After having stopped there a few minutes, two of the policemen being with us, and requesting us to cease shooting

Digitized by Google UNIVERSITY OF CALIFORNIA

which we were not doing then, we got into our jinrikishas and rode off in the direction of Shinagawa. When we had gone a certain distance one of the policemen (long after the snipe had been fired at, and who had been talking to us) came up saying he had been struck by some shot. He said he had been personally shot, but did not mention that any others had been shot. We alighted from our jinrikishas and asked him where he had been shot. He pointed to his coat and one of his arms. I do not remember which one. We examined the places indicated by him, but saw no signs of shot of any description. We then proceeded as far as the Shinagawa station, and on arriving there stayed a few minutes talking to accused. We then took leave and drove on.

To Mr Hill: We spoke to the policemen in Japanese I was within three yards of Mr Middleton when he fired at the snipe which was on the wing, about nine or ten feet above the ground My Consul informed me, when I asked him, that we were allowed to shoot. That is some time ago. I was also told about six weeks ago that I had the right to shoot. We stopped shooting because it was blowing and cold, and we wanted to get home before it was dark. We felt bitterly cold. I did not fire at the snipe: I was not ready. It was about two hours after tiffin that the snipe was shot. The policemen followed us all this time; they were sometimes out of view when we came to a thicket, and I believe there were three policemen altogether. I should think the distance to be at least 120 yards between the policeman and Mr Middleton, when the latter fired at the snipe. From tiffin time to the firing at the snipe I was always within about 20 yards of Mr. Middleton. We considered the policemen a nuisance. (A map produced by the prosecution of the place where the alleged shooting took place.) I do not think this map is correct; I do not recognise it. (Witness explained the position of the parties.) I did not hear Mr Middleton talking to the policemen from tiffin time to the shooting of the snipe. We were standing on the divisions of the rice fields. The policemen were in view. I think we only shot one woodcock that day. The snipe was missed. I and Mr Middleton stopped shooting after that shot. About 20 minutes afterwards I was told the man was shot. I believe it was an after-thought of his. I could not see any wounds. (Three policemen brought in.) Witness; One of them is the man who came up and said he was wounded. This man claimed at the time that he had been hit (shot). I saw no other policemen besides the three men. Mr Middleton did not get anything (game) that day.

To Mr Kirkwood: To the best of my belief, only one shot was fired in the paddy field. We spoke to policemen several minutes afterwards.

To His Honour: During the day Mr Middleton made no threats against the policemen. Before or after shooting the snipe, nothing was said by any of us about shooting the policemen.

The Court here adjourned till 2 p.m.

On re-assembling, Mr Hill handed in to the Court a translation of the instructions to the police on the subject of shooting. (Marked exhibit A.) A copy of the proclamation about shooting was also put in. It was agreed that a translation would afterwards be furnished to the Court.

Mr Hill then called

Tadsuka Tadashi, cautioned: On the 5th Dec. I was on duty at Ikingami. Three foreigners came there to shoot. I met them in front of a temple near this village. I asked them if they were going shooting, and they said yes. I told them they were not allowed to shoot. They said they would shoot. They went to a tea-house in the village and I went after them. I again and again told them they must not shoot. They said they would shoot, even if I tried to prevent them. Two of them gave me their cards: the other man did not. Near to this place I found two other policemen and told them that the foreigners would shoot. The three of us followed the foreigners, got in front of them, and told them again they must not shoot. The foreigners did shoot, and fired many shots. They then came to another village. The distance between the foreigners and the police in the field was about 180 feet. Two of the foreigners were standing close together. One of them fired, and a policeman named Murata was hurt. He received a shot in his left cheek, one in his left hand, and one in the left leg. I received some shot in my coat. We were all in front of the foreigners. Mr Middleton is the man who fired that shot. I recognise him. Our first thought was to arrest the foreigners, but we concluded only to follow them. The foreigners then went to the school-house at the village, and got into jinrikishas and went off very fast. We followed them, running after them. They went very fast. At the Shinagawa police station we reported the affair, and received orders to go and arrest the man who fired the shot. I ran ahead and found accused in the Shinagawa railway station. I arrested him and took him to the police station. On the way there I met the two other policemen. At the police station Mr Middleton was questioned as to whether he fired his gun, or not, and he admitted that he had. I do not know the paper you show me. I have seen it at the Shinagawa Police Station. At the time the shot was fired the three officers were standing together. The other foreigner, who was standing by himself, was about 150 feet from us, and about 180 feet from the other foreigners. (Map shown to witness.) I recognise this. (Witness marked the position of the parties on it.)

Mr Hill handed this map in, and it was marked Exhibit B.

Witness continued:—The land was quite level between the police and the foreigners where the shot was fired. Three shot struck me. I saw the wounds of the other man who was wounded. They were not very severe ones.

Cross-examined by Mr Kirkwood:—I received instructions from the Police Department to stop foreigners from shooting. I was ordered to stop foreigners of any nationality from shooting if they had not a licence. I was not told to put my hands on foreigners, or to arrest them if I could help it. Mr Middleton was one of the foreigners who gave me his card. Mr Middleton was one of the two foreigners who were standing together when the shot was fired. I think only one shot was fired in the paddy fields. After we were hit we stood consulting as to whether we should go and arrest the foreigners. I told one of the foreigners that I had been struck in the breast, and that another policeman was wounded in the face. I have seen the map produced before now; I saw it in the police station. I saw the map made, and I pointed out the positions on the map to those who were making it.

To Court: We did not speak to the foreigners at the school-house. The foreigers spoke to us, but I do not remember what they said. I did not hear the accused speak in Japanese. The last witness did all the talking.

William Boenitze, sworn:—I am a physician and a professor of anatomy. I have practised for eleven years. I remember a Japanese policeman coming to have some shot extracted from his body. He had one shot in the right cheek, one in the left hand and one in the leg. The shot had perforated the skin but had not gone deeper. If the shot in the cheek had gone in the eye the man would have lost it. It is difficult to say if it would have killed him. I recognize one of the policemen in court as the man I attended.

To Mr Kirkwood:—I have seen the man once since I treated him.

Mr Hill handed in a small glass tube containing the shot extracted from the man's cheek. (Marked Exhibit No. 4)

To Court:—The character of the injuries was very slight.

Murata Sadashira cautioned:—I received three shots in my body; one in the right cheek, one in the left hand, and one in the left leg.

To Mr Hill:—I received a number of shots besides in my clothes. The land was flat and level between us and the foreigners when accused fired the shot.

To Court: I did not see any bird fly up when the shot was fired.

Nangashisha Nawoki, after being cautioned, gave similar evidence to that of the two other policemen.

To Mr Hill:—I was also struck in the clothes by four shot.

This closed the case for the prosecution.

Mr Kirkwood then called the accused.

J. Middleton, sworn: I live at No. 4, Bund. I recollect the 5th Dec. last. I went shooting with two gentlemen on that day. We were shooting a few miles from Shinagawa station. After breakfast at the tea-house three Japanese policemen followed us about all the time we were shooting. When we were on our way back one of them came up and said he had been shot. We got out of our jinrikishas and examined his clothes, but could find no evidence of wounds. We got into our jinrikishas and went to the Shinagawa station. I was waiting for the train, and was arrested by one of these policemen and a file of armed men and taken to Police Station No. 5. At last they brought an interpreter, and said they were under the impression that it was one of these gentlemen who had shot the policeman I then for the first time saw this wounded man. After some detention,

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

one man was sent down to Yokohama with me to see where I lived. The charge of assault is an unqualified falsehood. I only fired one shot in the paddyfield I believe. I fired at a snipe as it passed before me. That is all the shooting that I am aware of. I saw two policemen after I fired the last shot; they followed us to the school-house. I understand Japanese very little. I have received no notification not to shoot. I was not aware then, nor am I aware now, that I was committing any offence.

To Court: I had no cause to bear malice against the policeman.

Mr. Kirkwood then addressed the Court on behalf of the accused, and Mr. Hill replied for the prosecution.

His Honour said that there could be no doubt the affair was purely accidental. The charge would be dismissed. It was quite evident that accused had had no malice against the policeman.

THE INDIAN CENSUS.

(The Saturday Review.)

The complete results of the Census of British India taken in 1871 have at length been published, and though there may be no surprise in store for statisticians so great as that caused by the discovery that the province of Bengal has a population of more than sixty-two millions, there is still an abundant store of interesting matter in the returns. The total cost of numbering the people has been less than half a farthing a piece. The methods adopted differed in different provinces. In Bengal lists were obtained from selected residents in such village, and the correctness of a certain number of these lists was afterwards tested by the police. The office was usually coveted as an honour, though there is some reason to think that in a few cases advantage was taken to extort some small payment from the people. In many villages there were no residents able to read, and here the work had to be done by the police or by paid enumerators. In the towns the municipal authorities prepared the lists. In the more settled of the hill districts each chief took the census of his clan. In the tea districts each planter took the census of his plantation. Travellers by land were counted at their halting places for the night, and the floating population on he rivers was ascertained by a census of the boats at each landing place. The employment of the people themselves as enumerators did a great deal towards soothing the alarm which the notion of a census had originally excited. The motive of the Government was at first variously supposed to be the imposition of fresh taxes, the raising of troops, or the getting rid of the surplus population. One delusion, that an evil wind would cripple all who were abroad on the night of the census, was found to make the operations of the enumerators easier, and was consequently encouraged by them. On the whole, most fears seem to have been entertained about the census of women, probably from the fact that it was more completely beyond the comprehension of the people what use the Government could make of their information. That the women would be taken to supply wives for the troops, that they were all to be sent to Calcutta for inspection by the Governor-General, and that the whole census was a subterfuge undertaken in order to obtain two virgins from every village to fan the Queen, owing to England having suddenly become intensely hot, were among the theories accepted by the natives. But, on the whole, the people were willing and even anxious to be counted. Two residents in an omitted hamlet travelled a dozen miles to report that the enumerator had not visited it. An enumerator went eight or nine miles to mention that a man had been away from home on the day of the Census, and so had not been counted. And some villages which had been accidentally passed over came to ask what they had done that their houses had not been numbered. On the whole, the Government may congratulate itself on its success in collecting so much fairly accurate information at so little cost either in money or popularity.

Taking the whole area of British India and the feudatory States the average density of the population is 165 to the square mile, or, excluding the native States, 211 to the square mile. This last proportion is exactly half that of England, and rather less than half that of Belgium. Even the average of 165 to the square mile exceeds that of France which only reaches 150. But India is on too vast a scale to make any figures drawn from all the districts taken together of much account. The density of population in particular parts is very great. Thus in England there are but seven counties which have a population of 500 to the square mile; while of the forty-three districts of Bengal, each being much larger than an English county, seventeen come up to this standard, and though the size of the whole province is nearly three times that of England and Wales, the average density of the population is also greater. A more striking fact still is, that in the valley of the Ganges, over a country little less in size that France, there is an average population exceeding that of Belgium by more than 7 per cent, and that of England by nearly 14 per cent. Even in these thickly populated districts the people are very evenly spread over the country. Only about 5 per cent. of the people of Bengal live in towns of more than 5,000 inhabitants, while if Oude and the North-West provinces be included, the proportion of the urban population is only raised to 7 per cent. Throughout India only five and a half millions of persons live in towns of more than 50,000 inhabitants, in England and Wales seven and a quarter millions live in towns above this size, the percentage in each case to the total population being 3 per cent. and 32 per cent. Whether the population is increasing or decreasing is hard to say, from the defects of all former attempts at registration. Such calculations as have been made seem to indicate that in Bengal the population has remained nearly stationary for the last fifty years. In the districts which have but recently come under British rule there must have been a considerable increase of population, and under exceptional circumstances this increase is known to have been very great. The Census of 1871 gave Orissa a population of over three millions, while it is estimated that five years earlier, immediately after the great famine of 1866, it was little more than two millions. The average number of persons to a house throughout the whole of British India is five, the proportion being, as a rule, less in towns than in the country. The explanation of this latter fact is that many of the shopkeepers are traders from a distance, who have left their families behind them The standard of comfort is lower, however, than might be inferred from this figure, as, though there is not much overcrowding if human beings alone are considered, there is a good deal when buffaloes, cows, and goats are taken into the calculation.

The proportion of males to females is as 100 to 94. In England the discrepancy is the other way, there being 103 females to 100 males. This inequality is held to arise almost entirely from emigration, and as this cause has next to no influence in India, a return to the natural equality of the sexes was to be looked for. Various causes have been assigned in explanation of the violent swing of the balance in the opposite direction; but the fact that among the Hindoos the inequality is great where the percentage of high caste people is high and small where it is low is extremely significant. The expenses attending the marriage of daughters among the Rajpoots lead a father to despair of ever being able to bear the burden. He "hopes that the infants may die," and very moderate ill treatment is sufficient to secure him his wish. As regards religion, nineteen out of every twenty persons are either Hindoos or Mahommedans, and there are seven of the former to two of the latter. In the South the Hindoo element greatly predominates. In the North the Mahommedans come nearer to an equality, though it is only in the Punjab that they form the larger half of the population. Out of something like 150,000,000 of Hindoo extraction, about 15,000,000 belong to the Brahmin, Kashatriya, and Rajpoot castes, and about 105,000,000 to other specified castes. The subdivisions of the latter are very numerous. The returns of the occupations of the people are very confused. In some provinces they only include the male adults, in others the whole family has been set down as of the occupations of its head. A rough estimate of male adults gives more than half as employed in agriculture. The artisan class and the not very well-defined class of labourers come next in numbers, yielding respectively 13 per cent. and 12 per cent. The priests and other religious teachers are reckoned at half a million. All those figures are but samples of the huge mass of information, or rather perhaps of suggestions and headings for information, which has been brought together in the Census returns. They will tend to confirm the impression which it is most essential that Englishmen should be under as regards India, the impression, that is, of the immense variety of nations, languages, races, and religions that are to be found in the peninsula, and of the consequent difficulty of legislating for India except in India. There are some politicians who seem to think that all that India needs is that the House of Commons should be good enough to take an interest in her affairs. They are perhaps also of opinion that all the knowledge required to make this interest intelligent and fruitful may be gained by reading the special Indian number of an illustrated newspaper. It is hardly to be expected that this strange misconception should yield to the study of a set of statistical tables; but the public, which the self-appointed friends of India must influence if they are to succeed, is happily not beyond the reach of conviction. A little

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

meditation over these Census returns will do as much as anything we know to generate that diffidence which is the indispensable condition of the successful government of India by Great Britain.

THE SUEZ CANAL.

(North China Daily News.)

The announcement that the British Government had resolved to purchase the share of the Khedive in the Suez Canal has, not unnatnrally, been a matter of interest not unmingled with surprise in the East, where the bare announcement of facts arrives so long before the account of the preliminaries. Taken in connection with the recent failure of the Turkish Government to meet its financial engagements, as well as in its apparent connection with the position of affairs in European Turkey and in Central Asia, this most recent step of the British Government may apparently be looked upon as one of the most important events of the day. The cost of the Suez Canal in round numbers may be assumed as nearly approaching sixteen millions sterling. Of this sum, in original shares or bonds the Khedive holds nominally some 200 millions of frances. Most of the bonds were, however, we believe, issued to him at a discount, so that the actual amount of his interest in the Canal when reduced to par would be about 150 millions of francs. This, from the short notice in the telegram, we presume to be the share purchased by the British Government for four millions sterling. It actually represents, we believe, 7/16ths of the capital of the Canal. Some three or four years ago, negotiations for the purchase had already advanced to a considerable extent, but fears as to probable expense of keeping the Canal open prevented their being concluded. Experience now goes to prove that this expense is not likely to be so great in the future, and that at a comparatively small cost, in proportion to the original outlay, the available width of the Canal could be doubled. It will thus be seen that the project, though a startling one. is not of a day's growth; and that, for some time back, the British Government has been conceiving the possibility of stepping in. The hostility of Lord Palmerston to the Canal was one of those phenomena difficult of explanation. The result was that the British capitalist was scarcely represented in its construction, and that this work was mainly carried out by French, Dutch, and Belgian capital with the assistance of the Khedive, to whom its completion was of course, a matter of the greatest moment. The successful construction of the Canal, contrary to Lord Palmerston's prediction, placed England in the curious predicament that, while she was most interested in the maintenance of the new highway, she had not a word to say in its management. It was true that the scheme had been a costly one for its original supporters, and that the host of small investors who had listened to the persuasive words of Baron Lesseps, have up to this time, and probably will for a long time to come, have to remain without any return whatever on their investment. Recent events have, however, thrown France and England together, even more closely than before; and the purchase by the British Government of a large share in the Canal, now places its management almost entirely in the hands of those two great maritime nations. It is to be presumed that the body of French shareholders are agreeable to the project, which will certainly not reduce their chance of the enterprise becoming financially successful, even if it do not directly contribute to that end. With regard to the financial position of the Khedive's share, little is known. A considerable portion was in ordinary shares in the undertaking, not likely for many years to come to pay a dividend; but others, invested in bonds, issued from time to time, and bearing interest of about six per cent nominal. As these bonds were issued at as low a rate as 66 per cent, they would show a rate of interest of about nine per cent. They are, however, saddled with various obligations as to deferred payment, so that, as an immediate investment, the British Government will probably find itself the loser. In some measure, however the British Government is mixed up with Egyptian finance, and the present occasion probably seems a good one to consolidate all interests. In 1855, it will be remembered, the then British Government guaranteed a loan to Turkey of five millions sterling, which, under the conditions, was placed on the market at the low rate of four per cent. As a guarantee for a loan the previous year, the Turkish Government had already pledged a portion of the tribute due from Egypt. With the sanction, or at the request of the British Government, the balance of that tribute, amounting to about £70,000, was applied to first payment of the interest and sinking fund, the annual amount of which are to be £270,000, viz., £200,000 interest, and the balance to form a sinking fund, increasing in amount as bonds were paid off. The recent collapse of Turkish finance, and the uncertainty whether the Khedive was bound to Great Britain to lodge in the Bank of England the amounts due from his tribute, or to obey in preference the commands of his suzerain, doubtless in some measure influenced the Government in the course they have taken. It is curious that the financial arrangements of Lord Palmerston with regard to the guaranteed loan of 1855 were adversely witnessed by the present leaders of the two political parties in England, Mr Disraeli and Mr Gladstone. It is more curious still that on the former should have fallen the burden of having to correct in some manner or other the financial difficulty here arising. One act leads up to another, and the conduct of Lord Palmerston in guaranteeing the Turkish loan of 1855 has been at least one of the links in the chain which has made, in 1875, the British Government the purchaser of the largest individual interest in his great bugbear the Suez Canal.

Politically, the purchase of the Canal may be viewed in an entirely different light from its financial aspect. The Turkey of 1875 excites little sympathy in England as compared with what it did in 1855. Then it was looked upon as an oppressed power, willing to do well if only relieved from the over-shadowing influence of its giant northern neighbour. From that dread it was effectually relieved, but only with the result that it has gone on from bad to worse. Almost any settlement of the Eastern Question which would relieve Great Britain of its connection with the Porte, would now be looked upon as satisfactory in England. No probable settlement seems, however, to point to the establishment at Constantinople of a respectable power, able to take an independent course, and make its councils respected in Europe. A weak power at Constantinople and a possible burst up in Egypt, with the fall of the Osmanli power in Europe, would not be acceptable to British politicians; and the Government seems to have considered that before letting go one crutch it was well to provide itself with a substitute. We imagine that from this date the stereotyped Eastern Question will be found to have entered into a new phase.

Shipping Intelligence.

ARRIVALS.

Dec. 21, *Rosetta McNeil*, American barque, Brown, 611, from Nagasaki, Dec. 13, Coals, to Order.

Dec. 23, *Tokio Maru*, Japanese steamer, Dunn, 2,119, from Shanghai and ports, Mails and General to M. B. Co.

Dec 23 *Yung Woo*, Chinese corvette, Captain R. E. Tracey, R.N., 1,393, from Foochow, via Kobe, Dec. 20.

Dec. 23, *Lathley Rich*, American ship, Lewis, 1,300, from New York, June 19, Coal, to Chipman, Stone & Co.

DEPARTURES.

Dec. 20, *Fleetwing*, American ship, Guest, 829, for New York, Tea despatched by Smith, Baker & Co.

Dec. 21, *Volga*, French steamer, Nondedeu, 960, for Hongkong, Mails and General, despatched by M. M. Co.

Dec. 22, *Curlew*, British gun-boat, Captain Church, 670, for a Cruise.

Dec. 22, *Nagoya Maru*, Japanese steamer, Eckstrand, 1,914, for Shanghai and ports, Mails and General, despatched by M. B. Co.

Dec. 23, *Haidamack*, Russian corvette, Captain Tirtoff, 1,100, for Kobe.

Dec. 23, *Montgomeryshire*, British steamer, Sturrock, 1,250, for Kobe, General, despatched by E. Fischer & Co.

Dec. 24, *Sumida Maru*, Japanese steamer, Gorlach, 690, for Hakodate, General, despatched by M. B. Co.

PASSENGERS.

Per *Volga* for Hongkong.—Mr. and Mrs. S. W. Pomeroy, Mr. and Mrs. Christansen, Messrs. Morton, H. Vogel, Ed. Zappe, Mammelsdorf, Captain D. B. Ulderup.

Per Steamship *Nagoya Maru*, for Shanghai, &c.:—Mr. and Mrs, Morrison, Mr. Rennie, Revd. M. A. Churchill, Messrs. Lesley Ario, Judd, Grigor, H. Ahrens, Revd. E. Jenkins, Yoshizawa, Shimadzu Hisatumi, Shidsumi, Kobayashi; Midzumachi, Bogel, Miss Ohamoto, one Japanese Gentleman, Mr. Ishivata, and 114 Japanese, 5 Chinese, and 1 Foreigner in the steerage.

Per *Tokio Maru* from Shanghai and ports.—For Yokohama: Miss North, Miss Center, H. E Sir Harry Parkes, K.C B, Messrs G. Ashton, T. Kempermann, Chas. Braess, A Aestmann, E. Wenmoho, E. C. Kirby. For San Francisco: Mr. J. Babut de Marcs. Steerage 111 Japanese, 5 Chinese, and 3 Foreigners.

CARGOES.

Per *Volga* for Hongkong:—

Silk for Marseille	230 bales.
London	64 "
	294 bales.

Per *Nagoya Maru* for Shanghai and ports:—
Treasure ... ...$34,700.
Per *Tokio Maru* from Shanghai and ports:—
Treasure ... ... $4,500.

REPORTS.

The German barque *Formosa*, that arrived here some time since, with a cargo of stores for the Imperial Government, hoisted the Japanese flag on Saturday. The *Formosa* was built in Allon last year and is classed 11 A. 1. in Lloyds. She was purchased and fitted out by Messrs. H. Ahrens & Co., and has been sold by them to the Naval Department. She is intended to be used as a training ship for naval cadets.

"Berkeley, Sept. 1869.—Gentlemen, I feel it a duty I owe to you to express my gratitude for the great benefit I have derived by taking 'Norton's Camomile Pills.' I applied to your agent, Mr. Bell, Berkeley for the abovenamed Pills, for wind in the stomach, from which I, suffered excruciating pain for a length of time, having tried nearly every remedy prescribed, but without deriving any benefit at all. After taking two bottles of your valuable pills I was quite restored to my usual state of health. Please give this publicity for the benefit of those who may thus be afflicted.—I am, Sir, yours truly, HENRY ALLPASS.—To the Proprietors of NORTON'S CAMOMILE PILLS."

No. 38 to 42...	per picul...	$42.00	to	45.00		
Reverse Twist ... 16-24 ... ,, ...		—				

Woollens.—*Common Cloth* still continues saleable in cases where holders are willing to submit to fresh concessions. The demand for *Blankets* seems to have been a speculative one, and has so far subsided that only small quantities at lower figures can be moved. A small enquiry for good qualities of *Plain Black Orleans* has continued throughout the month, but other articles, especially *Fancy Woollens* and printed *Mousselines de Laine*, remain disregarded even at very low prices. Plain *Mousseline de Laine* has been dealt in to a small extent.

Plain Orleans	40—42 yds.	32 in....	6.25	to	7.80	
Figured Orleans	29—30 yds.	31 in....	4.75	to	5.25	
Chimagoro	30 yds.	30 in....	5.25	to	5.75

Kerosine Oil.....	per case...	2.35				

EXPORTS.

Silk.—Since the 10th instant settlements are 525 bales of Hanks and 125 of Oshius, say 650 bales, the greater portion of which was bought in the earlier part of the fortnight. Later on, when the long interrupted telegraphic communication with Europe was reopened, the advices from the silk markets were found to be of the most discouraging nature, and transactions on this side were checked by the unwillingness on the part of most native dealers to submit to lower rates. Concessions have indeed been obtained to the extent of $10 to $20; but the stock which is estimated at 1,200 bales has for the most part been withdrawn from the market and will probably remain so till after the New Year's festivities.

The shipments of the fortnight are 477 bales, making the total export since the 1st July 9,341 bales against 6,697 last year for the corresponding period.

Tea.—Our market has been fairly supported during the past week, settlements comprising fully 2,600 piculs, mostly of "Common Leaf," holders of "fine Teas" apparently not offering their stocks. Prices are firm, especially for grades ranging from "standard good Medium" upwards; arrivals have been moderate and stocks in first hands rather light.

To-day's rates close as under, but telegraphic intelligence from the States is not as assuring as to the course of the New York market as it was generally here assumed to be.

The *Ukraine* for New York direct will have despatch early in January next.

Common	$15.00	to	18.00			
Good Common	19.00	to	22.00			
Medium	23.00	to	26.00

THE GREATEST

WONDER OF MODERN TIMES!

HOLLOWAY'S PILLS.

PERSONS suffering from weak or debilitated constitutions will discover that by the use of this wonderful medicine there is "Health for all." The blood is the fountain of life, and its purity can be maintained by the use of these Pills.

SIR SAMUEL BAKER,

in his work entitled "The Nile Tributaries in Abyssinia," says, "I "ordered the dragoman Mahomet to inform the Fakey that I was a "Doctor, and that I had the best medicines at the service of the "sick, with advice gratis. In a short time I had many applicants, "to whom I served out a quantity of Holloway's Pills. These are "most useful to an explorer, as possessing unmistakable purgative "properties they create an undeniable effect upon the patient, which "satisfies him of their value."

SIMPLE, SAFE AND CERTAIN!

HOLLOWAY'S OINTMENT

Is a certain remedy for bad legs, bad breasts, and ulcerations of all kinds. It acts miraculously in healing ulcerations, curing skin diseases, and in arresting and subduing all inflammations.

MR. J. T. COOPER,

in his account of his extraordinary travels in China, published in 1871, says—"I had with me a quantity of Holloway's Ointment. I "gave some to the people, and nothing could exceed their gratitude; "and, in consequence, milk, fowls, butter, and horse-feed poured "in upon us, until at last a tea-spoonful of Ointment was worth a "fowl and any quantity of peas, and the demand became so great "that I was obliged to lock up the small remaining stock"

Sold by all Chemists and Medicine Vendors throughout the World.

PROTECTED BY ROYAL LETTERS PATENT,

Dated October 11th, 1869.

Under Distinguished Patronage

DR. BRIGHT'S PHOSPHODYNE.

(OZONIC OXYGEN)

A CHEMICAL PREPARATION OF PHOSPHORUS, WITH THE VEGETABLE ALKALOIDS QUINIA, CYPRIPEDEN, XANTHOXYLIN, &c.

This Phosphatic combination is pronounced by the most eminent members of the Medical Profession to be unequalled for its power in replenishing the vitality of the body, by its supplying all the essential constituents of the blood and nerve substance, and for developing all the powers and functions of the system to the highest degree.

It is agreeable to the palate, and innocent in its action, while retaining all its extraordinary properties; and as a specific, surpassing all the known therapeutic agents of the present day for the speedy and permanent cure of—

Nervous Prostration	Lassitude
Liver Complaints	Shortness of Breath
Palpitation of the Heart	Trembling of the hands and limbs
Dizziness	Impaired Nutrition
Noises in the Head and Ears	Mental and Physical Depression
Loss of Energy and Appetite	Consumption (in its first stages only)
Hypochondria	Timidity
Female Complaints	Eruptions of the Skin
General Debility	Impaired Sight and Memory
Indigestion	Nervous Fancies
Flatulence	Impoverished Blood
Incapacity for Study or Business	Nervous Debility in all its Stages
Sick Headache	Premature Decline

and all morbid conditions of the system arising from whatever cause. The action of the Phosphodyne is twofold—on the one hand increasing the principle which constitutes nervous energy, and on the other the most powerful blood and flesh generating agent known; therefore, a marvellous medicine for renovating impaired and broken-down constitutions. It quickly improves the functions of assimilation to such a degree, that where for years an emaciated, anxious, cadaverous, and semi-vital condition has existed, the flesh will rapidly increase in quantity and firmness, and the whole system return to a state of robust health. The Phosphodyne acts electrically upon the organisation; for instance, it assists nature to generate that human electricity which renews and rebuilds the osseous, muscular, nervous, membranous, and organic systems. It operates on the system without exciting care or thought upon the individual as to the process. It moves the lungs, liver, heart, kidneys, stomach, and intestines, with a harmony, vigour, yet mildness unparalleled in medicine.

The Phosphodyne gives back to the human structure, in a suitable form, the phosphoric or animating element of life, which has been wasted, and exerts an important influence directly on the spinal marrow and nervous system, of a nutritive, tonic, and invigorating character, maintaining that buoyant energy of the brain and muscular system which renders the mind cheerful, brilliant, and energetic, entirely overcoming that dull, inactive, and sluggish disposition which many persons experience in all their actions.

The beneficial effects of the Phosphodyne are frequently shown from the first day of its administration, by a remarkable increase of nervous power, with a feeling of vigour and comfort, to which the patient has long been unaccustomed. Digestion is improved; the appetite increases wonderfully; the bowels become regular; the eyes brighter; the skin clear and healthy; and the hair acquires strength, showing the importance of the action of the Phosphodyne on the organs of nutrition.

Finally, the Phosphodyne maintains a certain degree of activity in the previously debilitated nervous system; its use enables all debilitated organs to return to their sound state and perform their natural functions. Persons suffering from Nervous Debility, or any of the hundred symptoms which this distressing disease assumes, may rest assured of an effectual and even speedy cure by the judicious use of this most invaluable remedy.

DR. BRIGHT'S PHOSPHODYNE

IS SOLD ONLY

In CASES at 10s. 6d. by all Chemists and Patent Medicine Vendors throughout the Globe.

Full Directions for Use, in the English, French, German, Italian and Dutch Languages, accompany each Case.

CAUTION.—The large and increasing demand for Dr. Bright's Phosphodyne has led to several imitations under somewhat similar names; purchasers of this medicine should therefore be careful to observe that each case bears the Government Stamp, with the words Dr. Bright's Phosphodyne engraved thereon, and that the same words are also blown in the bottle.

Wholesale Agents for—

BOMBAY.....D. S. KEMP & Co.
MADRAS.....BARRIE & Co.
COLOMBO.....O'HALLORAN BROS.

Export Agents.

NORTON WATNEY & Co.,
107, Southwark Street, London, S. E.

Yokohama, September 11, 1875. 52ins.

MISCELLANEOUS.

LONDON,

INVENTORS & MANUFACTURERS OF THE CELEBRATED

PARAGON LAMPS,

Burning Kerosine, Petroleum, or Paraffin.

Unrivalled for Simplicity, Economy, Durability, Safety & Brilliancy of Light.

OVER 5,000 PATTERNS OF

Handle Lamps	Factory Lamps
Table Lamps	Ship Lamps
Hall Lamps	Chandeliers
Church Lamps	Brackets
Billiard Lamps	Lanterns
Railway Lamps	Stoves

Fitted with our famous PARAGON BURNERS, which give a magnificent white and steady light, equal to 25, 20, 14 & 11 candles.

Our CLIMAX COOKING & PARAGON HEATING STOVES, in six sizes, will be found extremely useful in every household, being always ready for use, and saving time and money, coals, trouble of lighting fire, dust, and refuse.

Our HURRICANE LANTERNS are absolutely wind-proof and safe; simple in construction, and give a splendid white and steady light. They are the most serviceable Lanterns for use in Stables, Farms, Gardens, Boats, Cellars, &c.

Having been exclusively engaged in the production of Lamps for many years, the reputation which we have established for our manufactures in America, Australia, China, India, & all other Foreign Markets, enables us to satisfy the requirements of every buyer; our assortment being large & complete in every branch. For brilliancy of light, simplicity and durability of construction, our Lamps cannot be excelled; whilst the style, finish, & decorations are exquisite, & generally much admired. We therefore can confidently invite the attention of all Importers, & in recommending to you the above course, we point to our prospective mutual advantage. Catalogues, containing more than 1,000 Patterns sent free of charge.

May 22, 1875. B. 24ws.
